1. **W**E are now, according to our Promise, to resume the Thread of Mr. Ray's Travels, who, in his Return from *Italy*, passed through the Kingdom of *France*; but for the Reasons which have been already assigned, his Accounts of that Country are far less copious and distinct than those he has left us of *Italy*: Yet this is in some Measure supplied by the Journal of *Philip Skippon*, Esq; afterwards *Sir Philip Skippon*, whom we have mentioned before, and who was the Companion of Mr. Ray, from the Time they left *England* till this Gentleman left him, for the Sake of returning more speedily to *England*, at *Paris*. *Sir Philip Skippon* was a Gentleman of great Parts and Learning, as appears from the excellent Journal of his Travels, which being drawn up with regard to his private Use only, and not for the publick View, is an exceptionable Testimony of his Candour, good Sense, and Impartiality. He was a Man of an ample Fortune, and travelled purely for the Sake of Improvement and Amusement. He was therefore extremely inquisitive, where-ever he came, into all that might furnish him with Knowledge or Pleasure; and he kept so exact an Account of every Thing he saw, and designed with his own Hand, so accurately, every Engine or Machine, that he thought worthy taking Notice of, that one cannot help wondering, considering the Pains he took in viewing Things, how he found Time to describe them so carefully, and to accompany them with his Reflections.

At his Return Home, he led a retired, or at least a studious Life, as appears from the Books which composed his Library, and are now dispersed. In the Title Page of each of them is his Name, and the Year when they were bought or given to him, written in a very fair *Italian* Hand; and many of them have very

learned Notes, judicious Corrections, or pertinent and pleasing Remarks upon their Margins. Thus much I thought due to the Memory of this Gentleman, as having seen many of those Books, and possess'd some. We will now come to the proper Business of the Section, and open it from his Journal, which is much more exact and full than what Mr. Ray thought fit to publish; though nothing can be better than the Accounts of the latter, which he thought proper for publick View; and therefore we have brought both into this Section for the Reader's Convenience, in their Order of Time; so that they are intermixed but not blended, that it may be seen to which of these Authors the Accounts, Remarks and Observations belong.

Wednesday, July 19, (says Mr. Skippon) we hired Horses of the *Chasse Marin*, for four Crowns a Piece, (our Diet included) and allowed for the Carriage of our Portmanteau's two Sols for every four Pounds Weight, above what was allow'd, and left *Geneva* about Eleven of the Clock, then passed over *Pont d'Arve*, where there is a *Geneva* Guard, and over the Bridge is the Duke of *Savoy's* Guard, that searches for Salt, &c. We went through two or three Villages belonging to *Geneva*, and, after two or three Leagues riding, ferried over the *Rosne*, paying five Sols a Man. Half a League further we came through *Coulonge*, a Village where the *French* King's Officers search Passengers, Portmanteaus, &c. Half a League from thence we rode in a narrow Passage between the Mountains, divided by the *Rosne* on the left Hand of us, and passing through a small Port called *Clusa*, (where six or seven *French* Soldiers keep Guard) were examined whence we came, &c. About two Leagues thence we observed the Place where the River *Rhosne*, in the Winter-time, runs under great Stones for about half a Stone's Cast, after it passed through

through a Channel three or four Yards broad. Half a League farther brought us to our Lodging at *Chastillon*.

The 20th, We set forward about Four in the Morning, and rode thro' mountainous Ways, passing by a Fall of Water called *Pisse Vache*, which *Golnitz*, in his Itinerary, says, runs under Ground into a Lake called *la Bougie*, that was on our left Hand. *La Bougie* is divided into two Parts by a Wall, one Part is marshy, belonging to *St. Germain*, the other belongs to *Nantua*, filled with Water and stored with Fish. We travelled through *Nantua*, a long Town with *Portici* like those of the *Rue-bas* at *Geneva*; it is seated at the End of the Lake we had on our Left Hand. This Place is noted for good Needles. It is three Leagues from *Chastillon*. Three Leagues farther we baited at *Cerdon*, having rode between Box-hedges and a hilly Way, making a steep Descent just before we arrived at *Cerdon*, where our *Chasse Marin* changed his Horses. After Dinner, we ascended a rocky Hill, and then enter'd a Plain which continues to *Lyons*. Two Leagues from *Cerdon* we ferried over the River *D'Aine*, and three Leagues thence lodged at *Verbonne*. This Day we took Notice of the Shepherds Huts made of Straw, and placed on little Carts.

2. On the 21st, at Break of Day, we mounted, and, after two Leagues riding, came through a walled Place, and three Leagues thence rode through hilly Ways till we came to *Lyons*, where we first went through a Suburb full of Victualling-houses. At the Gate we received a Billet to lodge in the Town, then made a steep Descent in a well paved Way, and after weighing of our Portmanteau's, we took up our Lodging at the *Ecu d'Or*, or Crown of *France*. This is a very fair City, Part situated at the Meeting of the *Soane* and *Rhofne*, and Part on the other Side of the *Soane*; the Houses are high and well built, only defaced by the Raggedness of their Paper Windows. There is a great Commerce carried on here, and large Shops full of all Sorts of Wares.

We staid at *Lyons* till the 25th of July, and remarked these Particulars: The *Maison de la Ville* is a very handsome Fabrick, having a fair square Piazza before it, with a large Fountain. On one Side of the Piazza is a stately Front erecting. The Rooms we saw here have these Names; *la Chambre Consulaire*, where the Provost and four Eschevins sit; *la Chambre de la Conservation*, where the Merchants sit. In the Great Hall are the Pictures of the fourteen *Lewis's*, Kings of *France*; the Roof painted. Another Hall with the Pictures of the Eschevins; a little Chamber for Banquets, &c. *S. Nicy* is a pretty Church. *La Charitie* is the Hospital, a great Building. *N. Dame de Fourrier* is on the other Side the *Soane*, built on the highest Ground, where there is a small Pyramid erected to the Virgin *Mary*. Here we had a full Prospect of the City. Before another is a small Pyramid, and thereon is inscribed the Name of God, and Unity, and Trinity, in several Languages.

Without *St. Just's* Gate is a large Suburb; the *Car-melites*, that go barefooted, have a pleasant Convent with large Gardens, whence a pleasant View of the Town. The Fryars in this City are very importunate Beggars, coming into Strangers Chambers. The Feast of *St. James* was kept while we were here, and we saw this Procession. First went a great Banner, then a great Cake or Loaf, (called *Pain Benedict*) upon a Fellow's Head; after that two Pipes and a little Drum, which made some Musick in the Interval between the Fryars Singing. *Belle Cour* is a spacious wide Space, where there is a Mall and a pleasant Walk of Trees by it. Mr. *Palmer*, Brother to the Earl of *Castlemain*, was at this Time in *Lyons*, at the Academy Royal, and who lately turned Papist. The Protestants are about 2000 Families in this City, and have a Temple at *St. Romain*, two Leagues up the *Soane*. Monsieur *Moze*, an Apothecary and a Protestant was very civil to us.

The Monument of the two Lovers is on the other Side the *Soane*; it seems to have been some Roman Building, and is built of great Stones. Two Forts, *la*

Pierre Scize on the *Soane* Side; for *St. Jean* is on the same Side with the Body of the City. The *Soane* is a very slow River, and there are cross it one Stone and two wooden Bridges. On one of them a Customer demands a Liard of every one that passes over. *St. Jean* is the Cathedral, which is large, and remarkable for a Clock with Motions like that at *Strasbourg*; every Hour a Cock on the Top claps his Wings twice, and crows twice; after that an Angel comes out of a Door and salutes the Virgin *Mary*, and at the same Time the Holy Ghost descends, and God the Father gives the Benediction. The minute Motion hath an oval Circle, and yet the Handle or Index always touches the Circumference. Invented by *M. Servier*.

We had good Luck in seeing this *M. Servier's* Cabinet, his Humour being very difficult. He was a Soldier in his younger Days; but about twenty-two Years ago he retired hither, and invented many ingenious Pieces of Clock-work, Machines of Water, &c. which he hath described with his Pen, and bound them up together in a thick Folio, and made the Models of them in Wood with his own Hand. These Things we took Notice of, which we had not before seen in *Italy* and *Germany*. The Hand of a Minute Watch moved every Time the Ball springs up; in a certain Engine, a Lizard creeping up a perpendicular Rule, shews the Hour of the Day. A Mouse creeping upon a Rule, placed horizontally, doth the like. These are done by Magnets; An Hour-Glass that turns of itself, when the Sand is run out, and at the same Time the Hour Figure placed over the Glass, is changed. Several hydraulic Machines. An Atlas bearing a Globe, and upon its Equator was shewn the Hour of the Day. The Clock upon a declining Plane does not go when placed upon an horizontal Plane. A Ball put in at the Mouth of a winding Serpent runs through it, and afterwards passes up the Tail of another placed on a moveable Axis, and comes out of his Mouth. A Tortoise put into a Bason of Water, will never stand still till he points to the Time of the Day. A *Balestra* to shoot *Granada's* at a certain Distance. A Circle, with the several Humours of Persons written on it, and if you touch the Gnomon or Index, it will point to the Humour (as is pretended) of him that touches it. A Door that opens both Ways. Two Gates, when one shuts, the other opens. Two Dials, a pretty Distance from one another, moving the Index of the one, turns the Index of the other; but when *M. Servier* took a little Piece of Iron or Load-stone (colour'd white) out of the Point or End of the Index that was moved, the other would not stir. A Cannon to shoot downwards; it is placed on a declining Carriage, an Axis with Cords winds it backwards and forwards, and when the Cannon comes to the further End, a Circle of Lead is round the Mouth. We were told, that the *Germans* living in *Lyons* have great Privileges; that they have distinct Courts to judge Civil and Criminal Matters, and when they make Harangues to the King they speak standing.

3. The 25th, Hiring a Postilion for a *Louis d'Or* a Man, we left *Lyons*, and rode over a long Stone Bridge, cross the *Rhofne*, and then passed through a large Suburb, and entered on a large Plain, where we travelled four Leagues, and after that rode thro' a pleasant Country, cast up into Hillocks, and six Leagues from *Lyons*, dined at *Artas*, having passed through but one Village before. After Noon we came through *Merieu*, *la Bastie*, *Champier*, and at Night lodged in *la Frett*, three Leagues from *Artas*. 26th, We rode a good Way in a level Valley, and at two Leagues from *la Frett* went through *Moyran*; a little from thence we entered between the Mountains, and travelled through a fruitful Valley, planted like *Lombardy*, with Rows of Trees and Vines climbing about them; sometimes we mounted stony Hills, among them passed through *Rives* a Village noted for its Iron Works; four Leagues from *Moyran*, we arrived at *Grenoble*, riding by a double Pall Mall, just before we entered the City. This Night it snowed on the Mountains near *Grenoble*.

Grenoble is a large City situated in a fruitful and pleasant Valley near the Meeting of the River *Drac* with the *Ysere*. The Houses are generally meanly built, and the Streets are not handsome. A long Street (on the other Side of the *Ysere*) joined to the City by a wooden and a Stone Bridge. On the same Side, upon the Top of a high Hill, is a Fort called *la Bastille*; a Wall runs up that Hill. The Arsenal is another Fort guarded now by about 150 Soldiers. The Cathedral is a mean Church. The Jesuits are building a neat Chapel. The Protestants are here about 5000, their Temple is within the Walls, and is of an octagonal Figure, with a tall Roof; within are Seats for Counsellors of Parliament and Persons of Condition, a little Gallery with wicker Windows, where many Times Popish Gentry, &c. sit *incognito*, three Ministers. The Duke of *Lesdiguières*'s Palace has fine shady Walks, and a fair Garden.

The Bishop of this City is a Prince; within the Palace is a Room where the Parliament sits, the Lacqueys will suffer no Swords to be worn here, except you give them a small Piece of Money. Ancient Inscriptions on some of the Gates which are printed in *Golnitz's Itinerary*. Three Liards paid for every Horse that passes the Bridge with Stone Arches. We visited a Garden of Simples belonging to a Counsellor of Parliament, (who was civil to us) and Monsieur *Bernard*, an Apothecary.

4. On the 27th. Paying four Crowns for two Horses and a Guide, we immediately rode out of the City, ascended the Mountains, and at a League's Distance came thro' a Village call'd *Sapene*, and a League and a half further pass'd through the Valley of *Chartreuse* Village. These Valleys, among the high Mountains or Alps are well cultivated, having great Store of Oats, and other Corn and Meadow Ground. At a narrow Passage between two high precipitous Rocks, we passed over a Bridge, cross a Torrent, and knocking at a Gate, were let in by a Servant belonging to the Monastery of the *Chartreuse*; then we ascended a mountainous Way above a Quarter of a League, till we passed by a large Building, where Persons of all Trades live, and who are habited like the Fathers of the *Carthusian* Orders, and work for the Convent. A good Distance farther up we arrived at the *Grande Chartreuse*, where the Porter ask'd us whence we came, and called a Lay-Brother, who introduced us into one of the Halls appointed to receive Strangers in. At the Gate we left our Swords and Pistols. Seven Hours riding from *Grenoble* hither.

This Convent is seated under one of the highest Mountains in these Parts, and discovers far and near into the adjacent Countries. As soon as we came into the Hall, Wine, Bread and Cheese were set before us, and one of the Fathers, a very intelligent Man, visited and discoursed sometime with us about the News of *Europe*, which he was no Stranger to. A Boy guided us up into the Mountains, and shewed us a neat Chapel, dedicated to *S. Maria de Casalibus*, which is prettily adorn'd with the Letters of her Name in Gold, and with Scripture Epithets: Beyond this we saw *S. Bruno's* Chapel, built on a Rock. At Night we had our Supper and Beds prepared for us. We observed the Friars, at Even Song, bowing their Heads as they sat, at the Saying the *Gloria Patri*, &c. Sixty Fathers, and as many Lay Brothers here. No Women but those of the royal Blood can enter this Cloister. There are two Ways more to come to this Convent, besides that from *Grenoble*, viz. one from *Lyons*, and the other from *Chambery*. In their Stable they keep about sixty Horses, besides Mules and Asses.

28th, We saw their Church, a dark and narrow Building; before the Altar stand four tall Brass Candlesticks, within the Choir the Fathers sit, and without sit the Lay-Brothers. The Fathers rise to their Devotions at Midnight, and are in the Choir three Hours, but then they sleep till Seven or Eight in the Morning, when the Masses begin. The Cloister is a very long and narrow Square; we went into one of their Cells which are not kept so neat as those we saw at *Venice*. At

Meal Time several Servants bring Bread, Wine, &c. and open a little Window by the Side of the Cell-Door, and there put in the Provision. On *Fridays* they fast strictly, and this Day we saw what they eat, viz. two or three Spoonfuls of cold Pease boil'd, four or five Pears, and a few stewed Prunes and raw Plumbs, besides a small Pittance of Bread and Wine, and at Night they had no Supper. In the *Refectorium* are two Tables besides the Prior's; at the upper End they dine here together, only on *Sundays* and great Festivals.

In the General of the Order's Lodging, we observed the Pictures of *St. Martin* at *Naples*, the Chertruse of *Pavia*, and the Convent nigh *Avignon*, &c. Places belonging to this Order. In the Chapel is an Altar Piece of great Value. In the Chapter-Room is a large Picture, how seven of this Order were executed for Treason (they say for Religion) in *Henry the VIIIth's* Days, in *England*. Cardinal *Richlieu* professed himself first of this Order. The Lodgings to entertain Princes in are very neat; the Chapel there is within crusted over with Marble; we gave the Cook a *Quart d'Escue*, and having eaten our Breakfast, and written our Names in a Book kept by a Porter, we mounted and rode back to *Grenoble* the same Way we came.

5. We stayed in *Grenoble* till *August* the first, and one Day rode out, and after twice fording the River *Drac* (which makes a great Wash) at a League's Distance, went over *Pont de Clef*, a large Arch cross that River, where we paid one *Sol* a Man; a League further we passed through a large Village called *Vif*, and about a League thence by *S. Bartholomew*, another Village, and *Chateau Bernard*, where we saw Flame breaking out of the Side of a Bank, which is vulgarly call'd *la Fontaine qui Brule*; it is by a small Rivulet, and sometimes breaks out in other Places; just before our Coming, some other Strangers had fried Eggs here. The Soil hereabouts is full of a black Stone like our Coal, which perhaps is the continual Fuel of this Fire.

August the 1st, We took Boat for *Orange*, and went down the Rivers *Ysere* and the *Rhosne*, twenty Crowns was given for a Boat, and the Passengers paid proportionably to the Length of their Journey, some more some less. After we had left *Grenoble* three or four Leagues, we durst not stir from the Banks side, a furious Wind arising and stopping us for the Space of an Hour. Then nine Leagues from *Grenoble*, we arrived at our Lodging in *la Faurie*, a Village on the right Side of the *Ysere*.

2d. At Break of Day, we entered our Boat, and at two Leagues Distance passed under a Bridge with Stone Arches, and a wooden Penthouse over it; *Romans* a great walled Place lay on the right Hand thence. We went three Leagues to the Meeting of the *Ysere* and the *Rhosne*, where we observed for a good Space the *Ysere* kept itself unmingled with the *Rhosne*, which was of a whitish Colour and much troubled, the *Ysere* being much clearer and greenish. A League down the *Rhosne* we landed at *Valence*, a poor City and University, situated on the left Side of the River: Afterwards we went by the *Vivaretz* and *Sevennes*, and passed by *Montlimer* on the left Hand, and *Viviers* on the right, both walled, though mean Places, and at fourteen Leagues from *la Faurie* lodged at *Bourga*, a walled Town on the right Side of the River. Many Peages and Tolls paid by the Boatmen as we came along.

3d. After two Leagues we came to *Pont S. Esprit*, a stately Stone Bridge, with eighteen great Arches, and four little ones; between every Arch is a Window. It is curiously paved with square Stones, a Hand broad, two Coaches can go abreast on it, it is not made strait, but bending out against the Stream. The Town of *S. Esprit* on the right Hand is walled; a League further we landed at a Peage or Toll-Place belonging to *Orange*, (we might have landed a League nearer to *Orange*) where we gave thirty five Sols a piece for a Horse to carry our Things thither. We walked about two Leagues in a level and fruitful Country to *Orange*.

In *Valence*, *Bourg* and other Places, we observed Measures of Corn cut in Stone, and little Portals to let the Corn out of them.

6. *Orange* is but a small and meanly built City, and the Walls are not considerable, but there are Outworks which if well look'd after, would render it very strong, by Reason of its Situation in a Plain. The Castle is built on the highest End of a long Ridge of a Hill; it was formerly of greater Strength, when it had walled Bulwarks round about, which the *French* King, in this Prince of *Orange's* Minority, caused to be blown up with Gunpowder, when at the same Instant, (thirty) all *Roman Catholics* were overwhelm'd in the Ruins. The Governor is Count *de Dhona*, but his Deputy or Lieutenant is a *Frenchman* and a *Papist*. Within the Castle were now about a hundred Soldiers, who civilly admitted us into the Castle, and shewed us many great Pieces of Cannon, and their Armory stored with Arms enough for 5000 Men. In the Middle of the Castle is a very deep Well of good Water, cut out of the Rock. *C. Marius's* Arch, and *la Torre ronde* are Antiquities without the Walls; on some of the Engravings of the Arch was written, *BODUICUS*. The *Circus* is a stately Ruin within the Wall.

The People here are very civil, and of a much better Humour than the *French*; when the *French* King had the City in his Possession, many of the Gentry turn'd *Papists*. The University is not considerable, having about four Professors, and one of them is one *Guy*, I think a *Scotchman*. The *Roman Catholics* have now the Use of the Cathedral: The Inhabitants of this Principality are at least half Protestants, and who were sensible of the Change of Governors. On the Tower of the *Maison de la Ville*, we saw many false Weights nailed to the Wall. The Prince hath a Parliament here of both Religions, and hath passed a publick Amnestia of all Offences, wherein he calls the King of *England*, and the Marquis of *Brandenberg*, his Uncles and Tutors. In a poor Woman's House, we saw an old *Roman* Pavement of *Mosaick* Work, very curious representing a Cat with a Rat in its Mouth; round about were Squares.

7. 4th, Giving four *Livres* and fifteen *Sols* for three Horses and a Guide, we travelled a stony Way two Leagues, in a Country where Thyme, Lavender, Box, &c. grew plentifully, many Mulberry and Olive-Trees planted in the Fields; we passed by *Chateau neuf*, on the right Hand of us, and a League further ferried the River *la Nasque*, paying for each Horse one *Sol* a League, thence riding nigh the *Rhofne*, we entered *Avignon* at Port St. *Lazare*, upon which Gate was written, *Clave Petri tuta*. Having shewed our Bolletins of Health, which we took at *Grenoble*, leaving our Fire-Arms with the Guard, and taking a Note to lodge in the City, we came to a Sign of a Town call'd St. *Flour*, where we lay till Monday the seventh of *August*.

In the Cathedral, a small Church situated on the Rocks nigh the Windmills, we saw an ancient Monument of *Benedictus XII.* Pope, a Miller's Son. The Palace is adjoining, guarded by Soldiers, *Chigi* Cardinal *Padrone* is Legat and Governor, M. *Columnia* Vice-Legat, who (they said) was suddenly to be removed, because he had given some Suspicion to the *French* King, by making a kind of Fort before the Palace Gate, and laying up a large Quantity of Corn. On the Outside of the Palace where the Prison is, are pictured, hanging by the Heels, the chief of the late Rebellion against the Pope; and in the *Bando* 200 Pistoles are promised to any Person that can bring the Head of any one of them; these Rebels live in Safety at *Villeneuve*, a Place t'other Side of the Bridge, just cross the *Rhofne*, which belongs to the *French* King, who hath threatned to burn alive any that shall offer to lay Hands on them. Monsignor *Lomellino* is the new Vice-Legat.

The *Dominicans* Church is a large Building of one Arch. The *Cordeliers* Church is larger in the *Sacrista*; they shewed us a round leaden Box with a leaden Medal, plain on one Side, and on the other the Figure of *Laura*, and these Letters, M. L. M. J. which is interpreted by some, *Madonna laura morta jace*. This Me-

dal with *Italian* Verses on her, written by *Petrarch*, in a neat Character was found in that Box, lying at her Breast, when *Francis I.* took up her Body, who also made Verses on her in *French*, which are kept with the others. In an obscure Chapel we saw her Tomb-Stone.

In St. *Martial's* Church we searched for *Casimir* King of *Poland's* Monument, but could not be informed where it was; nigh the Altar is a very stately Tomb that reaches almost to the Top of the Church, and below lies the Figure of a Bishop, and over him our Saviour and the Apostles Effigies, and so upwards are many Marble Figures. The *Celestins* Church hath a Marble *relievo* Altar, which they say is but of one Piece, having many Figures in it: The Picture of a Skeleton drawn by King *Renatus*, who gave the Altar. In the Middle of the Choir is a handsome Monument of *Clement VII.* Pope. In a long Chapel adjoining, is the Legend pictured of S. *Peter* of *Luxembourg*.

The Coining-house is opposite to the Palace, and has a new fair Front. The *Jesuits* have a pretty Chapel, and an indifferent *Studium*; in the *Area* of it are Dials, with Directions to know what it is o'Clock; in such Cities as are under Kings, and in such as are under Commonwealths, the one is called *Horologium Regium*, the other *Aristocraticum*, in which they have placed *Geneva*. The Gate on the *Rhofne* Side is open every Day, but besides that, there is but one more open at a Time, and that they change every Week. About 700 *Italian* Soldiers in the City. Here are some Palaces and good Houses, but the Generality of the Buildings are mean, and the Streets narrow; the Inhabitants are in Fear every Night that the Rogues should creep in at their Windows.

8. The 7th, Giving fifteen *Livres* of *France*, we hired three Horses and a Postilion, who guided us first over the long Bridge at *Avignon* cross the *Rhofne*, which Bridge is entire on the City Side, but broken on the Side of *France*, and repaired with Wood. It seems to have been a *Roman* Work, is built of Stone, and paved (though now much defaced) like that at St. *Esprit*, and it is more bending against the Stream. Some Way on the Bridge stands a Centinel, and the *Avignon* Searchers lodge there, to stop and enquire into Merchants Goods. When we were almost over the Bridge, our Postilion paid about one *Sol* a Horse. At the End of the Bridge is *Villeneuve*, a Village, and a little Way thence on the River Side, S. *Andre*, a strong Place of the *French* King's. Leaving these Places behind us, (without entering them) we rode among some Vineyards, and then travelled a stony Way over little Hills, till we came by *Remoulin*, a small walled Place, about a short *English* Mile thence; we arrived at *Pont du Gard*, a stately Antiquity, well designed by Dr. *Bargrave*, and described in *Golnitz* and *Deyron's* Antiquities of *Nismes*. A League from hence we dined at *Sesignan*, a small Village; and in the Afternoon rode a direct and level Way between Olive Fields, (the Olive-Trees were much mortified by the Extremity of the last Winter) and after three Leagues riding, arrived at *Lutzenbourg*, a good Inn without the City of *Nismes*.

We saw the Amphitheatre, the Outside whereof is very entire, and is two Stories high, the Steps or Seats are ruined, and the *Arena* filled with Houses. Over the great Entrance are two half Bulls in Stone, and on the Outside is a Wolf suckling *Romulus* and *Remus*; also a *Triple* and *Priapus*, or *Penis* winged, and the Figure of a Woman holding by a Bridle. In a private House we saw Eagles excellently well made in Stone; a double Statue of a Woman having two Bodies and four Legs, it was made without a Head, but now they have fixed on it, the Head of an old Man; some will have this to be the Statue of *Geryon*, but *Deyron* contradicts it. A small Piazza call'd *Place de Salamandre*, from a Pillar with a Salamander upon it. *La Maison Quarre* is a fair Antiquity within the City, being one Pile of Building, adorn'd with Statues, Pillars, &c. Within the Port de la *Couronne* are many old Inscriptions, and an ancient Statue with his Hands upon his Head.

After

*PONT-DU-GARD about Four Leagues from Nismes a Stately Antiquity
One Hundred and Eighty Six Feet high from the River A A to the Top of the Aqueduct B B.*

*An outside View of the Amphitheatre at Nismes in L A N G U E D O E
of Sixty Arches and Pillars in each Story.*

Vol. 2. pa. 728.

After a little Walk without the Town, we saw the Ruins of the Temple of *Diana*, which is under the Side of a Rock, and close by is *Fons Dianæ*, which first makes a deep Pond, and sends Water enough to furnish all the Gardens of the City ; in Winter, or any rainy Season it overflows very much. *La Torre Grande*, on the Top of a Hill, is a ruin'd Tower of the old Roman Wall ; in other Places are seen the Ruins of the old Wall. The Circuit of this City was but 2000 Paces less than *Rome*, and was built formerly upon seven Hills. The Front of the Cathedral is adorn'd with ancient Carving. A large Plain or Level round the Town, except on one Side, where several Hills run along in a Hill. The *Splanade* is an open Walk without Port *de la Couronne*, sometimes frequented by a great deal of Company. In the *Maison de la Ville* are kept two or three Crocodiles, (dead) which are the Arms of *Nîmes*, and signify their Founders came out of *Egypt*.

In a Court of this *Maison de la Ville*, is erected on two Pillars against the Wall the Monument of *Dandalo* the General of the Protestants. The Protestants of this City are three Parts out of four, and they had two Temples, but one is lately pulled down : Every Morning they have a Sermon, and in the Afternoon Prayers : On *Sunday* they have four Sermons ; they have three Burying-places without the Walls, and they had a College and Professors, but now the Jesuits are Masters : The Protestants have a Bell to ring them to Church.

Thus far we have followed Mr. *Skippon's* Journey, who, as we observed in the Introduction, suffered nothing to escape him. Whatever he saw remarkable, he committed to Writing immediately, and the Description of it to his Journal ; whatever was particularly curious, he examined more closely, and the Result of his Examination was also committed to Writing. In like Manner he recorded whatever was communicated to him that deserved Notice. All this however was done in a hasty and unpolished Manner, for the Assistance of his own Memory, and not at all with a View, or even with a Suspicion that it should one Day appear in Print.

It was otherwise with Mr. *Ray*, who, though he kept such a Journal as Mr. *Skippon*, yet revis'd and improv'd what he set down in it, and where he had an Opportunity, compared it with the Notes of his Friend Mr. *Willoughby*. He begins his Description of *France*, with an Account of the City of *Montpelier*, to which this Introduction was requisite ; but now we are arrived at a more copious and polished Account of Things, we shall make Use of Mr. *Ray's* Travels so far as they go, and shall then take up with Mr. *Skippon's* Journal again, in Order to supply the Deficiencies that would otherwise appear in the Course of these Travels, and which has hitherto rendred Mr. *Ray's* liable to the Censure of being somewhat abrupt and unconnected. Thus he writes :

9. *Montpellier* is a round Town standing upon a Hill, in the Midst of a stony Country, somewhat bigger than *Geneva*, but not so populous, the Number of Inhabitants at present being about 25000, of which two thirds are Papists, and one Protestants. The Protestants have two Churches (Temples they call them) in Town. The Streets of this City are very narrow, short and crooked, without any Uniformity or Beauty at all, so intricate, that its half a Year's Work to understand them all, and learn the Way from Place to Place. The Houses are many of them, well built of free Stone, which were they set well together in order, would make three or four handsome Streets. No larger Piazza or Market-place in Town. The Number of *Apothecaries* in this little City is scarce credible, there being thirty Shops, and yet all find something to do ; their *Cypress* Powder, sweet Bags, *Cassiolets*, Treacle, Confection al *Kermes*, and *Hyacintha*, having a Name all *France* over. The Queen of *Hungary's* Water (as they call it) made here, is likewise much bought up. It is nothing but common Spirit of Wine, in which *Rosemary* Flowers have been macerated and distilled from the said Flowers. The Wines hereabout are very strong, and bear Water well.

Their Vineyards are of dwarf Vines, without any Support, the Standards, when the Branches are pruned

off, being like the Standards of our Oser Gardens. At *Montpellier*, the best Verdet or Verdegrease, *Viridi æris*, is made. They told us that so good could not be made elsewhere, though they used the same Method and the same Materials ; whether it be to be attributed to the just Temper of Heat, or the Nature of the Wine they use, or some other unknown Quality. The Manner thus ; First, they take Grape Stalks well cleansed from the Raisins, and from all Filth, and putting in the Bottom of a Pot, a Quantity of the best red Wine, they set Sticks cross, a little above the Wine, and upon them lay a Quantity of Grape Stalks, first also drenched in Wine, and let them alone about fifteen Days, more or less, according to the Season, till they come to make (as they call it) a Rose, that is, the Outfides become to Appearance dry, and the Middle only wet.

These Grape Stalks being thus prepared, they put in the Bottom of a large earthen Pot of the best red Wine, that begins to be sour, but is not yet come to be Vinegar, to the Quantity of about two or three Inches Depth ; somewhat above the Wine they set Sticks cross the Pot, and having ready many little Plates of Copper, they lay upon the Cross-sticks, first a Layer of the prepared Grape-stalks, then a Layer of Copper Plates, and so alternately, S. S. S. i. e. *Stratum super stratum*, till the Pot be full. In the Middle of the Pot they usually leave a Hole all along, for the Vapour of the Wine to ascend, neither are the Copper Plates laid near together for the same Reason ; when they have filled up the Pot, they cover it, and set it in a Cellar, and after some five or six Days turn the Copper-plates, letting the Pot remain in the Cellar three or four Days more. In eight or ten Days, according to the Season, the Verdet will be come.

Then they take out the Plates, and laying them six or seven on a Heap, put them in a Trough, and sprinkle the Edges of them with the same Wine, for three or four Days ; next they press them with heavy Weights for four or five Days, and last of all, scrape off the Verdet with Knives, and moulding it with a little Wine, dry it and sell it. The same Plates are again put into Pots, and used as before. So then the Verdet is nothing but the Rust or Scurf of the Copper, calcin'd by the Vapour of the Wine.

Here also we saw the Manner and Process of Blanching of Bees-Wax. First, they melt the Wax in a great Copper Cauldron, then they have ready a Mould or Form of Wood, of the Figure of a Sugar-Loaf, or the Block of a Steeple crown'd Hat, which having besmeared over with Slime of Snails, they dip into the Wax thus melted. This takes up a Skin or Film of Wax, as Candles upon Dipping do.

This they smooth with their Hands, and dip in Water, and when it is cold take it off the Form, from which, by Reason of the anointing the Form with the forementioned Mucilage, it will readily slip in the Form of a Cone or long crucible. These Cones (so let me call them) are set in a Garden in Ranks, singly one by one, supported with Canes or Reeds, crossing one another on this Fashion.

Round about they set Pots with Water, wherewith they sprinkle the Wax often, to keep it from melting. In Summer Time, when the Sun lies hot upon it, some six or seven Times a Day, otherwise but three or four Times. In fourteen or fifteen Days, the upper End of these Cones will grow white, and then they turn them to whiten the other End. In a Month's Time, more or less, according to the Weather, they will become White all over.

Then they melt the Wax again in earthen Pans like *Metæ* or Scuttles, and run it so melted, through the Neb of a Tin Pot, into Water, and as it runs down into the Water, a Man either breaks it with his Hand into Grains or works it into round Figures like spiral

spiral Wreaths, or *Corella*, and these they expose again to the Weather, in the Garden and Order as before, till they become purely white, and then melt into great Pieces to sell. The Mucilage wherewith they besmear the Forms, is made of Snails taken alive, Shells and all, and pounded in a Mortar, till they become a perfect Pap or Viscus. The Form once besmeared well over with this Pap, will last dipping many Times. Wax whitened is almost twice as dear as yellow Wax. Yellow Wax is solutive, and used where there is an Inflammation, and the Sore not ripe; white Wax, on the contrary very astringent. They say *Montpellier* is a Place proper for the Whitening of Wax; and that the same Workmen coming over into *England*, found the Air of a different Temper, and not convenient for this Trade. At *Montpellier* is made the best *Confectio Alkermes*, as Reason there is it should, the Grain which gives it its Denomination, being in no Country of *Europe* found so plentifully as here.

The Manner of the Preparation of this Grain, for the making the Confection, you may find set down in the *Philosophical Transactions*, N^o XX. p. 362, and I shall therefore here omit. These Grains have formerly been thought to have been proper to the Dwarf or Shrub *Ilex*, called therefore *Ilex Coccifera*, and a by Fruit or Excreescency of the Twigs of that Plant. But my learned and ingenious Friend Mr. *Martin Lister*, who hath been very happy in making Discoveries in natural History, hath found the like Grains here in *England*, upon the Twigs of Cherry and other Trees, and judged them to be the Work of an Insect, and by her affixed to the Twigs for Nests to breed and harbour her young; and indeed to me they appeared to be so, easily receding and falling off from the Wood, when the Young are hatch'd and gone. As for the Grains themselves, they are so like the *Kermes* Grains, that they are scarce to be distinguished, and grow to the Twigs just in the same Places and Manner. But for a more full and compleat History of them, I refer the Reader to Mr. *Lister's* Letters published in the *Philosophical Transactions*.

10. At *Montpellier* I observ'd the Manner of making Oil Olive: First, they take Olives, whether fresh gathered or laid awhile on a Heap, it matters not (as they told me) and bruise or grind them to a Paste, as we do Apples to make Cyder, with a perpendicular Mill-stone running round in a Trough. This Paste, or the Olives thus bruised, they put in round thin Baskets, made of *Spartum*, like Frails, having a round Hole in the Top: But both Top and Bottom clapping together, so that when pressed they look like a thin round Cake. Half a Score or more of these Baskets, filled with Olive Pouce, they lay on a Heap in the Press, and letting down the Press Beam, squeeze them at first without any Mixture. Then winding up the Beam they take out the Baskets, and into each one put a good Quantity of scalding Water (which they have always ready) and shaking the Basket mingle it with the Pouce, and then piling them upon one another, as before, press them down a second Time.

This second Operation they repeat again, and then taking out the Pouce, put in new, and proceed as before. The Oil, together with the Water, runs out into Vessels set to receive it. The Water with the *Annurca* sinks to the Bottom, and the Oil swims above it, which they take off with a Copper Dish, like a Fleeting-dish, as good Housewives skim the Cream from their Milk. The Water mixed with the red Juice of the Olive becomes red and thick, not at all mingling with the Oil; so that it cannot easily the least Drop of it, be taken up without perceiving it. It is said, that in *Provence*, they spread their Olives on a Floor, after they are gathered, and there let them rest thirty Days to dry, and for that Reason their Oil is better than that of *Languedoc*. Others lay them on a Heap a-while, to let them sweat as they call it.

It is worth the noting, that, though the Olives be very bitter, and of a very fiery ungrateful Taste, yet the Oil which is drawn from them is sweet, the like is observed in bitter Almonds, and it is very likely might be in all other bitter Fruits, which is a sufficient Proof,

that the Taste of such Fruits doth not inhere in the Oil, at least which is made by Expression; and it deserves Examination, whether the chymical Oil may not also be divested of the Taste of the vegetable, from which it is extracted. Olives when they come to Maturity, change Colour, and become black as some other Plumbs do, but it is very late in the Year first. They are then notwithstanding of an horrid and ungrateful Taste, firing the Throat and Palate of one that eats them. They afford most Oil when full ripe, but best as they told us when gathered and pressed green. Sometimes they pickle ripe Olives, but they will not last; therefore, those which they pickle to send Abroad, are gathered green. The Pickle they use is nothing else but a Brine of Salt and Water.

Near *Peroul*, about a League from *Montpellier*, we saw a boiling Fountain (as they call it) that is, the Water did heave up and bubble as if it boiled. This Phænomenon in the Water was caused by a Vapour ascending out of the Earth, through the Water, as was manifest, for if that one did but dig any where near the Place, and pour Water upon the Place new digged, one should observe in it the like bubbling, the Vapour arising not only in that Place where the Fountain was, but all thereabout; the like Vapour ascending out of the Earth, and causing such Ebullition in Water it passes through, hath been observed in Mr. *Hawkley's* Ground, about a Mile from the Town of *Wigan*, in *Lancashire*, which Vapour by the Application of a lighted Candle, Paper or the like, catches Fire and flames vigorously. Whether or no this Vapour at *Peroul* would in like Manner catch Fire and burn, I cannot say, it coming not in our Minds to make the Experiment.

11. From *Montpellier* we took a Journey of Pleasure to see the adjacent Country, and first we rode to *Frontignan*, a little walled Town by the *Estant* Side, three Miles distant, which gives Name to the so famous Muscate Wine. The Country about this Town, toward the Sea Southward, lies open to the Sun, but toward the Land Northward, it is encompassed with a Ridge of Hills in Form of a Bow, touching the Sea at each End; so that the whole is like a Theatre: In the *Arena*, and on the Sides of the Hills grows the Muscate Grape, of which this Wine is made.

In this Space are contained two other little Towns, the one called *Miraval*, the other *Vich*; this last gives Name to a mineral Water springing near it, much used hereabout. It hath an acid vitriolic Taste, but nothing so strong as our *Spaw* Waters, and therefore I guess the Operation of it is much weaker. At *Frontignan* and other Places, we saw the Manner of making Raisins [*uvæ passæ*], they take the fairest Bunches, and with a Pair of Scissars snip off the faulty Grapes, and tie two Bunches together with a String, then they dip them in a boiling Ley [*Lixivium*] into which they put a little Oil, till they are very plump and ready to crack.

Jo. Baubinus saith that they let them continue so long in the boiling *Lixivium*, *quo ad flaccescant tantum & corrugentur*; but we observed no such Thing, for they did not continue the Bunches half a Minute, but presently took them out again, and washed them in a Vessel of fair cold Water; then they put them upon wooden Poles for two or three Days in the Shade to dry, and after that exposed them to the Sun, taking them in the Night Time, or rainy Weather. *Cyprianus Richovius* describes the Manner of making Raisins in *Spain* thus: There are (saith he) two Sorts of *Uvæ passæ*, or Raisins, the one of those call Raisins of the Sun, of a blue Colour, the other of the *Uvæ passæ Linæ*, which they call frail or Basket Raisins.

In preparing the first Sort they thus proceed; when the Bunch they design for that Purpose begins to grow ripe, they cut the Footstalk of it half asunder, that so the radical Juice or Moisture may be at least in a great Measure detained, and not pass to the Grapes, and so they leave it hanging on the Vine. Then by the Heat of the Sun, the Grapes are by Degrees dried. When they are sufficiently dry, they gather them and put them up in Vessels. The second Sort they make on this Fashion; when they prune their Vines, they

they bind up the Cuttings in Faggots, and reserve them till the Vintage time. Then they burn them, and of their Ashes make a Ley or Lixivium, which they boil in great Vessels, and therein immerse the Bunches of Grapes one by one. Afterwards, to dry them, they spread them upon a paved Floor clean swept, made for that Purpose in the Vineyard, that so they may be more speedily dried by the Sunbeams.

When they are sufficiently concocted and dried, they put them up in Frails or Baskets. After the same Manner they prepare their dried Figs, by dipping them in a Lixivium made of the Ashes of the dried Branches of the Fig-tree, cut off in pruning. But however, they superstitiously observe to make their Lixivium for Raisins, of the Ashes of the Branches pruned off the Vine, &c. I doubt not but the Ashes of any Wood indifferently taken would serve as well for that Purpose.

12. From *Frontignan* we rode to *Balleruch*, to see the hot Waters, which are used as well inwardly as outwardly. At our being there, which was in the Beginning of *September*, the Water was scarce Lukewarm; they told us that in the Winter it was very hot. The Bath is not above two flight Shots distant from the *Estang*, and the Water thereof tastes very salt and brackish, whether by Reason of the Seas being so near it, or because the Water comes from some Salt Mine, I know not; yet the latter seems the more probable, because, should it come from the Sea, the Water straining thro' so much Sand, would probably lose its Salt by the Way, as we have found by Experiment in *England*. At *Gabian*, about a Day's Journey from *Montpellier* in the Way to *Beziers*, is a Fountain of *Petroleum*: It burns like Oil, is of a strong pungent Scent, and a blackish Colour. It distills out of several Places of the Rock all the Year long, but most in Summer-time. They gather it up with Ladles, and put it in a Barrel set on one End, which hath a Spiggot just at the Bottom; when they have put in a good Quantity, they open the Spiggot to let out the Water, and when the Oil begins to come, presently stop it. They pay for the Farm of this Fountain about Fifty Crowns per Annum. We were told by one Monsieur *Beaussofte*, a Chymist in *Montpellier*, that *Petroleum* was the very same with the Oil of Jet, and not to be distinguished from it, by Colour, Taste, Smell, Consistency, Virtues, or any other Accident, as he had by Experience found upon the Coast of the *Mediterranean Sea* in several Places, as at *Berre* near *Martegue* in *Provence*; at *Messina* in *Sicily*, &c.

They make Salt of the Sea-Water drawn into shallow Pools, and evaporated by the Sun-beams, in Summer-time. First, they let the Water into a large shallow Plain, like the Cooler in a Brewhouse, and there being well heated they run it into several shallow Beds, like the Beds of a Garden; when the Sun hath dried up all the Water, they let in more, and so again three or four Times, till the Salt, remaining at the Bottom of these Receptacles, come to be three Fingers thick, and then they take it up with Shovels, and heap it on little Hills; but the whole Process of this Operation being exactly described in the *Philosophical Transactions*, Numb. 51. p. 1025.

I shall forbear to enlarge any further concerning it. Now that I have mentioned *Martegue*, I shall add the Manner of making *Botargo* out of Mr. *F. Willoughby's* Notes. At *Martegue* they take Abundance of Mulletts [*Mugiles* not *Mulli*, as one would be apt to think by the *English* Name] in their *Burdigos*, which are Places in the Shallows inclosed with Hedges of Reeds. The Male Mulletts are called *Allettants*, because they shed the Milt, [*Lac piscium*.] The Females *Botar*, of the Rows or Spawn of which *Botargo* is made. They first take out the Spawn intire, and cover it round with Salt for four or five Hours, then they press it a little between two Boards or Stones, then they wash it, and at last dry it in the Sun for thirteen or fourteen Days, taking it in at Nights.

13. *December 7th, 1665*. From *Montpellier* we made an excursive Voyage into *Provence*. The principal Cities and Towns that we saw were, 1. *Lumel* four Leagues

distant from *Montpellier*. 2. *Arles*, a considerable City, once the Head of a Kingdom, called anciently *Arelates* standing upon the River *Rhofne*, which, a good Way above this City, divides itself into two Branches, and makes an Island called the *Camarg*. All this Island is full of *Vermicularis frutex* growing by the Ditch Sides all along. Beyond this City, in the Way to *Marseilles*, we passed over a large Plain or Level, all over covered with Stones, called now the *Craux* or *les Champs pierreux*, anciently *Campi Lapidei*. 3. *St. Chamas*, a large Burgh, standing upon the Ridge, and on each Side a narrow Hill, which is perforated like *Pausilypus*. 4. *Marseilles*, an ancient City, not great but well built, with tall Stone Houses for the most part, and very populous.

We were told that the Number of Souls was about 120,000. The Streets are narrow as in most of the ancient Towns in this Country, to keep off the scorching Beams of the Sun in Summer-time. The Haven is the most secure and commodious that I have seen; the Entrance into it is so strait and narrow, that a Man may easily cast a Stone cross it, but the Haven within large enough to contain 500 Vessels or more; of an oval Figure. On one Side of this Haven the Town is built, which compasses it more than half round, having before it a handsome Kay well paved, which serves the Citizens for a Walk or Promenade. This Haven is not capable of Ships of above 600 Ton.

On the Rocks near this Town, I found growing plentifully, the same *Colutea* I observed at *St. Chamas*: *Valeriana rubra* Dod. *Carduus galaetites*, I. B. By the Sea-side, *Tragacantha*, *Massiliensium* plentifully: *Aster luteus supinus*, I. B. *Tithymalus myrsinites angustifolius*; *Coronopus Massiliensis*, Lob. 5. *Bausset*. 6. *Oliolæ*, two little Towns. 7. *Toulon*, no great Town, but well fortified, and the best Haven the King of *France* hath on the *Mediterranean Sea*, having a large Bay capable of the greatest Vessels, where there is good Riding for Ships. At *Toulon* they make Holes in their Stone Walls at three or four Foot Distance near the Ground, and there plant Capers, the Fruit whereof they prepare and pickle after this Fashion. They gather the Buds or Blossoms of the Flowers before they be explicated, and spreading them thin, lay them in the Shade to wither for three or four Hours, to prevent the Opening of the Flower. Then they put them in a Vessel, and pour Vinegar upon them, covering the Vessel with a Board, and so let them stand for nine Days, at the End whereof they take them out and press them gently, and put them in fresh Vinegar, letting them stand as long as before: This done the third Time, they put them up in Barrels with Vinegar. Some mingle Salt with their Vinegar, which is the best Way, and preserves the Capers for three Years, both for Colour and Taste, as good at the First.

I observed near *Bausset* great Plenty of Myrtle in the Hedges; near *Oliole*, *Acanthus Sativus*; *Althæa frutescens folio rotundiore in cano* C. B. *Fumaria minor sive tenui folia surrecta* I. B. *Acacia trifolia*; *Teucrium vulgare*; *Arisarum latifolium Chrysocome* Ger. 8. *St. Maxime*; near which is the famous Grot of *Mary Magdalen*, called *St. Baulme*. 9. *Aix*, anciently *Aque Sextiæ*, from the hot Baths that are there. This is a very elegant and pleasant City, well built with fair Stone Houses, having broad Streets and handsome Piazza's. 10. *Selonie*, *Selonie*.

In the *Cordeliers* Church lies buried *Nostradamus* the famous *French* Prophet, whose Verses the *Frenchmen* esteemed as Oracles. In the Church Wall is placed a Stone with this Inscription to his Memory.

D. M. Cariss. ossa M. Nostradami unius omnium mortalium judicio digni, cujus pene divino calamo totius orbis ex astrorum influxu futuri eventus conscriberentur. Vixit an. 62. m. 6. d. 10. Obiit Salo MDLXVI. Quietem posteri ne invidete. Anna Pontia Gamella Solonia conjugi optimo. V. F.

11. *Aiguemortes*, a small Town, but of great Strength, near the Sea, in a fenny Place, six Leagues distant from *Montpellier*. From *Montpellier* we returned to *Lyons*, 8 X.

from Lyons we travel'd with a Messenger to Paris, from Paris again to Calais, and so cross the Strait to Dover; whence we at first set out, and began our Journey.

14. Thus we have run through all that Mr. Ray has left us concerning France; but for the Sake of obtaining more Particulars of that Journey, in which Mr. Ray seems to have been less circumstantial than usual, we shall have Recourse to Mr. Skippon's Journal of their Travels from Lyons to Paris, in which the Reader will find very few Repetitions; and many singular and curious Remarks that, for any Thing I can discern, had escaped the Observation of former Travellers, and are not taken Notice of by any that came after them, more especially the Story which he tells us of the Son of Count St. Geran; which he has related very succinctly, and that has since been made the Subject of a considerable Treatise. It may not be amiss to observe, that the young Gentleman, who thus recovered his Title and Fortune, married, and had only a Daughter, who, by the Interest of the Family, was put into a Convent; by which Means the Estate descended very nearly in the same Way that it would have done, if the Fraud had never been discovered.

March 6, We gave forty five Livres a Man, for Horses to a Messenger, who for that Money maintained us from Lyons to Paris, and allowed him five Sols a Pound, for every Pound our Portmanteaus weighed, above six Pound, which he carried on a Sumpter-horse. By the *Cocbe d'eau*, a Conveyance by the River Soane, we sent some of our Things, and paid but three Sols per Pound. Dr. Moulins, Mr. Lister, Mr. Ray and myself, were in Company this Journey with some Frenchmen. We went through a very stony Way, and passed over Hills, and three Leagues from Lyons passed through *la Brelle* and three Leagues further brought us to our Lodgings in *Tarrara*. This Day we observed Oxen shod with Iron. 7th, We mounted before Day, and rode over the Mountain of *Tarrara*, where we found Snow. After three Leagues riding we came through St. Savorin, and thereabouts observed a perpendicular Stone moved by Water, to bruise Hemp, held underneath by two Boys. Three Leagues further we dined at St. Nicholas in *Roanne*, and there ferried over the *Louvre*, each giving two Sols *Marque*. We passed a pleasant Valley, and four Leagues from our Baiting-place, lodged in *Pas de Quandiere* a small Village.

The 8th, We rode, for the most Part of four Leagues, thro' hilly Way, and dined at *l'Escu de France* in *Palisse*, where the Count de S. Geran hath a House. The present Count came thus to his Estate; his Uncle being next presumptive Heir, made a Compact with a Midwife, who delivered the present Count's Mother, but by casting her into a Sleep, the Midwife persuaded her into a Belief she was delivered of a dead Child; when the Midwife conveyed away the little Infant, who was bred up by a Country Woman, and being grown to some Years, the Countess desired, and took him for her Page, on whom she bestowed very good Breeding; and in the mean Time the Midwife, on her Death-Bed, confessed the Cheat, and declared the Page to be the Countess's true Son. This Discovery occasioned a great Suit between the Uncle and the young Heir; but at last it was determined by the Parliament of Paris, in Favour of the Heir the Countess's Son, who is now Count de St. Geran. Four Leagues from *Palisse*, having traveled good Way in a pleasant Country, we lodged at the St. George, without the Walls of *Warene*, a small Town.

On the 9th, we traveled seven Leagues, and dined at the *Three Moors* in *Moulins*, where many Women came to sell their Scissars, Knives, &c. *Moulins* is an indifferent City, which afforded little of Remark, besides the stately Monument of *Montmorency*, who was beheaded in the *Maison de Ville* at *Toulouse*. The white Marble Statues of the Duke and his Lady lay on a Tomb of black Marble; a fair Marble Statue is on each Side, and over them a Marble Urn, and other Ornaments. We rode seven Leagues from *Moulins* in very good Way, (as we did in the Morning) and lodged this Night without the Walls of St. Pierre de Montier. Hereabouts began stony Causeways. On the 10th, we

rode five Leagues, passed a stone Bridge over the River *Loire*, and dined at the *Flower de-lys* in *Nevers*, where the poor People desired us to buy their Bagatells of Glass. This City is meanly built nigh the *Loire* on a rising Ground, and hath an indifferent fair Cathedral, where are several marble Monuments: The Steeple of this Cathedral is handsomely adorned with Statues. After Dinner we continued our Journey about two Leagues and an half, and tasted of an acid Water springing up plentifully in the Middle of a Court, walled about. This Water is much drank in *August*, and is reputed very good for curing the Stone, &c. It is near *Pogue* a Village. This medicinal Well rises in the Level of a Valley. Two Leagues and a half farther we reached *la Charité* a walled Place, situated upon the *Loire*. Over the Gate we entered at is written,

In Varietate Securitas sub Lilio.

Our Inn was handsome, the Sign of the *Croix d'Or*.

On the 11th, we took Horse about Four in the Morning, and rode three Leagues to *Pouilly*, where we drank very good Wine, which that Place is noted for. Four Leagues thence we dined at *Cosne*, a walled Place, noted for Dogskin Gloves. In the Afternoon we travel'd five Leagues to *Bony*, and one League and an half farther lodged in *Briare*, a small walled Town. At this Place begins a Channel cut from the *Loire* to the *Seine*, the Water being kept up by Locks or Sluices. On the other Side of the *Loire*, in *Berry*, and about two Leagues from *Cosne* is *Sancerre*, a Town situated upon a Hill; formerly a strong Place and well defended by the Protestants about ninety Years ago; they held out so long, that they underwent the greatest Miseries of Famine, some Women digging up their Children they had buried three or four Days before. We met on the Road many *Savoyards*, who were Chimney-sweepers at Paris, &c. They come off the Mountains of *Savoy* in the Beginning of Winter, and return thither in the Spring.

The 12th, we rode four Leagues, and dined at the *Escu de France* in *la Bussiere*, a small Village. Seven Leagues further we lodged in *Montargis*, a City where we saw nothing worth our Observation. An indifferent Castle stands here on a Hill: There is an Archbishop of this City, and the King sends a Governor. In the Road we took Notice of many thatch'd Houses, and many Country-houses with high and steep Roofs cover'd with Slate. The 13th, we travel'd about five Leagues, and had on our Right Hand *Pont a Gasson*, a walled Town, and a League thence dined at the *Angel* or *Maison rogue*, a House that stands in the open Fields. In the Afternoon we went over a Plain sowed with Corn, and five Leagues from our Bait passed by *Milly*, a large walled Place on our Left Hand, and one short League thence arrived at *Corrance*, where we lodged. This Afternoon we saw on our Right the Wood of *Fontainbleau*. The 14th, we rode about a League, and passed among Rocks where Travellers are often robbed. About two or three Leagues farther we saw, on our Right Hand, *Corbilly*, a City in a Valley, with many Villages round it. Seven Leagues from *Corrance* we dined at *Juvissii*, at the Sign of the Golden Lyon. Three Leagues thence we passed through *Ville Juifue*, and there, on the Top of a Hill, had a Prospect of Paris, where we safely arrived after we had traveled two Leagues.

15. On our Left Hand we had a fair Hospital; from *Corbilly* to Paris is a Causeway in a strait Line, and well paved with square Pebbles. Nigh Paris we observed several Stone Quarries. This Stone is of very great Advantage to the City of Paris; for were it not thus plentiful, the Buildings would be but indifferent. We staid in this City till April 1, 1666, too short a Time for so great and remarkable a Place; but the French King's Declaration of War against England commanded us out of France, within three Months after the Proclamation thereof, which was on the 1st of February, N. S.

What I could observe during my Stay here, I hastily put

put in Writing, viz. Every *Wednesday* there is a Horse-market in *Fauxbourg S. Victor*, and every *Saturday* at *Port Richlieu*. At *Mount Martre* is made the Plaister called Plaister of *Paris*, and they have this Saying about it, *Il y a plus de M. Martre à Paris que de Paris à M. Martre*. Cardinal *Mazarine* left a great Legacy to build the College of four Nations, *Italian, French, Spanish* and *German*; a good Part of it was now finished; the Front is stately made, like a Theatre, and it looks upon the *Louvre*, being placed on the opposite Side of the River *Seine*. The *Sorbonne* College is a magnificent Structure. The Doctors wear black Gowns; and when Exercises are perform'd, they wear a white Furr, which hangs athwart the Breast. *L'Hôtel de Ville en la Place de Grave* is an old and fair Building. *Pont Neuf* in the Middle is joined to the Island *Notre Dame* Church stands in. The Brass Statue of *Henry IV.* on Horseback, made by *Bologna* (who is buried at the *Annunciata* in *Florence*) stands in the Middle of the Bridge, having Inscriptions and *Bass relievi*, describing his Victories, &c. *Place Dauphine* is a triangular Piazza built very uniform, and just in Sight of *Henry IVth's* Statue. *Rue de Harlay* is behind that Piazza, where all the Houses are of the same Building. *Place Royale* is an uniform Square, very neat, having a green Court railed about, and a small Portico under all the Houses. *Notre Dame* is a fair Church with a handsome Front, adorned with Statues, and two flat Steeples, from which is a good Prospect of the City. Several Colours hang up in this Church, two of them were taken by the *English*. The *Bastile* is like the Tower of *London*, for Prisoners of State, where the King gives them Allowance. It is near Port *St. Antoine*. The Arsenal consists of many Courts, and has fair Walks in a Garden nigh the City Wall. *St. Germain Auxerrois* is a pretty Church nigh the *Louvre*, and is called the King's Parish Church. The *Thuilleries* is the Garden belonging to the *Louvre*, which they would not permit Strangers to see at this Time. The *Louvre* Gallery is 900 Feet long; under half the Length of it are Stables.

Before the *Louvre* Gallery, not far from *Pont des Thuilleries*, stood an old Tower called *la Tour des Anglois*, which was thrown down the last Year. Some say, the preceding Kings durst not throw it down, because of a Prophecy that *France* should be then conquered. The *Louvre* will be a vast Place when it is finished; that Side towards the River, and the End towards the *Thuilleries* is already built. *Donec totum impleat orbem, and Virtuti Regis invictissimi*, inscribed on several Parts of the *Chesteau de Louvre*. In the Jesuits Church *Rue St. Antoine*, is *Lewis* the Thirteenth's Heart kept in a Golden Case, held up by two Silver Angels. In the same Church is a fair Altar, with about four Brass Figures or Statues, being the Monuments of this Prince of *Conde's* Father. I rode out of the City two Leagues to *St. Clou*, where *Madame Henrietta*, Dutches of *Orleans* our King *Charles* the Second's Sister, hath a Palace and Gardens. In the Parish Church of *St. Clou* is a spiral Marble Pillar, and Inscriptions to *Henry III.* whose Heart is kept here. In a Chapel under the Choir is the old Monument of *St. Clou*; two Leagues thence we came to *Verfailles*, a pretty Pleasure-house built by *M. Fouquet*. Here rare Birds and other Animals are kept, but the *Conceirge* would not let us see them, or the Rooms of the House, because we had no Ticket from *M. —*. In the Room, they say, are Cabinets, are Looking-Glasses, &c. curiously adorned with Silver Fillegree-work. Here I saw *Lewis XIV.* and his Queen, attended by a Foot Company of *Swiss*, armed with Back, Breast, and Head-pieces, a Company of *Swiss* with Halberds, and a Company of *French* Foot, besides his Guard in Livery on Horseback, armed with Carbines. The King has also a Guard of Younger Brothers, who serve him voluntarily, and wear whitish Coats with Silver Lace; they carry Muskets. Out of these the King oftentimes chooses his Officers. The Lord *Douglas* was formerly the *French* King's Page, who at this Time commanded a Regiment of *Scots*, which the King of *England* sent for over upon the Declaration of War between *France* and *England*.

Every *Monday* comes out the *Journal des Sçavans*, a Pamphlet written by one *Mr. Galloyer* a *Parisian*, and but a young Man. *M. Jonquet* is Professor in the King's Garden, which is a handsome large Place; but that at *Montpellier* is bigger and more pleasant. *M. Marchand*, formerly an Apothecary, hath travelled some Parts of the *Levant*, and is very skilful in Herbs; he hath the best *Hortus Siccus* that we ever saw, the Plants being neatly fasten'd on with a Glew, which he freely told us was made thus: Take of *Ithyocolla* and *Ξυλονολλα, ana*; cut these small, and then boil them with *Colocynth*, and afterwards dissolve all in Vinegar. Among the dried Plants, *Medica Ciliaris* and *Ferrum equinum, Siliqua multiplici*, are most remarkable. We met accidentally with one *M. Crock*, a Physician in *Amiens*, who seemed to be a very ingenious Person. In a dirty narrow Street, called *Rue de la Ferranerie*, we saw the Well, which *Ravillac* stood against, when he stabbed *Henry IV.* the King's Footmen, going through *St. Innocent's* Church-yard, which is just by. *St. Innocent's* Church-yard hath many Charnal Houses round about, and it is observable, that none of the Graves there are digged much above one Foot and an half deep, and yet the Flesh of the dead Bodies is suddenly consumed by the Earth, which is of a chalky Nature. When they make new Graves, they sometimes met with whole Coffins, but the Flesh quite consumed within them. In *Lent*-time no Butchers can sell Flesh, the Hospital having the Gain of all the Flesh that is eaten at *Paris* in this Season; which must be a considerable Profit, if they always, as they did this *Lent*, sell Beef at eight Sols per Pound.

St. Eustace is a fair and large Church. *Valdegrace* is a new Church building, at the Expence of the late Queen-Mother of *France*; it hath a handsome Ascent up to it, by several Stone Steps, which lead into a Portico in the Front of the Church: It is made after the *Italian* Fashion, and hath a Cupola between the Choir and the Nave. The Queen's Heart is buried here. The *Carthusians* have a great Cloister in the *Fauxbourg St. Germain*, and have large Walks. *Luxembourg* is a stately Palace, and very uniformly built; it hath fair and large Walks, like those of the *Roman Villa*, where all Persons may walk with Freedom. *Mademoiselle* the Prince of *Conde's* Sister lives here. Every Hour of the Day there passes a Hackney-coach from the *Place Royal* to *Luxembourg-house*; and another Coach goes from *Rue St. Honore* to *Rue St. Jaques*, where the Booksellers live. Every one pays five Sols for his Place, but goes with other Company, and for that Reason it is not usual for Persons of any Quality to go in them. *Palais Cardinal* is a fair Palace with handsome Walks. Here *Madame Henrietta*, Dutches of *Orleans*, lives. At one Side of this House is a publick Stage, where the *Italian* and *French* Comedians act by Turns. I saw here *Il Maritaggio d'una Statua*; a merry Play, where the famous Buffoon *Scaramuccio* acted; three antick Dances pleased the Spectators. The *Quatre Scaramuccie* was another pleasant *Italian* Comedy. We stood in the *Parterre* or Pit, and paid thirty Sols for seeing the first, and but fifteen Sols for seeing the last. We saw a *French* Comedy, entitled, *L'Estourdie*; which was better acted than we expected. We paid for seeing this, and standing in the Pit, fifteen Sols a Man. In the *Marais du Temple* are another Company of *French* Actors, who have Machines to move their Scenes. *M. le Dauphin* hath his Company of Boys, who, they say, act very well. The *Sale des Machines*, in the *Louvre*, is made like that at *Modena*, and by the same Workman *Gaspar Vigarini*; this is larger, and the Roof of the Theatre richer gilt; they say it will hold 5000 People, and that at *Modena* but 3000; one of the Machines moves a Hall with the King and Courtiers. The Sea is well represented in one Machine. Noblemen's Houses are called *Hostels*, and over their Gates are always written the Names of them; as, *Hostel des Ambassadeurs* near the *Luxembourg*. *Hostel de Sully* is in *Rue St. Antoine*; *Hostel de Vendosme* in *Rue St. Honore*. The *Mathurins* are the *Padri di Riscatto*, and are thus called in *Paris*, because *St. Mathurin's* Body

was

was formerly kept here ; which is since carried to the Place where he was born, called *Archant*, a Village in *Gastinois*. In the Cloyster here is a Tomb-stone with a Sphere on it, and round about it this Inscription.

*De Sacro bosco qui compustita Joannes
Tempora discevit jacet hic a tempore raptus
Tempore qui sequeris, memor esto quod morieris,
Si miser es plora, miserans pro me precor ora.*

Clermont College is a square and high Building, that belongs to the Jesuits who teach here, in several Schools, about two thousand Boys, many of whom are Gentlemen's Sons boarded here, having several Halls to dine in, and long Chambers to lodge in. They say about 400 Boys live here in this Manner, and are not suffered to go out of the Gate without Leave. Many of the Scholars wear colour'd Gowns, fashion'd like the Sophisters in *Cambridge*, and have large Velvet round Caps when they learn Logick, and square Caps when they read Philosophy. At a Dispute, we saw the Duke of *Guise*, a young Lad. *Le Palais* is in the same Isle with *Notre Dame*, where the Courts of Judicature sit ; the Lawyers wear black Gowns and square Caps. In the Hall are many Shops and Galleries. One *Varennes* is the only Protestant Bookseller here, who, to signify whether Mass is said or not, hangs out a Pastboard, having on one Side the Letter *N*. and on the other the Letter *O*. for *Non* and *Ouy*. This is taken Notice of by the Protestants that come to the Hall, that they may avoid the Elevation of the Host. *Eschelle du Temple* is a great Ladder that stands in the Corner of a Street not far from the Place where the *Templars* formerly lived. The chief Streets are, 1. *Rue St. Jacques*. 2. *Rue St. Martin*. 3. *Rue Montmartre*. 4. *Rue St. Denis*. 5. *Rue St. Honore*. There are ten *Fauxbourgs* or Suburbs, twenty Gates, eleven Bridges, six hundred Streets in the City and Suburbs, more than thirty-two thousand Houses, and above one hundred Religious Houses or Convents. At the *Gobelins* is a House where Tapestry is made. Nigh Port *St. Honore*, the Lord *Hollis*, the *English* Ambassador, dwelt.

The Fair of *St. Germain* begins the 3d of *February*, and holds all the Lent ; the Place the Fair is kept in, is a large square House with six or seven Rows of Shops, where Customers play at Dice, when they come to buy Things ; the Commodity is first bought, and then they play who shall pay for it. After Candle-lighting is the greatest Gaming ; sometimes the King comes and plays. Here we saw the Picture of our Saviour's Ascension, *St. Peter*, *St. Paul* and two Angels ; it was made by *Antonio Moro*, who lived in *Charles* the Vth Time ; it is valued at 200 Pistoles. The Frame is curiously carved, and very richly gilt. The *Theatins* have a fair Church and Cloister, a Building by the River Side, some Distance below the College of Four Nations. Cardinal *Mazarin* gave a Legacy for the Erecting this Convent. 1. *Pont St. Michel*, 2. *Pont aux Change*, 3. *Pont Notre Dame*, and 4. *Petit Pont*, have Shops on each Side. The *Pont Notre Dame* is a very uniform Street. 5. *Pont Marie*, some Years ago had many of its Houses, at one End, tumbled down in the Night, by a violent Stream of the River. Every one without a Sword pays two Livres that passes over. 6. *Pont de Bois*, which joins the Isle *Notre Dame* Church stands in, to Isle *Notre Dame*, where are new and handsome Streets. An *English* Boat rowed by twelve Men, two of them *English*, in this River, and belongs to the Dutchess of *Orleans*. The King hath one or two Pleasure-boats. Cross several Streets of *Paris* hang little Bells and Chains, which are rung when Thieves break into Houses in the Night-time. The *Chastelet* is a Prison not far from *Pont aux Change*, where Men are clapt up for Debt, and sometimes criminal Matters. Such as are found murdered in the Streets are brought hither, and exposed to View, that they may be known. *Vade in Pace* is a close Prison in Convents, where they keep such as have been professed of their Order, and are turned Protestants. They feed them with Bread and Water, and there let

them lie sometimes all their Days. It is like a Dungeon, having only some Light from the Top, whence their Meat is let down.

16. A *Frenchman*, at the first Sight, is very civil and familiar, and will as suddenly forget his Acquaintance with you ; they will ask you, whether you are of the Religion, *i. e.* Protestant or of the *Eglise*, *i. e.* *Roman* Catholick Religion, the first Time you fall into their Company, and enquire who made your Cloaths, what they cost, and twenty such Questions. If you employ a Porter, &c. and not agree with him before Hand what he shall have, he will go away grumbling, though you give him more than he could have expected if a Bargain had been first made. None but Gentlemen, or such as have been Officers in the Army, can wear Swords, &c. when they travel. The *French* Women are generally bad Housewives, minding their Cloaths, and dressing most, which they will have in the Fashion ; and the Humour of observing Modes must be satisfied in both Sexes, though their Bellies pinch for it ; for in most Families their Diet is both coarse and slender. The Women drink usually Water, and sometimes a little Wine ; they have a Breeding so free, that in *England* we should esteem it immodest, the *Hugonots* as well as popish Ladies, spot and paint their Faces, which, however, some of their Ministers do not approve ; and, in a Word, Women of both Religions, agree but too much in their Morals.

Swearing and Cursing, with the Addition of obscene Words, are customary in both Sexes. Yet there are some Men and Women among the *Hugonots* that are truly religious. Look on a *French* Woman, and you shall see her stare you in the Face, which is a Confidence that better becomes the Men, who seldom or never are put out of Countenance. The *French* are strangely impatient at all Games, especially at Cards, which transport some that lose into a Rage, and they make a dreadful Noise, with Blasphemies, Cursing and Swearing in a horrid Manner. At this Time most People complained of their King's imposing Taxes, &c. yet they seemed to boast of him, and were proud to think themselves Subjects to an absolute Monarchy. Shirking or Sharping is as natural to a *Frenchman* as his Oaths ; and tho' his Carriage be free, yet he is stingy enough of his Purse, and will sooner lose a Friend than a Penny, and small Interests will govern his Affections ; *Exceptis Excipiendis*.

Malefactors receive their Sentences on their Knees, which pronounced, the Hangman presently ties a Rope about their Necks, and conveys them to the Prison ; whence after Confession, they are immediately hauled to the Gallows, so that sometimes they are condemned in the Morning, and hanged before Night. If one hath endeavoured to kill another, and the assaulted Person lives, yet the Justice of *France* will condemn the other to die, taking the Will for the Deed. The Marquis de *l'Ange*, a Protestant, and reputed a stout Man, was divorc'd not long since from his Wife, a very handsome and virtuous Woman. She after some Years complained to her Friends, that the Marquis was not able to get her with Child : This made some Disturbance among the Relations, but at last, when Physicians, &c. had given in their Testimonies, they could perceive no external Fault in either ; it was agreed by both Parties they should prepare themselves, and a Day was appointed by the Physicians to be not far off ; but notwithstanding all the Endeavours of the Marquis, it was concluded by a Decree of Parliament, that they might be divorced. The Lady is since married to another, and hath Children by him, and the Marquis hath another Wife, and hath got her often with Child.

April 7. After Dinner, and just as Mr. Howlett, Dr. Ward, Mr. Ray, Dr. Moulins, Mr. Lister and myself, were going out of our Lodging towards the *Chasse Maree*, a kind of a Cart, that fetches Fish from *Calais*, one of the *French* King's Officers, a Captain de Guet, asked for Monsieur Moulins ; and while he exchanged two or three Words with him, he set his Baston, which he had under his Cloak in two or three Pieces, together ; and presently came in eight or ten Musqueteers, who seized

seized on Dr. *Moulins*, and hurried him away in a Sedan to the Bastile; the Captain first read the Order or Warrant commanding him to apprehend one *Moulins* wherever he could find him. Mr. *Howlett*, Dr. *Ward*, and Mr. *Ray* went away this Day for *England*, but Mr. *Lister* and myself not liking that Way of travelling by the *Chasse Maree*, staid a little longer in *Paris*; in which Time we could not learn any Thing concerning the Imprisonment of Dr. *Moulins*'s, only Guesses were made that his chief Crime was, he had lived too long among the *French* Protestants in *Languedoc*; and that the *French* King suspected he might discover the present Inclinations of that Party after his Arrival in *England*, he being very intimate with some of good Quality, that were discontented with the present Management of Affairs in *France*.

When *Oliver Cromwell* was Protector, there happened this Accident at *Nismes*; the Protestants having a Right to chuse Magistrates, the popish Party were resolved to hinder them by Force on the Day of Election, and had some of the King's Guards, and all the Papists in Arms standing ready about the Town-House; the Protestants also armed in great Numbers, and one Protestant Gentleman being nigh the Door that led into the *Maison de Ville*, had a Pistol in his Hand, and being demanded why he stood in that Posture, answered, to defend their Privileges; then they commanded him to deliver up his Arms, which he refusing, the Guard shot him dead; which gave such an Alarm to the Protestants, that they immediately fired at the Guards and others, and killed the Bishop of *Nismes*'s Nephew, and then turned the Guards, and the rest of the Papists out of the City. After that they began to fortify, and had many of their Friends come in daily to their Assistance, from the *Severnes*, &c. But some more considerate Persons consulting what was to be done, at last resolved to send Dr. *Moulins*, then in *Nismes*, into *England*, and acquaint the Protector with it, and to desire his Intercession with the Court of *France*; so Dr. *Moulins* immediately and privately rode away for *Lyons*, in bitter snowy Weather, and in eight Days arrived in *England*, having first waited upon Lord *Lockhart*, the *English* Ambassador at *Paris*. In this Journey, Dr. *Moulins* rode Post with a *Frenchman*, that seeing the Postboy fall down dead with the Extremity of Cold, opened his Codpiece, and rubbed his *Membrum virile*, with Snow, till he recovered him, which he did in a little Time, and the Boy was able again to ride Post. Dr. *Moulins* staid but a very short Time at *London*, and then returned with Secretary *Thurloe*'s Letters to the *English* Ambassador and Cardinal *Mazarine*; the Postscript of the Letter to Cardinal *Mazarine* was written with the Protector's own Hand; the Words were to this Effect: *As you shew Kindness to the Protestants, so you have me your Friend or your Foe.* Dr. *Moulins*'s, upon his Arrival at *Paris*, delivered the Letters to the Ambassador; within a short Time he attended on the Ambassador to the Cardinal's, who read the Letter, and then had some private Conference with *Lockhart*; after which *Moulins* was called in, who heard the Cardinal promise to the Ambassador, the Protestants at *Nismes* should not be meddled with; and added, Mr. Ambassador, *You know France is not in a Condition to deny England any Thing.* Accordingly, Orders were sent exprefs to stop the Troops which were marching against *Nismes*, and within a Day's March of the Place when they received the Orders.

Dr. *Moulins* sent a Note for some Linnen to our Lodging, and Mr. *Lister* returned by the Messenger a little Billet, which only condoled his Misfortune, but the Captain of the Guard at the Bastile tore it in Pieces. All this while we heard of no Crime laid to his Charge. He was kept a Prisoner at the King's Charge, and well dieted and used. After the City of *London* was burnt, the *French* King sent a Courtier, I think *Rouvingny*, to *Moulins*, to acquaint him he should make any Province in *France* his Prison, if he would give Security in a great Sum of Money not to go out of it, which he said he was not able to give. Some Time after the King offered him all *France* for his Prison,

upon the said Security; to which he answered as before. At last the King sent for him and told him, he had done him no Wrong, and then bid him begone out of *France* within a Fortnight. This Relation I had from Dr. *Moulins* after his Coming into *England*.

17. The *Romish Gallican Church* consists at present of fourteen Archbishopricks, which are, 1. *Lyons*. 2. *Ambrune*. 3. *Auchs*. 4. *Arles*. 5. *Tours*. 6. *Rheims*. 7. *Bordeaux*. 8. *Toulouse*. 9. *Bourges*. 10. *Narbonne*. 11. *Aix*. 12. *Vienne*. 13. *Rouen*. 14. *Paris*. Under these Archbishopricks are Eighty five Suffragan Bishopricks, which contain 7000 Parsonages, Priories, and Parishes, above 1140 Commanderies of *Malta*, 157000 Chapels, besides 557 Abbeys of Friars, and above 700 Convents of *Cordeliers*, exclusive of the *Carmelites*, *Jacobins*, *Augustins*, *Carthusians*, *Celestines*, *Jesuits*, *Minims*, and other religious Orders, who possess 14077 Convents. To these Clergy belong 259000 Farms, and 17000 Acres of Vineyards, which are by them leased out in *France*, not reckoning 3000 Acres from which they take the Third and the Fourth. The Revenue of the said Church is estimated at 920,000 Crowns *per Annum*, exclusive of the Reservations in their Leases, which amount to 120,000 Crowns, consisting of three *Livres* each. The said Calculation was made by order of the Assembly of the Clergy of *France*, held in the *Augustine's* Convent, at the End of *Pont Neuf*, in *Paris* the 16th of November, 1635.

18. April the 1st, Mr. *Poley*, Mr. *Lister* and myself gave eighteen *Livres* a Man for our Places in a Coach-Waggon that holds eight Persons; we had in the Coach with us, one of *Geneva*, (a *Genevrite* as they vulgarly call them) who had lived many Years, and married a Wife in *Venice*; but the last Year the Inquisition took Notice of some that were privately Protestants, and clapped two into Prison. This Man had Intelligence of their Design, and therefore presently retired out of *Venice*, and undertook a Journey for *London*, where he resolved to end his Days. We had also in the Coach, a stout young *Swedish* Soldier, who had stolen away a young Woman; and that Morning we set forward, three *Frenchmen* pretending themselves the King's Officers, attempted to get her away, and carry him to Prison, because he had dressed the Wench he sometimes call'd his Wife, in Men's Cloaths; but the *Swede* outvapour'd them, and turned them down Stairs, and went after them, hectoring them all the Way to the Inn-Gate. When I came to *London*, I met with this *Swede*, and asked him in *Italian*, where was his *Bella Donna*, he replied, he had dismissed her; and said, *Jo Tenge una piu bella*, i. e. I have got a handsomer. This Day we rode through *St. Dennis*, four Leagues from *Paris*, and four Leagues further lodged in *Beaumont*, a little Town situated by the River *Loazzo*. We observed some few Vineyards this Day. 2d. We travelled four Leagues, and dined at the White Cross in *Tilliar*, and three Leagues further lodged in *Beauvais*, a large Town, but the Houses low, and built of Wood.

The Royal Manufacture here employs four or five hundred Men in weaving Tapestry, having several Looms in long Chambers; and Painters are invited thither to draw the Pictures that are to be woven. We observed those that weave have the Picture they work just underneath the Tapestry they are weaving. The Cathedral in this City was not finished. The Choir is built like those in *England*, very high and handsome within and without: There is a large Piazza in this Town. On the 3d, after six Leagues riding, we dined at *St. Puy*; then three Leagues brought us to *Pais*, a Village where the Duke of *Crecqui* hath a Castle. On the 4th, we went five Leagues, and dined in *Airaines*, a great Village, and after Dinner rode four Leagues more to *Abbeville*, a large Town with wooden Houses. Good Guns and Pistols made in this City. There are likewise three or four large Piazza's here. *St. Ulfranc* is the chief Church, a lofty stone Building, not finished. The River *Soanne* crosses the City in three Places; little Vessels of 80 Tons come up hither, the Sea being but

three Leagues off. Between *Airaines* and *Abbeville* we passed by a Fort. On the 5th, we rode five Leagues, and dined in *Berneil*, a Village five Leagues thence, and lodged in *Montrevil*, a Garrison Town indifferently built, but well paved and fortified; where we entred, there was a treble Wall, and good Ditches, and where we went out, was a steep Descent into a marshy Ground. On the 6th, we travel'd two Leagues, very bad Way, to *Fran*, a small Village; and after Dinner rode hilly Way five Leagues to *Boulogne*, a City built on a Hill. The Suburbs called the *Basse Ville*, where we lodged; a little Sea-port here. All the Way, in this Journey from *Paris*, we bargained for our Meat before Meals, and at Night did the like, or else bought it out of the Cook's Shops, paying only for our Lodging, Use of Table-linnen, &c. in the Inn. *Piccardy* is a great Corn Country.

On the 7th, we rode bad hilly Way, three Leagues to *Marquise*, a Village, and four Leagues further to *Calais*: Half a League before we came into the Town, we descended into the Fenny Country about it. We passed also by a strong Cittadel, and among many little Cottages, which are used, as some told us, for Pest-houses in Time of Infection. Entering *Calais*, the Guards only examined how many *English* and *French* we were in the Coach. On the 8th, after taking a Passport from the Judge-Major, and our Things searched, we delivered our Passport without the Gate, and entering the *English* Packet-boat, sailed two Hours S. W. to gain the Wind; and in three Hours, without once changing Board, we safely arrived at *Dover*, a Boat fetching us a Shore. The Author concludes his Journal with this Inscription.

P. S.*

19. These Travels of Mr. Ray and Mr. Skippon may prove both useful and entertaining to the Reader in many Respects, not only though they were written so long ago, but even from that very Circumstance. They show the Condition that *France* was in at that Time of Day, the Size and the Number of the Inhabitants in several of the principal Cities, and above all, the Situation of Things before the Edict of *Nants* was recalled, and the Protestants were obliged to quit that Kingdom: This will afford the Means of making many useful Comparisons to Persons who have their Heads turned for rational Politicks, and ground their Opinions of Kingdoms and States, not upon the loose and general Representations of the ordinary Rank of Writers, but upon Observations of their own, founded in Facts that may with Reason be concluded certain. As for Instance, our Author last-mentioned gives us the State of the Clergy in *France* at the Time he was there: I will also give another short State of it as it now stands, from a Book published with Royal Authority: There are at present, in the Dominions of the *French* King, 18 Archbishopricks, 113 Bishopricks, 770 Abbeys of Men, and 317 of Women, to which the King names: There are besides 250 Commanderies of the Order of *Malta*, which shows not only the Power of the Clergy in that Kingdom; but also the Power and Influence of the Crown over the Clergy.

We may learn likewise, from these Travels, some very curious Circumstances with respect to Manufactures and Commerce. Those Things that appeared so new and singular even to these great Men, are now very common in this Kingdom. We are no Strangers to the Art of making Verdigrease; and, as for the Art

of Blanching or rather Bleaching of Wax, it is not only known, but practised here with as great Success as Abroad; so that the Notions of peculiar Excellencies of the Climate or Water of *France* appear to have had no Foundation in Nature, but were the mere Chimera's of *French* Vanity; and there is no Doubt that, upon proper Experiments, the same Thing will be found true in other Cases. It is, indeed, highly likely that these Travels occasioned our looking into and transferring several *French* Manufactures hither; and therefore this Kind of Writing ought, of all others, to be encouraged.

There was an Attempt made in King *James* the First's Time, to introduce the Silk Trade into this Kingdom, and a Plantation of Mulberry-trees was raised for that Purpose at *Chelsea*; but it failed, not because the Thing was found impracticable from any Faults in the Soil or Climate, but because those concerned in the Project, wanted Steddiness, and those employed under them, Care and Industry; without which, nothing of this Kind can be ever brought to bear. I have been informed, that in *Hampshire* some Trials of the like Nature have been made with great Appearance of Success; but those that were concerned made such a Secret of their Proceedings while living, that the Thing could not be conveniently carried on after their Decease. It has been likewise asserted, that Olive-trees might be cultivated in at least five of our Southern Counties; but we delight, it seems, rather in having Rarities in our Gardens, than Riches in our Fields.

The *French* had that Notion too, as well as we, but *Henry IV.* the very best King they ever had, beat them out of it, and compelled the Inhabitants of the poorest Provinces of *France*, to become wiser and richer in Spite of their Teeth. He made Use of his Power to make his Subjects happy; and desired it, for no other Purpose, as appears from an Answer he made, when it was slyly insinuated to him in Prejudice to the Protestants, that he could do nothing in *Rochelle*, which was then in their Hands. *It is a Mistake*, said the King, *I am absolute in Rochelle, for I can do there just as much Good as I please.* His Successor dragooned the Protestants out of *France*, though the most industrious People in it, because they were not of his Religion; but *Henry IV.* dragooned his Subjects of all Religions into planting Mulberry-trees, and making Silk. One, from a Principle of publick Spirit, obliged People to do what they ought against their Inclinations, because he knew it was for their Good; the other from a narrow and bigotted Spirit, drove People out of his Dominions, who were doing all the Good they could.

But there is no Need of making Use of Force here, another Method would do the Business much better. A Reward of Ten Thousand Pounds for the first Hundred Weight of Silk, or the first Hogshead of Oyl, upon Security given to make the like Quantity annually for twenty Years after, might bestow upon us both Commodities, if it be possible for us to enjoy them; if not, the Reward would never be obtained, and therefore no Hurt would be done.

We find, in these Travels, a remarkable Point of secret History; I mean the Protector's saving the City of *Nismes*, and that from the most authentick Authority, with many other Things which we might look for in vain any where else. But with regard to Matters of a later Date, which come nearer our own Times, and that may better enable us to judge of the present State of *France*, it is necessary that we should have in this Collection, Travels of another Nature, and in another Season, which the Reader will find in the next Section; and, from the Perusal of both, will be more instructed and better entertained than they could have been with either, if it had stood single.

SECTION IV.

TRAVELS through *France*, interspersed with historical, political and medical Observations, made with great Care and Circumspection, in two different Journeys through that Kingdom, the last of which was compleated in the Year 1702, and the Whole revised by the Author a little before his Death.

By Doctor JOHN NORTHLEIGH, of the Royal College of Physicians.

1. *A short Introduction. The Author's Entrance into the Kingdom of France. The Places he passed through in his Journey to Paris.*
2. *A large and curious Description of that City, with an Account of the principal Edifices and other Things remarkable, observed therein by the Author.*
3. *A very copious and circumstantial Description of the University of Paris, and of the several Colleges of which it is composed.*
4. *A Description of some of the principal Churches in this City; also of the Houses belonging to the Jesuits.*
5. *The Abbey of St. Germain's described, with some Account of the Curiosities there.*
6. *The Palais, the Chappel of St. Louis, the Palace of Luxemburg and the Observatory described.*
7. *An Account of the Bridges in Paris, with some historical Remarks.*
8. *The Place de St. Victoire, and the Triumphal Arch erected to the Honour of Lewis XIV.*
9. *An Account of the principal Gates of this City.*
10. *A Description of the French King's Country Palaces, particularly Fountainbleau, St. Germain's, and Marli.*
11. *A more particular Description of Versailles, and some other Palaces not far from it.*
12. *A Description of the Monastery of St. Dennis, where the French Kings are interred.*
13. *The Author's Journey to the Sea-Coast through Pontoise, Roan, Dieppe, Abbeville and Calais.*
14. *The Author's Journey from Paris by Charrienton to the Banks of the Loire, with his Observations in his Passage.*
15. *Nevers, Moulins, and other Places described, with some Account of the Waters of Bourbon.*
16. *A Description of the City of Lyons, of the most remarkable Buildings, and other Curiosities there.*
17. *This Subject continued with an Account of the adjacent Country.*
18. *The Author's Remarks on the French Government and Nation.*
19. *Some Observations upon the foregoing Section.*

I. **WE** are acquainted with very few Circumstances relating to the ingenious Gentleman, who was the Author of these Travels. He was bred at the University of Oxford, as Mr. Wood informs us, and traveled through the greatest Part of Europe, purely for the Sake of Improvement and Information. He entered France from that Part of the Low Countries now under the Dominion of the French Monarchs, having before passed through the Territories of the Republick of the United Provinces, which he has also described; but considering we have inserted Travels through that Country already, we shall not fatigue the Reader with Repetitions, but give him at once our Author's own Account of the Places he passed through in his Way to Paris.

The first Place we came to in France, properly so call'd, (without its Conquests) was *Peronne*, formerly a Frontier Town towards *Cambray*, and well fortified after the old Way, being the first on that Side in *Picardy*. Here the Custom-house Officers searched us as strictly as if we had first set Foot into the French Territories, though we came out of the French Conquests, and had paid Duties there to the same King. It is seated upon a Level on the River *Somme*, not unlike our *Salisbury*, but in Bigness approaching near to *Exeter*, in that Part of *Picardy* called the *Vermandois* or *Sans-terre*; the first being the Situation of the ancient *Veromandue*; *St. Quintins*, which is not far off, being supposed to have been the *Augusta Veromanduorum* of *Cæsar*.

From *Peronne*, passing through the little Village of *Marlipo*, we came to *Roy*, formerly a Town of Note, (as its Ruins sufficiently testify) seated on the River *Moreul* in the *Sans-terre*; then taking our Way through the Village of *Gourney*, surnamed *Sur le Arondeburg*, in the Isle of France, we came to *Pont* surnam'd *St. Maixence*, upon the River *Oyse*, having an old strong Wall, and a good Bridge that brings you to it cross the River. From hence travelling three Leagues further, we came to *Senlis*, a Bishop's See, Suffragan to that of

Reims; some would have it the *Augustomagus* of *Ptolemy*. The Great Church, dedicated to the Holy Virgin, is supposed to have been built by the English. The next Town betwixt this and *Paris* is the *Louvre*, seated in the Dukedom of *Valois*, once the Sirname of the Royal Family, before it was swallow'd up in the House of *Bourbon*. *Picardy* has generally a pleasant and fertile Soil.

2. Thence we came to *Paris*, the Metropolis of France, which some have compared with *London* for its Extent, Buildings, and Number of Inhabitants. As for its Circumference, the same is easily discover'd from off the Towers of their *Notre Dame* or *Our Lady's* Church, to be much less than our's, though it lies in a more circular Figure. The Houses, it must be confess'd, look very handsome on the Outside, being built with a fair white Free-stone (found thereabouts) with handsome Sash-windows.

The Number of its Inhabitants is, in my Opinion, best guess'd at, without any further Scrutiny, by the People you meet with in the Streets, especially on the *Pontneuf*, the greatest Passage in *Paris*, and that a very short one, notwithstanding which, you shall very rarely see near so many People there, as you meet every where walking all along from *Tower-hill* to *Westminster-Abbey*: Add to this, that their By-Streets and Alleys are not near so throng'd with People as ours in *London*; and if Trade is the main Thing that renders Cities populous, (as we see in those of *Holland*) it is evident that our Metropolis challenges the Preference upon that Account. What some would alledge in Reference to the Number of Coaches in *Paris* is of no great Consequence, though I am apt to believe we may carry it even upon that Account.

This so much celebrated City is seated in a most delightful Plain; their Houses are generally six or seven Stories high: By common Computation *Paris* has betwixt thirty and forty thousand Houses, and about seven hundred thousand Souls.

The Streets are much handfomer and less dirty than they were formerly, (which gave it the Name of *Lutetia*) and their Squares are exceeding noble; they are enlightned in the Night-time by Lanthorns hung on Lines. The whole Bulk of this spacious City is divided into three Parts; the first is called *la Ville*, containing the four Suburbs of *St. Antoine*, *Du Temple*, *St. Martin* and *St. Denis*, being encompass'd with the *Sein* on one Side, and Walls on the other; the second is call'd *la Cite*, seated betwixt the first and the third, upon what is properly call'd the *Isle*, surrounded by the Branches of the before-mentioned River, and joyn'd to the rest by Bridges, being the most ancient part of the Town; the third Part is called the *University*, seated on a rising Ground, containing the Colleges erected for the Promoting of Learning, and the *Fauxbourgs* or Suburbs of *St. Germain*, *St. Michael*, *St. Jaques*, *St. Marcell*, and *St. Victoire*.

The Suburb of *St. Germain* has the best Palaces and Colleges. For the rest; in all the three Quarters are reckoned forty Parish Churches, forty two Abbeys and Convents, forty Nunneries, twenty four Hospitals, forty eight Colleges, besides seventeen Chapels; so that Charity and Religion seems to take up a considerable Part of this great City. The *Sein* passes through the Middle of it, and the Water is very sweet and fresh here, but has no Tide, like our *Thames* about *London*. So much of it in general. We will now proceed to give you the Particulars. The *Louvre*, were it finish'd according to the first Design, would questionless exceed all Structures in the World, whereas now only two Sides are compleated, *viz.* that towards the *Sein* and *Thuilleries*, the Hotels of *Crequi*, *Longueville* and *Montausier* being since built within the Compass of this Structure, which for this and some other Reasons (amongst which the Siding of this City, with the Malecontents in this King's Minority is none of the least) is suppos'd will never be finish'd, it being certain that the third Part of the Charges employ'd in Building of *Versailles*, would have made this as compleat and magnificent a Structure as ever the World beheld: Some say *Philip the August* was the first Founder of it, above 500 Years ago, but the Fabrick, as it now stands, oweth its Rise to *Francis I.* The Hall call'd *le Salle de Cent Seifs*, formerly the Hall of Audience for Ambassadors, was by *Mary de Medicis* turn'd into a Playhouse. On the Porches you see several Inscriptions, sufficiently demonstrating that the *French* were always good at flattering their Monarchs, though they then did not come up to that Height as they have since, in bestowing the Epithet of *Viro Immortali* and other such-like blasphemous Expressions upon them. Upon this Occasion I cannot forbear inserting three Distichs made by the *French* Poets, exceeding for their Loftiness the Structure itself:

Rex, Regnum, atque Domus, tria sunt Miracula Mundi!
Rex animo, Regnum viribus, arte Domus.

Non orbis gentem, non urbem gens habet ullam,
Urbisve Domum, Dominum nec Domus ulla parem.

Louvre Domus, Dominus Ludovicus, Regia Rege
Digna suo, Cælo est hæc minor, ille Deo.

All the Antiquities and *Roman* Statues, with a most curious Cabinet of Paintings formerly preserv'd here, are transported to *Versailles*; there are however some Pieces left of *le Brun's*, and that celebrated Piece of *Paul Veronese's* Wedding of *Cana*, presented to the King by the Senate of *Venice*; for the *Servi*, in whose Church it stood on the Altar, having sold the same to the *French* King, the Senate hearing of it, to check these mercenary Monks, presented it to the King. Their Academy for the cultivating and improving the *French* Tongue, instituted by the present King's Father, consisting of forty or fifty of the most ingenious Persons of the City, is kept here ever since. Many of the chief Artists belonging to the King have their Apartments in this Palace; their chief Painter then was *M. le Brun*, since dead; their head Graver was *Girardon*; and for Sculp-

tures, Medals and Coin, *M. Rotier*, whose two Brothers have the Honour to serve in the same Employment to the Kings of *England* and *Spain*. And not far from these they shew you another spacious Place call'd the *Guard meuble*, stor'd with all Sorts of Paintings, Tapestries and curious Cabinets.

The *Thuillery* is also a Part of the *Louvre*, where it faces the fine Garden of the *Thuilleries*; it was formerly furnish'd with Abundance of the best Painting, and other Movables of the best Workmanship, which have been carried to *Versailles*: That Part which fronts the Garden is a long beautiful Piece of a Fabrick begun by *Henry IV.* and compleated by *Lewis XIV.* The Theatre in it is exceeding noble, and the Gardens before it not inferior to any in *Europe*, not excepting even *Versailles*; the Walks and Plantations whereof are indeed more costly, but not more delightful and regular. At the lower End of it, stands a noble Statue of *Verity* carried off in the Arms of *Time*, with this Inscription;

Opus Petri à Frankavilla Comeracensis, Ann. 1609.

There are divers excellent Pieces extant of this great Master.

The Royal Palace, call'd *Palais Royale*, does also belong to the King, being the ordinary Residence of the Duke of *Orleans*, the King's only Brother, when in Town; it is compos'd of two fair Courts, with a delicious Garden behind it; Cardinal *Richlieu* was the Founder of it, who also built here a Theatre on Purpose for Tragedies, of which he was a great Admirer; but since *Moliere* had Liberty to act his Comedies there, and after his Death the Opera's were acted in the same Theatre. The *Place-Royal* is a vast Square, open towards the Street of *S. Honore*, intended chiefly for the King's Statue, which is to be put in the Middle, for which Reason they have demolish'd the *Hotel de Vendosme*, and ruin'd the Convent of the *Capuchins*.

Near this is another Structure call'd *le Palais Brion*, design'd for a Library, but since turn'd into two Academies, *viz.* for Architecture and Painting; the first erected by *M. Colbert*; *Mansard*, *Perault*, *Blondel* and *Felibien* were Members of it; they meet two or three Times a Week to consult about the most curious Models in Architecture that can be contriv'd. That of the Painters acknowledges *M. Noyers*, Secretary of State, for its Founder, but *M. Colbert* for its Restorer; of this *M. le Brun*, their great Painter, was President. They keep here a good Collection of original Paintings of some of the best Masters, Statues, Busts of ancient *Roman* Sculpture to design by; besides which, they hire every Day some clean-limb'd Man or Woman, who expose themselves naked to their view. The House, known by the Name of the *Cabinet du Roy*, contain'd formerly great Store of curious Pictures, Medals, Agates, and such-like Rarities, as also the *Anticalia* found in *Childeric* the First's Tomb at *Tournay*, with his Library, and a considerable Collection of Manuscripts, among which was *St. Cyprian's* Work, brought thither from *St. Lawrence's* Library at *Florence*; but these are for the most part now at *Versailles*.

The Academy of Sciences was likewise founded by *M. Colbert*; they are employ'd in promoting Mathematicks, Physick, and natural Philosophy, like our *Royal Society*, which exceeds theirs both in the Number of its Members and Advancement of Learning. They have many Nobemen's Houses of Note, call'd by them *Hotels*; that of the great *M. Colbert*, now in the Possession of the Marquis of *Seignelay*, is a very noble Fabrick, and his Library is most exquisite, both for its Number of good Books and curious Manuscripts; they shew you a Manuscript Bible as old as the Reign of *Charles le Chauve*; the famous Historian *M. de Thou* has also left the Publick an excellent Library. Most of their Noblemens Palaces of Note are furnish'd with very good Collections of Original Pictures by the most excellent Hands, which they have purchas'd for the most Part from the covetous *Italians*; among these the *Palais Mazarin*, and the *Hotel de Seignier*, deserve to be particularly remembered;

membered; the first is noble without, and curiously furnished within, with Statues and Paintings both ancient and modern, of the Hands of *Grimaldi* and *Romanelli*, two famous *Italian* Painters, sent for hither upon that Account; the King has taken the best of them, yet there are many Cabinets, Tapestries, and other rich Vessels of Stone and Silver, left. The second was also excellently well furnish'd with all Sorts of Curiosities, and particularly with precious *China*-works of all Sorts, but since sold or distributed.

The *Recolets* have a very good Library, and some excellent Paintings: Hard by is the Hospital of *St. Lewis*, founded for those that are infected with the Plague, by King *Henry IV.*, but at present is made use of for the Sick of the *Hotel de Dieu*. In the Street of *St. Avoye* is an old large Palace belonging to the *Grand Prior* of *France*, but formerly appertaining to the *Knights Templars*; it has a considerable Revenue annex'd to it. In the Street of *St. Lewis* is a noble Fountain, adorn'd with *Tritons* and other such-like Ornaments.

Their *Maison de Ville* or *Townhouse* stands in the Place called the *Greve*, built by King *Francis I.* Neither the Place nor Structure are answerable to the Greatness of such a City as *Paris*; however, there is a noble Way leading to it, enlarg'd in 1675, with Causeway-banks on both Sides.

The *Place Royal* is a magnificent Square, near as spacious as our *Great Lincoln's-Inn-Field*, enclos'd with *Piazza-Walks*, and the Platform with Iron Rails; the Statue of King *Lewis XIII.* set up by Cardinal *Richlieu*, stands in the Middle of it, with several Inscriptions on it in *French* and *Latin*; the Horse is said to be the Work of *Volterre* a famous *Italian*, who made it for King *Henry II.* The said Cardinal's House stands in the same Place, having among other Curiosities an excellent Collection of Paintings.

The *Bastile* is a Place not unlike our *Tower*, surrounded with a plain Wall and eight antique Turrets, and serves for the same use, viz. for a Magazine and a Prison for Prisoners of Quality. There is another very good Arsenal not far from this, a spacious Pile of Building, three great Courts and a Garden; the Portal is supported by Cannons instead of Pillars, with this Inscription in Capitals:

*Ætna hæc Henrico Vulcania tela ministrat,
Tela Giganteos debellatura furores.*

Here many Workmen are employ'd by the King, to cast Statues and other Works in Metal.

The Abbey of *St. Victoire*, in the Possession of the *Canons Regular* of *St. Austin*, is one of the most ancient Foundations in *Paris*; it has a good Library, and some Manuscripts; and Students are permitted to make use of them three Times every Week. The noted Mr. *Santeuil* belong'd both to this House and Order. The *Jardin Royal* or *Physick Garden* (of which Mr. *du Verney*, an excellent Anatomist, was Surveyor) is maintain'd at the King's Charge, and Botanick Lectures are kept there during the best Season for Plants; it is something longer, but not broader, than that of *Oxford*. There also belongs to it a very good Anatomy-School, stored with Skeletons of Animals, and among the rest with one of a very large Elephant. In the King's Laboratory every Body is admitted to see the Operations, and the Medicines made here are bestowed upon the Poor.

Near it is the *Hospital General*, as they call it, a vast Pile of Buildings, finish'd in 1657, by Cardinal *Mazarin*, and containing near six thousand poor People, who are employ'd here in different Sorts of Work, and when sick well look'd after. Another of their Hospitals is that call'd *Hotel Dieu*, a very large Building, but neither handsome nor extraordinary convenient, being sometimes overcrowded with Sick, and too closely built up round about it. As it is the chief Hospital in *Paris* for the Sick, the Nuns of *St. Austin* are oblig'd to tend and look after them, which they do with so much Tenderness sometimes, that they don't care much

to return to the Nunnery's; for, not long before, a certain *Irishman* being recovered by the Care of his pretty Nurse, made shift to carry her away without being ever heard of since: The Danger and Trouble that must needs be the Attendants of this Employment, making the same very meritorious among the *Romanists*, the Ladies of the first Quality sometimes employ themselves in these Acts of Piety; and it was in this Place that (not long before) the Dutches of *Nemours*, Mother to the Dutches of *Orleans*, got the Small-pox, and her Death into the Bargain. Not far thence is the Hospital *de la Charite*, where the Friars of *St. John* perform the same Office as the Nuns do in the former: Each Room has three Rows of Beds.

There is another Hospital in *Paris* they stile *The Incurable*, because only such as are past Cure are admitted into it.

But what exceeds all the rest is, the *Hotel Royal des Invalides*, or the *Royal Hospital* for maimed Soldiers, or those render'd unserviceable by Age, founded upon the same Design as our *Chelsea Hospital*, built at the present King's Charge, from 1670 to 1678. The whole Structure is composed of five Quadrangles, one large one in the Middle, flank'd with two other square ones on each Side, with *Piazza's* and Corridors or Galleries round them all; the whole Fabrick being of fine hewn Stone, makes a very noble Appearance. The Kitchen is very large and handsome, and in their Refectories (where the Soldiers eat) you see most of the Sieges undertaken in the late Wars by the *French*, painted on the Walls. The Apothecary's Shop belonging to this Place is the best contriv'd and as well furnish'd as any I ever met with in all my Travels. The Soldiers are attended here by the Sisters of *St. Lazarus*. Considering the Freedom allow'd to Strangers, to be present at their Operations perform'd in all their Hospitals, the Advantage of their Chymical Lectures, Physick-Garden, and frequent Practise in Anatomy, *Paris* seems the most accomplish'd School for young Physicians, and to be preferred in this Respect to *Leyden*, *Padua*, *Montpellier*, *Cambridge*, and *Oxford* itself. The House known by the Name of the *Gobelins*, in the Suburbs of *St. Marcell*, was formerly famous for the making and dying of the best Scarlet Cloths; but now divers Sorts of the best Workmen are employ'd here at the King's Cost and Profit, in making the finest Tapestry, Plate, Mosaic, Iron, Copper and Bras-Works, Statuary, Sculpture, Embroideries, &c. These Suburbs have a Church dedicated to *St. Marcell*, where you see the Tomb of the celebrated *Peter Lombard*.

3. The University of *Paris*, which makes up one third Part of the whole, is worth the Curiosity of a Traveller; they make it as ancient as *Charles the Great*, and say it was he encompass'd it with a Wall; hence it is that they celebrate a certain Day to his Memory, when all the Heads of the University meet at the College of *Navarre*. Formerly the University of *Paris* had more Colleges and Students, the Number of the first (where publick Exercises are perform'd) is at present reduc'd to eight or nine, among which the *Sorbonne*, the College *du Plessis*, that of *Navarre* and of *Harcourt*, are the chiefest: They had also formerly the Privilege of being exempted both from the civil and criminal Jurisdiction of *Paris*, which is now little regarded.

The chief Things profess'd here are Divinity, Physick, Law, and Arts, or Philosophy; for each of these they chuse, four Times a Year, a *Rector* or *Professor*: The *Sorbonne* and the College of *Navarre* are the most considerable for Divinity. The Schools for the Civil Law are in the *Rue de Bauvais*, lately new model'd by the King's Orders. The Physicians have a fair Anatomical Theatre in the *Rue de Bouchiere*; and their College call'd *de quatre Nations*, (i. e. of four Nations) viz. those of *France*, *Picardy*, *Normandy*, and *Germany*, is dedicated to their Faculty of Arts.

The *Sorbonne* has got its Name from *Robert de Sorbonne* its Founder, formerly a plain and ordinary Fabrick, but now turn'd into a magnificent Structure, chiefly by the Care of Cardinal *Richlieu*; it has always been famous for its learned Professors, ever since its

first Foundation, which was under the Reign of St. Lewis, as the Inscription on a Brass Plate in the Church testifies ;

Ludovicus Rex Francorum, sub quo fundata fuit Domus Sorbonæ, circa An. Domini MCCLII.

The Professors and Students are lodged in the Apartments about the great Quadrangle.

The Library is kept in a handsome and lofty Room, much increased by the Liberality of the said Cardinal, especially with some Manuscripts, distinguished with his Arms upon them. Among other curious Pieces, they shew you two large Volumes of *Livy*, an old Translation of antiquated *French*, written in the Reign of *Charles V.* embellish'd with Paintings in Miniture on Vellum ; which Art has been lost above two hundred Years ago. They have good Store of Divinity Works, and all Translations of the Bible. The Picture of the Cardinal their Benefactor hangs at one End of the Room, at Length, in his Habit ; and, at the other, stands his Bust in Brass, done by the excellent Hand of *Varrini*. The Fathers and School-Divines are regularly placed one after another, with their respective *Annotators* in the Rows underneath. After they have frequented the publick Lectures for three Years, they are qualified for the Degree of Batchelors, who wear Lambskins and Tippets like our Batchelors of Arts at *Oxford* ; after two Years more, they may be promoted to the Degree of Licentiate, who generally are the Opponents to such as take the Degrees of Doctors. I was present at some of their publick Exercises and Disputations, which were managed with a great deal of Decency and Order. The Subjects on which most generally they exercise themselves are, the Sacrament, the Transubstantiation, Trinity and Incarnation, which in the *Roman Church* being look'd upon as the sole Object of Faith, even in Contradiction to Sense and Reason, I could not but admire to hear the Opponents urge oftentimes such Things as are accounted and declared heretical among them.

The College of *Navarre*, the next in Rank, acknowledges King *Philip the Fair* and his Queen for its Founders, as the Inscription under the Statues testifies. Formerly none but Noblemen's Children were admitted here, but now all Sorts, without Distinction. They have four Professors in Divinity, and the Archbishop of *Paris* is President of it. In 1684. the Magistrates of *Paris* founded an annual Panegyrick for this present King, on St. Lewis's Day.

The College of *Harcourt* is a large Structure near the *Sorbonne*, where continual Exercises are held for inferior Forms of Students in Logick and Philosophy ; they print their *Theses*, and dispute categorically, without confining themselves strictly to Syllogistical Rules. The College of *Plessis* was restored by Cardinal *Richlieu*, being as it were the Nursery of the *Sorbonne*, who always place a Governor of their own College over it. The Faculty of Arts for the four Nations is a different Foundation from the College of the *Quatre Nations*, these Artists having peculiar Houses allotted them, and chuse each, every Year, a President of their own Nation.

The College of the *Quatre Nations* acknowledges the Cardinal *Mazarin* for its Founder ; the Portal hath this Inscription :

*Jul. Mazarin : S. R. E. Card.
Basilicam, & Gymnas.
F. C. A. MDC.LXI.*

It has a double Court, and a good Library of the Cardinal's own Collection, which is open to every body at certain Hours in the Day. The Number intended by the said Cardinal's Will were sixty, viz. fifteen from about *Pignerol* and the adjacent Parts of *Italy*, fifteen for the *Alsatian Youth* of *Germany*, twenty for those of the *New Conquests* in the *Netherlands*, and ten for *Roussillon* and *Catalonia* ; but neither the Structure nor Institution is compleated yet. As the Doctors of

the *Sorbonne* are Governors of this College, so their Books in the Library treat of the Cannon and Civil Law, mixed with Abundance of School-Divinity.

The *College Royal*, founded by *Francis I.* for Law, Physick, Mathematicks, and the Oriental Languages, was carried on farther by King *Henry IV.* *Mary de Medicis*, and *Lewis XIII.* though not brought to Perfection ; the Professors receive their Salaries from the King, without any Dependence on the University. It is seated near St. James's-street and the College of *Cambray*.

4. The *English Roman-Catholics* have a good Nunnery and Convent of the *Benedictines* in *Paris*, founded in 1657. In the Nunnery many young Ladies of Popish Families are educated. Among their Churches, the Cathedral called *Notre Dame* challenges the first Rank, an antique *Gothick Structure*, compleated at several Times, more strong than noble, a very ancient Bishoprick, founded (as they say) by St. *Dennis* not long after the Apostles Time, but made an Archbishoprick so late as 1622, by Pope *Urban VIII.* In the Choir you see divers good Pieces of Painting and rich Tapestry, and Abundance of Gold and Silver Plate for their Altars : It has about fifty Canons belonging to it, among which was once the famous Historian *Paulus Emilius Veronensis*, whose Tomb is to be seen in one of the little Chappels.

The next is the *Jesuits Church* ; on the Front of their College you see these Words in Capitals, *Collegium Ludovici Magni*. This Society was first introduced into *Paris* by *du Pratt*, who presided at the Council of *Trent* for *France*, and afterwards proved a great Benefactor to them, as well as that famous and unfortunate Minister of State M. *Fouquet*. The Library, which was his Gift, is a very good one, both for Number of Books and Manuscripts, among which are many *Protestant* and *Socinian* Authors. These Fathers have another College in the Street of St. *Anthony*, the Church whereof is a magnificent modern Structure, carried on in Part by Cardinal *Richlieu*, under the Reign of King *Lewis XIII.* whose Heart is entombed here, as well as that of *Henry de Bourbon Prince of Conde*.

They have lately built another in the Suburbs of St. *Germain*, called the *Novitiates*, the Church whereof is but small, but the Architecture most excellent ; it was built at the Charge of M. *Noyer*, Secretary of State. The Church of St. *Genevieve*, with its regular Canons, is said to have been founded by King *Clovis*, who has an old Tomb here, which has been embellished of late Years, for they have put on his Head a Crown with a Flower de Luce, whereas those Arms were not till long after used by the Crown of *France* ; just as in some other Popish Countries I have observed our Saviour painted with Beads and a Rosary in his Hands. They have also put a modern Inscription upon the old King's Tomb. But the chief Ornament of this Church is the Tomb of that great *French Philosopher Des Cartes* ; it has two Inscriptions, one in *French Verse*, the other in *Latin*.

The Apothecary's Shop belonging to the Convent, and the Library, are neatly disposed, where they have ancient Busts, Coins, Medals, and other Antiquities : Father *Molinet* has a curious Collection of Rarities of his own ; and the famous Architect Father *Creil* was a Member of this Convent. In the Monastery of the *Jacobins* is to be seen the Monument of *Humbertus*, the last Prince of *Dauphine*, who having no Issue, sold this Principality to *Phil. de Valois*, and, embracing a monastical Life at *Lyons*, became first Prior of this Convent, and afterwards Patriarch of *Alexandria*, as the Inscription tells you.

5. The Church of the *Carmelites* is, for its Antiquity, not inferior to any in *Paris*, being supposed to have been founded by St. *Dennis* ; it now contains the Heart of the *Great Turenne*, and has divers excellent modern Paintings and other Ornaments within. That called *Val de Grace* is both a modern Institution and Structure, after the *Italian*, founded by Queen *Anne* of *Austria*, upon the miraculous Birth (as they stile it) of the present King, after she had been married twenty-two Years : Her Heart, as also that of our *Henrietta Maria* Dutches,

Dutchess of Orleans, lies entomb'd here. The *Altar* and *Cupola* are exceeding fine, and upon the *Portal* you see these Words,

Jesu nascenti Virginique Matri.

All the Nuns are of noble Extraction, and chuse a Lady Abbess every three Years : Madam *la Valliere*, once the King's Mistress, retreated to this Nunnery, to do Penance for her past Miscarriages.

In the ancient Abbey of *St. Germain* are the Tombs of many of their ancient Kings, who us'd to be buried here, before the Time of the Inroads made by the Northern Nations, as of late at *St. Dennis*. That of *Chilperio* has only these few Words, in a very old Character, on a plain Stone,

Rex Chilpericus hoc tegitur Lapide.

But that this was but Part of his Tomb, is evident from the Inscription on a broken Tombstone dug up since in another Place ; which shew how much in those Days, they were afraid of being disturb'd in their Graves.

Hic jacet Chilpericus Francorum Rex.

Ego Chilpericus Francorum Rex precor ut inde in Æternum non auferentur ossa mea.

Queen *Fredigonde*, who died in 601, is also entomb'd here ; and *Clotharius*, and the second Son to *Chilperic*, of the same Name with his Father, with their Wives. Among the modern Monuments chiefly remarkable are that of the Duke of *Vernouil*, Prince of *Bourbon*, natural Son of King *Henry IV*, who was Bishop and Abbot of *St. Germain*, but afterwards relinquishing the monastical State, married the Dutchess of *Sully*. Here is also interr'd the young Duke of *Bourbon*, Son of the present King of *France*, and *Casimir* King of *Poland*, who after having resign'd his Crown, died Abbot of this Place ; their Epitaphs and Inscriptions are too long to be inserted. Here are buried also some of the Family of *Douglas* of *Scotland*. They have a very good Library here, formerly accounted one of the best in *Paris*, and which still has the Reputation of excelling all the rest in Manuscripts, except the King's. They pretend to have the *Psalter* of *St. Germain*, which he generally used at divine Service, and a Missal of nine hundred Years old, written with a Stile on little Tables of Cedar. They shew you a great Volume brought by a *French* Ambassador from *Constantinople*, with Attestations of most of the Bishops of the *Greek* Church, concerning their Belief of Transubstantiation, which they produce as an undeniable Proof against the Opinion of the *Protestants* ; though to speak the Truth, it is very probable that these good Fathers might do much out of Complaisance both to the King and the Ambassador, nothing being more observable among the *Greeks* than to accommodate themselves, both in Discipline and Doctrine, to those among whom they live ; as is particularly remarkable at *Rome* and *Venice*.

The Fathers of this Abbey formerly publish'd a very good Edition of *St. Austin's* Works, from the best Manuscripts in *Europe* ; and Father *Dachery*, of this House, has sent Abroad divers Volumes of his *Specilegium*, containing many Curiosities and Antiquities taken out of their Manuscripts. They tell you, that the Church being built in the same Place where stood anciently the Temple of *Isis*, a Statue of which Goddess remains on Part of the Walls, a simple old Woman was seen to worship it for a Saint, which the Fathers having had Notice of, they broke it to Pieces.

6. Another of their publick Structures is what they call *le Palais*, because in old Times it was the Residence of their Kings, but by King *Philip the Fair* appropriated for the Assembly of their Parliament. The Hall in which anciently their Kings used to perform their greatest Solemnities is very spacious, and arch'd, with the several Courts of Justice in particular Chambers about it ; the ancient Chamber of private Audience is now the Room where the Remainers of their ancient

Parliaments assemble when the King has any Thing of Moment to propose to them ; it opens always on *St. Martin's* Day, when the Members attend in the Great-Hall in their Scarlet Robes. Here is also kept the Court of Aids, which has a separate Jurisdiction from the Parliament ; their *Court of Chancery*, and the *Chamber of Accounts* are the same as our *Exchequer Court* ; they plead by Way of Bill and Answer, Plaintiff and Defendant, but in a more summary Way than in our *Court of Chancery*, much like our Civil Law Courts of *Judicature* ; though at the same Time there are not wanting Instances, that their Suits have been protracted for a great many Years. Here all the *Patents* of the Peers are registred, as well as their *Charters* and other *Records*.

In the Chapel of *St. Lewis*, belonging to the Lawyers, they shew you Abundance of Relicks, which they vouch for authentick ; as, the Sponge dipt in Vinegar and Gall ; the Head of the Spear wherewith they pierc'd our Saviour's Side, and the Purple Robe entire, though at *Rome* they shew with the same Assurance a Piece of it. Near this Palace is the Square call'd *la Place Dauphin*, of a triangular Form, built immediately after the Birth of *Lewis* the XIIIth, which gave it the Name *Dauphin*.

The *Palais de Luxembourg*, or *Palais d'Orleans*, built by *Mary de Medicis*, is one of the most regular and magnificent Structures in *Paris* ; Mademoiselle *d'Orleans* has her Lodgings on one Side, and the Dutchess of *Guise* on the other, in whose is that famous Gallery of Paintings of *Mary de Medicis*, representing her whole Life, from her Nativity to the End of her Government, the Work of the excellent *Paul Reuben*, who, they say, bestow'd two whole Years upon it ; her Meeting with *Henry IV*, just before Marriage, he all in Armour, and she dressed with all imaginable Advantage, and the most beautiful and amorous Looks in the World, is a most exquisite Piece : The same Dutchess has most of her other Apartments curiously furnish'd with the choicest *Italian* Pictures, among these the wandring *David*, by the Hand of *Guido Reni*, is most excellent. The Gardens are suitable to the Magnificence of the Palace, and open for publick Walks.

The *Observatory*, built by the present King for Astronomical Observations, is a vaulted Fabrick, without either Wood or Iron-work, three Stories high ; besides which, you descend by two hundred Steps into a Cave with little Alleys, from whence there is a Prospect thro' the very Top of the House to the Sky, in Order to observe the Motions of the Stars by Day ; but this Contrivance has not answer'd Expectation, no Stars being to be seen there, but the Light only, which they impute to the not passing of any Stars through the *Zenith* of *Paris* ; but it is something strange that this Defect should not have been foreseen by their Artists ; though otherwise the Building is better contriv'd than ours at *Greenwich*.

Near it is the *Tour de Charpente* or the *Timber Tower*, all of *Carpenters-work*, for the fixing of their Tubes and Telescopes ; *M. Cassini* is the chief *Supervisor* of all this Business, the same who was *Professor* of *Bologna*, and made that famous *Meridian Line* in one of the Churches of that City ; he has a very good Salary allow'd him by the King, and deserves that Reputation he is in with the Publick, and if possible a greater.

7. Among the Bridges of *Paris* there are only three worth taking Notice of ; the first is, the *Pont-Royal*, or *Royal Bridge*, a strong plain Piece of Stone-work, but lately built cross the *Sein* to the *Thuilleries* ; in 1685, a Silk Bag of Medals was lodg'd in some of the Masonry of it, to perpetuate the Memory of their *Lewis le Grand* ; it was included in a Cedar-Box, with a blue Sattin, and the Arms of *France* upon it : One of these Medals was very large, of Copper gilt, besides twelve others of Gold and Silver ; one among them had for its Motto, *Germania servata* ; another, *Jussit Quiescere* ; another *Rbeno Batavisque unâ superatis* ; and on another is represented *Jupiter*, with this Motto, *Vibrata in superbos Fulmina*, and underneath, *Genua emendata*. What Vanity !

The

The second is the *Pont Notre-dame*, charg'd with Houses something like our *London Bridge*, but not near so big. The next to this is the *Pont Neuf* or *New-Bridge*, a curious Fabrick, (though not near so large as that of *London*) first begun by King *Henry III.* but finish'd by his Successor *Henry IV.* whose Statue on Horseback stands upon it much beyond the natural Size; it is a most excellent Piece of Workmanship of *John of Bologn*, an *Italian* Artist, but descended from *French* Parentage; it has several Inscriptions about it, relating to some memorable Actions, and the Battles of *Ivry* and *Arque* are represented in *basso relievo* upon the Pedestal, on each Angle of which lie four Slaves of massy Brass.

8. That noble Monument, erected in the Place of *St. Victoire*, to the Memory of their present King, by the Care (if not at the Cost) of the Duke de la Feuillade, is certainly the most excellent Piece of Statuary that can be beheld either in *Italy* or any where else, and the *French* boast, that it exceeds all that ever were made of this Kind, not excepting even those erected to the *Greek* and *Roman Emperors*. The King's Statue is of massy Brass, thirteen Foot high, in his Robes, with a *Victory* standing behind him, of the same Bulk and Metal, crowning him, poised with his Foot on a Globe; under his Feet is a three-headed *Cerberus*, to denote the triple Alliance over which he triumphed, at the Foot whereof you see these Words, *Viro Immortali*, the last of which they explain of the *Immortality* of his Fame. The whole was cast all at once, and weighs above thirty thousand Pound. The Pedestal is twenty two Foot high, which, with that Part of the massy Mould the Statue stands on, being three Foot, and the Statue itself thirteen, makes this superb Piece about thirty eight or near forty Foot high. Upon the Pedestal rest four Slaves of Brass, much beyond the natural Largeness, with *Basso relievo's* of his Battles and Conquests. It stands in a very spacious Square, and to render it the more uniform, they demolished many Houses, and the Duke pull'd down Part of his Palace. The Statue itself is enclosed by stately Iron Grates that environ a Floor of Marble; and a Centinel is always placed near it. The grand Inscription upon it runs thus:

*Ludovico Magno
Patri Exercituum
& Ductori
semper felici,
Domitis hostibus, protectis sociis,
Adjectis Imperio fortissimis populis,
Exstructis ad Tutelam Finium firmissimis Arcibus.
Oceano & Mediterraneo inter se junctis, præ-
dari vetitis toto mari Piratis: Emendatis
Legibus. Deletâ Calvinianâ impietate;
Compulsis ad Reverentiam Nominis
Gentibus remotissimis, cunctisq; summâ
providentiâ, & virtute domi forisq;
compositis.*

*Franciscus Vicecomes d'Aubusson, Dux de la Feuillade
ex Franciæ Paribus, & Tribunis Equitum unus in
Allobrogibus Prorex & prætorianorum peditum
Præfectus.*

*Ad memoriam posteritatis sempiternam.
P. D. C.*

Besides this, there are several Verses, some for the Statue, some relating to the historical Part represented in the *Basso relievo's*; as for Instance, that relating to the Statue.

*Tali de ore ferens, orbi & sibi, jura modumq;
Dat Lodoix, famamq; affectat vincere factis.*

There are divers others upon his Passage of the *Rhine*, the Peace of *Nimeghen*, the *Dutch* and the *Germans*, but that on the *Genoese* for Haughtiness exceeds all the rest.

*Vane Ligur, frustra; animis elate superbis;
Justitiam monitus disce, & non temnere Divos.*

The *Triumphal Arch* was, at the Time of my being there, not brought quite to Perfection; but if you will believe the *French*, it is to exceed all of that Nature in *Europe*, whether ancient or modern: It is true, the Design promises something very noble; the Models consist of two Faces of an extraordinary Height, with three Portals, after the Manner both of the ancient and modern *Romans*; the Orders of the Columns are finely designed, and the Captives and Trophies most exquisitely done, by the famous *Perault*, who translated *Vitruvius*. The King's Statue on Horseback is designed to be placed on this Arch.

9. The other Gates of the Town (as many *Triumphal Arches*) are all proud Pieces of Architecture; that of *St. Dennis* (which leads to the Place of the same Name) is above seventy Foot high, and as many over, adorn'd with Columns, *Basso relievo's*, and Trophies, with some Inscriptions relating to the Passing of the *French* over the *Rhine*, and their taking of *Maestricht*. The Gate of *St. Martin* is fifty Foot high, and as many wide, having on each Side an Inscription relating to this King's Actions. The third Gate is that of *St. Anthony*, erected in King *Henry* the Second's Time, but new embellished by the City, with some Inscriptions likewise relating to the present King. The *French* boast, that *Cæsar* makes Mention of this City, and that he laid Siege to it, being then enclosed betwixt the two Branches of the *Seine*, the same that is now called the *Isle*. Some of their Historians add, that *Cæsar*, after the Conquest of *Gaul*, had his Head-Quarters here, and built several Castles on the *Seine*. They all agree in that Point, that the Name of *Lutetia* was given it by the *Romans*, from its Situation in a moist dirty Soil, betwixt the two Branches of the River; the modern Name of *Paris*, being deduced from *Paris*, one of the Kings of the *Gauls*.

This City is much more gay and splendid in outward Appearance than wealthy within, nothing being more frequent than to meet with Beggars that appear in Habit like Gentlemen. It has few or no Pumps, most of their Waters being preserved in Cisterns. I took particular Notice here of two Medals that went about at that Time, made in Spleen to Pope *Innocent XI*; one represented our Sir *Edmund-bury Godfrey* strangling, with this Motto, *Jussu Pontificis*; the other had his Holiness's Head or Bust on one Side, and an Altar, Pix and Chalice turn'd topsy-turvy on the other, with this Inscription, *Pontificis quis credat opus?* Another I met with at the same Time no less odd than the two former, having the King's Bust on one Side, and a broken Column on the Reverse, on the upper Part whereof hung a Scroll of Parchment with these Words written upon it, *Edictum Nancii reversum*.

10. *Mezeray* says, that *Paris* was first paved and walled under the Reign of King *Philip II.* surnam'd the *August*; and near it the *French* King has many Palaces, where he resides at Pleasure: That called *Fountainbleau*, seated in the *Isle* of *France* among Woods, is of an irregular Structure; but its convenient Situation for Hunting makes the Court frequently retire thither in the Summer-time. Its Fountains and Canals are very good, and it has one noble spacious Hall, the rest of the Apartments being neither large nor magnificent enough for a Royal Palace, though some very good Paintings are to be seen in them; in the Queen's Gallery the Conquests of *Henry IV.* are excellently well done in *Fresco*; and in the Gallery de *Cerfs* underneath this, you see all the Royal Palaces of *France*, with Landships of the Country round them curiously painted; not to mention the Paintings in the King's and Queen's Cabinets. The Chapel Royal is also a very good Fabrick, and well adorn'd.

In their Play-house is to be seen a curious Marble Chimney-piece, representing the Battle of *Ivry* fought by King *Henry IV.* The Gardens are beautified also with Statues; and formerly a good Library belonged to it, since removed to *Paris*. The most noted Apartment in this Palace, is what they call the *Salle de Conseil*, famous for the Conference occasioned by *M. du Plessis's* Book against the Mass, in which the celebrated

M. Perron

M. Perron (afterwards Cardinal) pretending to shew at least five hundred false Quotations, a Conference was appointed to be held in this Room on May 14, 1600, in the Presence of King Henry IV. the President de Thou, and the famous Isaac Casaubon; the first for the Romanists, and the last for the Protestants: The first Day was spent in examining only nine, and each Party challenging the Victory, the Conferences were discontinued; Du Plessis afterwards publishing a Treatise upon these Debates, the same was answered by Perron.

The Palace of St. Germain, seated on a rising Ground near the River Sein, about four or five Hours from Paris, and one from Versailles, is built in the Nature of a Castle, surrounded with a dry Ditch; a noble Stone Gallery runs round the Middle of the whole Structure, which is of an oval Figure: The Covering of this Pile is of flat Free-stone, each Stone being three Foot long, two broad, and three Inches thick: On one Side of the Garden is a most delicious Terras-walk, with the River running under it, 3350 Paces long; and on the other Side it is flank'd by a most delightful Wood. I found hereabouts the wild *Genista Hispanica*, or *Spartum Hisp. Clus. Chab.* or the Spanish Broom, and the *Onobrychis Spicata*, commonly call'd by us *Saintfoin*, brought from France first, where it grows wild. In the Garden I observ'd, among other curious Plants, the *Agrifol. Odoratum*, a smooth Holly with sweet-scented Flowers.

The Chateau Neuf was built by Henry IV, upon the Brow of the Hill near the other, its Gardens descending by Degrees down to the River; here are to be seen the noble Ruins of Grotto's, Cascades, and Waterworks. About an Hour from hence is Marli, a most delightful Summer-seat, built by the present King (rather gay than magnificent) at the Head of a Canal, with several Houses along the Side of the Water for the Courtiers; they were then busy in cutting a Way to it through an adjacent Wood. Near this Palace, on the Sein, is that so much celebrated Waterwork of Marli, by which the Current of the River is, by the Help of an Engine-mill built upon it, forced over two or three vast Hills, by Iron Pipes of half a Foot Diameter, jointed into one another, and several laid by the Side of one another, every Stroke of the Mill throwing a vast Quantity of Water into the Basons on the Hill, which from these Basons is convey'd by such another Mill higher, over all the Eminencies, when gathering into a small Lake, the same by Aquaducts furnishes with sufficient Quantity of Water both Marli and Versailles.

11. Versailles, the most beautiful Palace in Europe, is seated in a dirty desert Ground; that Side which faces the Stables is not suitable in Magnificence to the rest, as that which fronts the Garden surpasses all that can be imagin'd sumptuous; its Roof glittering with Gold, affords a glorious Prospect at a Distance; and the Garden for Statues, Canals, Groves, Grotto's, Fountains, Waterworks, or what else may be thought delightful, far surpasses any Thing to be seen of this kind in Italy; and its Riches and Beauty within are altogether answerable to its Outside. The Royal Cabinet for Medals, Coins, Painting, and suchlike Curiosities, has the Choice of all Italy could afford. The King's Lodgings are enrich'd with Utensils of massy Plate, even to the Bedsteads, Balusters and Rails: The Gallery towards the Side of the Garden is the noblest that ever I beheld in my Life, for its most delicious Prospect, Statues and Looking-glasses plac'd between the Pannels. The modern Paintings in this Palace are for the most part of Mignard, Poussin and le Brun, among which the Battles of Alexander are highly esteem'd. At one End of the Garden is the Place where they breed all the foreign Beasts and Birds the East and West-Indies afford: And what they call the Trianon is a cool Retreating-Place for the King after his Walks, suitable in all Respects to the rest.

About two Leagues thence M. Louvois, the late prime Minister, had erected a noble Palace with vast Cost, the Ground rising into a pleasant Terras, with fine Gardens behind it. Near Paris there is another of the King's Houses, call'd Madrid, both unfurnish'd and unfinish'd;

they tell you that it was built by King Francis I, who having promis'd to pay his Ransom at Madrid, gave it this Name, and carrying the whole Sum thither, paid the Spaniards with this Equivocation instead of Money.

Hard by it, viz. at Ruel, a small Town, stands a pretty little Palace built by Cardinal Richlieu; it is neither stately nor magnificent, but has very neat Gardens and curious Waterworks.

About two Leagues from Paris, on the Ascent of the Hill of St. Cloud, is another of the King's Houses, where the Duke of Orleans sometimes resides for his Diversion; the Gardens are very pleasant, the Galleries very beautiful, and some of the Paintings very good: It was here that King Henry the III^d was stabb'd, by one Clement a Monk.

12. In our Tour to Roan, Diep, and the Sea-coast, we pass'd through St. Dennis, about a League from Paris, famous for the Sepulchres of the French Royal Race, and the Abbey built by King Dagobert, formerly call'd Catullia, but since dedicated to St. Dennis, the Areopagite, whose Body lies inter'd here; though the Monks of the Convent of St. Emeran, near Ratisbon in Germany, dispute that Point with them, and positively affirm, that they have the whole Body, and those of St. Dennis only a Finger. They boast here of the Sepulchres of several other Saints, as of their King St. Lewis, St. Hilary Bishop of Poitiers, St. Hypolito one of the sanctified Martyrs of the Thebean Legion, and one of the Innocents murder'd by Herod's Command. The most remarkable among the Tombs of the Royal Family are those of Francis I. and Lewis XI. Here you see also the Tomb of the Great Marshal de Turenne, placed by the the King's Order (but at the Charge of his Nephew) in a Marble Chapel built for that Purpose; he lies at full Length, surrounded with Laurels and Trophies in Relief, with a Roman Eagle at his Feet retreating as it were backwards, with display'd Wings at the Sight of his formidable Enemy: For though this Abbey is chiefly design'd for the Sepulchres of the Royal Family, yet by the King's Favour, such of his Subjects as have signaliz'd themselves in his Service are also sometimes interred here. There is a Cross of massy Gold on the Altar seven Foot high, set with Diamonds and the best Pearls, and a Table of Gold, the Altar itself being also plated over with Silver.

13. From hence we pass'd on to St. Pontoyse, an inconsiderable Place, seated upon the River Oyse, which rising in Picardy, runs a little below it into the Sein. The Country of Normandy betwixt this Place and Roan is champaign and extremely fertile, especially in Apples, of which they make excellent Cyder.

Roan is the Metropolis of Normandy, and one of the Cities of the second Rank in France; its Situation is upon the Banks of the River Sein, at the Foot of a Hill, and to the opposite Bank you pass by a handson Bridge of Boats, two hundred and seventy Paces long, which being pav'd, rises and falls with the Tide; below it you see the Pillars of an ancient Stone Bridge, beaten down some Years ago by the Violence of the Current; something lower Ships of about two hundred Tun can ride with Safety: Near the River-side stands a very ancient Castle with Turrets, now the Residence of the Governor. Two other Rivers (viz. the Robbee and Reinelle) run also through this City, which has two Churches remarkable; the Cathedral, dedicated to our Lady, exceeds in Beauty and Regularity that of Paris; here you see the Tomb of John Duke of Bedford, Regent of France in King Henry the IVth's Time, but the Monument is not answerable to the Grandeur of so high a Person. The Church of St. Toin is also a lofty Structure, but chiefly famous for its great Bell. The Streets of Roan are narrow, and their Houses for the most part of Wood and Plaister-work; here it was the English burnt the Maid of Orleans; this Place was the Rotomagus of the Romans, and the Residence of the Dukes of Normandy; it is at present a Bishop's See, and was lately a Place of very good Traffick.

From hence we travel'd through a very good Country and bad Road to Diep, a pretty little Sea-port Town,

the Streets whereof are more spacious and regular than those of *Roan*; they are very ingenious here at working in Ivory. The little Harbour lies betwixt two Cliffs, and the River *Arquo* runs into it; anciently it was known by the Names of *Julia bona* and *Deppa*, and then strongly fortified; it has still a good Castle and Wall. From *Diep* we continued our Journey through a little Place called *Eu*, seated upon the River *Bresse*, which being the common Boundary on that Side betwixt *Normandy* and *Picardy*, discharges itself into the Sea about a League below it.

Near the River's Mouth we saw on the Cliffs another small Town call'd *Criel-port*, and so passing through *Franchewille*, came safely to *Abbeville*, a poor old Town, meanly built and extremely dirty, in that Part of *Picardy* they call *Ponthieu*. They are noted here for making Guns and Pistols, but they are rather fine than serviceable. It is seated upon the River *Somme*, which falls into the Sea near *St. Valery*, from whence Barks can come up to this City. Before the *French* had made themselves Masters of the Province of *Artois*, this was a Frontier Town of a considerable Strength, and inaccessible in some Parts, being almost surrounded by the Fens. It is also a Bishop's See.

From hence we travel'd by the Way of *Hesdin* to *Calais*, from whence we could discover the chalky Cliffs of *Dover*; it is of no great Compass, but regularly fortified, and strengthened with a good Cittadel; the Town-house is but small, but the Market-place spacious. Some Antiquaries would have it to be the same mention'd by *Cæsar* in his *Commentaries*, under the Name of *Portus Iccius*, which some again explain of *Boulogn*, others of *Doway*. The Loss of it by the *English* is alledg'd to have been the chief Cause of our Queen *Mary's* Death.

The Doctor's Second Journey.

14. As you travel from *Paris*, in a Kind of *Dutch Treck-schuyt* along the River *Sein*, you pass by *Charenton*, a curious little Place, seated on the Banks of the *Marn* and *Sein*, and once famous for the Privileges the *Protestants* enjoy'd there. Above it is a neat House belonging to *Mademoiselle*. In the next Place is *Corbeil*, of no great Consequence, the *Castrum Corbolum* of the *Latins*, call'd by *Cæsar* *Josedum* or *Metrofedum* on the *Sein*, where its Waters are mix'd with those of the *Juin* or the *Estampes*.

Higher up, on the River, you see another little Place, about four or five Leagues from *Corbeil*, call'd *Melun*, (the *Melodunum* of the ancient *Romans*) which gives Title to the Viscounts of a very ancient Family. Here the River *Sein* dividing into two Branches, makes a little Island, which you pass by two good Bridges. The Barge, which carries you from *Fountainbleau* down the River to *Paris*, being drawn by three or four Horses, runs in ten or twelve Hours, sixteen of their Leagues, or about forty eight *English* Miles. In the Woods thereabouts I took Notice of the *Milysophillum*, *Orobanchæ*, *Rapum Genistæ*, Ger. Park. *Cariophillum olens*, C. B. our *Broom-rape*, *Polygonatum*, *Latifol. vulg.* C. B. the *Solomon's Seal*, besides all Sorts of Spurges of the *Essula* and *Tythimalus* kind.

The next Place we came to from *Fountainbleau* was *Nemours*, having nothing remarkable, except that it gave Title to the ancient Dukes of that Name. Near it is the Abbey of *Surcasson*, of the Order of *St. Bernard*. Here we observed the Women of the Town (even such as were in very good Habit) to come to the Inns to collect Alms from Travellers for the Poor.

From hence we travel'd on to *Montargis*, an old walled Town, but of no great Note, except that being Part of the *Demesnes* belonging to the Crown; it gives Title to the King's Brother, who is Duke of *Orleans* and *Montargis*; it has, however, a very ancient Church, with curious Pillars, and an antique Castle built in the Midst of Ruins: The present King's only Brother has laid the Foundation of a Church here; but it remains unfinished, there being nothing compleated but a small Portico, in which, on a black Tablet of Marble, is a *French* Inscription with Golden Letters, intimating, that

he laid the first Stone of this Church in 1677, in Memory of his Victories obtain'd in the Battles of *Montcassel*, *St. Omer* and *Buchar*.

From *Montargis* we continued our Journey to *Briare*, whither Cardinal *Richlieu* caused a Canal to be brought from *Blesneau*, a Tract of twenty Miles, and thereby made a Communication betwixt the *Loing* (which falls into the *Sein*) and the River *Loir*, so that by the Help of Sluices, Boats can pass through all three; the Banks of the *Loir* lying all along on the Flats, as you see near the Sea-shore, make it a very pleasant River. Near it we found the *Cariophyllus marinus*, Ger. Hob. *Juncus* C. B. or the *Sea-Gilliflower*, which is rarely found in Inland Countries, but commonly in Salt Marshes near the Sea-side.

15. From hence we pass'd through *Cosne*, a little Place noted for the making of Knives, and some Mills for polishing Iron and Steel, and so in Sight of *la Charite*, an inconsiderable Place, to *Nevers*, seated near the Conflux of the *Loir* and the *Nibaire*, the Capital of the Territory of *Nivernios*, though the Houses are but meanly built, representing more of Antiquity than Beauty. It is a Bishop's See, Suffragan to that of *Sens*, and gives Title to the Dukes of *Nevers*, (now in the Family of Cardinal *Mazarin*) *Cæsar* mentions it under the Name of *Nipernum* or *Noviodunum*.

The next Place we came to was *Moulins*, near which are the so much celebrated Waters of *Bourbon*, even in the Time of the *Romans*; they are of the Nature of our *Baths* and those of *Aix la Chapelle*, composed of a bitumenous Substance, impregnated with an Alcalifate Salt; which being mix'd with an Acid, causes a Fermentation and produces the same Effect on Syrup of Violets as the Salt of Tartar, turning it green. Of late they have been much used inwardly against the *Gout* and other nervous Distempers. The above-mentioned Town of *Moulins* is of no great Extent, though once the Residence of the Family of *Bourbon*, who built a handsome Castle here; the Inhabitants are reputed excellent Workmen in Steel and Iron, Knives and Scissars, &c.

Among their Churches and Convents (of which they have several) those of the *Carthusians* and of the *Visitation* are most remarkable, the last containing the Monument of the Great Duke of *Montmorency*, who was sacrificed to the Power of the Cardinal *Richlieu*. The whole Chapel consists only of a small Cupola to cover him; his Canopy and Armour is supported by Angels, with his own Effigies and that of his disconsolate Lady lying by him, in an elevated Tomb, with the Statues of *Pallas*, *Hercules*, *Charity* and *Religion*, all of the choicest Marble, much beyond their natural Grandeur, with this Inscription to his Memory.

Henrico II. Montmorenciaci Ducum ultimo, optimo & maximo, Franciæ Pari, Thalassiarcho, Polemarco, Terrori hostium, Amori suorum.

Maria felix Ursina, ex Romana Stirpe Conjux unica, cui ex immensis viri Divitiis, una amor viventis, & defuncti Cineres, felicissimo post exactos Conjugis Annos XVIII. Marito incomparabili, de quo dolere nihil unquam poterat, nisi mortem bene merenti posuit. Ann. Sal. MDCLII. Sui luctus XX.

It is remarkable, that they were forced to behead him in the Town-house for Fear of the Populace, whose Darling he was; his Dutcheß was so highly afflicted at his Death, that she forsook the World and retired into this Monastery, where she ended her Days in Tears for the Loss of a Husband she loved more than her own Life. I was credibly inform'd, by a Person who was well acquainted in that Family, that her Fondness to the Duke was such, that she would not stick to assist him in his Amours.

We had hitherto travel'd for the most part through fertile Plains; but coming near to *St. Sophorin* and *Bresse*, two small Places, we pass'd through Mountains cover'd with Pines and Firrs, which afforded great Variety of Plants: Those I took Notice of *en passant* were, the *Polygala Lutea*, call'd by *Chabre*. *Polygala vulg. maj. fol.*

fol. angustissimus, a kind of Milk-wort; the *Melisophilum* or wild Baum; the *Bellis Cærulca* Monspel, though growing also in other Parts of France; blue Daisies. In the Woods we observed the several Species of *Orchis*, *Spurges* of all Kinds, but especially the *Tithymalus Cupressifolius*.

16. From *Bresse* we soon came to *Lyons*, the largest City of France next to *Paris*, seated at the Confluence of the *Soan* and the *Rhofne*; the last runs here with a swift Current, and over the first they keep a Chain of Boats link'd together, to prevent Barks from passing by without paying Custom. Its Situation was anciently, as well as now, at the Conflux of these two Rivers, as appears from a Passage in *Seneca*; and that its Name was *Lugdunum* among the Romans, is evident from the following Inscription found at *Gætâ* in *Italy*.

*L. Minutius 2 L. Fil. L. N. L. pro N. Plancus
Cass. Cens. Imper. iter VII. Vir Epulon:
Triumph. ex Rbetis ædem Saturni fecit de manubiis
agros divist in Italia Beneveriti, in Gallia colonias
deduxit. LUGDUNUM & Rauracum.*

Part of the City is built on the Hills of *Tornir* and *St. Sebastian*, the rest along the Banks of the Rivers; the Market-place is handsome, and the Town-house (lately built) a fine Structure. In the *Carmelites* Church is an Altar of *Agate* and *Lapis Lazuli*; the *Capuchins* have all the pretended Miracles of their Saint painted on the Walls of the Cloyster; among which you see one where he pays his Apothecary with Prayers instead of Money.

The Church of *St. John* is their Cathedral, the Chapter composed of Gentlemen of the best Families, and formerly boasted of having had therein several Kings and Princes: They compute, that in the thirteenth Century they had, at the same Time, one Son of an Emperor, nine Sons of Kings, fourteen Dukes Sons, thirty of Counts, and twenty of Barons; there belong no less than three Churches to this Chapter, viz. that of *St. John* before-mentioned, of *St. Stephen*, and of the *Holy Cross*; in the first is to be seen the Clock so much celebrated for the Variety of its Motions and Mechanism. The *Huguenots*, during the Civil Wars, knock'd down many of the Heads of the Saints that were placed to adorn the Front of this Church. Their Theatres and Opera's are not inferior here to those of *Paris*; and the *Jesuits* College upon the *Rhofne* is the finest Structure in the whole City, being a regular Quadrangle curiously painted in *Fresco*, which is somewhat defaced on the East Side, where the West Winds from the Mountains bear upon it: I found them to perform their publick Exercises much after the same Manner as they do at *Paris*. Their Chapel has a fine Altar-piece of *Lapis Lazuli*, and an excellent Piece of Painting by *Blanchard*, who died while we were there. The Apartment for their Library is spacious and handsome, but the Books not extraordinary, and at that Time were all disorder'd, by reason of a late Fire that broke out in the College; they have, however, some Manuscripts of the Bible, but not very old; and *Pliny's Natural History* and *Decades* finely printed on Vellum about two hundred Years ago, all the capital Letters in Miniature, gilt and embellished as we see the old Mass-books. The most valuable Piece of the whole Library is a Manuscript of the same Author's *Natural History*, four or five hundred Years old; many obsolete Words, such as *illud*, *jocondissimo*, &c. demonstrate it to be a Piece of a considerable Antiquity.

The Abbey of *Daisne*, just without the Town, is an ancient Piece of Architecture, with very good Mosaick Work, the Picture of God the Father (excellently done) being almost defaced by Age. This Abbey is the same Place where *Caligula* had erected his *Athenæum* for the Improvement of the Greek and Latin Tongues, (mentioned by *Suetonius*) Rewards and Punishments being proposed to such as did either well or ill; to this *Juvenal* alludes,

*Palleat ut nudis pressit qui calcibus anguem,
Aut Lugdunensem Rhetor dicturus ad aram.*

Here they shew you the so much celebrated Buckler of *Scipio*, which, upon due Enquiry, is so far from being his Buckler, that it is rather a Basin or Dish well gilt and emboss'd; for, according to the ancient Form of Armoury, it is too unweildy, and its Concavity within no Way adapted to the Bending of the Arm and covering the Body. Add to this, that all Bucklers both ancient and modern, have their Ornaments of Painting or Gilding on the Outside, and not within the Concavity; and I remember, that talking with *M. Patin*, a great Antiquary of *Padua*, upon this Subject, he was of the same Opinion; it being crack'd, it was cramp'd on the Back with small Iron Bars. They have here a more authentick Piece of Antiquity, I mean the Speech of *Claudius*, who was born here; it is to be seen in the Front-walk of the Town-house, and the Word *illud* for *illud*, and the old Roman Punctuation betwixt every Word, sufficiently shews its Antiquity. They have also some Obelisks, but not so ancient as those at *Rome*; that near the *Jacobins* Church is inscribed $\odot \omega \odot$. $\tau\omega \Theta\epsilon\omega \pi\alpha\nu\tau\sigma\omicron\tau\eta\rho\iota\alpha\nu \pi\alpha\rho\alpha\kappa\lambda\eta\tau\omega \iota\epsilon\rho\omicron\nu$.

Their *St. Peter's* Nunnery is a fine Foundation, and the parochial Church of *St. Nieve*, adorn'd with several fine Pieces of Painting by *le Brun*.

17. The Prison of the City is built upon a Rock, unto which they have cut out a Way with vast Charge and Difficulty; but it is probable that this was rather done to make a Way into the Town by the Water-side, it extending, perhaps, before out into the River, which now runs just by the Street that lies under the Rock. This Place being seated on the Confines of *Italy*, was one of the best Magazines of the Romans in *Gaul*; some of the greatest Men of *Rome* have honour'd it either by their Birth or Abode, besides the Emperors *Claudius*, *Germanicus*, *Geta*, *Caracalla*; and here are still to be seen some Remnants of the Roman Antiquities, of their Baths, Aquaducts, and Part of an Amphitheatre. At present the King's Treasury for that Part of France is kept here, and another called the Court of Commerce. Two General Councils have been held at *Lyons* in 1245, under *Innocent IV.* and in 1274, by *Gregory XI*; besides which, they had several Synods here long before, as that assembled by *St. Irenæus* in 197, and another in the Time of *St. Cyprian*, under *Faustinus* Bishop of *Lyons*; it was upon this Occasion *St. Cyprian* writ that Letter to the Pope, which begins thus, *Faustinus Collega noster Lugduni consistens*, &c. In my Walks about the *Carmelites* Church-walls I observed the *Fumaria major scandens*, the large *Fumitory*; the *Muscattellina fol. fumarie bulbosæ* J. B. or the *Radix cava minima*, Ger. the *Muskwood Crowfoot*; *Bellis major*, the *Enneaphyllon* of *Pliny*, or the great bastard *Hellebore*; the *Hypericum vulg.* C. B. *St. John's Wort*. About the City grows also the *Anchusa Lutea*, a Kind of bastard *Gromel* with a yellow Flower.

I was not a little surprized to see so fruitful a Soil as all the Country betwixt *Lyons* and *Savoy* (called *Dauphiny*) almost destitute of Inhabitants, though well enough cultivated in many Places; but upon Enquiry found, that this Part of the Country being allotted for Winter-quarters to the French Horse, the Peasants used to come thither only in the Spring, to sow the Seed, and in the Summer to reap the Product thereof, and so retire into other Parts. This fertile Tract of *Dauphiny* brought us to the utmost Borders of France on that Side, viz. *Pontbeauvoisin*, an obscure Place seated upon an inconsiderable River called *Gyer*, which, however, is the common Boundary here betwixt France and *Savoy*. The chiefest Plants of Note I observed in *Dauphiny* were, the *Valeriana rubr. anguifol* C. B. the narrow-leaf'd red *Valerian*; the *Radix Rodia* or *Rosewort*, in great Plenty; *Linaria fol. Bellidis* J. B. a Kind of *Toad-flax* with a Daisy Flower; *Imperatoria vulg.* or the common *Masterwort*; *Parietaria cærulea quedam*, a Sort of blue *Pellitory*; the *Cataname fol. Cyani Delech. fl. Coronop.* J. B. which *Chabreus* would have the *Sisamoidis minus Matth.* a certain Grass with the Leaves of the *Blubottles* and Flowers of the *Buckthorn Plantain*.

We were no sooner pass'd the Bridge of *Pontbeavoisin*, but we were sensible of the Difference of the Country; for whereas we had left behind us the fertile Plains of *Dauphiny*, the other Side of the Banks of the same River represented to our View the frightful *Alps*, the Precipices whereof would have been more dreadful to us, had not the many Vineyards we found on the first Ascent taken off a great Part of the Horror we had conceiv'd at the first Sight of them.

As you ascend the first Rocks, you see and hear the Cataracts of the River *Guyre* among the Precipices, over which you ride by a Way cut out and supported by Art: Along this terrible Road I found among the wild Hedges the *Oxyacantha*, the *Privet*, *Ligustrum* & *Vaccinia nigra*. From this narrow Passage you proceed further into the *Alps*, where the Duke of *Savoy* has made a Road thro' the Middle of the Rock, near which is erected a Stone with this Latin Inscription:

Carolus Emanuel II.

Subaudiæ Dux. Pedem. Princeps. Cypri Rex. Publicâ felicitate partâ singulorum commodis attentus, breviorē securioremque viam Regiam, à natura oclusam, Romanis intentatam, cæteris desperatam, dejectis scopulorum Repagulis, æquatâ montium iniquitate, quæ Cervicibus imminabant, præcipitia pedibus subternens, æternis populorum Commerciis patefecit. Anno Domini, 1670.

About half-way betwixt this noted Passage and *Chambery* you see a delightful Fall of Water from one of the highest Rocks, which being continued afterwards by three or four more gradual Falls joining into a Current, and from a vast Height spreading itself among the craggy Precipices, produces here a natural, but more pleasant Cascade than all the Art and Expences of *Versailles* are able to afford.

From hence we proceeded to *Chambery* through a Sort of a Valley, (in respect of the other Mountains) a Town not so considerable at present as in former Ages, when it could boast the Residence of the Dukes of *Savoy*, but now has nothing to shew but old Houses and Walls, and a ruin'd Ditch about them; it is the *Cameriacum* of the *Latins*, and still the Capital of the Dutchy of *Savoy*, where there Parliament is conven'd, and the Chamber of Accounts kept: Its Situation is on the little River *Orban*, in a Sort of a Valley surrounded with Mountains; the Churches and Convents, the Town-house, Market-place, and a great Number of Fountains, make some tolerable Show. Here we first observ'd what we afterwards found common over all *Italy*, the Houses built so as to jet out into the Streets, and supported by Pillars, which form a Sort of Alley or Cloyster, under which you may pass secure from Rain and the Heat of the Sun. The Mall without the Town is handsome. Another such Plain brought us to *Montmelian*, a Place of great Strength both by Nature and Art, in *Savoy*, seated on a high Rock at such a convenient Distance from the adjacent Mountains, that though they overlook it, they don't command it; the River *Hero* runs by the Town that bears the same Name with the Castle, with an impetuous Current, and joining with the *Arche*, another rapid River made by the melted Snow, falls into the *Rhosne* at *Arbigny*, a little Place above *Montmelian*, as the *Isere* does at *Grenoble*, the Accession of these rapid Rivers being the true Occasion of the impetuous Course of that River. This Fortress is the Key of the Mountains on this Side, as *Susa* is on the other; but notwithstanding its Strength, it was taken by the *French* in 1691, and is now demolished.

The Country hereabouts being all mountainous, hath a very indifferent Prospect, except some few Valleys, which seem to promise something of Fertility; and the People looking as meagre and dejected as the Soil is barren, they seem to be made for one another, and adapted to that Slavery they are forced to suffer from their Prince, who has model'd his Government after that of *France*.

We had scarce pass'd the River *Isere* at *Montmelian*,

but we came into a Valley much more pleasant than any we had yet met with in *Savoy*, and continuing our Way towards *Argentier*, we met the roaring River *Arche*, which at that Time (it being Midsummer) was so swelled by the melted Snow from the Mountains, that we were forced to leave the ordinary Road near the Waterside, and, instead thereof, climb up a dreadful Precipice, call'd by them Mount *Greny* or *Grezy*, as high if not higher than Mount *Cenis* itself. On the middle Region of this Mountain you see a few small Farm-houses, there being thereabouts some cultivated Ground, which you can perceive below, but when you come to it, you find another Mountain rising upon the former, like *Pelion* upon *Ossa*: The Froth and Sediments which are by the Impetuosity of the River *Arche* forc'd down from the Mountains, make its Waters appear in the Valley as black as Pitch, almost like the Washes of Dyehouses.

We kept however along the Current of this River for some time through *Argentier*, *Esperies*, and *la Chambrey*, inconsiderable Places, and we no sooner left the last, but we were forced to climb up the Mount, by Reason of the Inundation of the River *Arche*, the Descent whereof brought us to *St. John Morienne*, once the chief City of the *Madulli*, and an Archbishop's See, which gave the Title of Earls of *Morienne* to the Dukes of *Savoy*. From hence we went on to *St. Michael*, a low watery Place: On the Top of the Mountain I observ'd as well as I could the *Mentha Cattaria montana*, *Valeriana Alpin. Latifol. Valerian. Alpina Angustifol. the Caryophyll. Alpin. minimus*; the small Mountain *Pink* of the *Alps*; afterwards I found it in great Plenty on another Hill. *St. Michael* was formerly a Convent, but now only a Village, near the Banks of the River *Arche*, which they pass over hereabouts by Bridges of Timber made of the Trunks of young Fir and Pines, laid athwart, which being round and ill joyn'd, tremble under your Feet as you pass them.

The next Place we came to was *St. Andre*, an inconsiderable Town seated among the Mountains; just over against it is such another Cascade or high Waterfall, but not altogether so diverting as that near *Chambery*. The Current of this River, render'd impetuous by various Waterfalls, is almost like the Torrents of our Mill-pools, but more foul and furious. I took Notice hereabouts of the *Absinth. Latifol. Ponticum* or *Rom.* and the *Absinth. tenuifol. minus*, which some would have to be *Absinth. Commune minus* of *Gesner* and *Gerard*. Above *St. Andre* the River *Arche* is, at a Place call'd *Termignon*, augmented by a Channel of Water coming from another Part of the Mountains, which brought us to *Lafnebourg* or *Lansebourg*, a Place that has nothing remarkable, except its Situation at the Foot of Mount *Cenis*: Here crossing the River *Arche*, we took our Leave of it, which rises about two Leagues above this Place with a pure but small Source, and affords in the Neighbourhood as well tasted *Trouts* as our best Rivers. We were now come to the Passage of Mount *Cenis*, (the *Ciniscum* of the Ancients) which we perform'd by the Help of Mules we were furnished with at *Lafnebourg*. This Mount exceeds in Height those of *St. Goddard* and *Sampion*, by which you enter *Italy* from *Switzerland*: Mount *Cenis* being in some Places cover'd with Pine and Fir-trees from the Top to the Bottom, ascending regularly one above another with the gradual Rising of the Mountain, affords the most natural Grove that can either be devised by Art or expressed by the Pencil. About *May* these Mountains open the vast Storehouses of Snow, which melting by Degrees till *October*, (when they begin to harden again) make the Rivers swell hereabouts in the Heat of the Summer, when the Sources of most other Rivers are very near exhausted.

The Passage of Mount *Cenis*, notwithstanding its Height, is not very unpleasant; the Precipices being not perpendicular, gave our Eyes Liberty to look about with less Trouble, and the Slowness of our Cattle (which made me walk on Foot) allow'd me sufficient Opportunity to expatiate a little Way out of the Road, and to take Notice of a great many Plants; but having

ing lost the Collection at Sea, I can only give such as I accidentally remembered and since set down, viz. the *Caryoph. Alpin. minor* in prodigious Quantities; the *German. Columbinum*, and what is more remarkable, the *Geran. Argent. Alpinum*; the Cranes-bill; the *Hyacinth. Caruleus Ger. or Racemosus carul. minor*, C. B. *Funcifol.* toward the Bottom out of Flower; *Calceolus Mariæ*, ad *Ger. Elleborine major*. Park. *stell. flor. rotund.* C. B. About the Bottom, *Helleborine flor. alb.* C. B. or *Damasonium Alpinum* J. B. the little, wild, white *Hellebore*; *Iris fl. albo*; the great white-flower'd *Iris*, or *Flower de Luce* wild; the *Herba Paralysis* or *Paralytica Alpina*, out of Flower; the *Caryophyllat. Montan.* or *Caryophyllat. Alpin. Lutea*; *Casp. B. yellow Mountain*; *Avens, flos Caryophyll. Alpinus pumilio dictus*; the little Dwarf-mountain Pink, or rather a *Lychnis*, agreeing with the Description of *Ger.* who from its *Calix* calls it of the *Lychnis* Kind; *Sedum Alpinum, Exigui fol.* C. B. *Sedum Alpin. minim. flor. carneo*, Schol. Botan. *Helleborus niger*, Lob.; *verus* Park. *Ger. fl. Albo & Atro rubente*; the black *Hellebore*, *Gentian. maj. fl. lut.* &c.

I took this Opportunity to make a strict Examination of the Snow, as it lay incrustated in hard Cakes on the very Top of the Mountains; some of these are such as have lain there for several Years, the Sunbeams not being able to dissolve them quite, by reason of their vast Thickness.

In the Midst of the Top of Mount *Cenis*, near the Road, (which is flank'd by other higher Rocks) you see a pretty large Lake gather'd, questionless, by the melted Snows, as the Coldness of the Water seems to testify; in the Midst of it the Duke has a handsome House, and another just by the Road; one for Devotion (of which the Priests take Care) and the other for his Diversion, which lies almost in Ruins by Neglect. Here it is you take Carriages to descend the Mountain, being only wooden Chairs carried by two Poles: By this Carriage you are convey'd down the rocky Precipices, which are however not so dangerous or dreadful as some have represented them; for though your Horses are led about a further Way, you may descend, for the most part, without much Difficulty on Foot, which I chose rather to do, than be jolted in these uneasy Chairs. Here is also a little Hospital for such as fall sick by the Way, and a small Chapel to bury such as perish in the Snow, from thence called the *Transit*. The Plain on the Top of this Mountain (which is about four Miles long) has also an Inn for the accommodating Passengers, suitable to the Circumstances of the Place: The Ascent is accounted four Miles, but the Descent no more than two. *Novales* has not any Thing remarkable, except its being the utmost Frontier of *Savoy* near the River *Semar*, which joins its Waters with the *Doria* at *Susa*, where begins the Principality of *Piedmont*.

18. Though the *French* live under the most despotic Government in *Europe*, yet are they so fond of it, that they laugh at other Governments, which do not come up to that absolute Power, of which they frame themselves such pleasant Imaginations, that in the Midst of their Slavery they find out an *Oligarchy* in their Council of State, an *Aristocracy* in their Parliaments, and a *Democracy* in their City Governments, administered by Provosts, Mayors and Merchants, and thereby would introduce into the World the most perfect Mixture of a Commonwealth; when, to speak truly, all these different Qualifications make up but one entire Chain of Slavery. They boast of the Policy of *France* as loudly as of their Conquests; and it must be confess'd, that in their Military Affairs they follow, in many Things, the Footsteps of the ancient *Romans*, but want their Honesty and true Generosity. The Body of the People is composed of the Nobility, Husbandmen, Artificers and Traders; the Peasants, being condemned to perpetual Drudgery, furnish the Field with Labourers and Soldiers, for when they are suck'd to the very Marrow by the Gentry and Tax-gatherers, they must either chuse to starve at Home, or seek for a Livelihood (such an one as it is) in the King's Armies. Artificers and Traders are much encouraged in *France*, being the Court-

Sponges, from whence they squeeze out what Juice they have gather'd before by one Means or other. The King commonly picks out the most ingenious among them for his own Service, and the rest are employ'd in converting the Products of *France* into Manufactures exported into Foreign Parts.

The Clergy of *France* has of late been look'd upon with somewhat of a jealous Eye by the Laity, both by Reason of the Encrease of their Number, and several Ecclesiastical Usurpations; these Encroachments of the Clergy at Home, and the pretended Power from the Popes Abroad, has made them revive our Lord Digby's Distinction betwixt the Church of *Rome* and the Court of *Rome*, and not to be so fond of the *Jure Divino* Doctrine of the Priesthood, but that the Privileges of the *Gallican* Church, and the *Regale*, have been made to give Laws to both; witness the Synod and the Decrees made there in 1682, against Pope *Innocent XI*; the Profession of the *Protestant* Religion being to be rooted out, some were for attempting it by mild Ways, which were follow'd at first, but soon changed for Fire and Sword, as the most effectual Means, either to make them fly the Kingdom, or to comply with the King's express Commands. This is differently taken among the *French*, according as they are more or less devoted to that unchristian Doctrine of the Extirpation of Heresy.

19. The Remarks of this Gentleman are such as might be expected from one of his Education and Profession; and as he doth not seem to be prepossessed in Favour of the *French*, so there appear on the other Hand no Signs of Prejudice against them. This may be justly esteemed a peculiar and a considerable Advantage to his Writings, for, generally speaking, most of our Travellers take one or other of these Turns. If they are Men of Vivacity, they grow fond of *French* Customs, and of *French* Notions, receive for Gospel every Thing that they are told, magnifying in their Relations both the Country and its Inhabitants, and labour to persuade such as read their Writings, that *France* is the finest Part of *Europe*; and the *French* Nation out of all Comparison the most powerful People in it. Such again as embrace opposite Sentiments, run with equal Violence into the other Extream; they find nothing lovely in the Place, and exclaim perpetually at the Slavery, the Poverty, and the Vanity of the People. Whoever takes his Notions of *France*, and the *French*, as a Nation, from either of these Sort of Writers, will be infallibly misled; and as in the present Situation of Things especially, Mistakes of this kind may be extremely fatal, by tending to inspire an Apprehension, that the Power of the most Christian King is irresistible, and therefore it is to no Purpose to oppose; or to create an Opinion that the Power of *France* is a mere Bugbear, and that at the Bottom; notwithstanding the Noise that is made about it, we have little or nothing to fear. To overturn both these Errors, and to give the Reader as near as may be a true Picture of the present State of that Kingdom, we will enter into a short political Anatomy of it, which, as it could not be expected from Travellers, so it may serve as a Supplement at least for some Time, to whatever has been published of that kind. We have taken a great deal of Pains to become, in some Measure, Masters of this Point, and we shall report what has been the Result of our Inquiries as concisely, as correctly, and with as much Candour as is possible.

It is very certain that in Point of Situation and Extent, the Dominions of the Crown of *France* are very considerable; they lie between the forty second and the fifty second Degrees of North Latitude, in the sixth seventh and eighth Northern Climates; so that they enjoy a very pleasant and wholesome Air, and generally speaking a rich and fruitful Soil, which by the Way however is far enough from being improved to the utmost Advantage. From West to East, that is, from Point *Conquest* in *Britany*, to the City of *Strasbourg* in *Alsace*, they reach pretty near six hundred Miles, and from South to North, that is, from the Frontiers of *Roussillon* to *Dunkirk*, they extend upwards of five hundred Miles.

But there is another Method of computing, which will prove more satisfactory than this to the intelligent Reader. *France*, according to the exactest Computation, contains about a twentieth Part of *Europe*, and is certainly much better peopled than *Spain*, *Italy*, *Russia*, *Sweden* or *Denmark*, but is not near so populous as *Holland*, *England*, or some Parts of *Germany*. If we could depend upon the *French* Accounts, we should reckon there are in it twenty Millions of People, but it is very certain that they are apt to stretch in their Computations, and that according to the established Rules of political Arithmetick, we cannot affirm the Number of its Inhabitants to be above fourteen Millions, and, in my own Opinion, even this Calculation is rather too high, considering that according to their own Reckoning, the Number of Persons in Religious Houses, that is to say, both Men and Women, amount to four hundred Thousand. As to their Secular Clergy, I never saw any just Computation, but I think there cannot be much fewer, and if we take in those, who from other Considerations lay themselves under Obligations of leading single Lives, the Number will not fall much short of a Million, which must be a prodigious Drawback on their Increase as a People.

This great Country is divided into thirty six Governments, of which that of *Paris* is esteemed the first, that is to say, distinguishing it, and the District dependant upon it, from the Isle of *France*. It is said to contain fifty one Parishes, fifty two Monasteries for Men, seventy eight Convents for Women, sixteen Hospitals, fifty Hotels, five Royal Palaces, fifty Colleges, twelve Suburbs, and six hundred and fifty six Streets. 2. The Isle of *France*, which is generally speaking a good Country and well inhabited. 3. *Picardy*, a very fine Province, yielding Plenty of Corn and Fruits; the Capital of which is *Amiens*. 4. *Champagne*, famous for Corn, Cattle and Wine; its Capital is *Troie*. 5. *Burgundy*, a very large, and very fertile Country, its Capital *Dijon*. 6. *Dauphine*, somewhat mountainous, but generally speaking well cultivated, and the Valleys very fruitful; the Capital *Grenoble*. 7. *Provence*, which though it cannot boast of producing much Corn or Grains, it is remarkable for its Wines, Oils, Saffron, and a great Variety of Fruits; the Capital is *Aix*. 8. *Languedoc*, is the largest and by many accounted the best Province in the Kingdom, producing great Quantities of Corn, Fruit, and Wine; the Capital is *Toulouse*. 9. *La Foix*, so called from its Capital, is neither large nor Fruitful. 10. *Bern* and the lower *Navarre* are accounted but one Province; the Capital of the former is *Pau*, and of the latter *St. John Pie de Port*. 11. *Guiene*, is a very fine, and a very rich Province; the Capital of which is *Bordeaux*. 12. *Saintonge* and *l'Angoumois* make but one Government, tho' it has two Capitals, viz. *Saintes* and *Angouleme*. 13. The Country of *Aunis* is very small, but very fertile and well peopled; the Capital is *Rochele*. 14. *Poitou* is a very large Province, about 180 Miles from West to East, but not the finest Country; the Capital is *Poitiers*. 15. *Britanny* is very fertile in Corn and Pastures, has in it many rich Mines, and is well seated for Trade; the Capital is *Rennes*. 16. *Normandy*, which once belong'd to us, is one of the fairest and finest of the *French* Provinces, though it produces no Wines; the Capital is *Rouen*. 17. *Havre de Grace*, a very small Government, taken out of *Normandy* purely on the Score of the important Port which gives a Name to it, and is its Capital. 18. *Maine* and *Perche*; the Capital of the former is *Nantz*, of the latter *Mortagne*, passable Countries both, but nothing extraordinary. 19. *Orleanois*, famous for its Wines; the Capital is *Orleans*, which gives the Title of Duke to the second Son of *France*. 20. *Nivernois*, a very small Country seated on the *Loire*, and consequently both fruitful and pleasant: There are also some Iron Mines in it; the Capital is *Nevers*. 21. *Bourbonnois*, a good Country, which is also full of Wines, and famous also for its Baths near the Castle of *Bourbon*; the Capital is *Moulins*. 22. *Lionnois*, a rich and noble Country; its Capital is the famous City of *Lyons*, remarkable on many Accounts,

but chiefly for its being the Seat of the Silk Manufacture. 23. *Auvergne*, a large Province, in which are found all the Necessaries of Life; and the Inhabitants of which are considered as the best Farmers in *France*; the Capital is *Clermont*. 24. The *Limousin*, a barren mountainous Country, the Inhabitants of which however are very industrious; the Capital is *Limoge*. 25. *Marche*, a small, well watered Country; the Capital of which is *Gueret*. 26. *Berry*; it is said to have the finest Meadows and Pastures in *France*; it produces a great deal of Wool, and therefore most of the Cloth Manufactures are in this Country. 27. *Touraine*, commonly called the Garden of *France*: Few Provinces boast of better, and none has so little bad Land; the Capital of it is *Tours*. 28. *Anjou*, a very fine well watered Country; the Capital of which is *Angiers*. 29. The *Saumurais*, taken out of *Anjou*, a small Country, the Capital of which is *Saumur*. 30. *French Flanders*, the richest and finest Province belonging to the *French* Crown; the Capital is *Lisle*. 31. *Dunkirk*; this Town and District makes a Government, ever since it was sold by us in 1662. 32. *Metz* and *Verdun*; the former is situated at the Conflux of the *Seille* and the *Moselle*, and is now one of the strongest Fortresses in *Europe*. *Verdun* upon the *Meuse* is large, populous, and well fortified. 33. *Toul* upon the *Moselle*; this, with the other two Cities before mentioned, are commonly stiled the three Bishopricks, and were taken out of *Lorraine* before the Whole of that Country became a Sacrifice to the *French* Ambition. 34. *Alsace*, a large, fruitful and rich Country, torn from the Empire with little or no Pretence, and kept, as it was got, by Force; its Capital *Strasbourg*. 35. *Franche Comte*, or, as it is commonly called, the County of *Burgundy*, fruitful in Wine, Corn and Wood; another Conquest without Right; the Capital of which is *Besancon*. 36. *Roussillon*, a mountainous and barren Country, the Capital of which is *Perpignan*.

These Governments were thus established in 1698. by *Louis XIV*. They have suffered some Alteration since, and are liable to the like Changes from the Will and Pleasure of the King, who may if he pleases join two of them together, or separate them if he thinks fit. The Reason we have mentioned them so particularly is, that we may show how they are governed; and by that Means how much *France* is changed from what it was, and how effectually the Power of the Crown is established. In every Province there is a Governor, who is a Person of the first Rank, and his Post is generally for Life; but as it is supposed that he cannot always attend the Functions of his Office, the King appoints a Lieutenant General if it be a small Province, if a large one, two or three, each of which has his particular District, in which his Power is independant. Besides these Lieutenant Generals, there are also the King's Lieutenants, who have smaller Districts; and the Governors of Towns are likewise appointed by the Crown, and are independant of the other Officers. In Places that have Citadels, those have likewise their Governors independant of the Governor of the Town, and by the Help of these Checks it is impossible for those Disturbances to happen, which were so frequent in every Reign before the last. Heretofore it was common for the King to grant the Survivorship of the Government to the Son or next Relation of the Governor; but now another Method is taken, for the Father actually resigns to the Son, who has the Title, but the Exercise of the Office is reserved to the Father by a Brevet, which gives him likewise the Power of resuming the Title, if his Son dies before him. The Administration of Justice in the Province is vested in the Parliament to which it belongs, in which the Governor has a Seat, which however is a mere Point of Honour, and gives him little or no Power. As this creates a new Distribution of the Kingdom, with respect to Parliaments, so there is also a Third in reference to Taxes, by which it is distinguished into Generalities and Elections; and at the Head of these are the Intendants. By this Kind of Policy, which was invented by *Richlieu*, and perfected by his Successors, every Part of the Kingdom is immediately under the Power

Power and Inspection of the Ministers ; and the Princes of the Blood and Great Lords, notwithstanding they have still the Title, Authorities and Revenues of Governors, have nothing of that Kind of Power that was so dangerous in past Times. But with respect to their Lordships, they have still very great Prerogatives ; which though they do not render them formidable to the Crown, give them such a Power over the common People, that without doubt the Peasants in *France* are as miserable as any in *Europe* ; and this is the true Secret why their Infantry, notwithstanding all their Discipline, is not near so good as the *English*, the *Swiss*, or those of some of the *German* Princes ; for Men born and bred under Oppression, have never that true Spirit and Courage that is so remarkable in Freemen. The Artizans and Manufacturers are somewhat better treated, and in the Cities of *France* they have Immunities and Privileges which at first Sight bear a near Resemblance to Liberty ; yet even these give Way upon any Exigence ; so that after all, the King is absolute Master of every Rank of his Subjects, and disposes, in a great Measure, both of their Persons and Properties at his Pleasure, which is the true Reason why so many leave their Country, and settle elsewhere.

We have hitherto in this Account represented Things in general ; and indeed it would require much more Room than we have to spare to enter into Particulars. It may very well suffice to say, that the ruling Maxim of the *French* Government is to sustain and to extend the Power of the Crown, to which every Thing must give Way. The Church, as a State Machine, is managed with greater Address in *France*, than in any Country in the World. *Louis XIV.* was a Bigot in his Practice, but not in his Church Politicks ; for while he dragoon'd his *Hugonot* Subjects, out of pious Regard to the Principle of Unity, he countenanced and approved the nice Distinction between the *Roman* and the *Gallican* Church. For by this Contrivance he procured for himself, and has left to his Successors, two Reins ; by which the Ecclesiastical Machine is governed with Ease. If the Pope is to be managed, and the Influence of the See of *Rome* becomes necessary to the *Eldest Son of the Church*, then one Rein is pulled, and the Royal Power is exerted in Support of the papal Authority : But if some stubborn, long-headed or well-meaning Cardinal is advanced to the supreme Dignity in the popish Hierarchy, who has a greater Regard to the Whole than to any Part, and will not employ either his Credit or his Power to serve the Purposes of the *Gallic* Monarch, then he plucks the other Rein, and makes his Holiness fully sensible, that without his Assuming the Title, he is truly and effectually Head of the *Gallican* Church. It must be confessed that this Sort of Policy is not without its Inconveniencies, and those too that are very evident, and sometimes very troublesome, such as continual Heart-burnings and Struggles, vexatious Disturbances, and a kind of perpetual Persecution, under all which Mischiefs the *Gallican* Church has now laboured near thirty Years : But this gives no Pain to the Ministry ; they look upon it as a necessary Evil, and raise and fall the Tide of Persecution as Interest directs. Thus the greatest Part of the *French* Clergy are obliged to conform to the Court Creed, as well as to the Catholick Faith ; and that Part of his Subjects are now most in the King's Power, which were least so in his Predecessors ; and those Men receive their Instructions from the Cabinet, who, from the Nature of their Office, have the strongest Sort of Influence over the Common People. By this Management also the Government draws a large Revenue from the Church, which in former Times was reckoned impracticable. The Tenths, which are annually paid to the King, amount to about Sixty thousand Pounds ; the Free Gifts, which are now become a stated and regular Revenue, amount to above two hundred thousand Pounds a Year, that is, in Time of Peace ; for in War the extraordinary Free Gifts bear some Proportion to the Exigency of the publick Affairs.

The Ecclesiastical and Civil Government in *France* was reduced by Degrees pretty near the same it stands at present under the Reign of *Lewis XIII.* and the Im-

provements only are to be attributed to his Son and Successor ; but with respect to the Military Establishment, *Lewis XIV.* was its original Founder. Before his Time a few Companies of Guards, and the four old Corps as they are still called, were all the standing Troops of *France* ; neither were they exactly of the same Nature with the Regiments that are now kept up, though this is not a Place to discuss the Difference. It is sufficient for us to observe, that the Prince last mentioned, finding every Thing at home disposed according to his good Pleasure, when he took the Administration into his own Hands, resolved to lay hold of that Opportunity to secure the boundless Authority, of which he was possessed in his own Dominions ; and at the same Time to make himself terrible to his Neighbours. It was to this End that he established first, under the Notion of Guards, a very considerable Force, which is now stiled the Troops of the Household, and afterwards, as Occasion offered, raised Regiment after Regiment, both of Horse and Foot, and kept them in constant Service. It was by the Help of this Standing Army, that he gained so many and so great Advantages over *Spain*, and the rest of his Neighbours, and annexed several conquered Provinces to his Dominions, which at the same Time afforded him an Opportunity of increasing the Number of these regular Troops, and of covering his Frontiers on every Side with Abundance of strong Fortresses. By Degrees other States in *Europe* found themselves obliged for their own Defence to raise and maintain regular Troops likewise, which afforded that ambitious Prince a Pretence for augmenting his to as great a Number as was possible for him to maintain ; and his Example in this, as well as in most other Points, has been exactly followed by his Successor. So that immediately before the Breaking out of the present War, the Standing Troops of *France* consisted of one Hundred and twenty thousand Foot, twenty thousand Horse and Dragoons, and between eight and ten thousand Invalids ; that is, in the whole, to about One hundred and fifty thousand Men. The keeping up so large an Army, and the maintaining so many Garrisons, is as serviceable to the King, as it is burthensome and ruinous to the Kingdom ; inasmuch as it keeps so great a Proportion of able and active Persons in a State of absolute Idleness with Regard to the Publick, at the same Time that heavy Taxes are raised upon the industrious Part of the People for their Subsistence. But it must be allowed, that it finds Employment for the Nobility and Gentry of *France* more especially, as it is become almost an indispensable Custom for them to spend their Youth, at least the first Part of it, in the Service ; by which they are brought insensibly into a Dependence upon the Court, and have their Minds filled with false and slavish Notions of the Glory of their Grand Monarch, which entirely gets the better of the natural Passions that all Men of Birth and Breeding in other Nations, have for the Service of their Country. Thus the Reader sees, that the Church, the Law, the Civil Employments, and the Military, being wholly at the Pleasure of the Court, the far greater Part of the active People in this great Country have their Lives and Fortunes at the Disposal of the Crown, and spend the best Part of their Days in the Maintenance of a System calculated to hold them in irrecoverable and perpetual Servitude.

As for the political Government, it is managed by several great Councils, or rather Committees of Council, of which there are at present four, which are stiled the Council of State, the Council of Dispatches, the Royal Council of Finances, and the Royal Council of Commerce. The first Civil Officer in *France* is the Chancellor, the only Officer that is not removeable at the King's Pleasure ; that is to say, he cannot be turned out without being brought to a Tryal ; but the King may and frequently does take the Seals from him, and put them into the Hands of another Person, who has the Title of Keeper, and the Power of Chancellor, who is removeable at the King's Pleasure. There is generally a Person at the Head of the Ministry, either with or without the Title of prime Minister, and with more or less Authority as the King pleases : At present this

is the Cardinal *de Tencin*. For the Management of publick Affairs there are four principal Secretaries of State, who have each their separate Departments. These are at present the Count *de Maurepas*, who has the Marine; the Count *de Puisieux*, who is Secretary for Foreign Affairs; the Count *de Saint Florentin*, who has the Care of Domestic Concerns; and the Count *d'Argenson*, who is Secretary at War. The principal Officer of the Revenue is the Comptroller General of the Finances, at present M. *de Machault*, who has under him a Multitude of Intendants and other Officers, subject to the Direction of the Council of Finances, of which the Duke *de Betbune* is President. As to the ordinary and settled Revenue of the Crown of France, if we may believe their own Writers upon that Subject, it is not at all increased in its real, though it is considerably augmented in its nominal Value. In 1683, it was computed at 116,873,476 Livres, and in 1730, it amounted to no more than 140,278,473 Livres, which make 5,844,973 Pounds of our Money, which shews that neither the general Wealth of France, nor the Income of the King, are near so great as is commonly imagined. It is, indeed, very true, that in Time of War the King levies much larger Sums; but it is very plain, that even these must fall short of what some People would persuade us they amount to, since there must be always a Proportion between the ordinary and extraordinary Revenue; and consequently, if we know the one, we may very easily compute how far the other can be carried, because even under arbitrary Governments, some Measures must be preserved; and some Regard had to the general Income of the People, which is less in Time of War, at the same Time that the publick Expence is greater.

With regard to the Commerce of France, there remains no Sort of Doubt, that it has grown more extensive and more profitable than formerly, when Trade was very little known in this Country. It may seem a little strange, but the Fact is certainly very true, that the Commercial State of this Country is entirely under the Direction of the Crown; and in this there seems to be the less Hardship, because it may be very truly affirmed, that the Commerce of France is as much or rather more the Work of their Ministers, than of their Merchants. When *Colbert* was at the Head of Affairs, he made the Increase of Manufactures, the Facilitating Domestick, and the Improving Foreign Trade, one of the principal Objects of his Ministry. In this he was very successful; he understood Commerce as a great Man should understand it, so as to render it beneficial to a Nation, without consulting too minutely the Profit of private Persons. Upon this Occasion I will venture to relate, after an eminent French Author, a very singular Story: He invited several eminent Merchants to meet in his Cabinet, in order to discourse on the Principles of Commerce, and promised them the utmost Liberty in Conversation. At their first Meeting, a certain Merchant, who was consider'd as the best Head amongst them, made a sett Harangue against the Management of the Duties, and spoke so bluntly, that the Minister rose in great Heat, and bid him hold his Tongue, for that was no Part of his Business. If no Freedom, no Speech, answered the Merchant, we will be going, if you cannot hear, it is impossible you should learn, and if you will not correct what is immediately in your own Power, what are we to expect? *Colbert* bid him sit down, and go on, and from that Time forward never checked any of them, let them say what they would. By this Means, in a few Years, he knew more than them all. *Madam de Maintenon* was likewise a great Politician in Commerce; and it fell out, when the Affairs of Louis XIV. were in the utmost Distress,

that some of his Ministers proposed postponing the Payment of the Sums due to his Bankers for a Year: To which the King seemed inclined. The Lady, who was spinning at the other End of the Room, without quitting her Work, address'd herself to the King in these Words: Sire, If you stop Payment to your Bankers, they will lose their Credit with their Foreign Correspondents, which while they maintain, you are never at a Loss for Money in any Part of Europe. While Things continue in this State, your Distresses are known only to a few; but if you take this Resolution, you will become a Bankrupt in the Eyes of the whole World: Stop therefore your Pensions, the Money destined for Buildings, and other Pleasures, and pay the Bankers punctually, for Credit is the true Basis of Power. The King took her Advice, which was certainly better than that of his Ministers; and it answered the End that was proposed.

By this it appears, as well as by what was said in the former Volume, of the French East-India Company, that the Commerce of France is the Creature of the State; and from thence it follows, that though in particular Branches it may flourish wonderfully, yet, taking in the Whole, it is nothing near so considerable as it might be, nor can it ever be made so under a Government constituted like that which subsists in this Country at present; which is one of the best Reasons that can be assigned, why the ordinary Revenue of France is not higher now than it was many Years ago, and why even very small Sums of Money, in Comparison of what are raised elsewhere, are raised here with so much Difficulty. The Shipping of France is certainly increased, but not in that Proportion that is commonly imagined, much less in the Degree some of our political Writers have asserted, for I have actually seen Computations of the Shipping employed in only one Branch of Trade very confidently laid down, which I could demonstrate to be very near, if not beyond the whole Shipping of this Country; a very clear and incontestable Proof of this, is the present State of their Navy. I have before me a List of it, in the Year 1693. when it consisted of One hundred and fourteen Ships of the Line, but at the Beginning of the present War, they had not forty Sail of Men of War and Frigates of all Sizes: I have likewise before me a Memorial presented by the Merchants of France, to the Count *de Maurepas*, at the Close of last Year, in which the Losses sustain'd thereby, are computed at Two hundred Millions, which makes Nine Millions three hundred thousand Pounds of our Money. In this Memorial it is said, that if the King could maintain Sixty Men of War and Frigates, including the *Brest* Squadron, which is reckoned at twenty Sail, the whole Trade of France might be well protected, which is an Evidence, that it is very far from being protected at present, and that the King has not any such Force as the Merchants think is requisite for that Purpose. While the War continues it is impossible he should, foreign Subsidies, and the Expences of his Land-Forces run away with all, and more than all; so that if our Naval Force was employed in Distressing the French Trade, in every Part of the World, but more especially in the *West-Indies*, there is no Doubt that we might put them back for half a Century, at least; and if at the End of this War, there should remain such a Part of the Sinking Fund, as, would enable us to take off the Duties upon Sugar entirely, I believe their *West-India* Trade could never revive. But I ought to ask my Reader's Pardon for this Digression, and for extending my Remarks to such a Length; but the Desire of shewing, that if France be a *Hydra*, it is not impossible she may meet with a *Hercules*, was what led me thus far, and I hope will serve for a tolerable Excuse.

CHAPTER V.

Comprehending TRAVELS through the remotest Parts of *Germany, Bohemia, Moravia, Hungary, &c.* to the very Frontiers of *Europe* upon that Side ; interspersed with the History of Mines, Salt-works, Fisheries, and other curious Particulars.

SECTION I.

A Voyage from England to Holland, with a Journey from thence, by Land, through the Electorates of Cologne, Treves and Mentz, the Lower and Upper Palatinate, Bavaria and Austria, to Vienna ; from thence through Moravia, Bohemia and Saxony, to Hamburg ; with many judicious and useful Observations.

By the very learned Dr. EDWARD BROWNE, of the Royal College of Physicians.

1. *Introductory Account of the Author. He embarks at Yarmouth, and proceeds by Sea to Rotterdam. Description of that City.*
2. *A very curious Account of the Hague, Leyden and Harlem.*
3. *A copious and circumstantial Description of what is most remarkable in Amsterdam.*
4. *The like Account of the City of Utrecht, and of the Country about it.*
5. *A Description of Boileduc, Breda and Dort.*
6. *The Author's Passage into the Island of Walcheren, with a Description of Middleburgh and Flushing.*
7. *The Course of the River Schelde, and the City of Antwerp described.*
8. *The Author's Journey continued through Brussels and Maastricht to Cologne.*
9. *His Journey from thence to Bonn, with some very curious Observations.*
10. *An Account of the Author's Journey from Bonn to Frankfurt, and of the Places he passed through upon the Road.*
11. *A succinct Account of Franckfort.*
12. *A Description of the City of Heidelburgh, and of the Palatinate.*
13. *His Journey from Heidelburgh to Nurembergh, with a Description of the last-mentioned City.*
14. *The Country of Bavaria and Austria described, with the principal Towns in them.*
15. *A large and particular Account of the City of Vienna.*
16. *A View of the Emperor's Court, and of that Prince's Manner of living.*
17. *Of the celebrated Library at Vienna, and the Emperor's Collections of Curiosities.*
18. *The most remarkable Things in the Neighbourhood of this City described.*
19. *The Author's Remarks upon the Customs and Manners of the Inhabitants in that great City.*
20. *A Description of the remaining Part of Austria and Moravia.*
21. *His Journey through the Kingdom of Bohemia, with an Account of the Silver Mine at Guttentberg.*
22. *The famous City of Prague described, together with an Account of some other remarkable Places in Bohemia.*
23. *A Description of the City of Dresden, and of the Country of Saxony.*
24. *The Author's Journey through Freiberg, Leipfick and Magdeberg ; with an Account of those great Cities.*
25. *A Description of the noble City of Hamburg, with the Author's Remarks upon the German Nation.*

IT is now Time that we should lead the Reader out of *Europe* ; of which, however, many Countries remain yet undescribed ; for the making known of which, we could think of no better Method than digesting, into the closest Order possible, the Travels of the ingenious Dr. Browne through most of those Countries, Accounts of which are still wanting. He was the Son of the famous Sir Thomas Browne of *Norwich*, so well known to the learned World by the many curious and valuable Works he published. As for this Gentleman, he received the first Part of his Education under the Care of his worthy Father ; and having passed through the Circle of School Learning, was removed to the University of *Oxford*, where, after having taken his Degrees regularly, and with much Reputation, he resolved to travel, as he did, through the greatest Part of *Europe* ; and having Recommendations where-ever he came, to Persons the most distinguished for Rank and Learning, acquired thereby va-

rious Opportunities of making deeper and better Observations than is common with Travellers in such hasty Tours. He published two Volumes of his Voyages and Travels, which were extremely well received ; and in the Account given of them by the Secretary of the Royal Society in the Transactions, they are very highly and justly commended. He afterwards took his Degree of Doctor of Physick, and became a Member of the College, Fellow of the Royal Society ; and, in regard to his great Knowledge and Experience, was promoted to the Rank of being the King's Physician. He enjoy'd these Honours, together with an universal and unblemish'd Reputation, for many Years, and was very justly consider'd as an Honour to his Family and Profession. We have taken the Liberty to range his Travels in the Manner most suitable to the Nature of this Collection, and because it was impossible to preserve a proper Connection, without taking in his Account of the *United Provinces*, the *Low Countries*, and some Part

of *Germany*; we chose rather to retain them, though many of the Places had been before spoken of in former Chapters of this Book, than to begin abruptly with his Accounts of *Austria, Bohemia, Hungary, &c.* for the Sake of which they were chiefly inserted; but as all he says is equally entertaining and instructive, we apprehend that this cannot be considered as any Inconvenience.

I went in the Year 1668, from *Norwich* to *Yarmouth*, a Sea-Port in the County of *Norfolk*, at the Entrance of the River *Yare*: Where being furnish'd with Letters of Recommendation by Sir *James Johnson* to *Amsterdam, Francfort, Venice, and Vienna*, I embark'd the 14th of *August* in *Yarmouth* Road, aboard the *Angel Ketch*, Burthen Fifty five Tuns; and set sail for *Rotterdam*. It was not long before we discovered *Goree Steeple*, and immediately after the *Briel*, situate at the Entrance of the River *Mosa*, or the *Maese*; which having its Rise in the Mountains of *Vauge*, or *Vaugesus*, passes by *Verdun, Dinant, Namur, Liege, Maestricht, Ruremond, Venlo*, and several other Places, and here discharges itself into the Ocean. In our Passage up the River we saw many stately Villages, the most noted of which were *Maesland-Sluice, Schiedam, and Delfts-Haven*; and came ashore about Six in the Evening at *Rotterdam*.

Here I had Sight of two of the largest Men of War belonging to *Holland*, viz. the *Crane*, and the *Wassenaer*; the last of which was built in Lieu of that in which Admiral *Opdam* was blown up, as he was engaged against his Royal Highness the Duke of *York*. The Points of the Keys of this City are very fair, and the Channels, which extend into the very Centre of it, so large and deep, as to be capable of receiving Ships of great Burthen. It is very populous, the Houses well built, and the Streets very clean. The Organs of the great Church, the Tower, and the Monument of *M. De Wit*, the Statue of *Erasmus* upon the Bridge, and some other Curiosities, are worth the Observation of a Traveller. It being then Fair-time, we saw some Drolls acted, and some Rarities, viz. Lions, Leopards, and among the rest a Woman of seven Foot high.

From *Rotterdam* we passed forward to *Delft*, passing by the Powder-House (a beautiful Structure at some Distance from the City). The Piazza of *Delft* is very large, the Town-house fronting it at one, and the new Church with its high Steeple at the other End. This Church is famous for the Tomb of *William of Nassau*, Prince of *Orange*, together with his Wife and Son, Prince *Maurice*, whose Statue is in Armour, with his Dog lying at his Feet, with four Obelisks supported by ten Marble Pillars: It stands in the Middle of the Isle. The old Church contains the Tomb of the famous *Van Trump*, carved on the Walls, his Effigies lying upon a Cannon, surrounded with Arms and Trophies. In another Church we were shewn the Monument of Admiral *Hein*, who took the *Spanish* Plate Fleet: And in a large House, in a Wall, the Marks of some of the Bullets, by which Prince *William* was murdered, in 1584.

2. The *Hague* is celebrated for being the ancient Residence of the Counts of *Holland*, and now of the States-General; it is about three *English* Miles from *Delft*. It has a very fair Piazza, many well built Houses, and the Pall-mall, the Wood, and the Park, are very beautiful Places; but what surpasses all, is the Way from hence to *Scheveling*, which is paved with Brick for three Miles, with several Rows of Trees on both Sides, as far as to the Steeple of *Scheveling*. The City of *Leyden* (nine Miles distant from the *Hague*,) may for its Neatness compare with any in *Europe*, its Streets being beautified with noble Houses, and large Channels on both Sides: Its Fortifications are after the modern Way. One of the chief Antiquities of *Leyden*, is what they call the *Hengist Castle*, (or the *Berg*,) from its Founder *Hengist* the *Saxon*. On the Top, into which we went by very handsome Stairs, we saw a very fair Harbour, a Labyrinth and Well, and at the Bottom is a very good House of Entertainment. But what surpasses this, are the Ruins of an ancient Fortrefs not far from this City, at the Village call'd *Cat-*

wick, upon the Sea, known by the Name of *Arx Britannica*; which being built by *Caligula*, and afterwards ruin'd by the *Normans*, was overwhelm'd by the Sea at last; yet not so, but that at certain Times, when the Tide is very low, its Ruins have been plainly discovered, and some Antiquities have been found with this Inscription: *Ex Ger. Inf.* that is, *ex Germania Inferiori*. The Stadt-house has a very fair Front towards the Street. In the Anatomy Hall you see many Skeletons, of a Whale, a Horse, Deer, Cow, Cat, and Fox, and two Legs of an Elephant, besides those of Men and Women, some Muscles preserv'd, and one entire Body with the Skin and Flesh.

The Physick-Garden is none of the largest, but abundantly stock'd with Plants of all Sorts. Near it stands the College where the Publick Lectures are kept every Day, and under it is the Printing-House of the University. In the Stadt-house, in the Apartment of the Burgermasters, I saw a most curious Piece done by *Lucas van Leyden*, representing the Day of Judgment. Near the same Place is also shewn the Table of that famous Taylor, *John of Leyden*, upon which he used to work, before he took upon him the Trade of a Reformer, and came to be King of the *Anabaptists* in *Germany*. From *Leyden* I travell'd to *Harlem*, seven *Dutch* Leagues (or twenty one *English* Miles) thence. Its Situation is very pleasant, among Groves of Trees. The great Church surpasses for its Bigness all others in *Holland*, and is full of remarkable Inscriptions. The Pictures of all the Earls of *Holland*, in the Prince's House, are very good Pieces; and in the Summer-House of the Garden is that of *Laurence Coster*, a Citizen of this Place, whom they stile the first Inventor of Printing; whereas others ascribe the same to a certain *German*, named *John Gottenberg*. In the other Rooms you see several excellent Pieces of Paintings of *Hemskerk* and *Goltzius*; but those of *Cornelius* of *Harlem* exceed the rest, especially his History of *Herod's* killing the Children; his Feast of the Gods, in which *Vulcan's* Foot is esteemed most; and his Collation of a Nun and a Monk.

On the other Side you see a Picture of a Ship with Saws, in Memory of the glorious Action done by those of this Town, who under the Reign of *Frederick Barbarossa*, fighting against the *Saracens*, took *Damietta*, entering the Port by Means of Saws fastned to the Keels of their Ships, which cut the Chains of the Harbour. Here is also an Hospital for Sixty aged Persons, and another for the Sick, both very handsome and neatly kept. Here I observed the first Time their Way of Whipping Malefactors with Rods: They tie their Hands stretch'd upward as high as they can, to a Post erected upon a Scaffold, with an Iron round their Waste, and so give them as many Stripes as are allotted them by their Judges. The Lake near *Harlem*, call'd the *Harlem Meere*, is above twenty Miles long.

3. The next Place to *Harlem* is the City of *Amsterdam*, famous throughout the World for its Riches, Trade, Shipping, fair Streets, and magnificent Buildings. Its Situation is upon the River *Ye*, being formerly the Seat only of a few Fishermen; but being favour'd in Time with the Title of a City, by the Earls of *Holland*, was strengthened with a Wall 1470, against those of *Utrecht*; and many Years after, by the Emperor *Maximilian*, honour'd with the Imperial Crown over their Arms, which are three Crosses on a Pale. It is almost incredible how this City is increased of late Years, being now encompass'd with a new Wall, and large Ditch, after the Modern Way of Fortifications. The new Streets especially are very spacious, with large Channels. The River *Amstel* (from whence it has borrow'd its Name) also passes through it, being let in under a very handsome Bridge of eleven Arches, and twenty six Paces broad, which makes part of the Wall. This whole vast Body is built upon Piles of Timber driven into the Earth close to one another, the Foundation of the Tower over-against *St. Catharine's* Church, being said to consist of 6334 great Trees; and I myself was an Eye-witness of the vast Number of Trees

I saw

I saw them drive into the Foundations, where the *East-India* House was to be enlarged; and at another Place, where they were laying the Foundation of a *Lutheran* Church.

The noblest Structure of all this Country, and one of the finest in *Europe*, is their Stadt-house, built of Free-stone, 110 Paces in Front (in which it exceeds *St. Peter's* Church at *Rome*;) and Eighty one Paces deep. At its very Entrance, on the Right-Hand, you see the Hall where Malefactors receive their Sentence; the Marble Statues here hanging down their Heads, as if grieved at what was pronounced. All the Floors are covered with Marble, and the Roofs finely carved, painted, and gilt; *Atlas*, bearing a Globe upon his Shoulders, stands on the Top of it. The Globe is of Copper of ten Foot Diameter, and exceeds, as far as I ever heard or saw, any Ball or Globe of this Nature. That of *St. Peter's* Church at *Rome*, and that of *Florence*, being less; and such as I have seen upon any of the *Turkish* Mosques, don't come near this in Bigness; nay, the largest of those three famous Balls at *Morocco*, are, according to the Report of those that have seen it, inferior to this. The Exchange of *Amsterdam* is very fair, exceeding large, and frequented by an incredible Number of People. Most of their Churches are stately Edifices. The Partition with Ballisters of Brass in the new Church are truly noble; and the Carvings of the Pulpit exceed the rest.

The Tombs of *Van Hulst* and *Hemskerck*, in the old Church, are very well worth a curious Traveller's Observation: The last of these two has rendered himself famous by his successful Expeditions in the *East-Indies*, after their first Settlement there, by the Way of the Cape of *Good Hope*, when they had found the *North Passage* by *Nova Zembla* impracticable. Their House of Correction is also worth Observation; having at its Entrance two Lions bridled with this Inscription:

Virtutis est domare quæ cuncti pavent.

A proper Emblem for the Purpose it was intended, viz. to bridle the Insolencies of such as are riotous in the Streets, or commit Disorders, and the Extravagancies of the Sons of Citizens, who are past the Government of their Masters and Parents. They are employed in Gaining their Bread by rasping *Brazil* Wood; and if they refuse to perform their Task, and become incorrigible by Blows, they (as we were told) put them in a large Cistern, with a Pump by them, and so letting in the Water upon them, force them to work for their Life.

Their *Spin-buis* is intended for the Correction of young Women, such as live loosely, or are taken in the Streets, and other suspicious Places: Sometimes the Citizens send their Daughters hither for Chastisement, and these have Chambers allotted them; I saw above an hundred Women in one large Room, some of which were very well dress'd. In the Hospital for Children are 600 Orphans, well educated and look'd after. The *Dol-buis* is like our *Bedlam*, intended for delirious Persons. The *Gast-buis*, an Hospital for the Sick; as the *Mannen-houze* is an Hospital for old Men. They have besides this, a laudable Custom throughout all *Holland*; which is, that upon the Appointment of any Meeting at a Tavern, or any other Occasion, certain Forfeitures are put into a Box kept in all Publick-Houses, for the Use of the Poor, which is the Reason that scarce ever any Beggars are seen in the Streets.

Their *East-India*-House contains an incredible Store of Spices, and other *Indian* Commodities. Their Admiralty House, where they keep their Stores for Shipping, is surrounded with Water for its greater Security, and near it lie Seventy two Men of War. On the Top of this House (as most of Note of this City) is a Cistern for the Reception of Rain-Water, to supply the Defect of Spring-Water, which is very scarce. At the Entrance of the Gate, we saw the entire Body of a Man preserved from Corruption, enclosed to the Waste in a Canoe, made of Fish-skin, so closely sewed together, that no Water could get in. The handsomest

Streets of *Amsterdam* are, the *Harlem-Street*, the *Cingel*, *Princes Graft*, *Kaisers Graft*, and *Heeren Graft*, as also the *New Island*. Among other Rarities I saw here a Globe, the Workmanship of *Vingbomes*, betwixt six and seven Foot Diameter; it was all of Copper, and very well painted, with all the new Discoveries made in 1641, at 42 Deg. S. Lat. and 170 Longit. those towards the N. W. of *Japan*, about *Nova Zembla*, the *Tartarian* Sea, beyond the Streights of *Voygats*, viz. *New Holland*, *West-Friesland*, &c. Though most of those Discoveries are contradicted by *Martiniere*, who made a Voyage into those Parts in 1653, from *Copenhagen*, especially as to the true Position of *Zembla*, its Coherency to the Continent, the Length of the Streights of *Voygats* (which they make ten, but he thirty five *Dutch* Leagues) and a Passage through it into the *Tartarian* Ocean.

I had the Curiosity to take a Prospect of the City from the Steeple of the Church, which by Reason of the Unevenness of the Houses, did not appear altogether so beautiful as those of *Italy*, which are flat on the Top. Every Day, at Eleven a Clock in the Forenoon, there is very good Musick at the Stadt-house, being the Gift of the Earl of *Leicester*. The Chimes, of which there is a Sett in most Steeples here, make also a very agreeable Harmony.

Among other Persons of Note, I got into the Acquaintance of *Dr. Ruish*, who shew'd me many Curiosities in *Anatomy*; such as the Skeletons of Children, and Fœtus's of all Ages, very neatly done; the Lymphatick Vessels preserved, with all the Valves; all the Vessels of the Liver separated from the fleshy Part; many Muscles dissected; and whole Bodies kept entire, without the least Signs of Corruption. *Dr. Swammerdam* shew'd me several of his Experiments, according to his Treatise *De Respiratione*, with a Collection of many Insects. *Glauber*, the noted Chymist, gave me a Sight of his Laboratory. And *Blasius*, famous for his Observations upon *Veslingius*, gave me many Marks of his Civility.

It is to be observed, that the Jews live at *Amsterdam* in more Splendor than in any other Part of the World being provided with magnificent Houses, and a very fair Synagogue, and have among them Persons of Learning, and endow'd with other good Qualifications; some of them having lived under the Notion of Christians in other Places. There was one *Juda Leo*, who had a Model of the Temple of *Solomon*, the Fort of the Temple, the Tabernacle, and many other Curiosities of that Nature. I also saw the Ceremony of the Circumcision of a *Jewish* Child; they thrust a Probe betwixt the *Glans* and *Præputium*, and dilating it so, that both the inward and outward Skin be drawn forward, by a certain Instrument they hold the Skin close to the Instrument; the remaining Skin being put back immediately, the Blood stopp'd, and the Plaister applied: All there present singing all the while, that the Cries of the Infant may be the less heard.

I pass'd from *Amsterdam* to *Utrecht* in seven Hours, in one of their *Track Schuyts*, or large Boats, drawn by Horses, through the artificial Channels which are made for this Purpose in most of the Provinces, as well of *Holland*, as of the *Low-Countries*.

4. *Utrecht*, (anciently *Antonina*, and afterwards *Ultrajectum*;) the Capital City of the Province of the same Name, is very large, and handsomely built. It has been an Episcopal See for near these thousand Years: Its first Bishop was *Willebald*, an *Englishman*. It was made an University in 1636. The great Church has three Steeples one above the other, from whence I took a full View of the adjacent Country, which is very plain, and so populous, that there are no less than fifty one walled Towns, to any of which you may go in a Day's Journey thence. Here is also an *English* Church, in the Middle of which is a Pillar, the Foundation of which was laid upon Bulls Hides, in 1099, with the Picture of a Bull with this Inscription:

*Accipe Posteritas quod per tua sæcula narres,
Taurinis cutibus fundo solidata columna est.*

The Library belonging to this Church has several old Manuscripts, and among the rest a Bible in six Volumes, painted and gilded after a very ancient Way. The two German Idols, bestowed upon this Place by the Emperor Henry IV. are worth taking Notice of for their Antiquity's Sake: As also a Horn said to be made of Ivory. I saw also three Sea-Unicorns Horns, (being an Animal in the Northern Seas) one of which being tipp'd with Silver, served for a Drinking-Cup. They were about five Foot long; though the King of Denmark has two that were taken near Nova Zembla, that have ten Foot in Length: This King's Father had so many of them, that he bestowed above one hundred of them for the making of a magnificent Throne. I myself have seen some fifteen Foot long, and a Walking-Staff, a Sceptre, Scabbard for a Sword, and other Curiosities made of the Teeth of this Animal, but could never be convinced of its Effects against Poison, or any contagious Distemper, though I have given it frequently, and in very great Quantities.

Here I had also the Honour to see Dr. Cyprianus ab Oesterga, Dr. Regius, Voetius, the only Member left alive of the Synod of Dort; but unfortunately miss'd the Sight of the famous Anna Maria Skurman, she being gone into the Country, yet had the good Fortune to see her Picture, drawn by her own Hand, with this Inscription:

*Cernitis hic pictâ nostros in Imagine vultus,
Si negat ars formam gratia vestra dabit.*

I travel'd from Utrecht, in two Hours, to Friswick, and crossing the River Leck to Vianen, where there is nothing remarkable besides the House and Gardens of Count Brederode, accounted the noblest Family in Holland, as that of Wassenger is the most ancient, and that of Egmont the richest. A Mount belonging to this Garden, makes Part of the Rampart of the Place. The Statues of the Twelve Cæsars, of Aristotle, with some Pyramids, Partitions, and Paintings, are Ornaments, suitable to a Traveller's Curiosity.

Hence I pass'd by Boat through the Country of Arkel, and came the same Night to Gorcum, a City situate near the three Rivers, the Ling, the Waal, and the Maese: It has a pretty handsome Market-place, and a Church with a very high Steeple. The Fortifications are of Earth; and over the Water-Gate you see this Inscription:

*Civitas in quâ maximè Cives legibus parent, & in pace
beata, & bello invicta. 1642.*

Which Inscription seem'd to have been fulfil'd in 1672, when the powerful Army of Lewis XIV. King of France, who conquered thirty Cities in one Campaign, did not extend their Conquests beyond this Place. From Gorcum I went to Worcum, on the other Side of the River, and so by the Castle of Lovestein, famous for the Imprisonment of Barneveldt; which, since that Time, has given that Name to the whole Party, which is generally called in Holland the Lovestein Faction.

5. Passing farther up the Maese, we came the next Day to Hertogen Bosche, having left Proye on the Left, and Heusden on the Right Hand. This City, called by some Sylva Ducis, Boisleduc, and Bolduc, is a well fortified City, situate upon the River Disa, or Deeze, which joins its Waters, two Leagues below this Place, with the Maese, being one of the chief Frontiers belonging to the United Provinces on that Side, and strong both by Art and Nature. Its Avenues are only Causeways made through the Marshes, with various Turnings, commanded by six small Forts; besides which, the Town is both commanded and defended by a Citadel, consisting of five regular Bastions. The Market-place here is triangular. In the Cathedral (which is dedicated to St. John) are many of the Arms of the Knights of the Golden Fleece, and on the upper Stalls an Inscription containing a short Account of the first Institution of this Order, by Philip surnamed the Good, Duke of

Burgundy, Lorrain, and Brabant. It was made an Episcopal See in 1559, and taken by the Dutch from the Spaniards in 1628.

From hence we pursued our Journey through a plain and sandy Country to Breda, a City situated upon the River Merk. It is very well fortified, with a large Ditch round the Counterscarp, and a Ravelin betwixt each Bastion, joined to the Rampart with-inside of the Ditch; besides a good Number of Half-moons and Hornworks, and a Parapet strengthened with a double Row of Elms. This Place belongs to the Prince of Orange. The Spaniards took it in the Beginning of the Low Country Wars; but the Dutch not long after surprized it, by putting eighty armed Men in a Boat covered with Turf, who thus entred the Castle.

It was taken by the Spaniards in 1625, and afterwards regained again by Frederick Henry Prince of Orange. It has a very fair Church, in which are many good Tombs; and among the rest those of Englebert Count of Nassaw, with his Family; of the Heer Van Horn, and his three Wives; and of Henry Earl of Nassaw, who being the Founder of the Castle of Breda, his Armour is supported by four Warriours upon their Knees: The Gardens, Gallery, Walks, and Dials belonging to this Castle, are worth a Traveller's Observation. From Breda we travel'd by Land to St. Gertruydenberg, the utmost Frontier Place of the Dutch on the North Side of Brabant. It is of no great Extent, but abounds in Fish, which are catch'd in a Kind of a Lake called the Waart, made so by the Falling into it of the Maese, and divers other Rivers. You see here a very fair Church, and the Ruins of a large Steeple. We pass'd hence over a large Water, which had overflow'd the Country, and drown'd twenty-two Parishes, and, passing by the ancient Tower called Murvey House, came to Dort, or Dordracum. This City, which is seated in the Waves of those great Lakes made by the Maese and the Wael, is reckoned the chief Town of South Holland, as having the Privilege of the Mint, and the Staple for Rhenish Wine and English Cloth; we have two Churches here, as the French have one. The great Church has a Steeple of 312 Steps high. I took a View of the Apartment where the Synod of Dort had been held in 1611; which was a very fair one, and had an extraordinary agreeable Prospect into the Country. The large round-bellied Vessels, which stand betwixt this City and Cologne, intermixed with long Liege Boats, afford an odd Spectacle to Strangers.

6. I embarked in a Vessel bound for the Isle of Walcheren, and sailing by most of the Islands of Zealand, and in Sight of the Towns of Williamstadt, Zirickzee, Tergoes, &c. we came ashore at Ter-Vere, where there is a convenient Harbour. It has a fair long Market-place. The Scotch have had a Factory here for above 200 Years; over-against it you see a Steeple, the poor Remainder of a noble Town, which has been swallow'd up by the Sea.

From hence to Middleburg the Way is paved with a Kind of small hard Brick; the same being to be observed in many Places also in Holland. The City of Middleburg is seated in the very Centre of the Isle of Walcheren, being very well built, spacious and populous, the fourth Chamber or Port of the East-India Company; Amsterdam being in the first Rank, Rotterdam the second, and Flushing the third. There is a broad Water within the Compass of the Town, from whence is cut a Channel, which carries Vessels to the Sea. It is very well fortified, and beautified with many fair Churches, and other publick and private Structures. The new Church is of an octogonal Figure, with a Cupolo; the Steeple of the old Church is famous for its Height, the Town-house considerable for its old Statues, and the Piazza of a circular Figure. The Country round it being cover'd with fruitful Gardens. The Zealanders are generally great Lovers of the Family of Orange. Hence I went to Flushing, a strong Sea-port Town, strengthen'd with Stone-Walls towards the Sea, and Mud-works to the Land-side. This being one of the first Places the Dutch took from the Spaniards in 1572, was, together with Rammaken and the

the *Brill*, made a Cautionary to Queen *Elizabeth*, 1585, and restored again to the United Provinces in 1616, by King *James* I. The Mouth of the Harbour is surrounded with Piles driven into the Ground, and these again are secured by Rushes, Flags and Reeds, staked down, intermix'd with Osiers and Hurdles, to break the Force of the Water. The Stadt-House is a noble Structure, standing in the Market-place, and affords a fair Prospect in Front, which is adorned with three Rows of Pillars, one above the other; the lower Row being of the *Dorick*, the second of the *Ionick*, and the Uppermost of the *Corinthian* Order, on the Top of which is a Gallery, from thence you may discover Ships at a great Distance at Sea. We saw here many Ships, and among them some Men of War of considerable Bigness. The Women in the Isle of *Walcheren* are clad for the most Part in red Cloth, and wear Straw Hats. If a Man happen to die here, a great Bundle is laid at the Door, if a Child a little one, if a Male it is put on the right Side, if a Female on the left. When a Woman is delivered, they give Notice of what Sex the Child is of to all the Neighbourhood, by tying a Piece of Lawn to the Rapper of the Door, made up into the Shape of a Puppet, and representing the Sex of the new born Child. I returned to *Middleburgh* by Land, where I embark'd again, and passing down the River by the Fort *Rammaken*, entered the River *Schelde*, and sailing up, pass'd the Fort *Frederick Henry*, and so to the Fort *Lillo*, where we were forced to stay till our Ship was searched. Just opposite to the last of these two Forts, on the other Side of the River, is the Fort called *Lifgens boek*, and on the other Side another call'd *de la Croix*, the last belonging to the *Hollanders*; the *Spanish* Forts to defend this Frontier are, the *Philip*, the *Pearl*, and the *Mary*.

7. The River *Schelde*, mentioned by *Cæsar*, has its Rise in the Country of *Vermendois*, and passing by *Cambray*, *Valenciennes*, *Tournay*, *Dornick*, *Oudenard*, *Ghent*, *Rupelmond* and *Antwerp*, divides itself afterwards into two Channels, whereof the Southern is call'd the *Hont* (Dog,) the other taking its Course from *Bergen-op-Zoom*, falls into the Sea between the Isles of *Zealand*. The next Day we continued our Voyage upon the *Schelde*, and arrived safely at *Antwerp*. This City is of a large Extent; its Walls very broad, with Rows of Trees upon them, faced with Brick and Free-stones, after the modern Way, though the Bastions are none of the largest, but the Ditch is very broad and deep. The Citadel is accounted one of the best Fortifications of five Bastions, in those Parts, very well lin'd with Brick and Stone, and commanding the City, the River and the adjacent Country. There is also another Fort near the *Schelde*. The Exchange of *Antwerp* is supported by thirty six Pillars, each carved a different Way. It stands in the Middle of four Streets, which lead unto it. The *Meer*, the most remarkable Street of the City, has the Water running under it, and here the Coaches meet to take the *Tour-ala-mode*; at one End of it you see a large Brass Crucifix, placed upon a Pedestal of Marble. The *Jesuits* Church exceeds for Magnificence any that ever I met with out of *Italy*. The Front is a noble Piece of Architecture, having the Statue of *Ignatius Loyola* on the Top. The Roof is for the most part painted by *Rubens* and *Van Dyke*; the Carving is most excellent, and the Flower Work done by *Segers* a *Jesuit*. It has a very handsome Library, kept in four Chambers, the Founder of which was *Godfrid Houtappel*, whose Tomb is to be seen in a Chapel on the South-side of the Church. The *Carmelite* Church is famous for the large Statue of Silver of the Virgin *Mary*. The Church of our blessed Lady is the biggest, and the Steeple the noblest and one of the best built in the World, being 459 Foot high. This Church abounds also in many curious Pieces of Paintings, and among the rest, there is one highly esteem'd, done by *Quintin*, who being at first a Smith, made that curious Iron Work of the Wall before the West Door; but afterwards, to gain his Mistress, turn'd Painter, and became famous in this Art. His Head, cut in Stone, is placed near the Church Door, with this Inscription:

VOL. II. N^o 120.

Connubialis amor de Mulcibre fecit Apellem.

I took also a View of the Abbey of St. *Michael*, seated upon the River *Schelde*; among other Rarities I saw here a Glass which represented the Pictures of our Saviour and the Virgin *Mary*, collected from the putting together of divers other Heads: One being represented from a certain Picture, which contained no less than thirteen Faces, and the other from one of twelve. That of the Virgin *Mary* had this Inscription:

Diva nitet variis expressa Maria Figuris.

In this Abbey, which contains sixty three Monks, I saw also the Tomb of a Countess of *Brabant*, who was drowned, and her Statue. Near the Wharf-gate, you see the Church of St. *Walburgis*, an *English* Saint. The Town-house of *Antwerp* is a fine Structure, that belonged formerly to the Eastern Merchants very magnificent and large, but run to Ruin; here were preserved, several Sorts of Musical-Instruments, not known now-a-days. The *Hessen* House has been none of the worst in former Time. The Water which they make use of in Brewing, is conveyed hither from *Herental*, at least thirty Miles, by Means of a Canal. This City produces also many great Collections of Pictures, and some of the best Miniature, done by *Gonsol*; of that kind I saw one curious Piece, done by thirty five several Masters.

8. I went from *Antwerp* to *Brussels* by Water, changing Boat five times, by Reason of the many Locks and Sluices, the Country about *Brussels* being 200 Foot higher than *Antwerp*. There is a Place call'd *Fontaine*, about five Miles from *Brussels*, where three Rivers cross one another, and one of them is carried over a Bridge. The Market-place of *Brussels* is a long Square, having the Town-house at one End, and opposite to it the Royal Palace, near which the Counts of *Egmont* and *Horne* were beheaded. On the Top of the Town-house you see the Statue of St. *Michael*, the Patron of this City, in Brass. In the Church of the *Carmelites*, the Altar is a very noble Piece, and near the Church stands a Statue of a Boy pissing, which serves instead of a continual Conduit. We also took a View of the Armory, which was well furnish'd formerly, but has now only some few Remains, such as the Armour of *Charles* V. of the Duke *d'Alva*, of the Cardinal *Infanta*, and some few others, and divers Bucklers curiously wrought; the Sword of *Charles* V. wherewith he used to make the Knights of the *Golden Fleece*; and some Banners taken at the Battle of *Pavia* from *Francis* I. Before the Court of the Palace stand five Brass Statues, and on one of the Towers a Bird pierced with an Arrow, in Memory of the Shot which the *Infanta Isabella* made. The Park has very pleasant Walks, set with Trees, and intermingled with Grotto's, Fountains, and Water-works; one Piece comes near to *Frascati*, imitating the Sound of all musical Instruments, by a Kind of perpetual Motion. But what is most surprising in this Park is, the Echo, which makes ten or twelve distinct Replies. The Church of St. *Gudula* claims the Preference for Bigness; and two Chapels here are worth the Travellers Observation; in one of which is presented the Host, which bled when stabb'd by the *Jews*. The *Dominican* Church is famous for the Monuments of the Duke and Dutchess of *Cleve*, in *Corinthian* Brass. The *Beguines*, or pious Maids, (a Kind of Nuns) of which there are near 800 at *Brussels*, have also a very fair Church, which is milk-white, and lately built. The *English* have also a Nunnery here. There were at that Time above 300 Houses shut up, infected with the Plague, and marked with this Token,

†
IHS

Which made me hasten away; so that after I had dined at the Fish-Tavern, (noted for its Pictures) I returned to *Antwerp*, and travelling the 4th of *October*,

9 D

through

through an open Country, I took up my Quarters at *Molin bruse*, and entering the Country of *Liege* the 5th, arrived the 6th at *Maastricht*, a strong City, situated upon the *Maes*, four Leagues below *Liege*. It is chiefly considerable for its Out-works, the Wall itself being old. To remedy the Inconveniency arising to the Town from an adjacent Hill on the S. E. Side, they have made an Horn-work within a Musket-shot of it, and a high Bastion answering to it, covers the Town. Under this Hill is one of the best Quarries of Stone in the World. On the other Side of the *Maes* is a Suburb called the *Wicke*, rather stronger than *Maastricht*, unto which it is joined by a Bridge of nine Arches. The Country on that Side is flat: The Houses of *Maastricht* are none of the handsomest; yet the Town-house is a stately Structure, standing in one of the Piazzas; in another Piazza stands the Great Church. This Town was taken by the Spaniards in 1632. October the 7th, I pass'd through *Gallop*, and came the same Night to *Aken*, *Aix la Chapelle*, or *Aquisgranum*, famous for its hot Baths. From hence I pursued my Journey to *Ju-liers*, but being late, we pass'd by it, leaving it to the Right. Not far from this City runs a shallow but swift River, called the *Roer*, at the Confluence of which with the *Maes* is *Roermonde*, the capital City of the Spanish *Gelderland*, seated upon a rising Ground.

9. *Cologne*, *Collen*, or *Colonia Agrippina*, anciently the chief Seat of the *Ubii*, who first inhabited the Country of *Bergues*, were infested by the *Germans*, and, imploring the Protection of the *Romans*, were by them placed on the other Side of the *Rhine*, and settled in this Place by *Agrippa* Lord Lieutenant of *Gallia*, and was afterwards named *Colonia Agrippina*, in Honour of *Agrippina* Daughter of *Germanicus*, and Wife of *Claudius*, whose Birth-place it was. It may for Extent vie with any City of *Germany*, and is fortified to the Land-side with two high Walls and two deep Trenches, and beautified with several Rows of pleasant Trees, and secured on the Side of the *Rhine* by a Wall of Stone; but its greatest Strength consists in some Out-works, Half-moons and Ravelins. The chief Streets are broad, and paved with broad Stones. *Maternus*, who was present at the Council of *Arles*, was their Bishop at least 1350 Years since. Great Part of the Town is taken up with Churches and Monasteries, many of them very well endowed, there being to most of the Houses of the Canons and Prebends, large Gardens and Vineyards. The Church of *St. Kunibald* lies on the North Side of the Town; but the Convent of the *Dominicans* is a very fair modern Structure. The *Jesuits* Church is full of rich Ornaments; and that dedicated to *St. Gereon* (who was martyr'd thereabouts in the Time of *Maximianus*) contains above 1000 Saints Heads. In the Church of *St. Ursula* you see her Tomb, and those of 11,000 Virgins slain by the *Huns*. The Tomb of *Ursula* has this Inscription:

Sepulchrum Sanctæ Ursulæ indicio Columbæ detectum.

Upon many of those Tombs were old Crosses and Lamps. The Church is also full of the Bones and Heads of Martyrs. The Cathedral of *St. Peter* is a large Structure, but remains unfinished. Within the Body of the Church are four Rows of Pillars, and the Choir is very handsomely built; behind it are supposed to be the Tombs of the three Wise Men of the East, or the Kings of *Arabia*, commonly called the three Kings of *Cologne*; *Milchior*, who, as they say, offer'd Gold, *Gaspar* Frankincense, and *Balthasar* Myrrhe. They relate, that their Bodies were first translated to *Constantinople* by *Helena*, the Mother of *Constantine* the Great; from thence to *Milan* by *Eustorfus* their Bishop, whence they were removed above 500 Years ago, viz. 1164. to *Cologne*, by *Rainold* Bishop of this Diocese. All the Canons of this Church must be Noblemen. Upon one of the Ruins in the Street, you see a Tomb made of one Stone, of which Kind many more are to be met with in other Places of this City. Of these I saw a great Number at *Arles* in *Provence*. The Town-house is an elegant Structure; on the Front of which

is a Man in *Basso rilievo*, engaged with a Lion, who, as they relate, was a Burger-master of that City, that having exasperated the Clergy against him, upon some Difference, they sent in a Lion upon him, whom he slew upon the Spot. The Elector of *Cologne*, who is also their Archbishop, has two Palaces here, but by Agreement is not to stay above three Days at a Time. It is a free Imperial City, notwithstanding which it does Homage to the Elector.

The Inhabitants are generally *Roman Catholics*, and the City, by reason of the vast Number of Convents, Churches, and Reliques, is stiled the *Rome* of *Germany*. However, the *Lutherans* have a Church within the Precinct of the Walls, and the *Calvinists* another at *Mulheim*, about two Miles below it, on the other Side of the *Rhine*. Just opposite to *Cologne* is the Village of the *Dutz*, inhabited chiefly by *Jews*. They speak but a Kind of odd *High-Dutch*; but to recompence this, the *Latin* and *French* are much in Use here. It was made an University in 1388, and has four very good Hospitals, two for young and old Persons that are infirm, and two for the Sick. After we left *Cologne*, we were drawn up the *Rhine* by Horses, and lodged the same Night at a small Village, near which *Julius Caesar* made his Bridge over the *Rhine*.

10. We came the next Day to *Bonne*, the ordinary Residence of the Elector of *Cologne*. It was formerly called *Castra Bonnenfia*, as being the Station of the sixth Legion in Winter, in the Time of *Tacitus*. The Archbishop's Palace is a noble Edifice, stretching a good Way into the *Rhine*. We took our Quarters this Night at the Foot of one of the seven Hills near the *Rhine*, most of which have old ruined Castles upon them. On the 15th we pass'd by a very pleasant Island, with a Convent in it; we saw also the Convent at *Remagen*, built upon a Rock, and fortified with round Towers, and came the 16th in the Morning to *Andernach* or *Antenacum*, one of the *Roman* Fortresses upon the *Rhine*. Some affirm, that this was the Birth-place of *Caligula*, and that *Valentinian* was buried near it. There are divers Mineral Springs hereabouts. The City is only fortified with an old Wall. The Water-passage being grown tedious, we hired a Coach to *Coblentz*, and passing through a very agreeable Country, planted with Walnut Trees, and in Sight of two of the Elector of *Treves*'s Country Houses, we cross'd the River *Moselle*, over a very fine Bridge, sustain'd by thirteen Arches, built in 1344, by Archbishop *Baldwin*. We went immediately to the Convent of the *Dominicans*, very agreeably seated upon the Banks of the *Rhine*; the Prior of which being in our Company, he would needs keep us with him all Night, and entertained us with an handsome Supper, and excellent *Moselle* Wine. *Coblentz* or *Confluentia*, is so called, from its Situation at the Confluence of the *Rhine* and *Moselle*, which make two Sides of it, the Third being a noble Fortification, after the modern Way, from one River to the other, which makes it of a triangular Figure. It has an old Wall within the Works, and is under the Jurisdiction of the Elector and Archbishop of *Treves*, as is likewise the Castle of *Hermanstein*, (*Hermans sterna*) by some called *Ehrenbreitstein*, built just over against it on the other Side of the *Rhine*, being join'd to *Coblentz* by a long Bridge. At the Foot of a Rock just underneath this Castle, you see a very noble Palace belonging to the Elector, having two very large Wings, and a Fort with five Pavilions, facing the *Rhine*. Not far from *Coblentz*, the *Carthusians* have a Convent pleasantly seated upon a Hill.

October the 17th, we continued our Voyage upon the *Rhine* to *Boppard*, a wall'd Town upon the Western Bank, an ancient Fortress of the *Romans*, known by the Name of *Bodobriga*.

The 18th, we dined at *St. Goar*, a Place upon the River, under the Jurisdiction of the *Lantgrave* of *Hesse*, who has a Castle here. On the Outside of the Wall of the Town is fastned a Collar of Brass, given, as they say, by *Charles V.* It is the Custom, that such Strangers as come ashore here, must put their Knees into this Collar, when they are ask'd, *Whether they will be sprinkled*

sprinkled with Water, or Beer, or Wine? If they are for the Wine, they must give an Entertainment of Wine to the Company. The Queen of *Sweden* passing by that Way not many Years before, had presented them with a great Silver Cup, which they commonly drink out of. The 19th, We pursued our Voyage to *Baccharach*, famous for its excellent Wines; under the Elector *Palatine*. Hence we pass'd by a very old Castle, situate upon a Rock in the Middle of the *Rhine*, called *Pfalz*, because hither formerly the Princesses *Palatines* were sent to be brought to Bed. The next Day we pass'd along with a rapid Stream, which is very dangerous by Reason of the many Rocks that lie under Water; and a little above it we had a full Sight of a round Tower, on a Rock in the *Rhine*, commonly call'd *Mouse-Tower*, built by *Hatto*, Archbishop of *Mentz*, who having at a Time of general Scarcity invited a great Number of Poor to present them with Corn, instead of relieving, set Fire to the Barn in which they were enclosed, and whilst they made lamentable Cries, he said, *Hear how the Mice scream*. Soon after, being persecuted with Rats and Mice to that Degree, that he was not able to abide in his Palace, he built this round Tower in the *Rhine*, but being also prosecuted thither by the Mice, he miserably ended his Days. Not far above it, upon the Western Bank, you see the Town of *Bing* or *Bingium*, an ancient Roman Fortrefs upon the *Rhine*, at the Conflux of that River, and the *Navus* or *Naw*, over the last of which is a very fine Stone Bridge. It belongs to the Elector of *Mayence*. From *Bing* we set forward for *Mayence*, and in our Way at *Rudesheim* in the *Rhine* (so famous for the Excellency of the Wine) we were shew'd a Boy, whose Hair was as woolly as any of the *African* Moors, but of a whitish Colour; I took some of the Hair along with me.

Mentz, or *Mayence*, *Moguntia*, by the *Latins*, is situated just below the Confluence of the two Rivers, the *Main*, and *Rhine*, over against it; extending in Length towards the River, abounding with Monasteries, Churches, and publick Buildings; but the Streets are narrow, and the private Houses built after an antick Fashion; the Country round it is extremely fertile. *Mayence* claims the Invention of Printing, but may rather be said to have brought it to Perfection. It is famous for the Defeat of the *Roman* Legions, under *Varus*, by the *Germans*, which happened near it; and *Gustavus Adolphus*, the victorious King of *Sweden*, made his publick Entry here, 1631. in great Magnificence, and laid two Bridges, one over the *Main*, the other over the *Rhine*, the first of which is taken away since, but the other remains in the same Station. The Elector of *Mayence* is the first in Rank of the *Electoral* College, and has his Place at the Emperor's right Hand in all publick Assemblies. But his Territories are not suitable to his Dignity, being far less than those of *Cologne* and *Treves*; besides that, they lie scattering in the *Palatinate* and *Franconia*. However his seizing the City of *Erfurdt* has been no small Addition to his Power; where he has built a Citadel on *St. Peter's-Hill*, which serves for an Inlet into *Thuringia*.

11. From *Mayence* we continued our Voyage up the *Main* to *Franckfort*, an Imperial City, call'd *Trajectum ad Mœnum*, because the *Franks* used to pass and repass here, whilst they made War upon the *Gauls*, and to distinguish it from *Franckfort* upon the *Oder*, an University belonging to the Elector of *Brandenburgh*. The City is very large, divided in two by the River, the lesser of which is called *Saxon-House*, joined to the other by a fair Stone-Bridge, supported by twelve or thirteen Arches. The Advantage of the River *Main*, which passes by *Bamberg*, *Schweinfurt*, *Wurtzburg*, and other Places, and is join'd by the River *Tauber*, and others of less Note, together with its running into the *Rhine*, renders this City very commodious for Trade, as may be seen at the Time of the two great Marts kept there every Year, in *March* and *September*, when there is an incredible Concourse of People of all Nations, who buy and sell their Commodities, but especially Horses and

Books, though at other Times the Booksellers have little Business here.

In *Saxon-house* is a Palace, belonging to the Knights of the *Teutonic Order*, which is a Sanctuary for Debtors and Criminals; for fourteen Days. Abundance of *Jews* live in, and frequent this Place they are distinguish'd from the Christians by their Habits, which is a Ruff for the old Ones, a Bonnet for the younger Sort, and a peculiar Head-dress for their Women. We continued our Journey from *Franckfort* through the *Bergstraet*, and passing by *Darmstadt*, travelled through a very fruitful Country, full of Wall-nut Trees, Vines, Corn, and Tobacco in some Places. Coming to *Heidelberg*, we pass'd the River *Neccar* or *Necarus*, rising in the *Sylva Martiana* or *Black Forest*, and continuing its Current through the Duke of *Wittenberg's* Dominions, joins its Waters with the *Rhine* at *Manheim*. It passes by *Sultz*, *Tubingen*, *Stutgard*, *Hailbrun*, *Heidelberg*, and divers other noble and famous Cities.

12. As for the City of *Heidelberg*, its Situation is betwixt a River and a Ridge of Hills, extending from East to West, which makes it unfit for a regular Fortification. It was made an University, in 1346: It was taken by the *Spaniards* in 1620. when the famous Library that was preserved there in the Great Church, was carried to *Rome*, and added to the *Vatican* Library, where I saw it in 1664 on one Side of the Gallery, opposite to that of the Duke of *Urbins*. This Church, as well as that of *St. Peter*, contains many beautiful Monuments of the *Palatine* Family and other Persons of Note. The *French* have a Church here as well as the *Lutherans*, the last of which is call'd the *Church of Providence*, and the Elector, though a *Calvinist*, laid the first Stone of it: The Electoral Family are now Papists.

The Town-House is remarkable for its Clock, which has several Motions, and represents several Figures of Men, fighting of a Cock, &c. when it strikes. The Elector's Stables are near the River-side, but one half of them has been ruined in the last *German Wars*, as well as the Statues that were on the Outside of the Castle, which being upon an Eminency has among other Things a very large Tower, formerly call'd *Trutzkaysar* or *Defiance to the Emperor*, the Name of which is since changed into that of the *Star-fort*. Near it is a beautiful Garden, adorn'd with Grotto's, Caves and Water-works. But the most remarkable of all are the Cellars, replenished with Vessels of Wine, of a more than ordinary Size, among which, that commonly call'd the *Tun of Heidelberg* surpasses the rest, built in 1664, containing near 200 Tuns; instead of Hoops it is made with large Knee Timber, like the Ribs of a Ship, well carved and painted, and supported by Pedestals likewise carved. On one Side is a Stair-case forty three Steps high, leading up into the Gallery, which is on the Top of this great Vessel.

There is a solitary Place not above a Mile from *Heidelberg*, where you see three very fine Springs come forth out of the Mountain, and after they have fill'd five Ponds, and passed through three Cascades or Falls, carry so strong a Stream through the adjacent Plains, that they turn four Mills within a small Distance one of another. It is call'd the *Wolfs Fountain*, from a certain Princess, who, as they say, was torn to Pieces near this Place by a Wolf. At *Heidelberg* I was visited by two *Englishmen*, Mr. *Villers* and *Timothy Middleton*. These belonged to a certain Monastery call'd *Lobensfeldt*, possessed formerly by the *Jesuits*, but bestow'd since upon the *English*, who, to the Number of about an hundred, leaving their Native Country, in 1661, settled themselves with their Families in this Convent, a few Miles from *Heidelberg*. They call'd themselves *Christian Jews*, maintain'd a Community of many Things, did not cut nor shave their Beards, and observed many other Ceremonies enjoin'd in the Old Testament. Their Head was then one Mr. *Poole* of *Norwich*.

Whilst I was at *Heidelberg*, I took a Turn to *Spires*, and afterwards to *Manheim*. The first (supposed to be *Urbs Nemetum* of the Ancients) is situate in a Plain near the

the Western Banks of the *Rhine*. The *Swedes*, in the last *German Wars*, demolish'd it. The Episcopal See is under the Jurisdiction of the Archbishop of *Mayence*; it is well built, and has several good Churches. In the Cathedral, which is beautified with four large Towers, the *Roman Catholics*, *Lutherans* and *Calvinists* preach in their Turns at different Hours. It is very populous from the the vast Concourse of People which attend their Law Suits here. The Imperial Chamber, which was by *Maximilian* establish'd at *Worms*, being since removed to *Spires*, in which, not only private Causes, but also the Differences betwixt the Princes of the Empire, are determined without Appeal. *Manheim* lies at the Conflux of the *Rhine* and *Neccar*, which, from a Village, is in a few Years encreased to a Town, with large fair Streets, walled about and defended by a very strong Castle or Fortrefs. I saw the Model of a Palace the Elector is building, and in that Part which is already built, are many good Pictures, and among the rest, a Landskip, with the History of the *Swiss Confederacy*.

13. In our Way from *Heidelberg* towards *Nuremberg*, we travel'd along the *Neccar* in rocky Ways to *Mospach*; the second to *Poxberg*, where we saw nothing but an old Castle; and the same Day came to *Merkenthal*, or *Mergentheim*, the Residence of the Grand Masters of the *Teutonic Order*. It is a very well built Town, with a handsome Piazza, which has a Fountain in the Centre, and a Statue of one of the Grand Masters of this Order, with a long *Corridore* from the Palace. This Order took its Rise under the Emperor *Frederick I.* who, in his Expedition against the Holy Land, being accompanied by many Gentlemen of *Germany*, in Emulation of the *Knights Templars*, entred into an Order, which being approved by Pope *Celestine III.* they waged afterwards War against the Pagans inhabiting *Prussia* and *Livonia*, and subdued them; of which they remain'd Masters, till they were at first dispossest of these Countries by the *Poles*, and afterwards by the *Swedes*; so that there is nothing remaining now of this Order, but a few Commanderies in *Germany*. They wear a plain black Cross on a white Mantle; and the Dignity of Grand Master (who takes Place of all the Bishops) is generally bestow'd upon one of the first Rank among the Princes of *Germany*.

As we pass'd by *Lauterbach*, we saw a Church, a very noble Structure, on the Top of a high Hill, where the Pilgrims perform their Devotions in great Numbers. The next Place we came to was *Rotenberg*, an Imperial City, situate near the Head Spring of the River *Tauber*; which, after it has pass'd by *Rotiengen* and *Landen*, falls into the *Main* near *Wertheim*. We lodg'd that Night at *Burgperner*, passing the next Day by *Schantzbach*, came before Night to *Nuremberg*. This City may very well claim the Prerogative of being the fairest in *Germany*; most of the Houses being built of Free-stone, very high, and many of them painted on the Outside, and adorned with gilded Balls on the Top; they are generally six or seven Stories; and though the City is at a good Distance from any navigable River, and situated in a barren Country; yet is it very populous, the Industry of the Inhabitants being such, as to be accounted the best Artificers in *Germany*, in Steel, Brass, Ivory, and Wood, which creates a vast Trade here, and retains it.

The three chief Churches are, the *Hospital Church* lately built; that of *St. Lawrence*, which is famous for its Bigness, with two Steeples in the Front; and that of *St. Sebald*, which excels the rest. Here you see a wooden Crucifix so carved, as to be valued at an excessive Rate: Without the Church is another of black Wood. In short, as the *Lutheran Religion* is exercised here in its full Pomp, so this stately Church, and especially the Pulpit, which is excellently carved and gilt, may challenge one of the first Places among those of that Religion. Every Morning Half an Hour is spent in this Church in reading certain Passages out of the Scripture by the Priest, before he preaches to the People. The Senate-House is worth the Notice of any Traveller; the Hall is very spacious, and the Chambers lofty, and adorn'd with many good Pictures,

the Floor being paved with Stones gilt, and intermix'd with several Colours. In one of these Chambers you see the Picture of most of the Great Persons of *Germany*, that were entertained in the Halls; another of the Three Brothers of *Saxony*; an Elephant painted to the Life; a Piece of *St. John*, another of *St. Mark*, and two more of *St. Peter* and *St. Paul*, both done by *Albert Durer*; but that of *Adam* and *Eve*, by the same Hand, exceeds all the rest, with this Inscription:

Albertus Durer Alman faciebat post Virginis partum, 1507.

There is also another very rare Piece, of *St. Luke* drawing the Picture of our Saviour, and the Virgin *Mary*. As you enter the Shambles, you see a large Ox carved in Wood, and painted over, with this Inscription:

*Omnia habent ortus suaque incrementa, sed ecce
Quem cernis, nunquam Bos fuit hic, Vitulus.*

The Castle of *Nuremberg* is seated upon a Hill. The Emperor's Picture, his Chapel, a very fine Well, and other Pictures of the Electors, are very remarkable. They shew'd us also the Armour of *Hebbele van Gailleingen*, a famous Sorcerer in those Parts, and the Print of his Horse's Feet in the Wall of the Castle; from whence, as they tell you, he leap'd with his Horse over the Town Ditch. They were then busy in making a new Fountain; I must confess, that the Brass Statues intended for it, were excellent Pieces: The Sea Horses were of a very large Size, and the Sea-Nymphs exceeded the ordinary Stature of Women: The Statue of *Neptune*, design'd to be set on the Top, was above ten Foot high.

The small River *Pegnitz* passes through the City, near which are several Stone Bridges; below it joins with the River *Rednitz*, that unites its Waters with the *Main* at *Bamberg*, which last falls afterwards into the *Rhine*. The River *Rednitz* has its Rise at *Weissenburg*, at no great Distance from the River *Altmul*, which falls into the *Danube* not far from *Ratisbon*. This Convenience induced *Charles the Great* to endeavour a Communication between the *Rhine* and the *Danube*; but after he had advanced about two *German Leagues* in this Work, his warlike Employments, and some other Difficulties, made him give over his Design.

14. Not above four Leagues from *Nuremberg* is *Altorff*, a Town under their Jurisdiction, with an University erected in 1623. They have here a very handsome Physick Garden, containing above 2000 Plants. The Anatomy School is not very large, yet has several Skeletons, of a Hart, of a Horse, of a Man, and of a Bear, bigger than a Horse; besides some very ancient Pictures, as that of *Moses*, and of a *Ninivite*. *Dr. Wagenseyl* (whose Brother travell'd with me from *Heidelberg*) Professor of the Civil Law and History, shew'd me also a good Collection of his own, of Rarities and Coins, which he had gather'd in his Travels through *Europe*. In the University Library I saw a fair *Hortus Eystetensis*, and *Youngerman's* Collection of Plants, by his own Hands.

Leaving *Nuremberg*, we passed through *Newmark* in the *Upper Palatinate*, belonging to the Elector of *Bavaria*; and the next Day by the Way of *Heinaw*, subject to the Duke of *Newburg*, to *Ratisbon*, anciently called *Augusta Tiberii*, and *Colonia Quartanorum*, from the Fourth *Italic Legion*, which had their Quarters assigned them here, as being the chief Place belonging to the *Romans* on those Frontiers. Some are of Opinion, that *Tiberius* settled a Colony here in the Year of our Saviour's Passion; but it owes its chief Increase to the Emperor *Arnulphus*. Near it the River *Regen* falls into the *Danube*, whence the *Germans* give it the Name of *Regensburg*. It has a Bridge of Wood below the Town, and another of Stone, the fairest that is to be seen upon the *Danube*, being supported by fifteen Arches. It is an Imperial City, and tolerably well fortified, and has many stately Buildings, both private and publick. The Cathedral of *St. Peter* is a very fair Edifice, on the South-

South-side of which you see the Picture of *St. Peter* in a Boat, and on the opposite Side the Apostle's first Mission. In the Piazza stands a small but very neat Church; the Convent of *St. Paul*, another of *St. Emmeramus*, Bishop of *Ratisbon*, and a celebrated Saint in those Parts: *Albertus Magnus*, who was also Bishop of *Ratisbon*, has made no small Addition to its Fame. But the chief Glory of this Place is the Diet, or General Assembly of the States of the Empire, which is call'd together here. Upon this Occasion the Vice-Marshal is obliged to take Care that Lodgings are provided for the Persons that are to appear there; that Provisions may be brought thither in Plenty, and sold at a set Rate; that the Place of the Assembly be adorned suitable to so great an Occasion, and the publick Safety be not violated.

In this Place I entred that famous River the *Danube*, which beginning to be navigable in *Suabia*, passes by *Donawert*, *Newburg*, and *Ingolstadt*; it is increased by the River *Licus*, or *Leck*; by which the Commodities of the famous City of *Augsburg* are transported into it. From *Regensburg* we pass'd the first Day to *Thonawstein*, (*Danube-stone*) where is a Castle seated upon a high Rock, and thence to *Pfeter*, famous among the Ancients, by the Name of *Vetera Castra*, now an inconsiderable Place. The Boats made Use of upon the *Danube* are generally flat bottom'd, and broad at the Head and Stern; there is an Apartment for Passengers in the Middle, and they have very large Rudders, the better to command the Boats where the Current is swift. The next Day we pass'd by *Straubingen*, a wall'd Town belonging to the Elector of *Bavaria*; and the same Afternoon by *Swartz*, where we saw a Church upon a Hill, much frequented by Pilgrims; we lodg'd that Night at *Deckendorff*, near which the River *Iser*, or *Isara*, after having pass'd by *Landshut*, *Frising*, and *Munchen*, (the ordinary Residence of the Elector of *Bavaria*) falls into the *Danube*.

Thursday, being November the 15th, we pass'd by *Wilshoven* to *Passaw*, *Passovia*, or *Boiodurum*, a handsome City in the lower *Bavaria*, formerly known by the Name of *Castra Batava* among the Romans, who had settled a Colony there. It is compos'd of three Towns, viz. *Ilstadt*, *Passaw*, and *Instadt*, and seated at the Meeting of the three Rivers, the *Inne*, the *Danube*, and the *Ilz*. It has several very fair Churches, amongst which that of *St. Stephen* exceeds the rest. The Bishop's Residence is a Castle built upon a Hill; his Revenues are very considerable, Part of which arise from the great Lead-Mine at *Bleyberg* in *Carinthia*. It was, not many Years ago, almost laid in Ashes, by an accidental Fire, and as most of the Streets have been rebuilt since after the *Italian* Manner, so this City may now justly claim to be insert'd in the Number of the ten considerable Cities upon the *Danube*, viz. *Ulm*, *Ingolstadt*, *Ratisbon*, *Passaw*, *Lintz*, *Vienna*, *Presburg*, *Strigonium*, *Buda*, and *Belgrade*; the eight last of which I had the Opportunity to see, before the End of my Journey.

Just by a Wall, opposite to the Great Church at *Passaw*, stands a very large Head cut in Stone, the Mouth being two Spans wide, and the rest proportionable. In the River *Ilz*, which comes from the North, they find Abundance of Pearls: And the noble River *Inne* coming from the South, and passing by *Insprung*, is augmented by the River *Saltz*, (upon which stands the City of *Saltzburg*) discharges itself with great Force into the *Danube*, being the largest Stream that hitherto had join'd that River. The River *Inne* rises among the Alps in *Tyrol*. The 16th we arriv'd at *Lintz*, the Capital of the *Lower Austria*, not so considerable for its Bigness as Neatness, the whole Town being built of a white Free-stone, and the Market-place very spacious and handsome. The Castle lies upon a Hill, and is fortified after the modern Way. It has a Bridge also over the *Danube*. When *Solyman the Magnificent* besieged *Vienna*, this was the Rendezvous of the Imperial Army. It was besieged by 40,000 Peasants in *Ferdinand II's* Time; but relieved by *Pappenheim*. Somewhat below *Lintz*, the River *Draun*, which rises out of the *Gemunder Sea* (or *Lacus Felicis*) joins its Current with the *Danube*.

The 17th, we pass'd by *Embs*, or *Anissa*, situated up-

on the River *Anisus* or *Onasus*, which rising near the Frontiers of *Saltzburg*, and being augmented by the River *Saltza*, upon which stands *Maria Cell*, noted for Pilgrimages, divides the *Higher* and *Lower Austria*, and then falls into the *Danube*. Hereabouts stood the ancient *Lauriacum*, a Roman Garrison, where a great many Roman Coins and Antiquities are found. On the North Side of the *Danube* we saw a Seat of the Earl of *Leichtensteyn*, near the Village of *Greim*. Not far below this Village are two dangerous Passages in the *Danube*, called the *Strudel* and the *Wurbel*; the first is a Place where the River being forced among the Rocks, some under, some above Water, the Waves are broken, and render the Current rapid and troublesome, requiring a great deal of Skill to pass through the Ledges of the Rocks, especially when it is low Water; the second is a Kind of Whirlpool, where the Current being forcibly repel'd by a great Rock, turns round with much Violence. Hard by, on the Top of a craggy Rock, you see a large Cross, and at the Foot a Chapel dedicated to *St. Nicholas*, who being look'd upon as Patron and Protector of such as have pass'd safely this Way, a Boat comes thence to receive such Presents as the Passengers are willing to give. We took up our Lodgings this Night at *Ips*, on the South-side of the *Danube*; opposite to which is *Besenbeug* or *Usbium Ptolomaei*. Two German Leagues below *Ips* lies *Pecklarn*, believed by some to be the old *Arlape*, where the River *Erlaph* falls into the *Danube*. A Mile and a half lower you see *Melcke*, formerly the Residence of the Marquesses of *Austria*, which was thence removed; first to *Leopold*, and afterwards to *Vienna*. The City is built along the South-side of the River; the Monastery of the *Benedictines* is seated upon a high Hill; has very great Endowments, and many Monuments of great Personages, and among the rest the Tomb of *St. Colman*. We dined at *Steyn*, where is a stately Bridge over the *Danube*. Near to this lies *Crembs*, a walled Town, and on the opposite Side *Mautern*; not far from whence is the rich Monastery called *Ketwein*. A little beyond it the River *Traissn*, or *Tragisama*, comes from the South. Afterward we pass'd by the famous Town of *St. Pold*; and taking up our Quarters that Night at *St. Eldorff*, went the next Day by *Thuln*, *Stockerau*, and *Cloister Neuburg*, safely to *Vienna*.

15. *Vienna*, called *Wien* by the Germans, and *Beach* by the Turks, is the capital City of all *Austria*, situate in 43° 20', differing not much from the Latitude of *Paris*, the Seat of the Archdukes of *Austria* and the German Emperors. According to ancient Geographers, this City belonged to the *Upper Pannonia*; the Limits of *Pannonia* extending as far as *Kalemberg*, or *Mons Cetius*, about six Miles to the Westward of *Vienna*; beyond which all that lies more Westward, betwixt that Mountain and the River *Inne*, or *Oenus*, which falls into the *Danube* at *Passaw*, was anciently called *Noricum*.

Several of the Roman Emperors, and especially *Marcus Antoninus Philosophus*, have made themselves famous by their great Actions against the *Marcomanni* and *Quadi*; the last of which, after he had routed these Nations, fell sick at *Carnuntum* or *Petronel*, and died at *Vindobona* now *Vienna*, situate upon the South Shore of the *Danube*; which is the Reason, that at several Times, but especially in 1662, many Roman Antiquities have been found hereabouts; the last was a Kind of Coffin containing hard Earth and Bones, with a small Gold Coin, a Glass Urn in a Brass Case, an Iron Knife like those used anciently in Sacrifices; a little Roll of pure Gold, clos'd with a Golden Cover at both Ends, with an Inscription; which, according to *Lambecius's* Opinion, was in old *Pannonian* Characters. Not far from the Monument itself, which was under the Foundation of a Wall near the old Palace, they found a Head in Brass, a *Patera*, Lamps, Lachrymatories, and other Vessels of the same Metal, and a Copper Coin of *Antoninus Caracalla*.

This City is not seated upon the Channel of the *Danube*, but only upon a Branch thereof, of which there are several that make divers small Islands. The River *Wien* (which has imparted its Name to the Place) passes by the East-part of the City, and below it falls into the

Danube: Its Floods often do considerable Mischief to the City, though at other Times it is so shallow and narrow, that one may step over it: It divides Part of the Suburbs from the Body of the City, the former are very spacious and full of fine Houses, Gardens, Walks, and other Conveniencies. The Body of the City is well fortified, being separated from the Suburbs by a fair *Espplanade*, descending in an open Ground for 300 Paces. Its Fortifications are after the modern Way, compos'd of ten Bastions to the Land-side, and a very deep Ditch, which though it be kept continually dry, for Fear the Water should spoil the Cellars, which are very deep here, yet they can let the *Danube* into it at Pleasure. It has two Bastions toward the Water, on the North-side of the Town. The Bastions are very large, the whole Fortification of a great Breadth, well faced with Brick, and edged with Free Stone. Besides, which it has an old inward Wall, built with the Ransome of our King *Richard I.* who was detain'd Prisoner there, in his Return from the *Holy War*.

The whole Circumference, Suburbs and all, takes up a great Tract of Ground; but the Fortifications of the City don't exceed three *English* Miles, but is exceeding populous, nothing being more delightful than to see *Turks, Tartars, Greeks, Transilvanians, Sclavonians, Hungarians, Croats, Spaniards, Italians, French, Germans, Polanders*, all in their own Country Habits. It has six Gates, viz. 1. The *Stuben* Gate to the East. 2. The *Carinthian* Gate to the South. 3. The *Castle* Gate. 4. The *Scotch* Gate. 5. The *New* Gate. And, 6. The *Red Tower* Gate, to the Northward, leading to the Bridge over the *Danube*; besides which there is a Port by the Emperor's Palace, towards the Water-side: There is a certain Nunnery in the Town, call'd *Himmel Port*, or the *Gate of Heaven*. The five first of these Gates are vaulted through the Town-Wall, with convenient Draw-Bridges to pass the Ditch. The sixth is a Passage under a Tower, towards the Bridge of the *Danube*: For as that River runs through a low Country, it divides itself into seven small Channels, which are join'd by as many Bridges made of many thousand Trees laid close one to another. There is a very remarkable Bridge at *Vienna* call'd the *High Bridge*, made by the crossing of two Streets by equal Angles; but the Ground in one Street being equal in Height to the Tops of the Houses of the other, they have been forced to build a Bridge or Arch in the lowermost Street, to let the upper pass over it. For the rest, the Houses here are of Stone, for the most Part six Stories high, and flat-roof'd after the *Italian* Manner; the Streets are of a middle Size, neither broad nor narrow: Their Cellars are worth a curious Traveller's Observation; in some of them I found four Cellars one under another, well arched, with two Pair of Stairs to go into them. In some I observed an open Space in the Middle of each Roof, for the Reception of the Air, and from the lowest a *Tube*, to convey the Air into it out of the Street, much after the same Manner as they do in the Mines.

I can't here pass by the Encomium *Aeneas Sylvius* gives of *Vienna*; viz. *That it has Palaces fit for Kings, and Churches which Italy may admire*: Which is much better verified now. For the Imperial Palace is a truly noble Structure, and excellently well furnish'd; it has two Courts, one very large, the other less, where the Emperor's Lodgings are. Over the Gate you see no other Inscription but the five Vowels in Capital Letters, viz. *A, E, I, O, U*; which some have interpreted thus: *Austrie Est Imperare Orbi Universo*; though I am apt to imagine, that this is not the true Sense of these Letters. There is besides the two before-mentioned Courts, another small one, where are the Lodgings of the Pages; where I took Notice of a large rough *Jaspis* Stone, of about nine Foot Diameter, which lay unregarded upon the Ground, though a little Piece that was polished, shewed that it was full of beautiful yellow, red, black, and white Veins: It was a Present of the Archbishop of *Saltzburg*, in whose Territories are noble Quarries, and Stones of several Sorts. Next to this the Palace of the Count *de Draun*, and that of Count *Rotbal*, lately built; with several others, are very considerable. This City

has also noble Churches, and rich Convents; as for Instance: Those of the *Carmelites*, of the *Franciscans*, of the *Benedictines*, and of *St. Nicholas*: In the Church of the last I saw the Tombs of Count *Strozzi* and Cardinal *Harrach*. The Convent of the *Dominicans* is a very fair Structure: The Church of the *Austin* Friars is very large, and has in the Middle a Chapel, the Model of which was taken from the *Holy House of Loretto*; the Top being adorn'd with many Colours taken from the *Turks* and *Tartars*; various of which were not square, but Escutcheon-wise, some full of Circles, with Half-moons within them.

The *Jesuits* Colleges are all very fair and spacious here; the Front of their College, which faces the Piazza, has a Statue, or *Column of Copper*, belonging to it, which stands in the Centre of the Market-place, resting upon a Pedestal of white Stone, with four Angels, Escutcheons, and the blessed Virgin on the Top: It has also divers Inscriptions, by which the Emperor dedicates *Austria* to her Patronage and Protection.

When I came into the *Scotch Convent*, it rais'd no small Curiosity in me to know how the *Scotch* became so considerable here, till I was inform'd, that *Vienna* had been many Ages ago a Receptacle of the *Scots*, in their Pilgrimages to *Jerusalem*; and that *Colman*, a Saint in high Veneration in those Parts, was not only a *Scotchman*, but also descended of the Blood Royal of *Scotland*, and barbarously murdered by the Peasants at *Stockerau*, four *German* Miles from *Vienna*; who hung his Body on a Tree, where it remained uncorrupted a Year and a half, and after many Miracles was buried at *Stockerau*, and from thence removed first to *Melk*, and afterwards into *Hungary*, where it was preserved for a long Time after at *Alba Regalis*, or *Stulweissenburg*. The Church of *St. Peter* is highly esteem'd for its Antiquity, being the oldest in the City, and built in the same Place where stood before the Altar dedicated to *Domitian*, called *Ara Flaviana*.

In the Cathedral of *St. Stephen* are many sumptuous Monuments of Princes, and other great Persons: It is a very noble Fabrick, but none of the highest, by Reason of the Paintings of the Glass Windows; it is covered only with Tiles of Wood, yet makes no ill Shew. But what is most worth Observation, is the Steeple and Spire, high, large, strong, and nobly built: It has on the Top, instead of a Weather-cock, a Cross under a Star and Half-moon, well gilded: This Star and Half-moon was, as they relate, put upon this Spire by Order of *Solyman the Magnificent*, who when he had besieged the City, offered to spare the Cathedral, provided they would set upon the Top the *Turkish* Arms, viz. the Half-moon and Star; which the Citizens comply'd with. This Spire has the largest Crockets I ever saw, being above a Yard long, and adorned with Foliage Work. The Steeple is accounted 465 Foot high: I went up half Way by 338 Steps; whence I could see the *Hamburger Hill*, near *Presburg*, and the Course of the *Danube* through a great Part of *Austria*.

In the Room where I was, they had wooden Hammers, which they make Use of from *Good-Friday* till *Easter-Sunday*, the Use of Bells being forbidden during the Time our Saviour was in the Grave. In the last Siege the Crescent on the Top of the Steeple was shot down, and has not been put up again there. Near one of the Doors of the Church is a Stone fix'd into the Wall, which they believe to be one of those wherewith *St. Stephen* was stoned to Death: It looks like a Pebble, and is very smooth, by the frequent Rubbing of the People, who touch it with their Fingers when they go to Church.

I was shewn another Stone, which they said, was one of those that kill'd *St. Stephen* in *St. Saturnine's* Church, at *Thoulouse* in *France*. Besides many Monuments of great Persons, which are in the Church of *St. Stephen*, there are also several Tombs of Men famous for their Learning, as of *Job. Faber*, Bishop of *Vienna*; *Jo. Cuspinianus*, and *Sebastianus Tengnagelius*, the last of which, according to the Inscription, was versed in fifteen Languages.

The University of *Vienna* may also challenge the Preference before most others, in Respect of its Antiquity, the Number of Students, their Accommodations and Privileges. *Albertus* the Third is reputed the Founder,

above

above 300 Years ago; who distinguish'd the Students into four several Divisions or Nations, each of which, besides the General Constitutions, had their peculiar Rules and Privileges; they were *Austrians*, Nations of the *Rhine*, *Hungarians*, and *Saxons*.

To the *Austrian* Division belonged those of *Friuli* and *Trent*, all *Italy*, and other Provinces beyond the Mountains. Under the Nations of the *Rhine* were comprehended the *Suevians*, *Alsations*, *Franconians*, *Hessians*, and the other Provinces, *France*, *Spain*, *Navarre*, *Holland*, and *Brabant*. To the third Class of the *Hungarians*, are joined the *Bohemians*, *Moravians*, *Sclavonians*, and all that use the *Sclavonian* Tongue, as also the *Germans*. To the Class of the *Saxon* Nation, belong the *Saxons*, *Westphalians*, *Thuringians*, *Misnians*, *Brandenburgers*, *Prussians*, *Livonians*, *Lusatians*, *Pomeranians*, with the *Ultramarine* Kingdoms of *England*, *Scotland*, *Ireland*, *Sweden*, *Norway* and *Denmark*.

As in these several Divisions all *Europe* is comprehended; so it must be confess'd, that there are in this University Students of many Nations, who sometimes, when any Differences arise among themselves, stand up each for their respective Divisions; but are sure to unite together, if any Contentions happen betwixt the Students and the Citizens, or Jews. As for their natural Philosophy, they have not yet attain'd to our new Way of explaining Things, by Corpuscular Motions, and Experimental Philosophy; though some of them were very inquisitive after our Royal Society, as well here as at *Altorff*; and I have been solicited even from *Cassovia* in Upper *Hungary*, to send the Transactions of our Society thither: A manifest Sign, that if they were once lead into the Path of our modern Philosophy, they would without all Question follow our Footsteps. For the rest, they are well versed here in Languages, History, and Antiquity.

I remember I was present here at a publick Anatomy-Lecture of a Woman, which lasted nineteen Days; perform'd by Dr. *Wolfstregel*, a learned Physician. I observed the *Pyramidal* Muscles to be very plain and large, and the *Uterus* of a Size larger than ordinary; the *Cartilago Eniformis* was double, and the Lungs very black. The Motions of the Eye were very nicely shewn by an artificial one of Ivory, and another of Pastboard, contrived and made by himself; and after the Dissection of the Muscles of the *Pharynx*, *Larynx*, *Os Hyoides*, and the Tongue, he reduced them with an admirable Dexterity into their proper Places, to discover their natural Position. The Anatomy-Theatre was capable of holding a hundred Persons.

16. This University has, among other Privileges, the Power of Life and Death, in respect of their own Members. But what gives the greatest Lustre to this famous City is the Residence of the Emperor *Leopold*, born in 1638. His eldest Brother *Ferdinand*, King of the *Romans*, dying before his Father *Ferdinand III.* *Leopold* succeeded in the Empire, and married *Margareta* Infanta of *Spain*, the Daughter of *Philip IV.* He is the Darling of his People, and equally beloved both by the Soldiery and Clergy. He is of a grave, but graceful Aspect, and has the long Chin, and remarkable Lip of the Family of *Austria*. He is well versed in the *German*, *Italian*, *Spanish*, and *Latin* Languages; and as he takes Delight in Reading, sometimes for several Hours together, so he is always forward in countenancing learned Men. He also delights in Musick, and frequently composes himself; which makes all the Church-men, and others, encourage Musick and Musicians. The Emperor himself has excellent Musick, both Vocal and Instrumental, in his Palace, and some of his own Compositions are play'd in his private Chapel, where eight or ten Pages of the Emperor, Earls Sons, serve at the Altar, with white Torches in their Hands, whilst the Eunuchs are singing.

His Recreations abroad consist chiefly in Hunting, especially the wild Boar. The young Nobility formerly used to encounter a wild Boar, sometimes a single Person alone, but since the unfortunate Accident that happened to Count *Nicholas Serini*, who was kill'd by one of those Creatures, the Huntsmen are always at Hand, when

the Boar is at a Bay, that the Emperor, or others there present, may the more safely kill it. There are great Numbers of these Creatures hereabouts, their Flesh being a common Dish at *Vienna*, and of a delicious Taste; for they feed upon Acorns, Beach-mast, and Chestnuts, and upon the Sprouts of Broom, Juniper, and other Shrubs, as also upon the Roots of Fern; they will sometimes leave the Forests, and range in the Corn-fields and Vineyards. It is the Huntsman's Business to keep a watchful Eye over them; and they are so skilful in that Game, that by the Tread of their Feet, and casting their hind Feet out of the Track of their Fore-feet, they will tell you, whether it be a wild Swine or tame Hog; nay, whether it be Male or Female, Young or Old, Lean or Fat, &c.

The Emperor, as he is a good Huntsman, so he takes a great Delight in Horses: He has a very fine Stable fill'd with manag'd Horses, brought from *Turkey*, *Tartary*, *Poland*, *Transylvania*, *Germany*, *Bohemia*, *Hungary*, and *Naples*. It was something surprizing to me, to find in an inland City such considerable Magazines of Naval Stores, as I found at *Vienna*: These are employ'd in the Fleet upon the *Danube* against the *Turks*; being a kind of Gallies, carrying great Guns, and a considerable Number of Soldiers, besides Seamen. They are laid up behind one of the Bastions of the City, and some of them are kept at *Raab* and *Comorra*.

The Imperial Court was at this Time composed of many wise Counsellors, great Generals, and refined Courtiers; such as, *Eusebius Wenceslaus*, Duke of *Sagan*. Prince *Lobkowitz*, Lord High Steward, chief Minister and Favourite of the Emperor, being the Person who discovered the late *Hungarian* Revolt, for which Count *Peter Serini*, and *Nadasti*, paid with their Heads. *Henry William* Count *Stabrenberg*, Marshal of the Court, *John Maximilian*, Count *Lamberg*, Lord Chamberlain, who has near a hundred Gentlemen of the Bed-Chamber under him, all Barons and Counts: They wear a Golden Key upon the Breast, as the Grooms of the Bed-Chamber wear one of Steel: Two of each attend every Night. *Gundaker*, Count *Dietrichstein*, Master of the Horse. Count *Zinzendorff*, chief Hunts-Master. The Count of *Aversberg*, chief Falconer, who has twelve others under him. The Count *de Paar*, Postmaster-General. *Leopold Wilhelm*, Marquis of *Baden*, Captain of a hundred *Hartshires*, who are a kind of a Horse-Guard of the Emperor's Body, arm'd with Pistols and Carabines, without the City; but within, the Foot carry Launces and Javelins with broad Points. *Francis Austin*, Count *Wallestein*, Captain of a hundred of the Emperor's Foot-Guard of his Body. Sixty Pages, most of them Counts and Barons. *Raymund* Count *de Montecuculi*, who has signaliz'd himself in *Poland*, *Hungary*, and *Germany*; the Emperor's General, President of the Council of War. Next to him was Count *Souches*, a Native of *Roche*; and his Son Governor of *Leopoldstadt*. Count *Lefly*, Nephew to Count *Lefly*, who was sent in the Quality of Ambassador to the Port from the Emperor, is also look'd upon as one of the best Commanders the Emperor has: Besides a great many other brave Officers, who have shewn their Valour upon a thousand Occasions; so that though the Emperor never takes the Field in Person, yet has he been very successful in his Wars, especially against the *Turks*. The Courts of both the Empresses are filled with Persons of great Worth. Among the Clergy, and Men of Learning (of which the Emperor is a great Lover,) the *Jesuits*, *Moelner*, and *Boccabella*, are the chiefest. And to sum up all, it is certain, that *Vienna* is the most likely Place for any Foreigner, whether Soldier or Scholar, to make his Fortune, provided he be of the *Roman Catholick* Religion.

17. It will perhaps be surprizing to some, that upon the utmost Limits of the learned Part of *Europe*, the Emperor is Master of a Library, which both for the Number and Value of Books, gives Way to no other Library in *Europe*. The worst is, that the Receptacle is not suitable to so vast a Treasure; for though it is divided into eight spacious Rooms, in which the Shelves stand so close, that there is scarce an easy Passage left betwixt

betwixt them, yet many Books lie upon the Ground. The Manuscripts have their peculiar Places, distinct from the printed Books, and are divided into six different Classes, viz. *Theological, Juridical, Medicinal, Philosophical, Historical, and Philological*. The Manuscripts of *Hebrew, Syriack, Arabick, Turkish, Armenian, Ethiopick, and Chinese* Books, are without Comparison the best Collection that is to be found.

The choicest Books of which this Library is composed, (which has been collecting ever since the Time of *Maximilian I.*) are: The famous Library of *Budd*, of *Matthias Corvinus*, Son of *Hunniades*. The choice Library of *Wolfgangus Lazius*; as also 3000 Books of *Johannes Sambucus*. *Augerius Busbequius* made a considerable Addition to the rest; and in his two *Turkey* Embassies, bought a great many choice *Greek* Manuscripts at *Constantinople*, which are mark'd thus with his own Hand, *Aug. de Busbeck. emit. Constantinopoli*. There was also a considerable Number added out of the Library of the learned *Johannes Cuspinianus*, the Emperor's Library-keeper: And the noted Libraries and Mathematical Instruments of *Tycho Brahe, Kepler, and Gassendus*, were purchased for it.

But the greatest Addition of all was made by that noble Library of Count *Fugger*, which consisting of 16,000 Volumes, was purchased by *Ferdinand* the Third. Besides which, the learned *Peter Lambecius*, the present Library-keeper, Historiographer, and Counsellor of the Emperor, has brought hither the choicest Books out of the Library of *Inspruck*; and himself is Master of a most excellent one of his own, which will in Time be added to the Imperial Library. I had it from his own Mouth, that there were at least 80,000 Volumes in this Library, which are encreased by the Accession of other Books, which are purchased, especially in the *Turkish* Dominions, where the Emperor keeping a constant Resident, no Opportunity is let slip to buy up any good *Greek* Manuscripts in their Convents. I remember myself, that when I was at *Larissa* in *Thessaly*, the Resident, *Seignior de Casa Nova*, was continually enquiring after *Greek* Books in their Monasteries, the present Emperor sparing no Cost to purchase them; and were it only for the Number of Books, it is certain, that by the Right the Emperor has of having two Books of whatever is printed in *Germany*, this Library might soon increase to a vast Number.

As *Lambecius* conferred on me a thousand Obligations, so he was so kind as to give me a Sight of all the rare Copies in this Library, among a vast Number of which, I took an Account of the following: A Letter in the *Chinese* and *Tartarian* Language, from the Emperor of *China*, to the present Emperor *Leopold*, weaved in a very fine Roll. Another Roll written in an unknown Character, but most resembling *Greek*. A Book in the *Runick* Language. A very fair Manuscript of *Ptolemy*, the Maps colour'd. A Copy of *Livy*, the most ancient Manuscript extant, a thousand Years old, in large Letters, without Distinction of Words or Sentences, brought hither from the *Inspruck* Library. A very fair Manuscript in *Greek* of *Dioscorides*, 1100 Years old, in large Characters, without Distinctions of Words or Accents; the Plants finely painted; with the Pictures of *Dioscorides, Galen*, and some other noted Physicians. Two Books of Geometrical Propositions demonstrated in the *Chinese* Language; whereof one with Pictures. An old *Greek* Manuscript in great Letters, without Distinction of Words or Accents. A *Greek* Manuscript 1300 Years old, of the Book of *Genesis*, without Stops or Accents. It contains forty-eight Draughts in Miniature, or Water-colours, relating to the Habits of the Ancients, to the Manner of their Feasting, their Postures at Meals, Attendance of Servants, and Musick. Among other Things, the Execution of *Pharaoh's* Baker is worth Observation, his Head being thrust through a forked Piece of Wood, and his Hands tied behind him. A Book of Painting in Miniature, by *Albert Durer*; and a Sphere with a Globe within it, carved and painted by the same Hand. A Book of *Michael Angelo*; wherein besides many Rarities in Architecture, all the Paintings and Designs of the *Belvedere* are seen in Miniature. A very fair Al-

choran in *Arabick*, with the *Turkish* Explication interlined betwixt it. A Bible in the *Coptick* and *Persian* Languages. *Luther's* Bible, with many Notes, written by his own Hand. A fair *Greek* Manuscript of the *New Testament*, written with Golden Letters upon Purple 1500 Years ago. A Magical Glass of the Emperor *Rudolphus*. Sixteen thousand Pieces of ancient *Greek, Roman, and Gothick* Medals and Coins, in Gold, Silver, and Copper. They pretend to have two Copper Coins of the Emperor *Marcus Otbo*. Being willing to add a few Drops to this Ocean, I presented some Coins, Intaglia's, and Inscriptions, not to be found in *Gruterus's* Great Work; which I met with in the remotest Part of the Emperor's Dominions; which being shew'd to his Imperial Majesty by Mr. *Lambecius*, he was so well pleased with them, that he not only permitted me the Use of what Books I desired, but also granted me a free Pass, in *Latin*, through the Empire, exempting my Goods from being searched; which is no small Convenience, in a Country where a Traveller is to pass thro' so many different Jurisdictions.

After I had taken a full View of this Library, I thought I could not bestow my Time better than in visiting also the Repository or Collection of Rarities made by the Care of many succeeding Emperors; in viewing of which, I spent several Hours; but fully to set down all the rich and magnificent Curiosities I saw here, is much beyond the Compass of this Treatise, (the Catalogue which is kept of them taking up a large Volume in Folio) so I will content myself with mentioning only a few of the best out of a great many, from whence the Reader may be able to give a Judgment of the rest. The Whole is divided into fourteen Cases or Cupboards.

1. Contains many curious Vessels turn'd out of Ivory, Cups of Amber, Spoons, and other Vessels, of Mother of Pearl, fine Works of Coral, a Galley of Ivory, and two Cups, one turn'd by the present Emperor's own Hand, the other by *Ferdinand III.* Several Cups of the Rhinoceros's Horn. In the 2d, An Elephant with a Castle, and many other Rarities of Workmanship on his Back. Two fine Pillars all of Ivory, with *Basso relievo*, and other Varieties in Ivory. A Picture in Oil of *Ganymede*, by *Corregio*. In the 3d, An old Man's Head in Oil, by *Albert Durer*; vast Variety of Watches and Clockwork; a fine Centaur in Silver. The 4th, Also contains Watches and Clocks; a triumphant Chariot; a *Turk* of Quality with his Attendance; a Landskip and a Cupid, by *Corregio*. In the 5th, Are Variety of curious Works in *Filegree*, brought from *Spain* and the *Indies*; and a Basen of *Agate* finely wrought. The 6th, contains an excellent Collection of *Intaglia*, and old *Roman Stones*, of inestimable Value for their Workmanship and Bigness. A large *Agate*, on which is wrought the Victory of *Augustus Caesar* over the *Dalmatians* and *Pannonians*; it is five Inches long, and four broad, of a very high Value; besides several Heads and Figures cut in *Onyx's*, Shells, and *Sardonyx's*; and a Chain with the Heads of the whole *Austrian* Family. In the 7th, Divers Pieces of Mother of Pearl, curiously wrought. The Head of *Maximilian I.* in Plaster-work, with a Lock of his own Hair, and the Twelve *Cesars* Heads. Another Head, excellently well done in Oil, by *Hans van Ach*. In the 8th, A Vessel made of one Piece of *Chrystal*, of a Yard and a half high; an Urn; several Hands, with other *Chrystal* Works. The 9th, Has a very noble Ewer of *Chrystal*, and another noble Vessel; many curious Crosses, and other Varieties. The 10th, Containing five rich Crowns; the Imperial Crown adorned with precious Jewels, and a large blue Sapphire on the Top. A Model of the Crown wherewith the Emperors are crown'd, much exceeding in Value the Original. A *Paragon Diamond*, weighing 17 $\frac{1}{2}$ Carats. Several very large Rubies. A Sceptre made of Unicorn's Horn, set with precious Stone. A Locket made of very large Diamonds. A most magnificent Sceptre, Globe, Cross, and Crown, valued at 200,000 Crowns. An Opal as big as one's Fist, as it came out of the Mine, with many other very fine Opals, and a very large Emerald. In the

the 11th, A Golden Bafon, used at the Baptism of the *Austrian* Family. Divers Golden Sceptres, Scimeters, Knives, and other Presents from the *Ottoman* Court. Three rich Dog-collars, sent from *England*, with this Mark 3C3C. A great Piece of pure Gold, of the Bigness of one's Fift, as it came out of the Mine. Another Piece of Gold Ore, where you see the pure Gold shooting forth upon a white Stone; besides divers other Bafons of Gold, and Vessels of Coral. In the 12th, Great Store of Vessels of *Jaspis*, *Agate*, *Lapis Lazuli*, *Oriental Granates*, *Cups* of *Onyx* and *Sardonyx*, one very great one of an *Amethyst*, and divers very large ones of *Lapis Nephriticus*. In the 13th, Are divers Flowers made out of precious Stones. A large high Vessel of *Bohemian Topaz*. A Cup made of an *Hungarian Diamond*. A Piece of Ambergrease of the Bigness of a Man's Fift. A very fine *Jaspis* Stone. A large *Agate* Stone on the Outside, and a Bed of large *Amethysts* naturally in it in the Middle, which is look'd upon as a great Rarity. In the 14th, Are many noble Chrysolites, *Jacinths*, *Oriental Granates*, *Beryls*, and *Aquamarines*. A very rich Emerald, or a Cup of that Stone; three great ones having been already taken out, valued at 300000 Crowns. Great Numbers of Gold Vessels, and rare Figures in Coral; *Turkish* Knives, Gauntlets, &c. fine Wax-works, large Bezoar-stones; a Golden Medal of the Emperor's Arms, worth 1000 l. Sterling, a Cup said to be taken out of *Solomon's Temple*; a most curious Bafon and Ewer of carved Ivory; King *Philip II.* of *Spain* in Diamond Armour, set in Gold; a curious Picture of an old Man courting a young Woman, with this Motto:

Arctum Annulum nē gestato.

A very fine Crucifix of Pearl; the Buff-coat of *Gustavus Adolphus* King of *Sweden*, in which he was kill'd near *Lutzen*; all the Gospel written and painted; the Head of King *Charles I.* King of *England*, in Marble; Priests Garments set all over with Pearls; an inestimable *Agate* Dish, betwixt three and four Spans Diameter, in which you see in natural Characters *XRIS OS*. Unto which may be subjoin'd that most magnificent Chain of Pearl taken from Count *Teckley* in the late *Hungarian War*, as I have been informed since.

One Day I had the Curiosity to walk up the Hill which lies two *English* Miles from *Vienna*, from whence I had a full Prospect of the City and Country, as far as to the Mountains of *Styria*, covered with Snow; and in my Return took a View of the Empress Dowager's House without the Town, call'd *la Favorita*.

18. Two *English* Miles to the East of *Vienna* are the Gardens of *Rodolphus II.* which are somewhat ruinous now. They consist of an inward and outward Garden, the inward being about 200 Paces square, much of the same Bigness as the *Place Royal* at *Paris*. It has a Cloister supported by forty Pillars of white Stone on each Side; and is covered with Copper, as are also the Pavilions. In certain other Buildings they keep Lions, Tigers, and other wild Beasts, which breed here. Some say that *Solyman* the Magnificent pitch'd his own Tent in this Place, when he besieged *Vienna*.

At two or three Miles Distance from thence, is a Place called *Arnols*, whither many *Devotees* go on Pilgrimage, especially in Lent, with heavy Crosses on their Shoulders. Here you see a House, the Model of which is taken after the Holy Sepulchre of *Jerusalem*, with a very curious Copy of the Picture of our Saviour and the Virgin *Mary*, at full Length; the first is exactly six Foot high, the last two or three Fingers Breadth lower. They are done after the Original in *St. John de Lateran* at *Rome*. I saw one Day the Emperor and Empress go thither on Foot, the Road being very dusty, and were followed by the greatest Part of the Court. Somewhat nearer to the City, is another Place call'd *Itzing*, likewise much celebrated for Devotion. In the Road from *Vienna* to it, the twelve Stations of the Cross are marked out in the same Manner as is observed in the *Via Dolorosa*, near *Jerusalem*, in Memory of our Saviour's going to the Mount *Calvary*. The Em-

VOL. II, N° 120.

peror has a very fine Park just by *Vienna*, with a House of Pleasure in it: I also took a View of *Luxenburg*, a House of Retreat also belonging to the Emperor; it is an old Structure, not very large; there is also a Summer-House, built in the Middle of a Pond; and an Octagon in the Marsh, from whence they let frequently fly at the wild Beasts. Over the Emperor's Palace Gate you see a Rib and Jaw-bone of an extraordinary Size, which they told me were human Bones, but appear'd to me more like the Bones of an Elephant.

From this Place I took a Progress to *Mannersdorff*, situated near the River *Leyta*; famous for the Bath, call'd the *wild Bath*, over the Spring of which is built a Church: The Water being only Luke-warm, they boil it, and so bath in Tubs: That being judg'd best, from what sticks to the Sides of the Copper when it is a Boiling; it seems to be impregnated with *Sulphur*, *Saltpetre*, and *Chalk*: The Water leaves a *Turquoise* Colour upon the Stones, and the Vapours, which condense and adhere to the Roof and Sides, give it a Tincture of Gold. The Physicians of *Vienna* have publish'd a Treatise in *High-Dutch* of this Bath.

From hence I went to the *Neusiedler-Sea*, or Lake, which is three *German* Leagues broad, and seven long, abounding in Fish, and is encompass'd with a great Number of small Towns and Villages. It has got its Name from *Neusiedle*, a Town situated on the North-side of it, with a Castle upon a Hill. Near this Place is a black Earth, of which they make *Saltpetre*. Afterwards I proceeded four *English* Miles up the *Danube*, to the famous Quarry of *Altenburg*. The Beds or Rows of the Stones don't lie horizontally, but elevated to the North, yet follow the Shape of the Hill in their Situation. I found here a Substance between a Clay and a Stone, call'd by them *Liverstone*, upon many of which you see the Figures of Trees and Leaves, but not so plain as in those of *Florence*.

I pass'd by *Cloister Newburg*, a Town belonging to a rich Monastery of the same Name. Upon one of the Peaks of *Calenbergb*, before-mentioned, live certain *Hermites*, call'd *Camaldulenses*, a very severe Order, living upon nothing but Herbs and Roots. Near their Cells they had paved the Ground with those figured Stones. It being now near *December*, the Branches of the *Danube* were frozen over, and the Ground being covered with Snow, afforded good Pastime for the Ladies, who at this Season take their Recreations in handsome Sledges in several Shapes, viz. *Griffins*, *Tigers*, *Swans*, *Dolphins*, *Scallop Shells*, &c. In one of those Machines the Lady is seated richly attired in Velvet, lined with rich Furs, adorned with Laces and Jewels, and Velvet Caps lined with Sables. The Sledge is drawn by one Horse, adorn'd with Plumes, Ribbons, and Bells; and as this Pastime is commonly performed in the Night Time, the Footmen ride on Horseback with Torches, the Gentlemen sitting on the Sledge, behind the Lady, to guide the Horse.

Christmas they celebrate here much after the same Manner as in *Italy*. On *Christmas-Day* the Emperor dines in publick. Upon *St. Stephen's Day* he went to the Cathedral, where he kneeled upon the Altar, and kiss'd the Plate whereon the *Hostia* had lain. On Twelfth-day they celebrated at Court the old Custom of choosing King and Queen, and the Lot falling upon Count *Leslie* to be King, the Emperor laid the Cloth, and the Empress fill'd out the Wine. Not long before *Christmas* I saw the Solemnity of the Marriage of Count *Serau*, with a natural Daughter of *Philip IV.* King of *Spain*, where I could not but be surprized at the Splendour in which the Ladies appear'd upon this Occasion. Not long after I saw also a very pompous Funeral, the Corps of Count *Draun*, which was brought from *Italy*, being interr'd in the *Dominican* Church, and a very sumptuous *Castrum Doloris* was raised, set round with a vast Number of Wax Torches and Candles.

During my Stay at *Vienna*, the Election for a King of *Poland* being at Hand, after the voluntary Abdication of King *Casimir*, there pass'd Messengers daily through *Vienna*. The Czar of *Muscovy's* Son, the

Duke of *Newburg* and the Prince of *Lorrain* were Competitors for the Crown; but the *Poles* thought fit to pitch upon *Michael Wisnowitski*, a Native of *Poland*, for their King. I saw also at the same Time at *Vienna*, the *Spanish* Ambassador *Don Baltasar de la Cueva*; the Pope's Nuncio was *Carlo Caraffa*. Besides which, the *Venetians* had their Ambassador at *Vienna*, who solicited Succours for *Candia*, which the *Turkish* Envoy opposed with all his Might. Much about the same Time came an Ambassador from the *Cham* of the *Crim Tartars*, named *Cha Gagi Aga*, who presented the Emperor with several very fine *Tartarian* Horses, in Return of which he was regaled by the Emperor with some Plate, a Silver Basin and Ewer, and a very fine Watch for the *Cham*. They were lusty, strong-limb'd Fellows, but very coarse, their Habit long fur'd Vests and Caps. They took a vast Quantity of Tobacco in very long Pipes.

19. Among the *Greeks*, who live and trade at *Vienna*, I was chiefly acquainted with three considerable Persons; one was an Abbot, who had been forced to quit his Convent for Fear of the *Turks*; another, who called himself *Constantine Cantacuzenus*, being descended of the Royal Blood of the *Cantacuzeni*; the third was a *Greek* Priest, named *Jeremiah*, who having travelled in Quest of a young Man, taken by an *Algerine*, and retaken by an *English* Ship, through *Italy*, *France*, *Germany*, the *Low Countries*, and *England*, had retained a most peculiar Kindness for the *English*, who, he said, had treated him more courteously than any other Nation.

The Country about *Vienna* is so fertile in all Things, that People live here in great Plenty; and if any Scarcity should happen, the *Danube* supplies them from remoter Parts. *Hungary*, *Italy*, and *Germany*, furnish them with such Varieties of Wine, that you may drink thirty several Sorts at any good Table in *Vienna*; neither are they destitute of good Beer. *Hallstadt* in *Austria* affords them Salt, from whence the Emperor draws a vast Revenue. Sheep and Oxen they have in great Plenty of their own, yet are they supplied with the last out of *Hungary* and the *Grand Seignior's* Dominions. Wild Boar is a great Dish with them, their Fat being as delicious here, as that of our Venison. Neither do they want Hares, Rabbits, Partridges, Pheasants, a Fowl called in *Latin*, *Gallina Corylorum*, &c. The *Danube* furnishes them with vast Plenty of Fish, such as Carps, Trouts, Tenches, Pikes, Eels, Lampreys of all Sorts, white Fish, and large Crevisses, besides Fish not known to us. Here you meet with the *Scheiden*, the *Silurus Gesneri*, which exceeds the Pike, Salmon, nay, any of our River Fish in Bigness; but the biggest of all are the *Hausons*, called *Hufones*, by *Johnston*, being sometimes twenty Foot long. Some will have this to be the Fish named *Anacetus* by *Ælian*, which he says is catch'd in the *Ister*. I saw them busy in fishing for them in the Isle of *Schutz*, between *Presburgh* and *Comoreea*, for they seldom come up hither, it being supposed that they come out of the *Euxine-sea*. They are not unlike the Sturgeon in Taste, and they eat them both fresh and pickled. It is full of Gristles, having a hollow nervous Chord down the Back, which, when dried, they use instead of a Whip. When they fish for them, they blow a Horn or Trumpet. *Venice* furnishes *Vienna* with Oysters, Sturgeon, and other pickled Fish, with Red-Herrings, Oranges, Limons, and other Fruits. They are much disposed to Jollity in this City; nothing more common than to see them dancing and fencing for Prizes on Holy-Days, and spending their Time in Merry-making, which made me wonder that they have not a Company of Players belonging to them.

Their Way of executing Criminals is commonly done by cutting off their Heads; though in Cases of High Treason, they first cut off the Right Hand, and next the Executioner strikes off the Head with one Fore-blow. I remember I saw one executed in this Manner; and no sooner was the Head separated from the Body, but a Man ran speedily to catch the Blood, which gushed out of the Neck, which he drank, and then ran as

fast as he could: They look upon this as a Remedy against the *Falling Sickness*. I had heard of something like this in *Germany* before, and I well remember, that *Celsus* tells us, that in his Time, some epileptical Persons used to drink the Blood of the Gladiators; yet most Physicians exclaimed against this Remedy, and I did not stay long enough here to learn the Effects of it.

At *Presburgh* they have an odd Way of Execution, (which is also in Use at *Metz*). They have an Engine framed in the Shape of a Maid, which the criminal Person is obliged to salute; but at the second Salute, she embraces him, and cuts him through the Middle.

It must be confess'd, that the Winters are very sharp here, but their Rigour is much mitigated by their sleeping betwixt two Feather-beds, and the Stoves they make Use of to warm their Rooms, as well here as in most other Parts of *Germany* and the Northern Countries. The Citizens of *Vienna* are generally well clad, and wear Furs very much, and the Womens Bonnets, which they wear upon their Heads, are both lined and faced with some Fur or other. The Climate is very healthful, yet have they an epidemical Disease, called *Colica Austriaca*, among them, which is very difficult to be cured. In the Court and City they speak very good *German*, but the Country People speak somewhat thick, and have a different Tone, and divers odd Words. I saw a certain Trick, performed at *Vienna*, which at first Sight somewhat surpris'd me, viz. a middle siz'd Man laid upon his Back, had a heavy Anvil fix'd upon his Breast; upon which two lusty Fellows, with great Hammers, gave at least a hundred Blows, till they had cut an Iron Horse-shoe, about half an Inch thick, asunder.

No other Religion but the *Roman Catholick* is permitted the publick Exercise of Worship here, the Protestants being obliged to go to Church as far as *Presburgh*, forty Miles from hence; for which Reason a Coach goes thither every Day, besides the Convenience of the Passage by the *Danube*; the Exercise of the Protestant Worship being strictly forbid here ever since the Battle of *Prague*, the same being allowed before in the Church of the *Holy Ghost* at first, and afterwards at *Arnolds*, not above an *English* Mile from *Vienna*. In this City are Abundance of *Jews*, but these have their distinct Habitations on the other Side of the Water. They are, indeed, permitted to traffick in a certain Street in the Day-time, but must leave the City before Night. They have frequent Broils with the other Inhabitants, and more especially with the Students. Whilst I was there, these last assaulted the *Jews* Town, where divers were killed on both Sides; the Consequence of which was, that many of the *Jews* were to be banish'd against a certain Day. The Empress being then with Child, they presented her with a Silver Cradle; but as she was their declared Enemy, she would not accept of it, and it was chiefly by her Means that afterwards they were banish'd, not only out of *Vienna*, but also out of all *Austria*; for as they were useful on one Side, for the Sale or Exchange of many Things, and used to furnish the Officers with Accoutrements and other Necessaries; so on the other Hand, they spoiled the Trade of the Citizens, and were accused of holding a secret Correspondence with the *Turks*. The *Jewish* Physicians pretend to more than ordinary Skill in Urines, which makes the common People resort to them, and to look upon their Predictions as Oracles.

20. Being now resolved to take my Leave of *Vienna*, in order to my Journey for *Prague*, I took a Place in the Coach, which goes thither in six Days in the Summer, and eight in the Winter. We pass'd over the great Bridge upon the *Danube* near the Chapel of St. *Bridget*. After we had pass'd the River, we enter'd that Part of *Austria* which lies betwixt the *Danube* and the River *Theya*, and travel'd in Sight of *Cornenbergh*, seated near the Hill *Bisnebergh*, which lies opposite to *Calenbergh*. Hence we came to *Stockeran*, famous for the Death of St. *Colman*: It is seated at the Conflux of the River *Mial* and the *Danube*. From thence, by the Way of *Guntersdorf* to *Koldorff*, which (though on the other Side of the River *Theya*) is reckoned the first Village of *Moravia*, and so farther to *Znaim*. It is observable,

servable, that in this Part of *Austria*, which extends along the North-side of the *Danube*, believed to be inhabited in former Ages by the *Marcomanni* and *Quadi*, there are not any Towns of Note; the *Romans* having had their Stations and Colonies on the South-side of that River. Yet is the Country well inhabited and full of Villages. I came in Sight of one of the chiefest Places call'd *Crembs* or *Cremona Austria*. *Znaim* is a good Place upon the River *Theya*; the common Boundary betwixt *Moravia* and *Austria*, which, joining its Waters at last with the River *Mark*, thereby opens itself a Passage into the *Danube*. This Town is the Fourth in Rank among those of *Moravia*; *Olmütz*, *Brun* and *Iglaw*, being the other three.

We continued our Journey from hence over *Ulverskirken*, *Paulitz*, and *Moravian Budweisse* to *Zimmaw*, and taking our Way through *Byrnitz*, came to *Iglaw*, upon the River *Iglaw*, a Place pleasantly situate upon a Hill, on the Frontiers of *Bohemia*. Its Fortifications are very strong, after the modern Way, especially on one Side, and the Market-place is one of the largest I ever met with. *Moravia* is a very plentiful and pleasant Country, being irrigated by divers Rivers, among which the *Mora* or *Marck* is the Chief; it rises on the North-side, and passing through the whole Extent of the Country falls into the *Danube* near *Presburgh*. The other Rivers of Note are, the *Theya*, or *Theyfa*, the *Swarta*, the *Schwitta*, which run into the River *Marck*.

21. After we left *Iglaw*, we enter'd *Bohemia*, the first Place we came to being call'd *Stecken*; thence to *Teutchin Broda*, near the River *Saczua*, and so further through *Haberne* to *Janikaw*, famous for the Battle which was fought there, the 24th of *February*, 1643. betwixt the *Imperialists* and *Swedes*; the first had the better of it at the Beginning, but falling to plundering, were defeated by the *Swedes*. In this Town I happened to meet with a Gentleman, who lived at *Schacklitz*, not far from the *Risgeberg*, or *Mountains of Giants*, situate near the Head Spring of the River *Albes* or *Elbe*; I was curious to enquire of him, what he knew concerning the pretended Spirit of *Ribenzbal*, which they say infects that Country, but I could get nothing from him that was satisfactory; all what he told me amounting to no more than that he verily believed there was such a Spirit, but that he had not done any Harm these twelve Years last past. I have heard divers such Reports among the Mountains and Mines of *Germany*. Thus they talk of Spirits in the Silver Mines of *Brunswick*, and in the Tin-Mines of the *Slackenwalde* in *Bohemia*, but they talk of them only.

From *Janikaw* we continued our Journey to *Czassaw*, the chief City in the Circle of that Name. This is reputed the Burying-place of *Zisca*, the famous *Bohemian*, General who forced the Emperor *Sigismund* to quit that Kingdom. From *Czassaw*, we came to *Guttenberg*, about twelve *English* Miles from *Prague*, a very considerable Town, near the River *Elbe*, and famous for the Silver Mines about it. There are in all about thirty of them, but as the Hills hereabouts are not very high, so the Mines are not so deep as those in *Hungary*, and in some other Places of *Germany*; however some are almost seventy or eighty Fathoms, and have been wrought at these 700 Years. I went into one of them which was first digged, called the *Cutten-Hill*, (*Cutten* signifying a Man's Garment) which has got its Name as they say from a Monk, who found a Silver Tree there, which gave Occasion for the Digging of this Mine, which is no more than nineteen Fathom deep: The chief Vein of the Ore, which is about a Foot broad, runneth South. It contains both Silver and Copper, of the first, a hundred Weight yields about an Ounce; of the last, eight, nine, ten, or more Ounces; though some Ore contains eight or nine Ounces of Silver in the hundred Weight. When they meet with a blue Earth in Digging, they are in Hopes of good Ore.

From hence we pass'd through *Colline*, and so by the Way of *Bohemian Broda* (to distinguish it from the *Teutonick Broda*) came to *Prague*, the capital City, and

formerly the Residence of the King's of *Bohemia*. I soon perceived, even at a Distance, that the Walls of this Town enclosed a larger Tract of Ground, than any in *Germany*, but considerable Abatements are to be made for the wide Spaces and Hills encompassed within them. It is situate upon the *Moldau*, a large rapid River, having its Source in the South Part of *Bohemia*, and, before it comes to *Prague*, being augmented by the Rivers *Sarsna* and *Watta*, and to the North of *Prague* by the River *Egra*, at last empties itself into the *Elbe*. This great Body is divided into three Cities, viz. the *Old*, the *New*, and the *Lesser City*.

22. The *Old Town* is seated on the East-side of the *Moldau*, being the most populous Place of the three; and considerable for the University, frequented by a vast Number of Students, this being the only one of the whole Kingdom, though it is not comparable now to what it has been. If we may believe *Lewis du May*, there were, in 1409, when *John Huss* was Rector, above 40,000 Students; and it is credibly reported among them, that when the Emperor *Charles* the IVth, would have retrenched some of their Privileges, 24,000 Students left the Town in one Week, and not long after 16,000 more. This Part of the Town has also several Colleges and Monasteries, and among the rest the *Jesuits*, which is a very handsome one.

The *New Town* is of a very large Extent, encompassing the *Old Town*, together with the River, being divided from it by a Ditch, into which they can let the River. The *Irish* have a Convent of *Franciscans* here, and the *Jesuits* have likewise a noble College. They were then busy in making some Bastions, and a Citadel for the Defence of the Town, but they were not finish'd.

The *Lesser Prague*, is seated on the West Side of the *Moldau*. It is far beyond the *Old Town* in Pleasantness and handsome Structures, being join'd to it by a very strong Stone Bridge, of sixteen great Arches, the whole Fabrick 1700 Foot long, and 35 broad, with two high Gates, under two large Towers at each End. Part of this Town is built upon a rising Ground, on the Top of which stands *Hartschin*, or *Upper Prague*, where the Emperor has a Summer-house, and a most magnificent Palace. In this Part of the City is also the Cathedral Church of *St. Veit*, containing many ancient Monuments. Most of the Houses of the Nobility are also in this Part; among which the Garden and Palace of *Coloredo* excel for Neatness, but it is not very large. The Palace of Count *Wallenstein*, afterwards Duke of *Friedland*, General of the Emperor *Ferdinand* II. his Armies, is a very stately Structure, built upon the Ruins of at least 100 Houses, which were pull'd down for that Purpose: The Hall is a very lofty and spacious Room, and the Garden exceeding beautiful, on one Side of which you see the Place where they used to manage his Horses, with a noble Fish Pond near it: On the other Side you see the *Aviary*, beautified with Trees and a Garden; the Model being taken from the *Aviary* of Prince *Doria* at *Genoa*. But what is most surprising are the large Stables, where you see a Marble Pillar betwixt each Horse; every Horse having a Rack of Steel, and a Manger of Marble, fix'd in a Nich of the Wall: Over the Head of each Horse you behold his Picture, as big as the Life, with his Name under it. Thus a Bay-Horse was named *Monte d'Ore*, a Mare *Bella Donna*, but his beloved Horse's Name was *Mas Querido*. The current Language of *Bohemia* is a Dialect of *Sclavonian*, though all the Persons of Quality here, and not a few of the Inhabitants both in the City and Country, speak very good *High Dutch*. The *Lesser Prague* was surpriz'd by the *Swedish* General *Koningsmark*, in the long *German War*, who carried off an incredible Booty.

A Part of *Prague* being inhabited by *Jews*, is thence call'd the *Jews-Town*. They are here in great Numbers, and deal chiefly in Jewels, and especially in those Stones that are found in the Mines of *Bohemia*. I bought some *Bohemian Topazes*, very well cut, of them, at the Rate of seven or eight Crowns a Stone.

John Hus, and *Jerome of Prague*, who endeavour'd to bring about a Reformation in those Parts 800 Years before *Luther*, are not as yet forgotten among the *Bohemians*, who keep Silver Medals to the Memory of these two great Men; upon which Account I cannot help mentioning, what *Aeneas Sylvius*, afterwards Pope *Pius II.* says of them two, viz. *That John was more in Tears and of greater Authority, but Jerome excelled in Eloquence and Learning; That they faced Death with unparallel'd Constancy, singing Hymns in the Midst of the Flames.* He adds, *None of the old Philosophers suffer'd any Kind of Death with so courageous a Temper, as these the Flames.*

As the same Author has made a Comparison betwixt the City of *Florence* and *Prague*, I cannot forbear to give you my Observations upon this Head, which I made myself, both from the Top of the *Domo* at *Florence*, and from the Cathedral of *St. Veit*, on the Hill of the *Lesser Town*. I found *Prague* to comprehend a much larger Compass, and to be more populous than *Florence*. The Streets of the first are much longer; and the Windows of the Palace being of very fine Glass, made a much better Show than the ragged Paper Windows of *Florence*. The River *Arno*, which passes through this last, bears not the least Comparison with the *Moldau* at *Prague*; and the great Stone Bridge over this River, bears a full Proportion to, if not exceeds, not only any one, but all the four Bridges of *Florence*. The Emperor's Palace also upon the Hill is a very noble Structure. On the other hand, it must be confess'd, that the Cathedral of *Florence*, built of black and white marble; the Chapel of *St. Lawrence*, and the Great Duke's Gallery and Rarities, exceed any Thing I saw at *Prague*. Upon the *White Hill* near *Prague* was, 1620. November the 8th, fought the famous Battle betwixt the Armies of the Emperor *Ferdinand II.* and *Frederick Elector Palatine*, in which the latter was routed.

23. The Winter coming on, I would not go by Water to *Hamburg* by the *Moldau*, which near *Melnick* falls into the *Elbe*; so that being obliged to travel by Land, I left *Prague* and the *Moldau* to the Right, and pass'd through *Zagethal*, *Wolverne*, and *Budin*, to *Labasitz* upon the *Elbe*. After having cross'd the River *Egra*, (which arising near the City of the same Name, falls afterwards into the *Elbe*) I came by the Castle of *Kriegstein*, seated upon a high Rock, thence to *Ausig*, a small City, and so by the Way of *Nolndorff*, and over the Mount *Kninsberg* to the Frontiers of *Misnia*; taking our Way through *Peterswald*, *Hellendorff* and *Kistbel*, near the last of which are Iron Mines and Works. Having spent nine Days by Coach, from *Inglaw*, on the Confines of *Moravia*, to this Place, not reckoning my Stay at *Prague*, which is computed to be 200 English Miles, the Ways being very bad in some Places, especially in the Winter Season.

As we were going toward *Dresden*, I took a View of the *Bohemian* Rocks behind us, which resembled, at a Distance, the Ruins of an old Wall; but could not be convinced of what most Geographers have told us of *Bohemia*, That it is enclosed in a great Forest, though it is not to be disowned, but that both within the Country, and in some Parts near the Borders, there are considerable Woods, believed to be Part of the old *Sylvia Hercinia*, or *Hercinian Forest*. The *Bohemians* have been at all Times a stout and warlike Nation; and though the common People are somewhat rough, the Gentry are very obliging and polite. They abound in lusty and strong Horses, but since their unfortunate Revolt, they have lost most of their Privileges, and many thousand Families have quitted the Kingdom.

We continued our Journey through *Misnia* to *Dresden*, one of the most remarkable Places in all *Germany*, being the Residence of the Electors of *Saxony* upon the *Elbe*, over which is a stately Bridge, supported by seventeen Arches. The Fortifications of the City are very strong, after the modern Way; the Bastions faced with Stone, surrounded in some Places with a double Ditch. It has three Gates. The Things most worth Observation are, The *Italian* Garden in the Suburbs, the *Hunting-house* in the *Old Town* beyond the River, and

the Electoral Palace, with the House for Wild Beasts, Stables, and *Arsenal*. The Hall in the Elector's Palace is very spacious, and chiefly remarkable for the many Draughts of Cities, Pictures of Giants, and the Habits of several Nations, very well done.

But what is most surprising is, the Collection of Rarities, divided into several Chambers. The first contains all Manner of Mechanical Instruments, made very artificially. In the other Chambers, these following are most worth Notice: A Tube-Glass four Ells long; divers artificial Works of Coral; Bowls and Cups made out of Mother of Pearl; Castles of Gold and Mother of Pearl; a Cup made of a Stone taken out of an Ox's Stomach, of a Foot long; a Stone as big as one's Fist, taken out of a Horse, resembling a *Bezoar-stone*; some very pure Ore out of the Mines of *Freiberg*; a natural Cross of the same Ore; one hundred twenty one Heads carved on a Cherry-stone; a Chrystal Cabinet, sold by *Oliver Cromwell*; *Charles II.* of *England*, on Horse-back, carved out of Iron; King *Charles I.* his Head; an Organ of Glass; several unpolish'd *Topazes*, ten Inches diameter; a Cup made of a *Topaz*; several Emeralds, an Inch in diameter, as they grow in the Rock.

Figures of Fish in Stones, the Stones dark colour'd, the Fish of a Gold Colour; two large fine Pieces of pure Gold Ore; a White Hart as big as a natural one, made of the Filings and Shavings of Harts-horn. Another Chamber contains all Manner of Mathematical Instruments, and a Library of Mathematical Books and Maps; an Unicorn's Horn, which they affirm to be of a Land Unicorn, because it is neither wreathed nor hollow. The most remarkable Pictures, among a great Number, are, the Siege of *Jerusalem*, by *Colier*, valued at a high Rate; two Nuns, by *Lucas van Leyden*; a Picture of *Dr. Luther*. Here is also a rowling Bullet, to demonstrate a perpetual Motion.

Of Clock-works you see a vast Variety: A Cuckow singing, a Horseman riding, a Ship under Sail, an old Woman walking, a *Centaur* running and shooting, and a Crab crawling or creeping upon a Table; all done by Clock-work, to the Amazement of ordinary Spectators. In the Stables, and Chambers thereunto belonging, you see a noble Stable full of Horses, each Horse eating out of a Rack of Iron, and Manger of Copper. Near them is a curious Fountain and Pond, surrounded with Ballisters, where the Horses are watered; a long Walk arched, and painted with very fine Horses; over which is a Gallery, with the Pictures of all the Dukes and Electors of *Saxony*, in their Electoral Robes and Military Habits; two Beds of Marble; a Horseman of Silver, bringing a Cup of Wine in his Hand, moved by a Spring; a Pair of very fine Pistols, with Stories of the *Old* and *New Testament* upon them; a Glass Gun; a Gun, which discharges forty Times without being charged again; a Lock without a Cock. Another Chamber has many rich Sleds and Accoutrements, made Use of in the Winter-time upon the Snow. A White Bear's Skin stuffed; Tigers and Lyons Skins; a *Cassowaries* Skin; very fine Armour for Men and Horses; a Picture of a *Laplander*; a *Lapland Magick Drum*; a Chamber full of all Sorts of curious Hunting Tackle and Arms.

The *Arsenal* is a long Square, a Building containing near 400 Brass Pieces of Ordnance; of Musquets and other Arms a great Quantity; divers Silver Coats of Mail, &c. In the Hunting-house in the *Old Town* are maintained fifteen Bears; Fountains and Ponds are made here for the Conveniency of washing themselves, in which the Bears much delight. Round the Pond you see high ragged Trees or Posts set up, where the Bears climb up and down, and Scaffolds on the Top, where they sun and dry themselves after they have been sporting in the Water. The Horn Gallery here is also worth taking Notice of; out of which you pass through three Chambers, one painted with all the different Sorts of Hunting, the second with Fowl, and the third with all Kinds of Wild Beasts. In the House where the Wild Beasts are kept, was a *Marian*, a four legg'd Beast, which hangs on the Bows of Trees by the Tail.

A wild Mountain Cat of an extraordinary Size; five young Bears, five old black Bears; the Feet, Head and Neck, longer than those of the black, but not so thick; two Lions and ten Lionesses.

The *Italian Garden* and *Summer-house* in the Suburbs, contained two noble Obelisks, two beautiful Fountains, a Theatre and good Landships. They were built by two of the Elector's Eunuchs. It is not many Years ago since *Dresden* has been made a City. The Revenues of the Elector of *Saxony* are very considerable, arising chiefly from his Impositions upon Commodities, Excises upon Beer and Silver Mines. The chief Church of *Dresden* is very fair. They are reputed to speak the best *Hig Dutch* here, and throughout all *Misnia*, which is a pleasant, fruitful and populous Country.

After I left *Dresden*, my Curiosity led me to *Frieberg*, noted for many considerable Mines, which are within two *English* Miles of the Place. Among those I took particular Notice of three; one call'd the *High Hill*, the deepest in those Parts, being Seventy seven of theirs, or Two hundred and eight of our Fathoms deep, which Depth exceeded any of the Mines I saw in *Hungary*. The second Mine I saw was call'd the *Prince of Heaven*, which not many Years ago, produced an Ore so rich, that an Hundred Pounds weight afforded an Hundred and thirty Marks of Silver, or Sixty five Pounds in the hundred; but it is a constant Observation among the Miners, that where the Veins are richest and purest, they are thinnest, and generally not above the Breadth of two Inches. The Ore, as it generally runs, affords not one Ounce and a half of Silver in the Pound; and they work it, if it holds above half an Ounce, which may seem somewhat strange to those who know not, that even in the Silver Mines of *Peru* and *Chili*, they will work the Silver Ore, which affords not above four or five Ounces; and the rich Ore in the Mines of *Potosi* does not commonly produce above ten or twelve Ounces of Silver; though this Hill alone, if we may credit *Alberto Alonso*, has produced in Silver since it has been dug, betwixt four and five hundred Millions of Pieces of Eight. They have here several Ways of opening the Ore to prepare it for Melting; as, by Lead, and a kind of Silver Ore which holds Lead.

The Sulphur Ore also which is found here, after its Calcination, proves no small Addition towards the melting of Metals; as likewise the *Schlich*, or pounded and washed Ore, and the *Schlaken*, being the Dross, Sediment or Scum, taken out of the *Vortiegel* (Pan) which received the melted Minerals, let out into it at the Bottom of the melting Furnace. Their *Treibshearth*, or Furnace of Separating, where the *Litharge* is driven, which I saw here, is more like that described in *Agri-cola*, than those I saw in *Hungary*. Some of the *Litharge* is Green: They wash the purest Ore, and such as is mix'd with Stones or Spars; and they have this Peculiar, that before they melt the Ore in the Melting-Furnace, they burn the pounded and washed Ore on the *Roasting Hearth*, as they term it. They make much Use of the *Virgula divina* or *Forked Hazel*, to find out the Silver Ore, or any other Treasure. I never saw them use it in the Mines of *Hungary*, where I was, but I took particular Notice of the Manner how they use it here; yet as it is amply described in some Books, and is better seen than represented at a Distance, I will not enlarge further upon that Subject.

The third Mine I visited was call'd the *Neckbreaker*, about eighty of our Fathoms deep: The Ore it produces is either Copper and Silver, or Silver and Lead, and sometimes all three; but they work only for Silver. I found the Mines cold as far as the Air could penetrate, but otherwise warm enough. Where they are at the deepest, they are full of Damps; but that which troubles them most, is the Dust, which settles upon the Lungs and Stomachs of the Miners. They have excellent Engines here to prevent the Inconveniencies arising from the Water. But I must not omit a rich Sulphur Ore, hard and stony, that with red Spots being

deemed the best. This is melted in a peculiar Furnace, to separate it from the Ore; some of which yields three Pound of Sulphur out of 100 Weight of Ore, which as it melts runs out of the Furnace into Water, or the Exhalations of the Ore are condensed into Brimstone, by the Coldness of the Surface of the Water placed to receive it. It is purified again, by melting it a second Time. Some of this Brimstone Ore holds Silver, some Copper, but in very small Quantities. The Remnants, after Sulphur is separated from the Ore, is reserved for a double Use; either for the melting of Silver, or the making of *Vitriol*. In the first Case, a certain Proportion of it is cast into the Melting-Furnace of the Silver, which, as the Miners term it, helps to make it Flux. In the making of *Vitriol* or *Copperas*, they take the Ore from which the Brimstone has been separated, and burn it over again, or let it continue to burn in the open Air, then putting it into a large Vessel, pour as much Water upon it as is requisite to imbibe the *Vitriol*; which Water being afterwards boiled to a certain Consistency, is let out into Coolers, where the purest Part of the *Vitriol* adheres to Sticks set for that Purpose, the rest settling on the Sides and at the Bottom. It is observable, that the Ore, after it is deprived of its *Vitriol*, has not the least Virtue left in opening Metals, or rendring of them fluid.

24. The City of *Frieberg* itself is of a circular Figure, surrounded with strong Walls; Its Streets are handsome, and so is the Market-place. The Elector's Palace is a very beautiful Structure; it has five Gates. But what exceeds all the rest, is the Church of *St. Peter*, famous for the Monuments of many of the Ducal Family, among which, that of *Maurice*, Duke and Elector of *Saxony*, excels, being accounted the noblest in *Germany*, raised three Piles high of black Marble, with many fair Statues about it in Alabaster, and white Marble, which is the Reason, that when this Town was surrender'd, *October* the 5th, 1632, to the Imperialists, the Elector of *Saxony* paid 80000 Crowns to save the Tombs of his Predecessors, and the Robes, Jewels, Rings and other Ensigns of Honour, that were buried with them.

There were certain Vaults and subterraneous Passages from the Mines into the City, which are said to have been discover'd first 1189, since which time the Silver Mines at *Schneeberg*, *Anneberg* and *Joachims Dale*, have been found, viz. in 1526. After having taken a View of what I thought most curious in and about *Frieberg*, I travell'd by *Waltheim* and *Coldick* to *Leipsick*, seated upon the River *Elster*, which having its Source in *Vogtland*, passes by this City, and afterwards falls into the River *Sala*.

It is a very rich Place, celebrated for its three Marts or Fairs every Year, when there is a great Resort of Merchants from all Parts. The Houses are generally stately Buildings, being for the most part six or seven Stories high. It has a Castle, but neither this nor the Town are well fortified. The Church of *St. Nicholas* has the Reputation of being within one of the finest *Lutheran* Churches in *Germany*.

This City is famous for three Battles fought near it in our Age; the 1st, Between *Gustavus Adolphus*, King of *Sweden*, and Count *Tilly*, the Imperial General, 1631, in which the last was totally routed. The 2d, Some Years after, betwixt *Torsten* the *Swedish*, and Arch-duke *Leopold William*, the Imperial General. The 3d, about a League and a half from hence, near *Lutzen*, fought between the same King of *Sweden*, and *Wallenstein* Duke of *Friedland*, the Imperial General, in which the *Swedes* were again victorious, notwithstanding their King was slain before the Beginning of the Battle, as he was going to take a View of the Posture of the Enemy. There is also a good University at *Leipsick*, erected there whilst the Troubles continued in *Bohemia*, with the *Hussites*, when 2000 German Scholars came hither at once from *Prague*.

From *Leipsick* I prosecuted my Journey to *Magdeburgh*, through a plain Country, betwixt the Rivers *Sala* and *Elbe*, through *Lansberg*, and near *Petersdorff*, and so

by the Way of *Koebten* (the Residence of the Prince of *Anhalt*) to *Calm*, situate upon the River *Sala*, not far before it falls into the *Elbe*. In this Neighbourhood is the famous Mountains, stiled the *Fichtelberg*, much celebrated for the Mines, Baths, and mineral Waters near it, and for four Rivers, running to the four different Quarters of the World, viz. The *Main* to the West, the *Nab* or *Nabus* to the South, the *Ager* to the East, and the *Sala* to the North; which four Rivers afterwards join the three capital Rivers of Germany, the *Danube*, the *Rhine* and the *Elbe*.

Hence we pass'd through *Saliz* (noted for its Salt-springs) to *Magdeburgh*, seated upon the River *Elbe*. This, which in former Ages was the Metropolitan City of Germany, but now under the Jurisdiction of the Elector of *Brandenburg*, is of a very large Circumference, but scarce half built, since it was destroyed by *Tilly* the Imperial General, who put 56000 Persons there to the Sword. The Cathedral Church is a very fair Structure, built after the Model of our *English* Churches; by the Emperor *Otho I.* and his Empress *Edithe*, the Daughter of our *English* King *Edmund*. Her Effigies in Stone stands still in the Church, with the Representation of eighteen Casks of Gold by her, which she gave thereto. The *Lutheran* Churches are very handsome here, and the *Jesuits* very fine, as indeed they are in all other Places. In the Cathedral Church of *St. Maurice*, I saw the Statue of the five wise Virgins smiling, and the five foolish Virgins lamenting, which were not ill done. Among the rest they shew'd several odd Relicks, viz. The *Basin* in which *Pilate* wash'd his Hands; and the *Ladder* whereon the *Cock* crow'd, after *St. Peter's* Denial of our Saviour. Among the Ruins of the Cloister of the *Austin Friars*, are still remaining *Luther's* Chamber, his Bedstead, and his Table. Upon the Door are certain *German* Verses, which translated into *English* are to this Purpose:

Great *Luther* lodg'd within this little Room,
While as a Monk this Cloister was his Home;
And we in Rev'rence of his Mem'ry keep
The Bedstead upon which he us'd to sleep.

At *Magdeburgh* I began to be sensible that I had left behind the true Purity of the *German* Language, for here you begin to hear another Dialect, generally called the *lower Saxon*, spoken in all the North of Germany, at *Hamburg*, *Lubeck*, and other Cities in those Parts. However People of Fashion converse in *High Dutch*, and their Sermons are generally held, and Books written in the same Language. The City of *Magdeburgh* is highly celebrated in Germany, as having been the first where the most famous Turnaments were instituted in the Year 638, by the Emperor *Henry*, surnamed the *Fowler*. The Condition of these Turnaments or Exercises of Chivalry were, That none but of the ancient Nobility, no Bastard, no Usurper, no Person attainted of High-Treason, no Oppressor of Widows and Orphans, none born of Parents, whereof one was of ignoble Extraction, no Heretick or Murderer, Coward, or who had given Offence to Ladies in Word or Deed, should be admitted into the List, and not above one in a Family at a Time. Princes were to come attended with four Squires, Counts and Barons with three, a Knight with two, and a Gentleman with one. He that was desirous to enter the Lists, appear'd at the President's Lodgings, where his Name and Quality being registred in the Presence of three *Heralds*, the Champion deliver'd unto them his Helmet and Sword, and after Confession enter'd the List, attended according to his Quality. Their Horses were to be without Defect, their Furniture according to the Rules prescribed, and the Saddles without any rising behind or before. Having performed all Manner of Exercises, they expected the Sentence from the Judges, and he who obtained the Prize, received it from the Hand of some Lady, or from the Prince who gave it.

But after these Pastimes had continued for some Ages, they were abolish'd upon very weighty Considerations,

these Exercises having caused no small Emulation among the Nobility, so that at the twenty third Turnament, held at *Darmstadt*, 1473, this Animosity rose to such a Height between the Gentlemen of *Franconia* and those of *Hesse*, that seventeen of the former and nine of the latter remained dead upon the Spot. The Winter now coming on apace, I hastened my Journey to *Hamburg*, which I performed in the Stage-Coach in four Days, taking our Way through the Elector of *Brandenburg* and the Dukes of *Lunenburgh's* Territories. In this Road I took Notice of many small Mounts of Earth, the ancient Funeral Monuments of Great Commanders; (which are also found in *England*) and sometimes Rows of great Stones; and in one Place I saw three great massy Stones in the Middle, in a large square, enclosed by other large Stones, set up on End.

25. The City of *Hamburg*, one of the greatest, richest, and perhaps the most populous Cities of Germany, is seated in a Plain, being well fortified after the modern Way, yet are their Works not faced with Stone. But the Territories belonging to it are of no great Extent. It is divided into the *Old* and *New Town*; It has five Gates; the *Stone-Gate*, which leads to *Lubeck*; the *Dyke Gate*; the *Grass-Brook Gate*; the *Dome Gate*, and the *Ellern* or *Altena*, a Town belonging to the King of *Denmark*. Their Buildings are very handsome, with very grand Entrances, and spacious Halls. The Senate House is a noble Structure, beautified with the Statues of the nine Worthies. The Exchange was then enlarging: It is celebrated for its fair Churches, and noble Steeples cover'd with Copper. The Church of *St. Catharine* has a noble Front, and round the Steeple you see a Crown well gilt. The Steeple of *St. Nicholas* is supported by great Globes. The other great Churches are, the *Dome* or *Cathedral Church*, *St. Peter's*, *St. James's* the Great and Less, *St. Michael's* Church in the *New Town*, besides several lesser ones, as of *St. Gertrude*, *St. John's*, *St. Mary Magdalen*, the *Holy Ghost*, the *Blue Coat Hospital Church*, and *St. George's* in the Suburbs. The River or rather Lake call'd *Alster*, passes through it into the *Elbe*, which is just beyond the Town, join'd by another small River call'd the *Bilde*. The Tide passes daily twice through most of the great Streets, through Channels, though the City lies eighteen Leagues distant from the Mouth of the *Elbe*.

As it is excellently well situated for Commerce, so it abounds in Shipping; for besides its Passage into the Ocean, it is but an easy Day's Journey from *Lubeck* on the *Baltick-Sea*, besides, that by the River *Elbe*, they carry on their Commerce by Water with a great Part of Germany, even as far as *Bohemia*. The Conveniency of Trade drives many foreign Merchants thither, among which the *English Company* enjoys great Privileges; it being computed that they vend there about 100,000 Pounds worth of our Woollen Manufactory annually. I left *Hamburg* the 10th of *December*, when embarking in an *English* Vessel, we got that Day to *Stadt* upon the *Zwingh*, which near it falls into the *Elbe*. It belongs now to the King of *Sweden*; and here it was the *English* Merchants resided for some Time, upon some Discontent with the *Hamburgers*.

11th, We pass'd *Gluckstadt*, seated upon the *Holsatian* Shoar, and belonging to the King of *Denmark*: We anchor'd that Night at the Mouth of the River *Oast*, which rising in the Dutchy of *Bremen*, falls into the *Elbe*, a Mile from *Brunsbittel*, on the opposite Side of the *Holsatian* Shoar. 12th, We pass'd *Cook's Haven*, in Hopes to reach the Sea that Night, but being becalm'd at Three in the Afternoon, were forced to Anchor again, between *Thicksand* to the North, and *Newark* to the South, near a Light-House. 13th, The strong Wind forcing us back to *Cook's Haven*, I embrac'd the Opportunity to go a-shore, and took a View of the Castle, which belongs to the City of *Hamburg*. It is a square Fort with a double Ditch, and at high Tide, some Vessels come up to the Channel, which reaches up to the Fort, but at low Water it is dry. Both the Town and Castle are call'd *Reutzbittel*, being not far from the *Lands-End*, and the Governor thereof is always one of the Senate. Within three Days after we

set Sail again with a brisk N. E. Wind for *England*, and scarce were we out of the Mouth of the *Elbe*, but we got Sight of a certain small Isle, belonging to the Duke of *Holstein Gottorp*, called the *Holy Land*, which as it is very high, so it is a safe Direction for Ships, especially those that come from Sea, without which they would be often at a Loss from the Lowness of the Shoar near that River's Mouth. This Island, which is very small, is reputed to have about 2000 Inhabitants, who live for the most Part upon Fishing, and by carrying Lobsters and other Sea-fish to *Hamburgb*, *London*, and *Queenborough*. We chose the main Sea that Night, but the next Day made nearer to the Shoar, and sail'd in Sight of *Ame-landt* and *Schelling*; and in the Evening discovered the Lights at the *Vly* and *Texel*. The next Day, having a fair Wind, we took down our Sails in the Evening, for Fear of coming too near the *Englisch* Shoar in the Night-time, and next Morning discovered the *North-foreland*, came the same Day to an Anchor in *Margaret Road*, and came as safely ashoar on *Christmas Day*.

Now I must confess, that after I had taken so full a View of *Germany*, I found it quite different from the Conceptions I had formed of it myself. For to speak first of its Rivers, they are so noble and great, that they excel those of *Italy* and *France*, it being certain that the *Po*, the *Arno*, *Garigliano*, and other Rivers of *Italy*, bear not the least Proportion to them; and though *France* has four great Rivers, viz. The *Loire*, the *Seine*, the *Rhofne*, *Garonne*, as well as *Germany* has the *Danube*, the *Rhine*, the *Elbe*, and the *Wefer*, yet has *France* none that can come in Comparison with the *Danube* and *Rhine*. 'Tis true, *France* has many fine Cities and Sea-ports, yet they do not come up in Number to those in *Germany*, and I much question, whether it has any Places that exceed *Hamburgb*, *Lubeck*, *Dantzick*, *Bremen*,

&c. Besides which, the whole Country is full of populous Towns, great Villages, strong Castles, Seats of Persons of Quality, delicious Plants, Forests, and pleasant Woods. Nay, *Germany* affords even under Ground Mines of Gold, Silver, Copper, Iron, Tin, Lead, Quick-Silver, Antimony, Coal, Salt, Sulphur, Cadmia, &c. and is full of the best Artificers to work in them. Add to this the easy Conversation of the People, who are great Lovers of Strangers, and honest in their Dealings: The Women are generally well complexioned, of a sober Behaviour, faithful to their Husbands, and good House Wives.

Besides that, *Germany* affords an inexhaustible Stock of Men, the People being naturally fruitful, not exhausted by long Sea Voyages and Engagements; and by Colonies sent into far distant Countries; the only Consumption of Men being in the Wars; and if they have none at Home, they will seek for them Abroad, being generally inclined to martial Exploits; and their Persons of Quality are always averse to Trade. To conclude, when I consider the present Condition of *Germany*, their great and populous Cities, with the Strength of their Fortifications, the vast Number of their magnificent Structures, publick and private, and their civilized Manner of living in them, and compare all this with the Character *Tacitus* gives of the ancient *Germans*, That they lived poorly, scattered, without Towns or Villages, ignorant of Arts, and such like, I cannot but be pleased with the Expression of a certain learned Person, tho' long ago, upon this Subject, That if *Ariovistus* and the other great Men of *Germany* of those Times, should rise out of their Graves, and take a full View of their Native Soil, they would fancy themselves to be in another World, and never acknowledge this for their own Country.

SECTION II.

A Description of the noble Kingdom of *Hungary*, in which its various Prerogatives and many Excellencies are pointed out; the Nature of the Country, its various and admirable Productions, the Disposition of the People, their Language, Manners and Customs are, from the Knowledge of the Writer, clearly and copiously set forth; interspersed with a Variety of Geographical, Historical, Physicall, Political and Literary Remarks, upon various Subjects.

By the learned Dr. EDWARD BROWNE, President of the Royal College of Physicians.

1. An Introduction, with some Account of the Author's Design in this Treatise. The Climate and Soil of Hungary described. The famous Rivers by which this Kingdom is watered.
2. Of the several Bridges that render this Country famous, particularly the admirable Bridge of Esbeck, the intended Bridge of King Sigismond, and the Ruins of that built by the Emperor Adrian.
3. Of the Islands in, and Fleets upon the Danube; as also of the famous Lakes in Hungary.
4. Of the large Plains in this Country, and how they facilitate Travelling.
5. Of the vast Quantities of all Sorts of Fish, and of some Species peculiar to the Danube.
6. The prodigious Fertility of the Country described, and of the Excellency of its Wines, Bread, Beef, &c.
7. Of the Language of Hungary, and of the adjacent Provinces. The general Knowledge the People have of Latin. The State of Learning there.
8. An Account of the old Hungarian Crown, the vast Veneration the People have for it. The Martial Disposition even of their Ecclesiasticks. The Tomb and Epitaph of the Roman Poet Ovid.
9. The Pyrrhic Dance still understood and practised by the Heydukes. The State of Hungary at the Time of the Author's being there. Account of the Frontier towards the Turks, as it then stood.
10. Of the Roman Stations, Garrisons and Antiquities of this Country.
11. A curious Account of a prodigious Treasure of ancient Greek Medals found at Deva, with Remarks upon some Roman Medals that have been also found in this Country.
12. Of the Habits and Arms of the Hungarians, and the Reasons why they have been imitated by the neighbouring Nations.
13. A succinct Account of Transilvania by another Hand.

1. **A**S we have already given an Account of the Author, we shall only observe, that having spent a great Deal of Time in visiting the different Parts of the Kingdom of Hungary, and in the Examination of the Curiosities it contains, Dr. Browne thought he could not do a more acceptable Service to his Countrymen, than by giving them a succinct View of the Result of these Examinations and Inquiries. It is a received Opinion, that the Air in this Country is very unwholesome, which is attributed to many Causes; first, the Flatness of the Country, for where there are no Mountains, there are seldom any Winds sufficient to cleanse and purify the Air. Secondly, the Soil being marshy and full of Minerals, the Vapours rising from thence are supposed to be tinged with Particles far from being Salutory to the human Body. Thirdly, the extream Heat in Summer, and the thick Mists and Fogs in Winter and in Autumn, contribute not a little to draw this evil Report upon the Climate. But after all, it is very certain, that the Natives of Hungary live many of them to a vast Age; and though it be true, that it was formerly stiled at Vienna, *Cemeterium Germanorum*, that is, the Churchyard of the Germans, yet perhaps a candid Judge upon a fair Hearing, would be inclined to acquit the Air of Hungary of the Murder of the Germans, and advise a fresh Indictment against the Wines. The Truth of the Matter seems to be, that in this rich and plentiful Country, Strangers are apt to indulge themselves too much; and in that Case it must be owned, that the Climate is not very favourable, for without vigorous and constant Exercise, the Natives themselves would not be able to maintain such robust Constitutions as they are famed for, considering the Liberties they take in Eating and Drinking.

But except this Charge in Relation to the Air, there seems to be no Impeachment against the Excellency of this Country, which in Time past, and while under the Government of its Native Princes made as great a Figure as any in Europe; and its Inhabitants had the Honour to give the first Check to the Arms of the Mahometans on this Side, as the French did on the other, and prevented them thereby from over-running all Europe. Since it fell under the Dominion of the House of Austria, it has indeed made a less Figure, and grown more out of Knowledge as all Kingdoms do when they become Provinces; and to the same Cause it has been owing that the Turks have made themselves Masters of so great a Part of it, and that it has been so ruined and distracted by intestine Divisions and civil Wars, that for their Severity and Length, there are scarce the like to be met with in History. But these are casual Events common to other Countries as well as Hungary, and which cannot be reasonably urged as derogatory from or destructive of those high Perfections, which it enjoys from Nature, and which ought to render it as much the Object of Attention to Strangers, as any other Country upon the Globe. For if we were to enumerate the several Advantages that distinguish those Countries of the World that are most deservedly famous, we might venture to affirm, that almost all of them may be found here. Since if Germany boasts her fine Rivers, Italy her golden Fruits, Sicily her copious Harvests, France her generous Wines; in short, if the numerous Commodities of Europe, if the luxurious Plenty of Asia, if the various Curiosities of Africa, if the Silver of Mexico, and the Gold of Peru, are fit Objects of our Admiration, Hungary must claim it too; no Country is better watered, none more fertile, none more pleasant, none yields better Fruits, none produces richer Wines, none abounds more with Cattle, none, notwithstanding all these Riches above Ground, can boast a greater Wealth below. But to clear up all this, let us now enter a little into Particulars.

On the East-side it has that noble River *Tibiscus*, or the *Tbeyssé*, rising at the Foot of the Carpathian Mountain, in the Country of *Maromorus*, and being increased by the Waters of the River *Mariscus*, or *Marisa*, and of several others, joins its Current with the Danube between *Waradin St. Peter*, and *Belgrade*. This River carries vast Quantities of Stone Salt from the Salt Mines of Hungary and *Transilvania*, and so by the Danube to all

Places as far as *Presburgh*, (it being not permitted to be carried higher, that it may not obstruct the Sale of the Austrian Salt) a considerable Quantity of the same Salt being carried down the Danube, and so by the River *Morava* into *Servia*, and other Countries adjacent. On the West-side is the River *Rab* (*Arabo*) which has its Rise in *Styria*, and being in its Passage augmented by the Waters of the *Lauffnitz*, *Pinca*, *Guncz*, and other Rivers, falls into the Danube near *Raab* or *Jaurinum*. The late Defeat of the Turks at *St. Gotthard* near this River, has rendered its Name famous to Posterity. Upon the South-side are two very considerable Rivers the *Dravus* or *Drave*, and the *Savus* or *Save*. The first has its Source in the Country of *Salzburg*, (Part of the ancient *Noricum*) and after a Course of three hundred Miles through *Carinthia* and *Hungary*, discharges itself into the Danube near *Erdoed* or *Teutoburgum*. At its Entrance into Hungary, it is joined by the long River *Mur*; but a great Way before that, even near its Source, it is a considerable River. The *Save*, the second noble River on that Side, has its Spring in *Carinthia*, and being augmented by the Accession of many other Rivers, after a Course of three hundred Miles, joins with the Danube near *Belgrade*. It is a very beautiful Stream even at *Crainburgh* (*Carnodunum*) an handsome Town not far distant from the Head-spring; which is so considerably enlarged afterwards, that it contains several remarkable Islands, as that of *Metubaris*, on the West-side of *Sirmium*, and that of *Sesseck* (*Segestica*) near *Zagabria*, whereupon was anciently built a strong Fortress, unto which the Romans used to carry their Provisions, and other Necessaries from *Aquileia*, and so by Land to *Nauportus*, for the Use of their Forces in these Provinces. Into the fertile Plains between these two Rivers, viz. the *Drave* and the *Save*, *Solyman the Magnificent* retired from before Vienna, and so farther to *Belgrade*. On the North-side of Hungary are the Rivers rising from the *Carpathian Hills*, which are the Boundaries betwixt that Kingdom and *Poland*, viz. the River *Gran*, which falls into the Danube over-against *Gran* or *Strigonium*; the River *Vagus*, or *Waag*, which joins with the Danube near *Comorrah*: It is generally conceived to equal the *Po* in Italy: This I am sure of, that at *Friestadt* (above fifty Miles before it runs into the Danube) it is already a considerable Stream, and has a long Bridge over it; and another very near to its Source at *Trenschin*, a handsome Town, famous for thirty two Springs of hot and Mineral Waters. Besides these, that great and famous River the Danube passes through Hungary, not any one Province having so large a Share of this River, as this Kingdom: For taking this River from the City of *Ulm* in *Suabia*, (where it begins to be navigable) it passes by *Ingolstadt*, *Ratisbon*, *Straubing*, *Passau*, *Lintz*, and *Vienna*, unto *Presburgh*; from whence it continues its Course for at least three hundred Miles through Hungary, before it comes to *Belgrade*. Not to mention here its smoother Passage along the Shores of *Servia*, *Bulgaria*, *Wallachia*, and *Moldavia*, and its Division into many Mouths, by which, after it has received into its Channel above sixty great Rivers, and, by a modest Computation, kept its Course for fifteen hundred Miles, it discharges into the *Euxine* or *Black Sea*; thence it is visible, that in respect of its different Parts, it might well be mentioned by a double Name by the Geographers, viz. by that of *Danubius*, and *Ister*. *Strabo* ascribes that Name unto it below its Cataract, or Water-fall, near *Axiopolis*, in the Inferior *Mæsia*, or *Bulgaria*; whereas *Appian*, and most modern Authors, begin it, at its Confluence with the *Save*, near *Belgrade*.

Besides these large Rivers, it has divers others, *Fluvii non ignobiles*, as *Pliny* very justly stiles them, viz. The *Sarvizza*, or *Orpanus*, rising near *Esperies*, (*Vesprinium*) and passing by *Stulweissenburgh* (*Alba Regalis*) falls into the Danube. The River *Walpo*, or *Vulpanus*, which has its Rise near a Town of the same Name; we pass'd over it by *Walcovar*, and the River *Bosneth*, or *Bacunthus*, which empties itself into the *Save* not far from old *Sirmium*.

2. Most of these great Rivers are covered with long Bridges.

Bridges. The Bridge of Boats over the *Danube*, betwixt *Strigonium* and *Barchan*, is the first upon this River after you come from *Vienna*. I saw also the Ruins of a Stone-bridge, upon the Shore of St. *Andrew's* Island; by *Virovichitz*; but the *Turks* now-a-days neglect those Bridges, instead of which they make Use of Bridges of Boats, which they find more useful, and contrive so conveniently, that they may with Ease open a Passage for Vessels that come that Way. Such a Bridge of Boats is betwixt *Buda* and *Pest*, over the *Danube*, being above half a Mile long; and if *Sigismund* had lived to effect his Design of building a Stone Bridge in that Place, no Bridge in *Europe* could, in all Probability, have compared with it.

Colocza, formerly an Archbishop's See, has also a Bridge; and near *Walcovar* is another over the River *Walpo*. But the Bridge of *Esseck* (anciently *Murfa*) built partly over the *Drave*, and partly over the low marshy Grounds and Fens, justly challenges the Precedency before the rest. It is five Miles long, with Towers upon it at each Quarter of a Mile, being handsomely railed on both Sides, and sustained by large Piles of Wood, nine or ten in a Rank for each Arch. Count *Nicholas Serini* burnt that Part of it which was built over the *Drave* in the last *Turkish* War, instead of which, the *Turks* have laid a Bridge of Boats a little below the other, which I pass'd in 1669. Here it was the unfortunate King *Lewis* of *Hungary* engaged with the *Turks* under *Solyman*, which cost him his Life. In ancient Times there were likewise many Bridges over that Part of the *Danube*, known generally by the Name of *Ister*. *Darius* King of *Persia* made a Bridge of Boats over that Mouth of the *Ister* called *Ostium Sacrum*: And, according to *Nicephorus*, *Constantine* built a Stone-bridge over it; but that admirable Bridge built by the Emperor *Adrian*, (if we may give Credit to *Dion* the Historian) surpass'd all the rest. Some of its Ruins are to this Day to be seen near *Severin*, about twenty *Hungarian* Leagues from *Belgrade*. It consisted of twenty Piles of square Stone of one hundred Foot high, besides the Foundation of sixty Foot broad, the Distance betwixt each of them being one hundred and seventy Foot, and joined by Arches with this Inscription:

PROVIDENTIA AUG.
VERE PONTIFICIS VIRTUS ROMANA
QUID NON DOMAT? SUB JUGUM ECCE?
RAPITUR ET DANUBIUS.

And for an everlasting Memorial, many Coins were stamp'd in Silver with this Inscription, *DANUVIUS*.

3. Not any River, that I know of, has such large and well-peopled Islands as the *Danube*; as the Isle of St. *Andrew's*, betwixt *Vicegrad* and *Vacia*: Another lies a little below *Buda*, against the West-side of which stands *Adom*, forty Miles long, and containing many Villages; another opposite to *Mobatz*, and another at the Confluence of the *Drave* and the *Danube*, and another new one near *Belgrade*, where forty Years ago there was not the least Footsteps of an Island to be seen: And if the River *Leyta* be the Boundary of *Austria*, the Isle of *Schutz* (*Insula Cituorum*), excels all the others, being well-peopled, and full of good Villages, besides divers considerable Towns, such as *Comorrah*, *Samarien*, &c. Another Thing is observable in the *Danube*, that no River whatever, at such a Distance from its Mouth, can boast of such considerable Naval Engagements as this; the Emperor keeping his Gallies at *Vienna*, *Presburg*, and *Comorrah*; as the *Turks* do theirs at *Strigonium*, *Buda*, *Belgrade*, &c. It seems not a little surprising, when we read, that *Mahomet* at the Siege of *Belgrade*, appear'd upon the *Danube* with 200 Gallies, and other arm'd Vessels, which were so smartly engag'd by the Christian Fleet, that besides what were taken, the *Turks* were forc'd to set their own Vessels on Fire, to prevent their falling into the Hands of the Enemy. The Christians had a Fleet of twenty four Gallies, and eighty other arm'd Vessels, besides Tenders and Ships of Burthen, at the Siege of *Buda*: And when *Solyman* the Magnificent lay before *Vienna*, the Imperial Admiral,

Wolfgang Hodder, did a signal Piece of Service with his Vessels; for coming out of *Presburg*, he sunk the *Turkish* Vessels, which carried the heavy Cannon, intended for the Battering the Walls. *Hungary* is also furnish'd with several considerable Lakes, as the Lake *Balatón*, or *Platsee*, as they call it, (the *Volcæa* of the Ancients) extending a great Length between *Esperies* and the River *Drave*, being guarded with several Forts, which have proved of great Use against the Incursions of the *Turks*. The *Newsidler-Sea*, being seven German Leagues long, and three broad, having borrow'd its Name from the adjacent Town of *Newsidel*, a handsome Place, situate upon a Hill, with a small square Castle. This is the same mentioned by *Pliny*, under the Name of *Peiso*; and the modern *Hungarians* call it *Terteu*, lying just half Way betwixt *Vienna* and *Sabaria*.

4. The vast Plain of *Pampus*, in *Paraguay*, in *America*, is famous for its Extent, being 2000 Miles long; I remember that famous Sea-Captain, Mr. afterwards Sir *John Narborough*, told me, that there is all low Land from the *Plate* River, to the Middle of the Streights of *Magellan*. The great Plains of *Muscovy* and *Poland*, are also famous throughout *Europe*; however, these are intermix'd with Trees; and sometimes whole Woods, whereas the Plains of *Hungary* are clear and open; and, if compared with our *English* Plains, as of *Salisbury*, *Lincoln*, and *Newmarket*, exceed them as far as a full-grown Man does a Child; such are the Plains of *Austria* from *Vienna* to Mount *Simmaren*, upon the Frontiers of *Styria*. I myself travelled from *Vienna* to *Belgrade*, through one continued Plain, for 400 Miles, without any Eminencies, except one inconsiderable Wood near *Bacna* and *Shilberg*, beyond *Dotis*: And this Plain taken from its first Beginning, viz. at Mount *Kalenburgh*, (*Cetius*), two German Leagues Eastward from *Vienna*, and so beyond *Belgrade*, along the North-side of the *Danube*, to the very Frontiers of *Wallachia*, exceeds by much that renowned Passage from *Labor* to *Agra* in the *Indies*. It is true, *Upper Hungary* has Abundance of Woods and Hills, yet are these intermingled with large Plains. The Levelness of *Hungary* proves a considerable Conveniency for Travellers, who are carried in open Chariots, carrying two Men besides the Driver, drawn by two or three, and sometimes four Horses a-breast. *Hungary* has more large Cities upon the *Danube* than any other Province; for among the ten considerable Cities which are seated from *Ulm* unto *Belgrade*, four, and those very large ones, belong to *Hungary*, viz. *Presburg*, *Strigonium* or *Grán*, *Buda*, and *Belgrade*; unto which if you add *Pest*, it makes up the Fifth.

5. All the Rivers and Lakes of this Country furnish them with vast Quantities of Fish: The River *Theisse* is so famous for its Plenty of Fish, that they have a common Saying, *That one Part in three consists of Fish*. And the *Budziack*, which falls into the *Theysse* near *Tockay*, is so full of Fish, that the Country People say, *It smells of Fish*; being to be understood of the dry Summer Season, when its Waters are very low; though (as I was credibly inform'd by a certain Officer) it is thirty Fathoms broad, and 8½ deep; but being of this Figure V, he told me, it could not be well fish'd with Nets. The *Danube* also affords a plentiful Share of Fishes, as *Trouts*, *Perches*, *Carps*, the largest and finest I ever met with; and besides many others, a certain Fish call'd *Coppen*, or *Capito*; a *Biscurne*, a kind of *Lamprey*, a *Grundel*, or spotted kind of *Cobites*, with six Beards, two short, and four longer; another Fish, exceeding in Bigness a Pike, call'd *Scheyden*, the *Silurus* of *Gesner*, and at certain Seasons great Numbers of *Hufones*, call'd by them *Hausons*, which are sometimes twenty Foot long, a delicious Fish, not unlike a *Sturgeon*. There are set Fishing-places, and peculiar Store-Houses for that Use upon this River, the highest thereof is above *Comorrah*, in the Isle of *Schutz*; but the greatest Plenty of Fish is near *Kilia* in *Wallachia*, where they take and salt many Sorts of Fish coming out of the *Euxine* Sea, and send them into the adjacent Countries. These Rivers afford also great

Plenty of Water-Fowl in the Winter, and among the rest *Pelicans*, but I never saw any Swans upon the *Danube*.

6. The Land here affords the like Plenty of Provisions of all Sorts, but especially of Bread and Wine, their Bread being as good as any in *Europe*, made light by kneading for a considerable Time; and that so cheap, that you may buy as much here for Two-pence, as we generally do for Twelve-pence in *England*; the same being to be met with in the *Turkish* Dominions in these Parts. Their Grapes are both large, and of a luscious Flavour, among which those of *Virovichitz*, near *Vacia*, excel the rest; their Vines are very noble, witness those of *Tockay*, which are in great Request; and the pleasant and rich Wines of *Sirmia*, in the Southern Parts of *Hungary*; the Vines of this Province having been planted first by the Emperor *Probus*, near Mount *Almus*, or *Arpataro*. At *Vienna* are no less than thirty Sorts of Wines to be sold. Neither are the *Hungarians* at all negligent in improving their Grounds by Husbandry. I remember that in *February* I saw every Night great Fires in the Country, occasioned by the Burning of the Stubble and old Grass, which rendred the Ground more fertile against the next Season. Instead of our Barns, or Hay, and Cornstacks, they use deep and spacious Caves under Ground, whither they retire also with their Families, in Case of a sudden Inroad from the *Turks* or *Tartars*. They have vast Plenty of Hares and Deer, as also of all Sorts of Poultry, Partridges, Pheasants, &c. vast Store of Sheep, having in some Places long spiral Horns, and long curl'd Wool; of Oxen such prodigious Numbers, that, according to a well grounded Computation, they send to *Germany*, *Italy*, and other Parts, above 100,000 yearly. They have also good Store of Bouffles, which are very useful to them, especially in ploughing some stiff Grounds. Neither do they want Horses, some of which are pretty large, but generally small, though exceeding swift; I saw above 1000 of them belonging to the Village of *Lower Sene*, or *Senia*, near *Comorrah*.

7. Their Language is peculiar to themselves; I heard a Minister praying and preaching in a Church at *Bitchka*, and though he that was with me was very well vers'd in the *Sclavonian*, *German*, *Turkish*, *Vulgar Greek* and *Italian*, yet could he not find the least Affinity in it, with any of these beforemention'd Languages. The same we observ'd in the *Albanian* Language, in the Northern Part of *Epirus*, and West of *Macedonia*, where indeed the *Sclavonian* is used by some, but their own Language in common Conversation among themselves, could not be understood by the best Linguists, both *Christians* and *Turks*, that travel'd along with us. Thus, in some Parts of *Hungary*, the *Sclavonian* is much in Use; I remember that at *Friestadt* (call'd *Colgotz* by the *Hungarians*) I heard them preach in *Sclavonian* in the Church of the Town, but the *Franciscans* preach'd in *Hungarian*. This Remoteness of their Language from others, makes them much addicted to foreign Languages, especially the *Latin*, which most of the Gentry and Soldiery speak fluently enough, and there is scarce a Coachman, or Footman, but what understands as much of it as will serve to make him understood; this makes the *Latin* Tongue very useful through all *Hungary* and *Transilvania*; but beyond *Belgrade* the *Sclavonian* is the universal Language; it being certain that you may travel with the *German* and *Sclavonian* from *Hamburg* to the Frontiers of *Tartary* and *Constantinople* itself; the *Sclavonian* being generally spoken in *Servia*, *Bulgaria*, *Romania*, and Part of *Macedonia*, besides in many other Parts; so that a Man may make Shift to pass with this Language from the *Adriatick* Shore in *Dalmatia*, unto the *Tartarian Ocean*. It is scarce to be suppos'd, that in a Country so near unto, and so much expos'd to the Violences of a barbarous Neighbour, I mean the *Turks*, there should be any Seminaries of Learning, there being no University in those Parts beyond *Vienna*; and though of old they have had many learned Men, yet these had their Education in Foreign Parts as had of old *St. Jerom*, and *St. Martin*; and those, Persons of Quality in *Hungary*, who intend to breed up their Children to Learning, send them

now-a-days to *Vienna*, *Breslau*, *Prague*, and some other Universities in *Germany*. At present there is a *Gymnasium*, or small University at *Schemnitz*. The *Hungarians* boast however of their once so famous Library of *Buda*, founded by their King *Matthias Corvinus*, the Son of *Hunniades*, about 200 Years ago, consisting of several Thousands of Books, and among them many *Greek* and *Latin* MSS. not to be purchased; Part of it was carried off into *Turkey*, after *Solyman* had surprized that City, and the choicest thereof procured afterwards for the Imperial Library at *Vienna*, when *Cuspinianus* was Keeper thereof; many of these Books being mark'd with the Arms of *Corvinus*, viz. a Crow bearing a golden Ring in his Beak; these, with the succeeding Additions of *Busbequius*, *Wolfgangus Lazius*, *Fugger*, &c. together with the choicest Manuscripts brought thither by *Petrus Lambecius*, the present Library-Keeper, from the *Ambrosian Library* near *Inspruck*, are Part of the 80,000 Volumes mentioned in the Imperial Library; of which I had the Favour not only to see the rarest Manuscripts, and other Rarities, but also to have several of the best Books to my Lodgings; and at my coming away, the same learned Person presented me with a Catalogue of some hundreds of *Alchemical* Manuscripts, with an Offer to have any of them brought to *England*, or to be transcribed at *Vienna*. There were lately about 400 Books (the Remnants of the *Corvinian Library*) left at *Buda*, but carelessly kept by the *Turks*, and were consumed in the great Fire that happen'd there, in 1669.

8. The *Hungarians* have a most profound Veneration for their Crown, which, they tell you, was sent to their King *Stephen* by Pope *Benedict VIII.* being admonish'd by an *Angelical Apparition* to send it to *Stephen*, and not to *Misca* the then King of *Poland*, his Competitor: Hence it is, that they have always been so careful to preserve it, as thinking the Fate of the Kingdom to depend on the Possession or Loss of it. Formerly it was kept in the Castle of *Vicegrad*, but at present in that of *Presburg*. This Crown has also a most peculiar Figure, being a very low Crown, with a Cross upon it, enclosed with four Turnings up like Leaves, one whereof is as large as two of the others. As it is a hard Matter to get Sight of the Original, so I was forced to be contented with the Sight of the Model thereof, in the Treasury of the *German* Emperor *Leopold*, exactly made after the Fashion of the *Hungarian* Crown of Gold, and beset richly with precious Stones, perhaps richer than the Original. Though the *Hungarians* want neither Inclination to or Abilities for Learning, yet have they generally been most addicted to Martial Exploits, even to the Clergy, witness that unfortunate Battle of their King *Lewis* near *Mobatz*, in which six Bishops were slain with that Monarch. Some are of Opinion, that the famous Poet *Ovid* being recall'd from his Banishment at *Tomos*, near the *Euxine Sea*, died at *Sabaria* in *Hungary*, in his Return Home; where they say, his Tomb was found, with this Epitaph made by himself:

*Hic situs est vates quem Divi Caesaris ira,
Augusti Patria cedere jussit humo.
Sæpe miser voluit patriis succumbere terris,
Sed frustra, hunc illi fata dedere locum.*

9. In *Hungary* I also first observed the *Pyrrhical Saltation*, or warlike Way of Dancing, which the *Heydukes* perform by Dancing with naked Swords in their Hands, advancing, brandishing, and clashing the same, turning, winding, elevating, and depressing their Bodies with singular Activity, singing at the same time to their Measures, after the Manner of the *Greeks*.

The great Deeds of *Attila*, King of this Country, and his numerous Armies, together with that memorable Battle fought against the *Roman* General *Ætius*, (who was a *Myrian* or *Servian* by Birth) in which 200,000 were slain, is sufficiently famous in ancient Histories; and how far they extended afterwards their Conquests over their Neighbours, is testified by the Banners carried at the Coronation of their Kings, viz. that of *Hungary*, *Dalmatia*, *Croatia*, *Sclavonia*, *Galisia*, *Rascia*, *Servia*, *Bulgaria*, *Bosnia*, and *Ludomiria*; and it must be confess'd, to the everlasting Honour of the *Hungarians*, that

that of all other Nations they have put the longest Stop to the victorious Arms of the *Turks*; and had it not been for their intestine Divisions, which the *Turks* have known very well how to improve to their Advantage, it is more than probable the *Ottomans* would never have been able to penetrate so deep into this Country as they have done; notwithstanding which, a very considerable Part thereof remains to this Day under the Emperor's Jurisdiction as King of *Hungary*, viz. almost all *Upper Hungary*, from *Presburgh* unto *Tockay* and *Zathmar*; and in the *Lower Hungary* there are still in the Possession of the Christians, (besides divers other Places of Note) the three strong Bulwarks of Christendom, viz. *Raab*, *Comorrah*, and *Leopoldstadt*, of which I took a full View, the last being erected since the Loss of *Newhausel*, and fortified after the same Manner. It is seated on the West-side of the River *Waag* opposite to *Friestadt*; its Fortifications, which were begun in 1665, consist of six regular Bastions and Ravelins, and were not quite finished in 1669, when I was there.

10. These Quarters are famous in ancient Histories for the Presence, Birth, Death, and great Actions of many *Roman* Emperors; not to speak here of *Trajan*, *Caracalla*, *Galienus*, *Constantius*, and others; the Emperors *Aurelianus*, *Probus*, *Gratianus*, and *Maximianus*, had *Sirmium* for their Birth-places; and *Claudius Gothicus* died in or near it. *Jovianus* and *Valentinianus* were *Pannonians* by Birth, and *Ingenius*, Governor of *Pannonia*, was saluted Emperor by the *Mæsan* Legions, as was *Vetranio* in the same Country. When *Photinus* was Bishop of *Sirmium*, a General Council was held in that Place. The *Roman* Armies being so frequent in this Country, no doubt but they brought Abundance of their Copper, Silver, and Gold Coin hither, of which I obtained a good Number at *Petronel*, of old *Carnuntum* in *Pannonia*, and with many more at *Sene*, or *Senia*, near the *Danube*. An *Armenian* Merchant, with whom I lodged at *Belgrade*, furnished me with a good Quantity of *Roman* Coins at my Return, which he had got at *Old Buda* or *Sicambria*, at *Old Sirmium*, in the Country now called *Schremnia*, and at *Mursa* or *Esseck*.

11. Near *Deva*, *Lyfimachus* King of *Macedon* and *Thrace*, is supposed to have kept his Court, in the Neighbourhood of which that unparallel'd Mass of ancient Golden Coins was found, under the Ruins of an ancient Castle: For a strong Current of Water having been forced that Way by long continued Rains, which washed away the Rubbish that had covered those Golden Medals, and the Glance of this costly Metal having drawn thither many of the neighbouring Peasants; they discovered these Medals, weighing two and three Crowns a-piece, having on one Side the Image of *Lyfimachus*, and on the other Side a *Victory*; under these Medals they also found a Golden Serpent, which General *Castalde* sent unto *Ferdinand*, who had also 1000 of these Medals, besides 300 *Castalde* had for his Share; of which there were collected, (after the Peasants had taken up a vast Quantity) to the Value of 10,000 *l.* So that there was scarce a Man found hereabouts, but what had some of them, so infinite was the Sum. This Castle was supposed to have been some Time the Residence of King *Lyfimachus*, and this Coin remained here from that Time; it being a received Custom among the Ancients, for such as buried their Treasure, to place Serpents there, as the Symbol of a faithful Keeper. Among other Medals, there were also found two Medals of Gold, one of *Ninus*, the other of *Semiramis*, which were presented to the Emperor *Charles* the Fifth. As I pass'd through the old *Roman* Towns, the Inhabitants brought me several Sorts of old Coins, which they term *Heathen-Money*; and in *Bosnia* and *Servia* the *Armenians* drive a great Trade with them, and send them by the Way of *Ragusa* into *Italy*. Among other Coins I found one of Copper pretty frequent here, but not easily found in other Parts. It was a Coin of the Emperor *Julius Philippus*, having on one Side the Head of *Philippus*, with this Inscription, IMP. C. M. JUL. PHILIPPUS. AUG. and on the Reverse a Woman between a Lion and a Bull, with this Inscription, P. M. S. COL. VIM. AN. VII. which may be; *Provinciae Mæ-*

sia Superioris Colonia Viminacium Annona Septimb data; *Viminacium* being a *Roman* Colony in *Mæsia Superior*, (now *Servia*) supposed to be *Singidunum* or *Senderin* upon the *Danube*, at the Mouth of the River *Morava* or *Marosch*. The Lion and Bull seem to declare the Fitness of the Soil for Agriculture, and the Warlike Temper of the People, and by these two Animals sitting peaceably together, the Prudence of *Philippus*. *Annona Septima*, unquestionless, intimated the seventh Distribution of Corn by *Philippus*, the conducting of which was committed to the *Legio XVI. Frumentaria*.

12. The Habit of an *Hungarian*, for its Conveniency, especially in Warlike Exercises on Horse-back, is made Use of by all the neighbouring Nations, as the *Croatians*, *Sclavonians*, and the *Turks* themselves, living near the Frontiers, though otherwise very nice in this Point. The *Hungarians* delight generally in Blue, Yellow, Green, and Purple Cloth, Black being a Colour rarely to be met with here, the Priests themselves being clad in long purple Garments. Two Sorts of Weapons are most common among the *Hungarians*, viz. a Kind of Iron Mace, called *Casshan* by them, with a round Iron Head, with Furrows in it, and Spaces cut away to render it the more light; the other they call *Balta*, being a Kind of a Hatchet, with a Head somewhat like a Hammer, but broader, and at the End makes the Shape of the Letter *Delta*.

13. The Country of *Transylvania* was formerly a Part of the Kingdom of *Hungary*; but as I propose to give only a summary Account of the Place and its Inhabitants, I shall not meddle with its ancient History. It is bounded on the North by the *Carpathian* Mountains, on the South by the Principality of *Walachia*, on the East by *Walachia* and *Moldavia*, and on the West by the Kingdom of *Hungary*. I believe there is no Country in the World so nearly equal in Length and Breadth, each being about one hundred and forty *English* Miles, it may be very truly stiled a Country of Wonders; for to Travellers, who have seen the rest of *Europe*, it appears altogether astonishing. The Air is temperate, and, generally speaking, wholesome, the Soil wonderfully fruitful, the Water commonly but indifferent, as being frequently tinged with Minerals, or, which is worse, with Allom or Arsnic. There run through it four great Rivers, viz. the *Mariscus* and the *Samos*, both which fall into the great River *Theysse*, the *Aluta*, which discharges itself into the *Danube*, and the *Chrysa*, which the *Germans* call the *Krusch* from its Windings, in which, I verily believe, it exceeds the Meander itself, for one is obliged to pass it thirty Times in half the Number of Miles.

The Country is finely chequered with Woods and Plains, Mountains and Vallies: There are many strong Passes in it, and some of its Cities are naturally so well seated, that with the Help of very small Improvements from Art, they might be rendered impracticable. To speak of its Plenty, is a Theme that might exercise the ablest Pen; for it is extremely difficult to know where to begin, or when to leave off. The Wheat that grows here is the fairest and finest in *Europe*, and so cheap, that, with respect to the Subsistence of an Individual, it has hardly any Value: The Oxen in this Country are large, fat and fine, and their Flesh wonderfully juicy and pleasant; yet I question whether one of them was ever sold for an *English* Guinea, but from twelve to fifteen Shillings is the common Price; and yet, if I may be allowed the Expression, they are the Staple Commodity of the Country, and are bought up for the *Austrian* and other Markets. They want not any other Kind of Cattle; and as for Hogs, they go in Drovers like Sheep, are prodigiously fat, firm and well tasted; so that the Bacon of this Country is truly excellent. All Kind of tame Fowl are here both cheap and good; as for wild, they are so common and in such Plenty, that they scarce bear any Price at all. Fish are not sold in *Transylvania*, nor are you much troubled with the Sight of them, every Man, poor or rich, fishes where he pleases, and with what Instrument he pleases; if he takes more than will serve for a Meal, he throws them in again after chusing the largest and the best, for nobody

nobody will touch a Fish that has been dead an Hour before it is dressed.

They have a very strong serviceable Breed of Horses, and besides these, they have a wild Sort with Manes that reach almost to the Ground. As for their Wines, they are rich, strong, and full bodied, much superior to those of *Austria*, *Moravia* and *Walachia*, but inferior in Flavour to some of the Wines in *Hungary*. Honey and Wax they have in Abundance, and of the former they make a Mead, which, when it is long kept, is richer and stronger than most White Wines. In their Mountains are Mines of Gold, Silver, Steel, Iron, Lead, Copper, Quicksilver, Salt and Brimstone.

As for the Inhabitants of this Country, to speak of them distinctly would take up a Volume, and that Volume might be filled with Matter very instructive and entertaining. What I have to say however shall be contained in a few Words; there are four Nations that are look'd upon as Inhabitants of *Transylvania*. The first of these are the *Saxons*, who are supposed to be the Remains of the ancient *Dacians*; they have a Language peculiar to themselves, and are governed according to their own Laws and Customs; the Capital of their Country is *Hermanstadt*, which is a considerable Place; and besides this they have six other Cities, and amongst them *Cronstadt* and *Clausenberg* are considerable Places. The Inhabitants of Towns are a civilized and good Sort of People, but the Plains are occupied by the *Heydukes*, who, in the Days of the Princes of *Transylvania*, were a Sort of Militia, and indeed for Strength, Activity and Valour, there are very few Nations that can compare with them. In Time of Peace they are Graziers, and live by Breeding, Feeding, and Selling of Cattle.

The *Siculi* inhabit the Northern Part of the Country towards the *Carpathian* Mountains; they are supposed to be Descendants from the *Huns*, and are as rugged and barbarous as the Country they dwell in; they resemble the Highlanders of *Scotland*, or rather the old *Irish*, for they value themselves upon their Nobility, and the meanest Creature in the Country insists upon it, that he is a Gentleman of Birth. They too have seven Towns, such as they are, are brave to a Degree of Madness, and contend for what they call Liberty, with a Fierceness that no Authority or Force has hitherto been able to tame.

The *Hungarians* have five Counties, and their Metropolis is *Alba Julia*, which is very far from being either a large or beautiful Place. These People were much favoured by the *Ragotski's*, and other Princes of *Transylvania*, which encouraged them to make various Attempts upon the Privileges of the *Saxons*; nor were their Differences less frequent with the *Siculi*, so that no Country was ever more torn or distracted with civil Dissentions than this. Each Nation had its Dyet apart, and, which is still worse, the seven Cantons of the *Saxons* were independant of each other, and their Dyets at *Clausenburg* were in the Nature of States-General.

There is a fourth Nation in *Transylvania*, which live all over it, but without having Land, Property or Government; these are the *Cingars*, in plain *English*, Gipsies; they had great Privileges from the Princes of *Transylvania*, pitched their Tents where they pleased, removed when they pleased, and did almost what they pleased; but the Race of these Vagabonds is almost extinguished, I mean in *Transylvania*, for there are enough of them yet in the *Turkish* Dominions. They are without Controversy the most arrant Scoundrels in the Universe, Atheists by Profession, Thieves by Trade, and have only this single Virtue, that they pretend to none. With all this they are a lively, active and ingenious

People, and, which is still more extraordinary, when there is nothing they can steal within their Reach, they will be very industrious. Like our Gipsies they are very expert Fortune-tellers, and have such Knowledge in Physiognomy, that they never fail to promise every Man or Woman that applies to them, what he or she likes best, and pick their Pockets for their Pains; they are very successful as *Quacks*, very skilful as Farriers, are good Blacksmiths, and the most able Tinkers in the World.

We have now shown the fairest Side of the Picture, let us turn the Reverse. As rich and as fine as this Country is, as healthy, brave and vigorous its Inhabitants, yet, whether they are the happiest or the wretchedest People upon Earth, is a Question one cannot easily resolve. As for Want, that is a Thing unknown, but with Regard to fix'd Property, Lands, Farms, and what we call Estates, they are far from being common. As for the *Saxons*, their supreme Delight is Drunkenness; fat Bacon is the only Dish they desire, upon which they pour as much Wine and Mead as their Stomachs will hold, and then sleep sixteen or twenty Hours till they are sober. The *Heydukes* are the merriest Mortals in the World; they dance with their Swords drawn, and their Targets upon their Left Arm, with inconceivable Agility; and the Strokes of their Bucklers, and the Clashing of their Swords, correspond with the Tune that is played; to which the Gracefulness of their Motion, and the Sweetness and Serenity of their Countenances, add such a surprizing Beauty to the Sight, as renders it extremely delightful. They have Musick always at their Feasts, drink in Tune, and keep Time by clashing their Mugs. An Excursion is their sole Pleasure, and Industry would certainly be very dreadful to them, if they had any Conceptions of it. But as they neither see it or hear of it, they fight, feast, and sleep all their Lives long, in short, they live without Care, and die without Thought.

But if a good Government could be established in this Country, and the People brought under due Regulations, they might certainly become both rich and powerful, as it is not a fifth Part of their Land that is cultivated, nor one Tenth of their Mines wrought. Some Cloth they make, but it is coarse, and only fit for their own Use, but one may guess what Industry would do in this Part of the World, by what one Baron *Lesley* in the Emperor's Service actually did; he employed twenty of his Soldiers as Drovers, and they at proper Seasons of the Year carried Cattle to *Vienna*, by which in five Summers he acquired One hundred thousand *Florins*; and having vested his Stock in proper Commodities sent it to *Venice*, whither he repaired at the next Carnival, where he found his Capital doubled, with which he bought a noble Lordship in *Bobemia*, and being naturally a Man of Economy, and a good Master, made his Vassals happy, and lived himself with all the Magnificence of a Prince.

But notwithstanding all this, the Towns in *Transylvania* are, generally speaking, mean; the common People live in Hutts; their Roads are bad at all Times, in wet Weather impassable; the People save nothing, and will rather abandon their Homes than pay Taxes; in short, they are proud of a Plenty which they abuse, and of a kind of Liberty, which is worse than any Sort of Subjection. They have all Sorts of Religions amongst them without Morality, and, in the Midst of the most valuable and saleable Commodities in the World, have few Manufactures, and little or no Trade. In short, they are Barbarians that think themselves the happiest People in the World, and might be really so, if they would become civilized.

SECTION III.

Travels through *Hungary* into *Thessaly*; a Description of the City of *Larissa*, and of the *Grand Seignior's* Court there, with other curious Particulars; together with a Description of other Parts of *Hungary*, more especially of the Gold Mines, and some Remarks upon the adjacent Countries, then and now making Part of the Hereditary Dominions of the House of *Austria*.

By the Learned Dr. EDWARD BROWNE.

1. *Introduction to this Section, including the Motives and Design of our Author's Journey.* 2. *He sets out from Vienna, and arrives at Petronal the Carnuntum of the Romans, with an Account of the Coins, and other Remnants of Antiquity found there.* 3. *A Description of the City of Presburgh, the present Capital of the Kingdom of Hungary.* 4. *An Account of the City of Raab, and the Manner in which it was betray'd into the Hands of the Turks.* 5. *The City of Comorrah described, with an Account of some Antiquities found there.* 6. *A Description of Newhawsel and Senir, with various remarkable Passages.* 7. *An Account of Strigonium or Gran, and of the Castle of Vicegrade, with some other Places in that Neighbourhood.* 8. *A copious Relation of the Baths, and whatever else is worthy of Notice in the Royal City of Buda.* 9. *A Description of Tolnor, Mohatz, and Zygetch, and several curious Particulars.* 10. *An Account of the Town of Esseck, and of the famous Bridge near it, supposed to be one of the longest in the World.* 11. *Observations upon the Country and its Inhabitants from thence to Belgrade.* 12. *A Description of that important City and Fortrefs.* 13. *The most remarkable Passages in the Author's Journey from thence to Lescovia.* 14. *A Description of that Place, and of the famous Mountain Hoemus.* 15. *The Author's Account of Macedonia, with several curious historical Remarks and Observations.* 16. *A Description of the City of Larissa, and the Country about it.* 17. *The same Subject continued, more especially with regard to Mount Olympus.* 18. *A Description of the Grand Seignior's Person and Court.* 19. *Miscellaneous Remarks, and, amongst other Things, of the different Modes of Shaving.* 20. *The Manners of the People, and the Reason of their being handsomer than the Macedonians.* 21. *Of the Produce and Commodities of Thessaly, and of the great Plenty of Provisions.* 22. *Some Remarks on the vast Extent of the Greek Church.* 23. *A Continuation of the Author's personal Remarks in this Country.* 24. *The Manner of Travelling through the Grand Seignior's Dominions.* 25. *Of the great Miseries indured by such as are Slaves among the Turks.* 26. *Of their Manner of Burying, and of the many Tombs that are to be met with on the Roads.* 27. *A very copious Detail of the Customs and Manners of the Turks, with Remarks upon their good and bad Properties.* 28. *The Author's Journey from Comorrah to visit the Mines.* 29. *A large Description of the Mines at Schemnitz, and the Manner of working them.* 30. *Of their Produce, and of the Manner of purifying the Metal, when extracted from the Ore.* 31. *An Account of a Gold Mine lost, and some other curious Particulars.* 32. *The Author's Journey to Eisenbach, with an Account of the Baths there.* 33. *A large and curious Account of the Gold Mines at Kremnitz, their Produce, and Manner of working them.* 34. *The several Methods made Use of for separating and cleansing the Gold.* 35. *An Account of the Quicksilver and Copper Mines.* 36. *The Author's Journey to that of Herrn-graundt, and his Observations there.* 37. *An Account of a Vitriolate Water that turns Iron into Copper.* 38. *A very singular Account of the hot Baths at Stubn,* 39. *A Description of the Salt Mines at Eperies; with some other remarkable Particulars.*

1. **T**HE ingenious Author, in the Collection of his Travels which he published, has regarded rather the Relation between Places, and the natural Connection of Things, than the Order of Time, for with respect to this, his Journey to the Mines was prior to that which he made to *Larissa*. In following this Method, he sought the Reader's Conveniency and Information, to whom it was of little Consequence when he travel'd, provided he was well inform'd of what he saw. While the Doctor lived, his Rank in his Profession, his high Reputation, universal Acquaintance and agreeable Conversation, gave his Travels the Vogue, and every body read them with Applause; but now they begin to grow a little out of Date, merely on the Score of their being made so long ago; and yet we have nothing better, or, to speak the Truth honestly, nothing near so good.

Indeed, it is not at all probable that we shall ever meet with any Thing of the like Kind of equal Value; for in the first Place, Dr. Browne travel'd at a proper Age, not after passing a Year at the University, but after having passed with Applause through both Uni-

versities, and was in his twenty-seventh Year. In the next Place, he was a Man of great Learning, very well skilled in ancient History, and a perfect Master of the Greek Language. We may add to this, that he was also acquainted with Physick, Botany, Anatomy, natural History and Chymistry; which last seems to me to have been his favourite Study. But the main Recommendation of all remains yet behind; he did not travel for the Sake of Amusement, and to kill Time, or as a Trader in Expectation of Gain, or in pure Obedience to a Father, who desired, that Traveling should set a Polish upon his Education; but he travel'd for the Sake of Knowledge, that he might employ his junior Years in procuring Materials fit for the Meditations of old Age; that he might visit those Countries with his Eyes, of which modern Books gave him so bad an Account; and that he might gratify his peculiar Inclination to the Study of Minerals, by inspecting himself the most famous Mines of *Europe*. When he had executed his Design, and found his Head fraught with Knowledge superior to that of other Men, and very conducive to the publick Good, he resolved not to conceal it; and thus the Writing and the Publication of his

Book were both the Effects of that great and generous Turn of Mind, which first put him upon Traveling, not any mercenary Design of Advantage, or a Scheme of making his Court to any great Man by a flattering Dedication.

We cannot help, therefore, reading his Book with Satisfaction, because, on the one Hand, we are certain that his Labours had no other Object than the Discovery of the Truth, and that he was a Man of too much Parts and too much Learning to be imposed upon himself; besides, in the Course of his Narration it appears, that he spared no Pains, and grudged no Expence in order to obtain an exact Acquaintance with whatever he thought it worth his While to enquire about; and as he took Time sufficient to examine all Things carefully, and to set them down circumstantially while he was abroad, so he did not hasten the Publication of his Book at home, till he had thoroughly digested as well as reviewed his large Collection of Materials. In a Word, he had all the Diligence of Sir Philip Skippon, all the Accuracy of Mr. Ray, and seems to have had a more extensive and penetrating Genius than either of them, of which we shall receive indubitable Proofs in the Course of this Section. Thus much I thought due to the Author's Character, as well as requisite to excite the Readers Attention, which having awaken'd by this short and I hope not improper Introduction, we will now proceed to the Doctor's Narrative, as near as may be in his own Words.

2. After having pass'd the Winter at Vienna, I met with a fair Opportunity to see the Grand Seignior's Court, which then, and a considerable Time before, resided at the ancient and famous City of Larissa in Thessaly. As I do not pretend to give you the Names of all Places through which I pass'd, so on the other Hand you will find mentioned some which are not to be found in Maps, at least not in any that ever I met with. Between Vienna and Presburgh, the first Place worth my peculiar Observation, was the Town of Petronel, and Haymburg Hill and Castle: The first is supposed to be the old Carnuntum, one of the strong Holds of the ancient Pannonians, who, one hundred and seventy Years before our Saviour's Birth, bravely repulsed the Romans here, but were forced to submit to the Power of Augustus, who made it a Roman Colony, and the Station of the Legio XIV. Gemina, and of the Classis Istria; and by Degrees arrived to that Pitch of Greatness, that it became the capital City of all Pannonia Superior, comprehending all that Tract on the South Bank of the River Danube, wherein now are Haymburg, Dutch Altenburgh, and Petronelli. Here I met with Variety of Medals, Inscriptions, and the Ruins of a most noble Aqueduct, and the Remnants of a stately Fabrick, which I thought might have belonged to a Temple of Janus, but is generally supposed to have been a triumphal Arch, erected in Memory of a Victory obtained by Tiberius, in the ninth Year of our Saviour, over the Pannonians and Dalmatians. Petrus Lambecius has, besides other Antiquities of this Place, given a Draught of the one Side thereof, and of the back Part I took a Draught myself. In this Place it was that the Emperor Antoninus Philosophus, when engaged in a War with the Marcomanni or Moravians, resided for three Years, and died at Vienna (or Vindobona.) And here Severus was elected Emperor by the German Legions. But this great City was laid desolate by Attila the Hunn, there being nothing remaining now, where the old Carnuntum stood, but some ruinous Foundations of the Houses and Streets, scarce discoverable by the Eye.

Of Roman Coins there have been, and still are, found such Quantities, that even the Peasants bring them to Sale, of whom I bought a good Number; and I remember, that Mr. Donallan an Irish Gentleman, my Fellow-Traveller, as we were viewing the Ruins of the ancient Foundations, struck by chance a Silver Coin with his Foot out of the Earth.

3. Presburgh, Posonium and Pisonium, is pleasantly seated on the North-side of the Danube, ten German Leagues to the East of Vienna, now the capital City of Hungary, under the Emperor's Jurisdiction, and,

since the Surprising of Buda by the Turks, the Place of Convention of the Estates of that Kingdom, and since the Loss of Gran (Strigoniun) the Metropolitan City. Its Castle is very noble and stately, built of white Stone, on the Top of a Hill, where is now kept the so much esteem'd Hungarian Crown. The Garden of the Archbishop is exceeding fair, the Walks, Grotto's, Labyrinths, and Fishponds, very noble, and the Figure of Jeronymo, well worth the Observation of a Traveller. In the Cathedral Church is interr'd the Body of St. Jobannes Eleemosynarius, Bishop of Alexandria. Part of this Church is in the Possession of the Jesuits; the Lutherans have likewise a handsome Church here.

4. Raab or Javrinum, a strong Frontier City, is seated at the Confluence of the Rivers Raab, the Rabnitz, and the Danube. It has two Bridges, one laid over a double Ditch, leading towards Austria, and the other towards Stultweissenburg, or Alba Regalis. Its Fortification consists of seven Bastions and four Cavaliers or Mounts. 1. The Castle Bastion, upon which stands the Governor's Palace. 2. The Water Bastion, on the Side of the Danube. 3. The Bastion of the Holy Hill. 4. The Middle Bastion, to the East on the Land-side. 5. The New Bastion. 6. The Imperial Bastion; and, 7. The Hungarian Bastion, facing the River Raab. Here the Turkish Governor was kill'd, when the Christians surprized this City. It lies in an open and plain Country, there being no Eminency near it, except a small Hill, which is undermined, ready to be blown up in Case of the Approach of an Army, for which Reason also a Spy Tower is built at some Distance, to give timely Notice in Case of Need of an approaching Enemy. Sinan Bassa the Turkish General, under the Reign of Achmet III, after having lost a vast Number of Men before this Place, and 12,000 in one Assault, took it by Composition; by the Treachery of Count Hardeek the Governor, who paid for it with his Head. But in a few Years after was recover'd by the Christians, who surprized it in the Night-time, under the Conduct of Count Swartzenburgh and Count Palfi, who put all the Turks to the Sword. At Raab and Comorrah we were shown several Sorts of Warlike Instruments, viz. a Morning-Star, as they call it, being a Club set round with Spikes; used in the Defence of Breaches, and in assaulting of Towns; Earthen-pots, fill'd with stinking and combustible Materials, to throw in among the Enemy; a Lehn Brader, or Plank, set with Hooks, to be fix'd to the Out-side of the Works, cover'd slightly with Earth; a Werf Kugel, or Kind of Hand-Gradoe; a Spanish Ritter, or Cheval de Frise, to be fastened in the Earth, to keep off the Horse, provided with long Iron Spikes on all Sides. At this Place the Turkish Chiausers or Messengers are obliged to stay to receive their Dispatches, the Court of Vienna being much pester'd with them before that Order, as they were sent continually with some insignificant Message or other from the Governors of the Turkish Frontier Places, for the Presents Sake, which they expect at their Departure.

5. Comorrah, Crumenum or Comaronium, is a large and strongly fortified Place, seated at the East End of the Isle of Schutz, looking over the Danube and Waag. The strongest Fort is called the Tortoise from its Figure. After Sinan Bassa had made himself Master of Raab, he was also for trying his Fortune against this Town; but being repulsed with great Slaughter in all his Attacks, he was for tempting the Fidelity of the Governor Baron Brown, unto whom he sent five Turks, under a Pretence of a Parley, with very advantageous Offers; but this brave Man, though dangerously wounded, having first given them the Hearing, caused four to have their Heads cut off, which he put upon long Pikes upon the Bulwarks, and sent back the fifth with this Message; That he was mistaken in his Person, if he judged of him by the Treachery of Count Hardeek; and that he might rest assured, he would live and die in the Defence of the Place committed to his Charge by the Emperor. In the innermost Castle of Comorrah, I saw three very ancient Tombs, brought thither formerly from Senia, a Place of Antiquity not far off, two of which having Inscriptions not to be met with in Gruter, I thought fit to insert here.

On

On one of them :

MEMORIAE JULIAE EMERITAE QUAE
VIXIT AN  VALERIA MASCLANIA
FILIAE PISSIMAE.

And on the Cover
D. M.

The Inscription of another was this :

MUAL VALERIANI LEG IIII F L VIXIT AN
XLII ET MUALUL PIOE Q PUBL' FIL VIXIT
AN VIII SIM CONDITIS ULPIA PARATIANE

And on the Cover this following :

ITAA MYPIEYTYX EIMETATIATROC

The third Tomb was of the same Figure, but without any Inscription. Of some other Places, through which I pass'd also the Year before, I shall speak only *en passant*.

6. *Newhawfel*, call'd *Vywar* by the Hungarians, is situate by the River *Nitra*, not far from *Nitria*, a strong Place, taken by Count *Zouches*, in the late Wars. *Newhawfel* is a regular Fortification of six Bastions, in the Form of a Star. After Count *Forchatz*, the Governor thereof, had rashly engaged with the *Turks* at *Barchan*, they laid Siege to this Place, and after a stout Defence made themselves Masters of it by Capitulation; though it is generally believed, that if the Visier had had not spent his Time and Men in this Siege, he might have put most of the Emperor's hereditary Countries into a great Consternation, whereas the Emperor's Auxiliaries being join'd by that Time, the *Turks* receiv'd a signal Disgrace near *St. Goddard*, the Loss of which Battle procur'd a speedy Peace. The *Turkish* *Bassa* lives now in the Palace, formerly belonging to the Archbishops of *Presburgh*. *Sene* or *Senia*, a Place of Note for many Remains of Antiquity found there now and then. Here, by the Favour of the *Byra* or Judge of the Place, I got a *Roman* or *Heathen* Key, as they call it, and several Sorts of Coins, some of Gold, and some *Intaglia's*, some of which I presented to *Petrus Lambecius*. The Inhabitants will have its Name to have been anciently *Apollonium*, but without any good Ground. In our Way betwixt *Raab* and *Datis*, we pass'd in Sight of *Martinberg*, a strong and handsome Town, seated upon a Hill. *Datis*, *Tata* or *Theodata*, twelve *English* Miles from *Comorrah*, has scarce any Thing remarkable, except its Castle, and some natural Baths near it. But to return into the Road; we were row'd from *Comorrah* in a Saick of twenty four Oars, the Hungarians rowing on one, and the Germans on the other Side; thus passing by *Sene*, *Nesmil*, and *Rodwan*, we came to *Motch*, the Frontier Place, where we were to stay for the *Turkish* Convoy, which being ready in the Morning, their Officers went ashore first, and next our *Veyda*, or *Veyvod*, with the Interpreter, and Chief of the Company, with a slow Pace, and at Meeting saluted one another by shaking of Hands together; then delivering our Boat to the *Turks*, they fastned it to their Saick, and sent one into ours to steer it. At parting they saluted the Christians with one Gun, and so with eighteen Oars row'd down the *Danube*, we carrying the *Eagle* in our Flag, and they the *Double Sword*, *Star* and *Half-moon*. The *Turkish* Saick having brought us to *Gran*, set our Boat ashore, and so left us; the Governor took no Notice of us, but being reprimanded upon that Account by an *Aga*, who came from *Newhawfel* with four Troops of Horse, we were soon dispatch'd.

7. The City of *Gran*, *Strigonium*, or *Ostrogon*, is situate on the South Side of the *Danube*, near its Confluence with the River *Gran*; it is divided into the upper and lower Town, each of which has its peculiar Walls, that of the lower Town commanding the *Danube*. The Hill of *St. Thomas*, which overlooks the Place, is also fortified with a Wall. Here are natural Baths of a

moderate Heat. This was the Metropolitan City of Hungary, which gave Birth to *St. Stephen*, their first Christian King, and King *Stephen III.* lies entomb'd here. This Place has endur'd many remarkable Sieges, having been often taken and retaken: It yielded in 1683, to the Duke of *Lorrain*. Opposite to it is *Barchan*, being join'd to it by a Bridge of Boats. From hence we pass'd to *Vicegrade* or *Vizzegrade*, having two Castles, the Upper Castle being seated upon a high Rock, where formerly the Crown of Hungary was kept. The lower Castle has been formerly a fair Structure. Here are also to be seen the Ruins of an ancient Fabrick of Arches of Square Stone. This Place, after it had been a considerable Time in the Hands of the *Turks*, was surrender'd to the Duke of *Lorrain* in 1684. Opposite to *Vicegrade* lies *Maroz*, where there is a handsome Church, the Christians living pretty well at Ease here, under the *Turks*, because of its voluntary Surrender to them. Below this Place, we saw the large Island of *St. Andrew* in the *Danube*, and some Ruins of Stone upon the Shore of the Isle, which the *Turks* told us were the Remnants of a Stone-Bridge. Below this, passing by *Virochivitz*, famous for its large and noble Grapes, we came to *Vacia*, formerly an Episcopal See, which has now two Mosques and one Christian Church. It was taken by the *Turks* in 1541. and regain'd by the Duke of *Lorrain* in 1684, after a signal Defeat given the *Turks* near that Place, but being not tenible by Reason of some adjacent Hills, was quitted the same Year in Autumn.

8. We changed again our Convoy here, and we came to *Buda*, formerly the Capital City and ordinary Residence of the Hungarian Kings, and at present of a *Turkish* *Vizier*, who has several *Basbas* under his Jurisdiction. This City is of a large Circumference, pleasantly seated upon the *Danube*, divided into the Upper and Lower-Town; wherein are to be seen the Remnants of many magnificent Structures, built by the ancient Hungarian Kings, and especially *Matthias Corvinus*, in whose Palace the *Vizier* now resides. This had anciently three most admirable Statues of Brass, of *Hercules*, *Apollo* and *Diana*, at its Entrance, which were by *Solyman* cast into great Guns; the whole Palace, in all other Respects not approaching to its ancient Glory; however, here are several handsome Mosques and *Caravansera's*. On the Top of *St. Gerard's* Hill is a Fort, which overlooks the Town and Country. But what *Buda* has most to boast of now-a-days, are its natural Baths, esteemed the noblest in all Europe, both for the Largeness of their Springs, and the Magnificence of the Buildings; for negligent as the *Turks* are in their private Houses, yet we found them most sumptuous in their publick Structures, as their *Caravansera's*, Mosques, Bridges, but especially their Baths, bathing being in great Request among them and all other *Mohammedans*.

There are here in all eight Baths, of which I took a View during my Stay in this City, viz. Three towards the East and South-East Part of the City, in the Way to *Constantinople*, and five towards the West End of the Town, in the Way to *Old Offen* and *Gran*. The first is a large open Bath, at the Foot of a rocky Hill, call'd *Purgatory*. The second has a *Cupulo* on the Top, stands near the same Hill, but more into the Town. The third they call the Bath of the Green Pillars (tho' now they are red) over against a *Caravansera*: The Spring is very hot, yet useful without the Addition of cold Water; it contains a petrefying Juice, which is to be discover'd on the Sides of the Bath and its Spouts, where it leaves a Gummy Stone behind it; and the Vapours of the Bath coagulated on the *Cupola*, the Irons reaching from one Column to another, and on the Capitals of the Pillars, form long Stones like Icicles, which you see hanging to all these Places. The Bath is of a circular Figure, set about with large Pillars supporting the *Cupulo*, which has divers Openings, for the free Passage of the Exhalations, notwithstanding which, the Bath continues always as hot as a Stove. The Water is let out every Night after the Women have done Bathing.

The Baths on the West End are, first, *Tastelli*, i. e. the *Table Bath*, being but small, the Water whitish, and of a sulphurous Smell, they both drink of, and bathe

bathe in it; what is drunk, is receiv'd from a Spout conveyed into the Bath; I gave a Piece of five *Sols* to a *Turk*, who holding it under the Spout, to let the Water fall upon it, and rubbing it in the mean Time with his Fingers, gilded it for me in half a Minute. The second is *Barat Degrimene* or the *Bath of the Powder Mill*, arising in an open Pond near the High-way, and its Waters being mix'd with those of the Pond, makes one Part of it of a whitish Colour, and clear in another, as likewise cold and hot in several Parts; being conveyed cross the Highway into a Powder-Mill it becomes useful in making of Gunpowder, whence it got its Name. The third is *Cuzzoculege*, the *Little Bath*, or the *Bath of the Saint*, being kept by *Turkish* Monks. The Water near the Spring-head is so hot, as not to be fit for Use, but being conveyed through one Bath into another, becomes tolerable. The Water differs neither in Smell, Taste, or Colour, from common Water, being without the least Sediment, except that the Sides of the Bathing-Room are cover'd with a green spongy Substance. The fourth is called *Caplia*, a noble Structure, of an octogonal Figure, with a very handsome Bath in the Middle, surrounded with a Trench of Water to bathe the Feet in: On each Side it has a Niche, wherein is a Fountain. In the Anti-chamber, where the Cloaths are left, is also a beautiful Fountain, with a Stone Basin; the Water of this Bath is also very hot, and not without a petrefying Juice. The fifth is the Bath of *Velibey*, the noblest of all the rest, having a spacious Anti-chamber; the Bathing-room is also very capacious, high arch'd, and advanced with one great Cupolo in the Middle, just over the great round Bath, besides four lesser ones at the four Corners, over as many private Bathing-Rooms, where the *Turks* take off all the Hair of their Bodies with *Psilotbrum*, mix'd with Soap, except their Beards. The middle Cupolo is supported by twelve Pillars, betwixt eight whereof are Fountains of hot Water, and between the rest Places to sit down, where the Barbers and Bath-men attend. In each of these Places are two Stone Cisterns, one for cold and the other for hot Water, to be mixed as every one thinks fit, the Water being not fit to be used without the Addition of cold Water: For the rest, it has a strong sulphurous Smell, and contains a petrefying Juice. The Mornings are appointed for the Men to bathe in, and the Afternoons for the Women. If you have a Mind to bathe, you are brought into the Anti-chamber of the Bath, where being furnished with a Cloth and Apron by those that attend, you lay by your Cloaths, and so enter the *Great Bath*, where sitting down on the Side or between the Pillars near a Fountain, you are well rubb'd, with your Hands and Arms stretch'd out, by the Barber, after which you bathe. If you please, or the Custom of your Country requires it, you may have your Head shaved, and your Beard also, except the upper Lip; next the Barber rubs your Breast, Back, Arms and Legs with a Hair Cloth, either sitting or lying upon your Belly; then having washed your Head with Soap, and thrown cold Water upon you all over, you walk in the Steem of the Bath for some Time. This City is generally called *Offen* by the *Germans*; some trace the Original as far as to a Brother of the famous *Attila*, called *Buda*. And to confess the Truth, the Situation of this Place upon the Banks of the *Danube*, where it gathers its Water in one entire Channel, and that upon an easy Ascent of rising Hills, from whence there is a Prospect out of many of the Creeks cross the *Danube*, into a beautiful Country, and of the City of *Pest*; so excellent a Situation, I say, added to the Advantage of its hot Springs, might well invite the Conquering *Huns* to prefer this Place for the Building of a City, before all their other conquered Countries. The City of *Buda* was the ordinary Residence of the *Hungarian* Kings, till it was conquer'd by *Solyman the Magnificent*, the 13th of *August* 1541. There is another Place called *Old Offen*, supposed to be that ancient *Sicambria*, where the *Sicambrian* Soldiers had their Quarters in the Time of the *Romans*. Here some Antiquities and Inscriptions have been discover'd formerly.

Upon the East-side of the *Danube*, directly opposite to *Buda* stands *Pest*, in a Plain, of a Quadrangular Figure. This City imparts its Name to the whole Country, or *Comitatus Pesthiensis*, (*Hungary* being divided into Counties like *England*) and is joined to *Buda* by a Bridge of Boats above half a Mile in Length.

I was something surprized at first, when I saw the *Turkish* Women wear long Breeches, reaching almost down to their Feet. Over these they wear their Shifts, and over these a Kind of a long Garment; their Head-dress covers their Faces, except the Eyes, almost like our Penitents. Whilst we staid at *Buda*, we took a View of one of the *Turkish* Convents, where we were entertained in a large Room, not unlike a Chapel, with Melons, and some other Fruit, by the Monks. The Superior, called *Julpapa*, i. e. Father of the *Rose*, having a Girdle about his Middle, embossed before with a white Stone called *Galaçites* or *Milk-stone*, bigger than the Palm of a Hand. They have a superstitious Opinion, that *Mahomet* turned a whole River of *Arabia* into a Kind of Stone. From the House where we lodged, we had a fair Prospect of the *Danube*, and were often visited by divers *Chiausfes* (*Turkish* Messengers.) The Master of the House being a *Rascian*, was thought to hold a secret Correspondence with a *Franciscan* Fryer of *Pest*, and with some other Persons of Note at *Comorrah*, *Raab*, and *Vienna*: We were also very civilly entertain'd by *Mortizan Ephendi*, who had been in Quality of Envoy-Extraordinary at the Court of *Vienna*, and would needs have me sit upon a Stool, brought in for that Purpose, being sensible that their Way of sitting cross-legg'd would not be very agreeable to me. Among many other Questions, he ask'd me, What was the King of *Poland's* Name; and when I told him it was *Michael Wisnowitski*, he replied, *Michael* is a good Name, it is the Name of the greatest Saint in Heaven, except *Mary*.

9. From *Buda* we travel'd by Land to the East, and passing by *Ham Zabbi Palanka* and by *Erzin*, came to *Adom*, call'd *Tzan Kurteren*, i. e. *Anima liberata*, by the *Turks*; which Name was given it by *Solyman the Magnificent*, because here he made the first Halt with his Army, after his Retreat from *Vienna*. Hence we came to *Pentole* or *Pentolen Palanka*, which some are of Opinion was the old *Potentiana*, where the *Huns* were overthrown by *Macrinus* and *Tetricus*, the two *Roman* Generals. Some will have this to have happened near *Adom*. From hence we went on to *Fodwar* in Sight of *Colocza*, seated on the other Side of the *Danube* in the Road to *Temeswar*, and so further by *Pax*, or *Paxi*, to *Tolna*, the old *Altinum* or *Altinium*, near which the *Huns* fought a second Battle, and routed the *Romans* with the Loss of 40,000 Men on their Side. It is inhabited by *Hungarians* and *Rascians*, who are often at Variance. Thence we came to *Jeni Palanka*, where we pass'd the River *Sarvizza* (or the *Urpanus*) which rises near *Esperies*, and passing by *Stukweissenburgh* (*Alba Regalis*) joins its Current below it with the *Danube*.

From thence, by *Setzar* to *Botoseck*, and so to *Setz*, a large Town, near which we saw the Ruins of an old Castle upon a Hill, enclosed with Pallisadoes. Here is a new *Caravanfera*. Hence we went on to *Mohatz*, but before we came to this Place, passing by a small Bridge over the Brook *Curasse*, we took a View of the Place where the unfortunate *Hungarian*, King *Lewis*, after the Loss of the Battle near *Mohatz*, fought *October* 29, 1526, was plunged in the Flight with his Horse in the Mud, and miserably perished. His Body being discover'd by *Cotriscus*, who was near him when he was drowned, to the *Hungarians*, it was taken up and buried at *Alba Regalis*, the Place of Sepulture of the *Hungarian* Kings. Near this Place we met with a *Caravan* of two hundred Persons under a Guard of *Janizaries*, and frequently upon the Road we saw numerous Drovers of Oxen driving towards *Vienna*, belonging to the Eastern Company there, who, as they have the Monopoly of Oxen in that City, so they have Liberty to buy them in the Grand Seignior's Dominions. The same Day we saw the City of *Five Churches* (*Quinque Ecclesia*) and *Zigetb* to the Right of us. This last is a strong

strong Place, situate on the Side of a Fen, in which there is an Isle, and beyond it a Castle. This Place is famous for the unparallel'd Resistance made here by Count *Serini* against the *Turks*; for, after having been forced out of the Town, he retired into the Isle, and from thence to the Castle, where, after having repulsed the *Turks* in several Assaults, he sallied out with twenty four Men, (all that were left) who were all slain by the Infidels, in endeavouring to break through their Lines.

10. From hence we pass'd on by *Barinowar Darda*, or *Draza*, to *Esseck* or *Osseck*, supposed to be the old *Murfa*, or at least very near it. Its Situation is very low, the Streets being paved with Timber Trees laid cross-wise; upon one Side of the Gate you see some Remnants of an old *Roman* Inscription, *M. AELIAN*, &c. and on the other Side a Maid's Head cut in Stone. Here you see also an uncommon Dial, brought hither from *Serinwar*; and the largest Piece of Ordnance that ever I saw in those Parts, not lying upon Carriages, but upon Bodies of Trees. But what surpasses all the rest is, the famous Bridge of *Esseck*, built of Wood, partly over the River *Drave*, partly over the adjacent Marshes, being five Miles long, railed in on both Sides, and defended by certain Towers at every Quarter of a Mile's Distance. But of this elsewhere; it being the greatest Passage from *Servia*, and other of the Grand Seignor's Dominions, into *Hungary*. Count *Nicholas Serini*, to hinder Supplies from coming to the Grand Vizier's Army, burnt that Part of the Bridge which was laid over the River *Drave*, (rebuilt since) and in his Return also set Fire to Five Churches, which lies to the West of *Esseck*.

From hence we travel'd to *Valcowar*, where there is a stately Bridge of Wood over the *Walpo*, (*Valpanus*) a River affording great Plenty of Fish, upon which, to the West, stands also the Town of *Walpo*; then by *Soizim Palanko*, and *Towarnick*, or *Tabornick*, to *Netrovitz*, a large Town near a Lake, and so to *Simonowitz*, leaving to the Right of us (at a great Distance) the so famous ancient *Sirmium*, a Place scarce worth taking Notice of now, except for its Antiquity. The Country hereabouts is called *Schremnia*; but that Part extending nearer to the *Drave*, *Bosfoga*.

11. In this Country many Families, nay the Inhabitants of whole Villages, have their Habitations under Ground, like the *Troglodytes*, and the subterraneous Nations bordering on *Egypt*. We saw some Wells near them, where they draw their Water like our Brewers; they no sooner got Sight of us, but they retired to their Caves, their Dogs by their Barking having given them timely Notice of our Approach. We alighted to take a View of the Houses of these poor Christians, which we found tolerably well contrived within, divided by Partitions with wooden Chimnies, and a Window at one End a little above Ground: All Things were neatly kept, though but poorly, after the Fashion of those Parts. Their Speech we found to be a Dialect of the *Sclavonian*.

We continued our Journey between the *Danube* and the *Save*; we came to *Zemlin* upon the *Danube*, and from its Castle had a fair Prospect of *Belgrade*; whither we pass'd from hence by Water.

Belgrade, *Taurunum*, *Alba Græca*, or *Greek-Weissenburgh*, or *Nandor Alba*, as it is called by the *Hungarians*, is a large, strong, populous, and trading City in *Servia* or *Mæsia Superior*, seated at the very Confluence of the River *Save* and the *Danube*, the first being to the West, and the other to the North. The *Danube* is very broad here, and its Current so rapid, that it seems to cut off that of the *Save*, as the *Rhône* doth the *Sein* near *Lyons* in *France*. The Water of the *Danube* seems more yellow and troubled, and that of the *Save* greenish and clear. At the very Mouth of the *Save* is an Isle, made there of the Settling of the Sands of both Streams, about thirty-five Years ago, which is now full of Wood.

12. As we entred *Belgrade*, I pass'd by the Water-Castle, and afterwards by the Upper Castle, both large, and strengthened with several Towers. The chiefest Trading-streets are covered over Head, to keep off the

Sun and Rain. The Shops are no bigger than Taylors Shopboards, and very low, the Shop-People setting upon them as our Taylors do, and selling their Wares to the Chapmen, who remain without, and seldom enter the Shop. There are besides these at *Belgrade*, two large *Bezastans*, or Places where the best Commodities are sold; they are built cross-wise like the old Cathedrals, with Walks within, like to those of our Old Exchange above Stairs. They have also two Exchanges built of Stone, with two Rows of Pillars over one another, but were almost filled up with Merchandizes. The Grand Vizier had lately built a stately *Caravanserai*, at his own Cost, with a Fountain in the Court, and just by a Mosque with a Fountain before it; this being the first I ever saw within-side. He had also built a College for young Students, one of which I saw in a green Garment, with a four-corner'd Turbant on his Head. I observed also great Numbers of Sepulchres near *Belgrade*. We lodged at an *Armenian* Merchant's House, where we were well accommodated, and our Landlord conducted us to several other *Armenians*, who had very fair Houses, and entertain'd us with Coffee, Sherbet, and very good Wines of the neighbouring Country. There are very few Trading People in those Places where the *Armenians* do not live; they have a Church at *Belgrade*, and seem to be more open, candid, and fair-dealing than the *Greeks* and *Jews*.

Belgrade is a Place of great Trade; its Situation at the Conflux of the *Danube* and *Save*, and the River *Theyffe* falling into the *Danube* near it, as the River *Drave* does not far from it, and the *Morava*, or *Marosch*, not much below it: All this, I say, together with the Advantage of a very fruitful adjacent Country, through which the *Danube* passes towards the *Euxine* Sea, is sufficient to make *Belgrade* one of the most flourishing Cities in *Europe*, were it in the Hands of a People that knew how to improve all these Advantages. This City was formerly the main Bulwark of *Hungary*, which has several Times stemm'd the Current of the *Turkish* Victories, witness the Disgrace received here by *Mahomet the Great*; but was at last taken by *Solyman the Magnificent* in 1521.

13. After we had left *Belgrade*, we continued our Journey through *Servia*, and passing by a very high Hill called *Havilleck*, to the West of us, (where we saw the Ruins of an old Monastery) we came to *Hissargick* near the *Danube*, though our Maps place it at a good Distance from it. Here we bid adieu to the *Danube*, at a Place where it had run already from *Ulm* in *Suabia*, where it begins to be navigable, about 900 Miles, besides what is to be accounted for from its first Source thither, and has several Hundreds of Miles to run before it discharges itself into the *Euxine* Sea. The next Place we came to was *Collar*, not far from *Samandria*, an old *Roman* Colony, but now an inconsiderable Place. From hence to *Hassan Bassa Palanka*, about forty *English* Miles from *Belgrade*, where we found a Lion worrying a Wolf, in Stone, a very ancient Piece.

Coming afterwards to *Baditzna*, we saw several *Bulgarian* Women, whose Drefs seemed to us very odd: For they wear a Kind of Canopy upon their Heads, set about, as well as their Foreheads, with all Sorts of Foreign Money; we also bestow'd some Pieces upon them, as an Addition to their Ornaments, which they thankfully received. Much in the same Manner have I seen some *Græcian* Women attired, their Foreheads being cover'd richly with Duckats of Gold, and Pearl; but their Head-dress was not raised so high.

We pass'd forward for *Jagodna*, pleasantly seated in a most delightful Country; and in a few Hours after we had left it, turning off to the South, we saw to the Right of us, on the Side of a Hill, the Tomb of a *Turkish* Saint, about four Yards long, and a square cover'd Place near it: Our *Chiaus* having performed his Devotion here, we went forward through great Woods by *Chifflick*, where there is a *Caravanserai*; but we thought it more safe for us to refresh ourselves, and our Horses, at an adjacent Farm-house, belonging to a Merchant of *Belgrade*. Hence we travel'd all Night to the *Morava*, or *Moschius* (the *Marosch*) the chief River

of this Country, arising in the Mountains in two Streams, the one call'd *Morava di Bulgaria*; the other *Morava di Servia*; and uniting afterwards in one Channel, falls into the *Danube* at *Zendecir*, or *Singidunum*, opposite to the *Rascian* Shore. We happening to pass this River in a Place where it was very broad, deep and rapid, the *Chiaus* betook himself to his Prayers; and after the Danger was over, it put me in Mind of the rapid River *Varus* or *Var*, on the Confines of *Provence* and *Italy*, which, when I pass'd on Horseback, two Men were forced to go on the lower Side of me, to keep my Horse from being carried downwards by the Violence of the Current. By this River the Commodities of *Servia* and *Bulgaria*, are carried into the *Danube*, and from thence to other Places; as on the other Hand, Salt, and various other Commodities of the Product of *Austria* and *Hungary*, are brought up against the Current of the same River. Near this River, *Hunniades* surprized the *Turkish* Camp by Moonlight, with 10,000 Horse, with the Slaughter of 30,000 Men, and 4000 taken Prisoners.

At last we came to *Halli Jabisar*, or *Crushovatz*, a Place of Note in *Bulgaria*, having a handsome Church, with two fair Towers. From hence we continued our Journey for a whole Day through Hills and Forests, and came at Night to *Procupie*, supposed by some to be the old *Villa Procopiana*; the *Turks* call it *Urchup*. We lodged here this Night at a Merchant's House of *Ragusa*, where we met with very good Accommodation. Here we met with a *Roman Catholick* Monk, who spoke *Latin* (a Rarity in those Parts) and one of their Physicians, whose Knowledge went no further than the Composition of some ordinary Simples; his Way was to offer his Service to the People every Morning in the Market-place.

14. From hence we travel'd to *Lescoa*, or *Lescovia*, a Town seated upon the River *Lyperitza*, which may well be call'd the *Mæander of Mæsia*, having so many various Windings betwixt the Hills, that in less than twelve Hours time we pass'd it ninety Times. This put me in Mind of the *Italian* River *Taro*, which I pass'd forty times betwixt *Parma* and *Fornovo*. I found nothing worth taking Notice of here, except an ancient large Tower, but without any Inscription. We were also much diverted with the great Concourse of People met together on Account of a great Fair, which is annually kept in an Enclosure near the Place. We continued our Journey the next Day over the Mountain *Clissura* (one of the Branches of Mount *Hæmus*) where our Eyes were surprized with the Brightness of the Rocks, which consisting of *Muscovia* Glass, made a pleasing glittering Show; like that mentioned by *Olearius*, of *Lapis Specularis*, betwixt *Permeras* and *Schamachia*, which shined like Diamonds. We descended through a narrow rocky Way, by the strong Castle of *Kolombotz*, or *Golobotz*, which brought us to *Urania*, a strong Pass with a Castle at the Foot of Mount *Clissura*, and commanding that Passage.

The whole Ridge of Hills, which extends betwixt *Servia* and *Macedonia*, is a Part of Mount *Hæmus*, which under divers Names reach from the *Adriatick* to the *Euxine* Sea; visiting by the Way several Passages which *Philip* King of *Macedon* took care to shut up, to secure himself against the neighbouring Nations; some affirm, That from the middle Peaks of Mount *Hæmus*, there is a Prospect both to the *Adriatick* and *Euxine* Seas. But King *Philip*, who made Trial of it, found himself disappointed in his Expectations, and so was I; for being upon one of those high Mountains, but somewhat nearer to the *Adriatick* Sea, I found that the Mountains of *Albania* cut off the Prospect on that Side. From hence we went forward to *Comonava*, where there is still a *Greek* Monastery on the Side of the Hills, and so to *Kaplanlib* or *Tygres* Town; then to *Kuprulib*, or *Bridge Town*, having a good Bridge over a considerable River call'd *Psinia*. It was casually set on Fire before we left it, and a great Part of it burn'd.

From hence we travel'd by the Way of *Isbar* to *Pyr-lipe*, first passing the high and craggy Mountains of *Pyr-lipe* in *Macedonia*, which glister like the *Clissura*, and

probably contains, besides the *Muscovia* Glass, some Minerals. There we saw massy Stones lie upon massy Stones, without the least Earth about them; and upon a high Ridge or Rock, many Steeples high, a very strong Castle, belonging formerly to *Marco Crollowitz*, a famous Man in those Parts.

15. After this, passing through a plain Country, we came to a large pleasant and well-peopled Town of *Macedonia*, call'd *Monaster*, or *Toki*, where great Preparations were making for the Reception of the *Sultana*, who was to lie in here; where I afterwards heard she was delivered of a Daughter, who lived not long. From hence we went on to *Filurina* and *Eccisso Verbeni*, where are plentiful Springs of Mineral Waters: But as we were descending the Hill which leads to the Town, we had Sight of that noted Mount, *Olympus*, though Seventy Miles off; and to the Left of us, of the two Lakes of *Petriski* and *Ustrova*, one whereof, as they say, was made by the removing of great Stones out of the Side of the Hills, whereby Vent being given to the Subterraneous Waters, they broke out into the adjacent Plains. Coming to *Egribugia*, we quitted again the Plains, and passed over high Rocks to *Sariggiole*, built partly upon a Hill, partly in the Plain; the first being inhabited by Christians, and this lower Part by *Turks*: Upon one of the adjacent Rocks stands a Castle. Not far from this Place we went through a Passage cut through the Rocks, like a Gate, through which also passes a Rivulet; this Pass commanding the Access of this Country, which put me in Mind of the Passage of *La Chiusa*, in the *Julian Alps*, betwixt *Vensone* and *Ponteva*, which is shut up by the *Venetians* every Night. We passed also by a Hill of a fine Red Earth, whereof they make Vessels, much esteem'd in those Parts; we proceeded over very dangerous Rocks, in narrow hanging Ways, with dreadful Precipices on one Side, where the Carcasses of Horses, which were tumbled down, gave us sufficient Warning to be upon our Guard. Afterwards we saw Mount *Olympus* upon our Left, till we come to *Alessone*, or *Alessan*, a Place of Note, where the *Greeks* have a Monastery, belonging to those of the Order of *St. Basil*; the Building whereof was a quite different kind from that we had seen before.

From hence passing a River, we entred a pleasant Place of five Miles long, with divers Towns in it; and afterwards over a Hill, a Branch of the Mount *Olympus*, on the Top whereof we saw an Old Man beating the Drum to give Notice, that the Passages on both Sides were free from Robbers. We descried from thence into the Plains of *Thessaly*; and turning to the Left, passed over the River *Pharibus*, which comes from under a Rocky Mountain, not in small Springs, but in one continued Channel, and taking its Course through the Vineyards and Corn-fields to *Tornovo*, runs unto *Larissa*, of which we shall hereafter say more.

In our Return we left the Road about *Kaplanlib*, taking that of *Skopia* (the *Scupi* of *Ptolemy*) call'd *Uscopia* by the *Turks*, being a large and trading City. It is seated on the Frontiers of *Mæsia* and *Macedonia*, at the Foot of Mount *Orbelus*, upon the River *Vardar* or *Axius*; in a pleasant fertile Country intermix'd with Hills and Plains. It was formerly an Archbishop's See: Above 700 Tanners live here, who make most excellent Leather. There are several handsome Sepulchral Monuments, and fair Houses here, as that of the *Cadib*, and of the *Emir*, or one of *Mahomet's* Kindred, whose Father was in great Veneration in these Parts. In the Court-Yard of the House of *Emir* you see a Fountain built like an old Castle with Towers, out of the Tops whereof spring the Water. The Floors in their best Houses are generally covered with Carpets, and the Roofs divided into Triangles; and many other Figures well painted, and richly gilt, but without any Figures of Animals or Vegetables. The *Bezastan*, or chief Market-place here, is covered with Lead, and the trading Streets with Wood; it contains also a considerable Number of *Turkish* Mosques. The most splendid of all stands upon a Hill, having a spacious Portico, sustain'd by four Marble Pillars; near it is an Arch, with a Brook running under it, which seems to be an ancient Piece;

as

as also a large Stone (being part of a Pillar) with this Inscription, *SHANC*. Not far without the City you see a most noble Aqueduct of Stone, from one Hill to another, over the interjacent Valley: It has about 200 Arches, and is a noble Piece of Antiquity. The Country hereabouts has been the Field of Great Actions in the *Roman* Times; here *Regillianus* did such mighty Feats, that he deserved a Triumph. Hereabouts stood also *Paræopolis*, and *Ulpianum*. This City drives a considerable Trade with *Belgrade* and *Salonichi*, which is the old *Theſſalonica*.

The *Sanziack* of *Servia* is under the Jurisdiction of the *Beglerbeg* of *Rumelia*, or *Greece*; as our Geographers generally mention this Place as a very considerable one, so I thought fit to give a more particular Account of it. From hence we went on to *Catſhanich*, a Fortrefs commanding the Passage of the Hills, and travelling on reach'd the Plains of *Coffova* in *Bulgaria*, known for the great Actions perform'd here, though not much exceeding *Lincoln Heath*. Some take it to be the *Campus Merulæ*. Here it was that *Lazarus*, Despot of *Servia*, at the Head of 500000 Men (the greatest Christian Army that ever was brought into the Field) was worsted by *Amurath*, and he slain in the Field; nor was he surviv'd long by *Amurath*, who viewing the dead Bodies, was stabb'd by *Michael Cobilovitz*, a Christian Soldier, left for dead in the Field; whence this Part, to this Day, is call'd, *The Field of the Sepulchre*, where a Monument is erected to the Memory of *Amurath*.

In these Plains also *Hunniades* engaged three Days successively against *Mahomet*, but being very unequal in Forces, was put to the Rout at last.

We travell'd on to *Prestina*, a most beautiful Town; but the Plague being there, we took a Gypsy for our Guide, who conducted us through a fruitful Country, but very ill peopled, and were much refreshed with the fair Carnations that grew by the Way. On the right Hand we saw a Bath, which we found arched within; the Water had a red Sediment, and a petrefying Juice, as might be seen by the grey Stone it had produc'd. It is not above two Leagues from *Bellachorque*, or *Curſumde*, which has a Convent with an old Church near it, with two handsome Towers. From hence passing over the Hill *Jasnebatz*, we came to *Eshelleck*, betwixt the two Channels of the River *Marosb*, and thence by a Castle upon a Hill, near which is a Convent famous in those Parts for the Sepulchres of *Kenez Lazarus*, and of *St. Romanus*, whose Bodies were interred here. But it is Time to return to *Larissa*.

16. *Larissa*, the Capital City of *Theſſaly*, seated by the River *Peneus* (the most considerable of this Country) has to the North the famous Mount *Olympus*, and to the South Part of the Plains of *Theſſaly*, being inhabited by *Christians*, *Turks*, and *Jews*, the first of which have several Churches here; it has also many fair *Bezantens* or *Turkish Mosques*. Its Situation is very pleasant, on a rising Ground, on the upper Part whereof stands the Grand Seignior's Palace, having large jetting Windows on all the four Sides, to give the freer Passage to the Air; here the Grand Seignior had kept his Court for several Years, to be nearer to *Candia*, and for the Convenience of Hunting and Hawking; he staid there for some Months after we came away, and then removed to *Salonichi*, and afterwards to *Belgrade*. It is now an Archbishop's See, having divers Suffragan Bishops under it. We went into the Cathedral of *St. Achilleus*, where we saw the reverend Father *Dionysius* (who was then Archbishop) standing in his Throne in his Episcopal Habit, and his Crozier in his Hand. The Summer being very hot, 1669, the Grand Seignior retreated for two Months to Mount *Olympus*, to enjoy the fresh Air, whence he had a Prospect of part of the *Ægean Sea*: This Removal proved destructive to a great many People, who being obliged to attend the Court, and being overheated by the ascending of so high a Mountain, were so struck by the sudden Alteration of the cold Air, that they dy'd soon after, especially such as had, in their Heat and Thirst, drunk of a certain Spring of a whitish Colour, who were immediately seized with a Coldness at their Stomachs, and died in three or four

Days after. Of Horses and Camels there also died a great Number, and the Sultan himself was ill for several Days; he kill'd one of his best Horses there, by forcing him up a cragg'd Peak called *Pythagon*, or *Kissagon*, where scarce any Body durst follow him; and had he not been with-held by the Prayers of his best Friends, he would have leap'd over a Fissure or Cleft in the Rocks.

17. The ancient *Greeks* (the best Romançers in the World, especially when they speak of their own Country) will have *Olympus* to reach beyond the Clouds, and therefore have assign'd *Jupiter*, and the Gods, their Residence thereabout: I am sure I saw Clouds above it; and to me some Parts of the *Alps* appear'd much higher; and in *September* there was no Sign of Snow upon *Olympus*, whereas the highest Peaks of the *Alps*, *Pyrenæan* and *Carpathian* Mountains, besides several others in *Europe*, are never without it; of which *Olympus* also had a considerable Share upon the first Rain that fell hereabouts; it being well known, that when it rains in the Valleys, it snows upon those and all other high Mountains.

I saw, as I told you, the *Olympus* at seventy Miles Distance, and it consists not of one high rising Peak, as some describe it, but is a long Ridge of Mountains, stretching out a great Way in Length: Its Extent from East to West makes the Inhabitants, at the Foot of the North and South Sides, as sensible of the Difference of the Air, as if they lived in very different Climates; which makes good the Words of *Lucan*:

*Nec metuens imi Borean habitator Olympi,
Lucentem totis ignorat noctibus Arcton.*

Paulus Emylius, the Roman Consul, surprized King *Perseus*, by marching about this Hill along the Seaside. At the Siege of *Larissa* by *Antiochus*, *Appius Claudius*, by making Fires on many different Places of *Olympus*, so terrified the King, that he left the Place, and the Consul *Martius* found Means to bring his whole Army over this great Mountain.

Larissa has been frequently visited by several famous Princes; King *Philip* of *Macedon*, the last of that Name, kept his Residence here for a considerable Time. Whether *Xerxes* honour'd this Place with his Presence, when his Army march'd through *Theſſaly* towards *Thermopila*, the Histories of those Times do not expressly mention; but certain it is, that *Philip*, the Father of *Alexander* the Great, having form'd his Design against *Greece*, took the City of *Larissa* upon the River *Peneus*, and afterwards made good Use of the *Theſſalian* Horse against the *Greeks*. Before the Battle of *Pharsalia*, *Scipio* was quarter'd here with a Legion; and this was the first Place of the Retreat of *Pompey*, after his Overthrow; according to *Lucan*:

*Vidit prima tuæ testis Larissa ruinæ
Nobile, nec victum fatis caput.*

And going down the River, went out to Sea in a Boat, and was taken in by a great Ship which was ready to sail.

The River *Peneus* rises from Mount *Pindus*, which running by *Larissa*, and being augmented in her Passage by several other Rivers of *Theſſaly*, exonerates itself into the *Sinus Thermaicus* or Gulf of *Salonichi*, passing by the famous Valley of *Tempe*, and running between Mount *Olympus* and *Ossa*, into the Sea. Over this River, which (according to the Description of *Homer*) has a very clear Stream and Bottom, is a handsome Stone-Bridge, supported by nine Arches, with Holes or Passages in the solid Parts betwixt the Arches, to afford a Passage to the Water, when the Water rises high by the Floods. The City being then crowded with People, by reason of the Grand Seignior's Residence here, many of the *Turks* had set up their Tents in the lower Grounds near the River; and these not coming within a Yard of the Ground, afford a free Passage to the Air. The nearest Port of Note unto *Larissa* is that of *Vollo* (the old *Pagasa*) in the *Sinus Pagasicus*, or Gulf of *Armira*; not far

far from whence stood the ancient *Argos Palaesticum*, from whence the *Argonauts* sail'd for *Colchus*; by this Way the Grand Seignior receives his Intelligence from *Candia*, and his *Asiatick* and *African* Dominions. Near the Promontory *Sepias* (not far from hence) *Xerxes* lost 500 Ships, by a Tempest from the East.

18. As the Grand Seignior *Mohammed IV.* went often abroad a Shooting and Hawking, attended by a great Number of his Huntsmen, Falconers, and others, and also went often to the great Mosque, I had many Opportunities of seeing him; among the rest, I took once a full View of him, as he was coming out of the Palace to go to the Mosque. Before the Palace I saw several very fine Horses richly accoutred, which were rode by some of his Attendants in the Court-Yard, till he looking out of the Window, made a Sign to let them know which he would make use of; he no sooner appear'd without, but he was received with great Acclamations, and very low Reverences, both near and at a Distance; the Streets were made clean, and a Janizary placed at every Corner, to remove any Thing which might be in the Way. The Chiaufes lead the Van on Horseback, these were follow'd by twenty-four Persons of Quality on Foot; on each Side of his Horse walk'd two Janizaries, with large spreading white Feathers of a Fathom high, fasten'd to their Caps; and these shaking as they walk'd along, were high enough both to shade and fan his Face. After him follow'd many very fine lead Horses, and several Persons carrying Cushions and Pillows to the Mosque.

The Grand Seignior was then scarce thirty Years of Age, well proportion'd, but somewhat short-neck'd, inclining to Fatness, of a fallow Complexion. For the rest, he was of a strong Constitution, delighted in hard Riding; his Countenance somewhat stern, yet he would invite with a kind Look, People to approach him. I heard of no Physician of Note he had about him; but the Grand Vizier had taken several Christian Surgeons along with him to *Candia*. The *Caimachan*, or Deputy to the Vizier, had the chief Management of Affairs of State, in the Absence of *Achmet* the Prime Vizier. I went with *Osman*, *Chiaus*, to see his Palace, which was a fine Structure; where I heard ten Men playing all at once in a high Room, upon large Wind-Instruments, which they do at certain Hours every Day, making a very loud, yet not unpleasant Noise, even to such as do not understand their Musick.

The Sultana was at the same Time at *Larissa*, by Birth a *Candiot*, and much beloved by the Grand Seignior; she was but low of Stature, and somewhat mark'd with the Small-Pox; being then big with Child, great Preparations were made for her Delivery at *Monaster*, a pleasant Town in *Macedonia*, the Roads were then a Plain, and the Hills laying level, with broad Bridges over the Rivers, for her more convenient Passage thither. The Grand Seignior's Son, who was with her there, was then six Years of Age.

I heard, at several different Times, the *Turks* sing their usual Songs, and, among the rest, one concerning that famous Jewish Impostor *Sabata Sevi*, whom *Cussum Bassa* forced to turn *Turk*. This *Cussum Bassa* is a Man of great Reputation at the Ottoman Court, and much valued for his Skill in Physick, (a Thing not much known in *Turkey*.) He was formerly Vizier of *Buda*, and is now Vizier of *Erzrum*, upon the Frontiers of *Georgia* and *Persia*, and married to one of the Grand Seignior's Sisters. Of *Padre Ottomanno*, a *Dominican* Friar, whom I had seen at *Turin*, and who was thought to be the Grand Seignior's Brother, I could learn nothing here.

19. The Wintering of that vast Army of *Xerxes* under *Mardonius*, is an undeniable Testimony of the ancient Fertility of *Thessaly*, which continues to this Day; for notwithstanding the vast Concourse of People, occasioned by the Sultan's Residence here, every Thing was so cheap, that one might dine at a common Victualling-house, upon roasted and boil'd, and have good Sherbet to drink, for Six-pence a Head; and an Officer arm'd with a Club, with twenty-four Followers, kept the Streets so quiet, that not the least Disturbance

was to be heard of there in the Night-time. The hot Weather which happened in *September*, 1669, occasioned frequent Fevers and Agues in those Parts, as about the same time other Parts of *Europe* were much infected with Quartan Agues. It being then their Vintage, I tasted of their Must, or new Wine; and I observed that some of the zealous *Turks*, who would not drink Wine, yet would take a plentiful Draught of this with a great Deal of Eagerness.

During the hot Season, we used frequently to visit the Barber, who perform'd his Business very well, and would trim every Man according to his Country Fashion. The *Greeks* always leave a bare Place of the Bigness of a Crown-piece, on the Top of their Heads, round which they let the Hair grow to the Breadth of two Inches, and shave all the rest of their Head. The *Croatian* shaves his Head on one Side, and on the other lets his Hair grow as long as it will. The *Hungarian* keeps only a Fore-top, the rest being shaved all over the Head. The *Polanders* don't shave their Heads, but keep their Hair cut so as it comes down to the Middle of the Forehead, and the Middle of the Ears. The *Turk* shaves his whole Head, leaving only a Lock upon his Crown. The *Franks* wear their Hair long, without shaving their Heads, but to give no Offence to the *Turks*, generally turn up their Hair under their Caps; but the *Greek* Priests keep and wear their Hair long.

The Party to be shaved sits low, so that the Barber, who lays on much Soap, takes of a great deal of Hair at once, and finishes the whole Business in a few Strokes. A Vessel of Water, with a Cock, hangs commonly over the Head of those that are to be shaved, so that the Barber lets out the Water upon them as he pleases. I saw accidentally in one of the Barbers Shops of *Larissa*, an ancient and very noble Monument, or Tombstone, of a Jasper-green Colour, through the Top-stone of which the Barber had caused a Hole to be made to serve him for a Cistern.

In the Market-place sit certain Money-changers, who exchanged our Duckats, and Rix-Dolars, into Medines, Aspers, and five Sols Pieces, of which great Plenty is to be found in those Parts. All the Trading Streets were cover'd with Wood; their Shops were generally small, but well enough provided, the Shopkeeper sitting like a Taylor, and selling his Wares to the Buyers, who commonly remain standing in the Street: Such Commodities as are not to be had in the Shops, are cry'd about the Streets by a Man on Horseback, who at the same Time tells the People what Price they are to be sold at.

20. I had been much pleased with the Sight of the several Stables of Christian Princes, as that of the *French* King's, the Vice-Roys of *Naples*, the Elector of *Saxony's* at *Dresden*, and that of Count *Wallestein's* at *Prague*; but for Horses, I must confess none of these could compare to those I saw at *Larissa*, being chosen from among the best of the *Turkish* Empire, so richly equipp'd with most stately Saddles and Bridles set with precious Stones, and so tractable, that I could not but be surprized thereat. I saw among the rest some *Tartarian* Horses, valued chiefly for their Hardiness and Swiftness, being for the rest rather unsightly, than beautiful. Some of the richest *Greek* Merchants are well versed in the *Italian* Tongue, which is prefer'd here before either *Latin* or *French*. The *Jews* of *Macedonia*, *Servia*, and *Bulgaria*, commonly speak *Spanish*; and those of *Hungary*, *High-Dutch*, for Conveniency in Discoursing with Strangers.

At our being there the Season was so parching, that even the greatest Rivers were very low, and the small ones quite dry, except one, I took Notice of about seven Miles on this Side *Tornovo*, which continued to flow plentifully in one copious Channel from under the Rocks. This general Drought however of the Country, put me in Mind of the Deluge which happened in the Time of *Deucalion* King of *Thessaly* (as sometimes we are apt to remember Things by Contraries,) when by the Stop-ping of the Current of the River *Peneus* (into which most of the others run,) the whole Country of *Thessaly*, which is plain, and enclos'd on all Sides by Hills, was laid

laid under Water for a whole Winter : I know some who are of Opinion, that all *Theffaly* was, in the most ancient Times under Water, till the Mountains *Ossa* and *Olympus* being torn asunder by a violent Earthquake, the River *Peneus* forced its Passage that Way by *Tempe*, into the Sea.

I remember, that as we were travelling in *Macedonia*, our *Chiaus* told me, that within a few Days I should see *Frenchmen* in those Parts ; meaning the *Theffalians*, the Country People wearing narrow brim'd Hats like the *French* Hats, then lately in Fashion. The *Theffalians* had always the Reputation of being Warlike, and are accounted so to this Day among the *Turks*, this Country having been very famous in ancient Times, not only for the Battles fought in the Plains of *Theffaly*, but also for its having produced many great and worthy Persons ; and *Hippocrates*, the Father of Physicians, lived and practised here, and died about *Larissa*, being buried betwixt that Place and *Gyrton*. The *Theffalians* are generally well made, have very black Hair and Eyes, with a fresh sanguine Complexion ; and their Women are much celebrated, among Strangers, for their Beauty ; the *Macedonians*, who inhabit a Hilly Country, being of a much rougher Complexion ; and the *Moreans*, or ancient *Peloponnesians*, who live more to the South, inclining to Swarthiness.

21. The Country abounds in Horses, and they have the largest Bufflos in all *Greece*, except those of *Santa Maura* in *Epirus*. They have also Plenty of fine yellow and black Tortoises, which are good Meat ; but the *Turks* use to laugh at the Christians, for eating them, when they had such Plenty of Mutton, and all Sorts of Fowl. This Country also produces very large and most delicious Figs, and the best tasted Water-melons that I ever met with ; likewise Pomegranates, Oranges, Limons, Citrons, and Vines, which grow low here like those of *Montpellier*, and though not supported, bear large Branches, and Grapes as big as our *Damascens*, and of a most luscious Taste. The Wine of the Country is rich, but has a resinous Tang.

The Tobacco they plant, they esteem beyond what is brought from other Parts, being stronger and more pungent. Their Fields are cover'd with *Sesamum*, and Cotton-Trees, which though but low, make a glorious Show ; as also with Almond and Olive-Trees ; the *Greeks* pickle their Olives ripe, whereas ours are all green. The Gourds in the Hedges, with their large yellow Flowers, and the different Sorts of green Thorns, and *Sempervirent* Oaks, make the Ways exceeding pleasant. The *Ilex Coccifera*, and *Chermes Berry*, or the Excretion serving for dying and making the Confection of *Alchermes*, are very plentiful in this Country. The high Hills produce *Asclepias*, and *Helleborus* ; and the stony Plains *Carduus Globosus*, *Cystus*, Lavender, Sweet Marjoram, Rosemary, and other sweet-scented Plants. The *Platanus*, or Plain-Tree, grows very fair and lofty in *Macedonia*.

They use a great deal of Garlick in their Dishes, and their Onions exceed ours, not only in Bigness, but also in Taste ; being sharp, and pleasantly pungent upon the Tongue, without any offensive Smell ; they agreed very well with my Stomach, though I never used to eat Onions before. They are used here at most Collations ; the *Turkish Chiaus*, who had travell'd almost through all the *Turkish* Dominions, told me, that the Onions of *Egypt* only, exceeded those of *Theffaly* in Goodness ; which was the first Time I really understood that Passage in the Scripture, of the *Israelites* longing after the Onions of *Egypt*. They have also a Fruit call'd *Pattlejan*, or *Melanzan* (*mala insana*) between a Melon and a Cucumber, out of which they take the Seed, and after having fill'd the Concavities with the Meat of Sausages, they pare and boil them, which makes a very good Dish.

The Foreign Ministers who attended the Grand Seignior's Court at *Larissa*, were the Imperial Resident, and the Ambassadors of *Ragusa* and *Wallachia* ; those Ambassadors that reside at *Constantinople* chiefly on Account of Trade, being not obliged to follow the Court.

The Imperial Resident having got Leave of the Sultan (by Reason of the great Concourse of People at *Larissa*) to chuse which of the neighbouring Towns he pleased for his Residence, he pitch'd upon *Tornovo*, a large and pleasant City of *Theffaly*, twenty Miles to the Westward of *Larissa* near the Hills, where most of the Inhabitants are Christians, having eighteen Greek Churches there, whereas the *Turks* had no more than three Mosques. The chief Churches I took Notice of were, the Cathedral of St. Stephen, the Church of St. Demetrius, of *Cosmus*, and *Damianus*, of the Nativity of the Blessed Virgin, of St. Elias (with a Monastery adjoining to it, of St. Anastasius, of the Twelve Apostles, of St. Nicholas, (with a Convent also) and of St. Anthony the Hermite. The Bishop of this City is a Suffragan to the Archbishop of *Larissa*.

22. Before I travell'd into these Parts, I could never conceive that the *Eastern Countries* contained such vast Numbers of Greek Christians as are to be found in *Greece* and the Greek Islands ; in the *Turkish* Parts of *Dalmatia* and *Croatia*, in *Rascia*, *Bosnia*, *Servia*, *Thrace*, *Sagora*, *Bulgaria*, *Persia*, *Bessarabia*, *Cossackia*, *Podolia*, *Moldavia*, and *Wallachia* ; besides the vast Dominions under the Jurisdiction of the Czar of *Muscovy* : Which put me in Mind of what a certain learned Author says upon that Head, viz. *That if a true Computation were made of the Greek Christians in Europe, they would far exceed those of the Roman Religion.*

The Font or Balon in the Greek Churches is generally made of plain Stone, and plac'd immediately upon the Floor of the Church, which seems to be done for Conveniencies Sake, for being not contented with sprinkling of Water upon the Child's Head ; the Priest, having first bless'd the Water, and dipp'd the Crucifix into it three Times, takes the naked Child by one Arm, and putting it into the Font up to the Waste, with the other Hand laves the Water thrice over his Head ; which that it has been the ancient Custom among them, may easily be gathered from what is related of the Emperor *Constantine VI. Constantinus sextus, dictus Copronymus, quod Infans dum baptizaretur aquam sacram ventris solutione maculasset* ; The Dipping of the naked Body in Water being apt to move it. Some of their Children I saw baptiz'd before the Navel-string was fallen off.

23. The Fields round this Place were full of Vines, *Sesamum* and Cotton-Trees. The Emperor's Resident, named *Signore di Casa nova* lived here in great Splendor, with a Retinue of about thirty Persons, some Christians and some *Turks*, and has two *Janizaries* attending at his Gate. He was a *Milanese* by Birth, much addicted to Study, civil and courteous in his Behaviour, but reserved. The Ambassador of *Ragusa* had made Choice of the same Town for his Residence ; but they never visited one another, by Reason that the *Ragusan* being here in the Quality of an Ambassador, would not give the Precedency to the other, who had only the Character of a Resident ; which sometimes gave great Occasion of Laughter to the *Germans*, who look upon the *Ragusans* no otherwise than as Vassals.

Here I must not pass by in Silence the many Civilities I receiv'd from a certain Greek Merchant of *Tornovo*, whose Name was *Demetrius*, who entertained us with a great deal of Freedom at his House, at several Times, and brought his two Daughters to bid us welcome, whom we saluted after the Custom of our own Country. They were very well dress'd after the Greek Fashion, with their Hair braided and hanging down their Back ; their Shoes and Slippers painted, and (which something surprized us) their Nails colour'd with red, by a certain Tincture drawn with Water and Wine out of the Leaves of a certain Plant call'd *Cnà* or *Alcanna*, brought out of *Arabia* and *Egypt*, and much used in *Turkey*, where some colour the Mains and Tails of Horses with it. The *Gracians* of *Scio*, who wear Gloves, use also this Tincture to colour them upon those Parts that touch their Nails. It must be confess'd, that the *Gracian* Countries bear now-a-days a quite different

Face from what they have done in ancient Times; the many Incursions of barbarous Nations, and the late Conquest by the *Turks*, having laid desolate many great and once famous Cities, and exchanged the Names of the rest, not leaving even the ancient Names of the Rivers, which generally are beyond the Fate of Towns. Thus the Rivers of *Macedonia*, the *Axius*, *Erigonus* and *Aliaomon*, which I pass'd, have now Names which have not the least Affinity to those of former Ages. The famous River *Peneus* has undergone the same Fate, as well as *Apidanus*, *Enipeus*, and others that join their Waters with it. *Larissa* is call'd *Jeni-Sabar* by the *Turks*; and *Thessaly*, *Comenolitari*.

24. It seems to be one of the greatest Delights that attends Travelling, to behold, as one moves along, a different Face of Things in Habits, Diet, Manners, Customs and Language: Of this we had our full Share after we had travelled a Day's Journey beyond *Raab* and *Comorrah*; for before we reach'd *Buda*, we enter'd upon so different a Course of Life, especially as to Habit and Manners, (which with some small Alteration, continues to the utmost Part of *Asia*, viz. *China*) that we thought ourselves in a Manner in a new World. Though we were provided with good Passes, and had taken all other imaginable Care for our Security, yet we were not without Fear from the *Hussars*, who knowing all the By-ways, commonly rob all they meet with as far as the Bridge of *Esseck*; neither were we in less Fear of the *Cingars* or *Gypsies*, who are noted here for their Robberies; though they live in the Towns of *Hungaria*, *Servia*, *Bulgaria*, *Macedonia* (and some also in *Thessaly*) by Labour and handy-craft Trades. They are generally supposed to have their Original from the Frontiers of *Wallachia*. They have a Way of Colouring their Hands and Feet of a reddish Colour, with *Cnà*, and some of the Women colour the Extremities of their Hair also.

We were in no small Danger of being robb'd as we travel'd from *Belgrade* into *Servia*, by three Horsemen, who coming up with us discharged their Pistols; had it not been for our *Chiaus*, who knowing them to be *Spabies*, shew'd them his Feather, bidding me to discharge at the same Time my Pistol, to let them know that we were not unprovided; whereupon they left us. *Caravansera's*; or publick Inns, built by charitable Benefactors to the Publick, for the Lodging of Travellers upon the Road, we seldom made Use of, the Rooms being very spacious: We were but a few in Company, and not fitted for Places where we must provide every Thing one's self; and therefore private Houses were much more convenient for us: Besides, that the Situation of those *Caravansera's* is often-time such, as not to be secure against the Insults of Robbers, which are too frequent in those Parts, though punished with the greatest Severity; for which Reason, in most dangerous Passages, Drummers are appointed, who by Beat of Drum give Notice to Travellers, that the Roads are safe.

However, in the main, we had sufficient Accommodation, for from *Comorrah* our Boat was towed by a Saick of twenty-four Oars, till we came to the *Turkish* Frontier Town, where meeting with the *Turkish* Convoy, our Boat was fasten'd to their Saick with eighteen Oars, till we came to *Buda*, from whence we were carried in open Chariots, with two, three or four Horses a-breast, and that very swiftly, through a very pleasant Country, to *Belgrade*. Here we were mounted on good sure-footed Horses, which would carry one safely twenty Miles in a Stage: They are very free, tender mouth'd, and tractable; which made the Owners not well pleased with our Spurs, which are seldom used by the *Turks*. They have generally a lighter and lesser Shoe than our Horses. Most of these Countries abound in good Horses, which are very fleet; but they never dock them, looking upon a long Tail as a great Ornament to a Horse, which they will handsomely make up, and adorn to render it more so.

The *Bassa* of *Temeswar* presented *Ragotzi* with a Horse, which he flighting, cut off the Horse's Ears,

Main and Tail, and so sent him back again; which the *Bassa* took for such an Affront, that he did not desist till he brought about the Ruin of *Ragotzi*, as he might have expected. They do not feed them out of high Mangers or Racks, but lay their Hay before them almost even with the Ground.

In the *Caravansera's* they tie their Horses to Rings, fasten'd to the Side of a long Place a little elevated, upon which the Travellers sleep as they can, their Hay being laid somewhat lower at the Feet, whereon their Horses feed. They plough generally with Oxen and Buffelo's, and have great Variety of Ploughs and Carts, some whereof I saw in *Macedonia* with Wheels of solid Wood, in the whole Piece, perhaps the better to resist the rough and ragged Ways of a rocky Country. We observed among the People in general, that they will be much obliged with a small Present, such as Knives, Scissers, and other Toys; nay, we gave sometimes a Glove to one, and the Fellow to another, which they took very kindly. Thus the *Bulgarian* Women would be well pleased with a small Piece of Silver Foreign Coin, and put it as an Ornament to their Head-dress, though they had others of much more Value there before.

25. In our Journey about the Mountains of *Servia*, we were in great Danger from Wolves, especially in the Woods, where they would come very near us in the Night-time; so that we were forced to remain close together, and keep our Fire-Arms in Readiness: Neither were the Dogs less troublesome; for no sooner came we near a Town, or left it, but they would either meet or follow us at a considerable Distance, and with Barking and Biting our Horses Legs, be very offensive. I remember, that at my coming to *Comorrah*, which happened to be about Midnight, we were so closely pursued by the Dogs, which were shut out of Doors on Purpose, that we were forced to seek for Shelter in the Guard-house.

The Fear, in which the poor Christians live in these Parts, could not but move us greatly to Compassion, where we saw them retreat to the Woods, at the first Sight, to avoid us; which made us many Times ride after them to undeceive them. But the miserable Condition of the Slaves and Captives is almost beyond expressing, especially if you consider the Variety of their hard Fate, and the odd Chances that reduce them into this miserable State; some by Treachery, some by Chance of War, others being stole by the *Tartars*; among all which, those who belong to the Grand Seignior seems to be in the worst Condition, as being past all Hopes of being redeemed or exchanged. Of these I met with one at *Egribugia* in *Macedonia*, who, though he had a Tole-Table Place at the Post-house, yet was quite dejected upon that Account. In *Thessaly* I met with an *Hungarian*, who being taken at the Battle of *Barchan*, first served a *Turk*, and afterwards was sold to a *Jew* with whom he endured great Hardship; but being at last sold to an *Armenian*, he behaved himself so well, that his Master gave him his Freedom, and coming to *Larissa*, he was entertain'd in the Imperial Resident's Service. He was a very worthy Person, who had retain'd his Christianity among all these Changes of Fortune. He spoke *Hungarian*, *Sclavonian*, *Turkish*, *Armenian*, and *Latin*, and, notwithstanding his slavish Condition, had been so curious as to take Draughts of many Monasteries, Abbeys, Mosques, and other considerable Buildings in *Armenia*, *Persia* and *Turkey*, which he shew'd me. The *Turks* make peculiar Observations upon the Captives of several Nations: Thus they say, a *Russian* makes the best Galley-Slave, a *Georgian* a good Courtier, and an *Albanian* a good Counsellor, &c. I remember that the first Time I went to have a Sight of the Grand Seignior, *Osman Chiaus* kept backwards; having ask'd him the Reason, he answer'd, *I take no great Pleasure in coming too near him*.

26. As the *Turks* are commonly buried near the Highways, Tombs and Sepulchres are met with every where hereabouts, but are not very splendid, consisting only of a Stone at the Head, and another at the Foot, some of

of which are two, three or four Yards high; some have a Turbant cut upon the Stone at the Head; some also set up two Pillars of Stone, and sometimes raise the Sepulchres after the *European* Fashion, placing two Pillars upon them, one at the Head and the other at the Feet. Of these I saw several at *Scopia*; but their neatest Way is to erect a Pavillion, supported by four Pillars.

As we travel'd through *Servia*, I saw to the South of *Jagodna*, on the Side of a Hill, a *Turkish* Tomb of four Yards long, which, the *Chiaus* told me, was the Tomb of one of their Saints. As I could scarce conceive that the Length of a Man should extend to that Height, so it put me in Mind of what I once heard Mr. *Wood* say upon this Account, *viz.* That he had seen several Graves in the Southern Parts of *America*, of four Yards in Length; and having never met with an *American* that came near that Height, he had the Curiosity to have one of the Sepulchres opened from one End to the other, wherein he found a Man and a Woman so placed, that the Woman's Head lay at the Man's Feet, and consequently required a Grave of four Yards long. I thought I might, without the least Hazard, relate this upon the Credit of a Person, who has given sufficient Proofs of his Ingenuity to the World, by his accurate Maps of the Streights of *Magellan*, its Islands, and the Coast from the *Plate River* to *Baldivia* in the South Sea.

In our Travels in these Parts, we met often with *Turkish* Fairs, which are kept in some large Ground, enclosed and divided into Streets, where you may furnish yourself with all Manner of Things not to be seen in these Western Parts, and have Musick at a cheap Rate; which, though none of the best, yet serves to pass away the Time pleasantly enough. We had the good Fortune, in all this Journey, to light upon no more than one Place infected with the Plague, *viz.* at *Prestina*, in the Plains of *Cosova*, which made us make what Haste we could thence to a *Gypsie's* House among the Hills, where we met with a good Accommodation. The *Turks* were very well pleased to see me take out my Pocket-Book, to write down such Observations as I had Opportunity to make, and were much taken with my Writing so quick with a Pen made of a Goose Quill; whereas theirs are made of a Reed, wherewith they will write very well upon smooth Paper.

27. I would often, as Occasion served, look into such Maps as I had brought along with me; whereat the *Chiaus* smiling, said, There is but little Dependance to be had on Maps, for they do not mention many great Towns, and those they do are often not rightly placed. We *Chiausses*, added he, who spend our Days in Travelling, take Notice of all Places, and know their *Turkish* Names, are the best Map-makers; and I must confess, that in several Particulars I was convinced he spoke nothing but the Truth; for I found the Maps of *Hungary* not exact, and those of *Servia*, *Bulgaria*, *Macedonia*, and *Theffaly*, very imperfect. In *Upper Hungary* many Towns were omitted, and as many ill placed; in the *Lower* also not a few. The *Danube* seems to take too great a Circumference to the S. W. before the *Theysse* falls into it. In *Servia* I found *Hissargick* placed a good Way from the *Danube*, which runs just by it. *Procupia* or *Urchoop*, and *Lescoc* or *Lescovia*, considerable Towns (the last upon the River *Liperizza*) I found quite left out, as likewise *Kaplanly* or *Tygreffs Town*; in *Macedonia*, *Kupruly* or *Bridge Town*, *Urania*, *Pyrlipe*, *Comonava*, *Eccisso Verbeni*, as also the Lake of *Petriski*; and the Towns of *Ostrovo*, *Egribugia*, *Sariggiole*, and *Sarvizza*, and the River *Injecora* near it; thus I found neither *Alession* nor *Tornova*, though one of the most considerable Cities in *Theffaly*; and to confess the Truth, he that travels into *Macedonia*, will never be able to square the true Situations of Towns and Rivers to their Positions and Descriptions in Maps, not excepting those that have been very lately published of *Greece*.

It was one of my chiefest Pleasures in this Journey to converse with *Chiausses*, who have (if they are come to any Age) seen much of the World in their Travels, and

consequently are good Company, and can give a good Account of Things. *Osman, Chiaus*, who was our Conductor, and then of about fifty Years of Age, spoke three Languages, *viz.* The *Turkish*, *Sclavonian*, and *Italian*, was a brave honest Fellow, who had travelled thro' the greatest Part of the Grand Seignior's Dominions, and proving old, had seated himself at *Buda* as a *Chiaus* to the Vizier: He took a very obliging Farewell of me at *Buda*, conducting me without the Gates, with many a *Dios* and hearty Wishes of a happy Return into my own native Country; and I must speak well in Honour of the *Turks*, that in all my Journey I met with very civil Usage from them; I never came into a Room where the *Turks* were sitting, but they would give the first Salute; and desiring me to sit down, offer some Coffee or Tobacco, except that now and then the Boys, and some few of the Scum of the People, would call us long hair'd Infidels: The worst Language I ever received was from a *Jew* at *Larissa*, whom I had employ'd to buy some Things; but had it not been for the Grand Seignior's Residence in that City, some of the *Turks* that were present would have taught him better Manners.

I found the *Turks* much addicted to taking of Tobacco in those Parts; they carried it in little Bags by their Sides, and used to take it in Pipes of an Ell long, made of Reed, with an Earthen Bowl at the End, laying one End on the Ground, and holding the other in their Mouths. I was not much used to Tobacco, yet out of Complaisance, I would now and then take a Pipe with them after their Manner, which, by reason of the Length of the Pipe, I found cool, and less distasteful than any other. I was also much taken with the Neatness and Cleanliness of the *Turks*, and with their washing of their Feet, Hands, and Faces; I used to be mightily pleased to see our *Chiaus*, at the Sight of a Spring, or any clear Water, alight and wash himself. He was very curious in winding up his Turbant every Morning, and combing of his Beard; nay, they are so nice, that they carry a Pitcher with Water with them to the House of Office; when they make Water, they rest upon one Knee, stretching out the other Leg.

Justice is a Virtue much encouraged, as well as revered, in *Turkey*; of this we had an Instance in our Return to *Egribugia* in *Macedonia*; for coming to *Sariggiole*, we met by the Way with a *Turkish Aga*, who having a numerous Attendance, had taken up all the Horses at *Egribugia*, so that not being likely to be supplied, we resolved to continue our Journey upon the same Horses to another Stage, finding our Horses strong and able enough to travel through the Plains we were to pass; but we were scarce got without *Egribugia*, when we were stopt and carried by the Post-master of the Place before the Cadi or Judge. He alledged against us, that he being the Grand Seignior's Servant, who had given him a certain Allowance for every Horse he provided, we were injurious to him in passing through the Town without taking Horses from him; for which he desired Reparation. We found the Cadi sitting upon a Carpet in a contemplative Posture, leaning his Elbow upon four or five Folio Books; he commanded his Servants to give us each a Dish of Coffee, and asking what we had to say in our Defence, the *Chiaus* urged, that we were going upon very urgent Business, had the *Chaimacham's* Letters, and were employed by the Grand Seignior to the Emperor of *Germany*; and that he was the *Chiaus* to the Vizier of *Buda*, whither he was to conduct us. Upon mature Deliberation, the Cadi said, *The Chiaus must not be stopped in his Journey, nor the Post-master unconsider'd*; and so calling for the Post-master's Book, took his Pen, and set down a *Sultanine* to be allowed him in his Accounts to the *Testardar* or Treasurer, and so wish'd us a good Journey.

The *Turks*, it seems, make use of a Maxim contrary to that of *Augustus*, who thought fit to put some Limit to the *Roman* Empire; whereas their chief Aim is to enlarge their Dominions by new Conquests; unto which their hardy Education, sober Course of Life, and unlimited Obedience to their Prince, seems to encourage them: Certain it is, that their Aim is beyond *Hungary*; and

and I have heard some *Turks* of Note often say, we must try our Fortunes again before *Vienna*; where the Star and Half-moon then remain'd upon the Steeple of the Cathedral Church of *St. Stephen*, above the Cross; and I could not, without a great deal of Grief, take Notice of a particular Cross (not known to our *Heralds*) lunated, to be seen in many Frontier Places, whereby the Inhabitants, as they testify their Christianity by the Cross, so they acknowledge the *Turkish* Sovereignty by the Half-moons.

A Journey from Comorrah or Gomorrah, to the Mine-Towns in Hungary, and from thence to Vienna.

28. Having satisfied my Curiosity at and about *Comorrah*, I pursued my former Resolution of taking a Journey to the Copper, Silver, and Gold Mines of *Hungary*; and being unwilling to take so long a Journey as to *Presburg* again, to bring me into the ordinary Road, towards them, I pitch'd upon a nearer, though not much frequented Passage; taking therefore my Way along the North Shore of the Isle of *Scutz*, till I came to the Confluence of the Rivers *Waag* and *Danube*, I passed over to *Gutta*, a Fortification raised since the late War, in a marshy Ground, between a Branch of the *Danube*, the *Waag*, and the *Swartz*, within a Mile of *Newhausel*, which we plainly saw from the Steeple of the Church of *Gutta*. It had then a Fort of 130 Men, commanded by an experienced and brave Officer, whose Name was *Mr. Matthias Fruwurd*. Their Boats, in which they will pass the greatest Rivers, are only one Piece of Wood hollowed out.

From hence we went on by way of *Forchatz* to *Schella*, where is another Fort to hinder the Incursions of the *Turks* and *Tartars*, and about half a Mile from this Place is a certain Concavity in the Earth, which burns like the *Solfaterra* near *Naples*; and so forwards to *Schinta*, a large Fort which commands the River and the adjacent Country. It consists of four Bastions, and has a Tower in the Middle. At the Gate hangs a great Rib, a Thigh-bone, and a Tooth, which, they say, belonged to a Giant; but I judge them to be of an Elephant. We came afterwards to *Leopoldstadt*, a regular Fortification of six Bastions, where the young Count *de Zouches* then commanded. Not far from hence, passing the Rivers, we came to *Friestadt*, a handsome large Town, but lately ruined by the *Turks*. I took a Draught here of the Castle and Palace belonging to Count *Forchatz*, which was a Structure that would have been thought elegant in *Italy*.

The *Lutheran* School had been lately ruined by the *Turks*. They pay a yearly Tribute of four Pence a Head, whether of Men, Women, Children, Sheep, Oxen, or Horses: They are much inured to Hardship, and their Women rarely marry above once. Bathing and Sweating naked in Stoves, with their Feet in warm Water, is much used here, as also Cupping and Scarifications. There were only twelve Fryars left in the Convent of the *Franciscans*, the *Roman* Christians having scarce any other Priests but Monks hereabouts. About fourteen *English* Miles from hence is *Banca*, which has fifteen Baths in a low Ground near the River, three of which are spoiled by the *Waag*, which has there transgress'd its ordinary Bounds. About twenty Years ago there were also hot Baths on the other Side of the River, but these are likewise swallowed up by the overflowing of the River. The Water of these Baths casts out a white Sediment, and tinges Copper and Silver in an Instant as black as Ink. Not far off is a Quarry of Stone, and several Chalk Veins, which being of all Sorts of Colours except Green, and curiously mix'd or marbled, was very pleasing to the Eye. It being the 18th of *March*, the cold Weather hinder'd us from bathing in so open a Place, though we saw several Women and Children in them, and our Charioteer bathed himself in one of them at Midnight.

March 21. Some Musqueteers having been sent us by Count *Zouches* for our Guard, we continued our Journey, and passing by *Ripnich*, a Castle at *Docatzi*, belonging to Baron *Berrini*, came the same Night to *To-*

polchan, a Town upon the River *Nitra*, great Part whereof had been consumed by Fire in the last Wars. At *Bellitz*, a Mile from hence, are likewise hot Baths. We pass'd the next Day by *Clesch*, and through a great Wood by *Hochwiese*, inhabited by *Germans*, and came to *Sernowitz*, situate upon the River *Gran*, having a Castle built upon a Rock. It is tributary to the *Turks*. *March* 28. We pass'd the River *Gran* in the Morning, and travelling among the Hills, came to *Hodrytz*, by which runs a rapid Stream, of great Use to move the Engines employed in the pounding, washing, and melting of Silver Ore.

29. Hence we travelled over a Mountain call'd *Hell*, and so to *Schemnitz*, which claims the Precedency for Bigness before all the other Mine-Towns in *Hungary*, and where a great Quantity of Silver Ore is digged every Day. It is a well-built Town, most of the Inhabitants being *Lutherans*, who have three very handsome Churches here. It has also three Castles; 1. The *Old Castle* in the Town, where there is all Sorts of Wind-Musick at Six in the Morning, at Twelve at Noon, and at Six at Night. 2. The *New Castle*, built by a Lady in a Place where formerly the Gibbet stood. 3. On a high Peak, where a continual Guard is kept to discover the Approach of an Enemy, in which Case the Signal is given by the Discharge of a Culverin. The Country being very hilly, the Streets consequently very uneven. There are hereabouts very good Mines, among which these are the most remarkable: The *Windschacht*-Mine, the *Trinity*, that of *St. Benedict*, *St. John*, *St. Matthias*, and another called the *Three Kings*; but the *Windschacht* and the *Trinity* are the best and most wrought. The *Trinity-Mine* is at least seventy Fathoms deep, built and kept open with Under-Work, at a vast Expence, the greatest Part of it being in an earthy Soil. The Ore is very rich, and generally blue, cover'd with a white Clay, which gives the Streams where they work it a milky Tincture, and is that Substance, as I suppose, commonly known by the Name of *Lac Lunæ*, or the Milk of the Silver.

Some of these Veins run to the North, and other rich Veins to the N. E. If two Veins happen to cross one another, they count it lucky; so that the Veins of Ore keep not the same Point even in the same Mine; but as they have no certain Way to know where they are, or which Way they run, so they must proceed by Guess, and persevere in their Labour till they light upon the Veins. They don't make use of the *Virgula divina*, or forked Hazel-stick to direct them (as they do in the Silver Mine at *Friburgh* in *Misnia*) but dig on, according as they judge it most likely to succeed. They shew'd me one Place, where they had digged six Years together, when afterwards they found the Vein of Ore but two Fathom distant from the Place where they first began; and they shew'd me another Place, where they digg'd twelve Years before they found the Vein, which prov'd so rich, that in a short Time they were very well paid over and above their Charges. I went so far into this Mine, that I pass'd quite under a Hill, and came out on the other Side.

I descended also into the *Windschacht-Mine* as far as the Water would permit me, by 300 large Steps or Stairs of a Ladder; deep in the Earth I saw a large Wheel of thirty six Foot Diameter, turn'd by the Fall of subterraneous Waters; by the Help of this Wheel several Engines are moved, which pump out the Water from the Bottom of the Mine up to the Concavity, where this Wheel is fix'd. The Water which turns the Wheel, does not fall lower into the Mine, but is convey'd thro' a *Cuniculus*, or a subterraneous Passage made for that Purpose, together with the Water pumped from the deepest Part of the Mine, to the Foot of a Hill, where it discharges itself into the Valley. Besides this Wheel, there is another above Ground, which lies Horizontally, turned by twelve Horses, which also serves to pump Part of the Water out of this Mine. I was told, that no less than 200 Men were employed in all the Works belonging to this Mine. I found some Places very cold and others so hot, that I was forced to open my Cloaths, which were only Linen before: It being always hot where

where they work, they work eight Hours naked, if they can hold it so long, and then rest eight Hours. They shewed me a Place, where six or seven Persons were stifled by a Damp; to prevent which for the Future, they have placed a Tube there; the like they have over all Doors and Passages where they intend to dig for a great Space, and have no Passage through, whereby they let in, or let out the Air, or carried about according as the Miners under Ground ought to be ventilated. The blackish Ore is generally the richest, much of it is mix'd with a shining yellow Marchasite, which if not in too great a Quantity, is very welcome, because it renders the Ore fluid, and easy to be melted; but if this is found in too great a Proportion, they are of Opinion that it preys upon the Silver in the Mine, and in the Furnace over-volatilizing it, and whilst it is a melting carries it upwards with the Smoak; for which Reason they call it the Robber. There is also frequently found a red Substance growing to the Ore, call'd Cinnabar of Silver, which being ground with Oil, makes a Vermilion equal to, if not surpassing the common Cinnabar made by Sublimation.

30. These Mines also produce *Chrystals*, *Ametheysts*, and *Ametheystine* Mixtures, sometimes in the Clefts of the Rocks, sometimes near or join'd to the Ore; as also a natural chrySTALLIZ'd Vitriol, particularly in a Mine in *Paradise Hill*. There is also great Variety in the Silver Ore, in respect of its Richness, or Proportion of Silver: A hundred Weight of some Ore yields not above half an Ounce of Silver, sometimes two Ounces, three, four, five, even unto twenty Ounces; what is richer is very rare, though some have been found to hold half Silver, and I myself have seen some so rich as to be cut with a Knife.

To discover the Richness of the Ore, a certain Officer is appointed, whom they call the *Probieter*, (Essay-Master) which he does in this Manner. They bring him a Specimen of each Sort of Ore digg'd out of the Mine, of all which Sorts he takes an equal Quantity, and (the Ore being first dry'd, burn'd and pounded) adds to all an equal Proportion of Lead, melts and purifies them, and then by exact Scales, takes the Proportion between the Ore contained in it, of which he gives an exact Account to the Work-men employ'd in the great Melting Furnaces; who, according to his Report, add or diminish the Quantities of those Substances, which are to be mix'd with the Ores, to melt them in the melting Furnaces; as for Instance, to a 100 *Centen*, or 10,000 Pound Weight of Silver Ore; a hundred Pounds Weight, or a *Centen* of which contains two Ounces and a half of Silver, they add forty *Centen* of *Leich* (which is Ore pounded and washed) 200 *Centens* of Iron-Stone, which is not Iron Ore, but a Stone found in those Hills of a Liver Colour (perhaps the *Lapis Hematites*) a certain Quantity of *Kis* (a Sort of *Pyrites*) in Proportion as there is a greater or less Quantity of Marchasite mix'd with the Ore, and of the *Slacken* as much as they think fit. This last is nothing else but the Scum taken off from the Top of the Pan, into which the Metals run, and is a Substance made out of the former mentioned, by Fusion.

Whatsoever is melted in the melting Furnace, is let out through a Hole at the Bottom into the Pan, fastned in the Earth before it; and thus expos'd, it acquires, as it cools, a hard Scum, Dross or Cake, which being continually taken away, the remaining Metal becomes purer; unto this they add Lead, which carries all the Silver down to the Bottom, and after some Time the melted Metal is taken out, and afterwards melted again in the driving Furnace, where the Lead, or what else remain'd mix'd with the Silver, is driven off by the blowing of two great Pair of Bellows; and runs over from the melted Silver in Form of *Litharge of Silver*; but that which comes last, being longest in the Fire, turns red, and is call'd *Litharge of Gold*, though both be driven from the same Metal. Most of the *Schemnitz* Silver-Ore contains some Gold: This they separate after the Silver is melted, by granulating it, and afterwards dissolving it in *Aqua fortis* made out of a peculiar Vitriol, prepared at *Chremnitz*, whereby the Gold

is left at the Bottom, and is melted afterwards, and the *Aqua fortis* being separated from the Silver by Distillation, serves again for the same Use.

But it is Time to quit the Subject for Fear of entangling myself too far in a Business, the accurate Description of which would require entire large Volumes, as well as those of *Misnia*, so exactly described by *Agricola*. *Lenys* in his Works concerning Minerals, are also worth Reading, and *Lazarus Erker* has given a very nice Account of the principal Ores and other Mineral Bodies. But after all, it must be confessed, that there are few Places in the World to be compared with this, where Art and Nature strive to shew their utmost Force, to procure Riches. The Emperor *Rudolphus* being a great Encourager of Mines, they work to this Day much after the same Manner, established in his Time, except that many of their Engines and Instruments are much improved since. It seems to be somewhat odd, yet is nevertheless very true, that in a Place where every Week a vast Quantity of Silver is digg'd up, and carried away by Cart Loads, I could not meet with one pure Silver Piece. This happened to me at *Schemnitz*; for being desirous to see what Alteration several of those Mineral Waters in that Country would make upon Metals, I would fain have had a Piece of pure Silver, which, however the whole Town was not able to furnish me withal, the current Money of the Country being all mix'd with Copper; so that I was forced to borrow some Silver Crosses and Medals, to try the intended Experiment.

31. Near to *Schemnitz* (where old *Schemnitz* stood) I saw a high perpendicular Rock, Part of which from the Top to the Bottom is of a shining blue Colour, with some green and yellow Spots, which appear'd as beautiful to the Eye, as if it had been one entire Mass of *Lapis Lazuli*, finely polished: I was not a little surprized at the Sight thereof, and should have been more so, had I not heard before from a certain *Spaniard* who had lived a considerable Time in the *West-Indies*; That there is a Rock like this near the Silver Mines of *Peru*.

At *Glass-Hitten* (about seven *English* Miles from *Schemnitz*) there was formerly a rich Gold-Mine, but is lost ever since the Inroad made by the *Transilvanian* Prince *Bethlem Gabor* into those Parts, when the Inhabitants flying, the Entrance was stopp'd up, and has not been known since. The Owner thereof has however thought fit to leave some Directions and certain Marks behind him, whereby in Time the same might be discovered again; with the Figures of his Instruments upon the Barks of the Trees; which Instruments having already been found by Digging, thus much is intimated, That where they find a Stone on which a Face is carved, they are near the Entrance of this rich Gold-Mine; and to open the Passage into it, they are only to remove a certain Part of the Rock thereabouts, which was made use of by the Owner, to stop up the Entrance into the Mine.

Glass-Hitten is also a Place very well known and much frequented by Reason of its natural Hot-Baths, of which five are conveniently built with handsome Steps into them, and cover'd with fair and lofty Roofs. The Springs are very transparent, having a red and green Sediment; the Wood and Seats under Water, being cover'd with a stony Substance, and Silver is gilt by being left in them. But that call'd the *Sweating-Bath* excels the rest, its Spring being drain'd through a Hill before they issue forth into the Bath; at one End of which is a Cave, into which you ascend by several Steps, which being heated by the *Thermae*, like a Stove, by chusing your Seat either higher or lower, you may enjoy either a more remis or more intense Degree of Sweating at Pleasure. The Sides of this Stove, as well as those of the Bath, by the continual Exhalations of the hot Springs, are cover'd with a red, white and green Substance.

Whilst I was bathing myself in the largest of these Baths, a certain Fellow who was shewing Tricks of Activity to the Men and Women that were then in the Bath, gave me a satisfactory Account concerning several

ral Questions I ask'd him about the natural Vitriol, which he told me was to be found in several Mines hereabouts, crystallized in Lumps, and fit for Use; but especially in a certain Mine near *Schemnitz*, now given over by Reason of the Earth's falling in, in several Places. About two or three Days after he came to me at *Schemnitz*, and having brought along with him, Lamps, and Minemens Habits for me and two more, we went together into the Mine, where he shew'd me the Vitriol shooting upon the Stones and Earth, nay, upon the Floor and Sides of the Passages, in the same Manner as it does in the Pans, and about the Sticks, not hanging from the Top like to Icicles, as I have seen in several Places before. *Glass-Hitten* belongs to the Earl of *Lippey*, of whose Family was the famous *Polycarpus Procopius Bocanus*, who being sent by the Archbishop of *Presburgh*, to investigate the Curiosities of these Countries, died before his Observations came to Light.

32. *Eisenbach*, not above four *English* Miles from hence, and about six from *Schemnitz*, has also hot Baths, with a red Sediment, and containing a considerable Quantity of petrifying Juice, as may be seen by the Timber on the Sides of the Bath, some of the lowermost of which, near the Water, were quite turn'd into Stone; it bears the Spout through which the Spring was convey'd into the Bath, being under Water, though of Wood, yet not in the least changed, the Reason of which must be ascrib'd to the volatile Particles of these Waters, which are carried immediately upwards with their Exhalations. I remember, that in the Bath of the *Green Pillars* at *Buda*, these Vapours condensed by the high *Cupola* built over it, and on the Irons extended from one Column to another, and on the Capitals of the Pillars were formed into long Stones like Icicles, hanging to all those Places, such as I have observed in many subterraneous Grotto's, and especially in *England*, in *Okey-hole* in *Somersetshire*, and *Pooles-hole* in *Derbyshire*.

This is evident from the sulphureous Parts contained in these Waters, which however are not discoverable, if you either boil or evaporate the Bath-water, as being carried away with the Steam; and nothing is more common than to see the Sulphur of the hot Water stick on many Places over the Bath. I perfectly remember, that leaning one Day over the Balisters of the Lower Bath at *Baden*, I found my Buttons, which were of Plate, tinged by the sulphureous Particles, of a fair Gold-colour, though at a good Distance from the Water. This Accident tempted me to the Trial of another Experiment, viz. I took Care to hang some Money at one or two Foot Distance, which was colour'd likewise in less than a Minute; which made me conclude, that its petrifying Quality consisted chiefly in its volatile Particles. I brought away with me several Pieces of this petrified Water, of five or six Inches Diameter. But to return to *Eisenbach*. It has in all three Baths; two of which are conveniently built; the third made by the Water let out of the former, is called the *Snake-bath*, from the Number of Snakes coming into it immediately after it is fill'd with these Waters.

33. *March 30.* I set out from *Schemnitz*, and taking my Way from *Glass-Hitten* and *Apfelsdorff* (where the Archbishop of *Presburgh* has a Palace) I afterwards pass'd the River *Gran*, and travelling among the Mountains, I saw certain Entrenchments cast up from one Ridge of the Mountains to the other, to defend themselves against any sudden IncurSIONS; then following the Traces of the same yellow Silver, which owes its Colour to the Ore which it washes above, we came to *Cbrennitz*, standing very high, especially the Church of *St. John*, at some Distance from it, which is supposed to stand upon the highest Ground in *Hungary*. The Town is but small, but the Suburbs are of a pretty large Compass. As the Mine here is the oldest, so it is the richest in Gold of all the seven in these Parts, which are, *Schemnitz*, *Cbrennitz*, *Newsol*, *Koningsbergb*, *Bochantz*, *Libeten* and *Tiln*.

The Gold Mine of *Cbrennitz* has been work'd, for very near a thousand Years, being nine or ten *English* Miles in Length. It has one *Cuniculus* or Horizontal

Passage, call'd the *Erbstall* of 800 Fathoms in Length, its Depth being at least 170 Fathoms; into which they do not descend by Ladders, but are let down in certain Seats of Leather, broad and conveniently contriv'd, fastned to the End of a Cable, by the gentle Turning of a Wheel, to which the other End of the Cable is fastned. This Mine has six perpendicular Schachts, Shafts or Pits, (1) That of *Rudolphus*, (2) of *Queen Anne*, (3) *Ferdinand*, (4) *Matthias*, (5) the *Windshacht*, and (6) *Leopold*. I went into the Mine by the first, 108 Fathom deep, and after many Hours Stay there, was drawn out again by *Leopold's* Schacht or Pit, in a strait Line above 150 Fathoms, a Height surpassing that of the Pyramids by a third Part. It was kept up on all Sides with fair Trees, laid upon one another from the Bottom to the Top, in the same Manner as all the other Mines are here, that have not Rock on all Sides. Most of the Veins run to the North and East, and they work towards one, two or three, as they call it in the Miners Language, who direct themselves Under-ground by a kind of Compass, not of thirty two Points (as is used at Sea) but by one distinguish'd into twenty four, which they divide into twice twelve, as we do our Days, and so compute by Hours.

The Gold Ore is some white, some black, some red and some yellow; but the white with black Spots is accounted the best, as also the Ore next to the black Veins. As this Ore is not rich enough to be made Trial of in small Parcels, to investigate the Proportion of the Gold it contains, so they take another Way for the Proof thereof; by pounding a considerable Quantity, and washing it in a small River running by the Town; which being branch'd out into several artificial Channels, runs over the Ore continually, and thus washing away the earthy Part from the Metalline, becomes thereby tinged below the Town (after its Passage over so much Ore) with a dark yellow Colour, the same with the Earth over which it runs. This is manifest at *Christmas*, *Easter* and *Whitsuntide*, on each of which Feasts, the Miners ceasing from their ordinary Works in the Mines for two Days together, the River flows as clear below as it does above the Town.

There have been Pieces of pure Gold found in this Mine, of which I have seen some in the Emperor's and Elector of *Saxony's* Repositories, one of the Breadth of the Palm of my Hand, others somewhat less; but these are esteemed great Rarities. The yellow Earth of the Grounds about *Cbrennitz*, but especially of the Hills to the Town are not without Gold, which is the Reason that a great Part of one of those Hills is quite dig'd away, the Earth having been wash'd and managed in the same Manner as the pounded Ore, not without good Profit. *Matthias Dollinger*, the Surveyor of the Mine at *Cbrennitz* (who entertain'd me very obligingly) has of late found out a certain Engine to pound the Ore much finer than it was before; by which Means they now obtain a considerable Quantity of Gold out of that Ore, which otherwise would have yielded none.

There are certain Passages in this Mine, cut through the Rock, which being long disused, the Sides which were formerly spacious enough to carry the Ore through, were grown now so near one another, that we were scarce able to pass. Their Way of conveying the Ore from Place to Place, or to the Bottom of the Pit (from whence it is drawn up) is performed by a certain Chest they call the *Dog*: It is higher behind than before, and runs upon four Wheels, having a Tongue of Iron at the Bottom, which being fitted into a Channel of Wood, cut in the Middle of the Bottom of each Passage, cannot deviate thence, so that a little Boy runs with 300 or 400 Pounds Weight of Ore in the Chariot before him, without any Light, through those dark Passages with great Swiftnefs, and coming out, turns out the Ore upon the Ground, and so back again thro' the same Way he came. They make Use of another Engine or Chest, altogether like this, except that instead of an Iron Tongue, it has four Rowlers, besides the four Wheels; with this they carry the Ore from the Mouth of the Mine, or down the Hills to the *Buchworke*, (as they call it) where it is pounded and washed, the

Way

Way being laid all along with Fir-trees, and so contrived, that the Rowers must needs rowl upon the Fir-trees, without being able to over-turn or run out of the Way, so as to be managed by a Child, and sometimes a Dog, there passing scarce a Week but that betwixt 300 and 400 of these Chariots, containing each 400 Weight of Ore, are carried down thus to every *Buchworke*. There were then in this Mine two very pernicious Damps, besides others that were less dangerous; one was in a *Schacht*, *Shaft*, Pit or *Puteus*, the other in a *Stall*, as they call it, or Passage, or *Cuniculus*; no Lamp would burn in them for any Time, and so long as they did, the Miners would venture to stay there; but as soon as they went out, they were drawn up again: They find these Vapours more pestiferous, where the Water is very high; but that in the *Cuniculus* they were in good Hopes to correct by Perflation, and digging another Passage into it.

They told me, that at one Time they lost twenty-eight Men in four several Passages, *viz.* seven in each *Cuniculus*. At the first sinking of *Leopold's Schacht* or Pit, they were extremely troubled with pernicious Damps, which they qualified in this Manner: They fix'd a Tube reaching from the Top to the Bottom of the Pit, but this not answering altogether their Expectations, they were obliged to have Recourse to another Invention, *viz.* by stopping the Pit, by Means of a broad flat Board, which covered all the Sides of it, except where the Tube was, and so forced out all the Air in the Pit through the Tube, which they were forc'd often to repeat till they made several other Passages into it, whereby the Air is render'd wholesome enough; for as I was drawn up through it, I found not the least Difficulty in Breathing. *Alttermans* Fore-stall or *Cuniculus*, 500 Fathoms long, was, by the Carelessness of a Boy, wiping the Snuff of his Lamp upon the Wood, burn'd in 1642, and fifty Men smothered in it; they were all afterwards taken up, except one, whose whole Body seem'd to have been consum'd by the Corrosiveness of the Waters of the Mine; there remaining nothing but his Cloaths.

34. This Mine also contains red, white, blue and green Vitriol and vitriolate Waters. There is also in this Mine a certain Substance adhering to the Gold Ore, and consisting of small pointed Parts like Needles of a purple Colour, and shining, the Colour of it being yellow like Brimstone, they give it the Name of *Antimony* of Gold. Various Sorts of Crystals are also found here, and among them some yellow ones.

Near the Gold Mine in the same Hills, is a Vitriol Mine, at least eighty Fathom deep; containing a red, and somewhat greenish Ore or Earth. This they infuse in Water for three Days, and then pouring it off, boil it for seven Days successively in Leaden Cauldrons till it is coagulated to a white thick Substance, which being reduced to a Calx in a Furnace, they keep for the making of *Aqua Fortis*, or the separating Water used at *Schemnitz*. Where they pound the Gold Ore, a Foundation of Wood is laid, at least three Yards deep, upon which they spread the Ore. Over this are twenty four Beams, covered at the Bottom with Iron, for the better grinding of the Ore, which is always covered with Water, and the Work continued Day and Night without Intermission, making Use of Fir, or some other resinous Wood, instead of Candles.

This Grinding, as I told you, is performed by the twenty-four Beams, moved by four Wheels, *viz.* six Beams by each Wheel; the latter, which runs from the pounded one, being let into little Pots or Cisterns, perhaps seven or eight one after another, and at last into a very large one, of perhaps half an Acre of Ground; which, after it is well settled, is let out.

The pounded Gold Ore they call *Slich*, among which they account that the richest, which is nearest to the Beams, where it is first pounded: Then they take the *Slich* washed so long, as, perhaps, in a hundred Pounds Weight there may be half an Ounce, or perhaps an Ounce of Gold and Silver, two Thirds whereof are generally Gold, (the *Chremnitz* Ore being rarely without some Mixture of Silver, as the best of the *Schemnitz*

Silver Ore contains, for the most part, an eighth Part of Gold, in Proportion of the Silver:) To this *Slich* they add Lime-stone, and *flaken* and melt them together in the Melting-Furnace. This Melting produces that they call *Lech*, which *Lech* being burn'd with Charcoal to render it more porous, is then call'd *Rost*. This *Rost* they mix with Sand, and melt it again in the Melting-Furnace, then let it out into the Pan, and proceed as in the Melting of Silver.

Among several other Ways they have to separate the Gold from the pounded Ore, they have one perform'd without the Use of Lead, *viz.* The pounded Ore being well wash'd, they lay it in Powder upon Cloths, so that by the easy descending of the Water over it, and their continual stirring it, the earthy Parts are wash'd away, and the heavier and metalline remaining on the Cloth. In the same Manner they proceed with Sheep-skins and Wool, being placed where the Rivulets come either from the Works, or the Hills. The Cloths in which the Ore is thus settled, they wash in several Tubs, and the Water, after settling, is poured off from its Sediment: This Sediment being again washed several Times, and stirr'd up in several Vessels, they at last sprinkle Quicksilver upon it, and knead it well together for two Hours; then washing it again in a wooden Vessel, (after they have first separated good Part of it, which the Quicksilver touches not, by striking the Vessel against their Legs) they reduce the Mixture of Gold and Quicksilver into an *Amalgama*.

After this, having separated again the Quicksilver, by straining it through a coarse Cloth first, and afterwards through a fine, they put the remaining Mass upon a perforated Plate, which they set over a deep Pan placed in the Earth, in the Bottom of which is a good Quantity of Quicksilver: Over this Pan and Plate they lute a Cover, and making a Charcoal Fire upon it, force the Quicksilver, as yet remaining with the Gold, downwards to the rest in the Bottom of the Pan, and afterwards taking out the Gold, purify it once more in the Fire.

35. Having passed several Days at *Chremnitz*, I travelled forward to *Newsol*; and as I passed over the Hills on the East-side of *Chremnitz*, upon the Top of one of them I saw a vast Stone or Rock alone, near the high Road; these Hills being for the most Part covered with Wood, which are of great Service to the Gold Mine. Passing on further, we came in Sight of the Village of *Lila*, near which are the Quicksilver Hills. From hence we came to the River *Gran*, upon which *Newsol* stands, which has a handsome wooden Bridge over the River, and a handsome Row of Piles cross the River to stop the Wood, which about ten Miles higher is thrown into the River, and without any further Labour, by the Force of the Current, carried down to *Newsol*, for the burning, melting, casting, and hammering the Copper in that Copper-Mine.

Newsol is a very handsome Town, having a spacious Piazza, at the upper End of which stands a fair Tower. The Church, which stands within the Castle, is covered with Copper, and within it are many carved Figures of Wood and Stone Relicks, which, though not much revered, yet are preserved by the *Lutherans*, who are in Possession of this Church; the same being observed in most other ancient *Lutheran* Churches.

All about this Town are the greatest Copper Mines in all *Hungary*; but the Copper itself being so strongly united to the Stone, or Ore, the Copper Ore of this Mine is burnt and melted fourteen Times before it produces Copper fit for Use. The first Melting is perform'd with a certain Stone they call *Flust-stein*, and its own Dross, and with *Kis*, or a Sort of *Pyrites*. Then it is carried to the *Rost-hearth*, as they term it, being great Stacks, or Heaps of Billets, upon which it is laid, and these being set a-fire underneath, the Ore is burned into a Substance called *Rost*; which being repeated thus seven or eight Times, it is then melted again in the Melting-Furnace, and at two Furnaces more at *Mis-mills*, and twice more at the Hammer. This *Kis* is brought hither from *Jesina*, which melted is used in the Melting of Silver.

At *Mismills*, not far from hence, they have a Way of getting a certain Quantity of Silver out of the Copper, by adding Lead to it whilst it is a melting, after which they take out the melted Metals, mixed together in Spoons or Iron Dishes. After it is cold, they give it a quick Fire again as it lies upon cross Bars, until the Silver and Lead melts and falls through. The Copper after by many reiterated Meltings it is made fit for Use, is cut in Pieces by very large pointed Hammers, moved by Mills, and afterwards formed into Plates, with other flat and round Hammers.

36. The Surveyor of the Works of *Newsol* did not only entertain me with a Present of Wine and Fowls, but also gave me a Letter to the Governor of the Copper-Mine of *Herrn-grundt*, to procure for me the same Treatment there. This is a small Town seated very high between two Hills, about an *Hungarian* Mile from *Newsol*: He found the high Lands thereabouts all cover'd with Snow, whereas in the Valleys between this Place and *Newsol* we met with none. We felt the Air very piercing at the Entrance of this Mine, being only in our Miners Habits, which consist only of a Linnen Coat and Drawers, a stiff round Cap, like the Crown of a Hat, a Leather Apron turn'd behind, and two Pieces of Leather fastened to the Knees, to defend them against striking upon the Rocks, or the Fall of any Earth upon them. But within the Mine it was warm enough.

I passed into this Mine through a *Cuniculus* called *Tachstoln*, and visited most of the remarkable Places in it; you descend into it by certain Trees set upright, with deep Notches cut into them to rest the Foot upon. As this Mine lies very high in the Hill, so they are not troubled with Water, but often with Dust, and sometimes with very pernicious Damps. In one Place they shewed me how they had remedied a very pestiferous Damp, by blowing a vast Pair of Bellows for several Days together. But what is most observable is, that those Damps are not only to be found in those Parts of the Mines where it is full of Earth and Clay, but also where it is rocky. I saw one Place where there had been a very bad Damp, surrounded on all Sides with so hard a Rock, that they had been forced to open their Way with Gunpowder ram'd into long Holes, and so blown up; for it is to be consider'd, that a great Part of this Mine is within the Rock, where consequently they need no Timber to keep it up, as they are forced to do in those Passages, that have either Earth on both Sides, or Rock on one and Earth on the other Side. The Passages of this Mine are neither horizontal, nor near to a perpendicular, but moderately inclining up and down, having many large Cavities within.

In one Place where we descended, we found the Passage stop'd by some Earth lately fallen in; but one of our Guides finding the Earth yet loose, without more ado digged his Way through, and, notwithstanding the Earth fell continually upon him, got through, though a great Heap of Earth tumbled after him, which they soon carried off with their Engines call'd *Doggs*, and so clear'd the Passage. This Mine has very large Veins, such as they call *Cumulate*, and the Ore is very rich, a hundred Pound Weight of Ore yielding commonly twenty Pounds of Copper, sometimes thirty, forty, fifty, and even to sixty in the Hundred; but a great Part of it is firmly united to the Rock, nay, in many Places the Rock and Ore are one continued Stone, with this Difference only, that one Part of it will yield Copper, the other none; which is distinguish'd only by the Colour, and that at first Sight, the Copper Ore being for the most Part either yellow or black, the yellow being pure Copper Ore; whereas the black contains also a Proportion of Silver.

This Mineral produces white, green, and blue Vitriol, and a red clear transparent; as also a green Sediment of a green Water, call'd *Berg-Green*, used by Painters. Here are also found Stones of a beautiful green and blue Colour, and one Sort upon which *Turcoises* have been found, and therefore call'd the *Mother of Turcois*.

37. But above all the rest, there are two Springs of

Vitriolate Water here (call'd the New and the Old *Ziment*) which turn Iron into Copper, and consequently deserve our peculiar Observation. These Springs lie very deep in the Mine, and commonly the Iron laid in it, is turn'd into good Copper in about fourteen Days Time, with this further Advantage, that the worst and most useless Iron is turn'd into the purest Copper, much exceeding in Goodness that of the Ore, which must run through many Fires before it is render'd useful, whereas this made by the Vitriolate Springs is very malleable, and easily melted; for I myself have melted it, without the Addition of any other Substance. I took a good Quantity of this Copper out of the Old *Ziment*, and among the rest a Piece of Copper of the Figure of a Heart, which had been laid in it eleven or twelve Days before, having the same Figure, but was as perfectly Iron then, as it is Copper at this Day. Some will not allow this to be a Transmutation of one Metal into another, but that this Water being saturated with the *Vitriolum Veneris*, and meeting with a Body so apt to receive it, as the *Mars*, or Iron, it deposes *Venus*, who immediately insinuating herself into *Mars*, precipitates his Substance, and in Lieu thereof substitutes her own Body. But this Opinion is sufficiently contradicted by Experience; for though, in the Changing of Iron into Copper, many Parts are separated, and lie at the Bottom of the *Ziment*, yet the same melted produces no Iron, but an excellent Copper, as I found it by my own Experience. I have since seen such a Kind of Transmutation attempted by Art, and not without Success, which deserves Consideration. After having taken a full View of the Mine, I was reconducted to the Surveyor's House, who entertain'd me very handsomely, presented me with a Chain of Copper transmuted in those Springs; and among other Curiosities shew'd me an exact Map of this Mine, with most curious Delineations of all its Passages, with a Scale to measure the Distances of the Places in the Mine; which, for its Extent, Number of People, and admirable Order, might well be compared to a very considerable subterraneous City. I saw him take some Copper Ore, which being well heated and cast into common Water, made it like the natural Baths which arise near these Hills. At parting we drank out of a Cup made of this transmuted Iron, gilt over, having a rich Piece of Silver Ore fastened in the Middle of it, with this Inscription engraven on the Outside:

*Eisen ware ich, Kupfer bin ich
Silberg trag ich, Goldt bedeckt mich. i. e.*

Copper I am, but Iron I was of old;
Silver I carry, cover'd am with Gold.

The yearly Profit arising to the Emperor from his Mines, is computed at 120,000 *l.* Sterling. But if more of these Vitriol Springs should be discovered (as some have already been at *Zolnock*, and other Places near the *Carpathian* Hills) the same would be considerably increased. But if like Springs saturated with the Vitriol of Silver, should be discovered near the Silver Mines, and the same by a skilful Artist improved to the best Advantage, the Profit likely to arise from such a Transmutation would amount to an immense Sum.

38. From *Herrn-grundt* we travel'd to *Stubn*, about twenty *English* Miles from *Newsol*, and fourteen from *Chremnitz*. Here we saw, near a Brook, several hot Baths, highly esteem'd, and much frequented; the Water is very transparent, of a sulphureous Smell, with a green Sediment; it colours the Wood over it green and black, but does not change the Colour of Metals so soon as most others: I left Money in it a whole Night, which I found but faintly colour'd.

There are seven Baths here: 1. The Nobleman's Bath. 2. The Gentleman's. 3. The Country-man's. 4. The Country-woman's. 5. The Beggar's Bath. 6. For such as are infected with the *French* Disease. 7. The Gypsies Bath. They are much of the same Degree of Heat as the King's Bath in *England*, in a fine Plain surrounded with Mountains, those to the East being the same

same, which on the other Side are so rich in Metals. From *Stubn* we went on to *Boinitz*, crossing the River *Nitras*, and leaving *Privitz*, a large Town, to the Left of us. At *Boinitz* are also five natural Baths, of a very gentle Heat, covered all of them under one large Roof. Into the Nobleman's Bath you descend on all Sides by strong Stairs, the other four being of Wood, but handsomely built.

From hence we continued our Journey to *Westonitz*, fourteen *English* Miles, and the next Day to *Trenschin*, which they count four *Hungarian*, or twenty eight *English* Miles, which took us up a whole long Day's Journey. *Trenschin* is a very handsome City upon the River *Waag*, having a very handsome wooden Bridge over that River, and a fair Piazza. The Jesuits Church is a noble Structure, and the Castle (belonging to Count *Jellbafey*,) seated very high; about a Mile from the City are two choice Baths, and the Country hereabouts affords several good Springs of Mineral Waters. Here it was that we met with Count *Rothal*, who being then on his Way to *Eperies* in Upper *Hungary*, to treat in the Quality of the Emperor's Commissioner, with those of *Abaffi* Prince of *Transylvania*: I engaged some of his Attendants to make an Enquiry into the Salt Mines there, of which they afterwards gave me the following Account.

39. About two *English* Miles from the said City of *Eperies*, is a famous Salt Mine 180 Fathoms deep; for the most Part in an earthy, and not a rocky Ground.

The Miners descend it first by Ropes, and afterwards by Ladders. The Salt Veins are so large, that entire Pieces have been found of 10000 Pound Weight, which they commonly cut into long square Pieces of two Foot in Length, and one in Thickness, which is afterwards ground betwixt two Stones. Though the Mine be cold and moist, yet is the Salt not easily dissolved: Notwithstanding which, great Part of the Water of the Mines is so much impregnated with Salt, that when boil'd, it affords a bluish Salt, which the Country People give their Cattle. The Colour of the Stone Salt of this Mine is somewhat inclining to a grey; but when ground to Powder is very white, and consists of pointed Parts, or Fossils. Another Sort of Salt there is also, which consists of Squares and Tables; and they have a third Sort with long Shoots. There is also some Difference in the Colour of the Salt

of this Mine, some of which is grossly mix'd with the Earth participating much of its Colour; and even that which is as pure as Crystal, often receives divers Tinctures: I saw once in the Middle of a Crystal Salt, with long Shoots, a delicate blue; and at the Count of *Rothal's* a large Piece of a transparent yellow; some Pieces are so clear and so hard, that they carve them into different Shapes and Figures like Crystal. Of all these Sorts I brought some Pieces with me to *England*. But it is Time to take our Farewell of the Mines, and to return to our Journey; which we continued near to the River *Waag*, to *Novo Mnesto*; and the next Day to *Tirnaw*, seated in a Plain. The following Day we reach'd the *Danube*, and took up our Quarters that Night at *Presburgh*, (of which we have spoken before.) Here passing the *Danube* in two Ferry-boats, we travelled by *Homburg* Tower, by *Haimberg* Hill, by the Town of *Haimberg*, by *Rogelsbrun*, *Vischet*, and *Swechet*, to *Vienna*. We observed in those Countries in Upper *Hungary*, through which we passed, Things wore a quite different Face from that of *Austria*, and from what in all Likelihood they have been formerly; most of them having been subject to the Ravages of the *Turks* and *Tartars* in the last War, and some of them being forced even now to pay a yearly Tribute to the *Turks*. The Inhabitants live so meanly, that they scarce afford themselves necessary Furniture for their Houses. Even in those Countries under the Emperor's Jurisdiction, many of the Inhabitants, being either *Lutherans* or *Calvinists*, and in constant Fear from the *Roman* Clergy, are but little satisfied in their Condition.

Formerly almost all the Mine-Towns were inhabited by *Lutherans*, but now the Officers are all *Roman Catholics*. And at *Schemnitz*, one of the *Lutheran* Churches was taken from them. And we were inform'd, that Count *Palfi* had enjoyn'd all his *Lutheran* Tenants, at and about *Boinitz*, either to change their Religion, or to quit their Houses and Lands. You meet also in Places of *Hungary* with *Anabaptists*; and near the Frontiers of *Transylvania*, with *Unitarians*. Even the *Roman Catholic Hungarians* are not a little jealous of the *Germans*, and the Court of *Vienna*; because they think them prefer'd before them, and that their Privileges are not well maintain'd, which is the true Source of almost universal Disaffection.

APPENDIX to the former SECTION.

A Journey from *Vienna* to *Venice* by Land, with a distinct Account of the Quicksilver-Mines in *Friuli*, including the Author's Observations in his Passage through *Styria*, *Carinthia*, and *Carniola*.

By Dr. EDWARD BROWNE.

1. The Design of the Author's Journey. A Description of the Baths at *Baden*, four German Miles from *Vienna*. Remarks upon the Nature and Use of these Baths.
2. A Description of the City of *Neustadt*, and some other Places in *Austria*.
3. An Account of the Town of *St. Veit*, or *St. Faith*, the Antiquities in its Neighbourhood, and the singular Method of installing a Duke of *Carinthia*.
4. A Description of various Antiquities in this Neighbourhood, and of the Civilities paid to the Author, by several Scotch Officers in the Imperial Service.
5. The wonderful Passage into *Carniola* through Mount *Luibel*, resembling that of *Paufilipo* in the Kingdom of *Naples*.
6. An Account of the ancient *Nauportus*, famous for the Landing there of the Argonauts.
7. A curious and copious Description of the *Zirchnitzer-See*, esteemed the greatest natural Curiosity of its Kind in the World.
8. The Author's Journey to, and Description of the Quicksilver-Mines at *Idria* in *Friuli*.
9. The Author's Remarks upon the Country and Inhabitants.
10. An Account of *Palmanova*, a Fortress of the Venetians, held at this Time to be the best in Europe, and considered as the great Bulwark of that State against the *Turks*.
11. The Author continues his Journey to *Venice*, and after a short Stay there, resolves to return by Land to *Vienna*.
12. A curious Description of the Venetian Dominions on that Side, and of the different Manners of the People on the opposite Sides of the Bridge over the *Fella*.
13. Some further Remarks upon the Country of *Carinthia*, and on the Lead and Quicksilver Mines therein.
14. The Author's Remarks on the most considerable Passages in his Journey.
15. Some additional Observations upon the foregoing Sections.

1. **A**FTER having taken a View of several Places about the City of *Vienna*, I made a Journey to *Venice* on Horseback, for the Conveniency of staying at a Place, or going out of the Road at Pleasure. The first Place of Note we saw was *Baden*, four German Leagues from *Vienna*, a walled Town, seated near a Branch of Mount *Cetius*, the common Boundary of *Noricum* and *Pannonia*. Near the City passes a River call'd *Swechet*, which about a German League from *Vienna* falls into the *Danube*. It has three Churches, that of the *Austin* Friars, of our *Lady*, and *St. Stephen*. But what makes this Place most remarkable, are its nine Baths, two whereof are within the Town, five without the Wall, and two beyond the before-mentioned Rivulet.

The *Duke's-Bath*, being the chief and by much the largest, is twenty Foot square, in the Middle of a House of the same Figure built over it: The Vapours pass through a wooden Tunnel at the Top, but the Water is carried in at one Corner of the Bath, near the Bottom, by wooden Pipes, under the Town-Wall from the Spring-head, which rises not far thence to the Westward.

The Springs of all the other Baths are conveyed into them through Holes of the Plancher, they being on all Sides cover'd with Wainscot. The Water is generally transparent, inclining something to a Blue, and makes the Skin appear pale, like the Smoak of Brimstone: It turns Metals black in a few Minutes, except Gold (the Colour of which it heightens,) but the Coin of the Country (which is a Mixture of Copper and Silver,) it turns in an Instant from a White, into a dark Yellow, which however soon after turns black.

The Water gives a delicious green Colour to the Plants it washes, and sometimes leaves a Scum upon them, of a Purple mix'd with white. Near the Spring-head it has a great Resemblance to the Sulphur River between *Tivoli* and *Rome*, but its Scent is not so nauseous, nor does it incrustate its Banks as that does.

This Spring-head is worth the Observation of a curious Traveller, in Regard it rises under a rocky Hill, into which is cut an arched Passage of forty Yards Length, through which I passed, and found it as hot as a Stove, occasioned by the hot Spring-Water running under it, (like that of *Tritola* and *Bajæ*) the greatest Part of this Cave being incrustated on the Tops with a white Substance, which towards the Entrance becomes harder and stronger. I had some of the Pipes which conveys the Bath-Water opened; and from the Upper Part of these Pipes took off a good Quantity of Powder like Flower of Brimstone sublimated; whereas nothing like it was found in the lowermost Parts of the same Pipes. I dropp'd *Oleum Sulphuris per Campanam* into this Water, which it received without the least Agitation: But the *Oleum Tartari per deliquium* dropp'd into it, caused an Ebullition, as in the making of *Tartar Vitriolate*.

The (2d) Bath within the Wall is call'd, *Our Lady's Bath*, being about twelve Foot broad, and twenty four in Length, and one End of it under a Church of the same Name. This seems to be more impregnated with Sulphur than the rest, and is bluer, leaving a yellow Flower upon the Boards, as the rest do a white. The (3d) is the *New Bath* without the Gate. The (4th) the *Jews Bath*, having a Partition in the Middle to separate the Men from the Women. The (5th) *St. John's Bath*, of a triangular Figure. The (6th) the *Beggars Bath*; so shallow, that they are forced to be drawn in it. The (7th) is the *Bath of the Holy Cross*, about two Fathoms square, intended for the Clergy. The (8th) *St. Peter's Bath*, the Waters of which are greener than the rest. The (9th) is the *Sour Bath*, set about with Stone Balasters, with a fair *Cupolo* and Lanthorn on the Top. The Water of it is very transparent, and will colour Money black without touching it; but if once cold, will not change the Colour of Metals although they be boil'd in it. The hottest of these Baths reach not the Heat of the Queen's Bath in *England*. They use no Guides here, but direct themselves with a short turn'd Staff.

2. A Captain in the Emperor's Service presented me with a *Gempskugel*, which is said to be an Excrecence upon the Liver of a *Rupicapra*, or wild Goat, in the Mountains of *Tyrol*, to which they attribute a signal Vertue in the Diseases of the Liver, malignant Fevers, and the Plague itself. The Soldiers of these Parts make great Account of it, being possess'd with an Opinion, that it renders them invulnerable for two Hours after they have taken it. From hence I travelled on to *Newstadt*, one of the most considerable Cities of *Austria*: It is of a square Figure, having a Piazza in the middle; it has four Gates, three whereof are to be seen from the Piazza. *St. James's Church* has two Steeples in the Front. The Emperor has a large square Castle here, having a Tower on each Corner, which, as well as the greatest Part of the Town, is to be seen at a great Distance, its Situation being in a low marshy Ground encompass'd with a Ditch and a double Wall. Here Count *Peter Serini*, and *Frangipani*, the Heads of the late intended Rebellion in *Hungary*, were beheaded.

From hence we went on through the Plains towards Mount *Simeron* (Part of Mount *Cetius*), upon the Top whereof you see a great Heap of Stones, which make the Boundary betwixt *Austria* and *Styria*; the Ascent of it is very rocky, and so steep, that twenty four Horses, or Oxen, are scarce able to draw up a Coach with Safety. In our Way we pass'd by *Newkirckel*, where is a Chapel with a little red Pinnacle, built, as they say, by an *English* King, and lodged that Night at *Schotwein*, or *Schadtwain*, a strong Town, situate on the Passage leading up to the Rocks betwixt the Hills; the Houses on the Sides of the Rocks being inaccessible but from the Top. This Town having the Mountain on both Sides, and being shut up with a Gate at each End, is therefore by some stiled *Claustra Austriae*; and a small Brook coming down from the Hills, passes under the Wall of it. From hence we travelled to *Mehrzuschlag*, where they beat out Iron into Bars: From thence passing by a swift Rivulet call'd *Murtz*, to *Keimburg*, and by a Castle belonging to the Family of *Stubenberg*, one of the most ancient in *Germany*, came to *Prug*, or *Muripons*, a well built Town, with a fair Piazza, seated upon the River *Mur*, or *Muer*, a swift large River, but not navigable. There is another Town of the same Name upon the River *Leyta*, call'd *Prug* upon the *Leyta* for Distinction's Sake.

3. We went on from hence to *Lubeim*, where the Staple of Iron is; and thence to *Knitelfeldt* and *Judenburg*, along the River *Mur*. The next Day to *Hundtsmark* and *Newmark*, and so to *Freisach*, supposed by some to have been *Virunum*, and by others *Vacorum*, in Sight of *Altenbofn*, the Castle of *Itrowitz*, and the Castle of *Tottenbrun*, which belongs to the Archbishop of *Saltzburg*. From hence we travell'd to *St. Veit*, or *St. Faiths*, (*Vitapolis*) formerly the Capital of *Carinthia*, seated at the Confluence of the two Rivers *Glan* and *Wunich*, encompassed with a Wall; it has six Churches, and a handsome Piazza, in which stands a noble Fountain, the Basen being of white Marble cut out of one Stone, five Fathom in Circumference, which was brought hither from *Saal*, or *Zolfeldt*, a Place near it, abounding with *Roman* Antiquities, of which this is one.

In Sight of this City are four considerable Hills, viz. that of *St. Veit*, *St. Ulrich*, *St. Laurence*, and *St. Helena*, with a Chapel upon each of them; to all which, upon a certain Day in the Year, the Inhabitants, for thirty *English* Miles round, come in Pilgrimage on Foot. We had here the Diversion of a *Latin* Comedy at the *Franciscans* Convent; it being then in *May*, we found the higher Hills covered with Snow, whereas the lower were very green, and full of Fir and Larch-Trees. Many of the Inhabitants here are troubled with hard Tumours in their Throats, some as big as their Heads (*Strumatici*), which they are obliged to cover in cold Weather, when they are much discolour'd. There is an Hospital without the City for those, as well as some others that are Blind, Dumb, and Changelings. We observed however, that the better Sort of People, who use a good Diet, were seldom troubled with this Distemper; though their

their Throats much exceeded in Bigness those I saw before in the *Alpine* Parts of *Savoy*.

From hence we continued our Journey to *Saal*, or *Solua*, an ancient *Roman* Colony, mentioned in the Map of *Wolfgangus Lazius*, by the Name of *Colonia Soluensis*, with a Field near it call'd *Ager Soluensis*, or *Zolfeldt*; a Place noted for *Roman* Antiquities, many of which have been carried away into other Parts. Here I saw that so much celebrated Piece of Antiquity of the King's Chairs; being of Stone, set together in the Form of two Elbow-Chairs, turn'd back to back. Upon three of the Stones are Inscriptions, which appear to be much more ancient than the Fabrick of the Chair. At the installing of the Duke of *Carinthia* (whether a King or Emperor) either he or his Representative sits in that Part of the Chair which faces the East, a Peasant sitting at the same Time in the other Part to the West. Among other Ceremonies, the Peasant rising up, presents the Duke with a fat and lean Ox; the Duke being obliged to return the fat one, and keep the lean one, receives afterwards a gentle Box on the Ear, from the same Peasant, and the Instalment is thus concluded.

The Church of *Saal* having had the good Fortune to escape the Fury of the barbarous Nations, is very ancient; and on the Walls has many old *Roman* Antiquities of *Basso relievo*, taken first out of *Zolfeldt*. Among many others, I took particular Notice of these: *A Chariot drawn by two Horses. A Chariot with a Man in it. A Wolf licking of Fruit fallen from a Tree. Hector drawn behind Achilles his Chariot about Troy. Four very fair Heads unto the Middle. Two Wolves, each holding a Horn and a Cup between them, out of which shoots a Vine with Leaves and Grapes*; this is over the Porch. Within the Porch is a *Cupid holding of a Bunch of Grapes*; *Romulus and Remus sucking of a Wolf*. Two Figures over the Crucifix by *St. Christopher*, with some others; all which, as I told you, were brought hither from *Zolfeldt*, where I also saw many Inscriptions; one upon a Stone on the South-side of the Church was this;

HERCVLI. *E*
EPONAE. AUG.
PROSALUTE. IMP.
CAES. M. AVR.
ANTONINI. PI. FE.
LICIS. INVICTI.

As also several *Roman* Coins of Copper and Silver found in these Parts. I brought away a Golden Medal of *Trajan*.

We went from thence to *Clagenfurt*, (the ancient *Claudia*) now the capital City of *Carinthia*, being a handsome four square Town, well fortified with a strong Wall, and a broad Rampart. Its Streets are very regular; and the Piazza in the Middle, being adorned with a Marble Column hath a Statue of the Virgin *Mary* upon it, as also a Statue of the Emperor, and, what exceeds all the rest, hath a most noble Fountain in the Centre, over which is a Dragon of a prodigious Size, made out of one Stone, *Hercules* with his Club standing before it. This was likewise brought from *Zolfeldt*. These mountainous Parts afford three noble massy Fountains, *viz.* those two of *St. Veit* and *Clagenfurt*, and that of *Salzburg* of white Marble. *Clagenfurt* being at that Time full of Soldiers, we were very civilly entertained by several of the Officers, but more especially by Count *Lesley* their Commander in Chief, Baron *Hay*, and Lord *Paisley*, who carried me in the Count's Barge through an artificial streight Channel into the *Werd Sea*, or Lake of *Clagenfurt*, to a Country Seat call'd *Loretto*, most pleasantly seated; having a Chapel belonging to it, built in Imitation of that of *Loretto* in *Italy*, which I found exactly conformable to the Original.

5. From *Clagenfurt*, we turned to the South, and after six or seven *English* Miles, pass'd the River *Drave* over two wooden Bridges, with an Island in the Middle; and within two Hours after entring among the Hills at a Place call'd *Hammer*, (where the Iron is beat out) continued my Journey towards the high and great Moun-

tain of *Luibel*. Soon after we saw ourselves arrived by the oddest Desert of Rocks that can well be imagined, at a great *Cascata* or Water-fall, which having worn out the Rocks underneath, appears at first Sight to be artificial. The Ascent is very surprising, being enclosed with Walls, turning backwards and forwards, to the very Pinnacle of this great Mountain *Luibel*, Part of the *Carnick Alpes*, dividing *Carinthia* and *Carniola*. Coming up as high as the steep Rocks and Peaks would let us, we were amazed to see our Guide lead us Side-ways through an artificial Road into a Passage cut quite through the Mountain, like the famous Grotto of *Pausilipo* by *Naples*. It has a Roof of Wood-work in the Middle, which is continued unto the *Carniolian* Side. The Roof of this Passage is very high, its Length 156 Yards, and four Yards in Breadth, affording daily Passages for Country Carriages and Carts.

Having never heard or read of this surprising Passage, I at first imagined it to be some old *Roman* Work, till I was credibly informed, that it was much later, there being formerly no Passage into *Carniola* this Way; but People entred it by going about a great Way by *Villach*. In ascending this high Mountain, being infested with much Rain, and a fierce Storm, till we came to the highest Part of it, I had the Opportunity to see the Clouds descend, and after it was pass'd to ascend again so high, as to get over Part of the Mountain, and a Stream of them pass'd through the rocky Passage out of *Carniola* to the *Carinthian* Side, directly contrary to our Way, who came out of *Carinthia* into *Carniola*. As we reached this Grotto by a continual Ascent, so no sooner were we got through it, but we descended by Degrees, first to *St. Anna*, two *English* Miles downward, next to *Newstattel*, six or seven Miles lower, and so descending still till we came to *Crainburg*, (the old *Carnodunum*) a handsome Town, seated upon the River *Save*, from whence, through a very pleasant Plain four German Leagues long, we came to *Labach* (*Lubiana*) the capital City of *Carniola*, through which runs the River of the same Name, which afterwards discharges itself into the *Save*. This is a very handsome City, its Castle, which is situate upon a Hill, overlooking two large Valleys to the N. and S. but being commanded by another Hill that lies near it, its Fortifications are neglected of late Years. Mr. *Tosb*, a *Scotch* Apothecary in this City, shew'd me various curious Minerals of those Parts.

6. *Labach* is supposed to be the ancient *Nauportus*, so famous for the Landing of the *Argonauts*, who setting out from *Argos Pelasgicum* in *Theffaly*, sail'd to *Colchos*, on the East side of the *Euxine Sea*; but being pursued by the Vessels of the King of *Colchos*, steer'd their Course Northward to the Mouth of the *Danube*, and passing up that River, till they came to the Confluence thereof with the *Save*, they next went up the *Save*, and so the River *Labach*, till they landed at this Place call'd anciently *Nauportus*, from whence they return'd by the Way of the *Adriatick Sea* into *Greece*. So that in my Travels I had been near the Place of their setting out in *Theffaly*, and at their Landing-place in *Carniola*.

From *Labach* we travel'd towards the *Zirchnitzer See*, or that famous and most surprising Lake of *Zirchnitz*, having the Marshes on our Right, and the Hills on our left Hand, till we came to *Brounitza*; and then passing over them, we reach'd *Zirchnitz*, a Town scarce containing three hundred Houses, but which has given its Name to that stupendious adjacent Lake. Here, having received the necessary Directions and Accommodations from the Hands of the Judge of the Place, for viewing of the Lakes, we went to *Seedorff*, a Village about half a Mile nearer the Lake, and thence to *Niederdorff*, where we took Boat, and spent some Time in taking an exact View of the Lake.

7. This Lake is about nine or ten *English* Miles long, and half as broad, enclosed with Hills at some Distance, and to the South-side with the *Birnbaumir* Forest, of a great Extent, and said to abound with Deers, Wild Boars, Foxes, Wolves, and Bears.

What makes this Lake most remarkable, or rather surprising, is, that every Year, in some Part of the Month of *June*, the Water thereof descends through certain

certain Holes at the Bottom, under Ground; and in the Month of *September* returns by the same Ways, with a very speedy Ascent, rising up to the Height of a Pike, and so covering the Ground again. Whilst the Water remains under Ground, the Earth produces very speedily great Plenty of Grass, yielding Food for Cattle in the Winter; and, during that Time, you may see the Hares, Deer, and other Wild Beasts, resort thither from the adjacent Forrests, of which great Numbers are then taken by the Country People.

The Lake affords vast Plenty of Fish, though that as well as Part of the adjacent Country being a Lordship belonging to the Prince of *Eckenberg*, the Country are not allow'd the Liberty of Fishing, except upon the retiring of the Water, when they take vast Numbers of them, by intercepting their Passage as they are going under Ground. As far as I was able to learn, this Lake brings not up any unknown Fish at the Return of the Waters, but only such as went down, and are found in most other Lakes, such as Carp, Tench, Eels, the which having spawn'd before they go down, the Fry has about three Months Growth, when they are brought up again through the same subterraneous Passages.

The Water in this Lake is of a very different Depth, in some Places not above four Foot, and not far thence perhaps twenty Yards; so that the Ground being as it were divided into small Hills and Valleys, the Fishermen have given peculiar Names to seven of them, which in the *Slavonian* (this Country Language) are, *Vodanas*, *Resbetu*, *Sitarza*, *Ribiskiamia*, *Naknifou*, *Levishe*, *Kot-el*. I myself pass'd over five of the aforementioned Valleys, and saw a remarkable Stone call'd the *Fishers Stone*, because, by its Appearance, they guess when the Water will begin to retreat under Ground; as also by a peculiar Hill, which being higher than the rest, becomes a pleasant Island at the Return of the Water.

Upon the most exact Enquiry I could make, I could not find that this Lake had fail'd one Year to descend and ascend again; or how long it was since this Property had first been observed; so that it seems more than probable, that this Lake does not owe its Rise to any Earthquake, but has been the same from all Antiquity, and, if my Conjecture fails me not, is the *Lugea Palus* of *Strabo*, who, notwithstanding this, as well as all the other ancient Geographers, make not the least Mention of this surprising Quality.

The nearest Part of the Sea unto this Lake is the *Sinus Tergestinus*, and *Sinus Flanaticus*, or the Gulph of *Trieſte*, and the Gulph of *Quevero*; at within a few Miles Distance, divers considerable Rivers have their Sources, as the *Labach*, the *Corkoras* or *Gurk*, the *Colapis* or *Culp*, which falls into the *Save*, and the *Vipao* or *Amnis Frigidus*, which runs into *Lysonſo* by *Goritia*, besides divers others. I observed the Ground about this Lake very hollow, and full of Caverns: The like I took Notice of in several other Parts of *Carniola*, not unlike unto *Elden Hole* in *Derbyſhire*; and, if we may give Credit to what several of the best Persons at *Zirchnitz* assured us, the Prince of *Eckenberg* had the Curiosity to go into one of those Caverns, and came out again upon the Side of a Hill.

8. Being upon my Departure, I was in some Doubt, whether I should go to *Tkrefte*, (*Tergestum*) a Sea-port in the *Adriatick Sea*, belonging to the Emperor, and thence by Ship to *Venice*; but having a great Curiosity to see the famous Quickſilver Mine at *Idria* in the Country of *Goritia*, I went from *Zirchnitz* to *Lovec*, and passing through the mountainous Parts of that Country, came to *Idria*, enclosed with Hills on all Sides, a River of the same Name running just by it; which is stiled by *Leandro Alberti*, *superbissimo fiume d'Idria*, though it was very small and shallow then, and after great Rains, scarce has Water enough to carry down the Fir-trees, and other Wood made use of in the Mines, for Building and Fuel, which being cast into the Water above this Place, are stop'd by some Piles set cross the River, as we observed in the River *Gran* near *Newſol*.

The only Thing that makes this Town worth taking Notice of, are the adjacent Quickſilver Mines; the En-

trance into which being somewhat lower than the Town itself, this makes them somewhat subject to Water-floods, to empty which, they are provided with excellent Engines, and other Devices: The deepest Part of the Mine, from its Entrance, is betwixt 120 and 130 Fathoms. This Mine affords two Sorts of Quickſilver; one call'd the Virgin Quickſilver, the other plain Quickſilver. They call Virgin Quickſilver that which discovers itself without the Assistance of Fire, and is either found in the Earth or Ore naturally as it is, or falls in small Drops, or sometimes streams out in a considerable Quantity down into the Mine. Thus seven Years before I saw it, they had such a Stream coming from the Earth, which at first was as small as a common Thread, and afterwards as big as a good Pack-thread, but did not continue for above two or three Days. They also reckon that Sort of Quickſilver, Virgin Mercury, which is separated by Water in a Sieve first, and afterwards in a long Trough with small Holes at one End, without the Help of any Fire.

Plain Quickſilver, or Mercury simply so called, is that, which being not at first perceivable to the Eye, is forced by Fire either out of the Ore or native *Cinnabar* of Mercury, which they dig out of this Mine. The Ore is of a dark brown Colour, mix'd with red, but the best is a hard Stone, which before they put into the Fire, is first grossly powder'd and work'd by the Sieve, to separate the Virgin Quickſilver, if any be found in it. The Quickſilver Ore of this Mine is the richest of all that ever I saw, for it generally contains half Quickſilver, or in two Parts of Ore one Part of Quickſilver, and sometimes, in three Parts of Ore two Parts of Quickſilver. I descended this Mine by the Pit of *St. Agatha*, by Ladders, and came up again by that of *St. Barbara*; an Ascent of 639 Staves or 89 Fathoms. I saw in the Laboratory, where the Quickſilver is separated by the Force of Fire, 16,000 Retorts of Iron, each of which costs a Crown at the Iron Furnaces in *Carinthia*. They employ at once 8000 Retorts, with as many Recipients, for the drawing over the Quickſilver in sixteen Furnaces, fifty Retorts in each, viz. twenty-five on a Side, twelve above and thirteen below of each Side.

June the 12th, 1669, When I was there I saw them carry away into Foreign Parts forty Saumes of Quickſilver, each Saume containing 315 Pounds Weight, to the Value of 4000 Ducats: It is carried upon Horses Backs, two small Barrels upon each Horse. In the Castle I saw 3000 Saumes of Quickſilver at once, all made up in double Leather, and in another House as much of the best Ore as could be separated in two Years Time, unless they should have more than ordinary Plenty of Wood coming down by the Rains; though, by reason of the high Hills about them, it snows oftner here than it rains.

It is a Custom for all the Strangers who come into the Castle of *Idria*, to have their Names set down in a Register-Book kept for that Purpose, with the Names of their Native Country. In the large Catalogue thereof, we met with but few *English* Mens Names, and of late Years only with Mr. *Evelyn* and Mr. *Pope's* Names, with their Companies, who after their Return, had their Observations inserted in the *Philosophical Transactions*. As the better Sort of the Inhabitants of this Town generally speak five Languages, viz. the *Friulian*, *Slavonian*, *German*, *Latin* and *Italian*, (besides that some also speak *French*) so it is very fit for the Reception of Strangers.

9. From *Idria* we passed the *Swartzenberg* or Black-Mountain, and descending ten Miles through a stony Country, came to *Adeſhini*, and so to *Goritia* (the old *Noreja*) the chief City of the Country of *Goritia*, pleasantly seated, over-looking a fair Plain to the South. The Imperial Governor resides in the Castle, having a Guard to attend his Person. As we were travelling in the Night-time, we had sometimes about us a great Number of large Glow-worms, which put in Papers, gave a dim Light, and in some Places in the Plains the Air was full of flaming Flies. There is Abundance of that neat kind of *Acer*, whereof Violins and other Musical

fical Instruments are made, as well in those Parts as in *Carinthia*, and the Archbishoprick of *Salzburg*, where they make Trenchers and Tables of it, and sell them at a cheap Rate; I brought some of the fair broad Leaves from thence.

Leaving *Goritia*, I pass'd the River *Soncius* or *Lizonso*, which rising near the Hills, empties itself into the *Adriatick* Sea, famous for the Death of *Odoacer*, who was slain near it in a Battle by *Theodorick* King of the *Goths*, and the Inroad of the *Turks* made hereabouts, in 1477, under the Reign of *Mahomet* the Great; after which, travelling through the Meadows, we came unto the strong City of *Palma Nova*, built since by the *Venetians* to prevent the like Incursions. All this long Circuit, till within a Mile of *Palma Nova*, we travelled through the Emperor's Dominions, which are much larger than generally apprehended; and as I have sooner or later seen the greatest Part of them, I can't but think him a great and powerful Prince, he being in Possession of all *Austria*, *Styria*, *Carinthia*, *Carniola*, Part of *Croatia*; *Istria* and *Friuli*, Part of *Alsatia*; *Tyrol*, *Bohemia*, *Moravia*, *Silesia*, Part of *Lusatia*; and a considerable Part of *Hungary*.

10. *Palma Nova* in *Friuli*, is the largest regular Fortification I ever met with in my Travels, having nine Bastions, bearing the Names of as many noble *Venetians*; on each Courtain there are two Cavaliers, the Rampart is much higher than the Wall, and the Ditch thirty Paces broad, and twelve deep; being kept dry to render the Town more healthful, but may be fill'd in Case of Necessity. It has three Gates; viz. *Porta Maritima*, *Porta di Civald*, and *Porta di Udine*. The three Bastions *Foscarini*, *Savorgnan*, and *Grimani*, lie betwixt the *Porta Maritima* and the *Porta di Udine*; those three called *Barbara*, *Dona* and *Monte*, betwixt the *Porta di Udine* and *Porta di Civald*, as those of *Garzoni*, *Contarini* and *Villa Chiara* are betwixt the *Porta di Civald* and the *Porta Maritima*. Each of these Gates were then covering with a very far Half-Moon. In the Middle of the City is a Sexangular *Piazza*, from whence there is a fair Prospect to the three Gates, and six Streets quite through the Town. In the Centre of it is fix'd a Standard over a triple Well; the Front of the Cathedral facing the *Piazza*, which is also beautified with divers Statues; and a finely gilt Obelisk. There is in the Middle of the Bridge an artificial Drawbridge, so contriv'd, that upon the Approach of any Force, the Centinel, by touching only an Iron Spring, can draw it up.

I have in my Travels made Observation of several Kinds of well-contriv'd Drawbridges, amongst all which none pleased me better than those of *Amsterdam*, which part in the Middle, so that the Mast-head or Break-water of the Ship bearing against it, opens it, and affords a free Passage to the Vessel without any other Help. The *Venetians* have made a Channel from *Palma Nova* to the Sea, capable of Vessels of good Burthen. This Fortification, which was begun by the *Venetians* in 1594, is esteem'd here one of the strongest in *Europe*, having been contriv'd by the Advice of the best Engineers.

11. From *Palma nova* I went to *Maran St. Vito*, a Port Town of the *Venetians* in *Friuli*, so named from *St. Vito*, who is said to have been buried in this Place. At this Town we took a *Felucca*, and sailing by the Shore of *Friuli* or *Patria*, we pass'd by *Porto di Taiamento*, and came to *Caborle*. In this Island there is a Church dedicated to the blessed Virgin, seated upon the Sea-shore nigh the Waves, yet said never to be overflowed by the Sea, being as it were, the *Halcyon* Nest of its Patronefs, and a Place of remarkable Devotion. On this Shoar we refresh'd ourselves, and were diverted while at Sea, in seeing them take Shell-fish; and then passing by *Livenza*, where the Sea came formerly up as high as *Opitergium*, and afterwards by *Porto di Piave*, I arriv'd at *Venice*, entering by the *Porto de Castelli*, passing by the *Carthusians* Convent, and landed at the *Piazza* of *St. Mark*. Here I found the whole City highly concerned for the hazardous State of *Candia*, which was lost soon after; *Dominico Contarini*, the present Duke was

sedulous in that Affair. The Voyage of *Ghiron Franchisco Marchese Villa*, General of the Infantry of *Candia*, with a Journal of a Siege, had been lately published; and was in many Hands. There was a Supply of Auxiliaries in good Readiness. It was at that Time a more than ordinary hot Season, and some of our *English* Sea-Captains and Masters told me, that they had seldom met with such hot Weather even between the Tropicks. Having formerly had a View of *Rome*, *Naples*, *Florence*, and the great Cities of *Italy*, and pass'd some Time at *Padoa* a few Years before, I made but a short Stay about *Venice*; and having reviewed what was most considerable, and renewed my Acquaintance with some worthy courteous Friends at *Venice* and *Padoa*, Mr. *Hales* the Consul, Mr. *Hobson*, Dr. *Cadined*, and others, I dispos'd my Affairs for my Return to *Vienna* the ordinary Way.

12. In order thereto, I took Boat at *Venice*, and landed at *Mestre* a pretty Town, and the best Place for Accommodation for such as travel into *Germany* by *Tyrol*, or into *Austria* by *Friuli*; from hence I travelled ten Miles through a pleasant plain Country, till I came to *Treviso*, which gives its Name unto the Country about *La Marca Travigiana*, a handsome City adorned with good Houses, Churches, Towers and Fountains. The clear River *Sile* or *Silo* runs through it, and afterwards into the Sea between *Mestre* and *Murano*; it abounds in good Wines and Fruits, and was a chief Seat of the *Lombards* in these Parts. This old City, after having run various Fortunes, and being under the Subjection of the *Huns*, and other conquering Nations, and sometimes obeyed the *Signora della Scala*, and the *Carraresi*, was united to the State of *Venice* in the Year 1388. It was converted to the Christian Faith, by *Prosdocimus*, a Follower of *St. Peter*. Eight Miles from hence stood the ancient City *Altinum*, founded by *Antenor*, and destroyed by *Attila*. From thence I came to *Lovadina*, and cross'd the great River *Piave*, *Plavis*, or *Anassus*, which arising in the Mountains, passes by the Cities of *Belluna* and *Feltre*, then to *Concian* or *Coniglian*, and next to *Sacille* or *Sacillum*, formerly a Bishop's See, under the Patriarch of *Aquileia*, a pleasant and well built Place, esteemed the Garden of the Republick, and seated by the River *Livenza*, or *Liquentia*, which passing by *Motta*, runs into the Gulf of *Venice*. Here I took a Guide to conduct me through the Plains and Meadows, and came to *Spilimbergo*, where I again took a Guide to cross the swift River *Taiamento*, or *Tihaventum*; this is esteemed the greatest River in *Friuli*, arising above in the *Julian Alpes*, and running down into the *Adriatick* Sea, and often overflowing a great Part of the plain Country. This swift River put a Stop to the Incursion of the *Turks*, when *Scander*, Bassa of *Illyria*, broke into *Friuli* with twelve thousand Horse, and destroyed all before him, in the Reign of Sultan *Bajazet* the II^d. Not far from *Spilimbergo*, I pass'd a neat River or notable Cut, call'd, *La Brentella*, sixteen Miles long, made by the *Venetians*, for the better bringing down of Wood from the Mountains, to be used in the making of Glasses at *Murano*: It is all paved with a good Stone Bottom and Sides; the Bottom is round, so that it is somewhat like a Tube opened or split in two. Then I pass'd by *St. Daniel*, seated upon a Hill by *Hospitaletto*, and came to *Vensone*, a Town seated at the Beginning of the Hills, and formerly the Limit of the *Venetian* Dominions; thence by *Rejuta* to *la Chiufa*, a Place remarkable for the straight Passage of the *Alps*, where the *Venetians* keep a Guard, and shut up the Passage every Night. From thence I came to *Ponteba* or *Ponte Fella*, upon the River *Fella*, the exact Confines between the *Venetian* and Imperial Dominions; and surely a Man can seldom pass more clearly and distinctly, from one Country into another, than in this Town. On one Side of the Bridge live *Italians*, Subjects unto the State of *Venice*; on the other Side, *Germans*, Subjects unto the Emperor. Upon the one Side, their Buildings, their Manner of living, their empty Rooms, large Windows, Iron Bedsteads, shew them to be *Italians*: On the other Side immediately, their Stoves, higher Bedsteads, Feather Beds one over another, square

Tables, and their Bafon and Cloth by the Wall, declare them to be *Germans*. The Bridge itself is also half *Italian*, half *Dutch*, one Part being built of Stone, and the other of great Trees laid over, after the *German* Fashion of making Bridges. Between *Venzone* and *Ponteba* there are many great *Cascata's*, or Falls of Waters; but of several Passages of the *Alps*, this seemed unto me the best and most easy. In these mountainous Places I was entertain'd with strange Stories of the Snow, which cover these Hills in the Winter; as how many Pikes Length the Snow was deep in some Places; how round the Country would look when all the craggy Rocks were cover'd; how a Snowball, thrown down from a Mountain, would so gather and augment in the Fall, as to do great Mischief in the Valley; and that if the smallest Bird should but scrape with her Foot at the Edge of an high Hill, that little Beginning might so increase in the Descent, upon a Thaw, as to overwhelm an House at the Bottom.

13. From hence, by *Tervis* and *Tirl*, unto *Villach* or *Villack*, an handsome Town, and one of the chiefeft in *Carinthia*; but before I came to *Villach*, I went to see the natural Baths, which were not much out of the Way, at the Foot of an Hill, about an *English* Mile from the Town, and in good Esteem. There are two clear sulphureous Baths, but very gently warm, and have an Acid, and no unpleasant Taste. The Bottom is not planchered nor paved, but hath its own natural Spring and Settlement with it; yet into one there is a hot Spring let in, which arises by it. They are large, and have Stairs to descend into them, with little Rooms of Wood about them for Accommodation: They are cover'd over, and they bathe in them cloathed with Shirt and Drawers, as in *Austria*. Not far from hence is a Lake called the *Ossiacker-See*, from *Ossiack*, a Town upon the Side thereof, and is one of the most considerable Lakes in *Carinthia*, there being besides it, these which are remarkable, the *White Lake*, the *Millstatter*, the *Werd*, and the *Forchten*. This Lake doth not only abound in Fish, but affords great Plenty of *Ossiacker* Nuts, which the People eat, and some make Bread of, which notwithstanding, upon Examination, I found to be no other than very large Seeds of *Tribulus Aquaticus* or Water Gallthorps. From *Villach* I soon came to the *Werd-See*, and keeping it continually on my Right Hand, I travelled by the Side of it till I came to *Clagenfurte*, and then passed again to *St. Veits*, where I met Mr. *Donellan*, from whom, upon my former Desires to him, I received an Account of the great Lead Mines in *Upper Carinthia*, at *Bleyberg*, where they have worked eleven hundred Years, and the Pits are deep. *Federnus Stollen* or *Cuniculus* is an hundred and ten Fathoms deep in the Earth, and the Hills so high about it, that upon the Melting of the Snow in the Spring, there is often much Hurt done, the Snow rolling and falling in such vast Heaps, that nothing is able to resist it; so that in the Year 1654, it fell so vehemently, that it destroyed and carried away sixteen Houses. He presented me also with many handsome natural Curiosities, collected by him in those Parts; one of which, among the rest, I cannot but mention, which was a rich, large, fair Piece of natural Cinnabar, found in *Crewaltar*, in the Forest of *Cre*, two *German* Miles from *St. Veits*, in the Lordship of *Osterwitz*, where there hath been great Quantities found out; for the *Herr von Standach* about thirty Years ago, as he was hunting in this Forest, being thirsty, and laying down to drink out of a Stream, which runs from the Top of the Hill, he perceived the Stream to be full of Cinnabar; but since it hath been so diligently searched after, that without working and digging for it there is none to be found. From *St. Viets* I continued my Journey by *Friesach*, where formerly there was a Gold Mine, and then by *Newmark*, *Hundsmark*, *Peltsolz*, *Knitelfeldt*, *Luibm*, *Prug*, *Kemberg*, *Mehrz-u. Schlag*, *Schadtwien*, *Newkirkel*, *Newstadt*, *Solinaw*, *Traskirchell*, *Newdorff*, to *Vienna*.

14. This my Return from *Venice* to *Vienna*, about three hundred and fifty *Italian* Miles, was the most quiet Journey I ever made; for not meeting with good Com-

pany, I perform'd it alone, and upon one Horse; and although there are several Nations, and no less than four Languages spoken upon this Road, yet I met with no Disturbance from any, nor did any one ask from whence I came, or whither I would go; no Trouble as to Bills of Health, and good Accommodations in the Inns at an easy Rate. They are, for the most part, a plain People, make good Soldiers, little mutinous, but obedient to Commands, and hardy, and are of good Use and Service unto the Emperor. In my Travels in *Germany*, I seldom failed to meet with *Jews*; but in this Journey I met with none, or such as I could not well distinguish; for though there were then whole Villages of *Jews* in *Austria*, yet they were prohibited in *Styria*, and severely banished out of *Carinthia*; so that for those *Jews*, who travelled between *Venice* and *Vienna*, the Emperor dispenses with them as to their Ruff, and the *Venetians* as to their Red Hat. I went this Journey when the Sun was in Cancer, in the hottest Time of the Year, and Heat was very offensive to me in the great Plains of *Friuli* and *Austria*, but in the *Alps* it was much more moderate, and the Country was all green and pleasant; when, on the contrary, all the Grass in *Austria* was burnt up by the Sun; and if there were not a continual Breeze about the Middle of the Day, upon all great Plains, especially in Southern Countries, the Heat would be intolerable; and I could not but take Notice, how pleasantly the poor Peasants in the *Alpine* Countries diverted themselves in the Fields, and after their Labour would be lively and brisk, sometimes play at Cards with Cards of a Span long, such as they have in those Countries; while the rich Countrymen in *Austria* were faint, and gasping for Breath; nor did it any Thing avail them, that *Austria* was more Northern than *Styria* or *Carinthia*, for there may be as much Difference as to the Temperature of the Air, as to Heat and Cold in one Mile, as in ten Degrees of Latitude, and he that would cool and refresh himself in the Summer, had better go up to the Top of the next Hill, than remove into a far more Northern Country. I have been ready to freeze on the Top of a Hill, and in an Hour's Time after have suffered as great Inconvenience from the Heat of the Valley at the Rising of the Sun; I have been upon a Hill with a clear Sky and good Weather, and have seen a Valley encompassed with Mountains, and covered over with Clouds much below us the Sun shining upon the upper Part of the Clouds made them appear like fine Down or Wool, and made the softest, sweetest Lights and Shadows imaginable; afterwards, when we descended into this Valley under the Clouds, we had no such pleasant Prospect, but were rained upon the most Part of the Day. In that hot Country of *Arabia*, Travellers complain most of the Cold they suffer in passing the Hills. The Mountains in *Italy* and *Spain*, are, some of them covered with Snow and Ice all the Summer long. I have heard that Mount *Atlas* is so also, from Dr. *Butler* who lately travelled in those Parts, and from others, when in *Great-Britain* there is no such Thing. At *London* we have Winters for the most Part favourable; when Captain *James*, who went to discover the North-west Passage, and to search if there were any Communication between the *Atlantick* Ocean and the *South-Sea*, in the Northern Part of *America*, as there is in the Southern, suffered more Hardship in the same Degree of Latitude, than the nine *Englishmen*, who were left all the Winter in *Greenland*; and *Baffin*, on the contrary, upon the same Design, had a pleasant Voyage in an open Sea, and met with Inhabitants upon the Shore, till he came within nine Degrees of the Pole. But I shall wander too far out of the Way, and therefore will put an End to this Discourse.

15. In the last Folio Edition of Dr. Browne's Travels, there are added, his Journey to *Cologne* in 1673, on Purpose to view the Baths of *Aix la Chapelle*, and to examine the mineral Waters of the *Spa*; as also his Travels through *Italy*, which were first made, and which had cost him twelve or fourteen Years to digest and put in Order. It may not be amiss however to inform the Reader, that in these he shewed himself a very learned

learned and curious Antiquary, of which, we have a clear and pregnant Instance in what he says of the City of *Padoa*, which, for that Reason, we shall transcribe for the Reader's Satisfaction and Entertainment, though otherwise much straitned for Room, and very impatient to take our Leave of *Europe*. "The Landing-place of *Padoa* is handsomely set off, with Stone Steps continued for a long Space along the Side of the River, after the Manner of the Landing-place at *Ghent*, and some other elegant Cities of the *Low-Countries*. The outward Wall is strong, being well fortified according to the modern Rules of Fortification, in the Time of *Leonardo de Loredaro*, Duke of *Venice*; and to render it more strong, the Rivers of *Brenta* and *Bacchiglione* are let into the Town-Ditch. The inward Wall is now most considerable for its Antiquity, and for retaining the Name of its Founder, it being still call'd *Antenor's Wall*: It contains a far less Space of Ground than the former *Padoa*, being built in this Respect like to the City of *Aix la Chapelle*, or *Aken*, having one Town within another. That *Patavium* or *Padoa* is one of the oldest Cities of *Europe*, built presently after the *Trojan War*, is confessed by ancient Writers, and so generally believed of old, that *Livy* lays it down for the Ground-work of his History, beginning in this Manner, *Tam primum omnium satis constat Troja capta, &c.* In the first Place it is sufficiently manifest, that *Troy* being taken, the *Grecians* executed the utmost of their Rage upon the *Trojans*, *Aeneas*, and *Antenor* only excepted, by Reason of their ancient Friendship with the *Greeks*, and in Respect that they had always endeavoured to make Peace and restore *Helen*. After various Fortunes, *Antenor* brought a great Number of the *Heneti*, who having lost their King *Pylemon* at the Wars of *Troy* and being driven out of *Papblagonia* by a Faction, were now seeking new Seats, and a Captain to lead them, and came along with them to the Bottom of the *Adriatick Gulf*, drove out the *Eugenians*, who inhabited between the Sea and *Alpes*, and established the *Trojans* and *Heneti* in those Countries.

"*Martial* also Saluting *Flaccus*, a *Padoan* Poet, calls him.

"*Flacce Antenorei spes & Alumine Laris.*

"And that you may more firmly give Credit to it, you may further also have the Authority of a Goddess for it, for *Venus* is introduced expostulating in these Terms with *Jupiter* in the Behalf of *Aeneas*.

"*Quem das finem Rex magne, malorum?*

"*Antenor potuit, mediis elapsus Achivis*

"*Illyricos penetrare sinus atque intima tutus:*

"*Regna Liburnorum et fontem superare Timavi,*

"*Unde per Ora navem vasto cum murmure montis*

"*It mare proruptum et Pelago premit arva sonanti*

"*Hic tamen ille Urbem Patavi sedesque locavit*

"*Teuconum et genti nomen dedit armaque fixit.*

"What Time, great King, shall terminate our Woes?

"Safe could *Antenor* break through all his Foes;

"Pierce to the Bottom of the *Illyrian Bay*,

"View Kingdoms where *Lyburnian* Princes sway;

"Pass the nine Mouths of fierce *Timavus* Waves,

"Which roars upon the Hills, and o'er the Valleys raves,

"And there could fix, and on that Foreign Ground

"Great *Padoa's* Tow'rs for After-Ages found.

"New name the Race, and free from all Alarms,

"Hang up in Peace his consecrated Arms.

"In those Days, when the Art of Navigation was but in its Infancy, and the Mariners very unwillingly parted with the Sight of Land, *Antenor* was forced to keep close, and creep along the Coast of *Peleponesus* and *Epirus*, and then sail by the *Illyrian* and *Liburnian* Shoars, which are very uneven and troublesome to deal with, being full of Creeks, unsafe Bays and Rocks, besides very many Islands of various

Shapes; whereas if he had crossed over to the *Italian Coast*, he had had a nearer Voyage, and sail'd with Pleasure all along an even, bold, brave Shoar. The People of *Padoa* are well pleased with the Thoughts of their ancient Founders and Progenitors; and they still preserve the Tomb of *Antenor*, near to which at present stands the Church of *St. Lawrence*, and in their publick Shows they will be still representing something of *Troy* and the old *Trojans*; and in one Place I saw a Horse of Wood about twenty Foot high, in Imitation of the old *Trojan Horse*, but I suppose nothing near so big as the first Original: Yet when I consider, that above eleven hundred Years after the Destruction of *Troy*, when Towns and Buildings were very much amplified and improved, *Pompey* coming in Triumph could not enter even the great Triumphal Gates of *Rome* itself in a Chariot drawn by Elephants, an Animal that seldom or never comes to be so high as this Horse, it may well be supposed that they could not have received even this poor Model of the first great one into the old Town of *Troy*, without pulling down their Walls. The City of *Padoa* was always a Friend to the *Romans*, and did them great Service in their Wars against the *Galli Senones*, the *Umbrians*, *Boians*, *Insubres*, *Cimbrians* and *Carthaginians*, and stuck close to their Interest till the Time of the Declination of the *Roman Empire*.

"When *Attila* the powerful King of the *Huns*, with Fire and Sword destroy'd it; and when after divers Years it was rebuilt by the Favour of *Narjes* the Eunuch, General to the Emperor *Justinian*, it was again lamentably ruined by the *Longobardian* Princes, who, by shooting Arrows with Firebrands fixed to them, set the City on Fire, and took it. But under the Empire of *Charles* the Great and his Successors, it arose out of its Ashes again, and flourished for a long Time, being governed first by Consuls, and then by a Podesta, until the Time of their dreadful Tyrant *Ezzelin*, who harrassed, banished, tormented and massacred the Inhabitants, cramming their own Wells within the City, full with mangled Bodies, and, amongst other Severities, upon an angry Distaste against them, slew ten thousand of them in one Day at *Verona*. But notwithstanding these Cruelties, they recover'd their Liberty again after the Death of *Ezzelin*, and by Degrees became very powerful, having under their Jurisdiction *Vicenza*, *Verona*, *Trent*, *Trevise*, *Feltre*, *Belluno*, *Ceneda*, *Seravalla*, *Ciosa*, *Bassano*, with its Territories; all the *Polesine* or *Peninsula*, and the greatest Part of *Friuli*, with other important Places, when in the End *Marsilio de Carrara* made himself Captain or Governor of the City.

"This noble Family of the *Carraresi*, very powerful in these Parts, came from their Castle of *Bossano*, and lived in *Padoa*, where they became very considerable, and siding with the Pope against the Emperor *Frederick* the Second, they were driven out by *Ezzelin*; but when, upon the successful Attempts of the *Roman* Legate *Angedin*, a Commander under *Ezzelin*, was overthrown, they were again restored, dignified, and established in the Government of *Padoa*, which they possessed with some Variety of Fortune from one to another, in their own Family, for about an hundred Years, in the Conclusion of which they were seized on by the *Venetians*, who thought fit to put *Francisco Novello* and his Sons to Death in the Year 1405. And after this Manner, by having totally extinguished the noble Family of the *Carraresi*, without Fear of any further Claim or Dispute, they possessed themselves of the City of *Padoa*, and hold it in their Hands to this Day.

"The Buildings at *Padoa*, both publick and private, are very considerable; for most of the City is built upon Arches, making handsome Portico's or Cloysters on each Side of the Street, after the Manner of the Houses in the Piazza of *Covent-Garden*, which at all Times afford a good Defence against the Sun and Rain, and many of the Houses are painted on the Outside with very good History Painting in *Fresco*, their

“ their Churches are fair, and divers well adorned.
 “ The Domo or Cathedral Church is large, seated near
 “ the Middle of the City, endowed and mightily en-
 “ riched by the Emperor *Henry the Fourth*, whose Em-
 “ press *Berta* lies buried here. The Revenues of this
 “ Church, at present, are reckoned to amount to a
 “ hundred thousand Crowns a Year; and besides the
 “ Monuments of many eminent Persons, they preserve
 “ here the Body of *St. Daniel*, of Cardinal *Pileo de*
 “ *Pratto*, and of Cardinal *Francesco Zabarella*.

“ The Church of *St. Antonio* is visited by Persons far
 “ and near, and the exquisite Design, artificial Carving
 “ in Marble, the handsome Choir and rich Ornaments
 “ make it worth the seeing. The Top of the Church
 “ is made up of six Cupola's cover'd with Lead. The
 “ Chapel of *St. Antonio* is nobly set out with twelve
 “ Marble Pillars, and a rich Roof. Between the Pil-
 “ lars are carved the Miracles of this Saint, who lies
 “ interred under the Altar, upon which stand seven
 “ Figures made by *Titian Aspetti*, a good Statuary of
 “ *Padoa*; and behind the Altar there is a most excel-
 “ lent *Basso relievo* done by *Sansovinus*, *Tullius*, *Lombur-*
 “ *dus*, and *Campagna Veronensis*. Over against the Cha-
 “ pel of *St. Antonio* stands the Chapel of *St. Felix*, and
 “ his Tomb, nobly wrought with colour'd Marble, and
 “ the whole splendidly adorned with the Paintings of
 “ the highly celebrated *Giotto*. The chief Relicks in this
 “ Church are the Tongue and Chin of *St. Antonio*, a Cloth
 “ dipped in the Blood of our Saviour, three Thorns of
 “ his Crown, and a Piece of the Wood of his Cross;
 “ some of the Hair and Milk of the blessed Virgin,
 “ and some of the Blood of the Marks of *St. Francis*.
 “ Before the Front of the Church, there is a handsome
 “ Brass Statue on Horseback, representing the great
 “ *Venetian General Gattamelata*. *St. Antonio* lived six and
 “ thirty Years, died upon the thirteenth of *June*, 1231,
 “ and was canonized by Pope *Gregory the IXth*, in the
 “ City of *Spoleta*, 1237.

“ The Convent of the black Monks of *St. Benedict*
 “ may compare with most in *Italy*, and their Church
 “ dedicated to *Santa Giustina*, built by *Palladio*, is one
 “ of the fairest in *Europe*. *St. Giustina* was a Virgin
 “ and Martyr, Daughter to *Vitaliano* of this City; she
 “ suffered Martyrdom in the Time of *Maximianus* the
 “ Emperor. In this Church there are still preserved, as
 “ they say, the Body of *St. Luke the Evangelist*, of *St.*
 “ *Matthias* the Apostle, of two of the innocent Chil-
 “ dren, of *Prædochimus*, of the Converter of these Coun-
 “ tries to the Christian Faith, and first Bishop of *Padoa*;
 “ of *Maximus* their second Bishop, and of *Santa Gius-*
 “ *tina*. The Front of this Church looks into a spacious
 “ Place, called *Prata della Valee*, where the Gentlemen
 “ meet in their Coaches in the Evening for their Plea-
 “ sure. In a handsome Room or Burying-place on the
 “ South-side of this Church, is a round old red Mar-
 “ ble Stone, upon which the Heads of many Martyrs
 “ were cut off, and near to it, a fine white Marble
 “ Well, call'd, *Pozzo di Martiro*, or the Martyr's
 “ Well, a Place of great Devotion.

“ Where the Temple of *Juno* stood in old Time,
 “ there is now built a handsome Church dedicated to *St.*
 “ *Augustin*, wherein are divers Monuments of the Fa-
 “ mily of *Carrara*, the Tomb of *Charlotta*, Daughter
 “ to *James King of Cyprus*, and of *Petrus Aponensis*, a
 “ great Philosopher. *Il Ponte Melino*, where there are
 “ thirty Water Mills together, and the *Castello della*
 “ *Munitioni*, both built by *Ezzelin*, are worth the see-
 “ ing. *La Corte del Capitano* is splendid, and was
 “ the Palace of the *Carrarese*. The *Palazzo della Ra-*
 “ *gione*, where the Courts of Justice are held, is very
 “ large, beautiful, and highly considerable, both with-
 “ out and within, being built of Marble, with Rows of
 “ Pillars without and within; there are Heads and In-
 “ scriptions for divers eminent Persons of this City; the
 “ Length thereof is two hundred fifty six Foot, and
 “ the Breadth eighty six, without any Pillar or Support
 “ in the Middle.

“ The University of *Padoa* was founded in the
 “ Year 1220, by the Emperor *Frederick the IIId*, and
 “ the Schools are fair and large, containing one Qua-

“ drangle, with Rows of Pillars above and below, and
 “ besides handsome Schools on every Side, there is a
 “ very convenient anatomical Theatre. The Physick-
 “ Garden is large, of a round Figure, walled about,
 “ and well stored with Plants. The Prefects hereof
 “ have been Men of Note, as, *Aloysius Mundella*, *Aloy-*
 “ *sus*, *Anguillard*, *Melchior Guilandinus*, *Jacobus Antonius*,
 “ *Cortusius*, *Prosper Alpinus*, and *Joannes Veslingius*.

“ The Arena, or old Amphitheatre at *Padoa*, is an
 “ Antiquity very remarkable, and the Remains of some
 “ of the Arches are to be seen still in the Gardens
 “ backwards, but the Arena itself, and the whole Po-
 “ dium are preserved intire and free, and empty. And
 “ at one End thereof is built a handsome Palace, the
 “ Front of which looks directly into the open Amphi-
 “ theatre, and is a Portion of an oval Figure, and the
 “ whole Area or Arena of the Amphitheatre serves
 “ for the Court to it, in such Manner, that the En-
 “ trance being now at the End, directly opposite to
 “ the House, the handsome Prospect of it, and the
 “ clear Avenue to it is extraordinarily surprizing, and
 “ extremely noble; and I could not imagine that any
 “ Gentlemen would ever desire to have a fairer Court-
 “ yard to his House, than the spacious Plain Arena
 “ of an old *Roman* Amphitheatre, nor a better Wall
 “ than a high, intire handsome Podium, the like to
 “ which perhaps is not at this Day any where else to
 “ be seen. And I must freely confess, that of the Re-
 “ mains and Ruins of twelve old Amphitheatres which
 “ I have seen myself, I have not met with any one
 “ that comes near it; for in the Amphitheatre at
 “ *Douë* in *Poitou*, which is cut out of a Rock, and
 “ being of a smaller Dimension, and Part of the Bot-
 “ tom being fill'd up, there is no visible Beauty of the
 “ Podium; the like may be said also of that at *Nizza*,
 “ near the River *Varus*, and that at *Pozzuolo*.

“ That at *Nismes* is filled up with Dwelling-houses
 “ in such Manner, that the upper Seats only are di-
 “ stinctly visible. The Amphitheatres of *Bordeaux*,
 “ *Xaintes*, *Arles*, *Garigliano*, that at *Rome*, near the
 “ Church of *Santa Croce* in *Gierusalemme*, and others
 “ are at present so much ruined, that nothing of this
 “ Nature distinguishable is to be expected, nay even
 “ about the Arena at *Verona*, and the great *Coliseo* or
 “ *Domitianus's* Amphitheatre at *Rome*, the Ground is
 “ now risen so high, that the Podium is at present
 “ either buried or disfigured. But as the Arena at *Pa-*
 “ *doa*, is clear and evident in this Part, so it is wanting
 “ in all the rest, and he that desires at this Day to
 “ view all the Parts of an Amphitheatre, must not see
 “ one but many; and by joining them together in
 “ his Thoughts, he may collect the Figure, Proportion
 “ and Dimensions of this sumptuous Sort of Buildings
 “ of the old *Romans*.

“ From the Walls of *Padoa* there is a pleasant Prof-
 “ spect of a plain Country to North-East and South,
 “ and of the *Euganean Hills* to the West, which sup-
 “ ply the Town with Variety of Plants, and great
 “ Numbers of Vipers. At a few Miles Distance are
 “ the hot Baths of *Abano*, and the Mineral drinking
 “ Waters of *Monte Ortone*, as also *Marchese Obizzi's*
 “ Country-House, which we saw with great Delight,
 “ it being well design'd and accommodated with a
 “ good Armory, a Theatre for Comedies, handsome
 “ Stables, and a Tennis-Court, and nobly painted both
 “ within and without by that Master *Paulo Veronese*.

This large Extract shows his Manner of treating An-
 tiquities, and may serve as a useful Memorial to young
 Travellers who are desirous of knowing how to digest
 their Thoughts, and to unite the Knowledge they have
 brought from the Universities, with what they collect
 from visiting the World. It is really a very difficult
 Thing to give our Author his due Praises; for the more
 we consider what is written, the more Reason we shall
 see for commending him; and which is not a little ex-
 traordinary, the more we consider what he has omitted,
 the greater Reason we shall have to admire his Pru-
 dence. There are however some Passages in his Wri-
 tings, which perhaps may be a little obscure, not from
 any Want of Knowledge in the Author, but rather
 from

from his Superabundance, which hinder'd him from discerning that what was extremely clear to him, might be very dark notwithstanding to Persons of less general Knowledge, and to such as had not found an Opportunity of considering particular Subjects in such a Light, as to be able to understand the Hints he gives about them.

As for Instance, what he says of the Miners Compass, seems to stand in Need of Explanation. They work, says he, towards One, Two, or Three of the Clock; for the Miners differs from the Mariners Compass, being not divided into thirty-two, but into twenty-four Points. This is very true, not only in regard to the *Hungarian* and *German* Mines, but with respect to our own Coal Mines, where, if you ask any of the Workmen about the Course of the Veins, they answer you, that it dips towards Six o'Clock; which is utterly unintelligible to common People. The Truth of the Matter is, that the Miners and Mariners Compass is founded upon different Principles, though I very much doubt, whether a Method might not be found of using the Mariners Compass to very great Advantage in Mines; but at present we have not Room to insist upon this, and shall therefore content ourselves with observing, that in the Miners Compass the upper Twelve o'Clock answers to the Meridian of the Place where the Mine is, and from thence the Hours are mark'd on each of the Semicircles; so that Six o'Clock makes a Quadrant on each Side, and each of the Hour Lines is distant from the other fifteen Degrees; so that in Fact, the Miners Compass is a Kind of Dial, and when they say they have worked to such an Hour, they mean that they work to such a Point as the Sun bears from them at the Time of the Day which they mention.

There is another Passage in these Travels, which deserves also to be insisted upon, and that is, the Hint given by the Author about the vast Advantages that might arise to the House of *Austria*, from the Practice of a philosophical Secret; in short, his own Experience had convinced him, that the Vitriolate Springs really and effectually changed Iron into Copper; from whence he infer'd, that Springs might be found in the Silver Mines, which might have the like Effect with respect to Copper, or rather with regard to Copper Ore, which might possibly be managed in such a Manner, as to dispose it to such a noble Change; for the Doctor observes, that not the best, but the worst Iron answered the former Experiment most effectually; for which many Reasons might be given; but as what we have already said will fully answer the End we proposed, and let the Reader fully into the Sense of what the Author delivers in the following remarkable Words, we shall dwell upon it no longer.

“The Profit which the Emperor makes by his Mines, says he, is reckoned to amount to an hundred and twenty thousand Pounds Sterling, yearly. But when they come to deal with deeper and richer Veins of Ore, and that there shall be by Degrees more of these Vitriolate Copper Springs discover'd, this Revenue will be then increased. And it is more than probable, that Time will bring more of them to Light; for at *Zolnoch*, and other Places near the *Carpathian* Hills, there are divers of the same Springs already made Use of. But if, furthermore, considering the Nobleness of these Springs, containing in them the true mature Salt of *Venus*, some Persons hereafter shall be so fortunate, as moreover to discover and experimentally improve the Use of Springs

“and Fountains saturated with a *Vitriolum Lunæ*, and learn perfectly how to adapt metalline Bodies to the adequate Energy and Activity of such Waters; the Improvement by Transmutation, as it is at present more than ten to one, so it will in those Days amount to above a hundred to one; and the Use of these Mines and metalline Labours may hereby effectually prove, in Times to come, one of the richest Jewels in the Imperial Crown.”

We are now to take our Leave of Dr. *Edward Browne* and his Travels, with which we shall close this Section, this Chapter, and this Book. We shall, indeed, in the first Chapters of the next, be obliged to enter into the Description of several Parts of *Europe*; but as the Travels included in those Chapters relate chiefly to *Asia*; and as it would have been very difficult to divide them, without breaking the Thread of the Discourse, and thereby destroying the Connection between its Parts, we judged it better to involve all such Travels in the Third Book. The Reader will observe, the Uses which may be made of this Collection are not only much more numerous, but more excellent also in their Nature, than those which result from any Kind of Geographical Performance, how accurately soever performed, because we do not dwell upon the Superficies, but go to the very Bottom of Things; and in the Accounts that we have given of the several Parts of *Europe*, we have taken all imaginable Care to treat succinctly of what appeared trivial, and to be more copious upon Points of real Use, and which contribute to the Improvement of solid Knowledge. If we had been allowed more Room, we should doubtless have answered all Purposes better; but we have made the best Use of what we had, and we may safely affirm, that no Collection of this Kind has, so far as we have already gone, treated every Country we have mentioned more fully, or given the judicious Peruser an Opportunity of understanding its past and present State more clearly.

It shall be our Study to execute what is to come in the same Manner, so that every Part of this Performance may, as near as it is possible, correspond with the Whole of it. Some small Differences there may be, which lie out of our Power to hinder, because of the Inequality in the Capacities of those Authors we transcribe; but if we make the best Choice we can of these, and give their Accounts in the best Manner that we are able, it is all that can be expected, indeed all that can be performed by us; which every candid Critick will allow. In succeeding Times, there will no Doubt be Variety of Voyages and Travels sent into the World, and amongst them probably there will be several superior in Value to those that have gone before them; but with respect even to these we have provided, as far as it lay in our Power, for the Reader's Service, because they may be easily digested according to our Method, and be ranged upon new Shelves in the same Library. We say this, that the Publick may be apprized of the true Value of what we have given them, and be satisfied, that this Collection can never be out of Date, the Authors which it contains, and those which it will contain, not only have at present, but will always have their Value; and how necessary or how pleasing soever it may be to peruse new Voyages or Travels, or new Collections of them, yet it is impossible they should ever supersede the Necessity of reading these, because the Perusal of them will be always requisite to the perfect Understanding of such as are later in Point of Time.

Navigantium atque Itinerantium Bibliotheca.

Or, A Complete COLLECTION of **VOYAGES and TRAVELS.**

BOOK III.

Voyages to and Travels through the Dominions of the Grand Signior, and through the other Empires, Kingdoms and States in *Asia*; with curious and copious Accounts of such Parts of that great Continent as are least known.

CHAP. I.

Voyages through the Islands of the *Archipelago*: Travels through most of the Provinces under the Dominion of the Grand Signior; with a full Account of the present State, Forces, Revenue, Commerce, &c. of the *Turks*.

SECTION I.

The Voyages and Travels of the Celebrated Mr. JOHN THEVENOT, from *Italy* to *Constantinople*, including a very curious and exact Description of the several Places he touched at in his Passage; of the several Cities he visited upon the Coasts; and a most exact View of *Constantinople* at the Time he visited it. Interspersed with a great Variety of Historical and Political Remarks, equally instructive and entertaining.

Extracted from the last Edition of the Author's Travels, printed at Amsterdam in 1727.

1. An Account of the Author and of his Family; the Occasion of his Voyages, and the Manner in which they were undertaken. 2. His Arrival in Sicily, and his Description of that Island and its Coasts, with some Account of Scylla and Charybdis. 3. An Account of the Island of Malta, and the Observations made therein by our Author during his Stay there. 4. He prosecutes his Voyage from thence towards Constantinople, and describes the Islands touched at by the Way. 5. A curious Account of the celebrated Streights now called the Dardanelles. 6. Several Cities on the Asian Coast between the Streights and Constantinople, described by the Author. 7. The several Cities on the Thracian Side of the Streights described in the like Manner. 8. An Account of the several Islands in the Propontis. 9. A Description of the City of Constantinople, its Ports, Walls, Gates, Towers, &c. 10. Continuation of this Description, with a large Account of the noble Cathedral called Santa Sophia, now turned into a Turkish Mosque; with an Account of several other Mosques and magnificent publick Buildings. 11. A very copious Description of the Seraglio, taken not only from Mr. Thevenot, but from Tavernier and Wisner's Accounts. 12. Of the Divan, or Grand Signior's Council of State, and the Manner in which Causes are heard there, and the Method in which Ambassadors are received in publick Audiences. 13. The Secrets of the Seraglio, with the Manner of the Grand Signior's living with his Wives and Concubines. 14. The Policy of the Seraglio, comprehending the entire Detail of the Education of the Sultan's Servants there, by which they are qualified for the chief Places in the Empire.

pire. 15. The Government of the Seraglio, containing a curious Account of the Grand Signior's Household. 16. An Account of his Manner of Living, together with a Detail of the Expences and Provisions of his Court. 17. The Customs and Rules of the Seraglio, and the Manner of the Grand Signior's going abroad in State. 18. The Manner in which their Bayram or Carnival is kept. 19. A Description of the Old Seraglio, and of several other Places. 20. Galata and Pera described, with several Places adjoining. 21. The rest of the Country of the Asiatick Side of the Bosphorus described. 22. An Appendix, consisting in a great Variety of entertaining and instructive Passages, extracted from other Authors. 23. Historical, Political, and Miscellaneous Remarks on the foregoing Section.

I.  It is impossible to read, with any Satisfaction, the Travels and Adventures of an Author, without having some Knowledge of who or what he was, and of his general Character in the World. Mr. John Thevenot was of the same Family with the famous Melchizedec Thevenot, who published a large and curious Collection of Voyages, Part originally written, and the rest very accurately translated from Spanish, Italian, English, and other Languages, into French; which is the Reason they are very often confounded together, by such as are not well acquainted with Literary History, but borrow what little Knowledge they have, from Title Pages, Indexes, and Journals. The elder Thevenot travelled, indeed, for some Time, but never without the Limits of Europe; nor did he think any Accounts of his Voyages worthy the Notice of the Publick. He was appointed Library-keeper to Lewis XIV. and not only discharged the Duties of his Office with great Diligence and Fidelity, but likewise enriched that noble Storehouse of Learning, with upwards of two thousand Volumes from his own Study. He was particularly careful in collecting Manuscripts in all Languages, and more especially in the English, Spanish, Italian, Latin, Greek, Hebrew, Syriac, Arabick, Turkish and Persian Tongues; all of which he understood perfectly. He died by too great Abstinence, which he flatter'd himself would have cured an Ague, on the 29th of October in 1692, in the seventy-first Year of his Age.

Our Author had, from his very Youth, a strong Inclination to travel, in Hopes of gratifying that Curiosity, which excited him to enquire into and examine after whatever appear'd new or curious, useful or entertaining. It was to gratify this Inclination of his, that he went to Rome, where meeting accidentally with the celebrated Mr. Herbelot, the most learned Man of his own, or perhaps of any Age, in every Branch of Oriental Literature, he caught from him so violent a Passion for penetrating into whatever was curious or extraordinary in the East, that he resolv'd to continue his Travels to the most distant Part thereof; in which he flatter'd himself with the Hopes of having the Company of the very judicious Person before-mentioned; but some Family-Affairs, which required the Presence of that learned Gentleman, oblig'd him at that Time to return into France; but Mr. Thevenot having made all the necessary Preparations for this long Expedition, and being encouraged to undertake it by his Friend, who promised to join him in the Island of Malta, resolv'd to proceed in the Execution of the Design he had undertaken.

Accordingly, on Monday, May 1, 1655, he left Rome, in order to go and embark at Civita Vecchia on board the Galley commanded by Count Gaddi, in which he began that Voyage of which we intend to give the Reader an Account in this Section. He appears, by his Writings, to have been a Man of great Accuracy and Diligence, as well as of wonderful Curiosity and Vivacity, of a bold and enterprising Spirit, merely for the Sake of Knowledge; for he does not appear to have had any Turn towards Profit or Glory. His sole Aim was to know; and as to Wealth and Power, he left them to the Covetous and Ambitious. He was very careful in his Enquiries, took very little upon Trust, examined all Things with his own Eyes, committed his Observations to Writing immediately, and, after his Return to France, revised and published them at several Times, at the Request, and to satisfy the Importunity of his

Friends. He appears to have had a large Share of useful Learning, which enabled him to make just and proper Enquiries, as well as very judicious, and at the same Time very entertaining Remarks. He was very inquisitive, but very far from being credulous; he had a strong Disposition to learn, and was ready to submit himself to be taught by any whom he found more knowing than himself. He was free from Prejudices or Prepossessions, was very desirous of knowing the true State of Things, and very willing to communicate his Knowledge. In a Word, his Candour and Integrity procured him the general Esteem of all who knew him, and have had the same favourable Effect with respect to his Writings, to which we shall now proceed.

2. He continued his Journey from Rome, and upon June the 2d. he embark'd at Civita-Vecchia, and came to an Anchor before the Port of Messina in Sicily in Seven Days. This Town lies opposite to Rhegio in Italy, from which it is distant about sixty Miles. It was built by the Messinians of Peloponnesus, and from them took its Name, being anciently call'd Zande. It is a safe Harbour by Nature, and round it are several fair Palaces built very uniform, which form a pleasant Prospect. The Mole, which shuts in the Port, has a Tower by it to secure the Entry, and another in the Midst of it. This Town is but a melancholy Place, though the Streets are fair and large. Over the Door of the Cathedral Church is written, *Gran-Mercy a Messine*, in Memory of the Surrender of that City to the French, when they took Sicily. Before it is a great Piazza, with a Theatre in the Middle of it, where the Victory of Lepanto is represented in Brass, and a brazen Statue of Don John of Austria stands by it. The Novitiate of the Jesuits stands upon an Hill that over-looks the Town.

There are eighteen strong Castles in it, but four of them only are in the Hands of the Spaniards: The Messinese have the rest. The Town is very rich, by Reason of the great Trade in Silk driven there. There are no Inns for Strangers, so that they are oblig'd to lodge in a wretched Tavern by the Harbour. All Things are cheap, the Wines strong, but bad. It is an Archiepiscopal See. The Streights are made dangerous by Scilla and Charybdis, though anciently they were much more so than now, because Navigation is improved. Scilla is a Rock near the Castle Scyllio, on the Italian Shore. Charybdis is the Meeting of two contrary Eddies, which by beating and clashing one against another, make a Noise like the Barking of Dogs, and by causing Vessels to turn round about, suck them down to the Bottom; nor is the Harbour itself safe from it, for the Currents will sometimes carry the Ships out into it, and therefore the Messinese have always a great many Pilots in Readiness to assist Vessels in Danger.

Sicily is of a triangular Form, each Angle making a Cape, which are now called Difaro, anciently Pelorus, Passaro, anciently Pachinis, and Bocho, heretofore Lilibæum. It is but three Miles distant from Italy, being separated from it by a dangerous Streight, call'd, The Pharo of Messina. It is the most considerable Island of the Mediterranean Sea, both for Bigness (being 700 Miles in Compass) and Fruitfulness, produces Plenty of Corn, excellent Wines, Olives, and other Necessaries of Life, insomuch as that it was call'd one of the Granaries of Rome. It contains a great many fair rich Towns, but it is much annoy'd by Mount Gibello, or, as it is stiled by the Ancients, *Ætna*, which continually casts forth Abundance of Flames, and covers the Land about it with

with Ashes for a great Way; this Island is also much infested with Earthquakes. It has been under the Dominion of many Nations, viz. *Greeks, Carthaginians* and *French*; at this Time subject to the King of *Spain*, who has always a Vice-Roy there, that has his Residence half a Year at *Palermo*, and the rest at *Messina*. From all these Nations the *Sicilians* have derived some Vices which makes them revengeful, haughty and jealous, especially of the *French*, whom judging by their vindictive Temper, they suspect not to have forgotten the *Sicilian Vespers*, and for that Reason always wear their Daggers by their Side even in their Shops and Work-Houses. They are of a subtle and malicious Wit, ready to contrive or execute any Mischief.

From *Messina* he sailed to *Agousta*, which is but an ordinary Town with one Street, but the Country about it produces excellent Wine, which has a strong Flavour of Violets: Then coasting along by *Syracuse*, now corruptly called *Saragoussa*, formerly the Metropolis of *Sicily*, and Birth-place of *Archimedes*, the Country about which produces excellent Muscadine, he made the Isle of *Malta*, anciently call'd *Melita*, from the Plenty of Honey it yielded.

3. This Isle is low, and the Soil a soft Chalky Rock, yet it produces very good Fruits, as Figs, Melons, which grow so easily, that they require no Care but to preserve them; Grapes very good to eat, but not for Wine; Cotton, but little or no Corn, for that is brought from *Sicily* thither. The Air is so hot, that there is no Walking in the Sun; and the Nights are as intollerable, if not through the Heats, yet through the Stinging of Musketoos; yet is so wholesome for old Men, that they can hardly die. They drink their Wine with Ice. Head-aches and sore Eyes, caused by the Whiteness of the Earth, are there common and dangerous. There are no venomous Beasts in the Isle, nor can any live in it, which the People attribute to St. Paul's Benediction, and they give the Earth of the Grott, where he lived, for an Antidote against Poison, with greater Success than *Terra Sigillata*. The Island is populous: The People are of a brown Complexion and are very revengeful. The Women are beautiful, and familiar, for though they hide their own Faces with their Mantle, they see every Body's else.

They speak *Arabick*, but *Italian* is also common. Here are several Ports and Creeks, but the chief Havens are the Great Port, and that called *Marsamouchet*. In the great Port are all the Gallies of the Order laid up, and all the Vessels that are to make any Stay at *Malta*, either to load, careen or refit, put in there, shut with an Iron Chain: The Port of *Marsamouchet* is for Ships to perform their Quarantine in, before they have Access to the Town, and for such as by Reason of foul Weather can't get into the great Port, as also for the *Corfairs*, who come only for a little Time, and so will not go into the great Port, because it is hard to get out again. As soon as the King of *Spain* had given the Island of *Malta* to the Knights of St. John, Sultan *Solyman* resolving to extirpate them, who had given him so much Trouble, sent a powerful Army to take it. The *Turks* landing near the Mount *Pelegrino*, attack'd the Castle of St. *Erme*, kill'd all that defended it, and took it. Then they turned against the Isle de *Sangle*, but were assaulted so furiously by the Castle of St. *Angelo*, who firing their Cannon, level with the Water, upon them, sunk their Boats and drown'd their Men, which being repeated several Times, the *Turks* despairing of Success, and finding Recruits come to them out of *Europe*, drew off, and left the Isle in the End of September, 1565.

After the *Turks* were gone, the Knights resolv'd to build a new Town, where the Great Master with all the Order might conveniently dwell. They pitched upon the Tongue of Land where the Castle of St. *Erme* stands, from whence the *Turks* had so furiously driven them. The Great Master *John la Valetta* laid the first Stone of it, March 28. 1566. and from himself called it *Valetta*; it has been so fortified since, that none exceed, and few Places can equal it. The Entry into the Port

is defended by the Castle of St. *Erme*, the *Baraque*, which has nine Pieces of Cannon, and the Bastion of *Italy*, and on the other Side by the Castle of St. *Angelo*, and a Tower, which has two or three Pieces of Cannon. The Town is no less strong by Land than towards the Sea, being begirt with good Walls, built upon very high Rocks, with several Bastions and other Pieces of Fortification, which are equally fair and strong. The *Baraque* is very delightful, being covered with lovely Orange and Lemmon-Trees planted in Rows, and having a great many Fountains, where the Water-works playing very high, give mighty Diversion.

From the Port you go up an Hill to the Town, which is small, but very pretty. It hath but two Gates, one leading to the Port, the other into the Country. There are several Churches in it, but that of St. *John* is the Chief. On one Side of it is a lovely Piazza, and at each Angle a Fountain. It is a large Building, and pretty high, paved with beautiful Marble, and adorned above with many Colours taken from Infidels. In this Church they pretend to have many fine Reliques, viz. St. *John Baptist's* Right-Hand, and many others.

There are several admirable Buildings in the Town, among others, the stately Palace of the Great Master, in which is a Magazine of Arms for 35 or 40000 Men, kept very clean and in great Order, and among them the Arms of such great Masters as have been wounded in any Action, are to be seen with the Marks upon them. This Palace looks into a large Square, in the Middle of which is a charming Fountain, which throws up Water in great Quantities, and very high, and supplies the whole Town. The Palaces of the Conservatory and Treasury are fair Buildings, and so are the Inns.

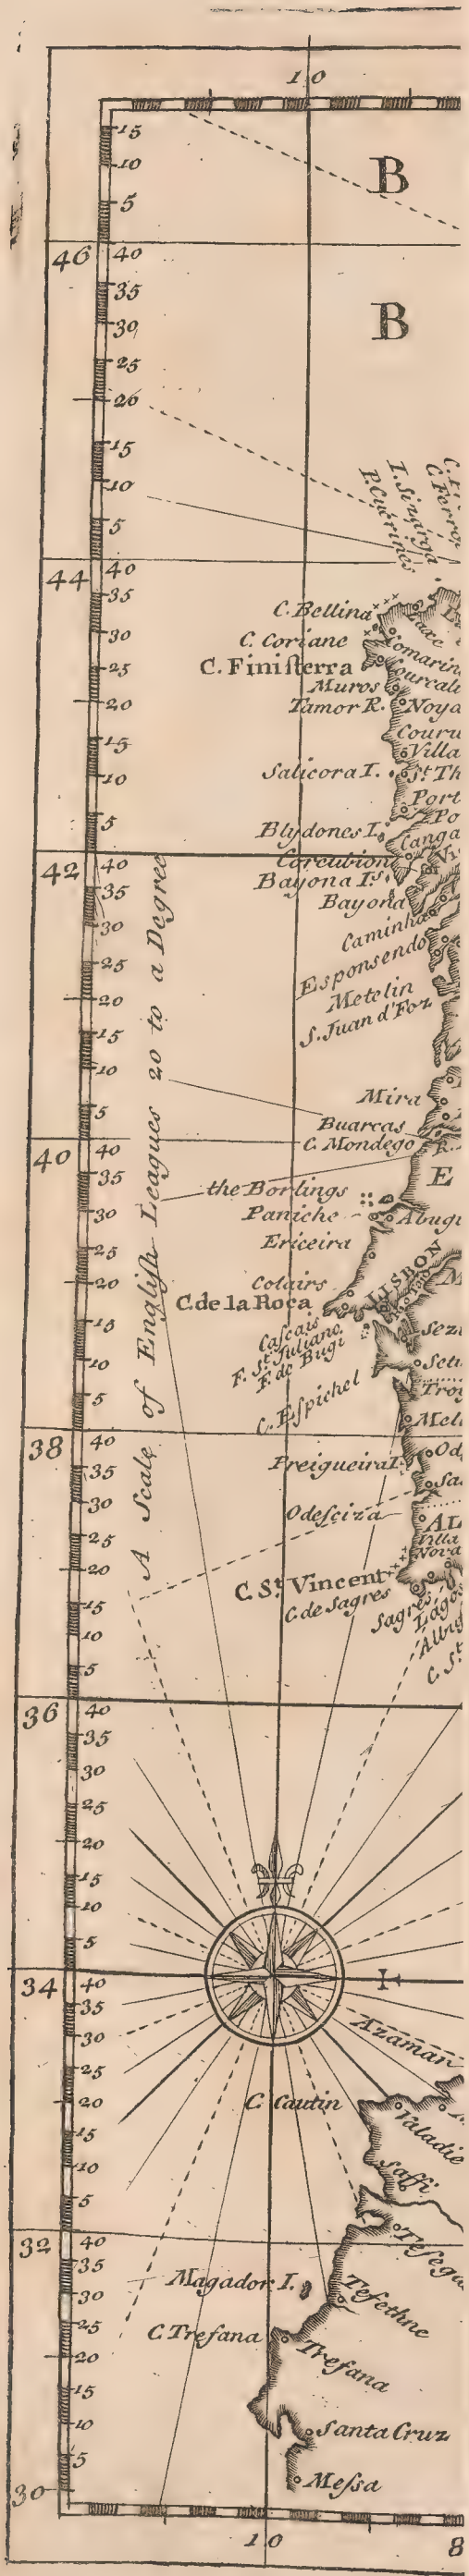

The Hospital is very well built, and the Hall for the sick Knights is hung with Tapestry, where they are attended by Knights, and serv'd in Plate. Poor Travellers find Entertainment here, till they can get Passage to the Place they are bound to, and then they are furnished with Provision, and their Charges are born through their Voyage. The Jesuits have a very well built House and a College there, and even the meanest Houses make a good Show, being built of a large square white Stone, which retains its Colour long and seems always new: They are all flat Roofed. The Streets of the Town are incommodious, because one goes always up Hill and down, but they are wide and strait. The fairest reacheth from the Castle of St. *Erme* to the Royal Gate, which is almost a Mile long, and in it they make the Horses and Asses run the *Pallio* upon their Days of Rejoicing. The Country about it is full of Gardens and very agreeable Places of Pleasure. About twelve Miles from the City the Grand Master hath a Palace, built in Form of a Castle, and very uniform, the Halls of which are adorn'd with excellent Paintings, and it has very neat Gardens full of Orange, Citron and Olive-Trees, with several lovely Fountains. At a little Distance from the House is a Grove stock'd with Game for his Diversion.

Five Miles from *Malta* is the Isle of *Gozo*, which is thirty Miles in Circuit, twelve in Length, and six in Breadth. It is a very wholesome Air, and though mountainous, is almost all cultivated, for the Inhabitants delight more in tilling the Land for Corn, than any other Sort of Husbandry, though it has many Places well watered, and fit for Gardening and Pasture. On our Lady-Day, September the 8th, the Knights keep a Rejoicing yearly for the *Turks* raising the Siege of *Bourg*, with Mase, Shooting, Feasting, Races of the *Pallio*, and many other Diversions.

4. Leaving *Malta*, Thursday Nov. 1655, he sailed by the Isle of *Sapienza*, and having weathered Cape *Matapan*, came to an Anchor in the Bay of St. *Nicholas*, in the Isle of *Cerigo*. Cape *Matapan* is a Promontory of the *Morea*, formerly called *Tenarus*, where *Arion*, carried by a Dolphin, was put on shore. This Country is inhabited by the *Meinots*, a People who lived in the Mountains without Law or Government, and are subject

1748.

ject to those who have most Power in the Country; sometimes the *Venetians*, and sometimes the *Turks*. All their Business is to rob Travellers.

Cerigo was anciently called *Porphyris*, because of the great Quantity of *Porphyrian* Marble found there; and *Cythera*. *Venus*, who is fabled to have been born of the Froth of the Sea, first dwelt here, and had a Temple near the Sea-side, the Ruins of which are still shewn. It is the first Island in the *Archipelago*, or *Ægean* Sea, sixty Miles in Compass, and five from the main Land. The *Venetians* are Masters of it, and keep a good Garrison there, because it is a Pass of very great Importance.

From *Cerigo*, where the Ship paid the Consul a Piastre for Anchorage, he sailed to *Zia*, leaving many inconsiderable Islands on the Right-hand, as *Melo*, *Antimelo*, &c. This Isle was anciently called *Ceos*, or *Cea*, it is shaped like an Horse-shoe, and fifty Miles in Circumference. The Soil is pretty good, producing Corn, Wine, Grass, and a great many other Things, and the Harbour is full of Fish. The Inhabitants pay a Tribute to the *Turks* of 3400 Piastras, and to the *Venetians* 2600, besides the Extortions and Robberies they meet with, which so impoverish them, that they are often forced to leave their Habitations. They are good People, and deserve to be pitied, because of the Miseries they suffer both from Christians and *Turks*. The chief Town of the same Name is five Miles from the Port; it is a large Place, containing seven hundred Houses, but there is not above four hundred of them inhabited, the rest being forsaken since the War of *Candia*. The Houses are built of Stone and Earth, rank'd on the Side of an Hill like the Benches of an Amphitheatre. The Castle is ruinous, but strong, so that sixty *Turks*, with two Musquets only, held out against the whole *Venetian* Army, under General *Morosini*, till Want of Water forced them to yield.

From *Zia* he sailed to *Andra*, anciently called *Andros*, sixty Miles from it, and eighty in Circuit. It is reckoned the most fertile Island of the *Archipelago*. It produces almost all Things necessary, and Silk more especially, for which they have a great Trade. The Port is pretty good, and the Town adjoining to it hath about two hundred Houses. In the whole Island are about sixty Villages, of which the most considerable are *Arni* and *Arnolacos*, inhabited by the *Arnauts* or *Albanians*, who are about twelve hundred Souls, and all of the *Greek* Church, differing in Language and Customs, yet all without any Discipline. Near these Villages is a large Monastery of an hundred ignorant Monks, called *Tagia*, who have a neat small Church, which they supply, and six lesser ones. There is a great Number of *Greek* Churches in the Isle, which are under the Government and Discipline of a *Greek* Bishop. The *Latins* also have a Bishop there, and six Churches, of which the Cathedral is dedicated to St. *Andrew*. The *Capuchins* preach in them, and teach a School, to which the *Greeks* send their Children from as far as *Athens*.

The *Turks* dispose of the temporal Affairs of this Isle, and are but uneasy Neighbours to the Christians. The *Jesuits* have a Church dedicated to St. *Veneranda*, and an House near the Valley *Monites*, with a Garden full of Fruit-trees of all Sorts, which yield them considerable Profit. The Houses in this Isle are ill built, and both the Air and Water bad. The Inhabitants are civil; their Women are chaste, and speak well, but their Apparel is unbecoming. The Inhabitants of the Towns love good Cheer and Diversions, and care not much to labour, but the Peasants are very industrious. Their Food is Goat's Flesh, for though in their Woods there is good Venison and Wild-fowl, yet they have neither Huntsmen nor Fowling-pieces to catch them. The Sea affords them no Fish. They have neither Physician nor Chirurgeon, but when they are sick, betake themselves to the Mercy of God as their only Remedy.

5. From *Andra* he sailed by the *Negropont*, *Sciro*, *Iplicera*, *Chio* and *Tenedo*, to *Troy*, where there are still considerable Ruins of that ancient and famous City, and those of great Extent, viz. An Harbour, Pieces of large Pillars, and the Remains of a great Temple; but

the Learned say, that they are only the Ruins of some Buildings erected there by the *Romans* long after the Destruction of *Troy*. From hence he passed the Mouths and entered the Channel of *Hellepont*, where the *Turks* first passed over into *Europe*, and sailing betwixt the Castles of the *Dardanel*s, came to an Anchor. The *Dardanel*s are two Castles, built on each Side the Channel of the *Hellepont* by *Mahomet* II. Son of *Amurat* II. The one stands in *Europe*, in *Romania*, in the very Place where *Sestos* formerly stood. This Castle is triangular, and besides two Bastions, hath three Towers covered with Lead, and twenty large Guns, which carry Stone Bullets of sixty Pound Weight. The other is in *Asia*, in a Plain where anciently *Abidos* stood. These two Forts are the Keys of *Constantinople*, though at two hundred Miles Distance, for they can hinder any Ship, Friend or Foe, to pass them without Leave, unless they will run the Hazard of being sunk. All Ships that come from *Constantinople*, are searched here for contraband Goods and fugitive Slaves. These Places are famous for the Loves of *Hero* and *Leander*, and *Xerxes*'s Bridge into *Europe*, which was made hereabouts. From *Andra* to this Castle is 280 Miles.

From thence he sail'd to *Gallipoli*, which is reckoned thirty five Miles. This Town was built by *Callias*, Prince of the *Athenians*, from whom it was called *Calliopolis*, which now is corrupted into *Gallipolis*. This Place is but thin peopled: The *Greeks* that dwell in it sell *Raki*, or Brandy, for the most Part, and their Houses have Doors not above two Yards high, to keep out the *Turks*, who will ride in else when they are drunk, and turn all Things upside down. It has a Tower and Arsenal, where are commonly laid up several Gallies.

6. Departing thence he passed the Isle of *Marmora*, which gives Name to the Sea, that was formerly called the *Propontis*, and sailing along by the *Seraglio* and *Constantinople*, came to an Anchor at *Galata*, where is the Harbour of that City. The Sea of *Marmora*, or the *Propontis*, which is about 120 German Leagues in Compass, lies between the 38° and 41° of Northern Latitude, which makes the Climate so temperate, that it has neither the Inconveniences of sharp Cold, or burning Heats, which is the Reason that both Sides of it has been so well adorn'd with famous Cities: For on the *Asian* Side stood *Chizico*, a Town formerly famous not only for being built by the *Argonauts* 500 Years before *Rome*, but for its lofty Towers, magnificent Buildings, large Arsenals and Magazines, fine Amphitheatre and convenient Port, though Nothing now remains of all these Things but frightful Ruins, which are the Habitations of Owls.

Nice, called by the *Turks* *Isnich*, famous for the first General Council. It is almost square, and stands at the Extremity of a Bay in a fine Plain. On the N. E. is a Ridge of Hills, which abound with Wood, Vines, Fruits and Fountains. It is encompassed with Walls full of round Turrets, and had a Covert-Way that ran by them, but it is now ruined. The City is pretty large, the Streets neat, and has at least 10,000 Inhabitants, as well *Greeks* as *Jews* and *Turks*, who trade in Corn, Fruit, Cotton, fine Cloth, &c. to *Constantinople*. There are here many Remains of Pagan and Christian Antiquities, but these are so defaced by the *Turks*, that nothing admirable is to be discerned.

Montagma, or *Nicopolis*. It stands on a Bay anciently called *Cianus Sinus*, from the City of *Cium*, which once stood there. This Town is small, but by Means of the Bay drives a great Trade to *Constantinople*, for its Nearness to *Bursa* brings all the Traffick of *Bithynia* to it. The Inhabitants are about five or six thousand *Greeks*, *Turks* and *Jews*, and are all Merchants, and live by their Trade in Fruits, which they send to *Constantinople*.

Nicomedia, which, next to *Constantinople*, has the pleasantest Situation of any City in the World. It stands at the Bottom of a Bay, and runs up the Side of an Hill, adorn'd with many Fountains, and is cover'd with Fruit-Trees, Vineyards and Corn. Their Garden-Fruits are extraordinary, and their Melons are thought by some

to equal those of *Cacban* in *Persia* for Goodness, which are reckoned the best in the World. Here are Abundance of Remains of Antiquity, enough to satisfy the Curiosity of Travellers. It was built by the Nymph *Olbia*, but has its Name from *Nicomedes*, King of *Bithynia*, who enlarged it. It is famous for the Death of *Hannibal* and *Constantine* the Great, for the early Conversion of its Inhabitants to Christianity, and the many Martyrs who sealed the Faith with their Death.

It is called *Ismit* by the *Turks*, and is a large and populous City, having about 30,000 Inhabitants, *Greeks*, *Armenians*, *Jews* and *Turks*, who most of them live by trading in Silks, Cotton-Wool, Linnen-Cloths, Fruits, Earthen and Glass-Wares, and several other Commodities, which make it a City of great Traffick. There are a great many *Greek* Churches and fair Mosques, with several Inns and neat *Bazaars*, or Market-Places, in this Town. Most of the Ships and Vessels which belong to *Constantinople* are built here, but they are sorry Artists at it. On the right Side of the Bay of *Nicomedia* is a Fountain of Mineral Water, which the *Turks* and *Greeks* say, cures all Distempers, and therefore flock to it mightily.

Chalcedon. This Town was once famous for the Temples of *Venus* and *Apollo*. Many Christian Churches, and among them one dedicated to St. *Euphemia*, where the Fourth General Council sate, and in Part of which, as it still remains, the *Greeks* have yet their Religious Worship, and strong Fortifications, and other fine Buildings it had; but is now reduced to a Village of 1000 or 1200 Houses, and those very ruinous. The City gives Name to the Straights adjoining, which are called *Fretum Chalcedonicum*, *Bosphorus Chalcedonius*, as well as *Bosphorus Thracius*, and near it is a Light-house and a Pleasure-house belonging to the Grand Signior, called *Finari Kioske*, which Sultan *Soliman II.* built for his Retirement with the Ladies of the *Seraglio*.

7. On the *Thracian* Side stands *Rodosto*, or *Radisto*, a Town well situated at the Extremity of a Bay, which affording it a very good Haven, fills it with Inhabitants, who drive a Trade all over *Thrace*, the *Propontis* and *Black Sea*. In it are three or four large Mosques, and some small ones, some Christian Churches belonging to the *Greeks*, and two *Jewish* Synagogues. The Town lies along the Sea-shore, where the Trade is, and toward the Land are many Gardens; but the Fruit is not very good, because the Gardiners of *Turkey* are but unskilful in their Art.

Perinthus, or *Heraclea*, which once gave Law to *Byzantium*, but now is subject to it. This Town hath two good Havens belonging to it, but one of them is so choaked up with the Rubbish and Filth of the City, that it serves only for Barks and Saicks. The Amphitheatre of *Heraclea* was one of the seven Wonders of the World; but now there are only some shatter'd Ruins of it. There are also seen many Pedestals with *Greek* Inscriptions to *Severus*, *Trajan*, and other Emperors, who had conferred any signal Benefit upon the City; but the Statutes which once stood upon them are thrown down and demolished. The Town at present is but thinly inhabited, and drives but a small Trade, though they have many Commodities, such as great Quantities of Cotton, Olives, Fruits, both green and dry, Skins and Wool. The Cathedral is one of the finest in all *Greece*, having a handsome Roof, and being very neat in the Inside, and better contrived than the Patriarchal Church of *Constantinople*. There are five or six Churches besides, but none of them in so good a Condition as the former, and two of them are wholly disused. But though the Buildings and Trade of this City daily decay, and Time may blot it out of the World, yet the Sufferings of many Christian Martyrs in it will keep up its Memory as long as the World endures.

8. In the *Propontis* are several Islands, viz. *Marmora*, which gives Name to the whole Sea, and is about ten Leagues in Compass. The chief Towns in it are *Galioni* and *Craſtio*. The *Caloyers*, or *Greek* Monks, have several Convents or Hermitages in it. They are very austere in their Way of Living. 2. *Avesha*, whose chief

Town is of the same Name. It hath two other Villages called *Aloni* and *Arabi Kieny*, because it is inhabited by *Arabians* only. 3. *Contalli*, which has a Town of the same Name: And, 4. *Godoro*, which has only some Houses and Cloysters for Monks. These four Islands go all by the Name of the first, and lie in a Cluster, abounding with Cattle, Corn, Wine, Fruits, Cotton, &c. Their Fishery is also good, but they regard it only for their own Use, because *Constantinople* is supplied from Places in its Neighbourhood. Nearer to *Constantinople* lies another Knot of Islands, called by the *Turks* *Papas Adassi*, by the *Greeks* *Papa Donissa*, or the Islands of the Monks; and by the *Europeans*, *The Pope's Isles*. If *Constantinople* were in the Hands of the Christians, they would be a perfect Paradise, and every one would have his House of Pleasure there; but being subject to the Ravages of the *Turks*, who often go thither to be drunk, and in their Heat rifle their Gardens and Vineyards, they lie in a Manner uncultivated, and only a few *Caloyers* manure a little Bit of Land by the Monasteries for Herbs and Roots for their own Use. These *Caloyers* are Monks of St. *Basil*, who retain the ancient Way of Living and Habit, without any Alteration. They lead a very retired and austere Life, and never eat any Flesh. They observe four *Lents* in the Year, besides several other Fasts; and some among them are so abstinent, as to be satisfied with eating a little Bread and Pulse, dressed with Salt and Water, once a Day; and others by Custom have brought themselves to eat once in two or three Days, during their *Lents*; and it is said some will eat but seven Times in the seven Weeks of their longest *Lent*, though this seems improbable; but these are only the most devout, which are but few. The rest order Matters so cunningly, that they observe nothing less than Fasting; for though indeed they eat no Butter, Fish, Eggs, or Oil, and drink no Wine, yet they use other Things luxuriously, as Oysters, Cavear, and Shell-fish, for Fish; Almonds, Pistacho's, and Nuts, for Butter; *Aqua Vitæ*, Coffee, and Sherbet, for Wine, &c.

9. *Constantinople* has the happiest Situation of any City in the World. It lies in *Europe* upon a Point of the main Land, jetting out towards the *Bosphorus* of *Thrace*, from whence it is but half an Hour's Passage into *Asia*. On the Right-hand is the *White Sea*, or *Propontis*, by which there is an easy Passage into *Asia*, *Aegypt*, and *Africa*, whereby it is supplied with all the Commodities of those Places. On the Left-hand it hath the *Black* or *Euxine* Sea, and *Palus Maeotis*, by which it is furnished with all the Commodities of the North; insomuch that there is Nothing that can be necessary, useful, or pleasant, which is not brought plentifully to *Constantinople*, the Winds always serving to bring in Commodities from one of those Parts. The Port is by Nature the loveliest in the World, being six Miles in Compass, and a Mile over, and so deep in all Places, that a Ship may lay her Head a-shore without Danger.

It was anciently called *Byzantium*, and was built by *Pausanias*, King of *Sparta*. The Emperor *Severus* demolished it, to punish the Rebellion of the Inhabitants, and *Constantine* the Great rebuilt it, calling it *New Rome* first, and then *Constantinople*; being afterwards dedicated to the Virgin, it sometimes bears the Name of *Parthenopolis*; the *Turks* call it *Istambol*, or *Stamboul*. After the Division of the *Roman* Empire; it was the Seat of the Eastern Emperors, from whom, in 1209, it was taken by the *Venetians* and *French*, but recovered by the *Palæologi* fifty Years after, and fell into the Hands of the *Turks* on *Whitsunday*, 1453, who have kept it ever since. The Air in Summer would be very hot and incommodious, were it not cool'd by a Breeze which comes every Afternoon from the Mouth of the Port, by which it is render'd very healthful, so that no Diseases are known here but the Plague, which makes a great Havock every Year. It is very subject to Earthquakes, so that sometimes two happen in a Day. The Figure of it is triangular, one Side lying toward the *Propontis*, the other on the Port, and the third toward the Land. It is all encompassed with good Walls, and to the Land Side they are double, being built in some Places of

of Free-stone, and in others of Free-stone and Brick. It hath twenty-two Gates, six toward the Land, as many along the Port, and ten on the Streight of the *Propontis*, which have all Landing-places and Stairs, and the whole City is about twelve Miles in Compass.

The Castle of the Seven Towers joins the double Walls on the Continent Side to those that lie upon the *Propontis*. It was anciently one of the City Gates, called *The Gilded Gate*, from the gilt Ornaments of it, and had four Turrets; but *Mahomet II.* becoming Master of *Constantinople*, added three new ones, and made it a Castle, strong enough to keep the Treasures of the Empire, and for that Purpose it served a long Time; but at present it is only used as an honourable Prison, where the Grand Signior shuts up such Persons of Quality and Slaves of Note as have incurred his Displeasure. If any Christians are confined in it, their Priests are allowed to come and say Mass to them in a little Chapel; and if they are Knights of *Malta*, or other Persons of Quality, they are allowed to go out, if an Ambassador, or other Person of Note, will be engaged for their Return. Sultan *Osman* and *Heusseïn Basha* were strangled in this Castle.

Without the Walls, hard-by one of these Castles, are two large Statues of white Marble in Basse Relief, the one seems to be *Endimion*, and *Diana* coming down to see him, and the other the Nine Muses, with the Horse *Pegasus*. They are done by a good Hand, but inferior to some Pieces in *Europe*. In going by Sea from this Castle to the *Seraglio*, there is a square Tower standing in the Sea, at about two Paces from the City-Walls, where, they say, *Justinian* imprisoned *Belizarius*, his famous General, out of meer Jealousy, and having stript him of all, forced him to beg his Subsistence of charitable Passengers. Not far from this Tower is a Fountain, to which the *Greeks* always pay a great Veneration, and, upon the Day of Christ's Transfiguration, carry their Sick to it, to whom they give some of the Waters, and cover their Bodies a While with the Sand, and they say, wonderful Cures have been thus done by it. The *Greeks* have Abundance of these miraculous Fountains, which they superstitiously honour, and the Priests encourage them in it for their own Gain. Near this Fountain stands the *Kioske*, or Pleasure-house of the *Bostangi Basha*, or Overseer of the Gardens. It is a Pavilion cover'd over just without the Walls of the *Seraglio*, and overlooks the *Propontis* and *Bosphorus Thracius*; but he, being in the fourth Post of the Empire, has no Time almost to take the Air. Beyond this *Kioske* are a great many Cannon planted, so as to strike any Ships that pass between Wind and Water, to hinder the Entrance into the *Seraglio* or Port, if any should attempt it by Force. These Pieces are always charged, but never discharged, unless it be upon the first or second Day of the Month *Bairam*, to give the *Musselmén* Notice of that solemn Feast, or upon the Account of publick Rejoycings, as the Taking of a City, or conquering some Province.

In the Middle of these Pieces of Cannon is one of the four Posterns of the *Seraglio*, called *Bostan Capi*, or the Gate of the Gardens. It is fortified with two large Turrets, and guarded by two Companies of *Bostangi's*, or Gardiners, who keep all from entring at this Gate, but the Sultanas and Officers of the *Seraglio*. After you have passed the Cannon, and doubled the Cape, where you pass a Fountain, from which most of the Ships take in their fresh Water, you come to two *Kioskes*, built by Sultan *Soliman* to view the going out and coming in of the Men of War, and divert himself with his Women, of which he had Plenty. Both of them are well adorn'd and furnished with gilded Cupola's, Alcoves, Sopha's, Quilts, Cushions, Carpets, and all other Things fit for so great a Prince, but nothing can be imagined more noble than one of them. At these Pleasure-houses always attend some small Galleys and Saicks, ready to receive the Grand Signior and his Train whenever he pleases to divert himself. These Galleys and Barks are very neatly gilded and painted all over, the Oars and Grappling Irons not excepted. These are all the re-

markable Things without the Walls, both of the City and *Seraglio*. We must now go into the City.

10. It stands upon seven little Hills, as old *Rome* did, and the Houses are so disposed, that one takes not away the Sight from the other. The Streets are narrow for the most part, but there are several stately Buildings in them. There are many magnificent Mosques in it, of which the most magnificent is that of *Santa Sophia*, which was anciently a Christian Church, built by the Emperor *Justin*, enlarged, enriched, and adorned by *Justinian*, and dedicated to the Wisdom of God, *Hagia Sophia*. The *Turks* have changed it into a Mosque, but retain the Name. This Fabrick is 114 Paces in Length, 80 in Breadth, and as many in Height, square without, but round within. The Mosque is very spacious, hath a Dome in the Middle, in the Form of a flatted Globe, which is a singular Kind of Architecture. It is paved with fine Marble, and matted, that the Cold may not hurt such as come to worship without Slippers, and squat down in their Service. There is a Tomb, which, the *Turks* say, is *Constantine's*, and a Stone on which, they believe, the Virgin washed our Lord's Linen, and they bear a great Reverence to it.

The Church was painted in *Mosaic* with Crosses and Images of Christ, the Holy Ghost, the Virgin, and other Saints, which yet appear, though the *Turks* have endeavour'd to deface them, for they suffer no Images. Within are two Galleries one over another, that go round the Church, and are supported by sixty-two Pillars, which, 'tis supposed, were for the Women when it was a Church. On the Out-side of the Church are four Steeples, very high and slender, on which are several Balconies, from whence the *Maexims* call to Prayers. It's big enough to hold 40,000 People, which Number usually meet in it at their *Bairam* or Passover. In a little Street on the Back of this Church are two large thick Pillars, where, they say, Justice was wont to be administred, and by them an old Tower, where the Grand Signior's Beasts are kept, viz. Lions, Wolves, Foxes, Leopards, a spotted Lynx, the Skin of a Giraff, and other rare Creatures.

Besides this Mosque, there are seven others, call'd Royal or Imperial, of which the Chief is called *Solimania*, because it was built by Sultan *Soliman*, whose Coffin remains in it, adorned with Carpets, a Turban set with Heron-Feathers and precious Stones, and Lamps burning. Several *Alcorans* are chain'd to it, that the People may read them, and pray for the Defunct's Soul, and some are hired to do it, for the Grand Signiors take care to leave a Fund for continual Prayers to be said for them after their Death. Near this there is another, where lies the Body of a Sultana whom *Soliman* loved extremely, as also of Sultan *Selim*, his second Son. This Mosque hath a most lovely Cloister, with Bagnio's and Fountains. The New Mosque, built by Sultan *Achmet*, is one of the fairest and most magnificent in *Constantinople*. The Entry into it is through a large Court. It is a great Mosque, hath a stately Dome, and is full of Lamps, and many Curiosities in Glafs-Balls.

The fairest of all, are the Mosques of Sultan *Mehemet*, Sultan *Selim*, and that which is call'd *Chabzadeh Mesdgidi*, i.e. The King's Son's Mosque, being built by one of *Soliman's* Sons, and *Bajazet's*. All these Mosques have Hospitals and Schools, where a great many poor Scholars are maintained, and educated. Most of the ancient Statues, Obelisks and Pillars, set up by *Constantine* and his Successors, are entirely ruined, yet the large *Hippodrome*, called by the *Turks*, *Atmeidan*, where they exercised their Horses in Racing, is still to be seen. It is a large Square, 550 Paces long, and 150 broad. In the Midst of it is an Obelisk pretty entire, mark'd with Hieroglyphick Letters, and at a little Distance from it a pretty high Pillar, made of large Stones, laid one upon another without Cement, and towards the End of it is a Pillar made of three brazen Serpents twisted together, and the Heads make the Capital. It was said to be the *Talisman* or Spell, raised by *Leo Isauricus* the Emperor against Serpents, so that none would come near, till *Mahomet II.* when he took *Constantinople*, beat

beat off the under Jaw of one of them with his *Zagaye*, and now they are said to do no Hurt, because it is standing. The Occasion of erecting it is as fabulous as the Virtue, and so the Relation may be spared.

The *Grand Bezistan*, or *Exchange*, is a noble Building and a glorious Sight. It is a great round Hall, built all of Free-Stone, and surrounded with a thick Wall, by which are Shops full of the richest Commodities. It hath several Gates, which are shut fast a Nights, and because no Body lies in it, it is guarded by several Watchmen, till it is opened again. Each Body of Merchants or Tradesmen have an Apartment by themselves, and no Man may sell the same Commodities in another Place. All Manner of Goods are here sold, during the Time it is open.

There is also another *Bezistan*, but neither so large nor so well stocked with Goods. There are also several *Bazaars*, or publick Markets, in one of which, called the *Auret Bazaar*, or Womens Market, is a Pillar of an extraordinary Height, called, the *Historical Column*, because from the Top to the Bottom, which is 147 Foot, are represented in *Basso Relievo*, several Expeditions, Battles, and other remarkable Events, during the Empire of *Arcadius*. 'Tis all of Marble, but much defaced, and the Houses stand so near to it, that one can't have room to examine or find out the Figures of it. There are Stairs in it to ascend up to the Top, but the *Turks* will suffer no Man to go up them. In the Quarter of the *Janizaries*, near the Baths of *Ibrahim Basba*, in the Court of a private Man's House, stands the Column of the Emperor *Marcian*. It is all of spotted Marble, about fifteen Foot high, and its Capital of the *Corinthian Order*. On the Top is a square hollow Stone, adorned with four Eagles at each Corner. It is reasonable to think his Heart was put in this Stone, and his Body buried under the Column. The other is call'd, *The Burnt Pillar*, because it has been lately burnt by a Fire that happen'd near it, which has so shatter'd it, that they have been forc'd to keep it tight with Iron-Bars. It is composed of eight Pieces of *Porphyrion* Marble, so neatly join'd, that they seem'd but one Stone, till the Fire damag'd it, but now they are all seen.

II. The Grand Signior's *Seraglio's* are also remarkable Buildings. They are the Palaces where the *Ottoman* Princes ordinarily keep their Courts. The Word is taken from *Serrai*, which signifies a noble House. There are two *Seraglio's* belonging to the Grand Signior, viz. The *Old*, and the *New*, which being much the more noble Building, though nothing so magnificent as the Palace of so great a Prince ought to be, is called the *Grand Seraglio*. It is of a triangular Form, two Sides whereof are encompassed by the *Thracian Bosphorus*, and the other divides it from the Town. It stands in the Place of the ancient *Byzantium*. It is three Miles in Compass, and is enclosed within a very strong Wall, upon which are divers Watch-Towers, on which the *Agiam-Oglams* watch Night and Day. It hath many Gates both to the Sea and Land-side, but the chiefest is towards the City, and that is used daily, but the rest are never opened but upon some special Occasion, those to the Sea-ward, when the Sultan or some chief Officer of the *Seraglio* open them for Pleasure, and those to the Land-ward, when the Grand Signior orders some Great Man to be put to Death, or upon some other great Design.

The chief Gate above-mention'd is guarded Day and Night by the Companies of *Capoochees*, or Porters, under the Command of the *Capoochee-Basba's*, or Captains of the Porters. A Company of *Janizaries* watch without the Palace, who are to give Notice of any Accident. And by the Sea-side, the *Agiam-Oglams* watch in Towers upon the Wall, and if any Shipping attempt any Mischief, they have Ordnance ready charged, and the Gunners lying close by them. In this *Seraglio* are many stately Rooms, suiting the Seasons of the Year, the greatest Part whereof are built upon plain Ground, and some upon the Hills and Sea-side, which are called *Kiosks*, or Banqueting-Houses. Among these is the Chamber where the Grand Signior gives Audience to Amba-

sadors, *Basba's*, &c. This Room stands in a Court adorn'd with many delicate Fountains, and is furnished with rich Carpets and Crimson Velvet embroidered with Pearls, and the Walls covered with fine white Stones, and by it is a small Room covered with silver Plate hatch'd with Gold.

To these Lodgings of the Sultan belong fair Gardens, with all Sorts of Flowers and Fruits, pleasant Walks and Marble Fountains. There are also Lodgings for the Women like a Nunnery, wherein the Sultana Queen, the other *Sultana's*, and all the Grand Signior's Women Slaves dwell, in which are Bed-chambers, Dining-Rooms, Bagnio's, and all other Buildings necessary for the Service of the Women. There are also convenient Rooms for the principal and inferior Officers, all well furnished, among which are the *Hazineh*, or King's private Treasury and Wardrobe, both strong Buildings with Iron Doors, which are kept continually shut, and the former is sealed with the King's Seal. In the *Seraglio* are also Rooms for Prayer, Baths, Schools, Butteries, Kitchens, Distilling-rooms, Places to swim in, to run Horses, and for Wrestling and Shooting at Buts, and, in a Word, all other Conveniencies for a Prince's Palace.

At the Entrance into the *Seraglio* is a very large and stately Gate, where there is a Guard always standing of fifty *Capigies*. This leads into a very spacious Court of near a Quarter of a Mile square, but it is not paved. The *Basba's*, and other great Men may ride into it, and near the Gate is a Piazza for the Shelter of Men and Horses. On the Right side of it is an Hospital for all that fall sick in the *Seraglio*, and an Eunuch called *Hasteler Agasi*, looks after them. On the Left Side is a Place where they keep their Timber and Carts, to be ready for the Service of the Palace, and over it an Hall, where are hang'd up Weapons of Antiquity, as Cimitars, Javelins, Bows, Head-pieces, Gantlets, &c. which are lent to the Soldiers when the Grand Signior, or chief Vizier makes any solemn Entry into *Constantinople*.

After having passed through this great Court, you come to another Gate, less than the former, but neater and more costly, in which there is also a stately Porch, and a Guard of *Capoochees*. This leads into another Court less than the former, but far more beautiful and pleasant, adorned with Fountains and Walks, Rows of Cypresses and Grass-Plats rail'd in, where the Gazels, feed. It is near 300 Paces square, and the Walks are paved. In this Court all must walk on Foot, except the Grand Signior. On both Sides of this Gate is an open Gallery, where the *Chiauffes*, or Pursuivants, the *Janizaries* or Foot-Guards, and *Spahi's*, or Horse-Guards, stand in their Ranks, very well apparell'd, when any Ambassadors enter, or on other solemn Occasions. In this Court are several Kitchens, with their Offices and Larders, for the *Sultana's*, and other Officers of the Court. On the Left Side is the Sultan's little Stable for about thirty five Horses for his Highnesses Use, and over it Rooms for their Furnitures, which are very rich, set with Jewels, to the Admiration of all Beholders. Next the Stable are Rooms for the Officers of the *Divan*, or Court of Justice, and by them the Chamber, where the *Divan* sits, and a little behind that is the Gate that leads to the Womens Lodgings.

At the End of this Court is the Royal Gate, which leads to the Sultan's Lodgings, and may not be entred by any, but such Gentlemen as attend him, and others that serve him, without Leave from the Sultan himself. This Gate is kept by the *Capee-Aga*, or chief Chamberlain, and a Company of white Eunuchs. The Court is paved with fine Marble, wrought with *Mosaic Work*, and adorn'd with curious Fountains, and a Lake where the Grand Signior has a fine gilt Boat for his Recreation. In the Buildings, which are sumptuous, are a Chamber of Audience, a Row of Summer-Rooms standing on a little Hill, and looking toward the Sea, a large Hall standing on Pillars, and opening towards the East, and by it the Grand Signior's Bed-Chamber, the Walls of which are covered with the finest *China Metal*, and the Floors with very costly *Persian Carpets* of Silk and Gold. The Posts of the Bedsted are

are Silver, the Canopy, Bolsters, Mattresses, and Pallets, are all of Cloth of Gold. Behind the Hall is a Place to shoot in, where for that Purpose are laid up many Bows and Arrows.

12. The *Divan* sits four Days in a Week, viz. *Saturday, Sunday, Monday* and *Tuesday*, upon which Days the *Vizier-Azem*, or chief Visier, who is the supream Judge, and represents the Grand Signior, with all the rest of the Visiers, the two *Cadileschers*, or Judges of the Armies in *Greece* and *Natolia*; the three *Tefterdars*, or Treasurers; the *Reiskitamb*, or Chancellor; the *Neshaunge*, or Keeper of the Mark, with their Secretaries and Clerks; the *Chiausb-Basba* and his Officers, are to be at the *Divan* by Break of Day. All Causes are determined by the *Vizier-Azem*, if he pleases, for the *Basba's* do not speak, but only hearken and attend till he refers any Thing to their Judgment, as he often does for Expedition, reserving the Causes of the greatest Consequence and Importance to himself, as the *Caimekam* or his Deputy does also in his Absence.

The Petitioners speak for themselves, or desire the Help of a *Chiausb*, for they have no Pleaders, or Attorneys. When the chief Visier hath heard their Suits, he consults with the *Basba's*, and then resolves and determines them as he will himself. This he doth usually after Dinner, and then he repairs on *Sundays* and *Tuesdays* to the Chamber of Audience, to give an Account to his Sublime Highness of what Business he has dispatched. Sometimes the Grand Signior will come privately to a little Window, which is cover'd with a Lattice, and looks into the *Divan*, to hear the Causes; and this forces the chief Visier to act circumspectly and justly in managing Affairs, while he sits in the *Divan*, tho' at other Times his Hands are open to Bribery, and he will carry Business as he pleases; but all Things are dispatched without Delay.

When an Ambassador from any great Prince is to kiss the Grand Signior's Hand, the Grand Visier calls a great *Divan* of all the Grandees of the Port, and all the *Chiausbes*, *Mutafurraka's*, *Spabi's*, and *Janizaries* are order'd by the Captains to dress themselves in the best Manner they are able, and stand in their Places in the second Court. When the *Divan* is set in their Order, the chief Visier sends a *Chiausb-Basba* with many of his *Chiausbes* on Horseback, to conduct the Ambassador to the *Divan*, where he is placed close to the Visier, who having complimented him a while, entertains him at Dinner, and then conveys him to a Room by the Imperial Gate with his Attendants, till the Sultan is ready to receive him. In the mean Time the Ambassador's Present is carried about the second Court, in the Sight of all People, and then is brought to the Sultan, and the Grand Visier sends the Ambassador several Vests, appointed by the ancient Rule, for himself and Gentlemen, to put on for that Ceremony.

The Vests for the Ambassador are of Cloth of Gold of *Bursa*, but for the rest, they are of little or no Value; yet the Ambassador must make a Present to the Grand Signior of more than the Worth of them. Then the Ambassador is conducted by the Master of the Ceremonies to kiss the Sultan's Hand, (which is, indeed, but his Hanging-sleeve;) which done, the *Druggoman*, or Interpreter, declares the Ambassador's Commission; to which the Grand Signior makes no Answer, (for he disdains to speak to a Christian) but speaking to the chief Visier, refers all Proceedings to his Discretion, and so the Ambassador departs, bowing his Head to the Sultan, but pulls not off his Hat at all. Other Ambassadors of Petty Princes, or State, though they have Vests given them also by the Grand Signior, yet come not to the *Divan*, but go privately with their Presents. All Ambassadors are maintain'd by the Grand Signior, except those from the States of *Venice*, during their Abode at the Port, but it is hard to get his Allowance through the Baseness of the Officers.

13. All Persons, that live in the *Seraglio*, are the Grand Signior's Slaves, as are also all that are subject to his Empire; for they all acknowledge, that whatever they

enjoy proceeds from his Good-will, and that their Estates and Lives are absolutely at his Disposal.

There are in the Sultan's Court about twelve hundred Women old and young. The Sultan's Concubines, who are kept for their Beauties, are all young Virgins, stolen from foreign Nations, instructed in good Behaviour, Dancing, Musick, Singing, and curious Sowing, and are given to the Grand Signior as Presents by the *Tartars*, *Bashaws*, and other great Men, and so their Number is uncertain. These Virgins, immediately upon their coming into the *Seraglio*, are made *Turks* by using this Ceremony: They are to hold up their Finger and say these Words, *There is no God but God alone, and Mahomet is the Messenger of God*; and then being examined by an old Woman, called *Kabiyah Cadun*, i. e. the Mother of the Maids, they are placed in a Room with their Equals in Age and Disposition. All the Women live like Nuns, but have large Apartments to dwell in. Their Beds are coarse and hard, made of Flocks, and by every tenth Virgin lies an old Woman, and there are Lamps always burning by them. Near their Apartments they have Baths and Fountains for their Use, and, above their Bed-chambers, Places to sit and sew in. They dine in Companies, and are waited upon by other Women, wanting Nothing that is necessary for them. There are also Schools for such as will learn to read or speak the *Turkish* Tongue, work or play, and some Hours are allowed them for Walking and Recreations.

The Sultan never sees these Virgins, unless when they are first presented to him, or when he desires to have one of them for his Bedfellow, and divert himself with Musick, or some other Pastime. When the Grand Signior desires a fresh Mate, he gives Notice to the *Kabiyah Cadun*, who picks out the fairest and most pleasing, and having placed them in two Rows in a Room, brings in the Sultan, who walking four or five Times in the Midst of them, views them, and as he goes out, throws his Handkerchief into the Virgin's Hand which he chuses to lie with. This Choice is accounted a great Favour, and the *Cadun* uses all the Art she can to prepare her for it, by attiring, painting and perfuming her, and at Night she is brought to sleep with the Grand Signior in certain Chambers set apart for that Business in the Womens Lodgings. By the Bed they have great wax Tapers burning all Night, and *Moorish* Women sitting by them. In the Morning when the Sultan rises, he changes all his Apparel, and leaves them to her he lay with, and the Money in the Pockets, and then departs to his own Lodgings, from whence he sends her immediately a Present of Jewels, Money and Vests of greater or less Value, according to the Satisfaction he received from her.

If any conceive by him, and bring him forth his first begotten Child, she is called *Sultana Queen*, and if it be a Son, she is confirmed and established by great Feasts and Solemnities, and thenceforward has an Apartment, Servants, and a large Revenue appointed her, and all Persons in the *Seraglio* must pay her the Respect of a Queen. The other Women that bear him Children are called *Sultana's*, but not Queens, yet live in separate Apartments, are well served and attended, and have no Want either of Money or Apparel, according to their Degree. But if it happens that the first-begotten Son of the Queen, Heir to the Empire, dies, and another of the *Sultana's* have a Son to succeed the deceased Heir, the former is deprived of her Revenue and Royalty, but remains a *Sultana*, and the latter becomes Queen, and so the Title runs from one *Sultana* to another by Virtue of the Son's Right to the Succession.

In Times past the Grand Signior was married to the Queen, but now she passes without celebrating any Nuptial Rites; yet the Mother of the Heir enjoys all the Prerogatives of a Queen, and has a Guard of thirty or forty black Eunuchs, under the Command of the *Kizlar-Aga*, their Master, to be employed on her Occasions. These *Sultana's* never go out of the *Seraglio* but in the Sultan's Company, and are never seen by any but such as attend them, who are those black Eunuchs, and have all

cut off clear to the Belly, that there may be no Danger from them.

The Grand Signior's Daughters, Sisters and Aunts, have their Lodgings also in the same *Seraglio*, and being royally serv'd, and sumptuously apparell'd, live by themselves in continual Pleasures, until such Time as, at their Request, the Sultan shall be pleas'd to give them in Marriage, and then they come forth, and carry each of them a Chest along with them, which the Grand Signior gives them full of rich Apparel, Jewels, and Money, to the Value of about thirty thousand Pounds *Sterling*, besides what they hoarded for themselves before, which amounts sometimes to a great deal; and if the Grand Signior be dispos'd to deal generously with them, they are suffer'd to carry with them twenty Women Slaves, and as many Eunuchs, and he continues their Allowance of a thousand or fifteen hundred Aspers a Day, which they had in the *Seraglio*, and furnishes their Houses; and if the Husband of such a Lady has not an House fit for her, the Sultan gives her one of his own.

As for the Husband, he is to make her a Bill of Dowry of at least 100,000 Chequins in Money, besides, Vests, Jewels, and other Ornaments, which amount to a great Sum. Being married, they converse with Men no more than they did before, except their Husbands, but only with Women, visiting their old Acquaintance in the *Seraglio*, but not without the Grand Signior's Leave. The *Sultana's* thus married, are for the most part their Husbands Mistresses, insulting over them, and commanding them as they please, wearing an *Hanjar*, or Dagger, in Token of their Power over them, and sometime they will put them away and take others, and such a Divorce commonly proves the Death of the Husband, whom the Grand Seignior leaves to their Will.

The other Women either grow old in the *Seraglio*, and so are made Mistresses of the young ones, or are sent into the old *Seraglio*, which they account their best Fortune, because from thence they may be married, with the Consent of the Mistress, and carry away the Riches they have got, which is very considerable, partly by saving out of the Sultan's Allowance, and by the Presents made them upon their *Bairam*, and by the *Basha's* Wives. Hither also, after the Sultan's Death, are all the *Sultana's* sent, except the *Sultana Queen*, and if they are wealthy, they marry to Men of reasonable Quality, yet with the good Will of the Mistress, and Consent of the Grand Signior. The Women of the *Seraglio* are punished for their Faults very severely, and are soundly beat by their Overseers, and if they prove disobedient and incorrigible, they are by the Sultan's Order sent into the old *Seraglio*, and the best Part of what they have, taken from them; but if they are found guilty of Witchcraft, Whoredom, or any such notorious Crime, they are bound Hand and Foot, and being put into a Sack, are in the Night cast into the Sea.

14. The *Seraglio* may be properly termed the Seminary or Nursery of the best Subjects, for in it all have their Education, who afterwards become the principal Officers or subordinate Rulers of the State and Affairs of the Empire, and these are they which are called the *Agliam-Oglans*, i. e. unexpert and untutor'd Youths. There are ordinarily about 6 or 700 of them, from twelve to twenty five or thirty Years of Age at most, being all Christian Children, gather'd up every three Years in the *Morea* and throughout all the Parts of *Albania*. They are taken from such Families as are suppos'd to be of the best Spirit and most warlike Disposition, and as soon as they are brought into the *Seraglio*, they are circumcised and made *Turks*. They are at first put to very base and slavish Employments, such as to serve in the Stables, Kitchens and Gardens, Digging and Cleaving Wood, and are made to row in *Saicks* or Barges, and to lead the Greyhounds to Courting, or whatever else they are commanded to do by the *Oda-Basha's*, or Captains. They are allow'd from two to five Aspers a Day, but afterwards such as have a Desire to learn, are taught to read and write, and generally all of them are taught to wrestle, leap, run, throw the

Iron-Bar, shoot the Bow, discharge a Piece, and all other Exercises becoming a *Turkish* Soldier.

The Grand Seignior makes use of them, when he intends a Journey to any Place for pitching his Tents, removing or carrying his Chests, and such like Services, for which Employment he never takes with him less than three or four hundred of them. The *Bostangee-Basha* always takes with him a good Number of them, when by the Sultan's Order he puts some great Man to Death, which is commonly done by the Hands of these *Agliam-Oglans*. They are capable of being made Stewards to the *Bostangee-Basha*, and may rise to that great Office, which is an eminent Place, for he hath the Keeping of all the Grand Signior's Gardens, and Houses, steers the Sultan's *Saick*, and wears a Turbant in the *Seraglio*, and if he be in Favour, he is preferred to higher Dignities, viz. to be *Captain-Basha*, *Basha* of *Cairo*, *Damascus*, *Aleppo*, &c. and sometimes he comes to be *Vizier-Azem*, or Prime-Minister.

There are other Youths educated in the *Seraglio*, called *Itchoglans*, but in a far better Manner than the former. They are brought up in Learning, in the Knowledge of the Law and Military Exercises for the Sultan's and their Country's Service, and to understand those Things which belong to the Government of the whole Empire. By the ancient Institution they should be always made of Christian Renegado's and Captives of the noblest that can be found; but the *Capee-Aga*, or chief Chamberlain, brings in some natural born *Turks* of the best Aspects, and who promise well, but with the Sultan's Consent. The Number of them is uncertain, but it is said, they are commonly about one hundred. As soon as they come into the *Seraglio*, they are exceedingly well instructed, and daily taught, as well polite Behaviour, as the Rites and Ceremonies of the *Mahometan* Law, and whatsoever may tend to the Improvement of their Minds, and for this Purpose there are four *Oda's*, or Schools, being so many Degrees, every one higher than the other.

In the first, called the *Choukou-Oda*, they all come when they are but Children, and there learn Silence, the Postures of holding down their Heads and looking downwards, with their Hands before them join'd across, which are expressive of singular Reverence, and are used by such as are before the Sultan. Then they learn to write and read the *Turkish* Tongue, and are taught their Prayers by Heart in the *Arabian* Tongue, and that they may learn these Things well, are encouraged to Admiration. In this School they stay about five or six Years, and such as are dull stay much longer.

In the second School, called *Quilar Oda*, they are taught by more learned and sufficient Tutors the *Persian*, *Arabian* and *Tartarian* Tongues, and to that End the Professors take great Pains in reading divers Authors in those Languages. Here they begin to wrestle, shoot the Bow, throw the Iron Mace, toss the Pike, run and handle their Weapons, &c. and in these Exercises in several Orders and Places they spend certain Hours daily, and are severely punished if they are found negligent in the least.

In this *Oda* they also spend four or five Years, and being become strong Men fit for any Thing, they are removed to the third, where forgetting Nothing they have already learn'd, they are taught further to ride, and how to behave themselves in the Wars. Besides all this, every one of them learns a Trade necessary for the Service of the Sultan's Person, as to shave, make a Turbant, fold up Apparel handsomely, pare Nails, attend at the Bath, keep Hawks, to be Sewers, Querries of the Stables, Target-Bearers, wait at Table, &c. While they are in these three Schools they are but meanly apparell'd, having yearly only two Cloth-Vests, somewhat fine, but their Linen is coarse. In this *Oda* their Punishments are severe, for their Masters will give them an hundred Blows for great Faults upon the Soles of their Feet or Buttocks, insomuch that they are oftentimes left for dead. In this School none is suffer'd to be familiar with any but their Companions, so that none may speak with them, but by Leave from the *Capee-Aga*, and that in the Presence of an Eunuch. When they

they go also to the Bath, or about any other Business, they have Eunuchs attending them, to keep them from any Lewdness, and for the same Reason they have Eunuchs lying by them always in their Bed-Chambers.

Here also, before they are raised to the 4th *Oda*, the Eunuchs use all Arts to try whether they are firm to *Turcism*, and have no Inclination to Christianity, and being thus proved, they are preferred to what is call'd, *Haz-Oda*, or, *The Prince's Chamber*. Here it is that all Punishments cease, and they may freely converse with all the Great Men of the *Seraglio*, and being cleanly and neat in their Apparel, the Grand Signior takes them along with him when he goes abroad upon Pleasure, if none of his Women be with him. Out of the young Men thus perfected and compleated in their Education, the King chuseth his *Aga's* and *Basha's*, viz. the *Selihtar Aga*, the Sultan's Sword-Bearer; the *Chioadar-Aga*, he that carries his Yagmoorlick; *Rachi Aga*, Yeoman of the Stirrup; *Mataragee-Aga*, who brings him Water to wash his Hands and Face; *Talbenter-Aga*, he that brings his Turbant; *Kembasir-Aga*, he that looks to his Apparel and the washing of his Linnen; the *Chefhnegir-Basha*, the chief Sewer; the *Dogangea-Basha*, the chief Falconer; the *Zagargee-Basha*, the chief Huntsman; the *Turnackgee-Basha*, he that pares the Sultan's Nails; the *Hamaumgee-Basha*, the chief Accomptant; and the *Teskeregee-Basha*, his Highness's Secretary.

All these are created out of the eldest of the *Itchoglans* of the fourth *Oda*. They are always in the Sultan's Presence, holding their Heads down, and Hands a-crofs, never speaking; but whatever the Sultan commands, they are wonderful ready to obey. They wait at the Sultan's Table, and he is pleased with their Service and Company. He will ride with them, and play at the *Jecrit* and other Sports when he is so disposed. He often gives them Presents of Vests, Swords, and Bows, and sometimes ready Money. He entrusts them with the Dispatch of Embassies, and though they must not go themselves, yet finding out what Presents the Prince, to whom the Embassy is to be sent, uses to give to Ambassadors, they sell it to a *Chiaus*; and this is done to enrich them against the Time he shall send them out of the *Seraglio*, to be Generals at Sea, or *Basha's* of some great City, as *Babylon*, *Aleppo*, &c. or makes them *Beglerbergs* of *Græcia*, *Natolia*, &c. When any is thus sent out, the next in standing succeeds, unless his ill Behaviour has made him incapable; and so all live in Hopes of Greatness and Riches. Before their Departure, they stay a while till their Beards are grown (for they are always shaved in the *Seraglio*) and then they receive handsome Presents of the Sultana's and *Basha's*, and when their Beards are grown, they pay their Visits to all the great Men of the Court.

15. In the *Seraglio* there are likewise other Ministers for necessary Services, as also Buffoons, Tumblers, Musicians, Wrestlers, and Mutes. These last are in great Request, because the Grand Signior thinks it below his Dignity to speak to any about him familiarly, and therefore he makes himself merry with these Mutes, who though deaf and dumb, will reason and discourse of any thing by Nods and Signs, as other People do by Words; nay, many of them can write very sensibly and well, which is admirable.

There are also White Eunuchs, who attend the Grand Signior at his Gate. The chief of them is, 1. the *Capee Aga*, or Chamberlain, who is in greatest Authority with the Grand Signior; for he alone is allowed to speak to him, and present all Petitions, Messages, and Writings, and accompanies the Sultan where-ever he goes. His Salary is eight Sultana's a Day, i. e. about three Pounds *Sterling*, besides Presents from all that have any Business with the Sultan.

2. The *Hazinebdar-Basha*, or the Treasurer of the Household, who keeps an Account of all the Treasure brought into this inward Treasury, which is only the Wealth of ancient Sultans, and the Revenue of *Egypt*, and the adjacent Provinces, and takes it out upon Occasion. He hath the Custody of all the Sultan's Jewels,

which he either wears, or are presented him, and keeps a Registry of them, when received and when given away. He succeeds the *Capee-Aga*, when he dies.

3. The *Keelergee-Basha*, i. e. Master of the Wardrobe, into which are brought all the Presents of Cloth of Gold, Plate, Silks, Woollen Cloths, Furs of all Sorts, Swords, Raw Silk, Carpets, and whatever else serves for his Majesty's Use, of which he keeps particular Inventories, as well as Servants under him, and his Salary is one thousand Aspres a Day, viz. 50 s. *Sterling*. He is commonly in Favour with the Sultan, and usually succeeds to *Hazinebdar-Basha*.

4. The *Sarai Agasee*, i. e. the Keeper of the *Seraglio*. He sees that all Things be prepared for the Service of the Palace, and that the Rooms be kept as they ought to be, and that all the Officers do their Duty. He is allowed to ride up and down the *Seraglio*, in the Courts, Gardens, and by the Sea-side, as the three former are: His Pension is eight hundred Aspres, or 40 s. a Day, besides Vests and Furs; he succeeds the *Keelergee-Basha*. The three last may not speak to the Emperor, unless in Answer to any Thing he asks them.

The Number of these Eunuchs is about two hundred, and they are all not only gelt, but cut smoth when they are very young, and that with their own Consent, which is obtain'd by assuring them what Great Men they will be, for otherwise they would be in Danger of Death, as the Workmen in that Business affirm. They are brought up with the *Ichoglans*, and are taken from the fourth *Oda* to serve the Grand Signior, who employs them in the Government of his other *Seraglio's*, and his Seminaries of Youth at *Constantinople*, *Adrianople*, and other Places, makes them *Basha's* of *Cairo*, *Aleppo*, and other Cities, and sometimes *Visiers* of the Bench. They are also trusted by the *Capee-Aga* to keep the King's Curiosities and valuable Rarities, as great Pieces of *Ambergreece*, Musk, Balsom, Cups of Agat, &c. for though they are, generally speaking, not of much Courage, yet they are accounted of great Judgment and Fidelity.

The Black Eunuchs and Black *Moor* Wenches serve the Sultana's and the rest of the Queen's Women. These Eunuchs, while they are Boys, are brought up as the White ones are, and after are set to serve and wait at the Sultana's Gate, under the Command of the *Kissar-Aga*. They are allowed a Pension of fifty or sixty Aspres a Day, and two Vests, with Linnen and other Necessaries, yearly, besides Presents given them by such Women as come to visit the Grand Signior's Women. They are never sent abroad in any Employment, but serve for ever in the *Seraglio*. They are called by the Names of Flowers, as *Rose*, *Narcissus*, &c. Their Business is to carry Messages and Notes from the Sultana's to the *Capee-Aga*, to be delivered to the Sultan, and attend upon the Ladies in Sickness and Health.

16. The Grand Signior's Sons by the Queen are brought up by themselves, by choice Nurses, which are found out of the *Seraglio*, and if he has Sons by other Sultana's, they are brought up also by themselves, but may play with them till they are six or seven Years old. They live with the Women nine or ten Years, and about fourteen are circumcised with great Pomp, as Weddings are kept among Christians. The Sons, from five to ten Years of Age, are taught to write and read by an *Hojab*, or School-master, who for that End is admitted into the Womens Apartment for certain Hours, but sees them not, unless two or three old ugly black *Moorish* Women; but Daughters are little regarded. When the *Shawhzawdeh*, or Sultan's Son who is Heir to the Crown, is circumcised, he is sometimes sent abroad with a suitable Equipage, and under the Care of his principal and trusty Eunuchs, to be Governor of *Magnesia*, and the Provinces about it, but as Deputy to his Father. The Eunuch is bound to give continual Advice to the Grand Signior of his Son's Deportment; so that if he transgress the Limits of his Commission in the least, he quickly falls into Disgrace, and into a Suspicion of Rebellion.

The Victuals in the *Seraglio* is dress'd by such of the *Agliam*

Agliam-Oglans as are brought up to this Service, called *Askees* or Cooks. They wear white Caps for Distinction, and are about two hundred from the highest to the meanest Officers of the Kitchen. They begin their Business early in the Morning, for the Grand Signior rising betimes, they must have always something ready for his Breakfast. He dines at Ten o'Clock in the Forenoon, and sups at Six in the Evening, both in Summer and Winter. He sits down with his Legs across, according to the *Turkish* Fashion, and has a rich Napkin laid before him. He carves for himself, but uses neither Knife nor Fork, for his Meat is so tender and delicately dressed, that he easily pulls it in Pieces with his Fingers. He hath two wooden Spoons, the one to eat his Pottage, and the other to sup the Syrups with, which he uses to quench his Thirst. He uses no Salt nor Antipast. He tasteth of all the Dishes one by one, and closes his Meal commonly with a *Boclava*, or Tart; and when he has dined or supped, washeth his Hands in a golden Basin, set with precious Stones.

His usual Diet is wild Pigeons, Geese, Lamb, Hens, Chickens, Mutton, and sometimes wild Fowl, and usually as much boiled as roasted of all of them, with Broths, Preserves, and Syrups in Porcelaine Dishes, and some Tarts and Pies. When he has done eating, he concludes with a Draught of Sherbet, and seldom drinks more than once at a Meal. He seldom or never speaks at Table, but to favour some Aga, to whom he speaks a Word or two, and throws him a Loaf. The Grand Signior's Dishes are all Gold or yellow Purcelane, scarce to be had for Money, in which he eats chiefly in their *Ramazan* or *Lent*, which lasts a whole Moon, and only by Night, as all the *Turks* do; but they make no Difference of Meats, excepting Swine's Flesh, and Things strangled, which are forbidden by their Law at all Times. The Sultan seldom eats Fish, unless when he is by the Sea-side with his Women, where he sees it taken. The Meat which is left at the Grand Signior's Table is carried to the Aga's that wait; and after Dinner the Sultan diverts himself with the Mutes and Buffoons. The *Capee-Aga* hath a Table by himself, dressed in his own Kitchen, and with him the *Hafnebdar-Basha*, *Sarai Agasee*, the Sultan's Physicians, eat, and what he leaves serves all the White Eunuchs. The Youths in the *Oda's* have two Loaves a-piece and boiled Mutton, with Pottage made of Rice, Butter and Honey allowed them daily.

The Queen and Sultana's are at the same Time served by the Black Eunuchs, but in Copper Dishes, unless the Sultan be with them. They drink their Sherbet with Snow, which costs dear to bring it from the Hills, and keep it under Ground. They eat no Cheese but *Parmesan*, sent by the *Bailo*, or Residentiary of *Venice*. All these Things are done in such Order, that all is finished in less than two Hours Time. The Grand Signior's, Sultana's, and Basha's Bread is made of Wheat, brought from *Bursa*, and ground there, and is very white and savoury; the rest of the Bread for the Seraglio is made of Corn brought out of *Velo* in *Greece*. There are vast Quantities of Bread spent in the Seraglio, because every one has a large Allowance made by the chief Visier. The Rice, Lentils, and other Pulse, is brought twice a Year out of *Egypt* in Galleons. There is a vast Quantity of Sugar spent in Sherbets and *Boclava's*, but they eat little Spice, except Pepper. This is brought out of *Egypt*, with a great Quantity of Conserve, Dates, Prunes, pickled Meats, and dried Plumbs, though four hundred *Halvagi's* are continually at Work to preserve others.

The Honey used at the Sultans Table comes from *Cio*, but the rest comes from *Walachia*, *Transilvania*, and *Moldavia*, in great Earthen Jars. The Oil is brought from *Modon* and *Coron* in *Greece*, and is much used in Meats and Lamps; but the Sultan eats only what comes from *Candia* and *Zant*, which is the dearest and best. Their Butter comes by Shipping out of the *Black Sea* from *Bogdiano* and *Cassa*, in Ox and Buffalo's Hides. They eat very little or no fresh Butter, nor eat much Milk, unless it be *Yogburd*, i. e. sower or clotted Cream. In the Seraglio are spent in dried Beef of Cows of *Bos-*

turnia, killed when they are great with Calf, because they say their Flesh is then more tender and savoury, four hundred yearly; and the daily Provision is two hundred Sheep, one hundred Lambs and Kids in their Season, ten Calves, fifty Geese, one hundred Hens, one hundred Chickens, and two hundred Pigeons. In the Seraglio there is little Fish eaten, though the Sea yields Plenty, and therefore the Christians buy it cheap. The Seraglio is plentifully served with Fruit from the Sultan's Gardens, and Presents sent to the Grand Signior from all Parts; so that they sell a great deal, and the Money is given to the Sultan for his Privy Purse.

The Furniture of the Sultan's Kitchens are of Brass, but so well kept, and so large, that they are as fine a Sight as can be seen. The Grand Signior's Cloaths differ little in Fashion from other Mens, only in Length and Richness. His Turbant is like the *Basha's*, only he wears Plumes and Gold Clasps, which they do not. He sleeps upon Matresses of Velvet and Cloth of Gold covered in Summer with Sheets, embroidered with Silk, and in Winter with Lufens, or Sables. When he lies alone in his own Lodgings, he is watched by the Pages of his Chamber, two at a Time, and two old Women wait on him with burning Torches to light him, if he pleases to say over his Beads, which they pray by at the Hours of Prayer in the Night, viz. at Midnight, and two Hours before Day. The Women's Habit is much like the Men's, for they wear *Chachshirs*, or Breeches, and Buskins, and sleep in them; but they have thin ones for the Summer, and thick for the Water.

17. The several Stipends of the Officers of the Seraglio are paid by the *Tefterdar*, out of the outward Treasury, who sends them their Vests against the Carnival; and if he fails at the Times appointed, upon any Complaint he will be utterly ruined, or at least displaced. If any of the *Itchoglans* or *Agliam-Oglans* die, his Chamber-fellows are his Heirs; and so it is with the young Women that never lay with the Sultan: But if any of the Eunuchs, who are generally very rich, dies, all comes to the Grand Signior himself, except he be out of the Seraglio, for then the Sultan has only two Thirds, and the rest he may dispose of by Will, if the Sultan will consent to it; but to secure his Parts, there is an Officer, called the *Beytel Mawelgee*, who, as soon as any one dies, enquires after their Estates, and certifies the *Tefterdar* of it, that he may seize it for the Grand Signior; yet the *Beytel Mawelgee*, for his own private Gain, will very often conceal a great Part of the Estate of the Deceased, to divide it privately between the Kindred and himself. If any falls sick in the Seraglio, they are immediately carried, in a Cart covered with Cloth, and drawn with Hands, from their Chamber to the *Lazaretto* or Hospital belonging to the Palace, where they are kept so close, that none can speak with them without great Difficulty, but the Physician and Apothecary; and, when recovered, they are carried back in the same Manner to their Chambers. The Grand Signior is at vast Expences in Gifts to the Sultana Queen, chief Visiers, *Serdars* or Generals, and Captains of his Forces by Sea and Land, *Tefterdars* and others, in Vests, Bows, Swords, Plumes, &c. and he allows the Sultana Queen and *Visier-Azem* in the Wars to be very generous, according to their Stations. He may go out of the Seraglio when he pleases, either by Water or Land. When he goes abroad by Water, he is carried in his Saick or Barge covered with Crimson-Velvet, richly embroidered, under which he sits, his Aga's standing all about him, and is row'd by the *Agliam-Oglans*, the *Bostangee-Basha* steering. When he goes by Land, he always rides on Horseback, and commonly goes out of the great Gate of the Palace. When he goes to the Mosque on *Fridays*, he is accompanied through the City by all the *Basha's* and Grandees of the Port, besides a large Retinue of Servants, who march at his Stirrup.

The People in his Way follow him with repeated Acclamations of Happiness, which he returns by a Nod, and such as are, or believe themselves wronged, present to him their *Arzes*, or Petitions, which his Highness

Highness orders to be received, and being read at his Return, he gives Command for Redress, to make good the Title he gives himself, that he is *Awlem Penawb*, i. e. *The Refuge of the World*. The Grand Signior at *Constantinople*, by the Sea-side, has a large Stable of a thousand Horses, for the Use of his Household, of which the *Imrohor-Basha*, or Master of the Horse, has Charge, and lesser Stables at his Houses of Pleasure in the Country, of ten Horses each. He has also Studds in *Bursa*, *Adrianople*, and many other Places for Stallions, which furnish him with very stately Colts, besides such as are daily sent him from *Cairo*, *Damascus*, *Bagdat*, and other Places, by the *Basha's*. For his meaner Servants, he has Horses from *Walachia*, and for his Baggage five thousand Mules to carry Pavillions, Chests, Water, and other Necessaries for Travelling; of which also the *Visier-Azem* makes use when he goes in Quality of General in any Expedition.

18. Upon the first Day of their *Bairam*, or Carnival, the Sultan shews himself publicly, and lets all the great Men and better Sort of his Servants kiss his Vest, and then he is richly dress'd with all his best Jewels, and sits down on a *Persian* Carpet, where his *Takt* or Throne is set, the Chief *Visier* telling him the Names of the Persons, that he may take Notice of them, and chiefly he respects the *Mufti*, *Cadeleschers*, and other Doctors of the Law of the highest Degree. The Ceremony being ended, he goes to the Mosque of *Santa Sophia*, the Company attending him, and hears the *Mamaz*, or Divine Service, and a Sermon; which being concluded, tho' he retires to his own Lodgings, and dines alone; as upon other Days, yet he orders a sumptuous Banquet in the *Divan* for the *Basha's* and *Grandeess*, and a great Dinner in the Court-yard for the rest of the Company, and after Dinner sends them a *Bairam-Lick*, i. e. a New-year's Gift, to all according to their Qualities. During the three Days of the *Bairam*, he causes Shews of Fire-works to be made all Night, and a Drum to be beaten all the while, the Sultan, with his Sultana's, as well out as in the *Seraglio*, diverting themselves with them, as well as with other Sports and Tricks, which the Sultan tolerates all that Time.

But as the Grand Signior gives, so also he receives Presents at this Time from the *Basha's* and great Persons, who strive to exceed one another in the Value of their Gifts, that they may gain Favour. The *Bairam* is celebrated also in all the Grand Signior's Dominions at the same Time, as well as at *Constantinople*, the Streets being set out with pretty Devices and *Salunjacks*, or Swings very artificially made to solace both Old and Young: But in this Fit of *Turkish* Mirth, it is dangerous for *Jews* or *Christians* to stir out, for the *Turks*, putting off their wonted Sobriety, are very insolent, and will do them a Mischief, if they do not give them what Money they demand.

19. Besides the *Seraglio* we have been describing, there is another in *Constantinople*, as has been observed, stiled the *Old Seraglio*, so called, because it was the first built by *Mahomet* the Second, when he took *Constantinople* to be his own Palace. It is a large Place, about three Quarters of a Mile in Compass, and seated in the noblest Part of the City. It is environ'd with an high Wall, and the Buildings are very fair. It hath but one Gate belonging to it, and that is of Iron, which is kept by a Guard of White Eunuchs. The Inhabitants of it are all Women and Eunuchs. The Women are only such as have been put out of the Sultan's *Seraglio*, viz. the Sultana's of the deceased Grand Signiors, such as are fallen into Disgrace with the Sultan for their ill Conditions or rude Behaviour, or such as are infirm and defective in something that should fit them for the Sultan's Bed. They are governed by an old Woman, called *Kabiya-Cadum*, i. e. the *Woman-Overseer*, who is to take Care that they have all Things necessary for them, according to the Custom of the House. The Sultana's have Lodgings apart, and are reasonably well served, though far short of what they had in the Sultan's *Seraglio*. If they are rich when sent thither, they take Care to make it known, and that procures them a good Husband and Jointure. The Sultan will sometimes go thither to visit

his Grandmother, Sister, or other Relations, or when he is melancholy.

There are other *Seraglio's* in *Constantinople*, which belong to private Persons, but built with an ugly Appearance for Fear of giving Jealousy to the Grand Signior, though within the Walls, which are high, there are very beautiful Apartments, adorned with Gold and Azure, and the Floors cover'd with fine Carpets, the Walls faced with fine Tiles like *China*. In the Halls and Chambers they have a Rising about a Foot higher than the Floor, which they call a *Divan*, covered with richer Carpets than the rest of the Room, and embroidered Cushions set against the Wall. Here they rest, receive Visits, and spend most of the Day. There are also many great Buildings in the City like Monasteries, which they call *Hans*, with Galleries and Chambers, where Merchants have Lodgings and Warehouses at easy Rates, viz. one or two Aspers a Day. They bring in a great Revenue to the Owners. They are built of Free-Stone round a Court, which has generally a Fountain in it. The Walls are strong and well barr'd to secure the Goods. The fairest of them in *Constantinople* is the *Valida*, built by the Grand Signior's Mother. The Houses of *Constantinople* are all of Wood, very indifferently built, and very subject to Fires from their taking much Tobacco. The Streets are crooked and narrow, standing also up and down Hill. The *Caravansera's* are built as the *Hans*, but are used only to lodge poor Travellers and the Servants of the Caravan, who have Rooms there for little or nothing.

20. *Galata* is the Suburb of *Constantinople*, separated by the Port only, in which there are *Saiks*, or small Boats, and Wherries, to carry you at all times for a small Matter. You may go by Land, but it is a little about, and you pass by the *Atmeidan*, or Field where the *Turks* exercise their Archery, and go in Procession to make Prayers to God for the Success of their Arms, and whatever else they want. Then you go to *Cassumpasha*, a great Village, where is the Arsenal for building Gallies, Maones and Ships: It has 120 Docks, and a Magazine of Arms for 60,000 Men, but it is inaccessible to Christians. In it are, besides the *Capoudan-Basha's*, or Admiral's Lodging, a spacious *Bagnio* for the Grand Signior's Slaves, of whom there are many Thousands, and live very miserably. This Town is divided from *Galata* only by the Burying-Places.

Galata is a pretty large Place, the Houses are good and well built. Many *Greeks* live there, and the *Franks*, who cohabit with them, have five Monasteries and as many Churches. It has a large Tower in it, and by the Sea-side the finest Fish-Market in the World, where there is great Plenty of all Sorts of Fish to be had cheap. The *Greeks* keep here a great many Taverns, which draw the *Turks* from *Constantinople* thither, who are very insolent in their Drink, and dangerous then to be met with, so that this is one of the greatest Inconveniencies in *Constantinople*.

Beyond *Galata* lies *Pera*, a large Borough, which is separated only by Burying-Places. In this Town reside the Ambassadors from Christian Princes, for the Emperor's, King of *Poland's*, and the Republick of *Ragoussa's* only may reside at *Constantinople*. The Houses are high and handsome, being inhabited only by *Greeks* of Quality. Over against the *Seraglio*, on the Right-Side, stands the *Tophana*, i. e. the Place where all the Guns and Artillery are cast, and it gives the Name to all the Quarter. The Houses of these three Places stand some higher and some lower, like an Amphitheatre, and form a pleasant Prospect from the Port or Sea.

21. In *Asia*, if you cross the Sea, which is about a Mile over, you come to *Schutari*, passing by *Leander's* Tower. It is a large Town, and there the Grand Signior has a stately *Seraglio* and lovely Gardens. A little lower lies *Chalcedon*, once a City famous for the fourth General Council, but now a pitiful Village. The *Prince's Isle*, which is four Hours Sail from *Constantinople*, and contains two little Towns of *Greeks*, has excellent Air, and the Channel of the *Black Sea*, call'd the *Thracian Bosphorus*, is very convenient to take the Air upon, being twelve Miles long, affording a delightful Prospect

of stately Houses and lovely Gardens. This Channel affords Plenty of Fish, especially Sword-Fish and Dolphins. Six Miles from *Constantinople* are two Forts, built to hinder the Inroads of the *Cossacks*, who would otherwise seek their Booty in that City. At the Mouth of the *Bosphorus* is a Rock, about fifty Paces from the Land, where stands a Pillar of white Marble, called *Pompey's Pillar*, because raised by him (as it is said) in Memory of his Victory over *Mithridates*. Over-against this Rock in *Europe* is a Village by the Sea-side, call'd *Fanare*, where is a Tower, with a Light on it always for the Convenience of Vessels to keep them from the Rocks, on which they are in Danger from frequent Tempests and Currents, caused by the *Danube*, *Boristhenes*, *Tanais*, and other Rivers falling into this Sea, to suffer Shipwrecks, and from thence it is called *Maurothalassa*, i. e. *The Black-Sea*; and by the *Greeks*, the *Euxine*, or *Axene Sea*, i. e. *Inhospitable*. Near the Channel of the *Black-Sea* there are a great many *Siacalles*, or wild Dogs, something like Foxes, but supposed to be engendered between Wolves and Dogs. They howl dreadfully in the Evenings and Nights, especially in cold and bad Weather. They are very mischievous, and as fierce as Wolves. The Land on *Europe* side is a fine Country, full of Gardens and good Pasture, and Villages inhabited by *Greeks*. A little further are the fine Aquæducts that supply *Constantinople* with Water in great Abundance.

22. As we are now constrained to think of every Method of saving Room, instead of giving several Travels thro' the same Country, we must be obliged to supply the Defects of such as we insert, by Additions from other Authors, at the Close of every Section, and this plain Account of the Matter may very well serve for an Introduction. Our Author has given a very good Description of the *Dardanelles*, which the *Turks* call *Bogar Hefsarleri*, that is, the Streights of the *Hellepont*. It is certain, that they speak in very high Terms of these new Castles, which they would have the World believe are the strongest Fortresses in the World, as well as the great Security of *Constantinople*; but though they are right as to the Importance of these Castles, yet they are much out of the Way as to the Castles themselves, which undoubtedly are very pitiful Fortifications.

There is Reason to believe, notwithstanding this swelling Language in which they speak of them, that the *Turks* are not in Reality persuaded of the Truth of what they say, with Respect to these Castles, for they are so jealous of a Christian's making any Draught of them, that if a Man looks at them more steadily than usual, they presently confine him; and if he should be caught with a Pencil in his Hand, he would certainly be put to Death. The Batteries level with the Water, are terrible only to Sight, from the large Size of the Cannon, and the prodigious Stone Bullets which they discharge. It is indeed true, that after the great Victory gained near these Streights by the *Venetians*, in 1657, their Admiral *Mocenigo* was destroy'd in attempting to pass, which hindered their victorious Fleet from going up to *Constantinople*; and this has raised their Credit with the Christians, yet without any great Reason. There is a wide Difference between the Passage of a Galley, and that of a Man of War with a brisk Gale; for as these Cannon are fixed, and not upon Carriages, they can make only one Discharge, for to load them again takes a great Deal of Time, and the People employed in that Service must be exposed all the while they are performing it.

In order to force this Passage, two different Methods may be made Use of, neither of which can be said to be exposed to insurmountable Difficulties. In the first Place, the Castles may be attacked by Land, and that without any formal Siege, as they are no otherways fortified than by a simple Rampart and a Parapet, so that a Battery or two of large Cannon would quickly make a Breach; nor is it at all impossible, that these Castles might be carried by a Scalade, and then the Passage would be free from all Interruption. The same Thing might perhaps be effected by a Bombardment, or rather there is no Doubt of it, and therefore there is no Ne-

cessity to run the Risk of those formidable Batteries. But, Secondly, even this might be very practicable, supposing it necessary, for with a brisk Gale, a whole Fleet might pass, and if two or three of the first Vessels were old Ships laden with Wool, it is highly probable the Stone Bullets would not do them much Harm, so that after all the impregnable Fortresses of the *Dardanelles*, as the *Turks* call them, are in Reality little better than Bugbears, and so it will certainly appear whenever an Attempt of this kind shall be made.

The Account our Author gives of the *Turkish* Name of the Capital of their Empire, is not very satisfactory, and indeed it is very hard to meet with any that is so, and therefore we will endeavour to clear up that Matter effectually. All the *Turkish* Authors of any Note, but especially their Historians, call it, *Constanbinah* or *Constantiniab*, which is the City of *Constantine*, and is the Translation of *Constantinople* into their Tongue. As to the Vulgar Name of *Stamboul*, it arose thus; The *Turks* hearing the *Greeks* often speak in their Language of going to the City, for so emphatically they call *Constantinople*, mistook the *Greek* Words, *εις την πόλιν*, which they pronounced, is *Stinpolen*, for the Name of the Place, and so called it corruptly, *Stanpoli* and *Stamboul*; but their learned Writers being ashamed of so gross a Corruption, and yet finding it impossible to rid themselves of a Word so long in Use, have brought in a new Orthography, and write it *Islambol*, which signifies in their Language, the Assembly of the true Belief, or the Capital of Believers; and to the best of our Knowledge, this is the clearest and most correct Account that can be given of the Matter.

Our Author has barely touched, as became a Traveller, on the several Changes that has happened to this famous City; but perhaps the Reader will be pleased to see these Matters placed in a clearer Light, the rather too, because very few of our Books of Geography, or of general History, are tolerably correct or exact in this Point. The City of *Constantinople* received that Name, according to *Eusebius*, *Anno Domini*, 328, from *Constantine* its Founder, who removed hither the Seat of his Empire from *Rome*. It was first besieged under the Reign of the Emperor, or rather Tyrant *Phocas*, by *Chozroes*, King of *Persia*, or rather it was blocked up by him for eight Years together, that is, from *An. Dom.* 603. to 611, when it was delivered by *Heraclius*, who thereby merited and obtained the Empire.

In the Year of the *Hegira* 52. *A. D.* 672. it was besieged by *Yesid* the Son of *Moavia*, the first Caliph of the Family of the *Ommiades*. This happened under the Reign of the Emperor *Constantine*, surnamed *Pogonates*, and it was at this Siege that *Abu Aïub*, the last of the Companions of the Prophet *Mahomet*, ended his Days. The *Greek* Emperor found himself so pressed by this Siege, that he was almost in Despair; for at the same Time that the *Saracens* Army lay before it on the Land Side, it was blocked up by a prodigious Fleet of theirs at Sea. But the famous Engineer *Callinicus* invented a Sort of Wild-Fire, called from thence the *Greek Fire*, which would burn under Water, and therewith destroyed the whole Fleet.

A. H. 99. *A. D.* 717. It was again besieged by *Moslemah* the Brother of *Solyman*, the seventh Caliph of the Family of the *Ommiades*, *Theodosius* the III^d. being then Emperor of the *Greeks*. It was relieved by *Leo*, the *Isaurian*, who caused the Emperor to be shaved and shut up in a Cloister, seating himself upon his Throne. *A. H.* 164. *A. D.* 780. *Haroun Raschid*, Son of the Caliph *Mahadi*, came before it with a vast Army of *Saracens*, the *Greek* Empire being at that Time governed by *Irene*, as Regent to her Son *Constantine* the VIth. surnamed *Porphyrogenetes*, who found herself so hard pressed, that she was glad to deliver herself by a scandalous Treaty, in which she promised to pay an annual Tribute to the Caliph, of Seventy thousand Pieces of Gold.

The *Greek* Empire declining from this Time, and the Power of the *Mahometans* increasing to such a Degree as threatned all *Christendom* with Slavery, produced those famous Expeditions, that make such a Figure

in History, under the Title of the *Croisades*. And the People of *Constantinople* having first put out the Eyes of their Emperor *Alexis*, and then throwing him from a high Place, beat him to Pieces, when he had reigned only ten Weeks; *Baldwin* Earl of *Flanders* surpris'd the City, A. D. 1204. and was proclaimed Emperor of the East.

He did not reign quite a Year, and was succeeded by his Brother *Henry* Earl of *Flanders*, who held the Government ten Years. *Peter Courteney* (of that noble Family which still subsists in *England*) having married his Daughter, succeeded him, and was killed in the sixth Year of his Reign. His Son *Philip* yielded the Empire to his Brother *Robert*, who was murdered after a Reign of seven Years. His Son *Baldwin II.* succeeded, though a Child, under the Tutelage of *John de Brenne*, who stiled himself King of *Jerusalem*.

A. H. 630. A. D. 1232, *Batu*, Grandson to *Gengishkan*, the Founder of the *Tartar* Empire, after over-running *Muscovy*, *Poland*, *Silesia*, *Bohemia*, and *Hungary*, advanced through *Bulgaria* to besiege *Constantinople*. Upon this Occasion, the *Eastern* and *Western* Christians joined, gave him Battle, routed him, and forced him to abandon his Design. In 1259, or, as some say, in 1262, *Michael Paleologus* recovered *Constantinople* from *Baldwin Courtenay*, and the *Greek* Emperors held it from that Time, though their Power was very weak.

A. H. 857. A. D. 1453. *Mahomet*, Emperor of the *Turks*, laid Siege to this City on the 9th of *April*, and took it by Storm on *Tuesday*, *May* the 29th, in *Whitsun-Week*. The *Turks* massacred forty thousand Men in cold Blood, pillaged the Churches, Monasteries, and Palaces, the *Greek* Emperor *Constantine Paleologus* being killed, as some say, in the Breach; or, as others report, trampled to Death by his own Soldiers in their Flight.

It is a Point out of all Doubt, that the *Christians* in general are stiled *FRANKS* at *Constantinople*, and throughout all the *East* but it is not quite so clear why they are called so; most People imagine it is a Corruption of *French*, and that the *Turks* do not distinguish between *Frenchmen*, and other Nations, who, like them, wear Hats, and not Turbants; but others who have lived long in *Turkey*, affirm, that it is from the *Italian* Word *Franco*, which signifies *Free*. In order to apprehend this clearly, we are to consider, that once a Year the *Turks* collect a Tribute from all their Subjects that are not *Mahometans*; and this Capitation they hold to be very reasonable, because they enjoy the Protection of their Government without fighting for it in War, or undergoing any troublesome Offices in Time of Peace; so that if it were not for this Tax, they would be in a better Condition than their Masters, which in the *Turkish* Logic would be very unreasonable.

Another Maxim of theirs is, that the Grand Signior is the great Judge of the whole World, the Redresser of all Wrongs, and hence his *Seraglio* or Court is stiled the *Port*, and upon this Principle they consider his Dominions as the Refuge of Mankind in general; so that they admit all Strangers to come to them who will, and to settle amongst them if they please, granting them immediately the same Privileges with their native Subjects. But then again it must be also understood, that all Subjects in *Turkey* are held to be Slaves, and therefore not at Liberty to quit the Dominions of the Grand Signior without his Leave; which if they do their Estates are forfeited. But the Subjects of Foreign Princes that come to reside in the Grand Signior's Country for the Sake of Trade, live there by Virtue of Capitulations granted by the *Turkish* Monarch to them at the Request of their Sovereigns; and being by this Means free from the Capitation Tax, and all the Consequences of being reputed *Turkish* Subjects, are from thence stiled *Franks*.

The Reader will please to observe, that though it be very true, that long before any such Capitulations were made, *Christians* might be called *Franks* in the *East*, upon the fore-mentioned Supposition, yet this will by no Means prove that the latter Etymology is false, because nothing is more common than this Kind of double Sense of the same Word. As for Instance, A-

mongst us, a *Turk* signifies the same Thing with *Mahometan*, and what they call *Islaim*, many of our Writers translate *Turcism*, or the Religion of the *Turks*; and yet we make use of the same Word in a more restrained, and indeed in a more proper Sense; for the Nation govern'd by the Grand Signior, who by our old Writers is commonly called from thence the *Great Turk*.

These are Things that may appear to be but of small Moment, but every Thing is of Moment that contributes to render what we read in Books of *History* and *Voyages* perfectly clear and distinct; and I dare assure the Reader, that if he is very conversant in Books of this Kind, he will find these Remarks to be very useful; as to the *French* Writers, they adhere unanimously to the first Sense of the Word, and would persuade us, that the *French* King is regarded at *Constantinople* as the first Prince in *Christendom*; and for a clear Proof of this, they tell you, that he is stiled *Padisha*, or Emperor, which is very true, but at the same Time proves Nothing. For when the Lord *Chandois*, Ancestor to the present Duke, was our Ambassador at *Constantinople* from King *Charles II.* he might have procured him the Title of *Padisha* also for a Present, but he thought that the *Turks* asked rather too much; and as he knew they set no great Value upon Titles, he thought it for the Honour of the *English* Nation to set less, or his *Britannick* Majesty had been at this Day stiled *Padisha* as well as he is King of *France*, and would have been alike the better for both. But it must be allowed, that the *French* have a much closer Correspondence with the *Turkish* Court than any other of the *Christian* Powers; the Reason of which is, that other Powers have nothing to do with them but in a Commercial Way; whereas the *French* treat with them also on a political Consideration, and are in that Respect as good, perhaps I should not much err if I had said better Friends and Allies to those Infidels than to any of their Christian Neighbours; and if this has procured them greater Marks of Honour and Respect from the *Turks*, than are paid to other Nations, however it may flatter their Vanity, it adds but little to their Reputation.

23. The Account given by our Author of the Manner in which Persons are educated in the *Seraglio*, plainly proves, that it is a mere vulgar Mistake, which prevails as to the Ignorance of such as are advanced to Employments in that Empire. It appears, that far from wanting Education, they are regularly bred up in all that Sort of Knowledge which is requisite for the sufficient Discharge of those Offices to which there is a Probability of their rising; and, perhaps, there is hardly a Nation in the World where so much Care is taken. It is true, that these young People are brought up in a Manner very different from ours; but then their Government is also very different; and provided they are so educated, as to serve effectually that Government to the Service which they are bound; this, with respect to them, is certainly a right Kind of Education. But I doubt whether our Author's Account of the *Turkish* Ministry is quite so exact, because it is not easy for a Traveller (let his *Genius* be what it will) to gain, in a few Weeks or even Months, an exact Knowledge of such Matters. Sir *Dudley North*, who resided many Years in *Turkey*, and had many Opportunities of enquiring into and obtaining a perfect Acquaintance with the Manner in which Things are there administered, has given us, in very few Words, a clear and more distinct Account of this Matter, than is to be met with almost in any other Writer: Which runs thus.

“ For the better Understanding of these Affairs, it
“ is absolutely necessary, first, to say something con-
“ cerning the Nature of the Government, of the Office
“ of *Vizier-Azem* or Chief *Vizier*, and of the several
“ *Kaimachams*, which are his Substitutes, and act only
“ in his Absence. The *Turkish* Government is directly
“ that of an Army, being under the same Methods in
“ the City in Time of Peace, as in the Field during
“ War. The Grand Signior is the General; he hath
“ indeed a double Capacity, the one as Head of the
“ Empire, the other as a private Person. As Head of
“ the Empire, he hath a daily Pay out of the publick
Treasury;

“Treasury ; and his common and ordinary Charges, both at home and abroad, are born by the *Tefterdar* or Treasurer for the Empire. As he is a private Person, he receives Presents, Fines, and Confiscations, and defrays many extraordinary Expences, as Buildings for charitable Uses, Jewels for himself and his Women, &c. Which Treasury is under the Care of the *Hafna Kiafi* or Treasurer of the Grand Signior. Here is to be noted, that in his private Capacity he is always vastly rich, and heaps up very great Treasures, when many Times the Publick Treasury is exhausted ; so that in Wars he is often forced to lend great Sums of Money to the Publick, which they are sure punctually to pay back again.

“The next in Office under the Grand Signior, in the Government, is the *Vizier-Azem*, or Chief Minister, who is of that Credit in the Empire, that the Grand Signior calls him Tutor ; and, indeed, he acts all both in Peace and War. The Grand Signior minding his Pleasures, leaves all to him : And this happens not more out of Luxury, than from the Maxims of their Policy : But when the Grand Signior is an active Prince, and will look into Business himself ; or when he is jealous, and his Nature fickle, apt to hear and believe Complaints against his Great Minister, the Vizier signifies much less. When the Grand Signior goes to the War, he carries with him all the Officers of the Court, even the *Mufti*, Judges, and all. The like doth the Grand Vizier when the Grand Signior stays behind : But then he leaves a Substitute, which they call *Kaimacham*, to act like him in his Absence ; and all the other great Officers of State make their Substitutes in the like Manner ; so that the Grand Signior hath as formal a Court as he had before. So also in Case he doth not stay in the Imperial City of *Constantinople*, but removes to any other Part of the Empire, where-ever he goes, he carries with him his whole Court ; but then, not to leave the great City destitute, a new *Kaimacham* and other Substitutes are appointed, whereby, notwithstanding the Absence both of the Grand Signior and Vizier, the City hath the same formal Government as if they were all there, with this Difference, that these are Underlings, and dare not meddle in great Matters.

“But in all Business of Concern, they receive Orders from their Principals abroad, and act accordingly. The Government being thus supplied, there is no Need (unless upon extraordinary Occasions) for the Ambassador of any Nation to attend the Person of the Vizier ; but they may dispatch their Business in *Constantinople*, the Resident of *Germany* only excepted, who continually attends the Vizier's Camp at some reasonable Distance.”

This gives us a clear Idea of the great Office of *Vizier-Azem*, and the Manner in which he executes in Person, and by his Substitutes. We are generally persuaded, that as the Grand Signior is an absolute Monarch, and accountable to none, so he governs entirely according to his Will and Pleasure, which appears to us to be the sole Cause of the frequent Changes that are made in the Administration ; but in this we are certainly much mistaken. I must confess, it is a little beside the immediate Purpose of these Remarks, to insist upon this Point ; but as I have some Reason to be acquainted with the *Turkish* Polity, and the Discussing of it cannot fail of pleasing the Reader, I cannot help indulging myself in setting this important Point in a true Light. A very wise and great Prince would be absolute in any Country, let its Constitution be what it will ; and in Despotick Governments, a Prince of no great Parts, that will suffer himself to be governed by an able Minister, may stretch its Authority to its utmost Bounds. But let the Government be ever so absolute, an unsteady Prince would be ever a Slave ; and in *Turkey* this is always the Case.

The Grand Signiors coming to their Power without any Acquaintance with the World, and under the Influence of an ambitious Mother or an intriguing Wife, seldom follow their own Choice in appointing a Vizier ;

and it is a Maxim in the East as well as the West, that the Minister, who is raised by a Faction, is ruined by a Faction. Besides, in all Despotick Governments the Populace or Mob is the *dernier Resort* ; and it must be so in the Nature of Things, for where all Men are Slaves, as they are by Law in the *Ottoman* Dominions, though the Grand Signior has the Name, yet the Commons, that is, the Soldiery and the lowest of the People, have in Fact the Supreme Power. Thus then it appears, that a Grand Signior of limited Abilities has a very limited Power, being under the Influence of the Factions in the *Seraglio* on one Side, and under the Terror of the People on the other. The frequent Changes therefore in the Government are so far from being the Effects of Plenitude of Power, that in Reality they demonstrate the Want of Power in the Sultan. But in Cases of this Nature, it is best to recur to Facts.

In the Minority of the Emperor *Mahomet IV.* when the *Seraglio* was torn by Factions, Viziers were made and deposed continually, and the greatest Part of *Europe* looked upon this as the Effect of the Emperor's Will : At last a great Mutiny happened amongst the *Spahis*, or *Turkish* Cavalry, who put the then *Vizier Azem* and all the *Basha's* to Death, except one old Man, whose Poverty made him contemptible. This was the famous *Cuperli*, or, as the Name ought to be written, *Kioprili*. Yet in this Massacre the *Spahi's* missed the chief Instruments of those Mischiefs which the Empire had suffered. These were the *Kissar Aga* and the *Selictar*, who really governed the young Sultan, and made and deposed Viziers at their Pleasure. These factious Men finding, as we say, that they had only *Hobson's* Choice, declared *Kioprili*, *Vizier Azem*, upon a Promise that he would do nothing but by their Direction ; to which he consented, provided they gave their Directions in Writing. The Change of Men producing no Change of Measures, the *Spahis* mutinied again, and *Kioprili*, instead of sheltering himself behind the Sultan's Throne, went directly to the Mutineers, and told them, that if they were displeased with the Government, it was fit they should know who were the Governors, producing at the same Time the Directions he had received. This had its Effect, the *Spahis* went directly to the *Seraglio*, and demanded the Heads of the *Kissar Aga* and the *Selictar*, which the Sultan was not in a Condition to refuse. *Kioprili* had then a private Audience of that Monarch, who was excessively alarmed, and doubted even of his own Safety ; but the old Man soon set his Heart at rest ; he told him he was now a Monarch, and himself a Minister, that the *Spahis* had done his Business, and he would do theris ; and he was as good as his Word, for in two Years Time there was not a Soul of them left alive.

He governed the Empire with great Dignity for seven Years ; and as he lived, so he died, Prime Minister. His Master made him a Visit when he was near his End, and deploring the Loss of so good a Servant, he desired he would recommend his Successor ; upon which he told the Grand Signior frankly, that his Son *Achmet Kioprili*, who had been hitherto employed wholly in Civil Affairs, was the fittest Man to succeed him. He was accordingly declared *Vizier Azem*, held that Employment seventeen Years, and was the greatest and best Minister the *Turks* ever had. Under their Administration, which lasted near twenty-five Years, and ended with the Death of *Achmet*, the Emperor maintained his Power, and the Empire recovered its Credit. After his Decease Factions revived, new Fluctuations in Government ensued, and at the last the unhappy Sultan was deposed, and five Years afterwards died in Obscurity.

In all Governments, Court-Factions are dangerous, and the true Sources of popular Discontent and general Insurrections. Great Princes and wise Ministers know how to prevent, or to quell Factions if they cannot be prevented ; and the Felicity of a People does not depend so much upon the Constitution under which they live, as the *Genius* and Capacity of those who administer Affairs under that Constitution, be it what it will. It is not therefore the Despotick Power of the Grand Signiors

Signiors that is the Source of their Subjects Miseries and their own Misfortunes, but the Want of that Power in proper Hands, the shifting Ministers continually, running from one System of Affairs to another, not as the Situation of Things directs, but as the Intrigues and Factions in the Seraglio compel; and though the Ministers, and sometimes their Masters suffer, the Eunuchs and the Women are generally in Fault.

Timid Princes are commonly governed by these Sort of People; they listen to Whispers in their Closets, and hold their Councils in their Bed-Chambers. Their *Divans*, where the Affairs of the Empire ought to be transacted, into which only Men of Business are admitted, become Things of Course, and the Grand Signior gives his Orders where he ought to consult what Orders should be given. It is departing from the *Genius* of the *Ottoman* Empire that has sunk it into that low Condition that we see it at present, and what has happened in *Turky*, will happen every where; for in all Climates, and in all Ages, the same Causes will produce the same Effects. A Government founded as that of the *Turks* is, in Military Virtues and the Administration of the Government by a single Person, must crumble by its own Weight, where those Virtues and that Ca-

capacity, which are essentially necessary to direct it, are wanting.

Governments founded upon better and more rational Principles, such as Justice, Liberty, and perpetual Regard to the publick Good, will decay more slowly; but will infallibly decay, when those Virtues are lost in factious Contentions for Power, Contempt of the Sovereign Authority, and Disregard of publick Happiness, from the mean and pitiful Ambition of raising private Fortunes. But we have wander'd too far from the Business of this Section, and into Reflections that cannot perhaps be pursued to the general Satisfaction of our Readers. Therefore we will here put an End to our Remarks, and return to the Observations of Mr. *Thevenot*, which will make the Reader Amends for this short political Digression, by leading him again into the flowry Paths of Amusement. Yet, why do we travel through every Part of the World but to know it? Or, what have we to do with the Customs, Manners and Policy of the *Turks*, if not to improve ourselves, by considering the Mistakes, and the Consequences of those Mistakes in other Nations? This is, or at least this ought to be, the End of Reading and of Writing.

SECTION II.

Containing an Account of the Customs and Manners of the *Turks*, their Learning and Religion, the Form of their Government, their Forces by Sea and Land; as also an Account of the *Christians* and *Jews*, inhabiting Countries, that are subject to the Grand Signior.

Taken chiefly from the Travels of Mr. JOHN THEVENOT; interspersed with many curious, useful and entertaining Particulars, extracted from the Works of other eminent Authors.

1. Of the Persons of the *Turks*, the Manner of their Dressing amongst various Ranks of People, especially amongst the Janizaries.
2. The Manner of their eating and drinking, preparing their Victuals, and by what Explications they so far satisfy themselves, as to drink Wine upon Occasion.
3. Of the Language and Learning of the *Turks*, and of their Fondness for Astrology.
4. The Religion of this Nation, the Author's Account of Mohammed from the Greek Writers, and other Particulars.
5. Their Praying for the Dead, and the Reason of it; their Notions of a future State, and of the Happiness of the Blessed, and Misery of damned Spirits, with their Doctrine of universal Redemption.
6. Of the Ceremony of Circumcision, the Time when, and Manner in which it is perform'd.
7. Of the Manner of keeping their Ramadan or Lent, and of their Feast of Bairam or Easter; their Extravagance and Folly at that Season, and the great Risque Christians run by appearing in Publick at that Time.
8. Their Ablutions or ceremonious Washings, and publick and private Prayers, and the Manner of Preaching in their Mosques.
9. Of the charitable Disposition of the *Turks*, and of their Readiness to forgive each other, and to avoid long Enmity and hasty Quarrels.
10. Their Pilgrimages to Mecca, and other Precepts of their Religion.
11. Of the Turkish Clergy; their Offices, Credit, and Power, and of their Dervises or Monks.
12. Of the several Kinds of Marriages practised amongst them, and of their Divorces.
13. Slavery amongst the *Turks* not near so grievous as it is generally represented, so that some Slaves have refused Freedom.
14. The Manner in which the Turkish Women pass their Time, and the Cases in which they are entitled to be divorced from their Husbands.
15. Their Customs in burying the Dead, their Mourning and Praying for them.
16. The Virtues and Vices of the *Turks*, their good and bad Qualities very impartially stated.
17. The unlimited Power of the Grand Signior, upon what Principle founded, and how exerted.
18. Of the Office of Vizier Azem, the Viziers of the Bench, and other Officers and Governors.
19. The Manner in which Justice is administer'd in the Divan, and within the Provinces.
20. The great Care taken to preserve Peace and Plenty in the Capital, and other great Cities on the Empire.
21. Of the Money current in Turkey, and of the Weights used in Trade there.
22. Of the Punishments in Use in Turkey, both for Men and Women.
23. Of the Military Establishment and different Sorts of Troops employ'd in the Grand Signior's Army.
24. Of the Manner in which his Forces are raised, and the Funds appointed for their Maintenance.
25. Of their Naval Affairs, and the Reason of their being in so indifferent a Condition.
26. Of the Greek Christians that live in the Dominions, and are the Subjects of the Grand Signior.
27. Of the Armenians, and the Difference of their Faith from that of the Greek Church.
28. Of the several Orders of Greek Monks, and their Manner of living.
29. Of the rest of the Greek Clergy, and their Influence over the People of their Communion.
30. Of the Virtues, Vices, Customs, Manners, and general Disposition of the Greek Christians.

stians. 31. Of the Jews that live in the Grand Signior's Dominions, their Manner of living, and the Cause of their being generally hated and despised. 32. Miscellaneous Observations collected from various Authors, serving to explain the foregoing Articles. 33. Remarks historical, political and critical upon this Section.

1. **T**HE Turks are commonly well shap'd, and have none crooked or cripple among them, but are of robust and strong Constitutions for the most Part: Their Habit is very fit to make them seem graceful, and to cover all Defects; for next their Skin they wear a Pair of Drawers, and over them a Shirt and Doliman, reaching down to their Heels, like a close bodied Cassock, made of Sattin, Taffata, or other neat Stuff, which is quilted in Winter, and this they gird about with a Sash, or Leathern-Belt, adorned with Gold or Silver-Buckles. At their Girdles they commonly wear two Daggers, or *Cangiar's*, their Handles and Sheaths being garnished with Gold and Silver, and sometimes precious Stones, and their Pouch for Tobacco. Over the Doliman they wear a *Feredg* or Night-Gown, which in Winter-time they line with rich Furs, if they are able. Their Stockings are of Cloth, and the Feet are Socks of red and yellow Leather sew'd to them. Their Shoes, which they call *Padouches*, are of the same Colour, like our Slippers. Their Heads are covered with a Crimson Velvet Cap, without Brims, about which they wreath a white or red Turbant, which is a Scarf of Linen or Silk-Stuff, many Ells long, and by the Fashion of it the Quality of the Man is known.

The Attire of the Ladies of *Constantinople* hath a particular Air of Grandeur and Magnificence in it, and far surpasses the Dress of the other Women of that Country. Their *Tarpous*, or Head-Dress, is made up of many Handkerchiefs of various Colours, all wrought with Gold and Silver, beset with all Manner of precious Stones, and adorn'd with several Sorts of Flowers. They can put it on or off without undoing it, and usually wear it several Days, and then put it into another Fashion, but it is often so heavy, that it is a Burthen to them. They wear outward a white Gown, edged at the Bottom with Gold-Laces and Fringes, and lined with Furs in Winter, as the Mens. The Ladies of the *Seraglio* wear sometimes on their Heads a *Calpak*, or Fur-Cap, others a round *Platine*, as the *Jewish* Women, with a Feather on each Side, and Plumes at their Ears. The *Janizaries* wear upon some special Occasions a *Sercola*, or Cap of Ceremony, which hangs down behind, and has a Pipe of gilt Leather before, half a Foot long, and reaches to the Middle of their Foreheads, otherwise they wear a Turbant of white, red, or other Silk, as the common Sort of *Turks* do.

They shave their Heads, and say the Devil nestles in long Hair, but they suffer their Beards and Mustachos to grow, and have a great Esteem for a Man with a lovely Beard, and account it a great Affront to take a Man by the Beard. They swear by the Beard or Head of their Father, Grand Signior, or the like. They salute one another by laying their Hands upon their Breasts, and bowing a little, say, *Sela meon Aleicom*, i. e. *Peace be with you*, and the Person saluted returns the like Answer, which was the ancient Way of Salutation, as appears from Scripture, and is very grave. The Left Hand is the most honourable with the *Turks*, because it is the Sword-side, so that the *Christians* and *Turks*, though neither will give the upper Hand one to another, agree well in Walking together, through Difference of Opinion.

The *Turks* make great Use of Bathing, both for keeping their Bodies neat and clean, and for their Health's Sake; and in every Town they have many fair Bagnios, the smallest Village being seldom without one. They are all made of the same Fashion, differing only in Bigness and Ornaments. All that go into them shave off all the Hair of their Body, and go in naked, all but their Privities, which are cover'd with a Napkin. A Servant also rubs them well behind and before, to supple their Bones before they go in. Such as cannot shave themselves, fetch off the Hair with the Powder of

a certain Mineral called *Rusma*, which being mingled with Lime and hot Water, and laid upon any Place, will fetch off the Hair in half a Quarter of an Hour's Time. In *Malta* they use Orpiment for the same End. Having bathed, a Servant with Soap and Cloths cleanses the Body from all Filth, and then they are dried with warm Cloths, and so dress. The Price of the Bagnio is two Aspers for the Master, and as many to the Man, if he will be well served. The poorest Person that is, Man or Woman, goes to the Bath at least once a Week. The Women go in by themselves, and are served by Women only. It is a capital Crime for a Man to go into the Bath where the Women are. Great Persons have them in their Houses for themselves and Wives.

2. The *Turks* have no sumptuous Feasts, but are contented with a small Matter. They cook their Meat themselves, for they have no Sauces but what are made at first Sight, as Oil, Pepper, &c. Their usual Food is Pilau, which is Rice boil'd with a Pullet, a Piece of Mutton, Beef, or the like, and for want of Meat, with Butter. Their Bread is light, but coarse, like our Biscuit, and flat. They spread a Carpet of *Turky* Leather on the Ground, called a *Sofra*, and squatting down upon the Ground like Taylors, eat it with Wooden Spoons, and instead of Napkins they use a long blue Cloth cast round about the Table. They say, *Bismillab*, i. e. *In the Name of God*, before they eat, as we do *Benedicite*. They pull their Meat in Pieces, (for they use no Knives) and then every one takes his Share. They seldom drink at their Meals, but, having eaten, rise and fill their Bellies with Water, and then say, *Han-dillab*, i. e. *God be praised*. Having finish'd their Meals, they wash their Hands.

They drink Water usually, because Wine seems to be forbidden by the *Alcoran*; but the Goodfellows say, it is a Council, not a Precept, and so drink it plentifully; but few do it in publick, except the *Janizaries* or some Desperadoes. They never mingle Water with their Wine, and laugh at the Christians for so doing. It is plentiful at *Constantinople*, and all over the *Archipelago*. The poorer Sort for Cheapness drink a Liquor made of Barley and Millet, somewhat like our Beer, but not so pleasant. This Drink will make them drunk. They also drink Coffee all Hours of the Day. They make it of the Berry parch'd and peal'd. This Liquor they hold to be good to cure the Head-ach, and keep down Vapours from the Head; it comforts the Stomach, and helps Digestion; nay, they say it is good against all Maladies. To mix any Thing with it makes it less wholesome and useful. All Sexes and Ranks, Rich and Poor, drink at least two or three Dishes a Day in *Turkey*. At the Coffee-houses the Master hath Musick to divert his Customers, and draw others in. They have also Sherbet, which is a very good Drink, made in *Egypt*, of Sugar, Lemmon-Juice, Musk, Ambergrease and Rose-water. At their great Treats they give Coffee, Sherbet, and Perfume for their Beards. They spread Quilts on the Ground for their Bedding, and every one lies on his own, and the Masters lay them on their *Divans*.

Their Recreations are either to sleep, smook a Pipe of Tobacco, or play on the Tambour, which is a Kind of Lute; and though it be no pleasant Musick, they will play all Day on it; but Scholars read or write. They laugh at the *Franks* for walking backward and forward. They entertain their Company with Discourse, or a Game at Chess, Draughts, Tables, or such-like Plays; but they never play for Money, or any Thing of Value, because they account it sinful, and yet will spend whole Afternoons at their Games; but their most usual Game is *Mancala*, at which they play with Shells in Boxes like our Tables. The Recreations of Soldiers are their Military Exercises, viz. shooting at Marks or Butts with Bows and Arrows, darting the *Zagaye*,

Zagaye, shooting with an *Harquebuse* running. The other *Turks* make a great *Diversion* of *Puppet-Shews*, which, though performed a different Way from ours, yet are more pleasing; their Songs are pretty, but very obscene; and so are many of their Postures.

3. The *Turkish* Language is a *Primitive* and *Oriental* Tongue, and though not very copious, yet is grave and pleasant, and with a little Supply from the *Arabian* and *Persian*, is rich and elegant enough. The *Turks* are not much addicted to Sciences, yet have Doctors of their Law, who explain it in all the Senses that can be given it. Some affect *Astrology* and *Poetry*, in which they have pretty *Conceits*, but they generally use the *Persian* Language, and the Tone they sing in is agreeable enough through Custom. Their Musick is a little Lute with three Strings, and the Flute. Many among them pretend to *Fortune-telling*, and have good Luck at it. They divine by the *Alcoran*, and four Arrows, which they call consulting the Book, and naming two of the Arrows *Christians*, and the other two, *Turks*, make them fight by reading the *Alcoran*; if the *Christians* overcome, they look upon the Action, whether in War or Peace, which they are to undertake, to be unlucky, and so will not enterprize any thing. They never go out to War, but they make this Experiment. They also divine with Beans, by taking out an uncertain Number, and then counting them, consult the Book to see what the Number signifies; and by a Piece of Timber almost square, which they call *Eliph*, which having Letters written on each Side, he that seeks his Fortune, takes it, and rolling it three Times, puts the Letters together, and then consults the *Fal*, or *Fortune-Book*, what the three Letters signify.

They have few or no Physicians, being very healthy, because of their frequent Bathings and Temperance. When they are sick, they make Use of their common Receipts, and, if they fail, consult the *Jews*, or some Renagado Christians, who learn their Skill at the Cost of many. When they have the Head-ach, they scarify, lance, or sear the Place, and that cures them. In other Distempers they also use Burning, and endure a live Match applied to the Place with Patience. Doubtless, Physicians might do them more Service, and help them at an easier Rate; but they are such bad Paymasters of Men for their Skill, and besides, if a Physician should be unsuccessful, and a Patient die under his Hands, they will accuse him of killing him, which is a Discouragement to the Art among them.

4. The Religion of the *Turks* is full of Fopperies and Absurdities, of which it would be no hard Matter to convince them; but that *Mahomet*, to prevent any better Information, hath commanded, that whosoever contradicteth it should be put to Death. *Mahomet* was an *Arab*, and illiterate, a Driver of Camels, and a Man of no Morals; but striking in with a *Greek* Monk, who had forsaken his Monastery, and had some Smattering of Learning, he was by him enabled to lay the Foundation of that great Sect, which hath hitherto infected so large a Part of the World. He made Use of the *Old* and *New Testament* in composing the *Alcoran*, that he might draw both *Jews* and *Christians* to submit to it, though both are confusedly applied; but the *Turks* hold, that it was written in Heaven by God himself, and brought Chapter by Chapter to *Mahomet* by the Angel *Gabriel*. No Christian may touch it, and the *Turks*, by reading it merit, in their Opinion, Paradise. It is written in pure *Arabick*, and the *Turks* believe it cannot be turn'd into any other Language; and for that Reason they account the *Persians* Hereticks, because they have translated it into their Tongue.

This Book contains all their Laws, both Canon and Civil, but is full of *Rabbinical* Fables. According to this Book the *Turks* believe in and worship God, the Eternal and Almighty Creator of Heaven and Earth, but they will not acknowledge a Trinity, nor allow any Images in his Worship, either painted or graven. They have a peculiar Fondness for Predestination, which they extend even to the most indifferent Actions. They are firmly persuaded, that under the Reign of every Em-

peror the State will infallibly and perpetually have either a disastrous or happy Fate. That Death is fatal both in War and Peace, and therefore as they willingly take up Arms, believing that if they are killed by their Enemies, they should some Way or other have died at Home, so they take no Care to keep themselves from the Plagues, or other infectious Diseases, and are offended at Christians for it.

They believe, that Jesus Christ was conceived by the *Rauah*, i. e. The Breath or Spirit of God, in the Womb of the Virgin; but they deny him to be the Son of God, who is one, and hath no Companion; That he was a great Prophet, and wrought many Miracles among the *Jews*, and foretold the Coming of *Mahomet*, under the Name of the Comforter, but they deny that he was crucified; That Jesus Christ shall come to judge the World, and shall reign forty Years in *Damascus*, marry and have Children, at which Time *Antichrist* shall arise, and deceive many, setting a Mark on their Foreheads; but Christ shall destroy him, and shall next ascend up into Heaven, and then the Day of Judgment shall come. In short, they give great Honour to Jesus Christ and the Virgin *Mary*, and if they hear any Man speak ill of them, they will chastise him as severely as if he spake against *Mahomet*; for they believe that the Gospel was sent to Jesus, as the Law was to *Moses*, and the Psalms to *David*.

They believe all the Prophets, and that Paradise shall be filled with the Just, and Hell by the Wicked. They say moreover, That the Power of God is such, that at the Creation of the World he prefix'd and appointed a set Time for every Man's End, that the Wit or Device of Mortals cannot divert nor prevent, which makes them not only very resolute and courageous in their Wars, and upon all other Occasions, but they laugh at and scorn all Means to drive away Diseases and prevent Death, as if they opposed God's Will in so doing. They deny a Purgatory, but hold that there is a Place called *Araf*, between Paradise and Hell, where they shall be that have done neither Good nor Evil. In Paradise *Mahomet* promises the Blessed, delicious Gardens, full of pleasant Fruits and Fountains, Rivers of Waters, Milk, Wine and Honey, Scarlet and Green Cloathing, and lovely Virgins, with Skins as white as a new-laid Egg, and black Eyes, always young and Virgins; that God shall appear to them every Week on *Friday*; That those that are in Hell shall drink scalding hot Water, and eat of the Fruit of the Tree *Zacon*; That if they have Faith, after all their Sins shall be consumed and wash'd in the Water *Solzaboul*, they shall be admitted into Paradise, where they shall receive and enjoy as much Happiness as those that entered at first; but such as have no Faith, and are meer Atheists, shall burn everlastingly in Hell-Fire.

5. They pray for the Dead, as the Papists do, and invoke their Saints to recommend them to God. They acknowledge Guardian Angels, not only to every *Mussulman*, but to every Affair and Member, and attribute all that befalls any Body to them, because they wait upon them in all Places but when they go to do their Occasions, and then they leave them at the Door. They also believe, that when a Man is buried, his Soul returns to his Body, and two Angels, called *Munker* and *Guanequir*, come to him, and if he has lived ill, they bring him an ugly Creature, that represents his Sins and bad Deeds, to torment him till the Day of Judgment; but if he hath lived well, they bring him a lovely Creature, which represents his good Actions, and which gives him a great deal of Content, and stays with him till the Day of Judgment.

They believe, that not only the good *Musselmens*, but some Beasts and Fowls shall enter into Paradise, viz. The Prophet *Saleh's* Camel, which he raised to Life in *Persia*; *Abraham's* Ram; *Moses's* Cow, whose Ashes are mingled with the Water of Purification; *Salomon's* Ant; the Queen of *Sheba's* Parrot, which brought her the first News of *Salomon*; *Ezra's* Ass, which, they say was raised to Life many Years after it had been dead, to prove a Resurrection; *Jonah's* Whale; the little Dog

Dog *Catmer*, that attended the four Sleepers, who slept 372 Years; and *Mahomet's* Camel, that carried him from *Mecca* to *Medina* to his Friends House by a certain Instinct.

6. They circumcise their Children as the *Jews* do, not at eight Days, but at eleven or twelve Years old, that they may make a Profession of their Faith in these Words, *There is no God but God, and Mahomet is his Prophet*. The *Turks*, as well as *Jews*, make great Rejoycings at the Circumcision of their Children; for upon the Day fixed for the Ceremony, the Child is set on Horseback, and carried about the Town with Timbrels and Musick, and being circumcised in his Father's House, he makes a Feast for all his Relations and Friends, at which they are merry, dance and sing, and the next Day the Guests make Presents to the Child according to their Quality. When a *Christian* turns *Turk*, he is circumcised after the Manner aforesaid; but if a *Jew* turns, his former Circumcision is sufficient, and he only is obliged to make the afore-mentioned Profession; for which the *Turks* have such a Reverence, that if any *Jews* or *Christians* pronounce them inconsiderately, they must turn *Turk*, or be burnt.

This Circumcision, called by the *Turks*, *Schounnet*, is only a Mark of their Obedience to *Mahomet's* Example and unwritten Command, for there is no Mention of it in the *Alcoran*; but they take it to be such a Token of Disobedience to their Law not to be circumcised, that such as are uncircumcised, whether Children or *Christians*, are not allowed to be present at their publick Prayers; and though there be no Persons to keep such out of their Mosques, yet if any are so bold (as some have been) and are taken, they are burnt alive, or impaled. Upon some special Occasions some are admitted to circumcise at seven or eight Years old; but in Case of Poverty, it is more usual to stay till fourteen or fifteen, till either the Parents of the Person to be circumcised, or the Person himself, is able to defray the Charges of it; or if neither are able, they wait till some rich Person is circumcised, that they may shelter themselves from the Charge by his Purse.

Men of Estates, at the Circumcision of their Children, make many Presents to the Youths that are circumcised with them, and give liberal Alms to their poor Neighbours, that by their Prayers the Grace of God may descend upon the new *Musselman*, and their whole Family. When any poor Renagado *Christian* is circumcised, two Basons are carried after him to gather the Alms, which the Spectators freely give them, though they have a common Proverb among them, *That he that has been a bad Christian, will never make a good Turk*. The Time and Place for Circumcision is not fix'd, for it may be done by a Priest or Chirurgeon, either at the Bath or Parents House. They name their Children as soon as they are born, and do not stay till they are circumcised, by putting some Grains of Salt into their Mouths, and so lifting them on high, as dedicating them to God, say, *God grant N. N. that God's holy Name may be as savoury in this Mouth, as this Salt is, and that he may preserve you from being too much in Love with the World*. As to those that die young, before they are circumcised, they believe that those are saved by the Circumcision of their Father.

7. The *Turks* receive the Ten Commandments of *Moses's* Law, and cause them punctually to be observed by all; and to them *Mahomet* has added five, viz. 1. To believe One Only God, and to worship him as such. 2. To fast during the *Ramadan*. 3. To pray at the Hours appointed. 4. To give the Poor yearly the Fortieth Part of their Substance. And, 5. To go in Pilgrimage to *Mecca* once in their Lives.

The first of these they observe very punctually, shewing great Reverence to God and his Name, which they never pronounce, nor hear pronounced, but with great Reverence, and will not set about any Action, but they first say, *In the Name of God*; yet they swear much by God, when they would be believed.

The second Commandment is to keep *Lent*, or *Ramadan*, in Fasting, whereby the Flesh is mortified, Concupiscence subdued, and the Soul purified. This Fast

lasts a Month, and is kept in the Month called *Ramadan*; because (as they say) the *Alcoran* came down from Heaven in that Month. This *Lent* begins as soon as such People as are set on Hills and high Places on Purpose can discover the New Moon, and the first Messenger of it, if a credible Person, hath a Reward given him for publishing it, and then the *Ramadan* is appointed all over the Town by publick Proclamation.

The Manner of keeping it is thus: It is said in the *Alcoran*, That they may eat and drink all Night long, till they can discern a white Thread from a black by the Morning-Light; but after that, it is unlawful for them to eat, drink, or smook Tobacco, yea, to touch their Wives; and thus their Nights are turn'd into Days, their Minerets being all hung with Candles, and their Coffee-houses are full all Night. In Summer-time this Fast is very troublesome, for though they are burnt up with Heat, they may not drink. Every one is obliged to keep this *Lent*, and some are so strict as to keep it in their Travels, and in the Army, though they may defer it to a more fit Opportunity. There are many that do not keep it, but they must eat and drink privately; for if it be known, they will be at least Bastinado'd. The Punishment of drinking Wine in *Lent*, is to have melted Lead pour'd down their Throats; and it hath been executed, though rarely. None may marry in *Lent*.

When the *Ramadan* is ended, the *Bairam*, or *Easter*, begins with the next New Moon, which is publish'd by firing of Guns, and publick Bonfires and Rejoycings. At this Feast the Houses and Shops are adorn'd with fine Hangings, Tapestries, and Sopha's; the Streets are full of Swings, adorn'd with Festoons, in which they sit down, and are toss'd in the Air, while Musick, both of Instruments and Voices, hired by the Masters of the Swings, pleases their Ears. They have many other Diversions, as Mills, Fire-works, &c. which they get ready some Days before the *Bairam*. Many Women, who never stir abroad the rest of the Year, have Liberty to walk about these three Days; but it is dangerous for the *Franks* to appear, because the *Turks*, being got drunk, will stab them with their *Cangiar*s, or to be sure make them pay dear for their Passage, by exacting Money from them.

One Thing very commendable is done at this Time, which is, that they pardon all their Enemies, and are reconciled to them; for they have made a bad *Easter*, if they keep Malice in their Hearts against any body; and for this Reason, when they meet any of their Acquaintance in the Streets, they kiss one another, wishing a good *Easter* and mutual Happiness one to another. This they call the Great *Bairam*, to distinguish it from the Little *Bairam*, which they keep seventy Days after. Their other Festivals are, the Night between the 11th and 12th of the Moon called *Rebiul Ewell*, wherein *Mahomet* was born; as also the Night between the 26th and 27th of the Moon *Rebiul Abber*, when they believe that *Mahomet* ascended up into Heaven upon the *Albo-raab*, as he tells them in his *Alcoran*; and on *Thursday* the 4th of the Moon *Regule*, they have Prayers in their Mosques till Midnight, and then return home and feast. On all these Festivals the Steeples of the Mosques are deck'd with Lamps in several Figures, which make a very pretty Sight.

8. The third Command of the *Turks* is, To pray at the Hours appointed; but because they always wash before they go to Prayers, 'tis necessary to speak of their Ablutions. They are of two Kinds, one is called *Gouss*, which is a general Washing of the whole Body, and this they are obliged to use after they have lain with their Wives, or after Nocturnal Pollutions, or when any Urine, or any other unclean Thing, hath fallen upon them. The other is called *Abdest*, which is performed by turning their Face to *Mecca*, and washing the Hands, Nose and Mouth three Times. This they use after their Needs, or when they have handled any Thing that is unclean, and for both these they have Baths and Fountains near all their Mosques. If any one happens to break Wind upwards or downwards, or any Blood or Filth issue from their Body, if they

they vomit, fall into a Passion, faint, are drunk, laugh at Prayers, embrace a Woman, or touch any naked Part of her, sleep at Prayers, touch a Dog, or any unclean Beast, all these Accidents make void the *Abdest*, so that it must be renew'd before they can legally go to Prayers.

The Places of Prayer are their Mosques, which on the Outfides are like our Churches. They have by them Towers or Minerets, which have a Balcony round them, from whence the *Muezim* call them to Prayers. In the Inside there is nothing written, but the Name of God. When they pray they turn toward the South, because *Mecca* lies on that Side. They have a Pulpit for the *Imans* to preach in, and the whole Mosque is cover'd with Matts for the Ease of the People's Kneeling, and Carpets for the better Sort. Their Prayers are in an unknown Tongue. They have them five Times a Day, *viz.* at Break of Day, at Noon, between three and four a Clock in the Afternoon, at Sun-setting, and about an Hour afterwards in the Evening. On *Fridays* they have Prayers at Nine o'Clock besides, and in the *Ramadan*, or *Lent*, at Midnight, and all are present at them, and then they may go to work, or open Shops, but most of them rest and make merry, or visit their Friends. When the Hour of Prayer is come, the *Muezim*, going up to the Mineret, sings and cries with all his Force, putting his Fingers in his Ears, *Allah Ekber*, &c. i. e. *God is great, God is great, God is great; bear witness there is but one God, and that Mahomet is his Prophet; Come and present yourselves to the Mercy of God, and ask Forgiveness of your Sins; God is great, &c.* and this he does towards the four Corners of the World, beginning at the South, and ending at the West.

While he is crying, every one goes to the *Abdest*, and then to the Mosque, or if they cannot go, say their Prayers at Home. They leave their Shoes at the Door of the Mosque, or carry them in their Hands with them. When they are entred they bow to the *Keble*, i. e. a Nich in the Southern Wall, and then go to their Seats, and wait till the *Iman* or Prelate begin Prayers, and then join with him. In praying the Men lift up their Hands to their Shoulders, and then lay them upon their Navels, and the Women lift up their Hands but half-way, and clap them on their Breasts. When Prayers are ended, they bowe both to the right and left Side, as to the two Angels, *Kerim*, and *Ki-atib*. When they are at Prayers they are so attentive, that they will turn neither this Way nor that. They never talk in their Mosques, but carry themselves always with great Reverence. They are but few who go not every Day to Prayers at Noon, Afternoon and Night, for if they observe not these three Hours they are punish'd severely, and this they must do in Travelling. All their Prayers do not last above half an Hour at most, and seldom above a Quarter. They are commonly of a very ordinary Composure, especially in the lesser Mosques, and upon ordinary Days; but during the *Ramadan*, and upon high Days, they are something better.

The *Mahometans*, during the Time of their Prayers, observe a grave Silence and a modest Deportment, kneeling till the Prayers begin, and then joining with the *Iman* in repeating the Prayers softly after him, and imitating his Gestures with Kneeling and Prostrations, which are more or less, according to the Hours; for in the Morning and Afternoon they use but six, but at Noon, Night and Evening, eight. When these are finished, some Choristers get up into the Galleries, and sing in Parts a Sort of an Anthem of an indifferent good Air. On *Mondays*, *Wednesdays* and *Fridays*, a Preacher mounts the Pulpit, to explain some Point or other of the *Alcoran*, which he understands and expounds as he thinks fit. Any one may be present at these Sermons, as well as those made in the Market-place. They conclude all with some Prayers for the Sultan and the Success of his Armies; to which all the People say, *Amen*.

9. The 4th Command is Charity, to give the fortieth Part of their Goods to their Kindred, if they have any, and if not, to their poor Neighbours, and for want of

them, to the first they meet. This Command is well observed by them, so that Beggars in *Turky* are very rare. And, indeed, they perform great Acts of Charity in founding Hospitals, building Bridges, and Inns for the Caravans, bringing Water into the Highways, setting Slaves at Liberty; and they that have not Ability to do these Things, mend the High-ways, fill the Cisterns with Water, and shew Travellers the Fords; and if offered Money, they refuse it, for they say, they do it for God's Sake, and not for Money. Their Charity also extends to Birds and Beasts, for some will buy Birds in the Market to let them fly, and they believe, that the Souls of those Birds will one Day testify their Kindness to God. Others will leave considerable Means to maintain so many Dogs and Cats.

To this Command of Charity may be reduced that of forgiving Enemies, not of their State and Religion (for those their Law obliges them to hate) but their particular and private Enemies. And indeed they observe this Law so well, that there are few Enmities among the *Turks*; for if there happen any Quarrel, they are obliged to use their utmost Endeavour to pacify it, and commonly they do not desist till it is adjusted; and that the Reconciliation may be firm, the Persons at Difference are obliged, before they pray to God on *Friday*, which is the Weekly Sabbath, to protest, as in the Presence of God, that they freely pardon their Enemies, or else they are taught, that their Prayers will not be heard. If the Persons at Variance will not be reconciled, they part them by Force, and carry them before the *Cadi*, or some other Judge, who will give them two or three hundred Drubs on the Bottom of their Feet, and make them pay two or three thousand Aspers. The Severity of these Punishments generally keep the *Turks* so much within the Bounds of their Duty, that they seldom quarrel, or injure one another; nay, they do not suffer themselves to be transported with Passion, or to swear.

10. The fifth Commandment of the *Turks* is to go to *Mecca*, which is the worst obey'd of any of them, because several for Want of Money, and others by their Affairs, are hindered from going so tedious a Pilgrimage; yet many go yearly, and such are revered ever after under the Name of *Hagies*, or Pilgrims, and others get ready to do it. Next to these Commandments they have several Prohibitions, which they cannot break without Sin, as, 1. To make, or have any Figures of Man, Woman or Beast; and this they observe so strictly, that they are angry at the Sight of any, and though they are great Lovers of Watches and Clocks, yet if they have any Figure on them, they will not accept of them, though given. 2. To lend Money upon Usury, and they are careful to abstain from it, but they will make Bargains that differ little from it. 3. To forbear unclean Meats, as Hogs, and such Creatures as the *Jews* account unclean; and this they strictly keep, and some will rather starve than eat of them. 4. Not to drink Wine, but this they say, was only a Council of *Mahomet*, and so they often drink it, and are drunk; yet if any Wine be spilt upon their Cloaths, the greatest Drunkard will labour to get out the Stain, and the most scrupulous will wear them no more, lest they be found guilty of Sin.

11. The *Turks* have their Clergy, as all other Religions have, to resolve their Doubts, and celebrate divine Service. They continually study the *Alcoran*, and are most of them knowing Men. The chief Ecclesiastick is the *Mufti*, whom they reverence as much as the *Romanists* do the Pope. He is chosen by the Grand Signior, and is always a learned Man in their Way, i. e. much versed in the *Alcoran*, for he resolves all Matters of Conscience, and gives his Decisions in little Writs, called *Festa*, to which even the Sultan himself must stand, but by adding these Words, *God is the best Judge*, he shews that he pretends not to Infallibility. He is married, and had in so great Veneration, that the Grand Signior rises to meet him and salute him when he comes to Court. It is unlawful by their Law to put the *Mufti* to Death, yet some Emperors have done it. There is but one *Mufti*, and his Residence is ordinarily at *Constantinople*, where finding Business enough,

the *Cadilesquers*, *Moullab's* or *Cadi's*, or Justices and Naibs, perform his Office in other Places. The Sultan consults with the *Mufti* about State-Affairs, as when he designs to put any Prime Minister to Death, disgrace the Prime *Vizier* or *Basba*, or undertake any other Business of Importance, because 'tis a Notion among the People, that there is more Equity in a wise and pious Person's Judgment, than in the absolute Power of a Prince, though as it is now used, 'tis meer Formality, for the *Mufti* must comply with the Will of his Prince. Every *Mufti* must have been a *Cadilesquier* first, and have discharged that Office well before he is raised to that Dignity. He has no Power over the *Imans*, or Priests, because the *Turks* have no Hierarchy.

Those who officiate in their Mosques, and read Prayers there daily, are the *Danischmend*, or as the *Franks* call them, *Talisman*s, and the *Iman* is the Chief of them. The *Muezims*, or Church-Clerks, call them to Prayers from the Minarets of the Mosques, and the *Hodgia's* are old Men of Integrity, very knowing in the *Alcoran* and Civil Affairs. These are consulted in Affairs of Importance, and sometimes preach on certain Festivals. They have several Sorts of Monks, of which the *Dervices* are the Chief. They live in common, and have their Superior, as Popish Monks have. They go very mean in their Apparel, and wear on their Heads a Cap of white Felt, like our Night-Caps. Every Tuesday and Friday they make a Dance in the Middle of an Hall, rail'd in square, where are two Pulpits, the one for the Superior, and the other for the Vicar. At the other End of the Hall is a Scaffold, where several *Dervices* are placed to play on the Flutes or Drums. When they have sung some Prayers, the Superior makes a Sermon upon some Words of the *Alcoran* in *Turkish*, which are read to him by the Vicar in *Arabick*. When the Sermon is ended, the Superior with the Vicar, come down from the Pulpit, and having, with the rest of the *Dervices*, taken two Turns about the Hall, all the Instruments play in Concert, and then begins the Dance. They pass before the Superior, and salute him humbly, and then making a Leap, fall a-turning upon their left Foot as a Windmill driven by the strongest Wind, and though they stretch out their Arms, and sometimes shut their Eyes, they never touch one another, but keep Time to the Musick, and never make the least false Step. The Author of this Dance was one *Hazreti Mewlana*, a *Dervise*, who is reckoned a Saint among them, but all their *Dervises* and *Santo's* are Hypocrites.

12. The Marriage of the *Turks* is of three Sorts, and so they have as many Sorts of Wives. 1. Lawful Wives, and these they take after this Manner: The Man that desires to be married agrees with the Parents or nearest Relations of the Maid about the Dowry they will give their Daughter or Kinswoman before a *Cadi*, who writes it down. This done he gets an *Iman* to bless his Marriage, and then the Bridegroom on the Marriage-day leads the Bride to his House, her Baggage being carried on Horses or Camels before them, and there they feast and are merry, the Men and Women by themselves, and commonly they have Musick and Poppet-Shows, as also the Women called *Tebingene*, to shew Tricks for the Diversion of the Company. These Wives the *Turks* may divorce when they please, by going before the *Cadi*, and saying, *Alei talac be talati*, i. e. *I part with her for three Times*: But if a Man put away his Wife wrongfully, he must give her her Dowry; but if he does it upon just Grounds, or she forsakes him, he gives her nothing. When a Woman is thus divorced, she may not marry another Man till four Months be past, that she may know whether she be with Child, for if she be, the Husband that divorced her must keep it, and if she be not, sometime such Matches are made up in that Time. A Man that hath divorced his Wife cannot marry her again, till she hath been first married to another Man, and then he may take her back. When they are thus married, if the Husband happen to die, the Wife takes her Dowry, and no more, and if the Wife dies, and leaves Children, they may constrain their Father to give them their Mother's

Dowry. Of these Wives the *Turks* can have but one, though some have said four.

They may also have Wives of *Keben*, which they take with less Ceremony than the former; for they only go to the *Cadi*, and tell him, that they take such an one to be their Wife, promising to give her so much if they divorce her. This the *Cadi* writes down, and gives the Man a Copy, and he may keep her or divorce her as he pleases, performing his Promise, and maintaining the Children he hath by her. The *Turks* may have seven of these Wives, nay, as many as they can keep, but to save Charges, few of them will have more than one or two.

Their other Wives are *Haylaykes*, i. e. Women-Slaves, and of these every Man may have as many as he pleases, and the Children begotten of them are held as legitimate as those of the former Wives, and have as much Title to the Inheritance of what their Father leaves behind him, if by his Will he infranchizeth them, otherwise they remain Slaves to the eldest by the lawful Wife; but if a *Turk* takes a Slave for his Bed, he may not sell her again if she have Children, but she becomes a Member of his Family; if she proves barren, she may be sold as often as her Masters will.

The *Turks* may buy all Sorts of Slaves of every Religion and Nation, but *Christians* and *Jews* may not buy a *Turk*. At *Constantinople* is a Market for Slaves in a Place near the *Bezistan* every Wednesday, and every one may buy freely for their several Uses, their Lust not excepted. These Slaves are bought and sold like Horses, view'd, review'd, and felt all over their Bodies, and their Mouths look'd into, being also examin'd of their Country and Age. A beautiful Virgin at these Markets is held at an high Rate, but the Seller is answerable for her Virginity, for if she prove otherwise, he must restore the Money she was sold for, and bear a sharp Fine for his Fraud.

13. The Slaves of the *Turks* are not so miserable as they are commonly supposed. They are frequently the Under-Masters of Families, for if they light on a good Master, or are endued with any Talent, their Masters will love them, and will seldom hinder them from going to Church to pay their Devotion: They are very frequently also in Favour with their Mistresses, who through a tender Compassion, natural to their Sex, give them Presents. Their Masters, indeed, are obliged by their Law to exhort them three Times a Day to embrace the *Alcoran*, but they seldom force them to renounce their Faith. These Things have made some Slaves to refuse their Liberty, and being made free to return again to their Servitude.

14. The *Turkish* Women are commonly beautiful, straight and well-shaped, for they never go abroad without their Veil to cover their Faces. They paint their Eye-brows with *Sarmee*, which gives them a blackish Colour, and their Nails with *El-banna*, which is a reddish brown. They are very cleanly and neat, for going to the Bath twice a Week they have neither Hair nor Dirt upon their Bodies. Their Cloathing and Shoes are much like the Mens, but their Head-Attire is different, for they make a very long Tress of their Hair, which hangs down to the Small of their Back, and if they want Hair, they use an artificial Tress, or a Case of Sattin.

In the House they cover their Heads with a Cap of red Cloth, like our Night-Caps, but with four Horns or Points on the Tops, to the Middle of which they stich a Round of Pearls, and tie it below with a Handkerchief of fine Stuff wrought with Flowers of Gold and Silk; but when they go abroad, they change it for one made of gilt Paste-board, and muffle up their Head so in a Linen Cloth, that nothing but their Eyes is uncovered, nay their Shift Sleeves cover their Hands, because it is a Thing of ill Repute so much as to shew any Part of their Bodies; yet in a Corner of the Streets, they will venture to uncover their Face to a Friend, or a young Man they like, though, if they be discovered, they are bastinado'd.

The *Turkish* Women are very haughty, and extremely lazy, and though they do nothing but sit on their Di-

vans embroidering an Handkerchief, yet they must go fine and have their Slaves, though their Husbands be ever so poor. This Idleness makes them vicious, and seek only Ways of having their Pleasure, of which the Husbands are so jealous, that they will not suffer them to shew themselves to Men; and if they do, they are sure to receive the Bastinado on their Buttocks. Upon these Accounts no Women are suffered to go to the Mosques, Markets, or appear in their Husbands Shops.

The Wives have not the Privilege of Divorcing their Husband, as their Husbands have of Divorcing them, unless they deny their Wives the Things which they are obliged to furnish them withal, as Bread, Pilou, Coffee, and the Use of the Bed once in eight Days, and Money to go to the Bagnio twice a Week; for, if they fail in these Things, they may go the *Cadi* and demand a Divorce, which if the *Cadi*, upon going to the House, finds true, he grants her Suit, as also if she complains, that he hath offered to use her contrary to the Course of Nature, which she expresses by Turning up the Soal of her Slipper, without Saying a Word.

15. When any one is sick, the *Imans* go and pray with him, and if he dies, all the Neighbours know it by the Howling of the Women, who cry out as if they were in Despair. The Friends and Neighbours go immediately to condole with them, weeping and mourning in a doleful Tone; but yet, as if they were singing, they rehearse the Praises of the Dead, *viz.* The Wife will say of her dead Husband, *He loved me so well, he gave me Plenty of every Thing I stood in Need of, &c.* and all present join with her, repeating her Words, and imitating her Gestures. This lasts several Days, as often as any new Visits are made; nay, sometimes these Cries are renewed at the Year's End. After these Lamentations comes the Burial, for which the Relations wash the Body, and shave off all the Hair, and then they burn Incense about it to scare away evil Spirits and Devils; and then praying God to be merciful to him, they wrap him up in a Sheet, and put him into a Coffin and Bier, like ours, but with his Face downward, and covered with a Pall, which is red; if the Person dead be a Soldier, green; if a *Scheriff*, i. e. one of *Mahomet's* Relations, black, with a Turban; which is red, if he be a *Fanizary*; red and white if a *Spahi*; green if a *Scheriff*; and white if any other Man.

As he is carried to the Burying-place, which is with his Head foremost, the Priests go before, saying certain Prayers, and often calling upon the Name of God: After the Corps, which is carried by four Bearers on two Sticks, follow the Relations and Friends, the Women come last howling like mad Folks: Being come to the Burying-place, they take the Body out of the Coffin, and bury it in the Earth, and leaving the Women to mourn, depart. When the Grave is filled up, the poorer Sort erect a Stone over the Head of the Deceased, for the Angel that examines them to sit on; but the richer Sort have Tombs of Marble, and at both Ends a Turbant of Stone like that of the Deceased. Their Burying-places are always without their Towns, that the Air may not be infected by the corrupt Vapours of the Graves, and this was the Custom of the Ancients. The *Turks* Burying-places are commonly by the Highway-sides, that Travellers may pray for them, and always distinct from the Christians. After the dead Body is interred, the Relations and Friends, for several Days, come and pray upon the Grave, that God would deliver the Soul of the Deceased from the Torture of the Black Angels, exhorting him not to be afraid. The Women also do the same with so much Passion, that one would think them absolutely distracted. Many on *Fridays* bring Victuals and Drink to the Graves, and leave it there for Travellers, that they may pray for the dead Person, for whose Sake it is given them.

16. In fine, though in Christendom the *Turks* are accounted barbarous, yet, in Truth, they are good People, and love honest Men, whether *Turks*, *Jews*, or *Christians*. They do not think it lawful to cheat or rob

a *Christian* more than a *Turk*, but carefully observe that excellent Command, *To do to others only what we are willing others should do to us.* They are, indeed, guilty of great Extortion from the *Franks*, but it is through the Instigation of the *Jews* and *Christians*, who envy one another, and seek each others Ruin. Usury is esteem'd a very great Sin by the *Turks*, and is very little practised. They are very devout and charitable, very zealous for their Religion, which they seek to propagate all over the World; and whenever they love a *Christian*, they exhort him to turn *Turk*.

They are ever loyal to their Prince, whom they highly reverence, and blindly obey, and are never known to betray him, but willingly die for him, whenever he commands it: They never quarrel or fight among themselves, and know not what Duels are, which may be said to proceed from *Mahomet's* wise Policy, who forbid them Wine, and Gaming for Money; and the good *Turks* so religiously observe these Laws, that they will not drink a Drop of Wine, and always play for Diversion. They are very temperate, and never commit any Excess in Quantity or Quality of Victuals; so that it may be truly said of them, *They eat to live, and do not live to eat.* Yet are they not without their Vices, for they are so proud, that they think themselves above all other Nations, and that the World was made for them. They despise the *Jews* and *Christians* so much, that they call them Dogs; and the Rabble think they do a good Act. Some of them are so superstitious, that if at their first going out in a Morning, they meet a *Christian* or *Jew*, they return home again, saying, *God preserve us from the Devil.*

The *Turks* love not hard Study, and think it enough to learn to read and write. They often study the *Alcoran*, which comprehends all their Law, both Canon and Civil, and some apply themselves to Astrology and other Sciences. They are very amorous, but their Love is brutish, for they are the greatest Sodomites, and boast of this infamous Vice. They are very covetous, so that Money will do any Thing among them, both at Court and in the Country. They are very friendly and civil, if they can gain by it; but common People are purchased at a cheaper Rate, for let them have but Drink enough, and they will do any Thing for you.

17. The *Turks* are subject to one Prince, called by them, *The Sultan*, and by other Nations, *The Grand Signior*, or *Emperor of the Turks*. He comes to the Empire by Inheritance, and is always of the *Ottoman* Family, for which the *Turks* have so great a Veneration, that they will not submit to any other. When the Grand Signior dies, his Son succeeds him, or, if he have none, his Brother, who fixes upon a Day when he will go by Water to the Mosque of *Esfou*, where being seated upon a Tribunal of Marble, raised upon Marble Pillars, the *Mufti* says some Prayers, girds him with a Sword, and then he makes his Entry into *Constantinople* with a Cavalcade to the Seraglio, and this Ceremony serves instead of a Coronation. The Emperor is no sooner settled on the Throne, but he takes care to secure to himself the Possession of it, by first shutting up all his Brothers so close, that none can tell where they are, and, if he has Children, putting them to Death by strangling them, making a Scruple of Conscience to shed the Royal Blood. The chief Reason of this Fratricide is to secure the Militia to himself; for so long as he has a Brother alive, they are ever threatening him with a Revolt, unless he will augment their Pay as they please. When the Grand Signior is settled on his Throne, he frequently minds nothing but his Pleasures, being attended with a great many Buffoons, *viz.* Mutes and others, who study continually to invent some new Pranks to divert him, and his *Basha's* send him Multitudes of the finest Women to gratify his Lust. His Power is absolutely and entirely despotick, and his Will is the only Law by which he rules. He is not curb'd by any written Law or Custom, so that the Oppressed have not so much as a Right to complain. He may take away any Man's Estate, prefer the meanest Person to the highest Dignities, and send for the Heads of whom he has a Mind, without Trial

or Justice, and none has any Right to enquire the Cause.

This unlimited Power of their Sultan is founded on the *Mahometan* Religion, which enjoins a blind Obedience to all his Commands under Pain of Damnation; but the *Turks* are freed in a great Measure from the Effects of it, by his retiring so much from Civil Concerns to his Pleasures; for as to all publick Business, he refers that to his Ministers, who have the whole Management of his Affairs, yet are obliged, on certain Days every Week, to give him a summary Account of them. When the Grand Signior is weary of staying in the Seraglio, he goes abroad to take the Air, either by Water or Land.

When he goes by Water he has little Attendance. His Galliot comes to the *Kioske* of the Seraglio, and from thence he goes to *Scudaret*, or the *Black Sea*, to take the Air, being row'd by two *Bostangi-Bascha's*, and twenty-four others, being their Favourites, on each Side. When he goes by Land, it is either in Pomp, as he does through *Constantinople* to the Mosque; but then he has so many Petitions put up to him against the ill Management of his Ministers, that they hinder it all they can; but he will often go abroad *incognito* in Disguise, to see if his Orders be punctually observed, and the Christians are glad of it, for by this Means they are free from Affronts. Sultan *Amurath* went often out thus, and one Day caused a Butcher's Head to be cut off, for selling Meat above the Price fix'd, and two Men more to be beheaded, at another Time, for smoaking Tobacco, which he had strictly forbidden, because, by taking it in their Beds, several great Fires had been kindled in *Constantinople*, which had burnt down great Part of the City.

18. The chief Minister of State is the *Grand Vizier*, who is called *King* by the *Turks*. He it is that receives Ambassadors, hears their Proposals, and gives them an Answer, the two Audiences which the Grand Signior allows them, being only for Ceremony at their coming and Departure. He takes Care to pay the Army, decides Law-Suits, condemns Criminals, and manages the Government, having in his Custody the Imperial Seal, and discharges the Office of the Grand Signior. This is a very heavy Charge, and requires a great deal of Sagacity and Prudence; and yet for all that, few can hold it above six Months before they are strangled, they create themselves so many Enemies; and they that do escape, must by their Gifts make great Friends at Court, and have the Protection of the Mother of the Grand Signior, the most beloved Sultana's, and others.

Next to this great Officer are the six *Viziers*, called *Viziers of the Bench*, who are properly the chief Counsellors of State, but intermeddle not with the Government, being only consulted upon Points of Law by the Grand Signior and the *Vizier Azem*. The other chief Charges are the *Cadilesquers*, or Judges of the Army, which are as it were Chief Justices, or Sovereign Judges, both of Civil and Military Affairs. They have under them *Cadies*, or *Inferior Judges*, being Bailiffs or Provosts, before whom are tried ordinary Causes, Marriages made, Liberties given to Slaves, and the Writings called *Heudgets*, or Decrees ordered.

The *Caimacan* is the Captain and Governour of *Constantinople*, Lieutenant of the Grand Vizier, but has no Authority but in his Absence, and then he performs all the Offices of that important Charge. The *Bascha* of the *Sea* is the Admiral of the Naval Forces of the Grand Signior; and the *Beys* are the Governors of the Maritime Provinces, and are obliged to keep the Grand Signior's Gallies in good Order.

The *Aga* of the *Fanizaries*, who is the Colonel-General, or Commandant of that formidable Body of the Soldiers called *Fanizaries*, is a considerable Station. He is allowed to come into the Grand Signior's Presence with his Arms in absolute Liberty, and with a confident Deportment, whereas all the other Grandees of the Port appear with their Arms cross their Bodies, in Token of profound Submission.

The *Bascha's* are a Kind of Viceroys in the Provinces; their Office is to administer Justice exactly, and to keep

the People in Subjection to their Government. They are obliged to pay a Tribute of Money and Slaves yearly to the Grand Signior, besides the *Carache* and other Imposts, But they generally abuse their Authority, and are more arbitrary than the Grand Signior himself, their Aim being to raise a Fortune speedily by their Spoils and Oppressions. The Sultan is forced to dissemble his Knowledge of these Disorders for Want of Power to suppress them, because they have the Soldiers sometimes more at their Service than he.

The five chief *Bascha's* are those of *Babylon*, *Cairo*, *Buda*, *Natolia*, and *Romania*, who have a Privilege of having Horse-tails carried before them.

The *Beglerbeys* are next to these, and are as it were so many Sovereigns in the general Government of the Empire, which the Grand Signior gives them. Under the greatest of these are several *Sangiac-Beys*, who govern small Provinces.

The *Spahi's* are a Body of 15000 Men, maintained out of the Revenues of the Grand Signior's Manors, or *Timars*. They pass for the Nobility or Gentry of the Country, and stand much upon their Honour. The *Zaims* differ not much from them.

19. The *Chiaux-Bascha* is the Chief of the Pursuivants, or Messengers, who carry the Prince's Commands to all Places, are sent of Ambassadors, and have the Custody of all Prisoners of Quality. The Government of Cities is managed by five Kinds of Officers; the *Bascha*, who judges criminal Causes; the *Sub-Bascha*, who is his Deputy; the *Wairwod*, who regulates Affairs in the City, walks the Rounds twice a Week, examines Weights and Measures, suppresses Tipling-houses, punishes Drunkards, and all such as commit any Disorders, severely; the *Cadi*, who is the Judge of all Civil Suits, and the Receiver of the Customs, and not only receives the publick Duties, but takes Cognizance of all fraudulent Practices relating to pecuniary Duties, and judges as he sees fit. These Officers make it their Business to ruin and discredit one another.

They have no written Laws but what are contained in the *Alcoran*, which they hold to be the Rule of Faith, and Standard of Justice; and every Thing that it forbids is esteemed unlawful and punishable. Nevertheless the *Bascha's* and *Cadies* judge as they please, for the Book is short, has but few Laws and moral Precepts, and those it has are so ambiguously express'd, and deliver'd in so loose a Manner, that those greedy Officers cannot desire a more favourable Opportunity to satisfy their Avarice, for they judge without Appeal, and cause their Sentence to be executed upon the Spot. It is true, some injured Persons have appealed to the *Divan*, but it is so hard, as well as chargeable to carry a Cause thither, that few will attempt it.

The *Divan* is the great Council and Assembly of the Nation, where all Affairs of State are debated, all Suits are finally decided, for any body may be heard there, of what Country, Quality, or Religion soever he be, and the poorest Man has Liberty to ask Justice of the Grand Signior in Person, and deliver him his Petition, which as soon as he has read, he gives Sentence according to Equity. If it be for Debt, the *Vizier*, upon Supplication, sends a *Chiaux* to fetch the Debtor into Court, and the Creditor bringing his Witnesses, the Prisoner is condemned, and the Sentence is immediately put in Execution; for all Things are dispatched with so much Expedition, that a Matter no sooner comes to a Hearing, but it is presently judged and finally determined.

No Trial, unless in a difficult Case, will last above four or five Hours without Sentence given one Way or other, so that no Man is wearied and ruined by Lawyers and Delays, as in other Places: Nor is there any Fear that Justice will not be administer'd, because at the End of the Hall where they sit, is a Window covered with black Crape, where the Grand Signior hears and sees when he pleases, without being discerned, and the Judges, fearing he may be there, dare not administer partial Justice, for if he finds it out, it would immediately cost them their Lives.

The

The Treasury is opened upon all *Divan* Days, but first the *Chiaux-Basba* looks whether the Seal be whole, and then takes it off; and when they have taken out, or put in what they think fit, he seals it again with the Grand Vizier's Seal. While the *Divan* is sitting, the *Aga* of the *Janizaries*, the *Spabilar-Agasi*, the *Cadilef-quers*, the Officers of the *Divan* and the *Viziers*, being introduced by the *Capidgi-Basba* and *Chiaux-Basba*, are brought before the Grand Signior, to give an Account of their several Charges, and what they have done, and none of them can promise themselves to bring back his Head again, because the Grand Signior, for a small Offence, will cause them to be strangled on the Spot.

20. In all Things the *Turks* are great Lovers and Observers of Order. They take special Care of Provisions, that all Things be had in Plenty and at reasonable Rates, and he that has taken Pains to bring Fruit to the Market first, has no Advantage but to take his Money first; for he must not exact a great Price, or sell dearer, unless he has a Mind to be soundly drubb'd, bastinado'd and fined. They have Officers to examine every Man's Weights and Measures, who daily go their Rounds; and if they find any Man's Weights too light, or that he sells his Goods too dear, they fail not to order him so many Blows with a Cudgel on the Soles of his Feet, and make him pay a Fine; so that most Sellers are so much afraid of offending, that they will give you something above Weight, and they dare not cheat the least Child.

Every one is obliged to hinder any Quarrels or Disorders that happen in the Streets; for there is a Law, that if a dead Man be found before any Man's Door, he must pay for his Blood 500 Piafres, or 45000 Aspers; so that every Man is obliged to see, that no Noise be made before his Door, and hinder all ill Effects of it. If he who committed the Fact be taken, and convicted of it, he is discharged of the Sum, and the Murtherer is punished, unless the Relations of the deceased will hearken to an Accommodation, for then the Murtherer is allowed to ransom himself, which is usually done by paying three or four hundred Crowns.

To prevent any Accidents in the Night Time, all Persons whatever are prohibited to go Abroad after Evening is shut, except in the *Ramadan* or *Lent*; and if the Under-Basba, who is Captain of the Watch, and walks his Rounds all Night, as our Constables do, meets any Man, he is carried before the *Cadi*, who examines him, and if he cannot give a good Reason for his being out late, he is fined and bastinadoed; and if he be dismissed without Fining, it is a lasting Disgrace to him, and he lies under Suspicions.

21. The Money current at *Constantinople* is, the *Mangour*, which is half a Quadrin, Copper-Money, and Six of them make an Aspre, which is a little Piece of Silver, stamp'd with the Grand Signior's Name, and worth eight Deniers, or three Farthings Sterling. The *Ifolette* is worth fifty five Aspers. The *Aslani*, or German Rix-Dollar, so called because it is stamp'd with a Lion, in *Turkish Aslan*, is worth eighty Aspers, and the Piafre, or *Picade*, 90. The *Turkish Chequin* is worth two Piafres, and the *Venetian* ten Aspers more. The Aspres are many of them counterfeit. Their Weights are the *Quirat*, which is four Grains, and sixteen of them make a Drachm; the *Medical* is a Drachm and an half, twelve Drachms make an Ounce; the *Rotte* is twelve Ounces; the *Oque* is three *Rottes*, or four hundred Drachms; and the *Cantar* is an hundred and fifty *Rottes*.

22. The *Turks* use several Sorts of Punishments for Offenders; those for smaller Faults are Blows upon the Soals of their Feet, or Buttocks, with a small Stick. The Feet of the Sufferer are so held up by two Men in a *Talacca*, or Wooden Instrument, that they cannot stir them, and then two more with Switches lay on the Blows upon them, as upon a Smith's Anvil, till he that is to see to the Execution says there is enough. Such as have received many Blows (as sometimes they inflict three or four hundred) are not able to go for three or four

Months after, but they'll bear thirty without any great Inconvenience.

Masters dare give no other Correction to their Servants and Slaves than this, and they are usually so severe, that for Fear of Punishment, they are wonderfully well served. You may see their Servants stand before them a whole Day together like Statues, with their Hands upon their Bellies, expecting their Master's Command, which at the least Wink of an Eye is obey'd. School-Masters do not whip their Scholars as we do in Christendom, but bastinado them on the Soles of their Feet. When they chastise any Person on the Buttocks, the Party is laid on his Belly, and the Blows are laid on over his Drawers. Sometimes they give five or six hundred Blows, but that is the highest; and if any Man hath been thus handled, a great deal of mortified and swollen Flesh must be cut off with a Razor from his Buttocks, to prevent a Gangrene, and he must keep his Bed five or six Months before he is able to go about his Business.

Women are also chastised this Way, when they deserve it: Such as deserve Death for their Crimes, are punished with Strangling, Hanging, Drowning, Beheading, Burning, Empaling, or Throwing upon Spikes of Iron. When any Man is to be hang'd, which is done for Robbery or Murder, they will make a Christian the Executioner, if they can light of any. In Beheading, which is done for Rebellion or Sedition, they are so dextrous, that they never miss cutting them off at one Blow. The *Ganche*, or throwing upon Spikes or Hooks, which is performed by letting the Malefactor fall upon them, and hang there several Days, till he expire with Hunger, Thirst and Pain, is accounted so cruel a Death, that the *Turks* very seldom practise it.

The *Turks* that turn *Christians* are burnt alive with a Bag of Powder hang'd about their Necks, and a pitch'd Cap upon their Heads; but *Christians* that do or say any Thing against the Law of *Mahomet*, or are taken with a *Turkish* Woman, or go into a Mosque, are empaled, unless they will turn *Turks*; for they are so zealous for their Religion, that a *Christian* may redeem his Life by turning *Turk*, whatever Crime he has been guilty of; but in these, as well as many other Cases, if he will not turn *Turk*, he is put to Death; but a *Turk* has no Way to save his Life, if he happens to commit the like or even a lesser Offence.

23. The Grand Signior's Arms have acquired him that vast Power and large Dominions he holds by their Means, taken from his Neighbours, for he always maintains a standing Army both in War and Peace, to defend himself and surprize others: His whole Army, which consists of Horse and Foot, are punctually paid once in two Months. The Infantry are of several Orders, as *Capigi's*, or Porters, who keep the Gates of the *Seraglio*, and stand round the Grand Signior when he gives Audience to Ambassadors: They are in all three thousand, and have a Captain, called the *Capigi-Basba*: They execute Death upon such as are fallen under the Sultan's Displeasure: They wear a Cap with a Cone half a Foot long. *Solaques*, which are the Grand Signior's Life-guard, and attend him when he goes abroad in the City: They wear a Doliman with Hanging-sleeves, and a Cap stuck with Feathers in Form of a Crest, their Bow always hangs on their Arm, and their Quiver is always full of Arrows ready to draw, if Need requires; but the chief of their Infantry are the *Janizaries*, who are either Children taken for Tribute, and educated in the *Oda's* of the *Seraglio*, or Renegado *Christians*, and some few *Turks*. This Order was instituted by *Ottoman*, the first Emperor of the *Turks*.

They call one another Brothers, and will not endure the meanest of their Body to suffer the least Injury, and none but their Officers dare lift up an Hand against them, upon Pain of Death: They can beat any Man, and no body dare touch them; for no Interest or Money can save the Life of him that has beaten a *Janizary*; and upon this Account Ambassadors take them into their Retinue, and Travellers hire them for their

Guides : They are distinguished from other *Turks* by their Caps, called *Zarcola's*, which being made like the Sleeves of a *Casaque*, hang down behind, and have a Cone on the Forehead half a Foot long, gilt with Silver and embroidered. Their Pay is from two to six *Aspres* a Day, and a Piece of Cloth every Year.

The *Janizaries* of the *Port* are 12000 in Number, and live in two Inns or Colleges, containing one hundred and sixty Chambers, in every one of which are thirty, forty, or fifty Soldiers. Every Chamber has three Officers, viz. the *Chobargi*, or Captain; *Oda-Basha*, the Chief; and the *Vikil Hardge*, i. e. the Steward. Over these is the *Kiaya-Bey*, or Lieutenant-General of the *Janizaries*; and over all, the *Aga*, or General, who is always a *Muteferaca*, or Person of Quality. He has not Power to punish any Soldiers by himself, but upon Complaint he delivers him to the *Oda-Basha* to be punished, which can be done only in the Night, for Soldiers can neither be beaten or put to Death in Publick. They are beaten on the Soals of the Feet for ordinary Crimes, and if they deserve Death, they are strangled, and thrown into the Sea in a Sack, a Cannon being discharged for every one that suffers. The other lower Orders of Infantry are *Azapas*, or Pioneers; *Dgebegi's*, or Men at Arms; *Topidgi's*, or Gunners; and others.

The Grand Signior's Cavalry are the *Chiaux*; their Employment is very honourable, for they execute most of the Commands of the Grand Signior and his *Basha's*, and are sent on Embassies to Foreign Princes: Their Caps are a Foot in Diameter, and are long and flat above: The Grand Signior and his *Basha's* wear them. The *Muteferaca's* are all Persons of Quality, and their Captain is the Grand Signior himself, and therefore they never go out to War but when the Grand Signior goes in Person.

24. The *Spahi's* are the ordinary Troopers, or Light-Horse, and are of two Sorts. Some receive their Pay every two Months, which is from fifteen to forty *Aspres*. They are divided into six Regiments, and have each a several Commander, called *Buluk-Agasi*, and different Colours. The others have, instead of Pay, a *Timar*, or Pension, from the conquer'd Territories, where they reside usually, and obey the *Sangiac-Bey*, or Lord of the Mannor, that rules that Quarter. They are very numerous, being dispersed all over the Empire, and, being required by the Grand Signior, bring him many Horse to his Wars. The Grand Signior is Heir to all in his Pay, if they die without Children; but he takes but two Thirds, if any leave Daughters.

Things being thus settled, it is easy for the Grand Signior to raise an Army of two or three hundred thousand Men in a very little Time, by sending his Orders to the *Basha's* and *Sangiacs* only, who come in with their Servants, Soldiers of their Governments, and *Timar-Spahi's* instantly. Nor is he at more Charge in War than Peace, for all maintain themselves and Servants; and so good Order is kept in their Camps, that where-ever they are they draw a Market, because they pay exactly for what they have; nay, Merchants travel securely by or through them, without Fear of being plundered. All their Soldiers are both strong and courageous. They live on a small Matter, and are so hardy as never to be wearied with Travel, or long Marches.

They fight like Lions, chusing rather to be cut in Pieces than retreat, unless the Enemy exceed them much in Number. That which makes them so courageous, is the Confidence they have in Destiny, believing, that they can't die before their Time is come, though an hundred thousand Men seek their Lives, and if they die in the Field, they should also have died at Home, which makes them fearless of all Diseases and Dangers. They are also so zealous for their Religion, that they will cheerfully die in Fighting against the Enemies of their Law, believing that they die Martyrs, and shall, after Death, enjoy the Delights that *Mahomet* hath promised them.

They will blindly obey the Orders of their Commanders, running into the greatest Dangers of War as cheerfully as to a Feast; and besides, they are

well armed with a good Musket, and a handsome Sword, with other suitable Habits and Accoutrements, insomuch, that it is not to be thought strange, if they are very strong by Land, and bring almost every Thing to pass that they undertake.

25. But though the *Turks* are so potent by Land, and succeed well in their Wars there, yet are they neither fortunate nor stout by Sea, and always worsted, unless they be six to one; and the Reason is, because they have neither good Ships nor good Men. They are very unskilful in Building their Ships, and when they have done, they not only want good Sea-Officers to manage them, but Soldiers to man them; for even those *Janizaries*, who know not what it is to give Ground on Shore, always go to Sea against their Wills, and if they can get off for Money, never fail to do it; and no Wonder, if their Navy can never be victorious, when all Things are so unfit for Battle. And hence it is, that the *Venetians* gain great Advantages over them, and particularly in 1656. gave them such a signal Defeat at the *Dardanelles*, where they lost twenty seven Ships, thirty seven Galleys, and eight Maones, that all the *Turks* were put into Consternation by so great an Overthrow, and imagined themselves to be Slaves to the *Venetians*, who, had they pursued their Victory, would certainly have driven the *Turks* out of *Constantinople*, and, perhaps, out of *Europe*; for the Grand Signior was preparing to flee into *Asia*, and the *Turks* believing that God had decreed that Time for their Expulsion out of *Europe*, as one of their *Imans* had foretold, would easily have departed; but the *Venetians* neglecting the Advantage, suffered the *Turks* to resume their Courage, and thereupon they grew more terrible to the Christians, whom they could not see without Regret, and threatned them with Destruction at their next *Bairam*, according to their natural Insolence.

But as the *Janizaries*, when obedient to the Grand Signior, render him one of the most formidable Princes upon Earth, so they strangely limit his Power when they lose that Respect to him, and revolt, which they pretty often do; and then, flighting all Commands, they follow the Dictates of their own furious Passions, and run down all that comes in their Way, for they have strangled several Grand Signiors, and among others Sultan *Osman*, because they smelt out his Resolution of dissolving their Body, as the only Curb to his unlimited Power, and set up his Uncle *Mustapha* in his Place; and in the next Succession Sultan *Ibrahim*, his Brother, and Father of *Mahomet*, who reign'd in the Year 1655. And this Prince they reduced to such Streights, that he was forced to grant them all that they demanded, and put many of the chief Officers of the Court to Death to appease them; but whoever they attempt against, yet they always so respect the Royal Blood, and have so great a Veneration for the Race of *Ottoman*, that they never so much as dream of altering the Succession from that Family.

26. The Subjects of the Grand Signior who are not *Mussulmen*, are either Christians or *Jews*. The *Greeks* are the chief of the *Christians*. They wear the same Habit with the *Turks*, except that they may not wear green on any Part of their Bodies, without Danger of being soundly bastinado'd and fined, nor a Turbant all white, lest they be forced to turn *Turks*, or die for it; but all other Colours they may wear, though it be better not to use all red or all yellow, for Fear of offending the Soldiery. The *Papa's*, or *Greek Priests*, are always clad in Black, but their Cap has a List of white. They wear long Hair, and so do their Monks.

As for their Religion, they differ from the Church of *Rome* in these Points: 1. They maintain that the Holy Ghost proceeds only from the Father, and not from the Son, but at most by the Son; yet they believe him to be God, and the Spirit of the Son. 2. They deny the Pope to be Head of the Church, and have four Patriarchs of equal Authority, to whom they submit in their several Jurisdictions, viz. *Constantinople*, *Antioch*, *Alexandria* and *Jerusalem*; but they are all raised by Bribery to their Dignities by the Grand Signior, and

and confirmed by the Grand Viziers and Bascha's of those Countries, as the Grand Signior's Deputies, from whom they receive a *Caftan*, or Vest, at their Confirmation. They have several Archbishops and Bishops under them; but they must first have been *Caloyers*, or Monks, and observe their Rule during their Lives. The Priests are regular, who are not married, and Seculars who marry. 3. They admit of no Purgatory, but hold a third Place, where the Blessed remain in Expectation of the Day of Judgment, before which Time, though they believe not the Saints to be admitted into Paradise, yet they pray to them to intercede for them. 4. They use leavened Bread in the Sacrament, such as they commonly eat, and communicate in both Kinds, as well Laymen as Priests, and Women and Children as Men, and condemn the *Latins* for depriving the Laity of the Cup. 5. They have four *Lents*, but the first, which begins six Weeks before *Easter*, and lasts till that Feast, they keep most strictly, calling it the great and holy Fast; for they eat nothing then that hath Blood, nor Oil, but only Herbs and Shellfish, as the Cuttle-Fish and Oysters. In the other three *Lents*, one of which is kept in Honour of the blessed Virgin, and the other of St. *Peter* and St. *Paul*, they may eat Fish and Oil.

27. The *Armenians* keep their Lent stricter than the *Greeks*, for they eat no kind of Fish nor Oil, nor drink any Wine, but live only on Bread, Water, Herbs and Roots. Their Churches are like ours, except that the high Altar is divided from the rest of the Church by a wooden Partition with three Doors, which make a kind of *Sanctum Sanctorum*. They have no Images, but Pictures only. They never kneel in their Churches, not so much as at the *Elevation of the Host*, but lean upon Crutches, of which they have Abundance for that Purpose. No Man can be admitted into Priests Orders till he is full thirty Years old. Priests are allow'd to marry but once in their Life-time, and that to a Virgin, who is also under an Obligation not to marry, if her Husband dies.

Their Mass is much the same in Substance with that of the *Latins*, save that it is much longer, for it takes them five Hours in a Day to read it over only, which occasions so many of the Clergy to omit it, that there is scarce any Place where it is regularly read, unless it be in Mount *Athos* and *Neomagni*, a City of the Island of *Scio*, and in some few well regulated Monasteries. Their whole Liturgy is divided into seven Books. 1. *Triodion*, which contains the Office for Fast-Days. 2. *Euchologion*, which is a General Office for all Days, and all Occasions. 3. *Paracleticks*, which contains all the Hymns. 4. *Pentecasterion*, which is the Service of the Church from *Easter* to *Whitsuntide*. 5. *Meneon*, an Office belonging to each Month. 6. *Horologion*, the Service for all the Canonical Hours for every Day. 7. *Antoloion*, which comprehends all that uses to be read in the ordinary Service of every Month throughout the whole Year. This Part of their Liturgy, they say, every Priest ought to have, and it ought to lie in every Church; but as to the rest the Length of them is so tedious, and the Price so great, that most of the Bishops, Priests, yea, even their *Caloyers*, never trouble themselves with them.

28. Their *Caloyers*, or Monks, lead a very austere and exemplary Life. They make three Vows: 1. Of renouncing the World. 2. Abstaining from Flesh: And, 3. From Marriage; which they very strictly observe, especially in the larger Monasteries of Mount *Athos*, *Neomagni*, Mount *Sinai*, St. *Saba* and St. *Michael* of *Jerusalem*, which are those that are best governed. Their Food is the Product of the Earth, and Fish, except on Fast-Days, when they will not eat any Thing that hath Life. Some of them, who are called *Ascetai*, live only on the Fruits of the Earth, and to that End leave their Cloister to live on the Mountains, and never return but on great Festivals, to assist at the publick Service. All their Monks are divided into three Orders, viz. St. *Basil*, *Elias*, and St. *Marcellus*; and in all of them they have three Sorts of Monks, Superiors or Elders, called *Egoumenoi*, the professed and other Fathers,

and the Novices, with the Lay-Brethren; but the Superiors, though had in great Veneration, have little Authority, except in imposing some trivial Penances; for they are afraid lest by Severity the Monks should turn *Turks*, as they have had many Instances, and therefore their monastick Discipline is almost lost; yet they still retain the Prerogative of stripping such Monks of their Habit, who have been guilty of some notorious Crimes, and will not submit to their Rules.

The Professed also take the same Liberty to lay down their Habits when they please, yet not without some Scandal to the others, and rendering themselves contemptible; however, upon their Repentance, and undergoing some slight Penance, they are re-admitted. These professed Monks, so long as they are in the Convent, take care of the Fruit, Corn, Sheep, and other Things that belong to the Cloister. The Novices and Lay-Brethren work in the Fields, and though they return ever so weary from their Labours in the Evening, yet they must attend at a long Prayer, and make many Genuflexions, which they call *Netaniai*, before they eat their Supper, or go to their Rest. Over all these Monks are placed Provincials, or *Visitors*; but instead of reforming the Abuses of the Monasteries, which should be their Business, they only gather up the Money which the Patriarch exacts of them. And, indeed, these *Visitors* come so often, that they are miserably poor, and are become thereby ignorant and illiterate, because the Time they ought to spend in their Studies, they are forced to employ in labouring for a Sustainance.

But, notwithstanding this general Poverty of the Monks, some few Monasteries are so well endow'd, and their Monks are so rich, as to be able to raise great Sums of fifty or sixty thousand Crowns to purchase the Patriarchate, nay, sometimes before the Possessor is dead, for the Grand Signior never refuses Money. Their secular Priests, called by them, *Cosmicoi Iereis*, are thus made: First they take their Tonsure upon them, i. e. are shaven on their Crowns the Breadth of one's Hand, and are thus taken into the Service of the Church. Then after some Months they are created *Anagiosfa's*, or Readers, because it is their Business to read the Mattins, Psalms, and some other Things, which the Clerks use to sing. When they have served the Church some Months in this Office, the Bishop confers upon them Deacons Orders, and a Power of waiting at the Altar, and chanting the Epistle. When they are Deacons, if they have a Mind to marry, they are allow'd to do it, provided they give Notice to the Bishop of the Woman and her Abode, that he may enquire after her; for if she be not chaste, wife, and handsome, she is not a fit Wife for a Priest, nor will the Bishop suffer their Marriage. And, indeed, the *Greeks* are so ambitious to bestow their Daughters on the Priests, that if it be known that a Priest desires to marry, all are forward to seek out the greatest Beauty for him, as if they were to consecrate it to God, and to court such Women they are dispensed with in their Service, and, upon their Return into it, are made Priests.

29. The Under Ministers of the *Greek* Church are, 1. *Seruophylaces*, or Sextons, who look after the consecrated Plate, and other Utensils of the Church. 2. The *Colonarchai*, who inform the Singers what Tunes to sing. 3. The *Tyrroroi*, or Porters, who open and shut the Church Doors. 4. The *Canidlapthi*, who take Care of the Tapers, of which they consume many. The Service of the *Greek* Church is said several Times a Day. In the Monasteries they rise at Midnight to perform a particular Form of Devotion, called *Mefonuction*, and to prepare them for some great Festival, they turn it into an *Holonuction*, or an All-night Service. After this they celebrate a Service at Break of Day, called *Oortos*; another at the first Hour, called *Protiora*; and so again at the second Hour, called *Tritiora*; and at Nine o'Clock in the Morning, called *Ektiora*: Then follows the *Ennati*, the Liturgy, and the Eucharist at Three o'Clock in the Afternoon, and *Esperines*, or Evening-Service; after which they use some slight Exercise till they go to Supper, and when that's done, they return again to Church, to perform the Service called *Apodipho*,

Apodipho, or, the Service of the Night, which in the *Romish* Church is called the *Complines*.

The Ministers of Churches follow the Example of the Monks as near as possible, so that in all Churches, be they rich or poor, there is every Day performed the *Hagia Koinoma*, or Celebration of the Eucharist, and some Churches more than once, but at different Altars. None of these Ceremonies or Usages are performed in Conformity to the Church of *Rome*, for they abominate both them and all their Customs, and if a *Latin* Priest should say Mass at any of their Altars, they would wash them as polluted. At the Close of every *Thursday* they excommunicate the Pope and all the *Latin* Bishops, and damn them as so many Hereticks and Schismatics.

They have so great a Number of Holidays, that there is no Day in the Year but is consecrated to some Saint; but those they have in greatest Veneration, are, besides the Feasts of Christ and his Apostles, the Invention and Exaltation of the Holy Cross, in *September*; the Feast of St. *Demetrius* in *October*; St. *John Chrysostom*, and the Virgin's Entrance into the Temple in *November*; St. *Nicholas*, St. *Spiridion*, and St. *Ignatius*, in *December*; the Feast of St. *Basil*, St. *Anthony*, St. *Atanasius*, St. *Cyril*, St. *Gregory Nazianzen*, and Christ's Baptism, in *January*; St. *Simeon's* meeting with Jesus and St. *Blasius* in *February*; the forty Martyrs in *March*; St. *George* in *April*; St. *Atanasius*, *Constantine the Great* and *Helena*, and the Invention of St. *John Baptist's* Head in *May*; St. *Marinus*, *Elias the Prophet*, St. *Parasava* and St. *Pantaleon* in *July*; Christ's Transfiguration, the Death of the Virgin *Mary*, and the Beheading of St. *John Baptist* in *August*.

On these Days they read in the Church the Life and Actions of these Saints in the vulgar Tongue, out of their *Synaxarion*, or Martyrology, and conclude the Service with the Distribution of the Eucharist; and generally the People, who come to hear, bring an Offering of Bread, Wine, Oil, Tapers, and the like, for the Use of the Priests, and give liberally to the Poor, even beyond their Abilities. They celebrate *Easter*, which they call, *Παχα αναστασις*, i. e. the Passover of the Resurrection, with great Demonstrations of Joy. By the Laws of their Church, they are obliged to confess themselves four Times a Year, but not so particularly as the Church of *Rome* requires, and after they have done some Penance, or promised, they are absolved in Form of a Prayer: *Let thy Sins be forgiven*.

They look upon Baptism as indispensibly necessary for Salvation; and though they baptise not till eight Days are pass'd after the Birth, unless in Case of Necessity; yet, when a Child is in Danger, they allow Laicks of both Sexes to baptise, because they dare not hope well for Children who die unbaptised. They rebaptise Hereticks and Apostates, when they repent and desire to come into their Church. Among the former they reckon the Papists: They have a great Aversion to Images in *Basso-Relievo*, and say, the Papists imitate the Heathens in the Use of them, but the Pictures of Christ and the Saints they account holy, and pay a Reverence to them, and to that End set them up in their Churches on their Festivals.

30. They condemn all the Western Christians for eating Things strangled, and account them Hereticks for so doing. They follow the Doctrines of the ancient Fathers, and the Canons even of the first General Councils, very exactly, and think all others of no Force. The *Turks* make them pay very severe Capitations for their Religion Sake, and which is worse to them, take their Children from them often by Force, to educate them in the *Mahometan* Faith, and make them *Ichoglans*. Though they have many Churches, yet they are obliged to take great Care to keep them in Repair, for Fear they should have no Churches at all, for the *Turks* very rarely will suffer them to rebuild them, if they fall; but they are allow'd to repair them. In their Churches they have a Candlestick which holds three Candles, by which, they say, is represented the Holy Trinity; and another two, which signify the two Natures in Christ. Their Sacerdotal Vestments have also the like Mysteries. In giving the Blessing, they make

the Sign of the Cross from the Right to the Left, contrary to the *Latins*.

Maids shew not themselves before they are married, even to their Relations, and therefore go not to Church for Fear of being seen. They are married by a Priest, and give a Ring like the *Latins*, but take Godfathers and Godmothers, which they do not. The Bride and Bridegroom being come before the *Papa* or Priest, he says some Prayers over them, while the Godfathers and Godmothers hold a Garland of Flowers, mix'd with *Orpine*, over their Heads, and a Pall over it. The Father and Mother of the Bride give her; and when Prayers are done, the Bride and Bridegroom drink to one another, and the Glass being given to the Priest, he merrily drinks it off, and then breaking the Glass, says, *So may this Bridegroom break the Virginity of the Bride*. Their other Rites are like those of the *Latin* Church.

Their ordinary Way of Living is much like the *Turks*, only they are more wicked, for they are covetous, perfidious, treacherous, *Sodomites*, revengeful to the highest Degree, very superstitious, and great Hypocrites, for which Qualities they are so much despised by the *Turks*, that they do not value them though they turn *Mahometans*. They are greater Enemies to the *Papists* than the *Turks* are, and none would hinder them from being Masters of *Turkey* more than they, if Providence should so favour them to recover what the *Turks* hold in *Europe*. Their Women are beautiful, but a little too fat, and most of them very proud.

31. The *Jews* in *Turkey* use the same Habits with the *Turks*, only may not wear green, or a white Turbant, or red Vests, and so are obliged to wear their Mestres, *Pabouches* and Caps, which are shaped like an Hat, of a Violet Colour only. Their Religion is contained in the *Old Testament* and *Talmud*. As to their Manners, they are great Cheats in all Places, and their only Contrivances are to vex both *Christians* and *Turks* with their Taxes and Tricks, which is the Reason they are hated and despised in all Places. All the *Jews* and Male *Christians*, which are subject to the Grand Signior, pay the *Karadge* yearly, which is a Tribute of four *Piastres* and an half, beginning to pay it about nine Years old; but the *Christian* Priests and Monks are exempted from it, and so are the *Jewish Rabbi's*; the Women also paying Nothing. This Tax brings in a great Revenue to the Grand Signior, and no body can avoid it by changing their Habitation, for at whatever Place they come in their Travels, their *Karadge* is demanded, and if they have paid it in any other Place, they must shew their Acquittance, and if they can't produce one, they must pay it, and take a Note or Acquittance to serve them in other Places; but such as are not Subjects to the Grand Signior, do not pay this Tribute, and to shew that they wear an Hat, and have a Certificate of their Abode from a Consul.

32. The Accounts already given from the Works of the most authentick Authors that have been published, cannot fail of entertaining as well as instructing the Reader; but, perhaps, it may not be amiss to make some Additions to these, from Materials of another Nature; such as the Informations of those who have resided long in the Dominions of the Grand Signior, and Books written in or translated from the Oriental Languages. To render these Remarks of the more Use, by keeping them in a certain Method, we will, as near as may be, pursue that which in the Course of this Section has been already laid down. The Dress or Cloathing of the *Turks*, though it appears odd and uncooth to us, is nevertheless founded upon Reason, and for that very Cause is not much affected by Fashion; as they have Nothing of Levity in their Nature, so there is Nothing can give Men a graver Appearance than the *Eastern* Habit; and in respect to all the Uses of Cloathing in a Climate like theirs, it will be found, that it answers them perfectly well. By changing the Stuff of which their Robes are made, from Silk to Cloth, and from plain Cloth to Cloth lined with Furrs, the Change of Seasons is provided against. Their Habit agrees likewise with their Manner of Living, they ride

ride without any Inconveniency. The Manner in which their Houses are furnished is suited to their Garb, and every Part of that is well contrived for the great Use they make of Bathing. The only Thing in the *Turkish* Dress, that seems to deserve Reprehension, is their Turbants, and it is observable, that this is the only Part of it that is subject to Fancy or Change; for as to the rest, there has been little or no Difference introduced in the Course of many Years.

The modest and temperate Way of Living, in Use amongst the *Turks*, is very commendable, and the more so, because it is not carried to any Degree of Severity or Extravagance. They abstain from all Animals that die of Diseases, that are choaked, strangled, or knocked on the Head, or that break their Necks; but in Cases of great Necessity, they allow that even these may be eat; but from Blood and Swines Flesh they most religiously abstain. They have not many Dishes, nor any great Variety of Dressing, but those they have are savoury, cheap, provided with little Trouble, and their Meals are soon over. All this is also very agreeable to their Climate and Way of Life, but at certain times, when they have a Mind to indulge, they have their Niceties, especially in Pastry and excellent Liquors, which they stile Sherbets, composed of a Variety of Ingredients, and always cool and pleasant. But after all, their great Dainty is Water, and some, from a Principle of Charity, carry it in Stone Vessels through the Streets of *Constantinople*, and offer it with great Civility to such as desire to drink; whence we discern the Propriety of that *Eastern* Expression, which occurs in our sacred Writings, of giving a Cup of cold Water; which, from the Difference of our Manners, does not appear to be any great Matter here.

As for the Practice of Drinking, the common People in those Countries have it not; so that if you offer Workmen any Thing for that Purpose, they answer very naturally, that they are not dry; but still you may oblige them, if you are disposed, by calling the Coffee-Man, who stands at the Corner of every Street with his Utensils, and all working People will be very grateful for a Dish of Coffee. But that we may not deal altogether in Generals, we will take this Opportunity of speaking particularly to three Heads, with respect to which we find very little in our printed Books that is exact and worthy of Credit. These three Heads shall be *Coffee*, *Opium* and *Wine*.

As to Coffee, which the *Turks* call *Capbuah*, it was first used in the Country where it grows, in the Kingdom of *Yemen* in *Arabia-Felix*, which from its producing Coffee, our famous Mr. Ray delivers it as his Opinion, that it may be stiled not only *Felix*, but *Felicissima*, that is not barely the happy, but the most happy. A Multitude of Writers have described Coffee, and some have pretended long ago to give us distinct Accounts of their own Knowledge and Experience, and yet it is but a very little while that we have known any Thing of it with Certainty, so as to be disabused in Reference to those Fables that have gone current for many Years, though without having Foundation or even Colour of Truth. The Tree then that produces Coffee is in Reality a kind of Jessamine, which bears first a very beautiful and odorous white Flower, inclining to yellow, which is composed of five Leaves resembling the *Spanish* Jessamine. As these Flowers drop off, the Fruit begins to appear, which is at first green, then of a pale red, turns next to a bright Crimson, by Degrees of a very deep red, and at last inclines to a dusky Brown. In Size and Shape it resembles a honey Cherry, but instead of a Stone, there lies within the Pulp two of those that we call very improperly Coffee-Beans, with their flat Sides joined to each other, and their Convex Sides outward; as there are Flowers, green Fruit, and ripe, all upon the same Tree at once, there are several Coffee Harvests, but the most considerable is that in *May*, when by laying Cloths under the Trees, and shaking them, the ripe Fruit drops off in great Quantities, out of which the Beans are taken, and very carefully dried, first in the Sun, and then in the Shade, and upon their curing in this Respect, their Goodness chiefly depends.

It is said, that the Virtues of Coffee were first discovered by the Frisking of Goats that fed upon it, and their living almost wholly without Sleep, which put a Prior of a Convent upon trying what Effect they would have upon a much grosser Animal, a fat, sleepy, lazy Monk, upon whom having wrought a wonderful Cure, Coffee came into general Use. I cannot vouch for the Truth of this Story so well as for what follows. It passed from *Arabia* into *Egypt*, where it began to be much taken Notice of, the *Turkish* Doctors doubting whether the Use of it was not forbid by their Law, because they held its Properties to be the same with those of Wine. This Point was cleared up by a *Mufti*, who was a great Friend to that Liquor, and wrote a Treatise in Defence of it, *A. H.* 875. *A. D.* 1470. The Name of this learned *Mufti* was *Abda* leader *Ben Mobammed*, and his Sirname *Al Ansari*, and the Title of his Work, *Omdat al Safuat fi hall al Cabuat*: We have been the more particular in mentioning this Book, because there is a Copy of it in the *French* King's Library amongst the *Arabick* Manuscripts, N^o 944, and there are in it some very curious Observations.

It is said that there are in *Grand Cairo*, no less than two thousand Coffee-houses; there are a vast Number at *Constantinople*, and in all the Cities in the *Turkish* Dominions; but sometimes on Account of the distracted State of their Affairs, these Coffee-houses are shut up; but in Times of Peace they are much frequented, more especially in the Mornings and Evenings, when such as are most at Leisure, and are in tolerable Circumstances, pass an Hour or two there in Conversation, in hearing the Musick which the Masters of such Places provide, or Books of Tales read, for which they have People on Purpose, who from a kind of Pulpit divert the Audience with Collections of Stories of all kinds, good, bad or indifferent. I will for the Reader's Amusement quote one, which is not much amiss.

"When the *Tartar* Slaves are crossing a River, and find themselves in Danger of being drowned, they catch hold of the Horse's Tail that passes before them, and by this Means frequently escape. From hence comes the Proverb, *Lay hold of the Tail if you can, and be sure keep it fast*. There was an honest *Mussulman* once, that by applying it luckily escaped being empaled, and the Case was thus; he had spent many Years in Study, had most Part of the *Alcoran* by Heart, was acquainted with many Sciences, but by attending to them, had slighted a very material Science, that of knowing how to live; so that when he grew in Years, though his Mind was well fed, his Body was in Danger of Want. He addressed himself to the Sultan *Mahomet* the IVth. on whose Memory be Peace! Beseeching him to save a Son of Science from starving. The Sultan having considered his Case, gave him no other Answer than this; Friend, *with all your Learning don't you know, that the World is a Tail, and happy is he that gets hold on it*. The *Mussulman* went Home in Despair, where after passing three Days in deep Meditation, he thus addressed himself to his *Russian* Slave, from whom he had learnt that Tongue; Infidel, says he, let us change Cloaths, carry me to the Market, and sell me to such a one. His Orders were obeyed; he worked for six or eight Months in the Fields with the other Slaves, and appeared so very stupid, that he was the Jest of all his Companions. At the End of that Time he began to preach, affirm'd that he had Visions, and that the Prophet, whose Name be blessed, had taught him the *Alcoran*, of which he repeated many Chapters. This made a very great Noise, he was visited by every Body, and Nobody went empty handed; at last, the Grand Signor heard of it, and sent for him. As soon as he came into his Presence, the Sultan recollected him, Friend, said he, *have I not seen you before?* For God's Sake cry'd he, do not betray me, you know the World is a Tail, and I have but just got hold of it. The Issue of the Matter was, that the Man got a living by his Wit, and the World has got a good Story. My Friends you'll be never the worse for hearing it, and believe

"believe me, you will be much the better for remembering it; for of all Kinds of Knowledge, there is none more important than this, that the *World* is a *Tail*, and *happy* is he that can lay *hold* of it." I have seen a Book that belonged once to Sir Roger Manly, the true Author of the *Turkish Spy*, which contained the Stories that were read in a Week at a Coffee-house at *Damascus*, and it was in *Italian*. I wonder it has not been published, for in my Judgment it was much superior to any Thing of the Kind that I have seen in Print, and I do not doubt but there are many such Collections in the Cabinets of the Curious in *Italy* and *France*.

Every body knows that the *Turks* are great Takers of *Opium*, and much has been written upon those Subjects, about which, however, there are many Mistakes; we will endeavour to rectify some of them. The *Turks* call it *Affium*, and the best comes from *Aboutige* in *Egypt*. It is very true, that as much as we have heard of *Opium*, there never was any of it in *Europe*. That which is used by the *Turks* of Distinction, is drawn by Incision from the largest Sort of *Black Poppies*, by laying new Ropes under them in the hottest Season of the Year; when they are slit with a Lance, the Liquor falls on and sticks to the Ropes in Drops of an Amber Colour, which are carefully collected, and sold at a considerable Price; and this is the true *Opium*. They afterwards mow and extract the Juice from the Poppies, which over a slow Fire they reduce to the Consistency of Turpentine, and afterwards make it up in Lumps and cover it with the Leaves; this is properly *Meconium*, but is what we receive for and generally call *Opium*. The best is of a black Colour, tough rather than brittle, of a pungent stupifying Smell, and free from Dross and Sand. The worst Sort is of several Colours, clammy in some Places, hard in others, and full of Dross and Impurities. What is extracted from *Garden Poppies* in *Europe*, is what we stile *Diacodium*; and this, if it be carefully made, of the largest and best Poppies, properly cultivated, and in a very dry hot Season, comes nearer *Opium*, and may be used with better Effect than the *Meconium*.

When the latter is purified and dissolved in some convenient Vehicle, it is stiled *Laudanum*, and when compounded with other Ingredients, these are marked by a Variety of Epithets added to the Word *Laudanum*. There is also a solid *Laudanum*, which is only the *Meconium* well purified, and reduced again into a solid Form. The very best Method of doing this is by mixing the purest *Meconium* with Rain-Water, and then evaporating it over a slow Fire, to the Consistence of a Syrup; after which it will soon grow dry of itself.

The *Turks*, the *Persians*, and, indeed, all the Eastern Nations, take *Opium* as we do Wine or Drums; and the *Chinese* are said to have the best Preparations of it in the World. It exhilarates the Spirits wonderfully, and the Use of it is so bewitching, that when People have once got a Habit of taking it, they cannot leave it off; and as they feel the Effects of it less by Use, they are obliged to increase their Dose, till at last they come to take amazing Quantities. Mr. Gracin, an Author of good Credit, says, that he saw a Fellow at *Bengal*, who for a Rousy took four Ounces of it, which made him sleep all that Day; but the next Morning he came to himself, and appear'd not much the worse for it. This, however, is very unusual, and it is very rarely that any Person in *Turkey* ventures upon half an Ounce, and this must be after many Years Practice. Those who take it while they are young, seldom live to be above fifty; but those, who begin to take it at that Age, are not so much affected with it.

As to Wine, there is nothing clearer than that the Use of it is forbidden to the *Turks* by the Interpreters of their Law, except in Cases of Necessity, when it is prescribed them as Physick. The Clergy make a great Point of carrying the Edicts against the Use of it into the strictest Execution, but to very little Purpose; and what they do of this Kind, produces as bad Consequences as Drunkenness; for upon the coming out of any new Edict, or once or twice in a Year to keep up a Show of executing the old ones, the Sub-Bashaw and his Officers go into some miserable Tippling-house, let

all the Wine about, take every Penny of Money they can lay their Hands on, break and destroy whatever they meet with in the Cabin; and, to complete all, treat the Master of the House, at his own Door, with a delicate *Bastinadoe*; of which, if he complains, or insinuates that he depended upon the Officer's Protection, in Consideration of an annual Present, he is probably sent to Goal into the Bargain. But notwithstanding all this, there are every-where Tippling-houses kept by the *Greeks*, for the Sake of getting a little Money, where yet they are exposed to a great many Inconveniencies, and to the daily Insults of the *Turks* when in their Cups.

Their Hovels are both within and without the most despicable Places that can be imagined. Four Mud Walls compose the House, plaister'd on the Inside, painted over with bawdy Figures, drawn in Charcoal by drunken *Turks*, three or four rotten Benches, and a few Earthen Pots in which the Wine is both drawn and drunk. Wretched as these Places are, they want not Company or Noise from Morning till Night, the *Greeks* being excessively abusive, and the *Turks* brutally quarrelsome in their Liquor; which shews, that, from a political Principle, the Prohibition of Wine in these Countries is a very right Thing.

Almost all our Travellers agree, that the *Turks* are extravagantly ignorant; but the Question is, whether themselves are good Judges of this, and whether it lies much in their Way to be acquainted with such as apply themselves to Letters. It is, indeed, very true that the *Turks* are prodigiously fond of Astronomy, Geomancy, and other Arts of Divination, which are very justly mentioned as Proofs of their Ignorance; but in Excuse of this, we should consider, that mean People practise this with Belief, and that Persons of higher Stations do it out of Cunning. We ought also to reflect, that it is not so long since we ourselves were addicted to these Fooleries, in which, after all, the *Turks* excel us extremely, not that their Astrology or other Arts are a Grain more certain, but the Cheat is managed with infinitely greater Dexterity. The *Turks* have Grammars and Dictionaries of their own Language; Books of Divinity, History, Poetry, Physick, Mathematicks and Morality; so that after all, perhaps, they are not quite so barbarous in this Respect, or at least not so universally ignorant as they are represented; nor do we find, that in any Negotiations with their Viziers, they are apt to be over-reached in their Politicks.

Their Religion, indeed, is absurd enough; but this is common to them and to other *Mahometans*; and, perhaps, they appear more absurd to us, than they really are, from our Want of being acquainted with many of their Doctrines. It is most certain, that they entertain very odd Notions of the State of the Dead, and are actually persuaded, that they have some Kind of Sensation in their Graves. An *English* Merchant once walking by a *Turkish* Village, with a *Fanizary* before him, came to the Burying-place of the *Jews*, where a miserable, shabby-looking Fellow was sitting before one of the Tombs; upon which the *Fanizary* stept up to him, and accosted him in these Words: *You old Rascal, what do you do out of your Grave? get into it again this Minute, and don't stink the World a second Time!* The poor *Jew* marched off as fast as he was able, and the *Fanizary* took it for granted that he was sneaked into his Grave again.

But with all their Superstition, there is no Want of Free-thinkers amongst the *Turks*, who take great Liberties with their Religion, and perhaps believe very little more of it than the *Christians* themselves. But they are obliged to keep their Notions very secret, for the Civil Government standing upon the same Basis with their religious Belief, any open Declarations of Infidelity would not only render a Man highly infamous, but subject him also to grievous Punishments. The *Dervises* or Monks are sometimes Enthusiasts, but, generally speaking, they are notorious Cheats and Hypocrites; they commonly affect a very warm Zeal for their Religion, which they express by being very rude to *Christians*, and taking uncommon Freedom with Persons of all

all Ranks among their own People, who very unwillingly submit to their Impertinences for Fear of opening the Eyes of the Vulgar, who cannot but bear a great Reverence to Religion, when they see that the more strict Profession of it, sets the meanest Man on a Level with the greatest. Some of the enthusiastical *Dervises* are sincere in their Way, and do some Service to Society by reproving the great People for their Offences.

As to the Slaves in *Turkey*, they are the most submissive, tractable and obedient Creatures in the World, and tho' there are Masters, that from the natural Brutality of their Tempers, treat them harshly enough, yet generally speaking they are tolerably well used; nor are they totally precluded from the Benefit of the Laws, for a Slave may summon his Master before the *Cadi* for ill Usage, and if he alledges that their Tempers are so opposite, that it is impossible for them to agree, the *Cadi* will oblige his Master to sell him; but then it must be allowed, that this Way of coming to Market does not much recommend him to the next Master; what affords these poor People most Ground of Complaint, is, the little Care taken of them in the Time of the Plague; for the *Turks* upon a Principle of Fatality, and a Belief that every Man's Fortune, as they phrase it, is written in his Forehead, when they lose one Slave by the Disease, put the next not only into his Room, but into his Bed, without taking any Precautions, and so lose perhaps half a Score, one after another.

An *English* Merchant who was very intimate with an honest and sensible *Turk*, that was half ruined by this wild Way of acting, convinced him of the Folly of it, by a very easy and natural Experiment. He bid him take three large fine Lemons, one of which had just begun to rot, and place them so as that this rotten Lemon touched one of the sound ones, and not the other; the next Day the sound Lemon corrupted; the *Turk* saw the Force of the Argument, caused his Slaves Chamber and Bed to be well washed with Vinegar, all the Utensils changed, and every Thing to be thoroughly perfumed, and these Precautions had their Effect, for the next Slave he had did very well, and it is to be presumed, the Master was cured of his Folly ever after. By the Way let us observe, that the Price of Lemons is a sure Way of knowing whether the Plague increases or decreases, when *Constantinople* is infected, for almost the sole Nourishment they give the Sick, is the Juice of that Fruit, which they suck continually, and as soon as one Lemon is exhausted, a fresh one is put into the Hands of the Patient, Experience having taught them, that Acids contribute most of any Thing to the Cure of this Distemper.

That the *Turks* are excessively jealous, is a Fact as certain, as that their Women are excessively lewd; and therefore if a Woman speaks to a Man, they take it for granted, that she has lain with him, or would lie with him, if she had an Opportunity; and when a *Frank* attempts to persuade a *Turk* of the contrary, by insinuating that they may like the Company of a Man, for the Sake of Conversation, their common Answer is, Friend, if you catch a Person's Hand in your Pocket, would you think it was a sufficient Excuse if he should tell you he did it only out of Curiosity, to see what was in it. The best Security they have against their Slaves, the only Males that have any Opportunity of coming near their Women, is the Severity of their Chastisements, for an Offence of this kind he is punished with Death without Mercy; yet even this dreadful Remedy is not always effectual, for their Women having so much Leisure on their Hands, have Intrigues always in their Heads, and it is allowed that none in the World exceed them in their Skill of managing them with Dexterity and Secrecy. We have already observed, that the despotic Power of the Grand Signior and the Vizir *Azem* is necessary, according to the Scheme of their Constitution; and though it is not limited by Law, yet it finds a natural Restraint from the Fear of popular Insurrections, which are more terrible in this than almost any other Country. As to the *Turkish* Justice, it is a Point of all others, the least understood by Strangers, at which we need wonder the less, when we consider,

that even in *Europe*, one Nation knows very little of the Laws and Customs practised in another. But however it is certain, that the *Turkish* Law very much resembles what is stiled the common Law in this Kingdom; that is to say, it depends upon Maxims and Rules that are founded chiefly in Usage.

But there is one Thing that deserves particular Notice, and that is, that in no Country in the World there are such Numbers of false Witnesses, nor are these less used by the Christian Merchants established amongst them, than by the *Turks* themselves; for as every Thing in their Courts of Justice must be proved by two legal Witnesses, that is, by *Mussulmen*, Merchants would find it impossible to recover their Right, if they were so scrupulous as not to make Use of this Practice. In such a Case they call in a Couple of *Turks* of their Acquaintance to their Assistance, and these having first very seriously asked the Merchant, if the Fact be as he states it; upon his answering in the affirmative, immediately tell him, Well, upon thy Credit we will swear it, and are as good as their Words, for which they are gratified with a small Present; nay, in publick Causes, such as Petitions for repairing a Church, if the Cause sticks for want of a Witness, a grave *Turk* that stands by will come in a Volunteer, and tell a formal Story how he came to know so much of the Matter as will set the Thing a-going; but he expects to have his Present next Day, and it would be a Thing of very bad Consequence to neglect it; but the greatest Objection to the *Turkish* Law arises from the Corruption of those who dispense it; for every Man is at Liberty to apply to the *Cadi* privately, and then without Doubt what he suggests is supported by more weighty Arguments than can be delivered in Words. Yet with all these Disadvantages, and without Doubt they are not inconsiderable, an *English* Lawyer who had great Opportunities of examining this Point to the very Bottom, has suggested, that the *Turkish* Manner of Proceeding is not without such Conveniences as balance all these Defects. The Reader no doubt will be glad to hear him, as his Remarks upon this Head are more to the Purpose, than those that could be made by any other Man, not of the Profession.

"One sovereign Virtue, says he, of the *Turkish* Law, is this, that every Man is his own Bailiff and Summoner, without the Plague of Process, Returns, Alias, Pluries, and I know not what Hooks or Crooks, that often beggar a Suitor, before he can bring his Adversary to answer him. But a Man, in this Country, requiring the Adversary to go before the Judge, he must without Shift or Delay go; and if he offers to escape, a Thing scarce known there, he must run quite away, for the very People will almost destroy him if they catch him. Here is no suing out a Writ, going to the Sheriff, from him to the Bailiff, with a farther Train of ill Consequences I am ashamed to remember.

"Another Virtue, and a singular one, is, that no Man answers by Attorney, but in proper Person only. The Course is, when the Parties come before the Judge, the Plaintiff makes his Demand for Money lent, the Price of Goods sold, or the like. The Judge sits all the while with his Paper upon his Hand, and writes his Minutes. *What Say you to it?* Says he to the other, and then he makes his Defence; if there be a Writing shewed, the Defendant fails not to own it; there are no *Non est factum*s for pure Delay, to be tried. It is there infamous in the greatest Degree for a Man to deny his Writing, when shewed to him before a Judge, or indeed any Matter of Fact that is true, after it appears to have been so to his Knowledge. What a vast Retrenchment of Delay and Charge is this? Men answering in Person can scarce be brought to speak false; they must be strangely abandon'd to all Shame, that in the Face of a Court, without stammering or blushing, will do so. Whereas when they sit at Home, and leave their Attorneys and Council to plead for them, there shall be false Pleas for Delays professedly, and no Concern at all to their Countenances.

" The *Turkish* Law seems to have another Virtue, which lies in the Method of Proof ; after the Judge hath heard the Demand and the Answer, he considers on which Side the Proof lies ; If the Dealing be denied, as by the Defendant's saying he bought no Goods of the Plaintiff, or the like, the Judge bids the Demander prove it ; and if Witnesses are not ready, he gives a few Days to bring them, because he might expect the other Party would have owned the Dealings ; but if he said, *It is true, I bought the Goods, but I paid him for them*, then the Judge bids the Defendant prove ; but he will never let Witness come to swear on both Sides to one and the same Fact, for that is to make sure of a Perjury ; so in a *Turkish* Court, Witnesses never confront and upon Oath contradict one another ; but being once taken as Witnesses, the Cause is at an End, the Demand is made and proved, What would you have more ? But yet, if the Witnesses are not credible, that Exception is allowed, and Witnesses heard to prove it, and the Judge determines thereupon, whether he shall believe the Witnesses or not, and accordingly judges of the Main.

" Another admirable Virtue of the *Turkish* Law is, that Decrees or Decisions never fight one with another ; and yet the Party hath the Benefit of an Appeal. They call their Decree an Odgett, which is a small Scrip or Ticket, which the Judge writes upon his Hand, and gives out to the Party that hath obtained Sentence. After this Odgett made and signed, and given out, no Judicature or Authority in the Empire can question or discharge the Matter, or the Effect of it, no not the Great *Divan*, although the Odgett were made by the meanest Judge in the Empire. This seems very much to resemble the Laws of the *Medes* and *Persians*, when a Decree might not be revoked. It is certain, that in *Turkey* there cannot be more than one Odgett or Decree in one and the same Cause.

" A *Turkish* Judge would laugh, if he were told of our Judgments, Writs of Error, and Error upon Error, Appeals, Reviews, &c. with full and entire Sentence of the Cause pronounced in all, and the latter giving the former ill Language, and looking as if a Judgment in a Cause were but a Foundation whereupon to commence a new Suit, to the incomprehensible Delay and Expence wherewith the Parties, their Heirs and Assigns are tormented. But it will be said, How then can the Parties have an Appeal ? As to that, if either Side thinks the Judge unskilful or partial, at any Time before Odgett made, he may appeal to a Superior Judge, and then the Cause is as if it had not been heard ; but the Parties go before the Judge by Appeal, as if the Cause originally came before him, and then he makes the Odgett ; but whoever makes it, the Odgett is irreversible.

" A farther Virtue of the *Turkish* Law is this : All Equity is comprehended in it. Men there are bound by their Contracts as well as here ; but if a Contract prove very unequal, the Judge takes Notice of the Unreasonableness, and gives Relief. As if a Man takes an House to build at half the true Value ; when the Work is done, he may sue in a *Quantum meruit* for the Whole ; and it is enough to say, I thought I might have done it for the Price, but was mistaken. This goes farther than our Courts of Equity, for they do not relieve against any hard Bargains, without Fraud or Circumvention proved. It hath been said, they do not sit there to relieve Fools ; but if we consider well, it will be found, that all Persons circumvented by Fraud, are so far within that Denomination. But granting full Relief may be had, what doth it cost to come at it ? In this Respect the *Turkish* Law is simple, for it not only disallows all over-reaching Bargains but, the Judgment of them falls proper in one and the same Suit, which Party soever promotes it. And even here very good Patriots have declared it fit, that the Court having Jurisdiction of the Cause in Point of Law, should also

judge of the Equity emergent thereupon : But the present Constitution doth not allow it.

" The Civilians reproach the common Law, saying, it wants Equity, and needs a particular Judicature to supply it. But I think theirs worse, for they have no Mitigations, and all is *summum jus*. And then they contradict themselves, saying, *Apices juris non sunt jura* ; and more grossly leap over their Law, judging as they say, *ex auctoritate*, against Law, which, in their Language, is *nobile Officium Judicis*. But the *Turkish* Law seems, in these Respects, to be most consistent and complete. One Thing more I will venture to alledge in Favour of the *Turkish* Law, which is of admirable Use, and that is, their Dispatch. A Cause seldom lasts a Week, and very often is opened and determined in a Day ; and there is scarce any Means to prolong it, but demanding Time to produce Testimony to Facts, about which the Parties happen to differ ; their alledging and answering for themselves orally before the Judge, keeps down Differences of Facts. For the Pride or Shame of the Parties, as well as Integrity, will make them save proving, and, for the most part, own what they know to be true, and so bring the Matter in Judgment upon the right Point.

It may be objected here, " That this Proceeding is precipitous, and Corruption a-part, for Want of Advice and Deliberation of the Parties, as well as on the Part of the Judge, Wrong may be done ; and Justice is a sacred Thing, and ought to have the greatest Regard. It is granted that Justice is a rare Thing, if it may be had ; but if it is to be gained by failing through a Sea of Delays, Repetitions and Charges, really it may be as good a Bargain to stay at home a Loser. A wrong Determination expedite, is better than a right one after ten Years Vexation, Charge, and Delay. A good Cause immediately lost, is in some Respects gained ; for the Party hath his Time and Tranquility of Mind reserved to himself to use as he pleaseth, which is a rare Thing in the Opinion of those who have felt the Want of both, and of their Money into the Bargain.

" The Reason why Justice is so sacred, is not because the Cause of Suit, or Thing claimed in itself is of any Regard, for that Argument will bring all Things to a Levelling, as why should one Man have too much, and another want ? But because it preserves Peace and Quietness among Men, which is the greatest of all temporal good Things ; and consequently, wrong Judgments, soon and final, have the Virtue of Justice, because Peace and Quietness is thereby preserved. But Delays have an Effect directly to the contrary, for those maintain Feuds and Hatred, as well as Loss of Time and Money ; so that if it be said, that in the End Justice is secured thereby (which I do not grant) I answer it is done by unjust Means, and comes to the same. But is it not a sad Thing, say some, for a Man to be hurried out of his Right ? Is it not a sad Thing a Man should have a Fever ? As the Body, so the Estate must be obnoxious to Infirmities ; there is no Perfection in either State, and that is always best which is shortest, and hath the least Anguish or Pain.

" I shall alledge but one Instance farther, where I think the *Turkish* Law is remarkably distinguished, and it is on the criminal Side : If a Man comes to the Judge, and with Clamour, as the Way is, complains that he is robbed of his Goods, the *Cadi* will ask him, *By whom, and where is the Thief ?* And if he says he does not know, perhaps punish him as a Knave, that pretends to be robbed to cheat his Creditors. What, says he, doth not the Grand Signior protect his Subjects ? If you are robbed, find the Thief, and Right shall be done ; if you want Help, take an Officer, but do not accuse the Grand Signior's righteous Government. Now to add here a Word or two of their criminal Justice, I shall observe, that it is executed with such Rigour, as keeps down Offences so effectually, that in that great City of *Constantinople*, there are

“ are not so many Men executed for Thievery in some Years, as in one, I may say, in one Session, in *London*.

“ If a Thief is caught, they make more Account of him by discovering others, than by the Example of his Punishment ; and they handle him at such a Rate, that he cannot but discover all he knows. He shall sometimes be secretly chained to an Officer, and so go about the City, and whom he points to is taken up. The first Thing done, is to see that he makes full Amends to the Person robbed, and when that Person declares he is satisfied, he is sent away with a Menace, that he concern not himself for Favour to that Man. And, after all, what hath this poor Thief to reward him for all his Ingenuity and Service to the Publick, by discovering ? Nothing but to die without Torment, for if the Judge be dissatisfied with his Behaviour, he makes such a publick Torture of him, as must terrify all Rogues from the like Practices ; otherwise he is committed to an Officer to be simply hanged, and then that Officer takes him into the Street, and chuses what Man's Sign or Post he pleases, and constrains whom he thinks fit to perform the Ceremony ; and a *Frank*, if he comes by unluckily at that Time, is not safe from being preferred to the Employment.

We have dwelt so long upon this Subject, that it is necessary for us to be the shorter in regard to the rest. The general Accounts we have of the *Turkish* Manners are, at one and the same Time, both true and false. True in regard to the Relaters Knowledge, who delivers what he saw and knew ; but false, as it is applied, by ascribing what he collected from the narrow Circle of his Acquaintance to a whole Nation. The *Turks* are like other People, some are Men of Sense, others Blockheads ; there are Men of Learning amongst them, as well as Multitudes that are ignorant. Drunkenness is common among the meaner Sort, and much worse Crimes amongst those in an exalted Station. Their Passion for Women, and the effeminate Life they lead in their Apartments, has a very bad Effect even amongst Persons of the greatest Distinction ; and, to say the Truth, there is so little Felicity to be enjoy'd under their Constitution, that we need not wonder at the Pictures modern Travellers draw of the present State of the *Ottoman* Empire, in which all that have Power are Oppressors, and all that have it not, are oppressed.

The *Greek* Christians, that live under the Yoke of the Grand Signior, are the most miserable People in the Universe ; and though all of them do not appear so, yet in Fact they are most miserable Slaves. If they can get nothing, they must of Course pass their Days in Meanness and Poverty ; and, if they come to have any Thing, they must still wear the Appearance of Meanness and Poverty to keep it. It is, indeed, true, that some of them lift up their Heads a little, and live in a State much superior to what we have described ; but they must have powerful Protectors to do this, and they must be continually acknowledging the Favour of this Protection by Presents equal to, if not above their Abilities ; and, after all this, if any Change happens, and such Changes are continually happening to their Protectors, they are torn to Pieces, and ruined in an Instant. But before this happens, they are equally despised and hated by the *Turks*, and the very meanest of them will insult the *Greeks* with Impunity. But in the Midst of so much Calamity, and under the heavy Load of such barbarous Oppression, these People keep up their Spirits, if to be easy and merry may be so called, and will be as frolick and gay over their Cups, as if they had milder Masters, or lived in absolute Freedom, according to the common Proverb amongst us, so much used and so little understood, *viz. as merry as a Greek*. The *Turks* have so much Policy as to indulge them in the free Exercise of their Religion, and to keep up their Hierarchy, which, generally speaking, keeps them in the Interests of their Masters, so as to prefer the *Turkish* Government (bad as it is) to that of any Christian Power not of their own Religion. But if ever the *Russian* Empire comes to be settled on a firm

Foundation, and there should happen a Succession of two or three great Princes, the *Turks* would run a considerable Hazard of finding that Prophecy true, which they have amongst them, that the *Muscovites* will one Day subvert their Empire.

The *Jews* in the Grand Signior's Dominions are pretty much the same that they are every where else, that is, a Kind of necessary Evils. At *Constantinople*, *Smyrna*, *Aleppo*, and other Ports, every Christian House, and, indeed, every Merchant of any Rank, has his *Jew*, who, if he has Goods to sell, finds him Customers ; and, if he wants to buy, finds out the Commodity is wanted. By their Usefulness in this Respect, they have a Share, and not a trifling Share, in all Sorts of Dealings ; and some of them arrive at Wealth, but never at Respect ; for as they hate *Turks* and *Christians* equally, so both *Turks* and *Christians* hate them in Return ; and for the far greatest Part of the Nation, they are in as low and despicable a Condition as it is possible to conceive a People, and which seems to be the very Extent of human Misery : They are destitute even of Hope, for no Revolution that can possibly happen in a Country, the most subject of all others to Revolutions, can ever prove favourable to them ; but they must be content to drudge on under the same heavy Yoke, let who will be their Masters.

33. We will close this Section with some Remarks upon the Decadence of the *Turkish* Empire, which tho' its Dominions are very near as extensive as ever, yet is very far from having the same Force that it had heretofore. This proceeds from a Multitude of Causes, but the principal is the Extinction of their ancient Spirit. It is very truly observed by an eminent Author that has been already quoted, that theirs is a Military Government, and that the Constitution is formed upon this Plan. It is for this Reason, that a State of War is natural to, as well as perfectly consistent with the Welfare of their Empire, which can never enjoy interior Peace, if the Arms of the Grand Signior be not employed on one Side or other. Almost every State besides is oppressed by War, and recovers its Strength in Time of Peace ; but the Reverse of this is the Case in *Turkey*, where War is almost always beneficial, and Peace brings along with it the greatest Danger. But for many Years past the *Turkish* Discipline growing relax, their Troops are no longer so formidable, and their being continually beaten by the *Christians* and the *Persians*, has made Peace necessary at least, if not agreeable.

This has been attended with an innumerable Train of Mischiefs and Inconveniencies, for their Soldiery being never disbanded, as making a Part of their Constitution, grow more and more formidable at Home, in the same Proportion that they became more and more despicable Abroad, which must be the Case of all Countries that put their Trust in a Standing Army. Their Officers also being no longer preferred for their Military Virtues, but in Consequence of Cabals and Intrigues, are Soldiers only in Shew ; and the same Disposition spreads itself downwards, so that a *Janizary* is at present terrible only from his Staff and his Cap, and to those he should protect, who see Nothing in him now that is military except his Insolence. The Government also is fallen of late Years into the Hands of the Men of the Law, who for that Reason do all they can to maintain Peace, notwithstanding that they cannot but be sensible how much the Empire suffers from the Extinction of that Spirit, by which it rose and extended itself to that prodigious Dominion it still preserves.

But we may safely affirm, that how large soever it may be, it is now no more than an infirm giantick Body, which reels and totters under its own Weight, and would be infallibly overthrown, if its Neighbours should unite to bring about its Destruction. The *Russians*, the *Polès* and the *Hungarians*, would at this Day be a great Overmatch for the *Ottomans*, and it would be no difficult Thing for each of those Nations, to bring sixty or seventy thousand Men into the Field, besides Irregulars. The *Venetians* are now no longer what they were, and their Maritime Power is sunk to such a Degree, as to make no Figure at all in *Europe*, but

even weak, as it is in Conjunction with the Pope's Gallies, those of other *Italian* Princes, and the Naval Power of the Knights of *Malta*, it would be very capable of giving Disturbance to the *Turks*, and of making a formidable Diversion in Favour of such a Confederacy.

This is very far from being a mere empty Scheme or visionary Project, for most certainly, if these Powers were to consider their own Interests, they would find it much easier to gratify their Ambition in its full Extent by attacking the *Turks*, than by injuring each other, since the Provinces depending upon that Empire, which by such a Confederacy might infallibly be torn away, are in every Respect more fruitful and more valuable, as well as out of Comparison more extensive than those Countries about which they have been for many Centuries disputing. Besides, this would change the general Face of Affairs extremely, and open many new Branches of Commerce to all the trading Nations in *Europe*, which would make them ample Amends for the Loss of that Profit they make by dealing with the *Turks*. The Passage to the Black-Sea would be then set open, and that noble Country which is now stiled *Crim-Tartary*, from being in the Hands of those Barbarians, would be inhabited by a civilized and social People, instead of serving for a Den of Thieves and Murderers, who subsist by Rapine, and the Ruin of their Fellow-Creatures.

If once that Spirit of Intrigue could be conjured down, which, for two or three Centuries has distracted and disturbed *Europe*, such a Design as this might be easily brought to bear; and there is the more Reason to wish it, because it would not only contribute to the Glory of the Christian Name, but to the common Ease and Benefit of Mankind. It would afford to Sovereigns that Satisfaction which is truly royal, of relieving distressed and injured Nations, and restoring them to those Rights of which they were at first dispossessed, and from which they have been so long withheld by barbarous and brutal Force. It would recover incredible Numbers of People from an abject State of Slavery, to a rational and industrious Way of living, which would change the Face of the Countries they inhabit, and make them appear once more adorned with all the Advantages that Art can procure, from the bountiful Dispositions of Nature, not more profuse in any Part of the Globe, than in those neglected Territories, that groan under the Iron Sceptre of the Grand Signior; nor is it to be feared, that the Changes which such a Revolution would produce, should be attended with any of those fatal Consequences that commonly follow such

Events; because instead of depopulating these Countries, it would certainly prove the Means of drawing into them prodigious Accessions of People.

The Weakness and Nakedness of the *Turkish* Government would then sufficiently appear, for they would be neither able to carry off any Number of their Subjects from the Countries they lost, nor would they dare to treat with the same Usage as they now do, the Christians remaining under their Power, because in Proportion as that declined, they would be compelled to abate of the Insolence that is supported by it. Nor would the Advantages derived from such Conquests belong only to the Powers that made them, for every Part of *Europe* would feel the Benefits of such a Change, since it must be attended with a vast Alteration of Manners, and a free Communication with Countries, that are now as much hidden and unknown, as either the Northern or the Southern Extremities of the Universe. Add to all this, that the apparent and extensive Profits, which must redound from such Expeditions, would excite a new Spirit in the Christian World, and very probably procure fresh Settlements and Plantations in more favourable Climates, and at Distances far less remote than we are now forced to seek them.

We should then see the *Greek* Islands, that are now so many Desarts, smile again in all their native Beauty, the venerable Remains of *Roman* and *Greek* Antiquities would be disinterred, and new Structures rise, however unequal to them, out of their Ruins. It would be easy to expatiate much further, on so agreeable and pleasing a Theme; but what I have said is sufficient to awaken the Thoughts of the intelligent Reader, and therefore it is high Time that I should call off my own, in order to resume the Thread of our Narration, and return to the Travels from whence I have digressed. But before I do this, give me Leave to declare, that I am thoroughly persuaded, that this Change is not at a very great Distance, but, that either the present or the next Generation, will infallibly see something of this kind accomplished, which in all Probability had been attempted before this, if the Change in the *French* Constitution, which has brought them to act upon the *Turkish* System, had not called off the Attention of the Christian Princes, to set Limits to that all grasping Power, which before it is long, will be also crushed by its own Weight; for Structures raised by Violence and Fraud, have such Weaknesses in their Foundations, that they cannot subsist for any Length of Time, but when at their greatest Height sink into Destruction, by the very Means whereby they were raised.

SECTION III.

An Account of several of the most remarkable Cities in *Asia*, of various Islands in the *Archipelago*, and of Things most observable in them, both with Respect to their ancient and present Condition; with Remarks Historical, Physical and Geographical.

Extracted chiefly from the Writings of Mr. JOHN THEVENOT; but intermixed with Accounts from WHEELER and LE BRUN.

1. *A Description of the City of Bursa, or as some call it, Prusia, with an Account of the Seraglio's and Tombs of the Turkish Princes in its Neighbourhood.*
2. *The famous City and Port of Smyrna described.*
3. *A curious and copious Description of the Camelion, from Wheeler's Travels.*
4. *A View of the noble City of Ephesus, from the Writings of Le Brun.*
5. *The adjacent Country described, with some Account of the famous River Meander.*
6. *A curious Description of the Island of Chio, of the Mastick Trees, and the Trade arising from the Sale of that Gum.*
7. *The famous Convent of Niamoni, one of the best belonging to the Greeks, described.*
8. *Of the chief City of the Island of Chio, which bears the same Name, from the Accounts given of it by several Authors.*
9. *A very particular and distinct View of the most remarkable Places in that Island.*
10. *Of the Inhabitants of Chio, their Manners, Customs, Trade,*

THE EASTERN MEDITERRANEAN SEA

*An accurate Map of the
MOREA together with the
neighbouring countries in
Greece;
also the Islands in the
Archipelago and AEGEAN SEAS;

Trade, and dreadful Oppressions by the Turks. 11. *The Islands of Patmos and Naxos described, with an Account of the Inhabitants, and of the State of the Greek and Latin Churches.* 12. *Of the Islands of Paros, Delos, Micone and Tina.* 13. *The Islands of Nio and Santorini described, with some very curious Particulars relating to the latter.* 14. *An Account of the Island of Polecandro, and its Inhabitants.* 15. *A Description of the Islands of Milo and Chimolo, with a very curious Account of the Hot-Baths in the former.* 16. *Sifanto and Thermia described, with an Account of their Produce, and of the Customs of their Inhabitants.* 17. *Of the Islands of Ajora and Scyra, with an Account of their Inhabitants.* 18. *Of the Islands of Samos and Nicaria, and of the peculiar Privileges which the Women enjoy in the latter.* 19. *A Description of the Island of Coos, now called Isola Longa, and of the famous Castle of Bodrou, which formerly belonged to the Knights of St. John.* 20. *Of the famous Island of Rhodes, the Manner in which it was taken by the Turks, and the Remains of the Castles, Palaces, and other Structures erected there by the Knights of St. John, while they were Masters of it.* 21. *A large and curious Description of the noble Island of Cyprus, with an Account of its ancient and present State.* 22. *Mr. Randolph's Account of the Island and Kingdom of Candia, and of the long War sustained by the Venetians against the Turks, in Defence thereof.* 23. *Miscellaneous Observations and Remarks from various Authors.*

1. **M**R. Thevenot left Constantinople, August 30, 1656. and sail'd in a Saïque to Montagna, from whence he rode to Bursa, which was called by the Ancients *Prusia*, the Metropolis of the ancient Kingdom of *Bythynia*, and was the Capital City of the *Turkish* Empire in the Reign of *Orcan*, the Son of *Osman*, the first Sultan, who took it in the 726th Year of the *Hegyra*, and in the Year of our Lord, 1325; but it was taken from *Bajazet* by *Tamerlane*. It is about ten Miles distant from Mount *Olympus*. It is pleasantly situated, and Water is so plentiful, that besides what they have in all their Dwellings, they have Fountains in their Houses of Office for their Ablutions. They have some Waters that run through the Town, so hot, as to boil an Egg, of which they have made several Bagnio's, which serve for the Cure of many Distempers, and People come above 100 Miles to wash in them. There are many fair Houses in the Town, and above 200 Mosques; many *Hans*, very magnificently built and constantly inhabited, because the Caravans from several Places pass through this Town; but the most remarkable Buildings of this City are the Sepulchres of the first *Turkish* Emperors and their Sultana's, in so many Chappels built Dome-wise.

Among them is said to be one, of a *French* Sultana, who being taken Captive, and presented to the Grand Signior, so much ravished his Affections, that he enjoy'd her, but permitted her to exercise her Religion to her Death. The *Christians* after her Decease desired to have the Care of her Burial, but it was not granted them, and so she lies in a little Chapel, arch'd and inclosed with Walls among the rest. This Town is about half a *French* League in Length, not entirely wall'd, and has a Castle standing in the Middle on a little Hill, which has Bastions that in their Opinion render it impregnable; but the Water that supplies it runs through the Town, and so may be cut off. No *Christian* is allowed to go into it, lest they should endeavour to regain it, because it was taken from them by stopping the Water. Within this Castle was formerly the *Seraglio* of the first Sultans of the *Ottoman* Family, but it is now demolished. It is said to be built by an Emperor's Daughter, who was cured of a Leprosy by washing in the hot Waters of this Town, being taught the Experiment by a measly Hog, that by washing in it was cured. Close by the Town is an Hill, where a *Turkish* Hermit lives in a Chapel, which is enclosed with good Walls and Iron Gates. In it are the Tombs of one *Roland*, or *Orland*, and his Son, with his Sword and Mace lying on a Table just by, who valiantly defended this Castle against the *Saracens* in the Life of the Foundress, and slew many of them.

2. From Bursa he went to Smyrna with the Caravan, and because Nothing is to be met withal upon this Road but Water, Travellers must carry all their Provisions and Household-stuff along with them, or want both. The Way lies through *Tablitalie*, *Loubat*, *Sousurluc*, *Dgelembe*, *Palamout*, and *Manasia*, to Smyrna. This Town is a noted Place in *Ionia*, built at first by *Tantalus*, named so from an *Amazon* who took it, and when it was demolished by an Earthquake, rebuilt by *Mark Anthony* nearer the Sea, to make the Harbour more

commodious. It boasts of being the Birth-place of *Homer*.

The *Turks* call it *Ismyr*. It is a large Town, and well inhabited both by *Turks* and *Christians*, but is neither pleasant nor strong. It is commanded by a Castle, at the Bottom of which, in the Way to the *Greek* Church called *Santa Veneranda*, is a great Amphitheatre, where *St. Polycarp*, *St. John's* Scholar and Bishop of *Smyrna*, suffered Martyrdom. Near it are the Ruins of *St. John's* Cathedral Church, which had several large Chapels, and in one is still a Tomb, which the People say is *St. Polycarp's*; but it seems rather to be that of some *Turk*. The Port is but small, but the Road is spacious and safe, and has a Castle lately built, to hinder what Ships they please from coming in, or going out. By the Road stands the Custom-House, and the Houses of the Consuls and Merchants; *Franks*, who have, for the most Part, a Back-door towards the Sea. In it is a *Cadi* to administer Justice.

Besides *Turks*, there live in it *Christians* of all Countries, *Greeks*, *Armenians*, and *Latins*. The *Greeks* have two Churches, viz. *St. Veneranda*, where their Archbishop officiates, and *St. George*, which belongs to their Monks. The *Armenians* have also two Churches, and the *Latins* as many, one of them belonging to the *Capuchins*, which is over-against the *French* Consul's House, and the other to the *Jesuits*, which has a lovely House adjoining to it. The Country about it is plain and fertile in Olive-trees, and full of Gardens. All Things there are in Abundance, and their Wine is most excellent. It is very subject to Earthquakes, which happen every Year, and often ruin the Town; but it is soon rebuilt again, because of the Convenience of its Situation. The Air in Summer-time would be very hot, if it were not for the low Wind, or North Breeze, as they call it, which blows regularly every Day, and much qualifies the Heat.

We have a larger and more correct Account of this City in *Sir George Wheeler's Travels*, which we will add in his own Words. *Smyrna* hath so many Advantages from its natural Situation, that notwithstanding the great Calamities which have befallen it by War, and most prodigious Earthquakes, that no less than six Times have over-thrown and almost utterly ruined it: Yet it hath still been thought worth the Repairing and Restoring to all the Beauty the Art of its Inhabitants could contrive to adorn it with; notwithstanding also, that from some old Tradition they expect the Seventh shall be its utter Ruin, never to be repair'd. It is situated at the Bottom of a Bay, esteemed twenty Miles to its Mouth, secured with high Mountains on every Side from all Winds but the West; whence from Sea they can receive no Damage: For the *Hermus* which emptieth itself into it, maketh a Bank of Sand that barreth the raging of the Sea out, yet leaves such a Passage in it, although but narrow, that he must be a very Ideot of a Pilot that cannot bring a Ship in safe into the inmost Part of the Bay; where he may find Room and Depth enough, with very good Moorage.

This Bay hath Mount *Sypilus North*. Another Mountain, which I judged to be the *Mesogismonds*, mentioned

mentioned by *Ptolomy* and *Strabo*, *North-East*. The Hills whereon the Town stands, from *East* to *South*. From thence to the Promontory *Argennum*, winding about to the *Western* Point. *Mons Mimas*, now called the *Brothers*, from the two highest Points. Here is indeed a little Gap, being the Mouth of the Bay, but thence Hills begin to rise again to joyn to Mount *Sipylus*. Of this Entrance I shall have Occasion again to speak when I part hence. But as to the rest, these Mountains are not so near, but that they leave fruitful Fields round about between the Bay and them, well planted with Olive-yards, Vineyards, and Corn Fields among them; and from the Town to Mount *Sipylus* is a Valley of four or more Miles in Length, and near a Mile broad in some Places, which with the Gardens about the Towns, and the Town itself, drink up two pretty Streams of good Water, one rising *Northward* from the Mountain *Sipylus*, and the other *Southward* from Mount *Mimas*, which join together *North-East* of the Town, and what it spareth, which is but little, the Sea receiveth at the *North-West-End* of the Town. That which cometh *Northwards* from Mount *Sipylus*, is a considerable Stream, driveth seven Mills, and hath Abundance of Fish in it. The other, coming from Mount *Mimas*, is the greatest Part brought to the Town in Aqueducts, two of which are well built, with Stone Arches crossing the Valley or deep Foss, which itself hath dug between two Hills, whereof the *Northernmost* is where *Old Smyrna* stood, now only a Castle. The rest of the Water is divided amongst the Gardens.

Smyrna is a Place of great Antiquity, and is reputed to have had the *Amazon Smyrna* for it Foundress. They therefore stamped their Money with the Figure of her Head. I got several Pieces of them, very rare, and saw many more in the Cabinet of an ingenious Merchant there, Mr. *Falkener*, who designs his Collection for the University of *Oxford*. One small one hath her Head crowned with Towers, and her two-edged Hatchet on her Shoulder, almost worn out with Age, and about it are these Letters, ΣΜΥΡΝΑ, on the other Side the Prow of a Ship, and these, ΣΜΥΡΝΑΙΩΝ. From another I saw of the Empress *Tranquillina*, is to be seen her whole Habit, which is thus: Her Head is crowned with a Tower, as before, her two-edged Axe upon her Shoulder, holding a Temple in her Right-hand, perhaps referring to some Temple *Tranquillina* had built, in a short Vest down to her Knees, and Buskins half Way her Legs. There is something also she holds in her Left-hand, besides her Axe, which perhaps is her Bow. In another she is dressed in the Habit of *Hercules*.

Of the ancient Situation and Beauty of this Place, *Strabo* giveth the best and shortest Account. Thence, saith he, (describing it *Northward* from *Ephesus*) is another Bay, in which is *Old Smyrna*, twenty *Stadia*, or two Miles and half from the *New*. When the *Lydians* had destroyed *Smyrna*, the Country thereabouts was only adorned with Villages for four hundred Years together; after which, *Antigonus* restored it, and after him, *Lyfimachus*. At this Day it is, of all the *Asian* Cities, most beautiful. Part of it is built upon the Mountain, but the greater Part on the Plain to the Haven, unto the Temple of the *Mother of the Gods*, and to the *Gymnasium*. The Streets are most excellently built, and as much as possible, reduced into Right Angles, all paved with Stone. It hath great and square Portico's both in the higher and lower Parts of the City. There is a Library, and the *Homerion*, which is a square Portico, with a Temple containing his Statue; for the *Smyrnoites* are very zealous for the Nativity of *Homer* amongst them, and have a Brass Piece of Money called by his Name, *Homerion*. The River *Meles* runneth by the Walls. There is a Haven on the other Side of the City, which may be shut up at Pleasure. Thus far *Strabo*.

The *Old Smyrna* that was in his Time, in all Probability, was on a Hill *South* of this that is now, and *West* of the Castle-hill; for there are some Steps of Heaps of Stones laid in some Order, as if a Wall had been there. This *New Smyrna*, but the *Old* one of our Times, without Doubt, took up all the Hill the old Castle standeth on and then adjoining to it, down to a Point running

into the Bay *Southwards*, and of the Plain much more *North-East* than the *New Smyrna* of our Times; but *North*, I believe, not much more, if so much; for turning into *Frank-street*, is a Wall which seemeth to be Part of the ancient Walls of the City, although the Mouth of the River *Meles* is just without the present Buildings; which is not far, and might easily be turned thither, if nearer to the Walls formerly. Along this Wall, from the Sea, you come to the Foundation of a great Building of hew'd Stone they were then demolishing, which might have been the *Sybil's* Temple, the great Mother of the Gods.

After discoursing largely of the Antiquities that still remain here, and of the State of the ancient Christian Church of *Smyrna*, he proceeds thus. The *Greeks* that are here have but two Churches, yet they are numerous, this Place being the Seat of their Metropolitan. But besides them, here is a great Number of Christians of all Nations, Sects and Languages. The *Latin* Church hath a Monastery of *Franciscans*; the *Armenians* have one Church; but the *English*, which are the most considerable Number next the *Greeks* and *Armenians*, have only a Chapel in the Consul's House, which is a Shame, considering the great Wealth they heap up here beyond all the rest: Yet they commonly excel them in their Pastor; for I esteem a good *English* Priest an Evangelist, if compared with any of the rest. The *Hollanders*, I believe next to the *English*, are more numerous than any Nation of the *Franks*, and take no more Care, as I could learn, of their Religious Worship. But as to Trade, none strive to outvy each other so much as the *English* and *Hollanders*, whereof *Smyrna* and *Aleppo* are now the chief Places in the *Levant*. The Trade was formerly pretty well divided between them; but since their War with the *French*, the *English* have much the greater Part of it.

The chief Commerce consists in raw and *Persian* Silks, Grograms, both in Yarn and also woven, brought to this Scale by the *Persians* and *Armenians*, and much Cotton, raw and made in Yarn, &c. which groweth all about these Countries, and the Islands of the *Archipelago*, being brought by the *Greeks* and *Turks* to be sold here. The *English* Factory consists of fourscore or an hundred Persons, most of them younger Sons to Gentlemen, who give three or four hundred Pounds to some great Merchant of the *Levant* Company, and bind their Sons Apprentices for seven Years, three whereof they serve at *London*, to understand their Masters Concerns, and then their Masters are obliged to send them to negotiate in these Parts, and to find them Business, out of which they are allowed a certain Sum per Cent. where by their Industry in Traffick for themselves, also upon good Gains, but little Loss, they live genteelly, become rich, and get great Estates in a short Time, if they will be but indifferent good Husbands, and careful of their own and their Owners Business.

The Officers allowed over them by the King and the *Levant* Company, are a Consul, a Chancellor, a Treasurer, a Divine, and a Physician. The Consul is allowed by the *Levant* Company, three thousand Dollars a Year Salary, and five hundred of Gratuity, besides other Perquisites and honest Ways, whereby he may get much more. His Office is to maintain the Privileges granted by the Grand Signior to the *English* Nation, against the Injuries and Insolencies of the encroaching *Turks*, instead of an Ambassador to decide all Differences that happen between Factor and Factor, to see that no Injury be done by any of the Factory to the *Turks*, and to punish Delinquents: So that he doth, in Effect, govern the Business of the whole Factory there, but yet from his Sentence, there may be an Appeal made to the Ambassador. Mr. *Ricaut* was then Consul, who writ the State and Policy of the *Ottoman* Empire, and a Treatise of the *Greek* Church, an Appendix to the *Turkish* History down to his Time, and also an Account of the seven Churches of *Asia*. He was very obliging to us, amongst other Favours, in directing and informing us, concerning these Parts. Their Chaplain is allowed five hundred Dollars a Year Salary by the *Levant* Company. He hath besides, a Warehouse allowed

allowed him to trade with, besides customary Gifts of all the Merchants yearly, which amount commonly to much more. And indeed the whole Factory live together in the greatest Amity, Peace and Freedom, of any of them I have seen beyond Sea.

The *French* and the *Venetians* have also their Consuls here, but they are in no great Credit amongst the *Turks*. The *English* have the best Reputation for their honest Dealing, and therefore ordinarily their Word is taken instead of Searching. But the *Armenians* pay more Custom than any. The *Turks* have thirteen Mosques, and the *Jews* several Synagogues, all which make the Town populous, though ill-built, and without either Strength or Beauty. All that defends it from the Incursions of *Corfairs*, is a little Fort at the Strait coming in about five Miles from the Town, whose great Guns are its best Security: For it hath but a little Ditch about it, and the Walls such as by two or three great Guns would be beat to the Ground. As to the Castle on the Hill above the Town it is slighted, and although it hath the old Wall about it, I believe built by the *Greek* Emperors, yet it is only a Heap of Ruins within, with here and there some arched Caves, used anciently for Cisterns or Granaries, as some think, having only two or three little Guns mounted against the Haven, to salute the Captain of the Gallies, or as Mr. *Smith* saith, the new Moon of *Bairam*. About the Walls are set one or two of the *Roman* Eagles well cut, and another *Basso relievo* of Men on Horseback. Over the Door is an Inscription in Marble, in the latter *Greek* Characters, but too high and difficult to be read.

There is another little old fashioned Castle at the Harbour, for the Gallies and Boats. On the other Side of which Harbour is the Scale or Custom-house for the Grand Signior's own Subjects. Beyond which, Southwards under the Hill, where St. *Polycarp's* Tomb is, are the *English* and *Dutch* Burying-places, and North of the Castle along the Shore, is, First, the new Bezeftin, built out of the great squared Stones of the Theatre. It is in Form like a Street, to shut up at each End; the Shops are little Rooms, with a Cupola over each of them covered with Lead, and little Holes on the Top, with Glass to let in the Light; opposite unto this is a very fine Kan now Building. After which is the Scale and Custom-house of the *Franks*, and then follows *Frank-street* along by the Water-Side, with their Scales and Warehouses, very convenient to lade and unlade their Goods, and is the pleasantest and best built of any Part of this present *Smyrna*.

3. As it must be allow'd that no Author extant has given so clear, so curious, or so correct an Account of that wonderful Animal the *Camelion*, as Sir *George Wheeler* has done; and as he was led to this by his seeing so many of these Creatures at *Smyrna*, it cannot but be agreeable to the Reader, to peruse his Remarks on so entertaining a Subject. About *Smyrna* says he, are Abundance of *Camelions*, which is an Animal something resembling a Lizard, but hath his Back gibbous like a Hog, and its Feet are divided like the Claws of a Woodpecker or Parrot, two Claws before, and three behind, which are not separated from each other until near the Ends. A long Tail it hath like a Rat, and is ordinarily as big, but it hath very little or no Motion with its Head. They are in great Abundance about the old Walls of the Castle, where they breed, and lie in Holes and Heaps of Ruins. Several we saw, and two we kept twenty Days at least, in which Time, we made these following Observations upon them.

Their Colour useth to be green, darker toward the Back, and lighter towards the Belly, inclining to a Yellow, with Spots, sometimes of a reddish Colour, and sometimes whitish. But the Green would often change into a dark Dirt Colour, without any Appearance of Green. The whitish Spots would sometimes vanish, or turn into the same Dirt Colour, and sometime remains. Sometimes they would only change into a darker Colour, of a kind of Purple-like Tincture, which used often to happen when it was disturbed. Sometimes from a green all over, they would be spotted with a pure

black, which also happened sometimes when it return'd from the black, ordinarily when it slept under a white woollen Cap, it would, when uncovered, be of a white or Cream Colour. But this it would do also under a red Cap. I never saw any change red or blue, altho' they have been laid upon those Colours often, and continued there a long Time. But upon green they would become green, and upon the dark Earth they would soon change to that Colour. One of the same Bigness, of which I made a Draught, I caught as I was walking on the Side of the Hill near the old Castle, where I saw many which had changed themselves from the Colour of the speckled Stone Wall, to a grey, with Spots like Moss. This I found on the Top of a green Bush of *Prunella Spinosa*, which, when I first cast my Eye upon, it was of a bright green Colour; but as soon as it perceived that I saw it, immediately let itself drop to the Ground, and I as soon stopp'd to look for it, but could see nothing; yet continuing to look about earnestly, at last I perceived it creeping away to a Hole in the Rock, being changed to a dark brown Colour, exactly like the Earth, which was then of that Colour after a Shower of Rain.

This changing of Colours is given to this Creature by Nature for its Preservation. For it is very slow in its Pace, lifting up its Legs high and not quick, as if they saw not the Way before them, or rather, as if they searched for Hold to climb up by, which they can do very well on a Bush, Tree, or Wall. When it saw itself in Danger to be caught, it opened its Mouth, and hissed like a Snake. In a small Time after I put it into my Handkerchief, it turned of the same Colour, with some white Spots, and a little Tincture of red. This little one changed its Colour more nimbly than others that were greater. The Cause of which I attribute to the Wildness of it, the other having been kept a good while before it was given us, and consequently tamer. The Eyes are as wonderful as the Colours, which are as my Lord *Bacon* hath remarked, large in Proportion to the Bigness of its Head, being commonly bigger and larger than a Pea. But that which seems most observable, his Lordship hath taken no Notice of. It is covered all over with a thick Skin, of the same Substance with the Body, the Grain being in Circles just to the Center or Middle, where there is a Hole no bigger than a small Pin's Head, by which it receives Light, which must make the Angle of its Vision very acute. The Head being immovable, it cannot turn itself to the Objects as it listeth. But to make Amends for all such Inconveniencies, Nature hath given most wonderful Motions to its Eyes, beyond those of any living Creature. It cannot only move them at the same Time, both forward and backward, upward and downward; but also one forward, the other backward, the one upward the other downward, the one fixed on one Object, and the other moving according to the Motion of some other Object, and so is capable of all the Changes imaginable, which my Comrade Mr. *Spon*, and I often experimented with a great deal of Astonishment.

The Tongue is a kind of little Trunk, of a grizzly Substance, above half an Inch long and hollow, join'd to his Throat by a strong membranous and fleshy Substance, in which it is sheathed when it is in the Mouth. It will dart this out of its Mouth above an Inch, being smeared with a glutinous Substance to catch Flies, which stick fast to it as to Bird-lime, and so are brought into its Mouth. These Flies are their ordinary known Food, although I never saw them catch any, but saw one that was almost dead, having a Fly in its Mouth. The rest of its Sustenance is Air, of which it will fill itself, being set out in the Sun, until it becometh much swollen. Of its Excrement I remarked Nothing. But my Comrade reported, that a Person of Curiosity at *Lyon*, assured him from his own Observations, that although the *Camelion* did eat little or nothing, yet it nevertheless made much Excrement.

They will live without any Sustenance besides Air, a very great While, as will many other Animals of the like cold Nature, viz. Serpents and Lizards, &c. One that I open'd had Guts, but I perceived Nothing in them;

them; but the Reason I believe was, because it was even starved, having been kept a great while, and then almost dead. Its Lungs reach near the Length of its Body, consisting of a thin skinny Substance, full of small Veins, and divided into two Labels placed on each Side, and filled with Air, which being let out, those Labels shrunk together. Its Tail is of very great Use to it in climbing. It will twine it about a Bone or a Stick so fast, that if it lets go, or falls short in reaching at any Thing else with its Claws, it will hang fast by the Tail, and sustain and recover its whole Body by it. The little one that I caught, I put into a Glass so deep, that it could not reach the Brim with its Fore-feet by much, nor could take any Hold with its Claws; and yet it got itself out, and almost escaped from me, as I saw afterwards, by standing upon its Fore-feet, and hoisting itself up backwards, until it caught hold of the Brim of the Glass with its Tail; by the Help whereof it lifted all its whole Body out. And this is what I observed of this wonderful Animal, which thus challengeth Praise for its Creator the Lord of all Wonder.

4. *Ephesus* lies not above fourteen or fifteen Leagues from *Smyrna*. In the Way is a Village called *Sedequi*, about three Leagues from *Smyrna*, situated in a very pleasant Country; for which Reason the *European* Consuls of *Smyrna* have their Country-houses there, and frequently retire thither to divert themselves with Hunting. The rest of the Way from *Sedequi* to *Ephesus* is over a very pleasant and large Plain. *Ephesus*, once so noted a City, is now nothing but a confused Heap of Rubbish, Pieces of Marble, demolish'd Walls, broken Columns and Chapters. That Part, which is at present inhabited, is bounded on the East with a large Plain, which reaches as far as the *Archipelago*, and on the Sides with high Hills. The most remarkable Things in it are, The old Church of *St. John* the Evangelist. It had anciently four Gates, but two of them are wall'd up. You enter into the Church by a Descent of sixteen Stairs, at the Bottom of which is a Fountain. Within it are four Pillars of *Porphyry* spotted with Black and Red, twelve Foot and an half in Circumference, and thirty-six Foot high, being one entire Piece of Stone, which bears up the Roof. There are also two other Pillars of *Samæan* Stone, and round about the Church, on the Outside, is a Gallery having four Pillars a-breast, and six in Length, set off in the Middle with an *Ozogon* Fountain, each of whose Sides are ten Foot long, and one Foot thick. The Church hath two Domes, and is cover'd with Lead. The *Turks* having converted it into a Mosque, have added a Minaret, and adorn'd it after their Fashion; but the greatest Rarities of it, when it was a Church, were carried to *Constantinople* to Sultan *Soliman*, to adorn the Mosque he had erected there.

The Castle stands on an Hill just by it, and has a very ancient Tower still standing, on the Top of which is a very curious Piece of Sculpture, or *Basso-relievo*, which, as some say, represents the History of the famous *Roman, Marcus Curius*; but others say, the Destruction of *Troy*. The Truth is, none dare come near enough to take an exact View of it, and so they only guess at it. In passing it, you may discern three Pieces of Marble, one represents *Baubmal*, the second a Man fallen dead from his Horse, and a Person in a Senator's Habit standing by, seems to lament the Accident, and the third is the Figure of a dead Body laid out ready for Interment.

A large Inclosure, where anciently stood the Temple of *Diana*; but there is nothing remarkable of it, but one large Gate much ruined and defaced. Within it, on the North Side, is engraven on a Stone a Man on Horseback, with a Dog by him, and a Serpent twisted round a Tree. On the South-side are two Inscriptions, the one within, in these Words, *ACCENSO. RENS ET ASIAE*; and the other, *M. P. VEDI NICERH. VEDIAE. PAVILLIMX. M. HIAE VXORIS EI*. But the Learned cannot tell what they mean. On the Front of the Gate are these Words graven, *UNIOR CANTUSIUM*; but they are so mingled, that their Meaning is not to be guess'd at.

Two Amphitheatres, where Prizes used to be anci-

ently fought; but nothing now remains of them, but Part of the Walls of one of them, built after the antique Manner of large Free-Stones. Hard by these Amphitheatres is a large Square, where are a great many Pieces of broken Columns, Chapters, Friezes and Pedestals, of a wonderful Bigness. Upon some of them are Arches of a prodigious Bigness, and in the Body of one of the Columns are a Pair of Stairs, which lead a great Way under Ground. Among the Ruins are some Remains of the ancient Baths.

The Grotto, called, *The Cave of the seven Sleepers*, who flying into that Place to avoid the Persecution in the Reign of *Decius* the Emperor, two hundred and fifty Years after Christ, fell into so sound a Sleep, that they did not awake again till the Reign of *Theodosius II.* who was a zealous Protector of the Christians, and supposed they had slept but one Night, though it was near two hundred Years.

A Tomb, or Monument, on which are several *Greek* Characters, and four little Children in *Basso-relievo*, with several Marble Statues buried under Ground, yet so carelessly, that the Feet of some of them appear'd above.

5. About a small Hour's Journey from *Ephesus* are to be seen the Fonts, where, they say, *St. John* the Evangelist baptized the Christians. It is a grey Jasper-Stone, sixteen Foot in Diameter, but a little mangled by Travellers, who usually carry away a Piece of it. The *Greeks* have many like them. About half a League further, upon the Top of an Hill, is a Fabrick, said to be the Place where *St. Paul* was imprison'd. There are four Rooms curiously wrought in Marble, still standing. From this Castle is a pleasant Prospect over the Plains and Meadows, where the River *Meander* makes so many Windings and Turnings, as ravishes the Spectator with Wonder and Delight at once. The Water of it is very pleasant, and the Current of it so still, that one can hardly discern which Way the Stream runs, unless it be at the Mouths where it empties itself into the Sea. Not far from *Ephesus* lies an Island called *Scala Nova*, but by the *Turks*, *Cous-Adasi*, or the Island of Birds. Here are the richest *Muscadine* Wines made, of all the Islands of the *Archipelago*.

6. From *Smyrna* Mr. *Thevenot* went for a Diversion to see the Wonders of *Chio*, so much talked of throughout all *Asia*. This Island, which may be called the Paradise of *Greece*, is governed by *Christians*, though under the Authority of the *Turks*, who command in small Matters. They chuse themselves *C O S S*, one half *Greeks*, and the other half *Latins*, who, during the Time of their Continuance, take Care of all Affairs. The People obtained these Privileges by submitting voluntarily to *Mahomet II.* when he conquer'd *Greece*, and the *Turks* suffer them to enjoy them without Controul. Up and down the Country are several Churches, belonging either to the Popish Bishops or Monks, but the *Greeks* have many more in several Places, the *Latin* Churches being reckon'd but three hundred and one, but the *Greeks* five hundred: They are all very well served, and Divine Service is performed with as many Ceremonies, as if it were in the Heart of *Christendom*, for the *Turks* molest them not, but they have a free Exercise of their Religion, insomuch that on *Corpus Christi-Day* the Holy Sacrament is carried about the Streets under a Canopy, without any Fear of Indignity that may be offered by the *Turks*, though nothing is more odious to them than that Ceremony.

When any Man is found killed in this Island, whether *Christian* or *Turk*, the Author of the Murther is diligently sought for, but if he be not found, the Town must pay the Price of his Blood thus slain, at the Rate of 12,000 Aspers, which is assessed upon every House by the *C O S S*; but if the Murtherer be found, his Blood satisfies for all, and no Money is paid. The *Cadi* and *Turkish* Officers make Advantage of these Fines. In the Island are twenty two Villages that have Mastick Trees, which are in all an hundred thousand. They are Lentisks, crooked like Vines, and creeping on the Ground.

They

They prick these Trees in the Months of *August* and *September*, and the Mastick, which is their Gum, sweating out by the Holes made in the Bark, runs down the Tree, and falls upon the Ground, where it congeals into flat Pieces, which they gather some Time after, and lay it in the Sun to dry, and then range and shake them in a Sieve to separate the Dust from them, which so sticks to the Faces of those that do it, that it cannot be got off but by rubbing their Faces with Oil. These Villages produce above one thousand Chests of Mastick, of which they pay to the Grand Signior yearly three hundred Chests, or three hundred Weight, containing ninety Oques a-piece, every Village being assessed according to their Quantity of Trees, and the rest they are obliged to sell at a certain Rate, to the Farmer of the Customs. This Mastick is by *Dioscorides* allowed to be the best in the World, though it grows also in other Places. It is a white Gum which enters into the Composition of many Ointments, and the *Greeks* use to chew it much, because it makes them spit, whitens their Teeth, and sweetens their Breath; they put it also in their Bread to make it more delicate. The chief of these Mastick-Towns is *Callimacha*, which hath two Gates that stand always open, six *Greek* Churches, and a Nunnery. It is well peopled, and round it are said to be thirty *Greek* Churches.

7. Some Miles from this Town lies *Niamoni*, i. e. the Old Virgin, where is a Convent of *Caloyers* or *Greek* Monks. It stands among Woods and Rocks, being built by *Constantine Monomancus*, Emperor of *Constantinople*, in 1050. The Church is adorn'd with a great many Pieces of Marble and Porphyry, and among others with thirty two Marble Pillars. The Dome is full of Pictures of *Mosaick* Work, and the Church is kept in good Repair. The Convent is very spacious, and built in the Form of a Castle: No Woman may enter into it. There are commonly two hundred Monks in it, under the Government of an Abbot, and it must never exceed that Number.

When any Places are vacant, such as will supply them, and become *Caloyers*, must pay one hundred Piaftres, and carry what Estate they have into the Convent, which they enjoy for Life, and then leave it to the Convent, unless they have a Kinsman who will become a Monk, and then he may give one Third to him, on Condition, that at his Death it go to the Convent. The Convent gives to the Monks every Day black Bread, Wine, but not good, and rotten Cheese; and, if they will have any Thing else, they must provide it as well as they can; and some live well on their own Estates, and keep a Horse to take their Pleasure; the rest must make a Shift with their Commons, yet on *Festivals* and *Sundays* they eat altogether in their Hall or Refectory. This Convent pays the Grand Signior five hundred Piaftres a Year, for their yearly Revenue is above sixty thousand Piaftres; and in their Treasury they have above a Million of Gold, for two Thirds of the Island belongs to them. The Monks that die among them are laid in the Church of *St. Luke*, just without the Convent. They have two Bells, and there are little ones in every Village, but the *Turks* throughout their Dominions, allow them no where but here.

8. The chief Town of this Isle is of the same Name. It hath good Houses, and the Streets are wide enough for Coaches: It is not large, but well peopled, and most Part of the Inhabitants are Christians, either *Greeks* or *Latins*, who have each of them a Bishop, and several Churches; but the *Greeks* have most by far. They have also many Convents of Nuns, but not so strictly shut up, but that Men may come at them, and they will be kind to them, sometimes even beyond the Bounds of Christian Charity. They may leave their Convent when they please; and their Business, while they are in it, is to embroider in Gold, Silver and Silk upon Handkerchiefs, Purse, &c. and they are very skilful in it. The *Latins* have five Churches in the Town, the first is the Bishop's, which is fair and large, but built since the *Turks* have been Masters of *Chio*, according to an Agreement made between the *French* King and the Grand Signior.

To this Church belongs a Burying-place, where all the *French* that die in this City are interred; which was given to it by Mr. *John Dupuis*, of *Marseilles*, the *French* Consul there. The *Capuchins* also have a large and spacious Church, which stands over-against their Convent, which is neatly built, and has a large Garden, but wants Water. They are forced to keep their Gate continually shut, because of the *Turks*, who, if they get in, spoil their Gardens, and commit many other Insolencies. They teach the learned Languages and Christianity to all Children that are sent to them. The *Jesuits* also have a Church and College, and are of three Congregations. The *Jacobins* and *Cordeliers* also have fair Churches. The *Turks* have their Mosques, and the *Jews* their Synagogues. The Town is but small, and not strong, but hath eight Gates, and a pretty good Castle to defend it. The *Turks* live in it, and are generally about eight hundred Men. No *Christian* may lodge in it; but the *Jews*, for their Security, pay a certain Sum yearly to dwell in it, for they would find but bad Entertainment among the *Christians*.

It was built by the *Genoese*, when they were Masters of the Isle, and commands the Port. Four Miles from the City, near to the Sea-side, is to be seen a vast Stone, which was cut out of some Rock; it is almost round, but the upper Part is flat, and somewhat hollow. On the upper Part are Places like Seats cut in the Stone, of which there is one higher than the rest, like a School-master's Chair, where, as Tradition reports, was *Homer's* School, where he taught his Scholars. *M. du Mont* says, he saw nothing but a square Altar cut out of a Rock, with the Figures of an Ox, Wolf, Sheep, and Rabbit, in *Basso-relievo*, and thinks, that in all Probability there were no Schools there, but that it was a Place where Sacrifices were offered to the God *Pan*, or some other Rural Deity. The Isle of *Chio* is eighty Miles in Circuit, and very populous, containing, besides the chief Town *Chio*, already described, sixty Towns and Villages, inhabited for the most Part by Christians.

9. The chief Villages are *Cordomolo*, which contains about five hundred Inhabitants: The Country about it is very fertile and well watered, yielding annually one hundred and sixty, or one hundred and seventy Tun of Wine. Some Years ago, several Pieces of Gold, Silver, and Copper Money, of the Emperor *Constantine*, were found there. Five Miles from it is a lovely Valley half a Mile long, where is a Spring of Water, to which there is a Descent by twenty five beautiful Marble Steps. At the End of it was a Temple of fine Ash-colour'd Marble, but it is pull'd down, and the Stones broken, and this only to get the Iron and Lead that joined them together.

Beyond it is *Vichi*, a Village inhabited by three hundred Souls, having a Church dedicated to the Virgin. Beyond it is *Cambia*, which has one hundred Inhabitants, and lies among Rocks, Hills, and Woods of wild Pine-trees, which they fell for Timber to build their Gallies. Among the Mountains are several Churches. Below this Village is a Valley, where stands a little Castle built upon a Rock, which is almost inaccessible. Over-against this Castle is the Mount of *St. Elias*, which is the highest Place of all the Island, and is seen from *Tenedo*, which is above one hundred Miles distant. It has a Church dedicated to that Saint built on it, but is usually cover'd with Mists and Snow. In the Middle of this Mountain is a large Spring, which waters the Fields about it, and makes them very fertile, and they are planted with all Sorts of Fruit.

In a Wood hard by lies *Spartonda*, a Village inhabited by about fifty Shepherds, but very pleasant, affording Plenty of good Water and Fruits. Between *Calandre* and *Coronia* there is a Bath of Sulphur by the Sea-side, under extraordinary big Oaks. It is called *Hayasma*, i. e. the Holy Water, because the Water being drank, cures many Diseases, but by the violent Operation it has killed many. Three Miles from the Sea, at the further End of the Island, is a Town called *St. Helena*, built on a Rock, containing two hundred Inhabitants, two Churches, and a Chapel. The Inhabitants of this Place firmly believe, that if a dead Body does not

corrupt

corrupt in forty Days, it turns *Zorzolacas*, or a *Nomolacas*, i. e. an *Hobgoblin*. The Chapel is highly esteemed for its Sanctity by all the Villages round about.

From hence one goes to *Volisso*, which is a great Village, with about three hundred Houses, and fifteen hundred Inhabitants. It is seated on an Hill, and has a Castle built by the famous *Belisarius*, the Emperor *Justinian's* General, who was forced ashore there by a Storm. The Country about it is very pleasant, open and fruitful, and the Inhabitants raise five thousand Weight of Silk yearly, with which they pay their Tribute. They are vicious, and it is thought they lie under a Curse of being always destitute of Bread.

Near this Place is *Varvariso*, where there is a Church dedicated to St. *Marcella*, to whom they keep a solemn Feast, called *Panagirio*, and the Priests sing Praises to her all Night long.

Three Miles from this Village is the Monastery dedicated to St. *John*, and by it a Village called *Fitta*, near which is a great Village, where there is a running Water that drives eight Mills, which serve all the Villages thereabout, for the Peasants have Hand-mills, and their Wives grind their Corn. From hence you go to *Sieronda*, which is an ancient spacious Tower, inhabited by fifty Shepherds, who have a Church in it. A little farther is *Lecimiliona*, a Village of one hundred and fifty Inhabitants, and a Church. There begin the Mastick Trees. Two Miles from thence is *Elata*, the Inhabitants of which are famous for taming of Partridges.

10. At *Armolia*, which is a little farther, is made all the Earthen Ware used in the Isle. It lies in a Plain full of Mastick Trees, and contains five hundred Inhabitants and several Churches. Over-against this Village stands a Castle, called *Apollieno*, very strong to resist the *Corfairs*. It was built in 1440 by *Nicholas Justiniani*, and has a Church in the Midst of it. The Village *Mesta* exceeds all the rest in Strength and good Building, and contains three hundred Inhabitants and several Churches. By it are two Harbours, *Aidinamy*, and *San Nickita*, but this last is nearest *Pergi*, a great Village with a Tower, containing two thousand Inhabitants and thirty Churches. The rest of the Villages have the like Number of People and Churches, and in many of them are Castles and Towers, built to defend their Towns and Mastick-Trees from the Ravages of the *Turks* of *Natolia*, who crossing the Sea in Boats or Gallies, come and carry away both the People and their Goods; for which Reason they have built Towers all round the Island, at four Miles Distance one from another.

This whole Island is very subject to Earthquakes, yet would be very fertile were it not so stony, and had more Water, for it rains so little there, that every Spring the *Turks*, *Greeks*, *Latins*, and *Jews*, are forced to make Processions to obtain Rain. But notwithstanding the Hilliness and Driness of the Island, it has all Things necessary and good in sufficient Quantities. It yields Corn and good Wine, but being thick, some do not like it, because, they say, they must both eat and drink it. All Things are cheap there, and excellent Partridges may be had for little or Nothing, for they keep them tame like Turtles, and have Keepers, who drive them out in the Morning, and whistle them in at Night, which Call they always obey. The Inhabitants of this Island are the only People who have preserved their Liberty under the *Turks*, living as they think fit, and exercising their Religion with all imaginable Freedom, only paying them their settled Tribute.

They are generally *Christians*, many of them are *Papists*, and the rest of the *Greek Church*. They are apparelled after the Fashion of the *Genoese*, and have much of their Humour. They are in Countenance (that is, the Men) so ugly as would scare a Man, though their Persons are proper and well shap'd. They are very proud, yet their Gentlewomen go to Market to buy Provisions, and carry them openly in the Streets. They love the *Spaniards* better than the *French*, but had rather be under the Government of *Turks* than *Christians*.

The *Chiot*s make much Damask, Sattins, Taffata's, Fustians, and other Silk Stuffs, and drive a Trade in

many Places with their *Saiques*, viz. to *Grand Cairo*, and the Maritime Cities of *Barbary* and *Natolia*. Such as are not obliged to work or follow Business, sit whole Days under the Trees talking together. Learning is out of Use in this Country, but profound Ignorance reigns among them, yet they have naturally a sharp Wit, so that to avoid their Cheats in Dealing, a Man had need of all his Eyes about him. They are much given to Pleasures, and love excessive Drinking.

The Women are very beautiful and well shaped, their Faces are as white as the *Jasmin* they wear on their Head, and are very charming, but their Breasts are scorched with the Sun, which is much to be wonder'd at, because they take as little Care of their Faces as Breasts. They are always very neat in their Dress, wearing on their Heads very white Linen. They have a very brisk and lively Wit, which renders them the most talkative Women in the World, but are extremely vain in their Apparel, wearing the finest Stuffs they can get; but whereas they used formerly to load themselves with Rings and Jewels, especially upon the Vigil of St. *John's* Day, they now are forbidden it under the Pain of Excommunication by the Pope, because the *Captain-Basha*, seeing this Finery, imposed a Tax of 50,000 *Piastres* upon them, and made them pay it, so that they wear no Gold, Silver nor Jewels about them.

The *Chiot*s, both Men and Women, are much given to Dancing, and on *Sunday*, and *Holidays* they dance all Night promiscuously, both in the Cities and Villages, and a Stranger is freely allowed to put in with them. They are not at all jealous, but their Women and Maids are allowed to stand at their Doors to see and talk with such Men as pass by; and they will be as merry and familiar with Strangers, as if they had been acquainted with them all their Days.

11. Another Isle of the *Archipelago*, bordering upon *Asia*, is *Patino*, *Palmosa*, or *Patmora*, anciently *Pathmos*. It is but eighteen Miles in Compass, and has but one well built Town in it, with a Castle in the Middle of it, called, *The Monastery of St. John*, where 200 *Greek Monks* live. St. *John the Evangelist*, being banish'd into this Isle, is said to have wrote here his Revelations. They carefully keep in their Church a Body shut up in a Case, which they likewise say, is the Body of St. *John*, and shew a Grotto where they likewise say, St. *John* wrote the *Apocalypse*. There are about 3000 Souls in the Isle, who have much ado to live, the Isle being very dry and rocky. No *Turks* live in the Island, but they are all *Christians* who pay Tribute to the Grand Signior. The *Corfairs* put into this Island to careen, and take fresh Water.

The Isle of *Nixia*, anciently *Naxos*, is 120 Miles in Compass. It was subject to the *Sanudi* and *Somarigi*, *Venetian Dukes*, till the *Turks* took it under the Emperor *Solymus*, yet there are still in it several noble Families descended of those Dukes. The Land is fruitful in all Things, but especially the Valley of *Darmilla*, which has eighteen Villages: They feed many Cows, Sheep and Goats, and their Country yields many Vines, of which they make great Quantities of Wine and Cheese, which they send to *Alexandria*, *Smyrna*, and *Chio*. Near the Town by the Sea, are Salt-pits and a Pond, which they farm out to Fishermen. In the Marshes of the Valley of *Plietri*, they catch great Plenty of very fine Eels. Their Woods are full of Rocks and solitary Dens, where there lie large Stags. The Peasants catch Partridges by stalking with an *Afs*, train'd up to it, and they have Plenty.

There are many Monasteries in this Isle, and one of them, which is built in Form of a Tower, is very ancient. There is also another called *Fanaromeni*, dedicated to the Virgin, which has seventy Rooms, and a small Church, but the Monks are extremely ignorant, and by their Viciousness one would judge they served some *Unknown God*. By the Sea-side, over-against the Island of *Nicaria*, is to be seen upon a very steep and rugged Mountains some Ruins of the Castle of *Apollo*; and it is a Wonder how Stones could be got up so high to build it. By it are four little Towns well inhabited.

On

On the Hills hereabout many Goats feed upon an Herb, called *Ledum*, which leaves a kind of viscous Dew upon their Beards, that turns into a kind of Gum, of a very good Smell, called *Labdanum*, or *Laudanum*, and is gathered by cutting off their Beards.

As you go to the Town, there is a Castle upon a very high Hill, which commands the Villages of *Darmilla*. Near the Town, upon the Rock *Strongyle*, is the Palace or Temple of the God *Bacchus*, built of very white Marble, but the *Turks* and others carry it away daily for their private Uses. *Bacchus* may well have a Palace at *Naxos*, where they are so great Drunkards. The Tower and Ducal Palace are still in being in the Town. There are two Archbishops in it, a *Latin* and a *Greek*. The Cathedral Church of the *Latin* Archbishop, dedicated to the Assumption of our Lady, is very handsome, and very well served by six Canons and seven Priests, but their Revenue is inconsiderable, for the Archbishop has no more than twenty Piastras of yearly Rent. He hath a Seat in the Country with a Church, at a Place called *San Mamma*; the Church is paved and lined with Marble, but not kept in very good Repair.

In the Castle the Jesuits have a sorry House, and the *Greeks* a Chappel, that belonged formerly to the Dukes. Without the Town are *Recollets* and *Capuchins*, who make many Profelites to the *Roman* Faith. The Inhabitants have such violent Feuds among them, that sometimes they will not speak one to another as long as they live; but the Women are more obstinate than the Men, and are great Medlers in other People's Business. The Women wear so many Coats one over another, that they are scarce able to go, and their Shoes are so strait, that they can hardly get their Feet in, but they are said to be pretty honest and chaste. From the Sale of their Wine, Cheese and Silk they raise their Tribute.

12. About six Miles from *Nixia* is the Isle of *Paro*, anciently called *Paros*, which has three Castles, several Villages, and a good Harbour for all Sorts of Vessels, fair Churches, and many *Greek* Priests and Monks. The Antiquities of this Isle, consisting in Statutes, Marble Chests, &c. were carried away by an *English* Gentleman, who took all he could find here, as well as at *Delos*, now called *Sedrille*, where was Plenty of them; but now there remains but one Image of a Woman so large that it cannot be stirr'd. This Isle was famous for its noble Quarries of Marble, and for the Oracle of *Apollo* heretofore, but now it is the Resort of the *Corfairs*. The Island of *Mycone*, anciently *Myconus*, was once a well peopled Isle, but now is almost forsaken, because of the rigorous Persecution of the *Turks*. It is about three Miles round.

Over-against this Island is the Isle of *Tine*, formerly *Tenes*. It belongs to the *Venetians*, is well peopled, and hath a very strong Castle built upon a Rock, and the Houses stand one above another. It is forty Miles in Circuit, and yields Plenty of Provisions and Silk, but it is so overstock'd with People, that many are obliged to go out of it, and dwell at *Smyrna* and *Chio*. There is a *Latin* Bishop in it, and the Women are handsome and courteous enough.

13. *Nio*, called of old *Oliarus*, which was not long since inhabited by the *Albanians*, a barbarous and warlike People, who used to go all Night arm'd by the Sea-side, and is a fruitful Country in all Things, especially Woods of Oaks, and other Trees, which they cut down and sell to other Places. You sail then to *Santorini*, formerly called *Therassia*, which is thirty Miles about, and sixty from *Candy*, from which it may be seen. There are several Castles in this Isle, viz. That of *St. Nicholas*, the Houses of which are built upon a black Rock, that is frightful. A *Greek* Bishop has his Residence there, and about 500 Souls about him; but they live most of them in Caves made in Pumice-Stone, and it is pleasant to see them come out of the Ground like Coney, while others are plowing over their Heads.

Scaro, built on a frightful Mountain, so steep, that those who go up to it must climb with their Hands and Feet. It contains 150 Houses, and the *Greeks* have a Church there, in which are two Images of massy Silver, one of our Lady, and the other of *St. Michael*. It formerly belonged to the *Latins*, who have still a Bishop there.

Pirgo, near which is a Chapel of our Lady, with many large Caves, where about two hundred People live. Between these Castles lies an Hill, from whence one may see the whole Island, which is planted with Vines, but has no Trees, but Fig-trees and white Mulberries. They make more Wine than they spend, which their Neighbours fetch from them to carry to *Chio*, *Smyrna*, and other Places. They make all Sorts of Stuffs, and by the Sale of them they raise Money to pay their Tribute. In this Place are one thousand Souls, almost all *Greeks*, and the *Cadi* resides here. Their Houses are well built, all white, and wall'd in, so that each looks like a Tower.

At *Scaro* there is an House of the Nuns of *St. Dominick*, but their Lodgings are poor and Air bad: Their Church is kept in good Order, and served by a Chaplain. On *St. Stephen's* Hill, between *Pirgo* and *Nebria*, lived a Woman, that in ancient Times gave Victuals to all the People for a whole Year that a Plague and Famine lasted, and there are still remaining several Statues of her.

Crötiri, inhabited by an hundred and fifty Souls, and about it there are seven Villages, but ill peopled. The Inhabitants of the Isle live very meanly; their Bread, called *Schifes*, which is made of Wheat and Barley, is as black as Pitch, and so harsh that one can hardly swallow it; for they bake it but twice a Year, because they have no Wood but what they buy by the Pound from *Nio*. They have no Fish or Flesh, but feed only on Beans, Pease, Eggs, and Biscuit. They have little or no Fruit but Grapes, which are plentiful. They know not what Physicians, Chirurgeons, and Apothecaries are; they are stout, and can defend themselves from their Enemies with Stones. The People live a beastly Life, doing nothing but eat, drink, sleep, and play at Cards.

The Isle at a Distance looks like Hell, being on the Shores all black and scorched by an Eruption of Flames, which happened about an hundred and twenty Years ago. About the Year 1638, there was another Eruption of Fire in the Port, which, with an incredible Noise, was heard two hundred Miles from thence, cast vast Numbers of Pumice-stones out of the Sea, like Bullets, and so infected the Air, that many on the Isle died, and several lost their Sight, but recover'd it some Days after; and all the Silver turned red, even in Mens Chests and Pockets, but in a few Days came to itself. *Seneca* says, this Island stands upon Mines of Sulphur, from whence these Fires proceeded. It is said, that *Alexander* sounded the Sea in this Place, but could find no Bottom; yet a Ship may come to an Anchor at *Tiresia*, a little Isle by it.

14. The Isle of *Policandro* is eight Miles in Compass, and a pleasant Place: There is but one Village of one hundred Houses, and three hundred Souls in it: It has three well built Churches, and two Monasteries, one of Men and another of Women. The Convent of Monks is well situated, and dedicated to the blessed Virgin. It has a little Garden, and a Fountain of excellent Water in it. The Nuns observe no Rule, but live as Nature teaches them; their Church is dedicated to *St. John*, and a Monk says Mass in it on all *Sundays* and *Holydays*. The Castle stands upon a very high Hill, but all the Houses are ruinous, except a Chapel dedicated to *St. Michael* the Arch-angel. From it one may see all the Isles of the *Archipelago*. The Inhabitants of this Isle are honest, civil, and courteous People, especially the Women, who are very handsome. They have good Bread, Fowl, Sheep, and other Things necessary, but no Wine; so that what they drink comes from *Santorini*, which is but thirty Miles distant. They have no

Trades among them, because their Port, which is in different good, is infested by the *Mainots* and *Corfairs*, who lodge in a Church by the Sea-side.

15. The Island of *Milo*, which is so called from *Mylos*, a Mill, because they have many Wind-mills in it, and it affords Abundance of Mill-stones, is thirty-six Miles about. It is fruitful in all Things, and exports yearly to *Candia*, *Venice*, and other Places, between three and four hundred Tun of Wine. They have a Mine of Brimstone, and another of Pumice-stones, which they farm to one of the Inhabitants for one thousand five hundred Piaftres yearly. Three Miles from the Town are certain hot Baths of Sulphur, where diseased People from several Places wash and recover their Health. The Port is six Miles long, three over, and has a good Depth of Water, and two Miles from it, in a Grotto, is a Fountain of Luke-warm Water, which gives so much Heat, that an artificial Bath cannot make one sweat more. In this Isle is a Town where two thousand five hundred Souls live, and an old Castle inhabited by five hundred more. They have a *Latin* and *Greek* Bishop.

The *Latin* Cathedral is without the Town, dedicated to *St. Peter*, but without Ornaments; and the Bishop celebrates in a Chapel that joins to a *Greek* Church. He has many Tithes, of which he gives to the *Greek* Bishop one third Part. He has also many well built Churches in good Repair under him, and many Priests to officiate in them. Most of the Inhabitants are *Greeks*, who live much at their Ease, and are civil, but, as usual, wicked and perfidious. Their Women go in a very ugly Dress, speak very ill, and cannot pronounce the Letter *L*. They are, however, very charitable and kind to Strangers. They have all Necessaries for Life, but no Physicians or Chirurgeons. There are no *Turks* in the Isle, but it is govern'd by four Deputies of the Town.

Half a Mile from *Milo* is the Isle called *Chimolo*, or *Argentara*, which hath a good Harbour, and a Village containing about two hundred Souls, which was burnt by the *Corfairs* in 1638. These poor People live in great Misery.

16. The Isle of *Sifano*, or *Sifanto*, anciently *Sifanus*, is thirty-six Miles in Circuit, and has a Castle upon a Hill, with double Walls, inhabited by three thousand Souls; and there are no other Houses in all the Island, unless it be some Country-houses of private Men. The Harbour is not good. There is upon it a *Latin* Bishop, and a good *Greek* Vicar; but the Bishop's Chapel is little and very poor. There is also a Monastery of *Greeks* built upon a Hill. The Isle produces not Provisions enough for above two Months in the Year, and for the rest of the Year, the People fetch it in Barks from other Places. They are very great Rogues, but their Women are very honest, and go with their Faces cover'd. There are no Manufactories or Trades, but Weavers, Shoe-makes, Joiners, and such-like.

The Isle of *Thermia*, so called from the *Therma*, or hot Springs in it, which give a great Relief to sick Persons, is thirty-six Miles in Circuit. The Town contains about three hundred Houses, inhabited by about two thousand Souls. The *Greeks* have fifteen Churches in it, and a Bishop, who resides six Months here, and as many at *Zia*. There is also a Castle and a pretty Village, called *Mesi*. The Isle is almost all plain, has few Trees, yet is fruitful, and abundant in all Things. The Inhabitants are reputed to be honest People, and trade in Stuffs, Threads, and other Commodities, raising thereby Money to pay their Tribute. The *Venetian* Corn only goes in this Isle, as it doth in all the others, except *Naxia*, *Andro*, and *Scyra*, where *Turkish* Money goes. Their Women are virtuous, handsome, and wear a neat Dress. The People live pretty well there, and a *Cadi* commands, with four Procurators, chosen out of the Citizens of the Town.

17. *Ajora* is an Isle eighteen Miles about, and depends on the Isle of *Scyra*, who keep some Shepherds there to feed their Sheep. There are four Churches in it, but Divine Service is perform'd in them at *Easter* only, when the Shepherds communicate. The *Cor-*

fairs hinder its being cultivated, because they take away the Oxen, and sometimes the Sheep.

The Isle of *Scyra*, which in the vulgar *Greek* signifies *Signora*, or Mistress, is so called, because it stands in the Midst of the other Isles, and by its Height commands them all. It is thirty-six Miles in Compass, and, having a dry Soil, but few Trees, abounds with Plenty of Provisions, as Flesh, Fish, and Venison. The Water is good. They have no Villages of Note, but only some scattering Houses up and down in the Country. The People are much addicted to Devotion, and especially the Women, who are very silly. There is much Hatred and Envy always amongst them, by reason of the Oppression they suffer from the *Turks*, and Oppression of the common Poverty. They are almost all *Latins*, and have several Churches. The Cathedral stands at the upper End of the Town, and is dedicated to *St. George*, and served by several Priests, who have a Bishop for their Superior, and he lives on his Revenue and Tithes. The *Capuchins* are diligent in Preaching, Catechizing, and hearing Confessions, by which they do much Good.

18. From *Chio* Mr. Thevenot sailed into *Egypt*, and in his Passage, being left before the Isle of *Samos*, he took a View of it. It is a very barren Country, though famous for having been the Birth-place of *Pythagoras*, *Polycrates*, and the *Sibyl*. It is eighty Miles in Circuit. Over-against *Samos*, and pretty near it, is the Isle of *Nicaria*, anciently called *Icaria*, from *Icarus* the Son of *Dædalus*. It is of a long Figure, and the Land is very dry, and full of Rocks, in which are the Houses of the Inhabitants, who are in all about three thousand Souls, very poor and ill clad.

They are much addicted to Swimming and Fishing up Sponges and Wrecks, and the richest Men, or *Papa's* in the Isle, give their Daughters to the best Swimmer, which is tried before the Damfel and her Father. He that can remain longest under Water wins the Maid. They pay the Grand Signior Tribute in Sponges. They have Vineyards among the Rocks here and there, and they make of the Grapes a Sort of white Wine, as clear as Water, which passes by Urine as soon as it is drunk. The Wine, as also Wax and Honey, they trade with to *Chio*. The Women are Mistresses there, and as soon as the Husband is arrived from any Place, the Wife goes to the Sea-side, and takes the Oars, and carries them Home, after which the Husband can dispose of Nothing without her Leave. The Inhabitants are well shaped and strong. The old *Greek* Emperors of *Constantinople* banish'd Persons of Quality that had offended them into this Isle.

19. Leaving *Samos*, he came to the Isle of *Stanchio*, otherwise call'd *Isola Longa*, ninety Miles distant from it. It was anciently call'd *Coos*, is seventy Miles in Circuit, and very fruitful, especially in good Wine. On the Port by the Sea-side is a pretty good Castle, where the *Turks* keep Garrison. The Town lies behind it, where there is a prodigious Tree of that vast Extent, as to cover 2000 Men easily, for the Branches being supported with many Stones and wooden Pillars; there are several Barbers Shops, Coffee-houses, and such like Places, besides Benches to sit on under it. It was anciently famous for the Temple of *Æsculapius*, and the Births of *Hippocrates* the Prince of Physicians, and *Apelles* the Prince of Painters. The Knights of *Malta* held it, when they were Masters of *Rhodes*, and there are still many Monuments remaining in it. Strangers are here more regarded by the Women, than is grateful to their Husbands.

From hence he sailed to the Castle of *Bodrou*, which lies over-against *Stanchio* at twelve Miles distance. There is a good Port, but so shut up with Dirt, that great Ships can't get into it. You enter this Castle through seven Gates, over which are several Coats of Arms, which belonged to the Knights of *Rhodes*, that commanded there, for in some of them are Crosses of *Malta*. There is above 300 of these Escutcheons. Beyond the sixth Gate is a Platform, where there are six Cannon pointed toward the Sea. The last Gate is made of Iron, and there stands a Guard of fifteen or twenty Men continually.

continually. The Castle is strong, and the Walls high, both built of a Sort of Stone, which great Guns cannot hurt. The Sea beats upon one Side of it, which has Port-holes, with great Guns mounted, which can easily hinder Ships from approaching it. It is also very strong towards the Land, the Walls being as sound as if they were lately built. No Horse can approach it, and yet it may be easily taken, by cutting off the Water that is brought to it by an Aqueduct. The Houses in it are ruinous, and there are many Pieces of Pillars found among them. The Country about it is fruitful in Grapes, Figs, and such like Fruits.

20. From *Bodrou* he sailed to *Rhodes*, which is 100 Miles from *Stanchio*. The Isle of *Rhodes* hath *Lycia* on the North, being parted from it by the Sea, which is twenty Miles broad, the Isle of *Cyprus* on the East, *Candia* on the West, and *Ægypt* on the South. It is 100 Miles in Circuit, lying in a temperate Climate. The Soil is fruitful, and hath several Villages in it well inhabited, besides a small City which is strong. This Island has been under the *Greeks*, *Saracens*, who lost it to the Knights Hospitallers of *Jerusalem* in 1309, who held it 200 Years, and now is in the Hands of the *Turks*, who under *Solyman II.* took it in 1522. by Composition, and that more thro' the Treachery of *Andrea d'Amaral*, Chancellor of the Order (who being angry that he was not chosen great Master at the last Election, inform'd the *Turks* of their Weakness, by a Letter shot to them on an Arrow) than by Force, though his Army consisted of 200000 Men.

The Town hath two Harbours, of which the Great Port, being square and spacious enough, is not very safe, when the Wind blows from the E. N. E. or S. E. On the Right Hand at the Entry of this Port is a new Tower, built by the *Turks*, in a Place where the old Tower of *St. Nicholas* stood. It is well furnished with Cannon, hath a Bastion behind, and Curtine reaching to the Walls of the Town; over against this Tower stands the Castle of *St. Angelo*, but somewhat ruinous.

This Castle and Tower were built in the Place where stood the Feet of the great *Colossus*, one of the seven Wonders of the World, between the Legs of which a Ship under Sail might pass. It represented the Sun, and was cast by *Chares* the *Lyndian*. It was seventy Cubits high, strided fifty Fathom, and carried a Light-house in one Hand. It was overthrown by an Earthquake, and being broke to Pieces by the *Saracens*, was sold to a *Jew*, who loaded 900 Camels with the Metal, and carried it to *Alexandria*, in the Year of our Lord, 954, and 1461 Years after it was made. The Port of the Galleys, which is covered by the Castle of *St. Erme*, is a good Harbour, and able to contain many Galleys, but the Mouth of it is so narrow, that one Galley only can enter at a Time. It looks to the E. N. E. and is every Night shut with a Chain. A little up-land above the Port is a Burying-place, and in it fifteen or twenty Domes of Free Stone well built, and supported most of them by four Arches. These are the Sepulchres of the *Beys*, or other Persons of Quality in *Rhodes*, who have been killed in the Wars. On the Side of this Port is a Piazza with some Trees and a Fountain in it, and at the Bottom of it the Arsenal, where the Galleys and Saiques are built. The Town is small, but strong, having high and well built Walls, planted with Faucons on the Top, and below there are Port-holes for great Cannon.

It hath three Gates, one to the Sea, where Corn is sold, and two to the Land-side. Over the Water-Gate is set up the Dragon's Head, which was thirty three Feet long, wasted all the Country round, and was slain by *Deogate de Gozon*, one of the Knights of *St. John*. The Streets of the Town are pretty broad, all paved with little Stones, and for the most part covered with Pent-houses on each Side. There are several fair Buildings in it. *St. John's* Church is still standing, but is turned into a Mosque. Over the Gate in a Nich, which hath a round Cover, are the Figures of our Saviour and the blessed Virgin, and *St. John* holding the Cross, cut in *Basse Reliefe*. No Christian is now suffered to go into it. The Street of the Knights lay just as you

come out of the Church, as the Arms upon the Houses shew; but now *Rhodes* is inhabited only by *Turks* and *Jews*, for though the *Christians* are permitted to keep Shops in Town in the Day-time, yet in the Night they must retire to the Villages in the Country about it. *Lindo*, the Country of *Chares*, who made the *Colossus* of *Rhodes*, is a little Rock at the Point of the Isle of *Rhodes*, sixty Miles from the Town. It has a small Town on it, with a very good Fort.

21. At the Bottom of the *Mediterranean*, lies the noble Island of *Cyprus*, famous in all Ages for the Fertility of its Soil, the Excellence of its Climate, and the Advantage of its Situation. It has been known in different Ages of the World, by very different Names, and some of these are such, that it would be a difficult Thing to point out clearly the Authorities upon which they are founded. In the Holy Scripture it is called *Kittim*, from *Kittim* the Son of *Javan*, the Son of *Japhet*, the Son of *Noah*, who first possessed it; in succeeding Times it was called *Ceraftis*, because of the many Promontories it thrusts into the Sea like Horns; *Maccaria*, because of the Fruitfulness of the Soil, and Happiness of the Climate; *Asperia* from the Roughness of the Soil; *Collinia* from its numerous Hills; *Arosa*, because of the Mines of Copper or Brass, which were first said to be found there; *Amathusia*, *Paphia*, *Salamina*, *Lapithia*, from the Towns of *Amathus*, *Papho*, *Salamine*, and *Lapithus*. At length it was called *Cyprus*, but from whence is not very clear; some say from its Copper Mines, others from *Cypress* Trees, which were in a Manner peculiar to it.

In ancient Times it was consecrated to *Venus*, who is filed by the Poets, the *Cyprian* Goddess, and the Reason of this seems to have been from the Wantonness of its Inhabitants, as this again may be derived from the Excellence of its Climate, and from the Fertility of the Country. The longest Day is about fourteen Hours and a half, their Weather in Summer is prodigiously hot, so that sometimes their Brooks, and even their Rivers have been dried up; and in the Reign of *Constantine* the Great, when they had no Rain for thirty six Years, it was in a great Measure deserted, but such Accidents, or rather such Judgments happen seldom, and therefore ought not to be mentioned as Objections to the general Repute this Country has been in for its great Fruitfulness. It was anciently governed by Kings, of whom there were nine when *Cyrus* reduced it; but it seems they remain Tributaries, and were not stripped of their Dominions; for long after this, we find the *Greek* Orator *Isocrates*, addressing two of his Orations to two of the *Cyprian* Monarchs; and in the Time of *Alexander* the Great, the King of *Citium* is recorded to have presented him a most excellent Sword, which he used afterwards during his Life.

Upon the Division of his Empire, *Cyprus* fell under the Dominion of *Ptolemy*, and was governed sometimes as a Province, sometimes as a separate Principality by that Family, till conquered by *Portius Cato* for the *Romans*, who carried from thence seven thousand Talents, which was more than ever came into the *Roman* Treasury by any former Conquest. After the Division of the *Roman* Empire, it belonged to the *Greeks*, from whom it was taken by the *Saracens*, recovered from them, and governed by Dukes or Princes. In 1191, it was conquered by our King *Richard I.* who first mortgaged it to the Knights of *Rhodes*, and then gave it to *Guy of Lusignan*, whose Family held it for many Generations.

Under these Princes it was divided into twelve Counties, containing forty eight great Cities, and upwards of eight hundred Villages. *Charlotta*, the last Heiress of that Family, was driven out by *James II.* her Bastard Brother, who married *Catharine Cornaro*, of a noble *Venetian* Family, adopted Daughter of the Republick, to whom she bequeathed this Kingdom, to which, however, her Right was but indifferent. The *Venetians* came into Possession in 1473, and held it almost an hundred Years; but at last it was taken from them by *Solyman II.* Emperor of the *Turks*, after a long and glorious Defence, and with Circumstances of most infamous

famous Cruelty and Treachery on the Part of the *Turks*, who have kept it ever since.

It abounds with Wine, Oyl, Corn, Sugar, Cotton, Honey, Wool, Turpentine, Alom, Verdigrease, all Sorts of Metals, and most excellent Salt. This Island affords several good Ports, all the Materials requisite for building of Ships, all the Commodities that can be desired for carrying on a great Trade; and, if it were under a right Government for one Century, might be able to defend itself against all its Neighbours. At present it is thinly peopled, and not half cultivated. A *Turkish* Basha destroy'd all the Sugar Canes, to prevent the *Cypriots* from having too much Wealth; an Evil which there is now no Reason to fear.

In a Word, it is at this Day the clearest Proof that can be given, how much a bad Government can defeat all the kind Intentions of Nature; for in Spite of all the Advantages that a Country can possibly have, there never was a more dismal or desolate Place than this Island is at this Day, from having Millions of People, there are now in it scarce thirty thousand; from a Climate that produced a perpetual Spring, it is become both unwholsome and unpleasant; from Cities and Towns that touched each other, there are now only Villages and Heaps of Ruins; from Abundance of all Things, the Inhabitants are reduced to Indigence and Starving; so that except to considerate and intelligent Persons, the Face of the modern *Cyprus* refutes all that ancient Authors have said in its Favour. Such are the Effects of a false Religion and tyrannical Government.

22. It would be inexcusable in speaking of these Islands, to suffer that which makes the greatest Figure in History, to remain hidden and out of the Reader's View; I mean the Island of *Candia*, so long the Theatre of War between the *Venetians* and the *Turks*. The Inhabitants of this Island are allowed to be sensible, as well as brave and hardy; whereas the *Sciotes*, or Inhabitants of the Island of *Scio*, are commonly called *Prassinos* by the *Turks*, which is as much as to say *Green*. The Reason of this is, that a *Turkish* Basha, much esteemed for his Wisdom, observing the Manners of the Inhabitants of that Island, said, that a wise *Sciot* and a green *Horse* were Rarities equally hard to be met with. By this unlucky Sarcasm he stamped the Name of *Prassinos* upon this whole Nation. But for the *Candiots*, though the *Turks* hate them, yet they cannot help owning, that they have both Courage and Understanding, of both which they gave ample Testimony in the Course of the long War before-mentioned.

Among others who have recorded the Events of that famous Dispute, our Countryman Mr. *Bernard Randolph*, is thought to have done it with as much Fidelity as any. He spent upwards of twenty Years not only in the *Levant*, but amongst these Islands; and upon his Return home, he composed a Description of them, which was printed in a thin Volume in *Quarto* in 1687, at the Theatre in *Oxford*. It appears from thence, that he was a plain well-meaning Man, more concerned about Matter of Fact, than the Style or Manner of telling his Story: What he related was chiefly from his own Knowledge, which gives great Credit to his Accounts, and in some Measure excuses the Roughness of his Language, and his Writing without any Method. It appears from the Works of the judicious Sir *George Wheeler*, that Mr. *Randolph's* Book was printing, when he was writing his Travels; and for this Reason that worthy Gentleman speaks very respectfully of that Performance, and refers his Reader to it, as a Kind of Supplement to his own: Yet in most Parts of his Book Mr. *Randolph* is wonderfully concise, and tells us more or less of a Place, not in Proportion to its Size, Situation, or Importance, but as he was little or much acquainted with it himself. Of this Island, however, he speaks copiously enough, and has thrown together, in his Description, the principal Actions in that War, which cost the Grand Signior *Mahomet IV.* so much Trouble, and which broke the Force, and exhausted the Treasure of the *Venetians* to such a Degree, that they have never been able to recover. We will give the Reader, therefore, his Account in his own Words.

The Island of *Candia*, (which in old Time was, and also now is by the *Turks* called *Crete*) hath followed, for the most Part, that of the Empire of *Greece*, and is now subjected to the Tyranny of the *Turks*, after a War for above twenty seven Years; in which Time the *Venetians* did bravely, and with unparallel'd Courage, defend the City of *Candia* to the last Extremity. After a close Siege for near two Years Continuance, the Vizier there in Person, and with him the best of all the *Ottoman* Forces, they were forced to surrender, yet upon the most honourable Terms that themselves could propose, carrying away with them not only their Cannon and all other Ammunition, but also the Bells which were in the Steeples, and whatever else they thought worth their Labour. The Vizier was so much overjoyed that the City was surrendered to him, that he appointed several of the *Turkish* Boats to assist the *Venetians*, if they should have Occasion for their Help in carrying their Goods to the Ships. He was so observing of his Word on the Cessation, that he caused two *Janizaries* to be put to Death for attempting to force their Way into the City.

All *Europe* has heard of this great Siege, how many thousand Bombs were cast into the City; how many Mines and Fornellos were blown up; and how many bold Assaults the *Turks* made. They had at last worked themselves so near the Walls, that it was impossible for the Besieged to make use of any of their great Guns; for no sooner could a Man appear to level a Gun, but there was a Shower of Bullets and Arrows; so that the *Turks* would often attempt to undermine, and the *Venetians* did countermine them; and when they met under Ground, they fought most desperately. The *Venetians* have an Engine which they call *Trombo di Fuoco*, it is as long as a half Pike, the Staff bigger; at the End are two Irons about two Foot long, in the Form of a Fork, in which is fastened a Trunk made of Iron, and some are of Wood; In it are five Charges, each firing severally and at a certain Time, and carry several Bullets to do Execution as far as a Pistol; they set Fire to it at the Fore-part, and have a Touch to reach from one Chamber to the other.

Another Invention they had to fish up the *Turks* when they attempted to undermine their Walls; they had Hooks made in the Form of a Boat's Grappling, the Points sharp, fastened to a Rope, and four or five Foot of Chain at the End; these Hooks they often cast over the Walls amongst the *Turks*, and seldom fail'd to bring up a *Turk*, some fastened by the Cloaths, others by the Body. I have heard some of the Officers say they have taken several in a Night, for when the Hook was fastened, they gave them not Time to unhook themselves, but had them soon over the Walls. At the *Greeks* leaving *Candia*, there happened a most sad Accident, a new Ship, called *La Fregatta Galliera*, or the *Gally Frigat*, was pitch'd upon for transporting most of the Principal of the Gentry, and the greatest Part of the Riches of the Citizens; there was also (besides what were mounted) fifty great Brass Guns; the Passengers were between two hundred and fifty and three hundred, besides two hundred Mariners and upwards. Being between an Island called *Obo* and the Port of *Cerigo*, the Ship opened, and not a Man was saved. The rest of the Fleet got well, some to *Zant*, others to *Ceſſalonia*, *Corfu*, and *Venice*, landing the *Greeks* as they had a Fancy to the Place which they came to, or as they found Friends. Thus they left their Estates to the Enemy, and not above five or six *Greeks* remained, who being in Years, and sickly withal, desired Leave of the General that they might end their Days there. In the Articles of Peace it was concluded, that the *Venetians* should keep Possession of three small Islets which are close to the Island of *Candia*, and have each a very strong Castle. The *Turks* laughed at their Proposals, saying, *We have the Hen, and the Chickens will follow of Course.*

This Island had twenty Cities, and above one thousand Towns, Villages, and large Monasteries; now there is not above four Cities and three hundred Towns and Villages. To give you an Account of them, I will begin with the Eastern Part. This was formerly a Province

vince called *Sittia*; the head City had the same Name, standing in a Bay at the North East Part of the Island on the West Side, extending from the North to the Bottom of the Bay Southerly, above a Mile in Length. The Castle stood on a rising Ground to the North West of the Town, built of a coarse Marble Stone. The *Venetians* finding the Place was not tenable, caused several Mines to be made, by which they destroy'd the Castle and Town, and so went to *Candia*. By the Ruins it may be seen, the Builders had no Thoughts so soon to have left them. Most of the Walls are entire, and some have lower Rooms with Beams, which are patch'd up, and serve for Store-houses to put Corn in, when any Ship comes to lade. In the Year 1680, I was here, and loaded a Settee of *Provence*, Capt. *Steppe Bremon*, who belonged to *Cassis*, about ten Miles from *Marseilles*. The Wheat was the *Basha's* own, which he sold at three Timins a Killoe, (*i. e.* about 14 *d.* the Bushel.) The *Turk*, who came with me from *Candia*, was an ordinary Servant; but as we travelled the Road, and when we came hither, he would domineer at a strange Rate. Here are no Inhabitants nearer than twelve Miles, at a small Village called *Alona*, saving at a small House and Chapel, which is a *Metoiki*, (or Chapel of Ease to a Monastery up in the Mountains) about a Quarter of a Mile from the Sea: Amongst others, the *Greek Priests* brought their Tenth to the *Turks*: They all desire to have a Seaman to measure their Corn, rather than the *Turks*; for they will stir the Corn about with their Hands, and press it down: But the Master was content to take it with a just Measure, and favour'd the poor *Greeks* what he could.

At *Alona* resides the *Basha's* Lieutenant, who has one hundred *Spahi's* to guard the Coast from Privateers, but more to gather in the Tenth. The *Greeks* maintain them at their own Charge. To the Eastward of *Sittia*, on a Point of Land, is a Monastery dedicated to *St. Isidore*, to which belongs a great Revenue; it maintains about forty Calojeros. There are several rich Lamps, and other Ornaments of Silver and Gold. Here they shew you the Picture of the Blessed Virgin, which, they say, was brought by Angels from *Stancoi*, and was found in a Cave of that Mountain. They have Lands on the Island of *Rhodes*, where they have a *Metoiki* and several Calojeroes to gather in the Crops of Corn, Oil, and Wine; the *Turks* allowing them to enjoy it, calling it *Vacofa*, or Possessions for God's Use; yet they will receive their Tenth from it. The *Gomina* or Overseer of this Monastery had made his Escape, taking with him above two thousand Pieces of Eight in ready Money and Plate; but being pursued, he was taken at *Scarpante*, an Island lying in the mid Way between *Candia* and *Rhodes*, and by the *Basha's* Order put to Death.

To the South of *Alona*, about ten Miles, is a very high Mountain, called by the *Turks*, *Basha Dogg*; from it may be seen the Sea to East, West, North and South. Here are the Ruins of a Castle, called formerly *Barozza*, because it was built by a Gentleman of that Name: It is square, about sixty Foot high, with a Tarazzo and Battlements on the Top; each square is about forty Foot. The Wall is very thick, the Door about ten Foot from the Ground, having a dry Ditch about it. Of these there are several about the Island, like the old built Castles that are still in *Ireland*: For formerly the *Candiots* used to war amongst themselves; but now all such Quarrels are ended by their Subjection to a common Master.

The City of *Girapetra* is in the South Part of the Island, having no secure Port, but an open Road, where Vessels in the Summer Time may lie with Security from the Weather, but not from Privateers, for while I was there, they carried away a Saïke which came from *Alexandria*. The Town is walled round, and hath a small Castle, which lies higher than the Town. Here is constantly a Garrison of two hundred *Janizaries*, besides there are several *Turks* who are Merchants, so that in all they can raise five hundred fighting Men. There is about it a very fine Plain full of Olive-trees, and some very pleasant Gardens. Their Houses are well built of

good Stone, the Rooms very lofty, but few Houses above two Stories high. In the Year 1675, one Monsieur *Crevellier*, a famous Privateer, landed five hundred Men in the Bay of *Spina Longa*; travelling in the Night, he came next Morning, just at the Dawning of the Day, and found the *Turks* at their *Sabbah Namaz*, or Morning Prayer, so he made himself Master of the Town, carrying away two hundred Slaves, nailing up the Guns which were in the Castle. The *Turks* who were at the South Part of the Town, betook themselves to some small Vessels, for they had not the Heart to return home to fetch their Arms. Monsieur *Crevellier*, to retreat with this great Prize, resolved to kill what Horses he found, securing twenty for himself and Officers to ride on and form the Rear.

This Enterprize was effected in less than six Hours after they entered the Town, for they did not make any Stay to ransack the Houses. After they were departed, about three hundred Men, *Turks* and *Greeks*, were got together, and marched a Mile or two out of Town, and had not *Crevellier* killed the Horses, he could never have got out of the Island. It is very strange, that so many Men could come with that Secrecy as not to be discovered, and that the Hearts of those *Turks* should be so sunk. Immediately they dispatched Expresses to the City of *Candia*, writing to the *Basha*, that about fifteen hundred *Christians* had landed, and carried away two hundred Prisoners, most of them Men of the Garrison. The *Basha* asked the Messenger, if the rest of the Inhabitants were asleep, or dead? No, says the Messenger, but their Hearts were, being all surprized, some in their Mosques, and some in the Coffee-houses, and not a Man that had his Senses; most of the Horses also being killed. The *Basha* asked him, how he escaped? He answered him, that he had the Wit to hide himself, as a great many others did. There were three Gallies in the Mole of *Candia*, under the Command of one *Bobba Hassan*, who were sent to look after *Crevellier*, but to no Purpose, for they returned without seeing him.

Since this there is an Order, that the Gates shall be shut an Hour before Sun-set, and not opened till an Hour after Morning Prayers; and now there are several Guards on the Mountains; besides, the *Basha* of *Candia* has threatened the *Providitore* at *Spina Longa* to complain to *Venice*, if he suffer any Privateers to come into that Bay; so as for some Years they have attempted nothing. The Country towards the South is not so mountainous as in the North and North-West Parts; having several large and pleasant Plains, which have many Ruins of fine Towns. To the East of *Girapetra*, about ten Miles, I went to see a Cave under the Mountain of *Tro*, as they now call it, where, they say, *St. Paul* preached. It is a large Chapel, having twelve Pillars, all cut out of the Rock by the Christians in the Night-time. Some say, but without Grounds, it was finished in less than a Month. Close by is a Fountain, where, they say, he used to baptize; and it is now called *St. Paul's Fountain*; the Water thereof is very good to cure such as have sore Eyes. From *Girapetra* to *Bonifacia* is 14 Hours Riding, most in Plains, very delightful, there being very high Mountains to the North, with most pleasant Valleys between, and Abundance of *Cypress Trees*. *Bonifacia* stands on a rising Ground, having only the Walls of a Castle.

The Inhabitants are most of them *Greeks*, very poor; here is a Metropolitan who pretends to be next to the Archbishop of *Candia*. There are two *Italian Churches*, the Doors of which are now made up with Walls to keep Cattle from going in. The *Greeks* have four small Churches, but one would contain more than all the Inhabitants. They have now new-nam'd the Place, calling it, *Malafacia*, instead of *Bonifacio* (good Face) it being so much alter'd from what it was in former Time. From *Bonifacio* to the *Labyrinth* is about ten Miles, or three Hours riding, West, most a Plain. Several Men have several Opinions, about this Building (if I may call it so.) But one Signior *Venetando*, who was born in a neighbouring Village, gives this Account, that a certain King of this Island had so great a Hatred for all Women, that he order'd this Place for his Court, and at

last lived so privately, that he would not suffer any to come to him, but such as administered Affairs, and ruled in his Stead; he would seldom come out, but to worship at a Temple dedicated to *Jupiter*, which stood close by it. In this *Labyrinth* he ended his Days, and had a famous Tomb built for him, the Ruins of which they shew you.

The *Labyrinth* is about two Miles about, being so covered on the Top with Earth, as it seems to be all firm Land; we entered it with two Torches and Candles in Lanthorns, having a Line to direct us out again. The Way is plain under Foot, and arch'd over Head, some Arches being about ten Foot high, some more, some less, with several Windings. I made it my Business to observe, if there was any Thing of a Building in the Pillars or Sides, but found it mostly an entire Stone, which they told me so well cemented together, that indeed it appeared so. Here are a great many small Vaults, about four Foot long, two broad, and two over, which were for Burying-places. There are Abundance of Batts which hang in Clusters, some are larger than ordinary. We endeavoured to fright them, scorching their Wings, by which we found there was Life in them; their Sleep is observed to be much more sound with a North-Wind, than with a South-Wind; as their Spring comes on, they leave this their Palace. We had almost ended our Line, being about 100 Pikes, which is about eighty Yards, and then returned out, being a good Hour in the *Labyrinth*. The Damps are very great, against Rain it is always dropping, but very dry with Northerly Winds. At the End is a Lake, and they tell you, that some who have attempted to go to, have been drawn into it. Our Curiosity did not invite us to see it, for though it were not true, as in Probability it is not, the noisome Smells are enough to stifle one.

To the South, and close by, is a small Village with two Churches, which seem to have been anciently Temples. To the South-West, about ten Miles distant, is that famous and great Mountain, call'd *Pfilla Vuona*, formerly Mount *Ida*; at four of the Clock it casts a Shadow on the *Labyrinth*. On it are many pleasant Monasteries, with Groves of Cypress-trees, and Abundance of Fountains. Some say the Coast of *Barbary* may be seen from the Top. From the *Labyrinth* to *Candia*, is about ten Hours riding, most in a Plain, till within ten Miles of the City. On the right Hand, about a Mile from the Road, is a most stately Monastery, dedicated to our blessed Saviour, which was built by Order of the Emperor *Constantine* the Great. It hath always been continued to the *Greeks*, and kept its Splendor till the late War, when it was much defaced.

There are in this Island Abundance of Monasteries, but very poor, and some are shut up for Want of Monks. *Candia Novo* is about six Miles from the City of *Candia*, Southward, being a strong Castle, having Mount *Jove* to the West. Here the *Turks* kept their Treasure and Ammunition in the Siege of *Candia*. It is seated very pleasantly on a rising Ground, giving a Prospect to the Sea. It is now chiefly inhabited by *Greeks*; the Castle has a Garrison of *Turks*, which the *Basha* intended to bring to *Candia*, and demolish the Castle, having writ to the Porte about it, but he had no Answer. *Candia* so famous, and generally known for the brave Defence it made against the *Turks*, appears by the Ruins, to have been one of the best Cities in the Mid-land Seas. It is seated on the Northside of the Island, almost Mid-way, between *Canea* and *Sittia*, in a pleasant Bay, having an artificial Port secured from the North-wind by a Mole about 200 Yards long, with a strong and large Castle at the Head, called *Castel del Molo*, having twenty great Guns. From the South is a low Point of Land, which runs into the Sea, North, that secures it from the Easterly Winds, and makes the Entrance not above thirty Yards wide; upon this Point of Land, the *Turks* have built a cover'd Way, with a very thick Wall, full of Holes for small Shot, strongly arch'd over, reaching from the Arsenal to the Entrance into the Port, where is a small Fort, with four great Guns, also very strongly arch'd over, so as no Bomb can deface it. At the Right-hand at coming out

of the Gate to the Mole, is a new Fort, built with four very great Guns, which lie level with the Water; over them are eight smaller Guns. This Fort is opposite to the Mouth of the Port, and is arch'd over to prevent Danger from Bombs or Wild-fire.

On the Mole are several great Guns, planted with Arches over them. To the East of the Arsenal is the old Castle, call'd *La Battaria del Arsenal*, which is rebuilt with a Ditch round it to bring in the Sea, most cut out of a firm Rock. The Port is almost round, and secure against any Wind for Galleys and smaller Vessels, but there is not Water enough for Ships of any considerable Bigness. It is filled very much with the Rubbish that the Rains carried into it from the City, and would certainly have been choak'd up in a few Years, had it not been for a *French* Merchant, one *Monsieur Dodei*, who to ingratiate himself with the *Basha*, caused an Engine to be brought from *Marseilles* to cleanse it. There are the Ruins of twelve Arches of the *Arsenal*, and about six Arches are yet entire, but they use them only to work in when the Gallies are there; no Gallies having been built here.

The City is not repaired towards the Land, where the Walls are so much shaken, that it will require a great deal of Time and Cost to fortify them. From the Port, towards the West upon the Wall, are fifty large Guns planted. The Fort of *St. Andrea*, at the Northwest of the City, is well repaired, having a double Wall toward the Sea. In all there are about 400 Guns planted on the Walls and Outworks, which are six Miles in Circumference. The Gates of *Candia* are the best I ever saw, the Arch or Gatehouse being about 100 Yards long; and the Gates ten broad; the Arch is all built of firm Stone. It will take up three Hours to walk round the Outworks; there are several Mines which were never blown up; every Mine had a distinct Name. I was in one Mine, which was above a Mile in Length, being above six Foot high, and three broad. All the Plain for above two Miles without the Walls, is like a new plow'd Field, where you cannot walk, but must see Pieces of dead Men's Bones. None are permitted to walk round the Works, but such as have a License, and a *Janizary* with them.

The *Turks* take a Delight to give an Account of the Strength of the Place, and especially will shew you a small Cave or Arch, where the *Venetian* General used to sleep, (as they tell you) to secure himself from the Bombs. Not above one eighth Part of the Houses that formerly were, are now inhabited, very few being left intire; nor do the *Turks* repair any but those where they dwell; the chief Mosque is well repaired; it was formerly a Church dedicated to *St. Mark*, and stands to the East of the great Piazza, to the South of it are part of the Walls of old *Candia*, close to which are built up a Row of Houses, two Stories high, for the *Janizaries*.

The *Basha's* Palace is a little below the great Mosque, on the other Side of the Way; opposite to it is the great Hall, formerly called, *La Sala di Consiglio*, which is a very stately Building; of white Marble, with several Works in *Basso Relievo* to the South East of it; stands the Church of *St. Francisco*, with an entire Cloister, which is now a Mosque. The Street from the Mole to the chief Piazza is in good Repair, being broad, and paved with large even Stones; the Houses are also well inhabited, but that part towards the West, is a Heap of Ruins, among which live the *Jews*, who have very large Houses; but some of their upper Rooms have no other Shelter from the Weather, but a few Matts made fast upon Poles. The Beams of the old Houses are bought up and carried to *Venice*, *Zant*, and other Places, and being made of *Cypress* Wood, they serve to make Chests and Cabinets, many of which have been brought to *England*. The Number of the Inhabitants of the City is not reckoned to be above 10,000, including *Greeks*. There is a continual Garrison of 2000 *Janizaries*, besides the *Basha's* Guards. Since the taking the Place, they have granted Liberty to all that will come to inhabit there, but all their Encouragement cannot bring the *Candiot*es to dwell there. Formerly the Plain was full of Olive-trees, with most beautiful Pleasure-Houses

Houses and Gardens. Now nothing but Ruins are to be seen.

The City stands on a rising Ground from the Sea, and the Houses were so built with Terrasses, that most from their Tops could have a Sight of the Sea. From *Candia* to *Retimo* is about twelve Hours Riding. The City stands on a Point of Land very pleasantly, having a Port to the East, which is almost choak'd up, so as no Galley can get over the Bar, being laden, but Brigantines and smaller Vessels are very secure against all Winds. Towards the Sea are no Walls, the Rocks there fortifying the Place, so that no Enemy can come but by Land. This Place was the first the *Turks* made themselves Masters of, putting all to the Sword, to strike the greater Terror into the rest of the Island. Since they possessed it, they have built three new Forts towards the Sea, and a Wall, with a dry Ditch to Landward.

It is now chiefly inhabited by *Turks*, who trade to *Constantinople* considerably. The Houses are here entire, according to the *Venetian* Manner of Building. There are some *Greeks* that dwell in the City, but they have a small Town about a Quarter of a Mile off, in which are two Churches, where they have the free Exercise of their Religion. The Country hereabouts is very pleasant, full of Olive-trees, and from the Sea-side the Land rises easily to the Foot of the Mountains of *Sfacia*, about eight Miles from the City, which from the Sea seems to be all a Wood; from which Mountains run several pleasant Streams, and one very large River, called *Platonica*, which is continually full, being supplied from above a thousand Fountains, which the Mountains produce.

These Mountains of *Sfacia* are abounding in all Things necessary for Life, and Nothing can be more delightful in the Summer-time. They reach near thirty Miles towards the South-West, and in some Places about ten in Breadth, coming down close to the Bay of *Suda*. The Cheese which is made here is bought up by the *Venetians* and other Merchants, and transported to *France*, *Italy*, *Zant*, &c. It is the best Cheese that is made in any of the Southern Parts, and generally as good as our *Cheshire* Cheeses, being made as big; besides which, they have great Plenty of Honey, Wax, Silk, Wooll, *Cordovan* Leather, and a Sort of Goats-hair little inferior to that of *Angora* in *Asia*. No Olives, Oranges, or Lemons grow here. There are above an hundred Villages on these Mountains, besides several Monasteries. The Inhabitants are a warlike People, and withstood the *Turks* above twenty Years after *Retimo* was taken, living as the *Mainiotes* in the *Morea*. There are such difficult Passes to them that an Army cannot march. Now at last they are brought into Obedience, and by humbling themselves to the Vizier, he granted them great Privileges to encourage them, lest they should take Part with the *Venetians*, who have the Island of *Suda* so near them.

As the Vizier pass'd by, in his Way from *Canea* to *Candia*, they brought him several Presents the Mountains produced, which he was so well pleased with, that he exempted them from going with him and paying their Attendance on him, only he obliged them to furnish the Camp with Mutton at a certain Rate. Most of his own Provision was carried from hence, Sheep at three *Timins* (about a Shilling) a-piece; Butter at a *Timin* the Oke (a Groat for two Pound eight Ounces); Cheese at the same Rate, and at this Price they were obliged to carry it as far as the Camp before *Candia*, where an Officer gave them an Acquittance, which was abated them out of their Tribute. They have a certain Drug, called by the *Venetians* *Oldain*, much of the Colour of Liquorice in Balls; it is a very great Comforter of the Head, having a pleasant Smell, being burnt it gives a pleasant Scent. Most of this is bought up by the *Venetians*, and sent to *Venice*. Here is also a Sort of Wood which the *Greeks* call *Plaete Excillo*; it burns like a Torch, and gives a most fragrant Smell; much of it was used to burn at the Siege. Every Night, at the Vizier's and other great Men's Tents, they had Fires of this Wood, the Wood being cut small, and put into an Iron Grate

at the End of a Poll fastened in the Ground. If a Man be hot in the Plain in riding two or three Hours up the Hills, he shall find so great an Alteration in the Air as is incredible.

About fifteen Miles from *Retimo* is a lovely Fountain called *Bognare Bashe*, standing so between two Mountains, that at Two in the Afternoon it is shady, continuing so all the rest of the Day. The Water is so cold as will cause a Dew upon any Fruit that is put into it; and tho' a Man ever so hot should drink of this Water, it will do him no Harm. In the Summer-time here are always some Persons of Quality, who bring their Beds, and continue for several Days together. The *Sfaciotti* are a healthy, strong and stout People; they pretend to be of a very ancient Stock: Some there are, who derive their Families from before the Coming of our Saviour. I saw a *Callojero* that was one hundred and ten Years of Age; he was very lusty, and could walk very well with a Staff. Part of these Hills are under the Jurisdiction of the Bishop of *Retimo*, and Part under that of *Canea*. From *Retimo* to *Canea* the Road is most by the Sea-side, passing by the Bay of *Suda*, having the Mountains of *Sfacia* on the Left Hand.

Canea is seated in a fine Plain, about three Miles from the Bottom of the Bay of *Suda*, and upon the Sea to the North, having a very fair Harbour, which may be called a double Port, the one being round, the other stretching away to the Eastward, where are two Arsenals. It is secure against the worst of Weathers. The Entrance is narrow, and not above eighteen Foot Water; to the West of which the *Turks* lately have built a new Battery with twenty very large Guns; and above it, to the South, is a great Cittadel, in which are forty good Guns. To the East of the Entrance is another great Castle, which commands the Port called the *Sabioniera*, with the Arsenal. Round about the Port is a broad Key, which is always crowded with Merchandize, and is little inferior to the Port at *Marseilles*. The Houses are all well built, and not much battered. The Walls are in very good Repair, having a dry Ditch about thirty Yards broad, and six deep from the Land on the other Side. The Walls are about thirty Foot high; within them the Earth is raised about ten Foot higher than the Walls, there being a Walk between. There is a Mount, which they call the *Marteningo*, where formerly were ten Guns; but now it is of no Use. Toward the Land there are four Bastions; to the South is the great Gate called *La Porta di Retimo*; to the West is a Mace placed on the Wall, to shew where a *Basha*, at the Taking of the Place, first entred the City: Before the Gate is a Half Moon built of Earth, about twenty Foot high; at each End is a small Pyramid of Mortar and Sculls, which are the Sculls of Christians who were slain before the Place in the Year 1666.

The *Venetians* then attempting to regain the Place under the Conduct of Marquis *Vila*, a *Savoyard*, 5000 Men were landed at *Culatte*, at the Bottom of the Bay of *Suda*, and were encamped before the City several Days. The *Turks* sallied out of the City to the West, surprising the Christians, and had a very great Victory, pursuing them to the Fort, which was built at the Bottom of the Bay. In this Flight there were above 1500 killed, and several taken Prisoners; amongst the latter was one Captain *Scot*, a *Scotsman*, who had his Hand upon the Drawbridge of the City; he was carried afterwards to *Smyrna* in the Gallies, and there redeemed by the *English* Merchants: But when he came to *Venice*, his Arrears were paid him, and he returned his Ransom to *Smyrna*, which remains there in Bank till another like Occasion should present itself. The City is near three Miles in Circumference, and is much better inhabited than *Candia*, having a *Basha* and other Officers, as in *Candia*, only in all Councils the other hath the Precedence.

The Country about is very pleasant, being all a Plain for above six Miles to the South and West, planted with young Olive-trees, so that it seems to be a Garden. It is well supplied both with Flesh and Fish; of the latter there is great Abundance, for besides the Sea, there is a Lake about ten Miles to the South, which furnishes them

them with great Variety of all Sorts. The Trade is much greater here than at *Candia*, it lying so convenient for the *Morea*, *Italy*, and other Places. The *French* have a great Trade for Oil, Wool, Wax, Cheese, and several other Commodities, having a Consul and two Merchants. The *Venetians* have also a Consul, but most of their Oil is shipped off from *Suda*, to which Place it is brought from *Retimo* and other Places thereabout. All great Ships come to an Anchor at a Place called *St. Todor*, being two small Islets, about five Miles to the West of the Port of *Canea*. There is very good Anchorage, and a small Fort to defend them. On one Island, notwithstanding it seems to be all Stone, and is very low, there are several Fountains of good fresh Water.

No *Greeks* live within the City. They have a new Town built to the South, about half a Mile off, where are two long Streets very commodious, and here they enjoy entire Liberty; their Churches are open, and the Bishop hath a very pleasant House, living in good Esteem. Close to this Town runs a pleasant River, which is seldom dry; there are likewise several pleasant Gardens well stocked with all Sorts of delicious Fruits. The *Turks* have also some Gardens here, but they must retire into the City an Hour before Sun-set, Winter and Summer, or else must remain out all Night, the Gates being then shut, and a strict Watch kept about the Walls. The *Turks* of this Place are generally very rich, and incline to Trade, giving all Encouragement to have Merchants come and reside amongst them. There was an *English* Merchant here, one Mr. *Trenchard*, who was recommended to the *French* Consul to have his Assistance, but in a little Time he grew weary of the Place.

Here they keep their Oil in great Vessels called *Tini*, which are square and made of Wood, some will hold twenty Tuns. They have a special Regard to preserve the Esteem of their Oil, nor will they force a Merchant to take any longer than it comes clear, not mixing the Bottoms, as in some Parts they will, by taking a hollow Cane, and putting it to the Bottom, by blowing through which they raise the Foot of the Oil, so that thick and thin goes together. Here they sell the Foot of the Oil at an under Price, and this serves to make Sope. Most Parts of *Turkey* have an Esteem for *Canea* Oil above others. Some will have it to be the better for that the Trees are all so young; others impute it to their Care in the making, for here they gather all their Olives, whereas in the *Morea*, they thrash them down with Poles. The Wines are generally esteemed above all others. The red Muscadine they call here *Leattico*, it is a richer Wine than Tent at *Cadiz*, and much more pleasant; I have seen it sold at fifteen Gallon, for half a Dollar. White Muscadine is not so good, as that of *Luxuria* in *Cefsalonia*. Some are of Opinion, that in the War, the true Muscadine Grape was lost; on the Mountains, there are smaller Sorts of Wines, so as a Man may have what Sort he pleases.

All Sorts of Provisions are very plentiful, but in the Summer-time the Mutton hath generally a bad Taste, which proceeds from their Feeding on some Herb on the Mountains. Here are Fowls of all Sorts in Abundance, but especially a Bird called *Beccha figgo*, which is almost a Lump of Fat; they are valued about four for an Asper, or eight for a Penny. Turtle-Doves and Quails are very plentiful. Their Beef is small, but very sweet. Of Fruits there is no Sort but what they have. I never saw larger Pears than are brought from the Mountains, being a Sort of Sugar Pear. The Musk Melons are very good, but their Water Melons are singular, Salating there is all the Year of all Sorts; no Place is esteemed to have larger and better *Endive* and *Carduus* than there are here. I have seen Sugar Canes of a great Height, full as good as what are brought from *Grand Cairo*. There are Abundance of Simples which are bought here for *France* and *Italy*.

Some say the Reason why no venomous Thing will live on this Island, is the Quantity of *Dittamo* that grows here. Others say it has only been since *St. Paul* set Foot upon the Island. Most of the *Candiot*es pretend to have great Knowledge in Simples. The Women are

experienced Doctresses. One I have Reason to say was very skilful, she having in a little Time wrought a great Cure upon me; for by Accident a Bullet having past through my Leg, I applied myself to her, and in fifteen Days she cured it. She did not allow me to eat any Flesh till it was perfectly well. They have several Antidotes against the Plague, but they had not the Effect they pretend to, for several of the Doctresses were swept away by that Disease; but most certain it is, that after *St. John Baptist's* Day it did here abate, as they always observe it to do in most of these Eastern Parts.

There are several other Places that have had the Name of Cities, which are now Heaps of Ruins; many hundred stately Palaces there were, that now have only some Walls, and those mostly fallen down. The *Candiot*es keep their Habit, that is, the Women; but the Men are dressed *alla Turcheffa*, especially the better Sort. They are as ignorant of the Antiquity of their Country, as the *Mereotes*, that have been above 200 Years in Slavery. There is no *Latin* Church upon the whole Island, as I was inform'd, but what is shut up, or converted to the *Turks* Use. Before the *Turks* conquered this Island, there were above a Million of Souls, whereas now there are not 80,000, of which not above 30,000 *Turks*, on the whole Island.

The Islets, which the *Venetians* have about the Island of *Candia*, are *Carabusa* to the West End of the Island, about six Miles from the *Main*, having a very good Port between the Islet and the main Land: The Castle is very strong, mounting about eighty Guns. In the late War it withstood several Assaults, but lying so far from any considerable City, the *Turks* did not so much Mind it as they did *Suda*. Here is a Garrison of *Venetian* Soldiers, and a Proveditore, who is under the Inquisitore at *Suda*. In Time of Peace with the *Turks*, they have a continual Trade and very good Correspondence with them, having all Sorts of Provisions at very reasonable Rates.

Spina Longa lies about forty Miles to the East of the City of *Candia*, at the Entrance of a great Bay. The Islet is not above a Mile and a half about; it has a very good Fortification round it, besides it is steep all round, so as an Enemy cannot well Land. It is not above a Mile from a Point of land, where the *Turks* raised a Battery, and continued for a Week to batter the Castle, but to little Purpose, for most of their Dwellings are in Caves under Ground. Here and at *Carabusa* there is no Water but what is brought them by Shipping, or what they save in great Cisterns and Jars. Here is also a Proveditore, and a Garrison of *Venetian* Soldiers.

Suda lies in a great Bay, about thirty Miles from *Retimo*, West, twelve Miles from *Canea*, and nine from the Bottom of the Bay South-East, having the Land to the South about a Mile, on the North North-west, not above half a Mile distant. This Island is about two Miles in Circumference, not above fifty Foot above Water at the highest Part, being all rocky and steep. To the South-west lies a long Rock about ten Foot above Water, and not above twenty from the Island; against it is the Entrance up to the Castle, very steep and winding, having two Gates and a strong Counterscarp, before you pass into the main Castle. The Wall about the Island is low but very thick.

To the West is a Mount, called *Il Marteningo*, about thirty Foot high, and three hundred in Circumference, very strongly built with small Stone and Mortar, which has above 1000 Shot in it. They are so fast in, that it would endanger its falling, if they should be pulled out. The Fortifications of the Castle are quite round, the Islet, wherein, and upon the *Marteningo*, are about 120 Guns planted. The *Turks* have several Times attempted to take this Place, and to that Purpose, in the Year, 1659, they built six Castles, three on each Side of the Bay, from whence they continued to batter it, and secured the Harbour so as no Ship or Gally could come to bring them Succour, but what in the Night small Vessels would adventure to get in.

In the Year 1665, the Captain *Basha* attempted to reduce it; he came with forty five Gallies, but durst not

not adventure to land any Men. He caused the Gallies to batter that Part of it which is towards the Sea, while on the other Side they continually fired from the six Forts. The *Venetian* Fleet was so dispersed, that they could not come to relieve them. The Besieged were much streightened for Provisions, but most for Want of Water; for above a Month they had but a Pint a Day, and were so disheartned, that they were near inclining to surrender the Place. But it pleased Good to shew them his Goodness in a signal Manner, by a Shot from the Enemy, which struck a Piece of Rock asunder at the Bottom, a little above the Sea, out of which sprang a Water which sufficed them to drink. I have seen the Fountain, and drank of the Water, though it is not very pleasant. Several Officers that were in the Island avowed this for a Truth, it being noted in the *Venetian* History of *Suda*. The Winds coming about Northerly, the *Venetian* Fleet came from *Zante*, forcing the *Turkish* Gallies to retreat. The Captain *Basha* was killed with a great Shot, upon which the Army broke up and retired to *Canea*.

The Vizier, in his March from *Canea* to *Candia*, passed by here, and with Admiration beheld the Place, but would not attempt any Thing at that Time, saying, it was not worth the Men which had been already lost against it. The Port is very commodious, being one of the largest in all these Seas, and there is very good Anchorhold all over the Bay, at the Bottom of which are Salt-pans. The *Turks* have here a small Tower, where are two or three Servants of the Customer of *Canea*, to see that no Goods are carried away which have not paid Custom at the City. In Time of Peace they have all Provisions from *Canea* at the Market Price, and there is a good Correspondence betwixt the *Inquisitore* of *Suda* and the *Basha*, who often send Letters to one another. The Governor of *Suda* hath the Title of *Inquisitore Generale delle Isole di Levante*; *Cerigo* and *Tine* being also under his Government, although there be *Proveditors* to both. The *Venetians* have no Benefit from these Islands, but are at a continual Charge to maintain the Garrisons in each. The Bottom of the Bay they call *Cullatte*.

23. In collecting the Materials for this Section, we have met with some more distinct and connected Accounts of the Military and Naval Forces of the *Turks*; which, as they come in properly enough at the Close of this Description of their Dominions, shall be here inserted; the rather, because they will enable the Reader to discern what Probability there is of those Events happening, which were mentioned in the last Section. It is with Bodies Politick, as with the natural Bodies; they get over even violent Diseases when attacked in their Youth; but when Infirmities grow upon them in their old Age, they seldom, if ever, escape. The most that can be hoped for in such a Case, is a gentle and gradual Decay; but even this can hardly be expected in some Constitutions. That of the *Turks* has neither Food nor Physick, but continual Wars. If these are successful they thrive; if not, their Distempers increase, and their political Diseases grow more and more dangerous. It is not with them as with States of another Texture, where the Laws themselves will, for a long Time, maintain the Form of the Government by the Respect the People have for them. In these Countries the Laws are derived from the Will of the Grand Signior, and consequently they are good or bad, wise or otherwise, according to the Temper of the Prince. Whenever, therefore, it happens, and in the Decline of every Government it generally happens, that a Race of weak and degenerate Princes succeed to the Empire; this alone must bring on its final Ruin, which might, perhaps, have been diverted by the Intervention of a great Genius. It would be no difficult Thing to bring many Instances in Support of this Doctrine, both from ancient and modern History; but that it is high Time to leave our Reflections, and come to Matters of Fact, which, we dare promise the Reader, are important enough to deserve, and sufficiently curious and entertaining to command his Attention.

Though the greater Part of the *Turkish* Infantry carries the Name of *Janizaries*; yet it is certain, in all this great Empire, there are not above twenty-five thou-

sand who are true *Janizaries* or *Ianizaries* of the Porte. This Soldiery was once composed only of Tributary Children, instructed in the *Turkish* Religion; but at present this is not observed, and People are not molested on this Account, since the Officers take Money of the *Turks* themselves to be entred in this Body. Formerly the *Janizaries* were not permitted to marry, the *Turks* being persuaded, that the Cares of a Family render Soldiers less fit for the Exercise of Arms. Yet now-a-days they who will, marry, with the Consent of their Chiefs, who also at the same Time give them a Sum of Money. The principal Reason, which keeps the *Janizaries* from marrying, is, that Batchelors only arrive at Offices, the most desirable of which are to be Chiefs in their Chambers; for this Soldiery are all lodged in a large Quarter, divided into one hundred and sixty two Chambers. Every Chamber has a Chief, who commands in it; but out of it he only performs the Office of Lieutenant of the Company, and receives Orders from the Captain. Every Chamber has its own Ensign-bearer, its Expenditor, its Cook, and its Water-Carrier. Above the Captains there is only the Lieutenant-General of the *Janizaries*, who is subject to the Aga.

Beside the common Pay, the Emperor gives the *Janizaries* every Year a compleat Suit of Cloth of *Salonica*, and every Day allows them a Quantity of Rice, Meat, and Bread. The Chamber lodges them for One half *per Cent.* upon the Pay they receive in Time of Peace, and seven *per Cent.* in Time of War. This Pay is but from two to twelve Aspers a Day, and is never raised but by little and little in Proportion to their Service. When they are disabled they have an Allowance for Life. The Cap peculiar to the *Janizaries* is made like the Sleeve of a Coat, one End is put upon their Head, and the other hangs down upon their Shoulders; to this Cap before is fastened a Sort of Spike half a Foot long, of Silver, gilded and adorn'd with some false Stones. When the *Janizaries* march into the Field, the Sultan furnishes them with Horses to carry their Baggage, and Camels to carry their Tents, to wit, one Horse for ten Soldiers, and one Camel for twelve. At the Accession of every Sultan their Pay is augmented at least one Asper a Day.

The Chambers inherit the Effects of those Members who die without Children, and the rest, though they have Children, always leave their Chamber a Legacy. The *Solaks* and *Peyes* alone among the *Janizaries* are the Emperor's Guard; the rest of the Corps never go to the *Seraglio* but to attend their Officers upon Divan Days, and to prevent Disorders that might happen in the Court; they are generally placed Centinel at the Gates and the Cross-ways of the Town, to keep Watch there. They are feared every where, and respected, tho' they carry only a Cane in their Hand, for Arms are not delivered to them but when they take the Field. The greater Part of the *Janizaries* do not want for Education, being taken from the Body of the *Azamoghlans*, which either through Impatience, or on some other Account, they frequently forsake. Those who are to be admitted among the *Janizaries*, pass along in Review before the Officer, and every one takes hold on the Bottom of his Companion's Vest. Their Names are entred in the Grand Signior's Registry, after which they all run up to the Master of their Chamber, who, to make them know they are under his Jurisdiction, gives them every one a Box on the Ear as they pass by. At their Inrollment they take two Oaths; the first is to serve the Grand Signior faithfully; the second, that they will not submit to the Will of their Comrades in Matters relating to the Body.

There is no Order of Men in *Turkey* so united as that of the *Janizaries*; it is this strict Union which preserves their Authority, and gives them the Courage sometimes to depose the Sultan. Though there are but twelve or thirteen thousand in *Constantinople*, they are assured that their Brethren, what Part soever of the Empire they are in, will not fail to approve their Conduct. If they think they have Occasion to complain, their Discontent begins to shew itself in the Court of the Divan, at the Time of the distributing the Dishes of Rice

to them, prepared in the Grand Signior's Kitchen : For they eat it quietly, if they are contented, and on the contrary, they throw the Dishes on the Ground, and turn them topsy turvy, if they are out of Humour at the Ministry. There is no Insolence they scruple to utter at such a Time against the principal Ministers, being well persuaded they shall obtain Satisfaction ; for this Reason the most favourable Opportunity is taken early to prevent their Rising, especially at the Time when they give them several Days Pay together.

The Mutinies of the *Janizaries* are much to be dreaded : For how often have they in an Instant changed the Face of the Empire ? The fiercest Sultan's and the most skilful Ministers have often found how dangerous it was to keep on Foot, in Time of Peace, a Militia who so well understand their own Interests. They deposed *Bajazet II.* in 1512 ; and promoted the Death of *Amurat III.* in 1595. They threatened *Mahomet III.* with Dethronement. *Osman II.* who had sworn to destroy them, having imprudently disclosed his Design, was disgracefully treated by them, for they made him walk on Foot to the Castle of the seven Towers, where he was strangled in 1622. *Mustapha I.* whom this impudent Soldiery put in *Osman's* Room, was deposed two Months after, by the same Hands that advanced him. They also put to Death Sultan *Ibrahim* in 1649, after they had dragged him ignominiously to the seven Towers. His Son *Mahomet IV.* was not so unhappy indeed, but they depos'd him after the last Siege of *Vienna*, which miscarried yet only by the Fault of *Cara Mustapha* the prime Vizier. In this Sultan's Stead was preferred his Brother *Solyman III.* a Prince of no Merit, who was also deposed in his Turn sometime afterwards, as others have also been.

With Respect to the Sultane's Mother, the *Viziers*, the *Caimacan*, the first Eunuchs of the *Seraglio*, the Grand Treasurer, and their *Aga* himself, the *Janizaries* value them not, and demand their Heads upon the least Uneasiness. All the World knows how they used, at the Beginning of this Century, the *Mufti Fesullah Effendi*, who had been Preceptor of Sultan *Mustapha*. This Prince who loved his Tutor blindly, was not able to prevent his being drawn upon a Hurdle to *Adrianople*, and thrown into the River. The only Expedient which could ever be devised to repress the Insolence of these Soldiers, was to encourage the *Spahi's* against them, and thereby make them jealous one of another, but they agree together too well upon certain Occasions. It signifies nothing to change their Quarters, for as the Absent always stand to what their Fellows have done, it is impossible to avoid their Fury, when they have once taken it into their Head that they have suffered some great Injustice. The History of the *Turks* can furnish few Examples of their having been appeased, without considerable Largeesses, or without its costing the first Officers of the Empire their Lives.

They have never dar'd to confiscate the Treasure of the *Janizaries*, nor to share the Goods their Officers possess in Property, in several Parts of *Asia*, as at *Cataya*, at *Angora*, at *Caraisfar*, and in other Places. When the General dies, the Treasurer inherits his Goods ; he is the only Officer whose Effects are not seiz'd to the Emperor's Profit. This General has the Privilege of presenting himself before the Sultan with his Arms at Liberty, whereas the Prime *Vizier*, and the other great Men of the Port, never appear in his Presence, but with their Arms across their Breast, which is rather a servile than a respectful Posture.

After the *Aga*, the Principal Officers of the *Janizaries* are the *Aga's* Lieutenant, the Grand Provost, the Captain of the Serjeants, who march by the Emperor's Side upon Days of Ceremony, the Captain, of his Foot Archers, and the Commander of his Pages, on Foot ; these last as well as the Archers, march by the Grand Signior's Person when he walks through the City. They are but threescore, and wear Caps of beaten Gold, embellish'd before with Milk white Feathers. As for the Foot Archers, or Archers of the Guard, they are in Number three or four hundred, and in a Day of Battle, they are about the Sultan, arm'd only with Bows and

Arrows, that they may not frighten the Grand Signior's Horse. Their Habit is a Coat of Cloth, tucked up at the Corners as high as their Waist, so as to shew their Skirts ; their Cap is Cloth, and ends in a Point, and is adorn'd with Feathers, in Fashion of a Plume. These Archers shoot with their left Hand, as well as with the right, which they are taught, that so they may never turn their Back upon the Sultan : When he passes over Rivers, they swim by his Horse, and sound the Fordings with all the Diligence imaginable : As a Reward, the first Time the Sultan passes the River, he causes a Crown a Piece to be given to every one who was up to the Knee in Water, and if they were up to the Middle, they have two Crowns, and three if they were above the Waist. Out of the Body of the *Janizaries* are taken the Gunners, and those who take Care of the Arms.

The Gunners are about twelve hundred, and receive their Orders from the Grand Master of the Artillery ; they live at *Topana*, in Apartments divided into fifty two Chambers ; but it is very happy that they are not as dextrous as the Christians in the casting and managing Artillery. They who look to the Arms are six hundred in Number, divided into sixty Chambers ; they lodge in Apartments near *Santa Sophia*. They not only take Care of the ancient Arms which are in the Arsenal, but of those of the *Janizaries* and *Spahi's*, which they deliver out to them in good Order, when they are going into the Field.

Besides the *Janizaries* now mentioned, all the Provinces of this vast Empire are fill'd at present with Foot Soldiers, who bear the Name of *Janizaries* ; but these *Janizaries* of the second Order are not inrolled in the Body of *Janizaries* of the Port ; and have nothing of the ancient Discipline of the *Turks*. All ill Persons who would skreen themselves from the ordinary Courts of Justice, and honest Persons also who are willing to cover themselves from the Insults of others ; they who would escape the Taxes, and be excused from publick Offices, purchase of the Colonels of the *Janizaries* who are in the Towns of the Province, the Title of *Janizaries*. They are so far from receiving Pay, that they give several Aspers a Day to these Officers to enjoy those Privileges ; sometimes they pass for Invalids, or Pensioners for Life, and live quietly at Home, without being obliged to go into the Army. Is it surprising after this, that the *Turkish* Forces are so much diminished ? They never have had so many Soldiers, nor such small Armies. The Officers who are obliged to take the Field, pass their own Domesticks for Soldiers, and put the Pay of those who ought to bear Arms in the Prince's Service into their own Pockets. The Corruption which is introduced into this great Empire, seems to threaten it with some strange Revolution.

Neither must we confound with the *Janizaries*, another Sort of Infantry, call'd *Azapes* and *Arcangi's*. The *Azapes* are the old *Mussulman*-Bands, more ancient than the *Janizaries* themselves, but very much despised. They serve for Pioneers, and sometimes are merely a Bridge to the Horse in marshy Grounds, and so many Fascines to fill up the Ditches of a Place besieged. The *Arcangi's* have no more Pay than the *Azapes*, but are appointed only to ravage the Frontiers of the Enemy. Yet in full Peace, (for the War is not esteemed to be declared, unless the Artillery be drawn into the Field) they are perpetually making Incursions and pillaging their Neighbours. If any one among these Troops happens to become a good Soldier, after some vigorous Action, he is entered in the Body of *Janizaries*. This is the State of the *Turkish* Infantry, nor is that of their Cavalry at present one Tittle better ; it is composed of two Sorts, known by the Name of *Spahi's*, but they must be carefully distinguished.

The one are upon the Emperor's Pay, and the other not. The *Spahi's* in Pay are divided into several Standards, the Principal of which are the Yellow and the Red : Those who have no Pay are of two Sorts, the *Zaims* and the *Timariots*. The *Spahi's* in Pay are taken from among the *Ichoglams* and the *Azamoglans*, who have been bred up in the Grand Signior's *Seraglio's*. Their lowest Pay is twelve Aspers a Day, and the

the highest a hundred. Those who come from *Ichoglans* generally begin with twenty or thirty, which are increased according to their Merit or the Interest of their Friends. In Time of War all the Spahi's in Pay, who bring in Heads of the Enemy, are advanced two Aspers a Day; and they who first acquaint the Sultan with the Death of any of their Comrades, are raised as much. The Spahi's are paid in the Hall, and in the Presence of the Grand Vizier or his Chiaia, in order to avoid all Occasion of Complaint.

Though the Spahi's are born of unknown Parentage, they may yet be looked on as the Nobility of the Country; their Education makes them more accomplished than the other *Turks*, and in every Place good Manners ought to constitute a real and true Nobility. Those of the Red Standard were heretofore only Servitors to the Yellow; but now they are all equal, and the Red have even overtaken under *Mahomet III.* who in a Battle in which the Spahi's of the Yellow gave Ground and fled, restored the Fight by the Valour of the Red. The Arms of both are a Lance and a Scymiter, and they make Use of a Dart, which they manage with wonderful Dexterity, and the Dart has a Steel Point at one End, and is about two Foot and a half long. They also carry a Sword, but it is fasten'd to the Saddle, and hangs down upon the Horses Thigh, so as not to hinder them in discharging their Pistol and Carbine. Some likewise use Bows and Arrows, especially the Spahi's of *Anatolia*; for those of *Europe* or *Romelia* rather chuse the Arms in Use with us. These Troops, however, fight without Order and in a Crowd, instead of throwing themselves into Squadrons, and rallying regularly.

Mahomet Kuperli the Grand Vizier, who was a great General, was so far from bringing them to Discipline, that he affected to humble them and keep them ignorant, for Fear of increasing their Insolence, since which Time they have extremely lost their ancient Reputation. They bastinado them now on the Soles of the Feet, lest, if they scourged them, they should be disabled from mounting their Horse; and for a contrary Reason the *Janizaries* are scourged, because they are obliged to use their Feet in marching. When the Grand Signior goes to command his Army in Person, he causes large Sums to be divided among the Spahi's. One Spahi and a Janizary are placed Centries at each Cord of his Tent, and the same at the chief Vizier's. The other Standards of the Spahi's are the White, the White and Red, the White and Yellow, and the Green. The most famous Spahi's are those called *Mutafaraca*, who receive forty Aspers a Day. The Emperor is their Colonel; their Duty is to attend upon him: They are about five hundred.

As to the other Cavalry, called *Zaims* and *Tamariots*, they are Persons to whom the Grand Signior gives certain Commands, term'd *Timar*, for Life, on Condition they maintain such a Number of Horse for his Service. The first Sultans, being Masters of the Fiefs of the Empire, erected Baronies or Commands out of them, to reward any extraordinary Services, and principally for raising and subsisting a Body of Troops without issuing Money. But it was *Solyman II.* who established the Order and Discipline of these Baronies, and settled by his Decrees the Number of Men each one should be obliged to find. This Body has been not only very powerful, but very celebrated also through the whole Empire. But Avarice, the common Vice of the East, has made them decline several Years ago. The Viceroy and Governors of Provinces prevail so far by their Intrigues at Court, that even the Commands which lie out of their Government are given to their Domesticks, or to them who offer the most Money. The *Zaims* and the *Timariots* differ little more than in their Income. The *Zaims* have the most considerable Commands, and their Revenues make from 20,000 to 818,819 Aspers. If they produce even an Asper above this, it becomes the Property of some Basha. Also when a Commander dies, his Command is divided, supposing the Income of it has been augmented under the Deceased, as it commonly happens to be, for they are generally improved rather than lessened.

The *Zaims* are obliged to maintain at least four Horse, which is after the Rate of one Man for 5000 Aspers of Rent. There are two Sorts of *Tamariots*, the one receive their Provisions from the Port, the other from the Viceroy of the Place; but their Equipages are less than those of the *Zaims*, and their Tents are smaller and proportioned to their Revenue. They who receive their Patents from the Court, have from 5 or 6000 to 19,999 Aspers; if they should receive one Asper more, they would pass into the Rank of *Zaims*. They who have their Patents from the Viceroy, have an Income from 3000 Aspers to six thousand. Every *Timariot* is bound to provide one Horseman for every 3000 Aspers his Income produces. The *Zaims* and *Timariots* are obliged to march in Person to the Army on the first Orders, and nothing can excuse them. The Indisposed are carried in Litters, and their Children in Baskets and Cradles. The *Timariots* must furnish Baskets to their Troopers, to carry Earth for filling up Ditches and Trenches. These are better disciplined than those who are properly called the *Spahi's*, though the *Spahi's* are more performable and lusty; and whereas the last never engage but in a Crowd at the Head of the ancient Cavalry, the *Zaims* and *Timariots* are divided into Regiments, commanded by Colonels under the Basha's. The Basha of *Aleppo* is Colonel General of this Body of Horse when he is in the Army, because being Seraskier of the Army by his Place, it belongs to him to command in Chief during the Absence of the Grand Vizier.

It is not strange that the *Turks* are so weak at Sea, because they want good Mariners, skilful Pilots, and experienced Officers. The Pilots of the Grand Signior scarcely know how to use the Compass, and those of the Saicks, which are their Merchant-ships, certainly understand Nothing of it. They steer by their Knowledge of the Coasts, which is very erroneous, and they generally trust themselves in long Voyages, as to *Syria* and *Egypt*, to *Greeks* who have run the Course with *Christian* Privateers, and have got the Track of the Countries of *Asia* and *Africa* by Rote. However, if the *Turks* would apply themselves to Navigation, they would easily become Masters of the *Mediterranean*, and chase away the *Corfairs* who do so much Mischief to their Traffick. Without reckoning the Supplies they might draw from *Greece*, or the Isles of the *Archipelago*, *Egypt*, and the Coast of *Africk*, the *Black Sea* alone would furnish them with more Wood and Rigging than are needful for even a very formidable Navy. At present the Maritime Forces of this great Empire are reduced to twenty eight or thirty Men of War, and they arm not above fifty Gallies.

The *Turks* had much more powerful Fleets in the Time of *Mahomet II.* of *Selimus* and *Solyman II.* but they never made any great Expeditions. Since the War of *Candia*, they have mightily neglected the Sea, and perhaps would have done so much more, if *Mizomorto* the Captain-Basha had not in our Days restored and improved their Navy. The Advantage which arose by the Sea to the Islands of *Spalmadori*, under the *Venetians*, made him set a wonderful Value upon the Island of *Scio*, and gave the *Mahometans* fresh Spirits. He was a Man of extraordinary Capacity for the Sea, and tried all Methods to engage *Christian* Officers in the Grand Signior's Service. The Sultan may now have six or seven Renegado Captains, who are well experienced; but the Seamen know nothing of the Tackle, and the Gunners are miserable to the last Degree.

The Successor of *Mizomorto* was but little esteemed. *Adram* a Basha, who was named the Admiral upon the Death of the other, was able to have brought the Condition of the *Turkish* Navy to Perfection, if some, who envied him, had not got him strangled a little after his Promotion. He was known among the *Turks* by the Name of the Basha of *Rhodes*, and among the *Christians* by that of the Butcher's Son of *Marseilles*. He was taken very young in a Ship belonging to that City, and was so unhappy as to turn *Mahometan*. He had the Character among the *Turks* of a very upright Man, and very disinterested. It is said, that as he was going the Round one Day to execute Justice at *Scio*, he asked

to whom three or four She-Ases belonged, which were loaded with weighty Stones, and were tied to the Door of a certain House; and understanding their Masters were hard-by at Breakfast, he passed on; but at his Return, being disturbed to find the poor Creatures were still in the same Condition, and that no Care had been taken to feed them, he sent for their Owners, and told them, it was but just that the Ases should eat in their Turn. The Peasants readily assented; but were surprized, when he order'd each to bear one of the Stones upon his Back all the Time the Ases were eating. The same Story is also told concerning Sultan *Morat*.

The Post of Captain-Basha is one of the noblest in the Empire. He is great Admiral and General of the Gallies; his Power is absolute when he is out of the *Dardanelles*, so that he can strangle the Viceroys and Governors who are on board, without waiting for the Sultan's Order. The Grand Vizier is the only Minister who is above him: It is the second Post in the Empire, and he is accountable to the Grand Signior alone. Not only the Sea-Officers, but all the Governors of the Maritime Provinces likewise receive Orders from him. At *Constantinople* there are not above twenty eight or thirty Men of War. The Gallies are distinguished into two Classes, namely, those of *Constantinople* and those of the *Archipelago*; those of *Constantinople* are at Sea only in the Summer. At the Close of the Campaign they are disarmed, to be laid up in the Arsenal of *Cassum Bassa*; the greater Part of the Beys or Captains are Renegades. Besides the Body of the Galley, Artillery, and Bisket, the Emperor also allows them Pay, and the rest of their Equipage, which consists of two hundred Oars, and a Boat to go on Shore.

If the Captains are rich enough to subsist their Slaves who row, they make a considerable Profit, for they are allowed twelve thousand Livres for Rowers, and make an Advantage also of the Journeys in which they employ their Slaves by Land during the other Part of the Year. When there are not Rowers enough, they press the Slaves of private Men at *Constantinople*; but very little Service is done by these poor Wretches, who have no Experience, and perish most of them at Sea, as the Service of the Sea requires much more Practice than that of the Land. To reinforce the Soldiers of the Gallies, the *Turks* add some of the Janizaries. The Gallies of the *Archipelago* are obliged to be in a Readiness to put to Sea at all Times. The Captains are paid by Assignments upon the Islands, and are bound to find their own Slaves, and pay them, for the Grand Signior allows them only the Vessel, Artillery, and Rigging.

They avoid an Engagement all they can, in order to preserve their Slaves; and most of them have neither the Number of Gallies they ought to maintain, nor their Equipage compleat, because the Captain-Basha for a Sum of Money (which the others know proper Ways enough to hand to him) often winks at it, consequently the Military Discipline is very indifferently observed. The Beys of *Rhodes* and *Scio* ought to provide seven Gallies for each Island; he of *Cyprus* six; those of *Mytelene*, *Negropont*, *Salonica*, and *Caval* one a-piece. *Andros* and *Syra* only one, and *Naxos* and *Paros* the like. The Captain-Basha sails round the *Archipelago* in the Summer, to raise the Capitation Tax, and learn the State of Affairs which have happened. He commonly holds his Days of Audit in a Port of *Paros*, called *Drio*, which is the Center, as it were, of the *Archipelago*. The Officers of the Islands repair thither to make their Presents to him, and pay in the Sums at which each Island is taxed. Here also the Captain-Basha finally judges all Matters, as well Civil as Criminal.

The only Danger that can now be apprehended from the *Turks*, must arise from the Wickedness of *Christian* Renegadoes, more especially Men of desperate Fortunes, who have had long Experience, and arrived at considerable Dignities either in Military or Naval Service; for these Men may, by repeated Memorials, awaken the *Turkish* Ministers to a true Sense of their

Condition, and may also propose amending their Discipline, by introducing that of the *Germans*, and so the last Evil would be worse than the first, since *Turkish* Infantry, thus disciplin'd, would be infinitely more terrible than the *Janizaries* have ever been. That this is not altogether a groundless or idle Suspicion, appears from two Instances in our own Time, viz. the Port's sending an Aga into *Holland* to treat with Mr. *Lan-gallerie*, a *Frenchman*, who quitting the Service of his own Prince, was raised in that of the Allies to that of a Lieutenant General; but growing discontented, as these Sort of People generally do, after the Peace was concluded, proposed transporting a Colony into the *Morea*, and reviving the *Ottoman* Naval Power in the *Archipelago*. His Schemes were received, a Person sent to treat with him in *Holland*, and considerable Sums of Money paid him; but some of his Practices requiring his Presence in *Germany*, he went thither, was seized and imprisoned, and continued in that Situation, till in a desperate Fit of Madness he put an End to his own Life.

The recent Example of Count *Bonneval* is another of the same Kind; he was a Man of one of the best Families in *France*, but profligate in his Morals, and without any Principles whatever. He too quitted the Service of *France* to enter into the Troops of the Allies, where he obtained very great Preferment, and if any Thing could have satisfied his Ambition, might have had it; but having conceived some Prejudice against his Patron Prince *Eugene*, he behaved in such a Manner as forced the Imperial Court to proceed against him with Severity, which so exasperated his haughty Spirit, that he retired to *Turkey*, where having some Differences with the *French* Ambassador, who refused to take him under his Protection, and being claimed as a Subject of his Imperial Majesty, which by the Treaty of Peace then subsisting would have obliged the *Turks* to have given him up, he found himself under the dreadful Necessity of abandoning the Christian Faith to save himself from being thus delivered.

These Circumstances are not taken from the fabulous History of his Adventures, but from his own Letters, and therefore the Reader may depend upon them. This Man might have proved as useful to the *Turks* as dangerous to the *Christians*. He had served against them in the last War in *Hungary*, was perfectly acquainted with the Errors in their Discipline, and without Doubt would have set them right, as appears from the Memorials that he presented from Time to Time, and which must be allowed to be very judicious in their Kind; but he was never much esteemed or greatly trusted by the Infidels; and to say the Truth, as Things stand at present in that Empire, it is very improbable that such a Man should succeed, for many Reasons, out of which I will mention a few.

The Nation in general are strongly wedded to their own Customs, and have an insuperable Contempt for those of other Nations. The Discipline of the *Janizaries* is now corrupted to such a Degree, that there is nothing they dread so much as a Reformation; they no longer consider their Kind of Life as a Military Profession, in which Preferment is to be derived from Merit, but as a Trade of which they are inclined to make the most they can, and therefore detest all Thoughts of being put out of the Way in which they now are, and would certainly mutiny, if a new and strict Discipline was insisted upon. The *Turkish* Ministers are naturally suspicious of Renegadoes, foreseeing that if they should rise to considerable Employments, it must be at their Expence, the Thoughts of which they cannot bear; and therefore though they cannot refuse such People Protection and Countenance, yet they always study to depress and keep them under; but we know not what Time, and the Lights of Experience may produce, and therefore we ought to be upon our Guard against all Accidents.

Besides in a Country so subject to Revolutions, Nobody can pretend to decide about what may happen. A new Emperor may arise of a martial and enterprising Genius, and may take the Reins of Government into his own Hands, and pay very little Deference to his

his Ministers. Such a Prince, from the Genius of the *Turkish* Constitution, would very soon become the Darling of his People, more especially if Success should attend any of his Undertakings; and in that Case he might very possibly have Recourse to Renegades, as Persons the most capable of serving him, which if they were able to do, he would not fail to raise them in Spite of all Opposition; and this once accomplished, the Effects that must attend it would become terrible to *Christendom*; for considering that general Depravity of Manners, and that dangerous Spirit of Irreligion, which prevails over all *Europe*, there is nothing more likely than that such a Turn as this would draw all the turbulent and restless Spirits in this Part of the World to seek their Fortunes under the *Turks*, and then perhaps it would be too late to think of any Remedy for such an Evil.

But if an opposite Spirit could be raised in Time, if Christian Princes could be prevailed on to lay aside their intestine Jealousies and Disputes, and think of augment-

ing their Subjects, and increasing their Dominions, at the Expence of their common Enemy; we have already shewn, that this might be very practicable. We will conclude this Section with observing, that how little soever we hear of it, Things on this Side are really at a Crisis, and in the Space of a very few Years we shall see them take either one Turn or the other; that is to say, either the Christian Princes, more especially the two *Imperial* Powers of *Germany* and *Russia*, the King of *Poland*, and the State of *Venice*, will think of recovering what has been torn from them by the *Ottomans*; or after some sudden and great Revolution among the *Turks*, the Face of Affairs will change, and they will resume their Designs against the *Christians* too, which they are always encouraged by that Power, which, as it seems to have adapted the Maxims of their Policy, has for many Years acted as if it was the natural and unalterable Ally of the Infidels, and in that Light as well as others the common Enemy of *Christendom*.

SECTION IV.

A Journey from *Aleppo* to *Jerusalem*, containing a curious and accurate Description of the *Holy Land* and *City*, interspersed throughout with great Variety as well of Philological, Physical, and Philosophical; as Historical and Critical Remarks.

By HENRY MAUNDRELL, M. A. late Fellow of *Exeter College*, and Chaplain to the Factory at *Aleppo*.

1. An Introductory Account of the Author and his Performance, in which is shewn the Nature, Design, and Uses of this Section.
2. The Author sets out in Company with fourteen English Gentlemen from *Aleppo*; the Manner of their Travelling, and the Nature of their Accommodations.
3. They are surprized in their Journey by a Storm, and obliged to take Shelter among the Tombs of Turkish Saints.
4. An Account of the City of *Latichea*, and of a Nation called *Neceres*, who are of all Religions, and of no Religion.
5. They continue their Journey to *Tripoly*, and meet with several Antiquities in their Passage.
6. A Description of that City, with an Account of the Entertainment they met with there.
7. Their Visit to *Ostān Basha* of *Tripoly*, the Ceremonies of their Reception, and what passed at their Audience.
8. A Description of *Gibyle*, the *Byblus* of the Ancients, famous for being the Birth-place of *Adonis*.
9. A very curious and learned Account of various Antiquities in this Neighbourhood.
10. A succinct but curious Relation of the *Emir Faccardine*, his Subjects and Successors.
11. The Author's Account of *Tyre* and *Sidon*, with some Remarks upon the Prophecies relating to those Cities.
12. A Description of *Solomon's Cisterns*, the City of *Acra* or *Ptolemais*, and other Places in that Neighbourhood.
13. They pass the River *Kishon*, and travel through the Country of *Samaria*.
14. Some very curious and satisfactory Remarks on the ancient Fertility and present Barrenness of the Land of *Judea*.
15. A very copious and circumstantial Account of the Ceremonies annually used at the Church of the Holy Sepulchre on Good-Friday.
16. The Celebration of *Easter*, and the Author's Visit to the Sepulchres of the Kings.
17. The Author's Journey to the River *Jordan* and the Dead Sea, with a Description of both.
18. A Journey to and Description of *Bethlehem*, with Variety of critical Observations and Remarks.
19. His Journey to the Convent of *St. John* in the Wilderness, with a Detail of the remarkable Places he saw therein.
20. A very particular Account of the Holy Fire at *Jerusalem*, and of some very extraordinary Practices of the Monks and Priests.
21. A circumstantial Account of the most remarkable Places in the Neighbourhood of *Jerusalem*.
22. The Author's Visit to *Mount Olivet*, and the Palace of *Pilate*, the Pool of *Bethsaida*, and other Places.
23. Their Departure from *Jerusalem*, and Journey from thence to *Nazareth*.
24. A Description of that Village, and of *Mount Tabor*.
25. An Account of what happened in their Journey till their Arrival at *Damascus*.
26. A very large and accurate Description of that City and the Country about it.
27. An Account of the great Turkish Caravan of Pilgrims that go annually to visit *Mecca*.
28. A very curious and copious Description of the City of *Balbeck*, the *Palmyra* of the Ancients.
29. An Account of the Turkish Punishment called *Empaling*; a Description of *Mount Libanus*, and the Author's Return to *Aleppo*.
30. Another Journey of his from *Aleppo* to visit the River *Euphrates*, the City of *Beer*, and the fruitful Country of *Mesopotamia*.
31. Remarks and Observations upon the foregoing Section.

1. **T**HE Author of these Travels was a Gentleman who, during the Time he resided in the University of *Oxford*, laid a Foundation of an extraordinary Character, in Point both of Learning and Manners. He applied himself with great Diligence to the Reading of *Greek* Authors, and a strong Turn towards Antiquities and Church-History; and though his Constitution was far from being strong, and his great Patron Dr. *Spratt*, Bishop of *Rockester*, had it in his Power to provide for him at home; yet, upon the very first Proposal of his going Chaplain to the Factory at *Aleppo*, he very chearfully and gladly embraced it; and, during his Residence there, was equally happy himself, and agreeable to the Gentlemen who then resided there, as I have been informed by several who were there at that Time, and by some that accompanied him in his Journey. It may not be amiss to observe, that the worthy Bishop *Frampton* was his Predecessor in this Employment; and as he was a Man of great Piety and Purity of Manners, so, on the other hand, his Conversation was so chearful and entertaining, and he had the Art of introducing learned Subjects with such Ease, and of enlivening them in such a Manner, that he diffused a Spirit of Literature through the whole Factory; so that when Mr. *Maundrell* came first amongst them, he professed himself astonished at the strict Order and perfect Regularity in which they lived; exhibiting, as himself says, in all their Actions the best and truest Signs of a Christian Spirit, sincere and chearful Friendship among themselves, a generous Charity towards others, a Conversation innocently chearful, addicted to no Pleasures but such as were honest and manly; and, in short, in all Points so well disposed, that it seemed rather a College, and a well-governed College too, in some famous University, than a Factory of young Merchants, sent there to make their Fortunes. We need not at all wonder, that in Company like this Mr. *Maundrell* rejoiced in his Situation, or that amongst other Advantages he there enjoyed, he should lay hold of visiting the Land of *Judea*, and the Places consecrated to the Reverence of all Christians, by their having been the Scenes of the principal Acts of our Saviour and his Apostles in the first Ages of the Church. What he saw with Pleasure, he has related with great Accuracy and Judgment; and the Learned, both of our own and of Foreign Countries, are agreed, that amongst the numerous Relations of Journeys to the holy City, there are none that, in Point of Candour, Fidelity, and Exactness, surpasses this; which is the Reason that we have given it a Place in this Collection, and dare recommend it to the Reader as an excellent Performance of its Kind, filled not only with all that can be reasonably expected from it; but also with a great Variety of curious and useful Learning, which can hardly fail to instruct and please.

2. On *February* 26, 1696, I set out with fourteen *English* Gentlemen from *Aleppo*, designing to visit the *Holy Land* at the next *Easter*, and the first Night we took up our Quarters at the *Honey-Kane*, about an Hour and a half West of *Aleppo*. A very indifferent Lodging we had; for here it is to be noted, that in travelling this Country, a Man does not meet every Night with Inns as in *England*; but you must either lodge under your own Tent, or else in Publick-houses, founded for the Use of Travellers, called by the *Turks*, *Kanes*; to which all Comers are welcome, paying a small Fee to the *Kane-Keeper*, if they be able. And here you must expect nothing but bare Walls, for all other Necessaries must be carried by every one that travels.

On the 27th, we parted from the *Honey-Kane*, and passing by *Oorem* and *Keffre*, we entered into the Plains of *Kefteen*, of a vast Compass, and in most Places very fruitful. At our first Descent into them at *Essoyn*, we counted no fewer than twenty four Villages; and *Kefteen* itself is a large Village on the West-side of the Plain, encompass'd with so many Fields of Corn, that the Inhabitants breed many Pigeons. At this Place we saw, over the Door of a Bagnio, a Marble-stone carved with the Sign of the Cross, and the *Gloria Patri*, &c. which was probably the Portal of some Church former-

ly. On the 28th, we left *Kefteen*, and continuing in the same Plain, abounding with Corn, Olives and Vines, we came to *Harbonoose*, and from thence to a very rich Valley called *Rooge*, which is wall'd on both Sides with high Mountains; and having travel'd in this Valley four Hours, we pass'd through the Skirt of the Lake or Sea of *Rooge*, and from thence we came to *Te-ne-ree*, where we paid our first *Caphar*. These *Caphars* are certain Duties paid by Travellers to Officers that attend in their Stations to receive them. They were at first levied by Christians, for repairing the Ways, and scouring them from Robbers; but under that Pretence the *Turks* now exact unreasonable Sums, though themselves are often the greatest Robbers.

After this *Caphar*, we cross'd over the Mountains on the West-side of the Valley of *Rooge*, and descending into a Valley, we pass'd *Bell-maer*, and came to *Shoggle*, which is a large but filthy Town, situate on the River *Orontes*, over which you pass to it by a Bridge of thirteen small Arches. The River hereabouts is pretty deep, and yet so rapid, that it turns great Wheels, made for lifting up the Water by its natural Swiftness, without any Force added to it, merely by confining its Stream. We lodg'd here in a large and handsome *Kane*, founded by the second Grand Vizier *Cuperli*, and so well endow'd, that it supplies every Traveller with a competent Portion of Bread, Broth, and Flesh. It was croud'd with *Turkish* *Hodgees* or Pilgrims, bound for *Mecca*; but we found a peaceable Reception among them.

3. *March* 1. we parted from *Shoggle*, and cross'd a Mountain on the West-side of the Valley, from which we descended into a third Valley like the two former; and having pass'd the Village *Bedame*, we entered into a woody Country, where our Road was very rocky and uneven, but yet pleasant, because it presented us with the Prospect of Plants and Flowers of divers Kinds, as Myrtles, Oleanders, Tulips, and other aromatick Herbs. After this we descended into a low Valley, at the Bottom of which there is a Fissure so narrow, that you cannot discern it till you come upon it, though you may hear the Noise of the Stream running into it at a great Distance. They call it the *Sheck's Wife*, from a Woman of that Quality that fell into it. From hence we came in one Hour to a Place called the *Sultan's Stone*, where we pitch'd our Tents, and lodg'd for that Night.

On the 2d, we left our *Campagna* Lodging very early, the Weather being yet moist and cold, and came in an Hour to the *Caphar* of *Crusia*, and from thence in another to the Foot of a Mountain called *Occaby*, which we ascended with great Difficulty, and then we found a fine Country planted with Silk-Gardens, through which we came to *Belulca*, and there repair'd to a Place which is both the *Kane* of the Village, and the *Aga's* House; but though we gave him a small Present, we could hardly obtain a dry Part of the House to lodge in. In the mean Time, being informed that there were several Christians Inhabitants in this Place, we went to visit their Church, which was only a Room about four or five Yards square, wall'd with Dirt, and cover'd with Bushes, in which was an Altar of the same Materials with the Walls, paved at Top with Potsherds and Slates; and in the Middle of the Altar stood a Cross made of two Laths nail'd together, on each Side of which there are two or three old Pictures of our blessed Lord and the Virgin, &c. a very mean Habitation for the God of Heaven, but yet held in great Esteem by the poor People, who come hither with great Devotion, and hang the Room with Bags of Silk-worms Eggs, that by the Holiness of the Place they may bring a Blessing upon them, and increase their Virtue.

On the 3d, we left *Belulca*, and arrived at *Scholfatia*, a poor Village, situate upon a small River, now swollen so high with the late Rains, that it was not fordable; which put us to a Nonplus, not knowing what to do till the Rain abated; and then we pitch'd in the open Field, though thoroughly soak'd with Wet. But after the Rain had ceased a little While, it began to pour down a-fresh with Lightning and Thunder, and then

we

we sent a *Turk* to a *Sheck's* House hard by, to try if by any Means we could get Admittance there; and at last, with good Words, having declared, that we had no Intention to defile their Faith, we were permitted to secure our Baggage in the House, whilst we shelter'd ourselves among the Tombs from the Rain, which pour'd down all Night long. A *Sheck's* House is a Stone Fabrick, of six or eight Yards square, roof'd with a Cupola, erected over the Grave of some eminent *Sheck*, i. e. one who by his long Beard, whining Prayers, and *Pharasaical* Pride, (the great Virtues of the *Mahometan* Religion) has purchased the Reputation of a Saint; of which Sort there are many in this Country, to which the People repair with their Vows and Prayers, which they offer in these Shrines, not to the Saints, as the Papists do, but to God only, whom alone they adore.

4. On the 4th: This Morning we found the River fordable, and got to the other Side of it with our Baggage, from whence ascending a very steep Hill, at the Top of it we were presented with the first Prospect of the Ocean; and to the Westward, we had a View of the City *Latichea*, built by *Seleucus Nicanor*, and by him call'd *Laodicea*, which Name it still retains with a little Corruption. After it was reduced to a low Condition, it now begins to flourish again, being put in a Way of Trade by *Coplan Aga*, a Man of great Wealth and Authority in these Parts. From the Hill last mention'd, we descended into a spacious Plain, having the Sea on the Right-hand, and Mountains on the Left. In which Plain we discern'd two ancient Tombs, which were Chests of Stone, two Yards and a half long each, cover'd over with large Tables of Stone, carv'd on the Outside with Ox-heads, and Wreaths hanging between them, after the Manner of adorning Heathen Altars.

Above an Hour from these Tombs we were stopt by another Stream, but here we found a safe Passage to the other Side, and then we were forc'd by the Rain to make the best of our Way to *Jebilee*. After this Manner our Road continued for several Days, between the Sea on the Right, and the Mountains on the Left; but the Mountains go under different Names, and are inhabited by several rude People. In that Part of them above *Jebilee*, there dwell a People called by the *Turks* *Neceres*, of a very singular Character for it is their Principle to adhere to no certain Religion, but to put on the Colour of that Religion which is professed by those with whom they converse: And so with *Christians* they profess themselves *Christians*, with *Mahometans* they are good *Mussulmans*, and with *Jews* they pass for *Jews*. All that is certain concerning them is, that they make very much and very good Wine, and are great Drinkers, but in Religion they are very *Proteus's*.

On the 5th; This whole Day we spent in *Jebilee*, having a convenient new Kane to lodge in, built by *Ostan* their Bashaw of *Tripoly*. *Jebilee* is seated close by the Sea, having a vast and fruitful Plain on the other Sides of it; its ancient Name was *Gabala*, and so it is call'd by *Strabo*. In the Time of the *Greek* Emperors it was a Bishop's See, and is still accounted a City, though it makes a very mean Figure at present. The most remarkable Things in it are a Mosque and an Alms-house, built by Sultan *Ibrahim*; in the former is his Tomb, which we found to be a great wooden Chest erected over his Grave, and covered with a Carpet of painted Callico, trick'd up with a great many Ropes of wooden Beads, which is the *Turks* usual Way of adorning the Tombs of their holy Men. In this Mosque we saw several Incense-Pots, Candlesticks, and other Furniture, being the Spoils of Christian Churches.

The *Turks* reported, that he divested himself of his Royalty, and liv'd twenty Years in a Grotto by the Sea-Side; and to confirm the Truth of their Relation, they show the Cell where he abode, and another Grotto twice as large, which had three Niches or Praying-places hewn in its South-side, as they always are, for that Way the *Mussulmen* are oblig'd to set their Faces, in Reverence to the Tomb of their Prophet. From this

Mosque our Guide carried us to a Christian Church, which we found to be nothing but a small Grotto in a Rock open towards the Sea, having a rude Pile of Stones for an Altar; which poor Chappel is the only Place, as the Curate told us, allow'd to the *Greek* Christians for Divine Service. But the most considerable Antiquity in *Jebilee*, is the Remains of a noble Theatre, of which the Semi-circle is all that's now standing, being an hundred Yards in Compass, having in it seventeen Windows, between which are large maffy Pillars standing against the Wall, that is three Yards three Quarters thick of firm Stone, by which Means it has been preserv'd thus long from the Jaws of Time, and the Ruin which the *Turks* bring upon most Places.

On the 6th, having done with *Jebilee*, our Road continued by the Sea-side, and banish'd us in two Hours to a fair deep River, call'd the *King's River*; on both Sides of which we saw the Footsteps of some considerable Buildings. About half an Hour further we passed the River *Jobar*, and on the other Side stood a great Square Tower, and round about it there was the Rubbish of a great many other Buildings. And all along this Day's Journey we observ'd the Ruins of Castles and Houses, which testify that this has been formerly a Place of great Strength and Beauty. *Strabo* calls that whole Region, from *Jebilee* as far as *Aradus*, the Country of the *Aradii*, and gives the Names of several Places situate along the Coast, which cannot be now distinctly known. Only the *Balanea* of *Strabo* seems to be that Place which the *Turks* now call *Baneas*, which stands about a Furlong from the Sea, and has such a pleasant Situation, such Ruins, and such a Bay, as shews it to have been a commodious Habitation. Leaving *Baneas*, we went by the Sea-side, and in one Quarter of an Hour we pass'd by an old Castle, on the Top of a high Mountain, built in the Figure of an equilateral Triangle, which the *Turks* call *Merchab*, which probably is the same Castle mention'd by *Adrichomius* under the Name of *Margath*, to which the Bishops of *Balanea* were forc'd to translate the See, by Reason of the Insults of the *Saracens*. About an Hour and half from *Baneas*, we met with a small clear Stream, which induc'd us to take up our Lodgings near it, about two or three Furlongs from the Sea, having in Sight on the Mountains above us a Village call'd *Sophia*, inhabited only by *Maronites*, and a little further, *Reseck*, possess'd by the *Turks*; and a little further *Merakiab*, possess'd by *Christians* and *Turks* together.

5. On the 7th: Next Morning we came in three Hours to a deep River call'd *Nabor Hussine*, having one Arch large and well wrought; and in an Hour and half more we reach'd *Tortosa*, anciently call'd *Orthosia*, being a Bishop's See in the Province of *Tyre*, frequently mention'd by the Writers of the Holy Wars as a strong Place, as it appears to have been. What remains of it is the Castle, wash'd on one Side by the Sea, on the others fortified by a double Wall, between which there is one Ditch, and another compassing the outermost Wall. You enter this Fort over an old Draw-bridge which lands you in a spacious Room, which on one Side resembles a Church, having at this Day several holy Emblems, as that of a Dove descending, and that of the holy Lamb; but on the other Side it has the Face of a Castle, being built with Port-holes instead of Windows. On the South and East-side of it stood anciently the City, encompassed with a good Wall and a Ditch, of which there are some Remains; but of other Buildings there is nothing left, except a Church which is an hundred and thirty Foot long, ninety three broad, and sixty one high, so entire, that it might easily be repair'd; but it is now made a Stall for Cattle, in which we waded up to the Knees in Dirt when we went to see it.

From *Tortosa* we sent our Baggage before towards *Tripoly*, which we follow'd not long after, and within one Quarter of an Hour we came to a large Channel of a River, now almost dry; and in half an Hour more we came to a small Island about a League from the Shore, call'd by the *Turks*, *Ruad*, which is supposed to be the ancient *Arphad*, or *Arpad* (mention'd, 2 Kings xix.

13. *Gen. x. 18. Ezek. xxvii. 11.*) and the *Aradus* of the *Greeks* and *Romans*, which seem'd to be fill'd with Buildings like Castles, and to have been anciently famous for Navigation. About a Quarter of an Hour further we came up with our *Muliteers*, who had pitch'd our Tents at a Place where we found several notable Antiquities, having in it a Fountain call'd the *Serpent Fountain*. The first Antiquity that we observ'd was a large Dike thirty Yards over at Top, cut into the firm Rock, whose Sides went sloping down with Stairs form'd out of the Rock; and this was on the North-side of the Fountain; but on the other Side we found a Court of fifty five Yards square, cut in the natural Rock, and compass'd about with Walls of the same Rock on three Sides, but to the North it lay open. In the Center of this *Area* was a square Part of the Rock left standing, being three Yards high, and five Yards and half square, which serv'd for a Pedestal to a Throne made of four large Stones, two at the Sides, one at the back, and another hanging over the Top like a Canopy, which was five Yards and three Quarters square, carv'd round with a handsome Cornish. The Court we imagin'd to be an Idol-Temple, and the Pile in the Middle to be the Throne of the Idol, which seem'd the more probable, because *Hercules*, i. e. *the Sun*, the great Abomination of the *Phœnicians*, was wont to be adored in an open Temple.

6. On the 8th: We got up early to take a nearer View of the two Towers we saw the Night before, whereof one was thirty three Foot high, on a Pedestal ten Foot high, and fifteen square; the other was thirty Foot high, on a Pedestal six Foot high, and sixteen Foot six Inches square, supported by four Lyons, the upper Part rear'd upon the Pedestal, being all one single Stone. Under these Monuments were several Sepulchres, to which we descended by Steps, having several Cells for Corps hewn out of the Rock, some of which we found to be eight Foot and half long. Having parted from these Antiquities, we entred into a spacious Plain between the Sea and the Mountains, reaching almost as far as *Tripoly*, which the Natives call *Junia*. We were seven Hours in passing it, and found it all along very fruitful, by reason of the many Rivers that are in it; of which the first being about six Hours from *Tripoly*, has a Stone Bridge of three Arches, and is called the *Great River*.

About half an Hour further we came to another, called the *Leper's River*: In three Quarters of an Hour more we came to a third, called *Nabor Acchar*; and two Hours more brings you to a fourth, called the *Cold Waters*. Which Rivers I do particularly mention, because it is probable, according to the Description of the Ancients, that one of them is the River *Eleutherus*, though the Moderns do all agree, that it is the same with a River between *Tyre* and *Sidon*, called by the *Turks* *Casmeer*, contrary to the Account of *Strabo* and *Pliny*, who place it near *Orthofia*, or between that and *Tripoly*; and of *Ptolomy*, who places it yet more Northerly between *Orthofia* and *Balanea*.

On the 9th, our *Muliteers* were afraid lest their Beasts should be press'd for publick Service, as indeed they were, in Spight of all their Caution; and so we left them in the Plain of *Junia*, and arrived at *Tripoly* about Sun-set. It is seated about half an Hour from the Sea, and the major Part of the City lies between two Hills, one on the East, on which stands a Castle that commands the Place, and the other on the West, between the City and the Sea, which is said to be first rais'd, and still increas'd by Sand blown to it from the Shore; whence arises a Prophecy, that the whole City shall in Time be buried with this sandy Hill.

On the 10th, we were treated by Mr. *Fisher* in a narrow pleasant Valley by a River Side, about a Mile from the City: A-cross the Valley there runs, from Hill to Hill, a lofty Aquæduct, carrying upon it so great a Body of Water as suffices the whole City. It was called the *Prince's Bridge*, and is supposed to be built by *Godfrey of Bulloign*.

7. On the 11th we all dined at Consul *Hasting's* House, and after Dinner we went to wait upon *Ostan*,

the *Basha* of *Tripoly*, having first sent our Present, after the Manner of the *Turks*, to procure us a favourable Reception; for it is accounted uncivil in this Country, to visit without an Offering in Hand, which all great Men expect as a Tribute due to their Character. And even the inferior People seldom visit without bringing a Flower or an Orange, or some such Token of Respect, according to the ancient Oriental Custom, hinted in 1 *Sam. ix. 7. If we go, says Saul, what shall we bring the Man of God? there is not a Present, &c.*

On the 12th we went to visit *Bell-mount*, a Convent of *Greeks*, about two Hours to the South of *Tripoly*, and we came there just as they were going to Evening Service. The Church is large but obscure, and the Altar is enclos'd within Chancels, which none but the Priest must approach, after the Manner of the *Greek* Churches. They call the Congregation together by beating a Tune with two Mallets on a long Piece of Plank hanging at the Church Doors, Bells being an Abomination to the *Turks*. Their Service consisted in a hasty Chattering of certain Prayers and Hymns to our Blessed Saviour and the Virgin, and in some dark Ceremonies, for the Priest that officiated spent at least a third Part of his Time in compassing the Altar, and perfuming it with a Pot of Incense, and then going round the Congregation, tendring its Smoke with three Vibrations to every one present. Towards the End of the Service, there was brought into the Body of the Church a small Table, covered with a Linnen Cloth, on which were placed five small Cakes of Bread cross-wise; and in a Hole made in each Cake was fixed a small lighted Wax Taper. And then the Priest read the Gospel concerning our Lord's feeding the Multitude with five Loaves; after which, the Bread was carried within the *Cancelli*, and being there broke in Bits, was again brought out in a Basket, and presented to every one in the Assembly, that he might take a little.

After this Collation, the Priest pronounc'd the Blessing, and so the Service ended. On both Sides of the Church there were Seats for the Monks, being about forty in all, and in each Seat there were Crutches (as there are in most Churches of this Country) which are us'd by the Priest to ease him, by leaning on them, in Case the Service be long, because by the Rubrick he is forbidden to sit down. We found the Monks good-natur'd, but very ignorant, for the Chief of them told the Consul, that he was as glad to see him, as if he had beheld the Messiah in Person come to visit him. Nor is this Ignorance much to be wondred at, since they are forced to spend all the Time, between their Hours of Devotion, in managing their Flocks, cultivating the Lands, and pruning their Vineyards, which they do with their own Hands; and this they are obliged to do, not only for their own Sustenance, but to satisfy the unreasonable Exactions of the *Turks*. And to shew what Kind of Men they are, I took particular Notice, that the same Person whom we saw officiating at the Altar in his embroider'd Priestly Robe, brought us the next Day on his own Back, a Kid, and a Goat's Skin of Wine, as a Present from the Convent.

On the 13th: This Morning we went again to wait upon *Ostan* *Basha*, by his own Appointment, and were receiv'd with great Civility after their Manner, which is this: When you would make a Visit to a Person of Quality, you must send a Present by a Servant, who is to learn what Time may be most seasonable to wait upon him: When you come to the House, some Servants receive you at the outermost Gate, and conduct you towards their Master's Apartment, and others in their several Stations meet you as you draw nearer to him. Coming into the Room, you find him prepar'd to receive you, either standing at the Edge of the *Duan*, or lying down at one Corner of it, as he thinks proper. These *Duans* are low Stages rais'd about sixteen or eighteen Inches above the Floor, spread with Carpets, and furnish'd with Bolsters to lean upon; on which the *Turks* eat, sleep, smoke, say their Prayers, receive Visits, &c. Their whole Delight is in lolling on them, and their Luxury consists in furnishing them richly.

Being come to the Side of the *Duan*, you slip off your Shoes, and take your Place first at some Distance, and upon your Knees, laying your Hands formally before you; and there you must remain till the Man of Quality invites you to draw nearer, and to lean upon a Bolster. When you are thus fix'd, he discourses with you as Occasion offers, the Servants standing round with profound Respect and Silence. When you have talk'd over your Business or made your Compliments, he makes a Sign to have the Entertainment brought in, which is generally a little sweet Meat, a Dish of Shirbet, and another of Coffee, which is presently brought in by the Servants, and tender'd to all the Guests in Order with great Care; for if any of them should make the least Slip in giving or receiving his Dish, it might cost him 100 Drubs on his bare Feet to atone for his Crime. At last comes the finishing Part of the Entertainment, which is perfuming the Beards of the Company; and for this Purpose, they have a small Silver Chafing-dish, with a Lid full of Holes, fix'd on a Plate, in which they put some fresh Coals, and upon them a Piece of *Lignum-Aloes*, and then the Smoke ascends with a grateful Odour through the Holes of the Cover. This Smoke is held under every ones Chin, and offer'd as a Sacrifice to his Beard, which greedily drinks in the gummy Steam, and retains the Savour of it a good while after. This Ceremony is intended to give a civil Dismissal to the Visitants, intimating that they may go away as soon as they please, and the sooner after this the better.

Having ended our Visit to *Ostan Bassa*, we rid out after Dinner to view the Marine, which is about half an Hour distant from the City. The Port is an open Sea, rather than an enclos'd Harbour, but is partly defended by two small Isles, about two Leagues out from the Shore, one of which is called the *Bird*, and the other the *Coney-Island*, from the Creatures they severally produce. And for its Security from Pirates, it has six several Castles on the Shore at convenient Distances. In the Fields, near the Shore, there are many Heaps of Ruins and Pillars of Granite, which are Indications of some great Buildings this Way; which agrees with what *Causabon* says upon *Strabo*, that *Tripoly* was anciently a Cluster of three Cities, of which the first was the Seat of the *Aradii*, the second of the *Sidonians*, and the third of the *Tyrians*, which may more probably be the Occasion of the Name, than the Joint-Interest of three Cities in Building it, as is commonly said.

8. On the 14th, we rested at *Tripoly*, and on the 15th our *Muliteers* having run away for Fear of the *Bassa* of *Sidon*'s Servants, who press'd Mules every where for their Master's Service, we put ourselves in a new Posture of Travelling. We parted from *Tripoly*, and going close by the Sea-side, we came in an Hour and half to *Callemone*, a Village just under *Bell-mount*, and from hence putting forward, we met with a high Promontory that lay in our Way, and forc'd us to turn off to the Left-Hand into a narrow Valley, where we took up our Quarters under some Olive-trees; which Promontory seems to be that which is call'd by *Strabo* the *Face of God*, and which he assigns for the End of Mount *Libanus*.

On the 16th, this Morning we cross'd over the fore-mention'd Cape, which we did in an Hour, though it was very steep and rugged, and we came into a narrow Valley, which laid the Sea open again; and near the Entrance is a small Fort that commands it, call'd *Temseida*. And in half an Hour we came up with *Patrone*, which is thought to be *Botrus*, situate close by the Sea, in which we found some Remains of a Church and Monastery. In three Hours more we came to *Gybile*, call'd by the *Greeks* *Byblus*, a Place once famous for the Birth and Temple of *Adonis*. It is compass'd with a dry Ditch and a Wall, with square Towers at forty Yards Distance, and on its South-side it has an old Castle.

There is nothing else remarkable in it but many Heaps of Ruins, and the fine Pillars in the Gardens near the Town. It is probably the Country of the *Gi-*

blites, mention'd *Josh. xiii. 5.* whom King *Hiram* made use of in preparing Materials for *Solomon's Temple*, as may be collected from *1 King. v. 18.* where the Word rendred *Stone-squarers* in the *Hebrew* is *Giblim*, and in the Version of the seventy *Byblii, i. e.* the Men of *Byblus*, the former using the *Hebrew*, the latter the *Greek* Name of the Place; which Difference may be observ'd likewise in *Ezek. xxvii. 4.* where our Translation has the *Ancients of Gebel*, and the Seventy the *Elders of Byblus*. Leaving *Gybile*, we came to a River call'd by the *Turks* *Ibrahim Bassa*, which is doubtless that ancient River so famous for the Idolatrous Rites perform'd here in Lamentation of *Adonis*, and we lodg'd on the Banks of it that Night.

9. The 17th, having had a very tempestuous Night of Wind and Rain, we had an Opportunity of discovering the Occasion of that Opinion which *Lucian* relates, that this River, at certain Seasons of the Year, especially about the Feasts of *Adonis*, is of a bloody Colour, as he says, from a Sympathy for the Death of *Adonis*, who was kill'd by a wild Boar in the Mountains out of which this Stream rises; for we found the Water of a very red Colour, which doubtless was occasion'd by a Sort of *Minium*, or red Earth, wash'd into the River by the Violence of the Rain. In an Hour and a Quarter we pass'd over the Foot of Mount *Climar*, and entered into a large Bay call'd *Innia*, where we found an old Stone-Bridge, and at the Bottom the high Mountains of *Gastravan*, chiefly inhabited by *Maronites*, and famous for producing an excellent Sort of Wine.

The *Maronite* Bishop of *Aleppo* dwells here in a Convent, and there are many other small Convents on the Top of these Mountains. Towards the further Side of the Bay we came to a square Tower or Castle, at which we paid a fourth *Caphar*, which is receiv'd by the *Maronites*, who are more exacting Rogues than the *Turks* themselves. In an Hour more we came to the River *Lycus*, call'd also sometimes *Canis*, whose Name is deriv'd from an Idol in the Form of a Dog or Wolf, which was worship'd and gave Oracles. The Body of it is shewn to Strangers lying in the Sea, but the Head they say is to be seen at *Venice*. This River, which is certainly different from *Adonis*, (though some Moderns confound them) falls into the Sea from between two Mountains very high and rocky, where we found a good Bridge of four Arches, and near the Foot of it, a Piece of white Marble inlaid in the Side of a Rock, with an *Arab* Inscription, that the Emir *Faccardine* was the Founder of it.

Having pass'd the River, we presently ascend the Rock hanging over it on that Side, where we met with a Path above two Yards broad, cut along its Side at a great Height above the Water, being the Work of the Emperor *Antoninus*, as appears by an Inscription engraved on a Table, plain'd in the Side of the natural Rock. In passing this Way we saw strange antick Figures of Men carved in the Rock, in *Mezzo-relievo*, and in Bigness equal to the Life; and close by each Figure there was a Table plain'd in the Side of the Rock, on which something had been inscrib'd, though the Characters are generally now defac'd, which may deserve the further Scrutiny of some Traveller. The *Antonine* Way extends about a Quarter of an Hour's Travel; after which you come upon a smooth sandy Shore, which brings you in an Hour and half to the River *Beroot*, which has over it a Stone-Bridge of six Arches; and on the other Side is a Plain near the Sea, which is said to be the Stage on which *St. George* duell'd and kill'd the Dragon. In Memory of which, there is a small Chappel built upon the Place, dedicated at first to that Christian Hero, but now perverted to a Mosque. From hence in an Hour we arrived at *Beroot*, and quarter'd at a good Kane by the Sea-side.

10. On the 18th: This Day we spent at *Beroot*, anciently called *Berytus*, (from which the Idol *Baal-Berith* is suppos'd to have had its Name) which was honour'd with many Privileges, and the new Name of *Julia Felix* by *Augustus*. Its greatest Happiness at present consists in its Situation,

Situation, being seated by the Sea-side in a fertile Soil, which abounds with fresh Springs flowing down from the Hills. The Emir *Faccardine* had his chief Residence here, in the Reign of Sultan *Morat*, the fourth Emir or Prince of the *Druses*; who not contented to be penn'd up in the Mountains, enlarged his Dominions into the Plain, all along the Sea-Coast, as far as from this Place to *Acra*, but was driven back again to the Mountains by the Grand Signior. We went to his Palace, and found at the Entrance a Marble Fountain of greater Beauty than is usually seen in *Turkey*.

The best Sight that the Palace affords, which is much ruin'd, is the Orange-Garden, which contains a large quadrangular Plat of Ground, divided into sixteen lesser Squares, four in a Row, with Walks between them, which are shaded with Orange-trees of a fine Growth, on which the Fruit hung thicker than ever I saw Apples in *England*. Every one of these sixteen Squares was bordered with Stone, and in the Stone-work were Troughs artificially contrived for conveying the Water all over the Garden, there being little Outlets cut at every Tree for the Stream, as it pass'd by, to flow out and water it. But the *Turks* have so little Sense of such refin'd Delights, that they use it now as a Fold for Sheep and Goats. In another Garden we saw several Pedestals for Statues, and at one Corner of it, a Tower about sixty Foot high, whose Walls were twelve Foot thick, from whence we had a View of the whole City, and saw a large Christian Church, which was said to have been consecrated to St. *John* the Evangelist, but is now the chief Mosque of the *Turks*.

There is another Church, that being a very mean Fabrick, remains in the Hands of the *Greeks*, which is adorn'd with many old Pictures; and among the rest, I saw one with this Inscription in *Greek*, *Coartus the first, Archbishop of Berytus*, and just by it the Figure of *Nestorius*, who commonly makes one in the *Greek Church* of his Sect, though they do not now profess, nor, I believe, know, his Heresy. But there was one very odd Figure of a Saint, at full Length, with a large Beard reaching down to his Feet, and the Curate told us, that this was St. *Nicephorus*, who wanting the Ornament of a Beard to set off his other Endowments, fell into a deep Melancholy; whereupon the Devil tempted him to comply with his Suggestions, by promising to give him a Beard; but this beardless Saint rejected the Temptation, and at the same Time taking the downy Tuft upon his Chin in his Hand, he found the Hair immediately stretch with the Pluck he gave it, and he never left pulling his Beard till he had drawn it down to his Feet. At the East-end of *Beroot* are to be seen seven or eight Pillars of Granite, and several Pieces of Marble, having *Greek* and *Latin* Inscriptions, Fragments of Statues, and other poor Relicks of its ancient Grandeur. On the Sea-side is an old Castle, and some Remains of a Mole.

19th. Leaving *Beroot*, we came into a large Plain, and at the Entrance of it there is a Grove of Pine-trees of *Faccardine's* Plantation, and at a Distance we saw a small Village called *Suckfoat*, which belongs to the *Druses*, who possess at this Day a long Tract of Mountains as far as from *Castravan* to *Carmel*. Their present Prince is *Achmet*, Grandson to *Faccardine*, an old Man, and one who keeps up the Custom of his Ancestors, of turning Day into Night, from a traditional Persuasion among them, that Princes can never sleep securely but by Day, when Mens Actions and Designs are best observ'd by their Guards, and, if Need be, most easily prevented: but in the Night it concerns them to be always vigilant, lest the Darkness should give Traytors an Opportunity to assault them with Dagger or Pistol.

Two Hours from *Faccardine's* Grove brought us to the fifth Caphar, and another Hour to the River *Damer*, anciently called *Tanoras*. Here were Country Fellows who had stript themselves naked to assist us in passing over; and to make their Help more necessary, they brought us to a Place where the Water was deepest, which Cheat we saw them impose upon other Travellers; but we found a Place of the Stream which was broader and shallower, where we pass'd without their Assistance, and just by we saw the Ruins of a Stone Bridge, which

might have been still entire, had not these Villains broke it down to make their Advantage of Passengers, either in conducting them over for good Pay, or else, if they have Opportunity, drowning them for their Spoils. On the other Side of the River the Mountains came closer to the Sea, leaving only a narrow rocky Way between.

From *Damer*, in two Hours Time, we came to another considerable River, not mentioned by any Geographer; but the *Maronite* Patriarch at *Canobine* told me it was called *Awle*, and had its Fountain near *Barock* in Mount *Libanus*. At this River we were met by several *French* Merchants from *Sidon*, who have there the most considerable Factory they have in the *Levant*; and being arrived at *Sidon*, they conducted us to a large Kane close by the Sea, where the Consul and all the Nation are quartered together. Before this Kane is an old Mole running into the Sea, which was filled up with Rubbish by *Faccardine*, to prevent the *Turkish* Gallies from coming hither; so that all Ships that take in their Burthen here, are forc'd to ride at Anchor under a small Ridge of Rocks about a Mile from the Shore.

Sidon is well enough stock'd with Inhabitants, but is very much shrunk from its ancient Extent, and more from its Splendor, as appears from many beautiful Pillars that lie in the Gardens without the Walls. On the South-side stands an old Castle, said to be built by St. *Lewis IX.* of *France*; and not far from the Castle is an old Palace of *Faccardine's*, which serves the Basha for his Seraglio. Near to *Sidon* begins the Precincts of the *Holy Land*, particularly of that Part which was allotted to *Asher*, the Borders of which Tribe extended from *Carmel* as far as *Great Zidon*, as appears from *Joshua* xix. 26, 28. But the People on the Sea-coasts were never actually master'd by the *Israelites*, being left to be Thorns in their Sides for a Reason given, *Judges* ii. 1, 2, 3, &c. He who is the *French* Consul at *Sidon*, has also the Title of Consul of *Jerusalem*, and is obliged to visit the holy City every *Easter*; with whom we desired to join in this Year's Pilgrimage, but he set out from *Sidon* the Day before our Arrival there.

11. The 20th. We set out next Morning from *Sidon*, hoping to overtake the Consul, and travelling in a fruitful Plain, in half an Hour we met with a large Pillar of Granite lying cross the Highway, on which was a Fragment of an Inscription; and some *English* Gentlemen, in 1699, found another Pillar with the like Inscription, about Midway between *Jerusalem* and *Sidon*, by which we may observe the Exactness of the *Romans* in measuring out their Roads, and marking down on every Pillar the Number of Miles, as 1, 2, 3, &c.

A little beyond this Pillar we pass'd in Sight of *Korie*, a large Village on the Side of the Mountains, and in twelve Hours and half more came to *Sarphan*, supposed to be the ancient *Sarephath* or *Sarepta*, so famous for the Residence and Miracles of *Elijah*. From hence, in seven Hours, we arrived at *Casimeer*, a large River running down to the Sea, which had once a good Stone Bridge, of which there remains Nothing now but the Supporters, between which are laid Beams and Boards to supply the Room of Arches. This River, by modern Geographers, is falsely thought to be the old *Eleutherus*, as has been shewn before; but it seems to be that River mentioned by *Strabo*, p. 521. falling into the Sea near *Tyre*, for within a Bow-shot of this River *Casimeer*, is a Kane of the same Name, from which, keeping near the Sea-side, you arrive in an Hour at *Tyre*.

This City standing in the Sea upon a Peninsula, promises something magnificent at a Distance, but when you come to it, you find Nothing like the Glory for which of old it was so renown'd, as it is described, *Ezek.* 26, 27, 28. On the North-side it has an old *Turkish* Castle, besides which there is Nothing here but a mere *Babel* of broken Walls, Pillars, Vaults, &c. there being not so much as one entire House left. Its present Inhabitants are only a few poor Wretches that harbour in Vaults, and subsist upon Fishing, whereby God appears to have fulfilled his Word concerning *Tyre*, viz. *That it should be as the Top of a Rock, a Place for Fishers to dry their Nets on*, *Ezek.* xxvi. 14.

In the Midst of the Ruins there stands up one Pile higher than the rest, which is the East-end of a great Church, probably of the Cathedral of *Tyre*, and may very well be the same that was erected by its Bishop *Paulinus*, and honour'd with that famous Consecration Sermon of *Eusebius*, recorded by himself in *Eccl. Hist.* l. 10. c. 4. And 'tis very observable, that in all the ruin'd Churches which we saw, being perhaps no fewer than 100, though their other Parts were totally demolish'd, yet the East-end we always found standing, and tolerably entire. How this came to pass I cannot determine, but certainly a Thing so universally observ'd by us in our Journey, could not proceed from blind Chance.

But to return; There being an old Stair-case in the Ruin above-mention'd, I got to the Top of it, from whence I had a Prospect of the Island-part of *Tyre*, the Isthmus, and the adjacent Shore; and from that Height I could discern the Isthmus to be a Soil of a different Nature from the other, it lying lower than either, and being cover'd all over with Sand, which the Sea casts upon it. The Island of *Tyre*, in its natural State, seems to have been of a circular Figure, about forty Acres in Compass, and the Foundations of the Wall that encompass'd it are still to be seen. It makes with the Isthmus two large Bays, one on its North-side, and the other on its South, which are in Part defended from the Ocean by a long Ridge, either of Walls or Rocks, resembling a Mole, stretching out directly on both Sides from the Head of the Island. Coming out of these Ruins, we saw the Foundation of a very strong Wall, running cross the Neck of Land which served as a Barrier to secure the City on this Side. And hence we pass'd the sandy Isthmus, and came to the Place we thought the natural Shore, where we met with a fertile Plain, which extends to a vast Compass before *Tyre*, whence we arrived in three Quarters of an Hour at *Roselayn*.

12. *March 21st*: *Roselayn* is the Place where are the Cisterns call'd *Solomon's*, which according to the common Tradition are said to have been made by that King, as part of his Recompence to King *Hiram*, for the Materials he sent toward building the Temple: But though they are very ancient, yet they are of a later Date than this Tradition makes them, because the Aquæduct which conveys the Water, is carried over that Neck of Land by which *Alexander* join'd the City to the Continent at his Siege of this Place, and so cannot be older than his Time. Of these Cisterns there are three entire at this Day, one about a Furlong and half distant from the Sea, the other two, a little further up. The former is of an Octogonal Figure, being twenty two Yards in Diameter, and contains a vast Body of excellent Water, which is so well supplied from its Fountain, that though there issues from it a Stream like a Brook, driving four Mills between this Place and the Sea, yet it is always brim-full. On the East-side was the ancient Outlet of Water by an Aquæduct, having a Channel one Yard wide, which is now stop'd up by the *Turks*, who have broke an Outlet on the other Side, which makes a Stream for grinding Corn.

The Aquæduct, now dry, is carried Eastward 120 Paces, and then approaches the two other Cisterns, of which one is twelve, the other twenty Yards square, and they had each a Channel, by which they rendred their Waters into the Aquæduct, and so the united Streams of all the three Cisterns were carried together to *Tyre*. There still remains some Fragments of the Aquæduct, and in its Sides, and under its Arches, we observ'd some Heaps of Matter, produc'd by the Leakage of the Water which petrified as it distill'd from above, and by continual Accession of new Matter were grown to a great Bulk. They were compos'd of innumerable Tubes of Stone of different Sizes, cleaving to one another like Icicles, each Tube having a Cavity in its Center, from which its Parts were projected in the Form of Rays to the Circumference, like the Stones call'd Thunder-stones. The Fountain of these Waters is as unknown as the Contriver of them, though 'tis certain, from their Rising so high, they come from

some Part of the Mountains which are about a League distant.

From this pleasant Place we came in an Hour and half to the white Promontory, over which you pass by a Way about two Yards broad cut along its Side, from which the Prospect is dreadful, by Reason of the Steepness of the Mountains, and the Raging of the Sea at bottom. This Way, and the Castle *Scandalium*, which is not far off, are said to be built by *Alexander*; from whence we come first to *Nachera*, and then to the Plain of *Acra*, over a deep Mountain, suppos'd to be part of Mount *Sharon*. This Plain extends from Mount *Sharon* as far as *Carmel*, and is six Hours long, and two Hours broad, between the Sea and the Mountains, and was a delicious Plain, but is now, for Want of Culture, over-run with rank Weeds, which were, when we pass'd it, as high as our Horses Backs.

Having travell'd about an Hour in the Plain of *Acra*, we pass'd by an old Town call'd *Zib*, which probably is the Old *Achzib*, mention'd *Jos. xix. 29.* and *Jud. i. 31.* and seems to be one of the Places out of which the *Asberites* could not expel the *Canaanites*. Two Hours further we came to the Fountain of the blessed Virgin, as it is call'd by the *French* Merchants at *Acra*, at which Place we arriv'd in an Hour more.

Acra, anciently call'd *Accho*, is another of the Places from which the *Israelites* could not drive the Natives; but being in After-times enlarg'd by *Ptolemy I.* it was by him called *Ptolemais*. And since it was possessed by the *Turks*, like other Cities, having lost its *Greek* Name, it is call'd by them *Acca*, or *Acra*. This City has often chang'd Masters, and at last, by a long Siege, was taken and ruin'd by the *Turks*, in such a Manner as if they had taken Revenge upon it for the Blood it cost them. On the North and East it is compass'd with a spacious and fertile Plain, on the West it is wash'd by the *Mediterranean* Sea, and on the South by a large Bay, extending from the City as far as Mount *Carmel*.

But notwithstanding these Advantages, besides a large Kane in which are the *French* Factors, a Mosque, and a few poor Cottages, there is nothing now to be seen but vast Ruins, which show its former Strength, for it appears to have been compass'd about with a double Wall defended with Towers, and without the Walls are Ditches, Ramparts, and a kind of Bastions. In the Fields we find several large Balls of Stone, thirteen or fourteen Inches in Diameter, which were part of the Ammunition used in battering the City, Guns being then unknown. Within the Walls are the Ruins of the Cathedral dedicated to *St. Andrew*, of the Church of *St. John*, the titular Saint of this City, and of the Convent of the Knights-Hospitallers, and near to it the Palace of the Grand Master of that Order; and lastly, some Remains of a large Church, formerly belonging to a Nunnery, of which they tell this Story.

The *Turks* having press'd this City with a long Siege, at last entred it by Storm, *May 19, 1291.* In which Extremity, the Abbess fearing that herself and her Nuns should be subjected to such Bestialities as is usual in such Cases, exhorted them all to cut and mangle their Faces, as the only Way to preserve their Virgin Purity; and to encourage them, she made herself the first Example of her own Counsel, which the Nuns instantly follow'd, cutting off their Noses, and disfiguring their Faces with such terrible Gashes, as might excite Horror rather than lustful Desires. The Consequence of this was, that the Soldiers breaking into the Nunnery, and seeing instead of beautiful Ladies such sad Spectacles, put them all to the Sword in Revenge for disappointing their Lusts.

There are many other Ruins here of Churches, Palaces, Monasteries, Forts, &c. for more than half a Mile in Length. But that which pleas'd us most was, to find the *French* Consul *l'Empereur* here, who having staid for us two Days, resolv'd to set forward next Morning. But we were doubtful which Way to take, because of the Factions of the *Arabs*, which are kept up by the *Turks*, to prevent their uniting under one

Prince

Prince, whereby they might be strong enough to shake off the *Turkish* Yoke; for in these Discords Strangers are sure to suffer, being a Prey to each Party.

13. The 22d, we set out early from *Acra*, having some *Turkish* Soldiers for our Convoy: And first we pass'd by a small River, which we took to be *Belus*, famous for its Sand, of which Glass is made. Here we declin'd from the Sea-coast to the East, and crossing over the Plain, we arrived at its further Side, where it is bounded by Mount *Carmel*; and here we found a narrow Valley, which led us out of the Plain of *Acra* into that of *Esdraelon*. About this Place is the End of the Tribe of *Asber*, and the Beginning of that of *Zebulon*, as their Borders are described, *Josh. xix. 26*.

Passing through the said narrow Valley, we arrived in two Hours at the River *Kishon*, which cuts its Way down the Middle of the Plain of *Esdraelon*, and then continuing his Course by the Side of Mount *Carmel*, falls into the Sea at a Place called *Caypha*. We saw it when it was low, but we discern'd many Torrents falling into it from the Mountains, which must make it swell, as it did at the Destruction of *Sisera's* Host, *Judg. v. 21*. In three Hours and half from *Kishon*, we came to an old Village and good Kane called *Legune*, near to which we lodged that Night.

From this Place we viewed the Plain of *Esdraelon*, which is very large and fertile, and about six Hours Distance stood within View *Nazareth*, and the two Mounts *Tabor* and *Hermon*; and here we felt the Dew of *Hermon*, as the *Psalmist* calls it, our Tents being as wet with it as if it had rained all Night. About a Mile's Distance from us was encamped *Chibly*, Emir of the *Arabs*, with his People and Cattle; and below, upon the Brook *Kishon*, lay another Clan of the *Arabs*, being the adverse Party to *Chibly*; and it was little to our Satisfaction, that we were seated in the Midst between two such bad Neighbours.

The 23d. Leaving this Lodging, we went to the Emir's Tents, to whom we paid two Caphars, one of *Lagune*, and the other of *Jeneen*, and whatever else he was pleased to demand. He very civilly eas'd us of some of our Coats, which begun now, by reason of the Heat, to be troublesome. Getting quit of *Chibly*, we return'd out of the Plain of *Esdraelon*, and entred into the Precincts of the half Tribe of *Manasses*. From hence our Road lay, for four Hours, through narrow Valleys, pleasantly wooded on both Sides, and we lodg'd at *Caphar Arab*.

On the 24th, having paid our Caphar, we set out very early the next Morning; and leaving first *Arab*, and then *Rama*, on their Right-hand, we came to *Selee* and *Sebasta*, where we leave the Borders of the Half Tribe of *Manasses*, and enter into those of the Tribe of *Ephraim*. *Sebasta* is the ancient *Samaria*, the Imperial City of the Ten Tribes after their Revolt from the House of *David*, and being raised by *Herod the Great* to a magnificent State, was by him, in Honour of *Augustus*, call'd *Sebasta*.

It is situate on a long Mount of an oval Figure, and is now wholly converted into Gardens, having no other Remains of such a Place, but on the North-side a large square Piazza, encompass'd with Pillars, and on the East some Ruins of a great Church, said to be built by *Helena*, over the Place where *John the Baptist* was imprison'd and beheaded. In the Body of the Church you go down a Stair-case into the Dungeon where that Blood was shed. The *Turks* hold that Prison in great Veneration, and over it have erected a small Mosque; but for a little Piece of Money they suffer any one to go into it.

Leaving *Sebasta* we pass'd by *Sherack* and *Barseba*, and then entring into a Valley, we arrived in an Hour at *Naplosa*, which is the ancient *Sychem* or *Sychar*, as it is call'd in the *New Testament*. It stands in a narrow Valley between Mount *Gerizim* on the South, and *Ebal* on the North. From Mount *Gerizim* God commanded the Blessings to be pronounced upon the Children of *Israel*, and from Mount *Ebal* the Curses, *Deut. xi. 29*. Upon the former the *Samaritans*, whose chief Residence is at *Sychem*, have a small Temple, to which they are

still wont to repair for Religious Worship: But that their Religion consists in worshipping a Calf, as the *Jews* say, seems to have more of Spight than Truth in it.

Upon one of these Mountains also it was, that God commanded the Children of *Israel* to set up great Stones, plaister'd over and inscribed with the Body of the Law, and to erect an Altar, and offer Sacrifices, Feasting and Rejoycing, before the Lord, *Deut. xxvii. 4*. But whether *Gerizim*, or *Ebal*, was the Place appointed for this Solemnity, there is some Cause to doubt; for the *Hebrew Pentateuch* and ours, from it assign Mount *Ebal* for this Use; but the *Samaritan* asserts it was *Gerizim*. Our Company halting a little at *Naplosa*, I had an Opportunity to visit the chief Priest of the *Samaritans*, and to discourse with him about this and other Difficulties.

And first, as to the Difference between the *Hebrew* and *Samaritan* Copy, *Deut. xxvii. 4*. the Priest pretended, that the *Jews* had maliciously alter'd their Text out of Odium to the *Samaritans*, putting for *Gerizim*, *Ebal*, because the *Samaritans* worshipped in the former, which, for that Reason, they would not have to be the true Place appointed by God for his Worship. To confirm this, he alledg'd, that *Ebal* was the Mountain of Cursing, *Deut. xi. 29*. and an unpleasant Place; whereas *Gerizim* was fertile and pleasant, and the Mountain of Blessing; and therefore it was more probable, that this was the Mountain appointed for Religious Worship, and not *Ebal*. But he could not say that any of those great Stones, which God directed *Joshua* to set up, were now to be seen in *Gerizim*, which would have determin'd the Question clearly on this Side.

I enquired also, what those *Selavae* were wherewith the Children of *Israel* were so long fed in the Wilderness, *Numb. xi.* he answer'd, They were a Sort of Fowls, which by his Description appear'd to be Quails. Then I ask'd him, what Sort of Plant or Fruit the *Dudaim* or Mandrakes were, which *Leab* gave to *Rachel* for the Purchase of her Husband's Embraces? He answer'd, They were Plants of a large Leaf, bearing a Fruit like an Apple, ripe in Harvest, but of an ill Savour and unwholesome, and that the Virtue of them was to help Conception, being laid under the genial Bed; to which Purpose they are often made Use of by Women at this Day.

Of these Plants I saw several in the Way to *Jerusalem*; and if they were as common in *Mesopotamia* as here, we must conclude, that either these were not the true Mandrakes, or else it is hard to give a Reason why *Rachel* should purchase such common Things at so beloved a Price. *Naplosa* is at present in a very mean Condition to what it has been anciently; it consists of two Streets lying parallel under Mount *Gerizim*, but is full of People. Having paid our Caphar here, we proceeded in the same narrow Valley between *Gerizim* and *Ebal*; and just without the City we saw a small Mosque, said to be built over the Sepulchre purchased by *Jacob* of *Emmor*, Father of *Shechem*, *Gen. xxxiii. 19*. It goes by the Name of *Joseph's* Sepulchre, his Bones being inter'd here, *Josh. xxiv. 32*. About a Quarter of an Hour from *Naplosa* we came to *Jacob's Well*, famous not only for its Author, but for the Conference it had there with the Woman of *Samaria*, *Joh. iv.* Over the Well there stood formerly a large Church erected by *Helena*, of which remains nothing now but some Foundations. The Well is cover'd at present with a Stone Vault, into which you are let down through a very straight Hole; and then removing a broad Stone, you discover the Mouth of the Well. It is dug in a firm Rock, and is about three Yards in Diameter, and thirty-five deep, five of which we found full of Water.

At this Well the narrow Valley of *Sychem* ends, opening into a wide Field, very pleasant and fruitful, which is probably Part of that Parcel of Ground given by *Jacob* to his Son *Joseph*, *Joh. iv. 5*. From *Jacob's Well* we went through a large Valley, and having pass'd by two Villages on the Right-hand, called *Howar* and *Sawee*, we came in four Hours to *Kane Leban*, near a Village of the same Name, one of which is supposed to have

have been the *Lebonah*, mentioned *Jud. xi. 19.* and here we lodg'd that Night.

14. On the 25th, from *Kane Leban* our Road lay through a rocky Country; but having pass'd-by *Cinga*, we entred into a narrow Valley between two rocky Hills, at the further End of which we found the Ruins of a Village and a Monastery. In this Place *Jacob's Bethel* is supposed to have been, where he had his strong Couch made easy by the Vision of God, and of the Angels ascending and descending on a Ladder between Earth and Heaven, *Gen. xxviii.* near which Place are the Limits that part between *Ephraim* and *Benjamin*, *Josh. xviii. 13.* From hence we pass'd through large Olive-yards, and having left *Geeb* and *Sekwid* on the Right-hand we arrived at *Beer*; which is the Place to which *Jotham* fled from the Revenge of *Abimelech*, *Jud. ix. 21.* and is supposed to be the same with *Michmas*, *1 Sam. xiv.*

Beer is seated on the Side of a Hill, which at the Bottom has a Fountain of the same Name, and at its upper Side are the Remains of an old Church built by *Helena*, in Memory of the blessed Virgin, who being in Quest of the Child *Jesus*, *Luke ii. 24.* is said to have fate down here pensive and weary, because she could not find him; but after her Return to *Jerusalem*, she found him sitting in the Temple with the Doctors, both hearing them, and asking them Questions. Thro' the whole of this Day's Journey we had nothing in View in most Places but Rocks, Mountains, and Precipices, which astonishes Pilgrims, as being contrary to those high Ideas they had form'd of the Pleasantness and Plenty of this Country, and almost startles their Faith, as thinking it hardly possible for a Land like this to feed so prodigious a Number as are said to have been poll'd at one Time, being no less than 1,300,000 fighting Men, besides Women and Children.

But to remove these Scruples, any one may observe that these Rocks and Hills must have been anciently covered with Earth and cultivated, and so they afforded a larger Space of Ground than if the Country were level, which they husbanded by gathering up the Stones, and placing them along the Sides of the Hill in Form of a Wall, which kept in the Mould, and form'd many Beds of excellent Soil, from the Bottom to the Top of the Mountains; of which Form of Culture we see plain Footsteps in all the Mountains of *Palestine*. And there is Nothing upon Earth more fruitful, even at this Day, than the plain Country and Valleys, either for the Production of Corn or of Pasturage for Cattle.

The Hills, tho' improper for any Cattle but Goats, yet being disposed into the Beds before-mention'd, serv'd very well to bear Corn, Melons, Gourds, Cucumbers, and such-like Garden-stuff, which are the chief Food of these Countries for several Months of the Year. The most rocky Parts might serve for Vines and Olive-trees, which delight in such dry and flinty Places; and the great Plain joining to the Dead Sea, which by reason of its Saltness could not serve for Corn, Vines, or Olives, was yet very useful for the Nourishment of Bees, and making of Honey, as *Josephus* testifies, *Bell. Jud. l. 5. c. 4.* and I found by Experience, when I was there, finding in many Places a strong Smell of Honey and Wax. Thus the Country might very well maintain the vast Numbers of its Inhabitants, being every where productive of Milk, Corn, Wine, Oil, or Honey, which are the principal Food of these Eastern Nations.

Leaving *Beer*, in two Hours and a Quarter we came to the Top of a Hill, from whence we had the first Prospect of *Jerusalem*; *Rama*, anciently called *Gibeab* of *Saul*, being within View on the Right-hand, and the Plain of *Jericho*, and the Mountains of *Gilead* on the Left. In an Hour more we came to the Walls of *Jerusalem*, but durst not enter without Leave of the Governor; which being obtain'd, we entred at the *Bethlehem* Gate, mounted and arm'd, because we were in Company with the *French* Consul, for otherwise all *Franks* that come not in with some publick Minister, are to dismount at the Gate, deliver their Arms, and enter on Foot. We took our Lodgings at the *French*

Consul's, and our Board at the *Latin* Convent, while we stay'd at *Jerusalem*.

15. The 26th, being *Good-Friday* in the *Latin* Stile, we were obliged to go with the Consul into the Church of the Sepulchre, to keep the Feast with him, though it was a Week before our own *Easter*. We found the Church Doors guarded by *Janizaries*, who suffer none to go in until they have paid their *Caphar*, which for *Franks* is commonly fourteen Dollars *per* Head, unless they be Ecclesiasticks, and then it is but half so much. This being once paid, you may go in and out *gratis* as oft as you please during the whole Feast at the ordinary Times when the Door is open. All the Pilgrims being admitted, the Church Doors were lock'd, and opened no more till *Easter-day*; and being confined for three Days, we visited all the holy Places at Leisure; therefore I shall relate what pass'd during the Festival, and say of the Church, what is necessary to make my Account intelligible.

The Church of the Holy Sepulchre is founded on Mount *Calvary*, a small Hill upon the greater Mount of *Moriab*; it was anciently appropriated to the Execution of Malefactors, and therefore shut out of the City as a polluted Place; but since it was made the Altar on which the precious Sacrifice for the Sins of the World was offer'd, it stands in the Midst of *Jerusalem*, a great Part of the Hill of *Sion* being shut out of the Walls to make Room for it.

Though a great Part of this Hill was cut away to make it a fit Foundation for a Church, yet Care was taken that none of those Parts concern'd in our Lord's Passion should be alter'd or diminish'd; and so that very Part of *Calvary* where Christ was fastened to the Cross, remains entire, being about ten or twelve Yards square, and standing so high above the Floor of the Church, that you have twenty one Steps to go up to its Top; and the holy Sepulchre, which at first was hewn into a Rock under Ground, is now a Grotto above Ground, the Rock being cut away from it all round. The Church is less than an hundred Paces long, and not more than sixty wide, yet it contains twelve or thirteen Sanctuaries, consecrated by some particular Actions relating to the Death or Resurrection of Christ.

As, 1. The Place where he was derided by the Soldiers. 2. Where the Soldiers divided his Garments. 3. Where he was shut up, while all was made ready for his Crucifixion. 4. Where he was nail'd to the Cross. 5. Where the Cross was erected. 6. Where the Soldiers stood that pierced his Side. 7. Where his Body was anointed in order to his Burial. 8. Where his Body was laid in the Sepulchre. 9. Where the Angels appeared to the Women after his Resurrection. 10. Where Christ himself appeared to *Mary Magdalen*, &c. All which Places, and many others of the same Nature, are contain'd within this Church, and adorn'd with so many several Altars.

In Galleries about the Church, and little Buildings annex'd to it, every Christian Nation had anciently proper Quarters for a Society of Monks, but now, all except four, have forsaken these Quarters, because of the severe Rents imposed upon them by their *Turkish* Landlords; and of these four, the *Cophies* have only one to represent their Nation; and the *Armenians* are so much in Debt, that they are likely to desert the Place quickly, and then the *Greeks* and *Latins* will only remain.

Besides their several Apartments, each Fraternity have their peculiar Altars and Sanctuary for their own Use. But the great Prize now disputed between the *Greeks* and *Latins*, is the Command of the Holy Sepulchre, in which Contention they have proceeded to Blows and Wounds, even at the Door of the Sepulchre; and as an Evidence of this Fury, the Father Guardian shew'd me a great Scar in his Arm, being the Mark of a Wound given by a *Greek* Priest; but at the Request of the *French* King, this holy Sepulchre was appropriated to the *Latins* in 1690, they alone having the Privilege to say Mass in it, though all other Christians may go into it for the Celebration of their private Devotions.

The *Latins*, of whom there are always ten or twelve at Church, with a President over them, make every Day a solemn Procession, with Tapers and Crucifixes, to the several Sanctuaries, and sing at every one a Hymn relating to the Subject of the Place. Their Ceremony begins on *Good-Friday* Night, which is called by them the *Nox Tenebrosa*; and as soon as it grew dusk, all the Friars and Pilgrims met in the Chapel of the Apparition, (which is on the North-side of the Holy Grave) to go in Procession round the Church.

After a Sermon, at which all the Candles were put out to make a lively Image of the dark Night, every one had a lighted Taper put into his Hand; and amongst the other Crucifixes, there was one very large, which bore an Image of our Lord, as big as the Life, fastned to it with great Nails, crown'd with Thorns, besmear'd with Blood, and lively represented our Lord's Body as it hung upon the Cross. This Figure was carried in the Head of the Procession, after which all the Company followed to all the several Sanctuaries of the Church, singing at every one a Hymn.

The first Place was that of the Pillar of Flagellation, kept in a little Cell just by the Chapel of Apparition; there they sung their Hymn, and a Friar preach'd in *Spanish* about the Scourging of our Lord. From hence they proceeded to the Prison of Christ, where they had also a Hymn and a Sermon. From the Prison they went to the Altar of the Division of Christ's Garments, where they only sung a Hymn; and from thence to the Chapel of Derision, where they had a Hymn and a fourth Sermon. From this Place they went up to *Calvary*, leaving their Shoes at the Foot of the Stairs. Here are two Altars, one where he was nail'd to the Cross, at which they laid down the great Crucifix, and acted the Nailing of Christ to the Cross. The other where his Cross was erected, bearing the Image of our Lord's Body. At this Altar there is a Hole in the natural Rock, in which the Foot of our Lord's Cross stood; and here they set up their Cross, with the bloody crucified Image upon it, and then sung a Hymn, and preach'd a very affecting Passion Sermon.

About a Yard and half from the Hole where the Foot of the Cross was fix'd, is seen that Cleft in the Rock which was made by the Earthquake at Christ's Death, when *the Rocks were rent*, *Matt. xxvii. 51*. It appears to be a natural Breach, for the Sides of it answer each other like two Tallies, and it runs in such intricate Windings as could not be counterfeited by Art. After the Ceremony of the Passion is over, two Friars personating *Joseph of Arimathea* and *Nicodemus*, come with a grave and solemn Air, and take down the feigned Body from the Cross. The Limbs of the Image were soft and flexible, and it was surprizing to see the two Mourners bend down the Arms which were before extended, and lay them upon the Trunk, as is usually done in Corpses. The Body being taken down was receiv'd in a large Winding-sheet, and carried from *Mount Calvary* to the Stone of Unction, *i. e.* the Place where our Lord's Body was anointed, *John xix. 39*. And here while they cast over it sweet Powders and Spices, they sung a proper Hymn, and a Friar preach'd a Funeral Sermon in *Arabick*. After this they carried the feigned Corpse and laid it in the Sepulchre, shutting up the Door till *Easter* Morning.

On the 27th: This Morning the Pilgrims had Leisure to mark their Arms with the usual Ensigns of *Jerusalem*; and in the Afternoon, the Congregation was assembled in the *Area* before the Holy Grave, where the Friars sung over the Lamentation of *Jeremy*, which with the usual Procession to the holy Places was all the Business of this Day.

16. On the 28th, being *Easter* Morning, the Sepulchre was again set open very early, and Mass was celebrated just before it, being the highest Place in this Church, where the Father Guardian in his Robes gave the Host to all that were dispos'd to receive it, not refusing Children of seven or eight Years old: Which Office being ended, we went out of the Sepulchre, return'd to the Convent, and din'd with the Friars. After Dinner we

went to visit some of the remarkable Places without the Walls; we began with those on the North-side. And first, we were conducted to a large Grot, a little without *Damascus*-gate, which is said to have been the Residence of *Jeremiah*: And here they shew'd us the Prophet's Bed, being a Shelf on the Rock about eight Foot from the Ground, and near it is the Place where they say he wrote his Lamentations. This Place is now a College of *Dervises*, and is much honour'd by *Turks* and *Jews*.

The next Place we came to, was those famous Grotts called the *Sepulchres of Kings*, for what Reason I know not, unless they were the Sepulchres of the Sons of *David*, mentioned *Chron. xxxii. 33*. but it appears by the Labour and Expence to have been the Work of Kings. At the East-end you enter through a Rock into an open Court, about forty Paces square, cut down into the Rock. On the South-side is a Portico nine Paces long, and four broad, cut out of the natural Rock, and at the End of it you descend into the Sepulchres, within which is a fair Room about seven or eight Yards square, cut out of the natural Rock so exactly square, that Nothing could be built more regular; and so firm, that it may be called a Chamber hewn out of one Piece of Marble.

From this Room you pass into six more, one within another, all of the same Fabrick with the first. In every one of these Rooms, besides the first, were Coffins of Stone placed in Niches on the Sides of the Chamber, and in each Room there was a small Channel cut in the Floor, to drain the Drops that constantly fall into it. But the most surprizing thing that belongs to these Rooms was their Doors, of which there is only one remains hanging to puzzle the Beholders. It consisted of a Plank of Stone about six Inches thick, of the Size of an ordinary Door; it was carved so as to resemble a Piece of Wainscot, but the Stone was visibly of the same Kind with the whole Rock, and turned upon two Hinges like Axels, which were of the same Stone with the Door, and contained in two Holes of the Rock, one at the Top, the other at the Bottom.

It seem'd to be a Riddle to Pilgrims, whether these Doors were here cut out of the Rock, or brought hither; for resolving of which, I observed that the Door left hanging did not touch its Lintel by at least two Inches, and so might easily be lifted up and unhinged, which intimates how this Work was done. From these Sepulchres we return'd towards the City, and just by *Herod's* Gate were shown a Grotto full of Mire, which passes for *Jeremiah's* Dungeon, out of which he was dismissed by *Ebed Melech*, *Jer. xxxviii*.

17. The 29th. This Day, being *Easter Monday*, the *Moslem*, or Governor of the City, set out with some Bands of Soldiers to convey the Pilgrims to *Jordan*, and to secure them from the Insolence of the *Arabs* in those Parts. The Fee to the *Moslem*, upon this Occasion, is twelve Dollars for each *Frank* Pilgrim, and six for Ecclesiasticks, which every one must pay, whether they go the Journey or stay in the City. We went out at *St. Stephen's* Gate, being in all, of every Nation and Sex, about 2000 Pilgrims; and having cross'd the Valley of *Jehosaphat*, and Part of *Mount Olivet*, we came in half an Hour to *Bethany*. At the Entrance into it there is an old Ruin called *Lazarus's Castle*, supposed to be his Mansion-house, and not far from it is the Sepulchre out of which he was raised by Christ, which is held in great Veneration by the *Turks*, who use it for an Oratory, and demand of all Christians a *Caphar* for their Admission into it.

A little further you pass by what they call *Mary Magdalen's* Habitation, and then descending a Hill, you come to the Fountain of the Apostles, where they were wont to refresh themselves in their Travels between *Jerusalem* and *Jericho*. After some Hours Travel in a barren Country, you come to the mountainous Desert into which our Saviour was led by the Spirit to be tempted of the Devil; and from the Top of these Hills we had a Prospect of the Mountains of *Arabia*, the *Dead Sea*, and the Plain of *Jericho*, into which we descended, and turning up on the Left-hand, we came to the Foot of the *Quarantania*, which they say is the Mountain into which

which the Devil took our Saviour, when he tempted him with that visionary Scene of all the Kingdoms in the World, and the Glories of them.

Turning down hence into the Plain, we came to the Fountain of *Elisba*, so called, because by him it was miraculously purg'd of its Brackishness, at the Request of the Men of *Jericho*, 2 *Kings* ii. 19. Its Waters now being receiv'd in a Bason, divide themselves into several small Streams, which refresh the whole Field that lies between this and *Jericho*. A little from hence is *Jericho*, at present only a poor nasty Village of the *Arabs*; and here we saw the Place where *Zaccheus's* House is said to have stood, which is an old square Stone Building on the South side of *Jericho*.

30th. We set out early for *Jordan*, and arrived there in two Hours. We found the Plain very barren, producing Nothing but Marine Plants; and in many Places of the Road, where Puddles of Water had stood, we observed a Whiteness on the Surface of the Ground, which we found to be a Crust of Salt raised by the Water out of the Earth. About a Furlong from the River *Jordan*, was an old Church and Convent dedicated to St. *John*, in Memory of his baptizing our Saviour. We were there in *March*, but could discern no Sign of its overflowing, though it was the proper Time for these Inundations.

One Bank of the River is so beset with Bushes and Trees, that several Sorts of Wild Beasts are said to harbour in them; whose being wash'd out of their Cover by the Overflowings of the River, gave Occasion to that Allusion, *Jer.* xlix. 19. *He shall come up like a Lion, from the swelling of Jordan.* When we came to the River, some stript and bath'd themselves in it, others cut down Boughs from the Trees, and every one was some Way employ'd to take a Memorial of this famous Stream. Its Breadth was, about twenty Yards over, and in Depth it far exceeded my Height. By the Moslem's Leave we went towards the Dead Sea with a Guard to attend us. The Dead Sea is enclosed on the East and West with very high Mountains; on the North it is bounded with the Plain of *Jericho*, on which Side also it receives the Waters of *Jordan*. On the South it is open, and extends beyond the Reach of the Eye. It is said to be twenty four Leagues long, and six or seven broad. On the Shore of the Lake we found a black Sort of Pebbles, which being held in the Flame of a Candle, soon burns, and yields a Smoke of an intolerable Stench; but by burning it loses only of its Weight, and not of its Bulk. It is a common Tradition, that Birds attempting to fly over this Sea, drop down dead into it; and that no Fish, nor other Sort of Animal, can live in these Waters. The former Report I saw actually confuted, by several Birds flying over this Sea without any visible Harm. The latter I have some Reason to suspect as false, having observed on the Shore two or three Shells of Fish like Oyster-shells. As for the Bitumen, for which the Sea is famous, there was none at the Place where we were, but it is gathered near the Mountains on both Sides in great Plenty. It is so like Pitch, that it cannot be easily distinguished from it but by its sulphureous Smell and Taste.

The Water of the Lake was clear, and not only salt to the highest Degree, but extreme bitter. To try its Strength I went into it, and found it bore up my Body Swimming with an uncommon Force. Though I diligently searched, I could not find any Remains of those Cities here situated, which were made so dreadful an Example of Divine Vengeance; neither could I discern any Smoke ascending above the Water, nor any Ruins. But the Father-guardian, and Procurator of *Jerusalem*, both assured me, that they had seen one of these Ruins, and the Water being very shallow, they went to it, and found there several Pillars, and other Fragments of Buildings. On the West-side of this Sea is a small Promontory, near which, as our Guides told us, is the Monument of *Lot's* Wife metamorphos'd.

As to the Apples of *Sodom*, I never saw nor heard of any such hereabouts, nor is there any Tree near the Lake from which one might expect such Fruit. In our Return, about an Hour's Distance from the Sea, we

saw a ruin'd *Greek* Convent, and found a good Part of the Church remaining, with the Figures of several Saints, and a *Greek* Inscription over the Altar. Hereabouts, and in many other Places of the Plain, I perceived a strong Scent of Honey and Wax, the Sun being hot, and the Bees very industrious about the Blossoms of that Salt Weed the Plain produces. Among the Products of this Place, I saw a notable Fruit, called by the *Arabs*, *Zacchone*; it grows on a thorny Bush with small Leaves, and both in Shape and Colour resembles an unripe Wall-nut. The Kernels of this Fruit the *Arabs* bray in a Mortar, and then putting the Pulp into scalding Water, they skim off the Oil which rises to the Top; which Oil they use inwardly for Bruises, and outwardly for green Wounds; and I have found it, upon some Trials, a very healing Medicine.

18. On the 31st: This Morning we went in Six Hours near the Walls of *Jerusalem*, and thence to *Bethlehem* in two Hours, through the Valley of *Bephaim*, famous for being the Theatre of *David's* Victories, 2 *Sam.* v. 23. In this Road we met, 1. With the House of *Simeon*, who having our Saviour in his Arms sung his *Nunc dimittis*. 2. The Turpentine-tree under which the Virgin is said to have rested, when she carried Christ in her Arms to present him to the Lord at *Jerusalem*. 3. A Convent dedicated to *Elias*, where the *Greek* Monks pretend to shew the Impression of his Body in a Stone that serv'd for his Bed; near to which is the Well of the Star, that appear'd to the wise Men, which there re-appear'd to them. 4. *Rachel's* Tomb, mention'd *Gen.* xxxv. 19. which is a modern Structure, but probably the true Place of her Interment.

Being arriv'd at *Bethlehem*, we went to all the Holy Places belonging to it, viz. the Place where our Lord is said to be born, the Manger wherein he is said to be laid, the Chapel of *Joseph* his supposed Father, that of the Innocents, those of St. *Jerom*, of St. *Paula* and *Eustochium*, and of *Eusebius* of *Cremona*, and the School of St. *Jerom*; all which Places I only Name, being afore describ'd by Mr. *Sandys*.

From the Top of the Church we had a View of *Tekeah*, about nine Miles distant Southward, of *Engedi* about three Miles Eastward, and of a high Hill called the *Franks* Hill, being defended by the *Crusaders* forty Years after the Loss of *Jerusalem*.

April 1. We went to see the remarkable Places near *Bethlehem*, and first to the famous Fountains, Pools and Gardens, which are said to be King *Solomon's*; to which he seems to allude, *Eccl.* ii. 5, 6. The Pools are three in Number, so dispos'd, that the Waters of the uppermost descend into the second, and the second into the third. The Breadth in all is the same, being about ninety Paces, but the Length is different, that of the first being about an hundred and sixty Paces, that of the second two hundred, and the third two hundred and twenty.

About an hundred and forty Paces from them, is the Fountain from which they chiefly derive their Waters, which the Friars will have to be that seal'd Fountain to which the Spouse is compar'd, *Cant.* iv. 12. Here you find four Places where the Water rises, from which it is convey'd into a Bason, and from thence is carried by a subterraneous Passage into the Pools; and by the Way there is an Aquæduct of brick Pipes, which receives Part of the Stream, and carries it by many Turnings about the Mountains to *Jerusalem*. These Pools may probably be the same with *Solomon's*, because there is not the like Store of good Spring-water to be met with any where else in *Palestine*. From these Memorials of *Solomon* we return'd to visit some Places nearer *Bethlehem*, where we saw the Field in which they say the Shepherds were watching their Flocks, when they receiv'd the glad Tidings of Christ's Birth, and hard by the Village where they dwelt, and an old Nunnery built by St. *Paula*, in which she died; all which Places lie Eastward about half a Mile from the Convent.

But to the Westward we saw *David's* Well, which he so much thirsted after, 2 *Sam.* xxiii. 15. and a little beyond it some Remains of an old Aquæduct, which convey'd the Waters from *Solomon's* Pools to *Jerusalem*; which

which is said to have been the genuine Work of *Solomon*, but is now destroy'd by the *Turks*. Returning from this Place, we went to see the *Greek* and *Armenian* Convents, contiguous to that of the *Latins*, each of which has a several Door opening into the Chapel of the holy Manger; and then we went to the Grot of the blessed Virgin, within forty Yards of the Convent, where she is said to have hid herself, and her divine Babe, from the Fury of *Herod*, sometime before their Departure into *Egypt*. This Grot is hollow'd into a chalky Rock, whose Whiteness they say proceeds from some Drops of the Virgin's Milk, that fell from her Breast while she was sucking the holy Infant; upon which Account, they believe that this Chalk has a miraculous Virtue of encreasing Women's Milk, and for that End it is often taken by Women *Turks*, *Arabs* and *Christians*, and they say with very good Effect.

19. On the 2d, having presented the Guardian with two *Chequeens* for his Civilities to us, we went from *Beitlehem* to go visit the Wilderness, and Convent of *St. John Baptist*, and in this Stage we first cross'd that famous Valley in which the Angel is said in one Night to have destroy'd many thousands in the Army of *Senacherib*; and then we came to *Boatbellah*, in which they say no *Turk* can live above two Years, by which Report the *Christians* have it to themselves. A little further we came to a Fountain, where they told us, but falsely, that *Philip* baptiz'd the *Ethiopian* Eunuch; and then to the Village of *St. Philip*, at which ascending a steep Hill, we came to the Wilderness of *St. John*, which is very rocky, but is well cultivated, and produces great Plenty of Corn, Vines and Olive-trees. And here we saw the Cave and Fountain where the *Baptist* is said to have led an austere Life, *Mat. iii. 4.* Near this Cell are some Locust-trees, which the Friars say yielded him Sustenance, though they appear to be planted much later than his Time. After this, as we went to the Convent of *St. John*, we pass'd along one Side of the Valley of *Elah*, where *David* slew the Giant, *1 Sam. xvii.* and had a View of *Modon*, on the Top of a Hill, the Burying-place of the *Maccabees*.

When we came near the Convent, we visited a Place which they call the House of *Elizabeth*, Mother of the *Baptist*; and in the Ruins of the Convent that was formerly here, is a Grotto in which they say the blessed Virgin saluted *Elizabeth*, and pronounced her divine *Magnificat*, *Luke i. 46.* The Convent of *St. John* has been rebuilt from the Ground within these four Years, and is now a large square Building, and neat all over; and has in it a very beautiful Church, at the North-end of which you go down seven Marble Steps to a stately Altar, erected over the Place where they say the *Baptist* was born. As we return'd from *St. John's* to *Jerusalem*, we saw a Convent of the *Greeks*, taking its Name from the Holy Cross, because they say here is the Earth that nourish'd the Root that bore the Tree that yielded the Timber that made the Cross; and under the high Altar you are shown the Hole in the Ground where the Stump of the Tree stood. After this we return'd to *Jerusalem*, and had our Feet washed by the Guardian, and kiss'd by every Friar, who did all sing *Latin* Hymns at the Time.

20. On the 3d, we went to see the Office of the Holy Fire, a Ceremony kept up by the *Greeks* and *Armenians*, who believe that every *Easter-Eve* a miraculous Flame descends from Heaven into the Holy Sepulchre, and kindles all the Lamps and Candles there. When we came to the Church of the Holy Sepulchre, we found it crouded with a numerous Mob, who began their Disorders by running round the Holy Sepulchre with all their Might, crying out *Huia*, i. e. *This is he*, or *this is it*; by which they express the Truth of the Christian Religion. After this they began to act many antick Tricks, like Mad-men; sometimes they dragg'd one another round the Sepulchre, sometimes they set one Man upon another's Shoulders, and so march'd round; and sometimes they tumbled round the Sepulchre like Tumblers on a Stage, and acting the rudest Things on this Occasion.

This frantick Humour continued from twelve to four; and then the *Greeks* first set out in a Procession round the Sepulchre, who were immediately follow'd by the *Armenians*, in which Order they thrice compass'd the Sepulchre, producing their Standards, Crucifixes, and embroider'd Habits, upon this Occasion. Towards the End of this Procession, a Pidgeon came fluttering into the Cupola over the Sepulchre, at which there was a great Shout; and the *Latins* told us, this was let fly by the *Greeks*, to deceive the People into an Opinion that it was a visible Descent of the Holy Ghost. The Procession being over, the Suffragan of the *Greek* Patriarch, and the principal *Armenian* Bishop, approach'd the Door of the Sepulchre, and cutting the String with which it was fasten'd, and seal'd entred in, shutting the Door after him, all the Candles and Lamps within having been before extinguish'd in the Presence of the *Turks*. And then the Exclamations were double as the Miracle drew nearer, and the People press'd with such Vehemence to the Door, that the *Turks* could not keep them off with the severest Drubs, which they did out of a great Desire to light their Candles at the holy Flame, as soon as it is brought out of the Sepulchre, for that is counted most sacred and pure, as coming immediately from Heaven.

The two Miracle-mongers had not been above a Minute in the Sepulchre, when the Glimmring of the holy Fire was seen through some Chinks of the Door, which made the Mob as mad as any in *Bedlam*. Then presently came out the two Priests with blazing Torches in their Hands, which they held up at the Door of the Sepulchre, while the People thronged with mighty Zeal to obtain a Part of the first and purest Flame, and could not be kept off by the hard Blows of the *Turks* Clubs, who laid on without Mercy. Those who got the Fire applied it to their Beards and Faces, pretending it would not burn like an earthly Flame; but I saw none that endured the Tryal long enough to make good the Pretension. However, so many Tapers were presently lighted, that the whole Church seem'd to be in a Flame; and with this Illumination the Ceremony ended. Those within the Church acted their Part with great Quickness and Dexterity, but the Behaviour of the Rabble without, which would better become a *Bacchanale* than a *Christian* Festival, very much discredited the Miracle.

The *Latins* take a great deal of Pains to expose this Ceremony as a shameful Imposture, and a Scandal to the Christian Religion; but the *Greeks* and *Armenians* pin their Faith upon it, and make their Pilgrimages chiefly upon this Motive; and it is the Unhappiness of their Priests, that having acted the Cheat so long, they are forced now to stand to it for Fear of endangering the Apoastcy of their People. After the Rout was over, when we went out of Church, we saw several People about the Stone of Unction, who, having Store of Candles lighted with the holy Fire, were daubing Pieces of Linen with the Weiks of them, and the melting Wax, which were designed for Winding-sheets; for they believe, that if they are buried in a Shroud smutted with this Fire, it will secure them from Hell-fire.

The 4th being our *Easter*, we did not go abroad, the Time requiring Employment of another Nature.

21. On the 5th we went to see some new Curiosities; and first we came to that which is called *St. Peter's* Prison, from which he was deliver'd by an Angel, *Acts xii.* Next we came to an old Church, in the Place where the House of *Zebedee* stood; then to the Place where stood the Irongate which open'd to *St. Peter* of its own Accord; and a little farther is a small Church built over the House of *St. Mark*, whither *Peter* went after his miraculous Goal-delivery. The *Syrians*, who keep it, pretend to show you the Window at which *Rhoda* look'd out when *Peter* knock'd at the Door. In the Church they shew a *Syriack* MS. of the *New-Testament*, pretended to be eight hundred and fifty-two Years old, and a little Stone-Font used by the Apostles in baptizing. Beyond this, in the same Street, is that which is call'd the House of *St. Thomas*, formerly a Church now a Mosque.

A little

A little further, in another Street, is the Place where they say our Lord appear'd after his Resurrection to the *Maries*, *Matt. xxviii. 9.* And here the *Armenians* have their Convent and Gardens, which take up all that Part of Mount *Sion* that is within the Walls of the City. Their Church is built over the Place where they say *St. James*, the Brother of *John*, was beheaded, *Acts xii. 2.* and on the North-side of it is shown the Place of his Decollation. In this Church are two Altars set out with extraordinary Splendor, deck'd with rich Mitres, Copes, Crosses of Silver and Gold, &c. and in the Middle a Pulpit made of Tortoise-shell, and Mother of Pearl, curiously mingled and inlaid in one another.

In the Anti-chapel are three large rough Stones, esteem'd very precious, one of them being the Stone upon which *Moses* cast the two Tables when he broke them, the other two being brought, one from the Place of our Lord's Baptism, and the other from that of his Transfiguration. After this we went to another Chapel of the *Armenians*, which is said to be founded in the Place where *Annas's* House stood; and in it is shown a Hole, denoting the Place where one of the Officers of the High-Priest smote our Saviour, *John xviii. 22.* whom the Friars will have to be the same *Malchus*, whose Ear our Lord heal'd. In the Court before this Chapel is an Olive-tree, to which they say Christ was chain'd for some Time by Order of *Annas* to secure him from escaping.

From the House of *Annas* we went out of *Sion gate*, which is near to that they call the House of *Caiaphas*, where is another small Chapel of the *Armenians*. Here, under the Altar, they say is the Stone which was laid to the Door of our Saviour's Sepulchre, *Matt. xxvii. 60.* which the *Armenians* stole from the Church of the Sepulchre and brought hither; it is two Yards and a half long, one Yard high, and as much broad. Here is likewise shown a Cell, said to have been our Lord's Prison till the Morning, when he was carried hence before *Pilate*; and also the Place where *Peter* was frighted into a Denial of his Master. A little further without the Gate was the Church of the *Cænaculum*, where they say Christ instituted his last Supper, which is now a Mosque. Near this is a Well, which is said to be the Place where the Apostles divided to go every one to his several Charge; and close by it is the Ruin of a House, in which the Virgin is said to have breathed her last. And a little lower is the Grot in which *St. Peter* wept so bitterly for denying his Master. After this we return'd to the Convent, and by the Way had a View of the beautiful Gate of the Temple.

On the 6th, we took a another Progress about the City; and going out at *Bethlehem-Gate*, and turning on the Left-hand, we came to *Bethsheba's* Pool, where she is said to be washing herself when *David* spied her from his Palace. A little below this Pool begins the Valley of *Hinnom*, on the West-side of which is the Place call'd the *Field of Blood*, now called *Campo Sancto*, which is about thirty Yards long, and half as broad. The Corpses are let down into it through five Holes left open for that Purpose, through which we could see the Bodies under several Degrees of Decay. A little below the *Campo Sancto* is an intricate Cave, in which the Apostles are said to have hid themselves when they forsook their Master and fled. The Valley of *Jebosaphat* crosses the End of that of *Hinnom*, in which is the Brook *Cedron*, which is always dry except in the Winter.

In this Valley of *Jebosaphat* we first went to the Well of *Nehemiah*, so called, because it is reputed the Place where he recover'd the Fire of the Altar after the *Babylonish* Captivity, *2 Mac. i. 19.* A little higher is the Place where *Isaiab* is said to be sawn asunder; and above that is the Pool of *Siloam*. A little farther is the Fountain of the Blessed Virgin, and over-against it the Village call'd *Siloe*, in which *Solomon* is said to have kept his strange Wives; and above it is a Hill call'd the *Mountain of Offence*, where *Solomon* built the high Places, *1 Kings xi. 7.* Not far from it they show another Field of Blood, where *Judas* met with his compounded Death, *Matt. xxvii. 5.* Here also they show'd

us two noble Antiquities, the Sepulchre of *Zachariah*, and the Pillar of *Absalom*; and close by is the Sepulchre of *Jebosaphat*. From hence keeping in the Valley, we saw the Sepulchres of the Blessed Virgin, *St. Anna*, and *Joseph*. After this, going up the Hill, we saw a broad Stone on which they say *St. Stephen* was martyr'd, and not far from it a Grot into which the *Jews* cast his Body; from whence we went to *St. Stephen's Gate* of the City.

22. On the 7th, we set out again to see the holy Places upon Mount *Olivet*, and as we ascended the Mount we saw certain Grotto's, call'd the Sepulchres of the Prophets. A little higher you come to the Place where they say Christ utter'd his Prophecy concerning the Destruction of *Jerusalem*, *Matt. xxiv.* and on the Right-hand is the Place where they say he dictated a second Time the *Pater-noster* to his Disciples, *Luke xi. 1, 2.* At the Top of the Hill you come to the Place of our Lord's Ascension. Here was anciently a large Church built in Honour of that Triumph, in which they shew the Print of our Saviour's Foot; but it is now used for a Mosque, as many other holy Places about *Jerusalem* are, whether out of Devotion or Lucre I do not determine. Two Furlongs Northward is the highest Place of Mount *Olivet*, on which stood a high Tower call'd *Viri Gallilei*! in Memory of the Apparition of the two Angels to the Apostles after Christ's Ascension, which about two Years since was demolish'd by a *Turk*, who bought the Field in which it stood. From this Place we descended the Mount by another Way, and about Midway they show the Place where Christ beheld the City, and wept over it, *Luke xix. 41.*

A little lower they show *Gethsemane*, about fifty seven Yards square, lying between the Foot of Mount *Olivet* and the Brook *Cedron*. It is well planted with Olive-trees, which are believed to be the same that stood here in our Saviour's Time; which Opinion made these Olives and Oil an excellent Commodity in *Spain*. At the upper Part of the Garden is a flat Ledge of Rocks, which is said to be the Place on which *Peter*, *James*, and *John*, fell asleep during our Saviour's Agony; and just by is a Grotto, which is said to be the Place in which our Saviour underwent that bitter Part of his Passion. Not far off is a small Shred of Ground twelve Yards long and one broad, which is said to be the Path on which *Judas* walk'd up to Christ, and said, *Hail, Master*, and kiss'd him: Which narrow Path is separated by a Wall out of the Midst of the Garden, as a *Terra damnata*; which is the more remarkable, because it is done by the *Turks*, who, as well as *Christians*, detest the Ground on which that infamous Treachery was acted.

On the 8th, we went to see the Palace of *Pilate*, which is not far from *St. Stephen's Gate*, from whence we had a Prospect of the Place where the Temple stood, which is all that is allow'd us, for we cannot go within the Borders of it without forfeiting Life or Religion. It lies upon the Top of Mount *Moriah*, over-against Mount *Olivet*, the Valley of *Jebosaphat* lying between. It was about five hundred and ninety of my Paces long, and three hundred and seventy broad; in the Middle of the Area stands now a Mosque, which is said to be built on the Ground where formerly stood the *Sanctum Sanctorum*.

In this pretended House of *Pilate* is shown the Room where Christ was mock'd with the Ensigns of Royalty, and buffeted by the Soldiers. As you come out is a Descent, where was formerly the *Scala Sancta*. On the other Side of the Street is the Room where, they say, our Saviour was scourged, which is now a Weaver's Shop. Returning from *Pilate's* Palace, we pass'd along the dolorous Way, in which we saw, 1. The Place where *Pilate* brought our Lord forth to the People, and said, *Behold the Man!* 2. Where Christ fainted thrice under the Weight of the Cross. 3. Where the Blessed Virgin swoon'd at so tragical a Spectacle. 4. Where *Veronica* presented him the Handkerchief to wipe his Bleeding Brows: And, 5. Where the Soldiers compel'd *Simon* to bear his Cross. All which Places I need only to name, being described by others.

On the 9th, we saw the Pool of *Bethesda*, which is one hundred and twenty Paces long, forty broad, and eight deep, but no Water in it; and there we saw some Arches, which are said to be the Porches in which the Lame, Halt, and Blind sat, *John* v. From hence we went to the Convent of *St. Anne*, where there is a large Church, and under it a Grotto, where, they say, the Blessed Virgin was born. Near this Church they shew the *Pharisees* House, where *Mary Magdalen* wash'd Christ's Feet with her Tears, and wiped them with her Hair, *Luke* vii. 38. In the Afternoon we saw the stately Pool of Mount *Gibon*, which is one hundred and six Paces long, and sixty-seven broad, lined with a Wall, and well stored with Water.

On the 10th, we went to take our Leave of the holy Sepulchre, which being the last Time, the *Turks* allow free Admittance to all People without any Fee, not only to the Poor, but to the Lewd, who prophaned it as much as when the Heathen celebrated here their *Aphrodisia*. On the 11th began the *Turks* Byram, and we kept at home to avoid the Affronts usual at such Festivals. On the 12th and 13th, we prepared for our Departure, and how to avoid the *Arabs*, by going along with the *Mosolem*.

23. On the 14th, we went with a small Present to wait on the *Mosolem*, who set out the next Morning; and before our Departure I took the Measure of the City, going out at *Bethlehem-Gate*, and walking round about to the same Gate again, and found it in Circumference to be four thousand six hundred and thirty Paces, and ten of my Paces amounting to nine Yards; this Number makes four thousand one hundred and sixty-seven Yards, which is just two Miles and an half.

On the 15th in the Morning, having received our *Diplomata*, to certify that we had visited the holy Places, and presented the Convent with fifty Dollars a Man for their Trouble, we set out with the *Mosolem*, and lodg'd at Kane *Leban*. The Country People being at Plough, in order to sow Cotton, us'd Goats of an extraordinary Size, being eight Foot long, having at one End a sharp Prickle to drive the Oxen, and at the other a Paddle to cleanse the Plough, which is held by the same Person that drives; and with such a Goat it seems to be, that *Shamgar* made the great Slaughter *Judg.* iii. 31.

The 16th. Leaving Kane *Leban*, we passed by *Naplosa* and *Samaria*, and came to the Fountain *Selee*, where we lodg'd. The 17th, we travelled in the same Road we came to *Capbar-Arab*, and then we left that Road, resolving to cross the Plain of *Esdraelon*, and visit *Nazareth*, which we did, after paying our *Caphar* to Emir *Chibly*.

24. April 18. *Nazareth* is now a small Village, on a high Hill, where we were treated at a Convent of some *Latin* Fathers, who live in perpetual Fear of the *Arabs*. The Church of *Nazareth* stands in a Cave, said to be the Place where the blessed Virgin received the Message from the Angel, *Hail thou that art highly favoured, &c.* *Luke* i. 28. It resembles the Figure of a Cross, whereof the Tree is fourteen Paces long, and six over, and the Traverse is nine Paces long, and four broad; just at the Section are two granite Pillars, whereof one stands at the Place where the Angel, the other where the blessed Virgin stood at the Time of the Annunciation.

After this we went to see the House of *Joseph*, where they say the Son of God liv'd for near thirty Years in Subjection to Man, *Luke* ii. 51; and near this they shew the Synagogue, where our Lord preached that Sermon which so much exasperated his Country-men, *Luke* iv. Here are the Ruins of two Churches built by *Helena*.

On the 19th, about two Hours distant from *Nazareth* Eastward, is Mount *Tabor*, a high Mountain, round and beautiful, standing in the Plain of *Esdraelon*, about three Furlongs within the Plain. This is thought to be the Mountain on which our Lord was transfigur'd, *Mat.* xvii. which has a plain Area at Top very fertile, on which in several Places are Cisterns of good Water,

and three Grotto's representing three Tabernacles, which *St. Peter* propos'd to erect, when he said, *Let us make three Tabernacles, &c.*

And here I cannot but observe, that almost all Passages and Histories of the Gospel, are said by them who shew the Places, to have been done in Grotto's. Thus the Places of the blessed Virgin's Birth, of the Annunciation, of the Virgin's Salutation of *Elizabeth*, of the *Baptist's* and *Christ's* Nativity, of *St. Peter's* Repentance, and the Transfiguration; all these Places are said to be Grotto's, though it is no Ways probable that so many various Actions, with such Circumstances as seems sometimes to require Places of another Nature, should be done in Grotto's.

From the Top of *Tabor* you have a most delightful Prospect: On the North-west you discern the *Mediterranean*, and all round you have the beautiful Plains of *Esdraelon* and *Galilee*, where you have a View of many Places memorable for the Resort and Miracles of Christ; at the Bottom stands *Daberab*, which is said to take its Name from *Deborah*, and near it is the Fountain of *Kishon*. Eastward you see Mount *Hermon*, and at the Foot of it *Nani*, famous for our Lord's raising the Widow's Son there, *Luke* vii. 14. and *Endor*, where *Saul* consulted the Witch. Southward you see the Mountains of *Gilboa*, fatal to *Saul* and his Sons.

Due East you discover the Sea of *Tiberias*, and close by it a steep Hill, down which the Herd of Swine ran and perished in the Waters, *Mat.* viii. 32. Towards the North appears that which they call the Mountain of *Beatitudes*, where our Saviour delivered his Sermon, *Mat.* v. 6, 7. And not far from this little Hill is the City *Saphet*, that stands upon a high Mountain, to which being then in View, our Saviour may be supposed to allude, when he says, *Mat.* v. 4. *A City set on a Hill cannot be hid.* From Mount *Tabor*, we had also a Sight of the Place call'd *Dothani*, where they say *Joseph* was sold by his Brethren, and of the Field where our Saviour fed the Multitude with a few Loaves, and a few Fishes. After Dinner we went to see the Mountain of the *Precipitation*, i. e. the Brow of the Hill where they say the *Nazarites* would have thrown down our Saviour, *Luke* 4. had he not made a miraculous Escape: And here the Friars show some Holes, which they call the Prints of Christ's Fingers, made in the hard Stone, when he resisted the Violence offer'd him.

20. On the 20th, we directed our Course to *Acra*, pass'd in View of *Cana* of *Galilee*, and came to *Sepharia*, the reputed Habitation of *Joachim* and *Anna*, Parents of the blessed Virgin; over which stands a good Part of a large Church. Here begins the Plain of *Zabulon*, from whence we came to *Acra*.

On the 21st: At *Acra* we were treated by the *French* Consul, and came the first Night to our old Lodging at *Solomon's* Cisterns.

On the 22d: About three Hours from *Sidon*, we were carried to see a Place we had not observ'd before, which was a high rocky Mountain; on the Side of which were hewn a Multitude of Grotts, to the Number of 200, as they were counted, which have an Entrance two Foot square, and a Room within for the most part four Yards square, which seem'd to be design'd for the Use of the Living, and not of the Dead, because some of the Cells are no more than one Yard square, and in the Rock are Cisterns for storing up Water. On the 23d, we continued at *Sidon*, being generously treated by the *French*.

26. On the 24th, having gone through the Olive-Yards of *Sidon*, we ascended *Libanus*, till we came to a Fountain call'd *Ambus-lee*. On the 25th, we arrived at the highest Ridge of the Mountain, where the Snow lay close by the Road; and then we begun to descend on the other Side, and came to a Village call'd *Meshgarab*, where a *Caphar* was demanded by the *Druses*, who possess these Mountains. From hence, in one Hour, we entred into a Valley call'd *Bocat*: This seems to be the same with *Bicath-Aven*, mentioned *Amos* i. 5. together with *Eden* and *Damascus*, for there is very near it a Place call'd *Eden* to this Day; in this Valley there runs a large River call'd *Sejane*, which falls at last into

into the River *Casimir*, falsely call'd *Eleutherus*. We cross'd a Bridge, and pitch'd our Tents on its Bank.

On the 26th, we pass'd through the Valley *Bocat*, and came to the Foot of *Antilibanus*; and having pass'd by several Villages, we went through a narrow Clift between two rocky Mountains to *Demus*, a small Caphar. On the 27th in the Morning, we came to the River *Barrady*, which supplies all the Gardens and the City of *Damascus* with Water; we cross'd over it at a Bridge, and our Road ascending brought us to the Brink of a high Precipice, from whence the *Turks* say their Prophet took a View of the City *Damascus*, which he found so pleasant and beautiful that he would not enter into it, because he said there is but one Paradise designed for Man, and he would not take his in this World.

It is, as near as I could guess, about two Miles long, but compass'd with Gardens, extending to thirty Miles round; in which are Fruit-trees of all kinds, and many Turrets, Steeples and Summer-houses, peeping out from green Boughs. The River *Barrady*, near its Spring-head, is divided into three Streams, whereof the Middle-most runs directly to *Damascus*, and is distributed in the City; the other two are drawn round to the Borders of the Gardens, so that there is not a Garden but has a fine quick Stream, which serves not only for watering the Place, but for Fountains and other Water-works.

This River was call'd by the *Greeks* and *Romans* *Chrysorrhoas*; but as for *Arbana* and *Pharpar*, Rivers of *Damascus*, mention'd 2 *Kings* v. 12. I could find no Memorial of them, but doubtless they were Branches of the River *Barrady*. We continued a good While upon the Precipice, as being loth to leave such a charming Prospect, though it allur'd us down to the City. Coming down the Hill into the Plains, we were conducted by a *Janizary* into the City, where we observ'd the Garden-walls to be made of great Pieces of Earth, fashion'd like Bricks, and hardned in the Sun, being two Yards long and one Broad, and half of one thick. We also observ'd their Method of scouring the Channels: They put a great Bough of a Tree in the Water, and fasten it to a Yoke of Oxen, upon the Bough there sits a good heavy Fellow to press it down and drive the Oxen; and thus the Bough is dragg'd all along the Channel, and serves at once both to cleanse the Bottom and also to fatten the Water, for the greater Benefit of the Gardens.

On the 28th, we walk'd out to take a View of the City: And here we found all the Houses on the Outside built either with Sun-burnt Brick or *Flemish* Wall, very coarsely daub'd over; and so by the Washing of the Houses upon a violent Rain, the whole City becomes as it were a Quagmire. But the Gates in these Mud-walls are adorn'd with Marble Portals, carv'd and inlaid with great Beauty; and on the Inside you find generally a square Court, beautified with Variety of fragrant Trees and Marble Fountains, and Duans floor'd with Marble, richly gilded, and furnish'd with Carpets and Cushions.

In the next Place we went to see the Church of St. *John Baptist*, now converted into a Mosque, which no Christian may enter into. Its Gates are vastly large, cover'd with Brass, stamp'd over with *Arab* Characters; and within it is spacious and lofty, built with three Isles, between which are Rows of polish'd Marble of great Beauty. In this Church is kept the Head of St. *John*, with other Reliques so holy, that it is Death for a *Turk* to go into the Room where they are. From the Church we went to the Castle, and being admitted within the Gate we saw Store of ancient Arms and Armour, and among the rest a *Roman* Balista, and a Chain cut in Stone.

27. On the 29th, we went to see the Cavalcade of the *Hadjees* setting out for *Mecca*, which has been describ'd before. After this we went to see the *Ager Damascenus*, a beautiful Meadow just without the City, divided in the Middle by a Branch of the River *Barrady*; and it is a current Tradition here, that *Adam* was made of the Earth of this Field. Adjoining to this is a large

Hospital, enclosed on the South-side by a stately Mosque, and on the other Sides with Cloysters and Lodgings. Returning hence Homeward we saw a beautiful Bagnio, and not far from it a Coffee-house capable of entertaining four or five hundred People.

It had two Quarters for Guests, one for Summer, and the other for Winter. That for Summer was a small Island, wash'd round with a large swift Stream, shaded over Head with Trees, and with Mats when the Boughs fail. And here we found a Multitude of *Turks* in the Duans, regaling themselves with Greens and Water, which two, with a beautiful Face, according to their Proverb, are a perfect Antidote against Melancholy. In the Afternoon we went to visit what they call the House of *Ananias*, who restor'd Sight to St. *Paul*, *Acts* ix. 17. And the Place shown for it is a small Grotto, containing a *Christian* Altar and a *Turkish* Praying-place, seated too near one another.

Our next Walk was out of the East-gate, to see the Place of St. *Paul's* Vision, which is about half a Mile from the City, close by the Way-side. A little nearer the City is a small Timber-structure with an Altar in it, where you are told St. *Paul* rested some time in his Way to the City after the Vision, *Acts* ix. 8. Being return'd to the City we were shown the Gate at which St. *Paul* was set down in a Basket, *Acts* ix. 25. This Gate is at present wall'd up, by Reason of its Vicinity to the East-Gate, which renders it of little Use. In the City we saw the Patriarch of it, who told me there were more than twelve Hundred of the *Greek* Communion in that City.

On the 30th, we went to visit the Gardens, and spent a Day in one of them, where we found a pleasant Summer-house, with a plentiful Stream of Water running through it, and the Garden thick set with Fruit-trees. In visiting these Gardens, the *Franks* are oblig'd either to walk on Foot, or ride on Asses, which stand there ready to be hir'd) for the *Turks* will not allow them to ride a Horse. May 1. we spent in another Garden, whose Summer-house was more splendid, and had greater Variety of Fountains.

On the 2d, Some of us went to *Sidonaia*, a *Greek* Convent, about four Hours from *Damascus* to the Northward, and by the Way we saw on the Right-hand a very high Hill, reputed the same on which *Cain* and *Abel* offer'd Sacrifices, and where the latter was slain by the former. *Sidonaia* is situated at the further Side of a large Vale, on the Top of a Rock, which would be inaccessible but for the Steps that are cut in it all the Way up. It is fenc'd at Top with a Wall (which encloses the Convent, which was at first founded by *Justinian*, and is at present possess'd by twenty *Greek* Monks, and forty Nuns, who live promiscuously together.

Upon this Rock, and in a little Compass round about it, are no less than sixteen Churches or Oratories, dedicated to several Names, 1. To St. *John*. 2. To St. *Paul*. 3. To St. *Thomas*. 4. To St. *Babylas*. 5. To St. *Barbara*. 6. To St. *Christopher*. 7. To St. *Joseph*. 8. To St. *Lazarus*. 9. To the blessed Virgin. 10. To St. *Demetrius*. 11. To St. *Saba*. 12. To St. *Peter*. 13. To St. *George*. 14. To *All-Saints*. 15. To the *Ascension*. 16. To the Transfiguration of our Lord; from all which we may conclude, that this Place was highly esteem'd for Holiness.

In the Chapel here made Use of by the Convent for their daily Service, they pretend to a great Miracle, of which they give this Account. In this Church they had once a little Picture of the blessed Virgin, very famous for the many Cures and Blessings granted to Supplicants. This Picture was stole away by a sacrilegious Rogue, who had not kept it long but it turn'd into a Body of Flesh; which wonderful Event struck him with such Remorse, that he carried back the Prize, and begg'd Pardon for his Crime. The Monks having recover'd so great a Jewel, to secure it for the future, laid it in a Chest of Stone, and placing it in a little Cavity behind the high Altar, fix'd an Iron Grate before it.

Upon

Upon the Grates hang Abundance of Toys, being the Offerings of many Votaries for the Success of their Prayers made at this Shrine. Under the same Chest, in which the Incarnate Picture was deposited, they always place a small Silver Basin, to receive the holy Oil, which they pretend distils from the enclosed Image, and does wonderful Cures in many Distempers, especially those affecting the Eyes. On the East-side of the Rock is an ancient Sepulchre hollow'd in the firm Stone, which is about eight Yards square, and contains twelve Chests for Corpses. At the Entrance are six Statues in three Niches, two in each; at the Pedestals are some Greek Words very dark.

On the 3d, we went to see the Street call'd *Straight*, *Acts ix. 11.* in which is shewn the House of *Judas*, with whom *St. Paul* lodg'd; and in the same House is an old Tomb said to be *Ananias's*, much reverenc'd by the *Turks*, who keep a Lamp always burning over it. On the 4th: In an Hour and half we came to a small Village call'd *Sinie*, just by which, on the Top of a Hill, is an old Structure, suppos'd to be the Tomb of *Abel*, which is thirty Yards long, and thought to be but just proportion'd to his Stature; from whence the adjacent Country, in old Times, was call'd *Abylene*.

28. On the 5th we pass'd by the Fountain of *Barady*, and came to a Village called *Surgawch*, from whence we arrived a second Time in the Valley of *Bocat*; and hence, going Northerly, we came in three Hours to *Balbeck*, which is suppos'd to be the ancient *Heliopolis*, or City of the Sun, and so the Word imports; for *Baal*, though it comprehends all Idols of whatever Sex, is very often appropriated to the Sun, which is the Sovereign Idol of this Country. The City has a pleasant Situation on the East-side of the Valley of *Bocats*, of a square Figure, compass'd with a good Wall, though its Houses are mean, as they are usually in *Turkish* Villages.

There is in it a noble Ruin, which was anciently a Heathen Temple, in which we observed, first, a round Pile of Building, all of Marble, encircled with Columns of the *Corinthian* Order, very beautiful, which support a Cornish that runs all round the Structure, of no ordinary State and Beauty; and what remains of it at present is in a very tottering Condition, but yet the *Greeks* use it for a Church, which should excite them to a little more Fervour in their Prayers than they generally use, for they are seemingly the most indevout at their Divine Service, of any People in the Christian World.

But besides this Temple, here is another Curiosity, which is so strange, that a Man may be thought to strain the Privilege of Travellers in relating it, and that is a large Piece of the old Wall, which encompasses all the Structures in the City; a Wall made of such prodigious great Stones, that the Natives here ascribe the Building of it to the Devil. Three of the Stones we measured, and found them to extend to sixty one Yards in Length, whereof one was twenty one, and the other two twenty Yards long; these three Stones lay in one Row, End to End. Here was also a single Column of the *Tuscan* Order about fourteen Yards high, and one Yard and half diameter, having a Channel cut from the Bottom to the Top.

On the 6th we left *Balbeck*, and went a-cross the Valley; and as we pass'd by the Walls of the City, we saw many Stones inscribed with *Roman* Letters, which show that the Walls are made of the Ruins of the old City. In two Hours we saw, near the Road, an old Pillar nineteen Yards high, and five Foot in Diameter. In an Hour more we came to the other Side of the Valley, at the Foot of *Anti-libanus*; and, ascending the Mountain, we saw an old Lake called *Limone*, and thence in an Hour more we arrived at the Snow. Here we lodged all Night on the Top of *Libanus*, which is free from Rocks, but very barren, and cover'd with a Sort of white Slates.

It is so high, that it proves a Conservatory of Abundance of Snow; which thawing in the Summer, supplies with Water the Rivers and the Fountains in the Valleys below; and in the Snow we saw the Print of the

Feet of Wild Beasts, the sole Proprietors of these upper Parts of the Mountain.

On the 7th we went almost four Hours upon Snow, which being frozen, bore us and our Horses, and then descending about an Hour, we came to a Fountain and a milder Region. From hence we design'd for *Canobine*, but our Guide being at a Loss, we steer'd to *Tripoly*, where we were nobly treated.

29. On the 8th, Mr. Consul *Hastings* carried us to see the Castle of *Tripoly*, which is situate on a Hill that commands the City; but being now unprovided with Arms, it serves rather for a Prison than a Garrison. There was in it a poor Christian called *Sheck Eunice*, a *Maronite*, one that had formerly renounced his Faith, and turn'd *Mahometan*; but in his declining Age retracted his Apostacy, and died to atone it; for he was impaled by Order of the *Basha* two Days after we had left *Tripoly*; which Kind of Punishment is certainly one of the greatest Barbarities that can be offer'd to human Nature.

The Execution is done after this Manner: They take a Post about the Bigness of a Man's Leg, eight or nine Foot long, which they make sharp at one End, and force the Criminal to carry to the Place of Execution; and there they thrust in the Stake at his Fundament, and then taking him by the Legs, draw on his Body upon it till the Point of the Stake appears at his Shoulders; and then they erect the Stake, and fasten it in a Hole dug in the Ground. The Criminal sitting in this Posture, does sometimes drink, smoke, and talk, for twenty-four Hours; but generally, after he has remain'd an Hour in this Posture, one of the By-standers is permitted to give him a gracious Stab to the Heart, which puts an End to his inexpressible Misery.

On the 9th, having cross'd the Plain of *Tripoly*, we came to the Foot of *Libanus*; and thence ascending, in four Hours we pass'd by a Village call'd *Eden*, and in two Hours and a Half more we came to the Cedars which grow amongst the Snow, near the highest Part of *Libanon*, where we found some very old, and of a prodigious Bulk, of which Sort I counted sixteen, and others younger, of a smaller Size. I measured one of the largest, and found it twelve Yards six Inches in Girth, and thirty-seven Yards in the Spread of its Boughs. It was still found, and about five Yards from the Ground, was divided into five Limbs, and each of which was equal to a great Tree.

After we had staid about half an Hour in this Place, the Clouds began to thicken and fly upon the Ground, which so obscured the Road, that with much ado we found the Way that goes down to *Canobine*; which is a Convent of the *Maronites*, and the Seat of a Patriarch, and is pleasantly situated near a Rupture in *Libanus*, cloath'd with Greens, and refresh'd with Fountains. It is seated on the North-side of this Chasm, about the Midway in the Mountain, and was founded by *Theodosius the Great*, at the Mouth of a great Cave, having a few Rooms fronting outward that have the Light of the Sun, the rest being all under Ground. The Valley of *Canobine* was anciently much resorted to for Religious Retirement, as appears from the many Hermitages, Cells, and Monasteries here to be seen.

On the 10th, I took my Leave of the Patriarch, and return'd to *Tripoly*, through a Path cut in the Side of the aforesaid Rupture. On the 11th, we took our Leaves of our worthy Friends at *Tripoly*, and travelling the same Way we came, we arrived in eight Days at the *Honey-Kane*, and found many of our *Aleppine* Friends there. All that occur'd to us new in these Days Travel, was a particular Way used by the Country-people in gathering Corn, which they pluck up by Handfuls from the Roots, that they may loose none of their Straw, which is generally very short, and necessary for the Sustainance of their Cattle, no Hay being made here. This is their Practice in all Places of the East I have seen, and seems to give Light to that Expression of the *Psalmist*, *Psal. cxxix. 6. which withereth afore it be plucked up*; and though there is Mention in the next Verse of a Mower; yet being such as fills not his Hand, this rather confirms the former Sense.

30. We

130. We are next to take Notice of an Excursion our Author made some Years after this, in order to take a View of the famous River *Euphrates*, and the Country near it on both Sides; which being so famous both in ancient and modern History, might well excite his Curiosity, as the Plainness and Perspicuity of his Account cannot but satisfy ours. We set out, says he, from *Aleppo*, April 17, 1699, and steering East North East somewhat less, we came in three Hours and a half to *Surbass*.

The 18th, we came in three Hours and a half to *Bezay*, passing by *Bab*, where is a good Aquæduct, *Dyn il Daab*, to which you descend by about thirty Steps, and *Lediff*, a pleasant Village. Our Course was thus far East and by North. In the Afternoon we advanced three Hours farther, Course North East, to an old ruined Place, formerly of some Consideration, called *Acamy*: It is situated in the Wilderness on a Hill encompassed by a Valley: It was large, and had the Footsteps of good Walls and Buildings.

The 19th we went East and by North, and in four Hours arrived at *Bambych*. This Place has no Remnants of its ancient Greatness but its Walls, which may be traced all round, and cannot be less than three Miles in Compass. Several Fragments of them remain on the East-side, especially at the East Gate, and another Piece of eighty Yards long, with Towers of large square Stone, extremely well built. On the North-side I found a Stone, with the Busts of a Man and Woman large as the Life, and under two Eagles carved on it. Not far from it, on the Side of a large Well, was fixed a Stone with three Figures carved on it in *Basso Relievo*. They were two *Syrens*, which twining their fishy Tails together, made a Seat on which was placed sitting a naked Woman, her Arms and the *Syrens* on each Side mutually entwined.

On the West-side is a deep Pit of about an hundred Yards Diameter: It was low and had now Water in it, and seemed to have had great Buildings all round it, with the Pillars and Ruins of which it is now in Part filled up, but not so much but that there was still Water in it. Here are a Multitude of subterraneous Aquæducts brought to this City, the People attested no fewer than fifty. You can ride no where about the City without seeing them. We pitched by one about a Quarter of a Mile East of the City, which yields a fine Stream, and emptying itself into a Valley, waters it, and makes it extremely fruitful. Here perhaps were the Pastures of the Beasts designed for Sacrifice. Here are now only a few poor Inhabitants, though anciently all the North-side was well inhabited by *Saracens*, as may be seen by the Remains of a noble Mosque and Bagnio a little without the Walls. We were here visited by a Company of *Begdelies*, who were incamped some Hours further towards *Euphrates*, having about a thousand Horse there.

20. For avoiding the *Begdelies*, we hired a Guide, who conducted us a By-way. We travelled North North East over a Desert Ground, and came in three Hours to a small Rivulet called *Sejour*, which falls into the *Euphrates* about three Hours below *Jerabolus*. In about two Hours more we came to a fine fruitful Plain, covered with extraordinary good Corn, lying between the Hills and the River *Euphrates*. In about an Hour and half's Travelling through this Plain on the Banks of the River, we came to *Jerabolus*. This Place is of a semicircular Figure, its flat Side lying on the Banks of *Euphrates*; on that Side it has a high long Mount close by the Water, very steep. It was anciently built upon (and at one End of it I saw Fragments of) very large Pillars, a Yard and half Diameter, and Capitals and Cornishes well carved. At the Foot of the Mount was carved on a large Stone, a Beast resembling a Lion, with a Bridle in his Mouth, and I believe anciently a Person sitting on it; But the Stone is in that Part now broke away; the Tail of the Beast was couped.

Round about this Place are high Banks cast up, and there is the Footsteps of Wall on them. The Gates seem to have been well-built; the Whole was 2250 Paces, that is Yards, in Circumference. The River is

here as large as the *Thames* at *London*; a long Bullet-gun could not shoot a Ball over it, but it dropt into the Water. Here is found a large Serpent, which has Legs and Claws, called *Woralla*. I was told by a *Turk*, that a little below this Place, when the River is low, may be seen the Ruins of a Stone-bridge over the River; for my own Part, I saw it not, nor do I much rely on the *Turk's* Veracity. The River seem'd to be lately fallen very suddenly, for the Banks were fresh wet two Yards and more above the Water. It was here North and South.

On the 21st we kept close on the Banks of *Euphrates*, and in two Hours and a Half crossed a fine Rivulet called *Towzad*, and in two Hours more arrived over-against *Beer*, and pitched on a Flat, close by the River-side. Observing the Latitude of the Place by my Quadrant, I found the Angle between the Sun and the Zenith, to be twenty-two Degrees, and the Declination this Day being fifteen Degrees ten Minutes; the Whole is thirty seven Degrees, and ten Minutes.

On the 22d, we continued at our Station, not daring to cross the River for Fear of falling into the Hands of the *Chiah* of the Basha of *Urfa*, who was then at *Beer*, ordering many Boats of Corn down to *Bagdal*. We were supplied at the same Time with Provisions by *Sbeck Affyne*, to whom we made Returns.

On the 23d, the *Chiah* being now departed, *Sbeck Affyne* invited us over to *Beer*. We crossed in a Boat of the Country, of which they have a great many, this being the great Pass into *Mesopotamia*. The Boats are of a miserable Fabrick, flat and open in the Fore-part for Horses to enter: They are large enough to carry about four Horses each: Their Way to cross is, by drawing up the Boat as high as they know to be necessary, and then with wretched Oars striking over the Falls a good Way down by the Force of the Stream before they arrive at the further Side.

Having saluted *Affyne*, we were conducted to see the Castle, which is a large old Building on the Top of a great long Rock, separated by a great Gulph or natural Bottom, from the Land. At first coming within the Gates, which are of Iron, we saw several large Globes of Stone, about twenty Inches diameter, and great Axles of Iron, with Wheels which were entire Blocks of Wood two Foot thick in the Nave, and cut somewhat to an Edge toward the Periphery and Screws, to bend Bows or Engines; as also several Brass Field Pieces.

Ascending up the Sides of the Rock by a Way cut obliquely, you come to the Castle. At first Entrance you find a Way cut under Ground down to the River. In the Castle the principal Things we saw were, first, a large Room full of old Arms. I saw here Glass Bottles to be shot at the End of Arrows; one of them was stuck at the End of an Arrow, with four Pieces of Tin by its Sides, to keep it firm. Vast large Cross-bows and Beams, seemingly designed for Battering, Rams and Roman Saddles, and Head-pieces of a large Size, some of which were painted, and some large Thongs for Bow-strings, and Bags for slinging Stones. But the Jealousy of the *Turks* would not permit us to stay so long as would have been requisite for a perfect Examination of these Antiquities. From the Castle we return'd to *Affyne*, and were civilly treated. In the Evening we went up into the Country of *Mesopotamia*. The Hills are chalky and steep, and come close to the Water-side, without a Plain intervening, as it is upon the Side of *Syria*, so that *Beer* stands on the Side of a Hill. However, it has a Couple of fine Streams that run over the Top of the Hill; one of which drives two Mills, and so runs down to the City, which is well walled. In the Side of the Hill there is a Kane under Ground, cut into the Rock, with fifteen large Pillars left to support its Roof.

24. We left *Beer*, and travelling West, came in three Hours to *Nizib*, a Place well situated at the Head of the *Towzad*. Here is an old small Church very strong and entire, only the Cupola in the Middle of the Cross is broke down, and its Space covered with Leaves to fit the Place for a Mosque. I believe the *Turks* made the Places to which they turn in Prayers, empty

Niches, to shew that they worshipped one invisible God, not to be represented by Images. In two Hours we came from *Nizib* to a good Christian Village called *Uwur*, and in an Hour and half more to a Well in the Desert.

25. We travelled West near two Hours, and came through a fine Country diversify'd into small Hills and Valleys, to a Village called *Adjia*, having left *Silam* and two other Villages on the Right-hand. At *Adjia* rises the River of *Aleppo* from a large Fountain at once, and just above it runs the *Sejour*, which might be let into it by a short Cut of ten Yards. From *Adjia* our Course was West North West. The Banks of the *Sejour* are well planted with Trees and Villages. In two little Hours we came to *Antab*, having crossed the *Sejour* at a Bridge, about three Quarters of an Hour before. Leaving the City on the Right-hand we passed under its Walls, and pitched about three Quarters of an Hour from it on a plain Field, on the Banks of the *Sejour*.

Antab stands mostly on a Hill, having a Castle, on a round Mount at its North-side, and exactly resembling that of *Aleppo*, though much less: It has a very deep Ditch round it, and at the Foot of the Mount within the Ditch, is a Gallery cut through the Rock all round the Castle with Portals for Shot, and it is faced with Stone Walls, where the Rock was not strong enough. The Houses have generally no upper Rooms, the *Bazars* are large. I saw here a fine Stone very much resembling Porphyry, being of a red Ground with yellow Specks, and Veins very glossy. It is dug just by *Antab*.

Antab is doubtless *Antiochia penes Taurum*, in the Skirts of which it stands, and is not far distant from the highest Ridge: It is about two Thirds as big as *Aleppo*.

26. We passed through a fruitful mountainous Country, and came in seven Hours and a Quarter to *Rowant* Castle: It stands on the Top of a round steep Hill, and has been strong for the Times it was built in. It is probably a *Saracen* Fabrick, and is now in Ruins. At the Foot of the Hill Westward runs the River *Ephreen*, its Course is South-South-West; our Course from *Antab* to *Rowant* was North-West and by North.

27. We continued travelling through the Mountains, which were now somewhat more uneven and precipitious, but watered every where with fine Springs and Rivulets. In about six Hours we came to *Corus*; our Course was South-west, having crossed the *Ephreen* about two thirds of an Hour before. Just by *Corus* is the River *Sabon*, that is, *Chor* or *Char*, which encompasses most part of the City.

Corus stands on a Hill, consisting of the City and Castle: The City stands Northerly, and from its North-end ascending, you come at last to a higher Hill to the Southward, on which stands the Castle. The whole is now in Ruins, which seem to have been very large, wall'd very strongly with huge square Stones. Within are observable the Ruins, Pillars, &c. of many noble Buildings. On the West-Side there is a square Enclosure of great Capacity, compassed with good Walls and five Gates, which admitted into it as one may discern by the Ruins of them. I conjectur'd they might be the Cathedral.

Below the Castle-Hill to the Southward stands a noble old Monument. It is six square and open at six Windows above, and is covered with a Pyramidal Cupola. In each Angle within is a Pillar of the *Corinthian* Order of one Stone, and there is a fine Architrave all round just under the Cupola, having had Heads of Oxen carved on it, and it ends a-top with a large Capital of the *Corinthian*; near this are several sepulchral Altars.

28. We left *Corus*; and without the Town about half a Mile South-East, we descended down through a Way cut obliquely on the Side of a Precipice, which leads to a Bridge of seven Arches, of a very old Structure, over the River *Sabon*. And about a Quarter of a Mile further we came to another Bridge of three very large Arches over the River *Ephreen*. These Bridges

are very ancient, and well built of square Stone. Three Pillars have an acute Angle on the Side against the Stream, and a round Buttress on the other Side, and on both Sides are Niches for Statues. They were well paved a-top with large Stones, and are doubtless as well as that of the other Side of the Town, the Work of the excellent and magnificent *Theodorit*.

From this Bridge in about three Hours with a Course South-East, or South East and by South, we arrived at *Jan Bolads*. From *Jan Bolads* to *Chiblis* is one Hour and two Thirds, Course North, North-East. *Chiblis* is a large populous Town, and has fifteen Mosques that may be counted without the Town, and it has large Bazars. Many Medals are found here, which seem to argue it to be ancient; but under what Name I know not.

Aleppo bears from *Jan Bolads* South and by East, *Seck Berukel* South South West. An Hour from *Jan Bolads* is *Azafs*; and two Hours further we lodged in the Plain, which about *Chiblis* and *Azafs* is very wide and no less fruitful. This Country is always given to the *Valide*, or Grand Signior's Mother. On Saturday, April 29, we arrived safe at *Aleppo*, having travelled about five Hours that Day.

There is at the Distance of about four Hour's Journey from this City, a very great natural Curiosity, much talked of in that Country, and which deserves to be particularly described: It is called the *Valley of Salt*, and indeed is so stiled with great Propriety. This Valley is of two or three Hours Extent; we were three Quarters of an Hour in crossing one Corner of it. It is of an exact Level, and appears at a Distance like a Lake of Water. There is a Kind of a dry Crust of Salt all over the Top of it, which sounds when the Horses go upon it like frozen Snow. There are three or four small Rivulets empty themselves into this Place, and wash it all over about Autumn, or when the Rains fall. In the Heat of the Summer the Water is dried off, and when the Sun has scorched the Ground, there is found remaining the Crust of Salt aforesaid, which they gather and separate into several Heaps, according to the Degrees of Fineness, some being exquisitely white, others alloy'd with Dirt. It being soft in some Places, our Horses Hoofs struck in deep; and there I found in one Part a soft brown Clay, in another a very black one, which to the Taste was very salt, though deep in the Earth. Along on one Side of the Valley, viz. that towards *Gibul*, there is a small Precipice, about two Men's Lengths, occasioned by the continual taking away the Salt, and in this you may see how the Veins of it lie. I broke a Piece of it, of which, that Part that was exposed to the Rain, Sun, and Air, though it had the Sparks and Particles of Salt, yet it had perfectly lost its Savour, as in *St. Matt. Chap. v.* The inner Part, which was connected to the Rock, retain'd its Savour, as I found by Proof. In several Places of the Valley we found the thin Crust of Salt upon the Surface, bulged up as if some Insect, working under it, had raised it; and taking off the Part, we found under it Efflorescences of pure Salt, shot out according to its proper Figure. At the neighbouring Village *Gibul* are kept the Magazines of Salt, where you find great Mountains (as I may say) of that Mineral ready for Sale. The Valley is farmed of the Grand Signior at 1200 Dollars per Annum.

31. Our Author not only wrote this large and regular Account of his Travels, but was also ready on any Occasion to explain whatever Difficulties arose in the Minds of his Friends, with respect to the Eastern Countries, in which he had lived so long, or the Manners of the People that inhabit them. Thus upon the Reverend Mr. *Osborn*'s writing him a Letter, to desire from him a general Character of the *Turks*, and a particular Account of the Manner in which the *English* Merchants lived amongst them; he gave him the following clear and distinct Answer. "As to the former it would fill "a Volume to write my whole Thoughts about them, I "shall only tell you at present, that I think they are very "far from agreeing with that Character, which is given "of them in *Christendom*, especially for their exact Jus-
tice,

tice, Veracity and other moral Virtues, upon Account
 of which, I have sometimes heard them mentioned
 with very extravagant Commendations, as though
 they far exceeded Christian Nations. But I must pro-
 fess myself of another Opinion: For the Christian
 Religion, how much soever we live below the true Spirit
 and Excellency of it, must still be allowed to discover so
 much Power upon the Minds of its Professors, as to
 raise them far above the Level of a *Turkish* Virtue!
 It is a Maxim that I have often heard from our Mer-
 chants, that a *Turk* will always cheat when he can
 find an Opportunity; Friendship, Generosity true
 Wit (in the *English* Notion) and delightful Converse,
 and all the Qualities of a refined and ingenuous Spi-
 rit, are perfect Strangers to their Minds, though in
 Traffick and worldly Negotiations they are acute
 enough, and are able to carry the Accounts of a large
 Commerce in their Heads, without the Help of
 Books, by natural Arithmetick, improved by Cus-
 tom and Necessity. Their Religion is framed to keep
 up great outward Gravity and Solemnity, without
 begetting the least good Tincture of Wisdom or
 Virtue in the Mind. You shall have them at their
 Hours of Prayer (which are four a Day always) ad-
 dressing themselves to their Devotions with the most
 solemn and critical Washings, always in the most
 publick Places, where People are passing, with most
 lowly and most regular Prostrations, and a hollow
 Tone, which are, amongst them, the great Excellen-
 cies of Prayer. I have seen them, in affected Charity,
 give Money to Bird-catchers (who make a Trade of
 it) to restore the poor Captives to their natural Li-
 berty, and at the same Time hold their own Slaves
 in the heaviest Bondage. And at other Times they
 will buy Flesh to relieve indigent Dogs and Cats, and
 yet curse you with Famine and Pestilence, and all the
 most hideous Execrations; in which Way these East-
 ern Nations have certainly the most exquisite Rhe-
 torick of any People upon Earth. They know hardly
 any Pleasure but that of the sixth Sense. And yet with
 all this, they are incredibly conceited of their own Reli-
 gion, and contemptuous of that of others, which I take
 to be the great Artifice of the Devil, in order to keep
 them his own. They are a perfect visible Comment
 upon our Blessed Lord's Description of the *Jewish*
Pharisees. In a Word, Lust, Arrogance, Covetous-
 ness, and the most exquisite Hypocrisy, compleat their
 Character. The only Thing that ever I could ob-
 serve to commend in them is, the outward Decency
 of their Carriage, the profound Respect they pay to
 Religion, and to every Thing relating to it; and
 their great Temperance and Frugality. The Dear-
 ness of any Thing is no Motive in *Turkey*, though it
 be in *England*, to bring it into Fashion. As for our
 living amongst them, it is with all possible Quiet and
 Safety, and that is all we desire, their Conversation
 being not in the least entertaining. Our Delights are
 among ourselves, and here being more than forty of
 us, we never want a most friendly and pleasant Con-
 versation. Our Way of Life resembles in some Mea-
 sure the Academical. We live in separate Squares
 shut up every Night, after the Manner of Colleges.
 We begin the Day constantly as you do, with Pray-
 ers, and have our set Times for Business, Meals, and
 Recreations. In the Winter we hunt in the most
 delightful Campaign twice a Week; and in the Sum-
 mer go as often to divert ourselves under our Tents,
 with Bowling, and other Exercises; so that you see
 we want not Divertisements, and these all innocent
 and manly. In short, it is my real Opinion, that
 there is not a Society out of *England*, that, for all
 good and desirable Qualities, may be compared to
 this.

Thus we see, that very sensible Men differ very much
 in Reference to this Subject, and that as some enter-
 tain very high, so others again have very low and mean
 Opinions of *Turks*. This Disparity must arise from that
 Inequality in Point of Understanding and Morals, which
 is natural to them and to all Nations; and therefore
 we are to make proper Allowances in reference to all

such general Characters. One Thing deserves to be
 particularly remarked, which is this, that amongst the
Turks it is not usual for the better Sort of People, by
 which I mean those best bred and educated amongst
 them, to betake themselves to Trade; but, on the con-
 trary, they commonly apply either to the Sword or to
 the Robe; that is to say, they endeavour to rise in the
 Army, which is the speediest Way; or in the Law,
 which is the safest; this may very well account for
 the Want of that Integrity and strict Honour, com-
 plained of amongst the *Turks*; and I apprehend, that
 it has appear'd amongst the *English* in a very high
 Point of Light when our Author resided at *Aleppo*,
 where he lived and conversed with Gentlemen, who, in
 Point of Birth and Fortune, were superior to Tempta-
 tions, and who were above lessening their Characters to
 increase their Riches. I had the Honour to know more
 than one of these Gentlemen myself, and have spent
 some of the happiest Moments of my Life in their
 Company: They were Persons, who, from their long
 Experience, had just and excellent Notions of Trade;
 and never discoursed of it without observing, that the
 true Basis of Credit was an irreproachable Behaviour:
 They thought, that in Foreign Countries, and more
 particularly in the *Levant*, Factors were not only trusted
 with the Effects of their Correspondents, but also, in
 some Measure, with the Honour of their Nation, and
 that to injure the latter was as much a Crime, as to be
 false to the former. I hope and I believe, that the
 same Measures are still pursued with the same Punctua-
 lity, and as much to the Profit and Honour as ever of
 the *British* Nation; but whoever reflects on the wide
 Difference between *Turkish* Traders and *British* Mer-
 chants, will not at all wonder that the former were
 so low in the Esteem of the latter. But for all
 this, we may lay it down as a Thing certain enough,
 that amongst the better Sort of *Turks* there are
 Men of great Probity and Honour, and who are very
 far from seeking to make an Advantage of the Igno-
 rance or Credulity of Strangers. When I say this, I
 do not mean their great Ministers and Bashaws, who
 have rose either by Accident, or by the Caprice of their
 Masters; such Men in *Turkey*, and in all other Nations,
 are frequently unworthy of the Posts they hold, and ex-
 ercise them with a Venality suitable to their vicious Dis-
 positions. Ambition, Pride, and a Spirit of Volup-
 tuousness, are Passions that inspire Men with as mean
 Thoughts as Avarice can do, though certainly that is
 the meanest of all Vices, and most unworthy of the
 Mind of Man. We must likewise make some Al-
 lowances for the Nature of their Government, which
 has already been fully described; for in a Country where
 Money will do every Thing, it is natural for every Man
 to be desirous of getting Money.

It may not be amiss to consider how great and dan-
 gerous an Evil this is, and how far it is capable of sub-
 verting the Constitution of every Country where it pre-
 vails. We know that in former Times this Humour
 did not prevail among the *Turks*; and that on the con-
 trary, they were proud of their Poverty, or rather, be-
 ing content with the Necessaries of Life, they despised
 those who could not live without enjoying Superfluities;
 in those Days the *Turks* were a great and a victorious
 People. The same Thing may be said of other Na-
 tions with the same Truth, but we will confine ourselves
 at present to the East. The *Saracens* or *Arabs*, in the
 Days of *Mahomet* and his immediate Successors, were a
 Race of hardy People, and their Princes valued them-
 selves upon their Power, without dreaming of Magni-
 ficence. As that Spirit declined, and as their Caliphs
 began to affect stately Palaces, numerous Guards, and
 all the exterior Ensigns of unlimited Authority, they
 lost those Qualities which rendered them truly venerable.
 This created Dissentions and civil Wars, frequent Insur-
 rections, and a Series of Revolutions, which by Degrees
 broke the Power of particular Princes, and in Process
 of Time that of the whole Nation; so that now there
 is not the least Footsteps of that Authority, which once
 appear'd so terrible to all its Neighbours. The *Mahome-*
tan Empires of the present Age, such as those established

in *India*, *Persia*, *Barbary* and *Turky*, have been raised on the Ruins of the *Saracen* Empire, and are all of them now grown old and infirm, so that they seem ready to crumble under their own Weight. No other Reason can be assigned for this, but the Prevalence of Corruption in them all, for wherever moral Virtues grow into Contempt, it is simply impossible that national Power should long subsist; or that where Princes and great Men, instead of devoting their Cares to the Administration of Justice, become insensible of all Things, but what contribute to their Ease and Pleasure, they should for any Length of Time continue to enjoy even these. Innocent Divertisements and manly Pleasures are not at all inconsistent with good Government and publick Spirit; but sensual Delights, and a Propensity to Indolence which always accompanies them, naturally begets Contempt in those whose Reverence and Respect can only keep them in real and constant Subjection. These Remarks may be confirm'd, from what has happen'd within our View in all these Countries. The *Mogul* Empire has been over-run in less time than would have sufficed in ancient Time for the Conquest of one of its Provinces; the *Persian* Empire has been subverted over and over; nothing has been more unsteady of late Years than the Throne of the *Xeriffs* in *Africa*; and the deposing of the Grand Signior is in some Measure become a Thing familiar. But let us now return to our Author for the last Time.

Mr. *Maundrell*, though he had lived long in a Country where Superstition prevails to such a Degree, that the several Nations who inhabit it seem to vie with each other in Credulity, yet he preserved a just Regard for Evidence, and did not suffer his Judgment to be hurried away by Tradition, however ancient; or Assertions, however bold. He examined every Thing carefully, and then exercised his own Judgment freely, assisted by all the Helps that could be derived from Conversation and Learning. Of this we have a remarkable Instance in an Answer he gave to a Gentleman who consulted him upon these two Points, *viz.* Whether *Gebazi's* Leprosy still stuck to and distinguished his Posterity as some have reported; and what Ground there was to impute to the *Greek* Church, a Notion that Persons who died excommunicated, did not consume in their Graves. "When I was in the *Holy Land*, says he, I saw several that labour'd under *Gebazi's* Distemper, but none that could pretend to derive his Pedigree from that Person. Some of them were poor enough to be his Relations, particularly at *Sichem* (now *Naplofa*) there were no less than ten, (the same Number that were cleansed by our Saviour not far from the same Place) that came a begging to us at one Time. Their Manner is to come with small Buckets in their Hands, to receive the Alms of the Charitable, their Touch being still held infectious, or at least unclean. The Distemper as I saw in them, was very different from what I have seen it in *England*, for it not only defiles the whole Surface of the Body with a foul Scurf, but also deforms the Joints of the Body, particularly those of the Wrists and Ancles, making them swell with a gouty, scrofulous Substance, very loathsome to look upon. I thought their Legs resembled those of old battered Horses, such as are often seen in Drays in *England*. The whole Distemper indeed as it there appeared, was so noisome, that it might well pass for the utmost Corruption of the human Body on this Side the Grave. And certainly the inspired Penmen could not have found out a fitter Emblem, whereby to express the Uncleaness and Odiousness of Vice. But to return to *Gebazi*. It is no Wonder if the Descent from him be by Time obscured, seeing the best of the *Jews*, at this Time of Day, are at a Loss to make out their Genealogies. But besides, I see no Necessity in Scripture for his Lines being perpetuated. The Term (*for Ever*) is, you know, often taken in a limited Sense in holy Writ, of which the Designation of *Phineas's* Family to the Priesthood, *Numb.* xxv. 15. may serve for an Instance. His Posterity was, you know, cut entirely off from the Priesthood, and that transferred to *Eli*, who was one of another Line, about three hundred Years after. I have enquired of

" a *Greek* Priest, a Man not destitute either of Sense or Probity, about your other Question. He positively affirmed it, and produced an Instance of his own Knowledge in Confirmation of it. He said, that about fifteen Years ago, a certain *Greek* departed this Life without Absolution, being under the Guilt of a Crime which involved him in the Sentence of Excommunication, but unknown to the Church. He had Christian Burial given him, and about ten Years after a Son of his dying, they had Occasion to open the Ground near where the Body was laid, in order to bury his Son by him; by which Means they discovered his Body as entire as when it was first laid in the Grave. The Shroud was rotted away, and the Body naked and black, but perfectly sound. Report of this being brought to the Bishop, he immediately suspected the Cause of it, and sent several Priests, of whom the Relator was one, to pray for the Soul of the Departed, and to absolve him at his Grave. Which they had no sooner done, but (as the Relator goes on) the Body instantly dissolved, and fell into Dust like slack'd Lime. And so well satisfied with the Effect of their Absolution, they departed. This was deliver'd to me *Verbo Sacerdotis*. The Man had hard Fortune not to die in the *Roman* Communion; for then, his Body being found so entire, would have entitl'd him to Saintship: For the *Romanists*, as I have both heard and seen, are wont to find out and maintain the Relicks of Saints by this Token. And the same Sign, which proves an *Anathema Maranatha* amongst the *Greeks*, demonstrates a Saint amongst the *Papists*; perhaps both equally in the Right". This sufficiently proves what has been before advanced, that Superstition prevails generally through the East, and that the *Christians* are as far gone in it as the *Turks*; neither need it be at all wonder'd at among the *Greeks*, since it is natural for all Nations under Oppression, to sink into Superstition; and there is certainly nothing that can be more evident, than that these unfortunate People are brought as low, and their Spirits as much broke, as it is possible to conceive in the Course of so many Ages as they have been under the Yoke: But however, it is certain, that even in *Russia*, where their Religion is established by Law, this Notion prevails, together with the Practice established upon it, of absolving the Dead, that their Bodies may rot in Peace, and not remain, as they apprehend they do, for a Covering or Receptacle to evil Spirits. Upon the same strange Notion, collected from the same Nation, arose the wild and incredible Relations concerning *Vampyres*, or dead Bodies that suck the Blood of living ones, that appear'd in our News Papers some Years ago from *Hungary*. Yet I think it might be doubted, whether this strange Opinion was not originally borrow'd from the *Mahometans*, who, as we have before observed, are strongly persuaded, that Men have a Kind of Sensation in their Graves, and that there is no such Thing as absolute Rest even among the Dead.

We may learn from this Gentleman's Account of the *Holy Land*, the true State and Condition of it at this Day, independent of Fable and Priestcraft; and from thence it appears, that there could not be a more fruitful or pleasant Region, better seated for all Purposes whatever, or more in the Heart or Center of the Universe, while that was a Thing of Consequence to the Propagation of Religion, than this Land of *Israel*. It is no less evident from the Remains of a vast Variety of Antiquities, some of which extend to the very Country itself, where not only Buildings but Mountains are seen in Ruins; that this was truly what *Canaan* is represented to be in the holy Scriptures, a Land of Hills and of Valleys, abounding with Corn, productive of Wine, and flowing as it were with Milk and Honey. Yet now its State is so much alter'd, that if we were to measure the Wickedness of its Inhabitants by the Misery of the Places that once furnished them with Habitations, we should not in the least doubt of the Representations made by inspired Writers of the Sinfulness and Obstinacy of these People. There is another natural and plain

plain Observation arises from contemplating the past and present State of this famous Country, and it is this; that the unanimous Inclination of *Jews, Christians, and Mahometans*, upon very different Principles, to pay it an high Veneration, and to esteem many Places therein as peculiarly sacred, is a Kind of perpetual Testimony in Favour of Revealed Religion. It is impossible that Nations, differing so widely in their Manners and Customs, as well as in their Religious Notions, should for so many Ages agree in obtruding Cheats upon each other. We may add to this, that the *Samaritan* Scripture is another strong Proof of the Sincerity and Authenticity of the *Mosaick* Writings; for nothing but Truth could have united the *Samaritans* and *Jews*, whose Hatred to each other has now subsisted for many Centuries, in concurring to vouch any Fact. To this, indeed, it may be objected, that they differ about the Mountains *Gerizim* and *Ebal*, in which they directly contradict each other: But when this Objection is maturely weigh'd, it will be found to fortify extremely the Credit of this Testimony, because it is the clearest and most unexceptionable Proof, that there is no Kind of Collusion between the two Nations, but that the respective Persuasions of each, with regard to the Copies of the Scriptures they have amongst them, is founded upon Motives in which they cannot be deceived. It is very true, that there is a prodigious Mixture of fabulous Superstition in the Traditions of all these Nations; but as this is natural, and indeed unavoidable in Things of this Kind, it is so far from derogating from the material and substantial Proofs, which are, if I may be allow'd the Expression, over-grown and cover'd with this Bark of Folly, that it rather fortifies the Evidence in the Sentiments of a sober and ingenuous Mind. For what Kind of History is there, which has come down to us pure and unmixed with Fable? The Eastern Nations were always famous for it, the *Egyptians* had it

in a high Degree, it passed from them to the *Greeks*; and as to the History of the elder Ages of *Rome*, it was so intermixed therewith, that in the Times of *Cicero* they were scarce able to distinguish any beyond the capital Facts that were to be relied on. But does it follow, that because Men have always loved to amplify and extend the Truth, therefore there was no such Thing? Shall we, because it is very difficult to settle the precise Situation of ancient Cities that make so great a Figure in the best Authors, doubt whether those Cities ever were in the World? Or, because the Oriental Chronicles of all the ancient Empires differ widely from ours, shall we peremptorily decide, that there never were any such, notwithstanding that manifest Monuments of the flourishing State of those ancient Empires remain even to our Times? Are the Antiquities at *Tchelmimar* in *Persia*, of *Tadmor* or *Palmira* in the Wilderness, of *Balbeck*, or *Heliopolis* seen by our Author, to be rejected as Fancies or Fables? And, if these are all Matters of Fact, do they not more clearly prove the Histories of past Times, than all the Chronicles in the World? Men may write fabulous Histories, or may forge Records, but such Monuments of ancient Times are beyond the Reach of Fiction or Forgery, so that Incredulity, with respect to them, is not only irrational and absurd, but downright Madness.

We may upon the whole rest satisfied, that what our Author has delivered to us in his Travels, and in his Remarks, deserve both Credit and Respect, and are capable of furnishing us with Materials for very solid and useful Meditations. But it is now Time to proceed and quitting the Limits of the *Turkish* Empire, to pursue our Journey with fresh Guides, and fresh Views, into other Regions, which will afford us new Pleasures and additional Helps, to the Increase of our Knowledge, and the Improvement of our Understandings.

CHAPTER II.

Containing TRAVELS through the Empire of *Persia*, and the Provinces depending thereon ; with a large Account of their Climate, Soil, and Produce, the Constitution of the Empire, and Nature of the Shah's Government, the Laws, Manners, Religion, Commerce, Diversions, &c. not only of the native *Persians*, but of the several Nations living in their Country, and subject to the Shah, with a brief Account of the late Revolutions in that Empire.

SECTION I.

The Travels of Sir JOHN CHARDIN, by the Way of the *Black-Sea*, through the Countries of *Circassia*, *Mingrelia*, the Country of the *Abcas* ; *Georgia*, *Armenia*, and *Media* into *Persia Proper* ; with a very curious and accurate Account not only of the Countries through which he travelled, but of the Manners and Customs, Religion and Government, Commerce and Inclinations of the several Nations that inhabit them ; Relations so much the more curious, as these Countries, and the People dwelling in them, had not been tollerably described before by any Author.

1. A succinct Introductory Account of the worthy Person by whom these Travels were written, of the Value of them, and of the peculiar Excellencies by which they are distinguished.
2. An Account of the Thracian Bosphorus, of the delightful Prospects in sailing through it, and the beautiful Countries upon the Coast.
3. The Author's Arrival at Caffa, a Description of the Country of the Crim Tartars, and of the Condition, Customs, and Manners of that Nation.
4. The Cherks, Abcas, and other barbarous Nations that however stile themselves Christians, largely described, with some very curious Remarks on the State and Strength of those Nations.
5. A more particular Relation of the Mingrelians, Cara Cherks, or Black Circassians, and other Inhabitants of that Country, known to the Ancients by the Name of Colchis.
6. The large and fruitful Country of Mingrelia exactly described, with a View of the Government, Forces, Way of Living, and dissolute Manners of all Ranks and Degrees of People who inhabit it.
7. Of the terrible Corruption, in Point of Religion, which reigns amongst them, and from whence it appears to be a wild and extravagant Mixture of Atheism and Superstition, kept up by the Arts and Frauds of their Priests, who are little better than Cheats and Juglers.
8. The Principality of Guriel, and the Kingdom of Imeretta, anciently called Iberia, with the Countries adjacent, described, and the Manner in which they lost their Independency, and became Tributaries to the Turks.
9. The Author continues his Journey through Mingrelia, is present at the Ceremony of Baptizing two Children, of which he gives a large and particular Account.
10. The famous Mountain Caucasus described, and a View of the Condition of its present Inhabitants.
11. A large and circumstantial Detail of the Country and Inhabitants of Georgia, with a Description of the capital City of Teflis, and the State of the Roman Catholick Missionaries in that Country.
12. The Author's Travels through the Countries, at the Foot of Mount Taurus, forming a little Principality inhabited by the Cossacs.
13. An Account of the famous City of Erivan, and of the Country of Armenia, of which it is the Capital, as well as of the People who inhabit it.
14. A Digression concerning the Marriages of the Persians, and the Reasons why Divorces, though lawful amongst them, are seldom practised.
15. The Author's subsequent Observations in his Travels through Armenia, and of the Fortresses erected to prevent the Incursions of the Turks.
16. Of the noble Province of Azerbeyan, anciently called Media, with an Account of a spurious Kind of Cochineal prepared by the Inhabitants.
17. A Description of the large populous and magnificent City of Tauris, the prodigious Fertility of the Country round about it, and a Comparison between the different Climates of Media and Parthia, with many other curious Particulars.
18. A Description of the last-mentioned Province, and of the Cities of Ebher and Casbin, in the Neighbourhood of which grow the finest Grapes in the World.
19. An Account of the famous City of Rey, formerly one of the largest in Asia, of which there are now scarce any Ruins remaining.
20. The City of Com and the glorious

glorious Tombs of the Persian Saints therein, fully described, with an Account of the adjacent Country. 21. A Description of the City of Cashan, with an Account of the several Manufactures carried on there, and of the fruitful Country about it. 22. The Author's Account of two other Roads leading from Warsaw to Ispahan, and from Ispahan to Moscow. 23. Remarks and Observations upon the foregoing Section.

WE have very large and considerable Collections of Travels through the Empire of *Persia*, and the Provinces depending upon it; and indeed there are very few Countries that better deserve to be visited, or which afford either the Traveller himself, or whoever peruses his Accounts, more Entertainment than *Persia*. Notwithstanding this, many Inconveniences would arise from inserting numerous Accounts of Travels through this Country, because of Necessity it must produce many Repetitions, which would appear tedious and troublesome, as well as perplexing to the Reader. The Method therefore that we shall take, is to give in this Section the Travels of Sir *John Chardin*, from *Constantinople* into the *Persian* Dominions; and in the subsequent Sections, we shall give a Description, in as regular a Method as is possible, of the whole Empire, distinguished into its several Provinces, with whatever occurs remarkable or worthy of Notice in the Works of other celebrated Travellers, so as to preserve the Marrow and Quintessence of their Relations, without embarrassing ourselves with Things of less Consequence and Particulars, that without the least Prejudice to the Design of this Work may be as well omitted. By this Means we shall bring into a reasonable Compass all that is requisite, and give a distinct and clear Notion of the past and present Condition of one of the most powerful and famous Empires of the Earth.

The Reason we made Choice of Sir *John Chardin's* Travels, by way of Introduction, was his taking a different Route from most other Travellers, viz. by the *Black Sea*, and the Countries that border upon it, which are scarce described by any other Traveller, or at least are described by none with equal Plainness and Perspicuity. It rises from hence, that, generally speaking, we have only confused and imperfect Conceptions concerning these Countries and their Inhabitants, which however it is of some Importance that we should know more distinctly, because as they made a great Figure in ancient History, so it is not at all impossible, that as low and despicable as they now seem, they may hereafter come to change their Circumstances, and appear with new Lustre, if not in ours, yet in the Eyes of our Posterity. It is very evident, that from their Situation they are very considerable, and if their Inhabitants were well governed, and lived in tolerable Correspondence with each other, they might be now, as they were heretofore, equally formidable to the Grand Signior, Successor to the Greek Monarchs of *Constantinople*, and to the *Persian* Emperors. We have a late Instance of this in the Case of *Nadir Shah*, who received from these despised and barbarous People, that Check which proved first fatal to his Authority, and in the End to his Person. The Author of these Travels was a Gentleman of a good Family in *France*, and of a liberal Education; he applied himself to Commerce very early, and prosecuted with great Success the most considerable Branch of Foreign Trade, that of dealing as a Merchant in Jewels, which he understood perfectly, and by which he acquired, with an unspotted Character, a very large and affluent Fortune. He made several Excursions into the East, by different Roads, and resided several Years in *Persia*, had very great and uncommon Opportunities of entering deeply into the Subjects of which he has treated and digested his Accounts, with great Accuracy and Perspicuity, so that they have been esteemed not only here, but in *France*, and throughout *Europe* in general, as the most perfect in their Kind that have hitherto appeared.

This Gentleman, when the Persecution against the Protestants broke out in *France*, came over hither, and brought with him great Riches. He was received with much Respect at Court, and King *Charles* the II^d, as a

Mark of his Favour, bestow'd upon him in the Month of *March*, 1693, the Honour of Knighthood. He published the first Edition of his Travels in our Language, in a large Folio Volume, but they have been since several Times printed with many Corrections, great Improvements, and considerable Augmentations in *French*. He continued to reside here, and purchased a considerable Estate, so that in the Reign of Queen *Anne*, we find him frequently mentioned by such as took Occasion to show how much the Wealth of *England* was improved, and its Trade increased, by encouraging Foreigners of the Protestant Religion, to come and settle amongst us. Sir *John* died at a good old Age, on *Christmas* Day, 1712. He left behind two Sons, and several Daughters.

His eldest Son was created a Baronet of this Kingdom by his late Majesty King *George* the First, and having purchased from *Grantham Andrews*, Esq; of *Sunbury*, the noble Seat of *Kempton-Park*, in the County of *Middlesex*, and not far from *Hampton-Court*, fix'd there, and is still living and unmarried. The old Gentleman employ'd a great Part of the latter Period of his Life, in completing his Book of Travels, and intended, as himself informs us, to have written a distinct Treatise, explaining a great Variety of Passages in the Scripture, from the Customs and Manners of the *Eastern* Nations, with which no Man was better acquainted than he; but by many unlucky Accidents was hindered from fulfilling that Promise, to the no small Concern of the learned World, who expected with great Impatience so useful and instructive a Book, of writing which he was extremely capable, and of seeing any Thing of the same kind, the Publick since his Decease seem to despair.

2. Sir *John Chardin* left *Paris*, Aug. 17, 1671, with an Intention to go to the *East-Indies*, and travelling by way of *Milan*, *Venice*, and *Florence*, arrived at *Leghorn* in the End of *October*, and embarking in a Ship, under a *Dutch* Convoy, arrived at *Smyrna*, March 2, 1672, and twelve Days after at *Constantinople*. He remained in this City four Months, and in the mean Time there happening a Quarrel between the Grand Vizier and the *French* Ambassador, which caused a Report, that the Grand Vizier intended to arrest the Ambassador, and all the *French* Nation, he was afraid that his Goods, which were very rich, and very considerable in Quantity, would be seized; and so sought all Means to get out of *Constantinople*, and to proceed on his Journey to *Persia*.

The Caravans in those hot Months did not travel; but the Port being about to send a new Commander, with some Soldiers and Money, as they do yearly, to the Fort of *Azoph*, which stands upon the Lake *Mæotis*, he obtain'd Passage in a *Turkish* Saick belonging to that Fleet, and embark'd, July 27, at a Port in the *Thracian Bosphorus*. This Chanel, which is about fifteen Miles in Length, and about two in Breadth, in most Parts, but in others less, so called, because an Ox may swim over it, is certainly one of the loveliest Parts of the World; for the Shores are rising, and cover'd over with Houses of Pleasure, Woods, Gardens, Parks, delightful Prospects, and Wildernesses, watered with Thousands of Springs and Fountains: The Passage through it, in fair Weather, is exceeding diverting, by reason of the great Number of Barks which are continually sailing to and fro, and the Prospect of *Constantinople* from the Top of it, which is about two Miles distant, is the most charming that ever Eyes beheld. There are four Castles standing by it, all well fortified with great Guns, two of them eight Miles from the *Black-Sea*, and two at the Mouth of the Channel, which is the most dangerous Place for Shipwrecks in all the *Euxine-Sea*.

3. On the 3^d of *August*, in the Morning, he arrived at *Caffa*, a Port in the *Tauric Chersonese*, or *Peninsula*,

so called, because it was first inhabited by the *Scythians* of Mount *Taurus*. It is thirty-five Leagues from North to South, and fifty-five from East to West. The Isthmus, that joins it to the Continent, is not above a League in Breadth. It is inhabited by the *Crim Tartars*, who dwell in Cities and Towns; whereas their Neighbours the *Nogays* and *Calmuc's* dwell in Tents, as the rest do on the Continent.

Caffa is a great Town built at the Bottom of a little Hill, upon the Sea-shore, and encompassed with strong Walls, that advance a little into the Sea. It hath two Castles, the one, which stands on a rising Ground on the South-side, is large, and commands all the Parts thereabouts, and is the Residence of a *Basha*; the other is not so big, but is well furnished with Guns. They reckon about 4000 Houses in it, of which about 3200 are *Mahometans*, *Turks*, and *Tartars*, and the rest *Christians*, *Greeks*, and *Armenians*. The Houses are small, and built of Earth; as are also their *Bazars*, *Mosques*, and *Baths*. The Soil about it is dry and sandy, bearing little Fruit, and the Water is bad, but the Air is very pure and wholesome. All Provisions are very cheap and good, Mutton being not above a Farthing a Pound, and other Things proportionable. The Road of *Caffa* is shelter'd from the Winds, except on the North and South-East Sides, and the Ships lie close to the Shore safely in ten or twelve Fathom Water. There is a great Trade driven here in Salt-fish and *Caveare*, which being taken out of the Lake *Mæotis*, that is twenty-six Miles distant from it, in great Quantities, are transported into *Europe*, and as far as the *Indies*. They also export Corn, Butter, and Salt, with which they furnish *Constantinople*, and several other Places, for the *Caffa* Butter is the best in all *Turkey*.

From *Caffa* he went in a Ship bound for *Colchis*, Aug. 30. and the next Day arrived at *Donslow*, or the Salt-pits, fifty Miles from *Caffa*, on the Shore. Here are great Marshes of Salt, which is made by letting in the Sea-water, and suffering it to congeal by the Sun. The People say, that two hundred Vessels are laden here with Salt yearly, paying only 3 s. a Day to those that load it. About a Mile from the Shore is an Habitation of the *Tartars*, where there is not above ten or twelve Houses with a little *Mosque*, and round about it a great Number of Tents, with several Wagons close cover'd, which serve them instead of Houses. The Tents for themselves are very handsome, being made with Poles, and cover'd with large light Furs well-stretched upon them; their Inside is commonly hung with Tapestry, and the Floor is laid with the same. Every Family hath two other Tents belonging to them, cover'd with a great Sarplar of Wool, one for their Servants, and Kitchen, in which is a Pit five Foot deep, to make a Fire in to dress their Meat, and the other for their Horses and Cattle.

They store up their Corn and Forage in Magazines under Ground, which they cover so exactly, that none can find them but themselves. They can remove their Tents with a small Trouble, and in a very little Time, and carry them away in Carts drawn by Oxen and Horses, of which they breed a great Number. They profess the *Mahometan* Religion, but mix with it strange superstitious and ridiculous Opinions of Fortune-telling and Divination. From *Donslow* he sail'd all along in the Channel to *Cape Cuodos*, which *Ptolemy* calls *Cirocondoma*, where the Coasts that bound the Lake *Mæotis*, which are very high Lands, are seen at about thirty Miles Distance.

4. From the Channel of the Lake *Mæotis*, to *Mingrelia*, is reckon'd 600 Miles along the Coasts, which consist of pleasant Woods, inhabited by a Sort of *Tartars*, called *Circassians*, and by the *Turks*, *Cberks*, but so thinly, that the Country looks like a Desert. The Ancients called them *Zageans*, or Mountaineers; and *Pomponius Mela*, *Sargacians*. They are neither Subjects nor Tributary to the Port, because their Country producing nothing valuable, the *Turks* think it not worth the Toil of conquering it. The Vessels that come from *Constantinople* to *Mingrelia* trade with this People, but with their Arms in their Hands, and by Hostages, for they

are Infidelity and Perfidiousness itself, and will never fail to steal where they find an Opportunity. The Trade with them is managed by Exchange, the *Cberks* bringing down Slaves of all Sexes and Ages, Honey, Wax, Leather, Jackals, *Zandava*, and other Beasts Skins, for such Commodities as they want.

Circassia is a pleasant Country, and the Soil is very fruitful, bringing forth great Plenty of all Sorts of Fruit without Trouble, as Cherries, Apples, Pears, Walnuts; but their chief Wealth consists in Cattle, as well-shaped Horses, which are so swift and good, that they will tire the wild Beasts, and catch them in plain Course; Goats, Deer and Sheep, the Wool of which is as fine as that of *Spain*, which the *Muscovites* fetch to make Felts. They sow no Grain but Millet for their own Bread, and Barley for their Horses; and their Women till and manure their Ground: Their Drink is Water and *Boza*, which is a Liquor made of Millet, as intoxicating as Wine: They live in wooden Huts, and go almost naked. Every one is a sworn Enemy to those that live in the Provinces round about him. Their Beds are made of Sheep-Skins sowed together, and stuffed with Millet-Leaves, beaten in the Threshing as small as Oat-chaff. They were formerly Christians, but now have no Religion; no not so much as the Light of Nature among them, save what they place in the Observing certain superstitious Ceremonies, borrow'd both from the *Christians* and *Mahometans*.

The *Abca's* Border upon the *Cberks*, possessing about an 100 Miles upon the Sea-Coasts, between *Mingrelia* and *Circassia*. They are not so savage as the *Cberks*, but are as much inclined to Thieving and Robbery; so that the Merchants trade with them with the like Caution, and after the same Manner. September the 10th, he arrived at *Isgaour*, a Port in *Mingrelia*, where all the Vessels that trade thither lie. It is a Desert Place, without any Habitations, only the Traders that come thither build themselves Huts and Booths of Boughs for the Time of their Abode, which is usually as long as they find themselves safe from the *Abca's*.

5. *Colchis* or *Mingrelia* is situated at the End of the Black-Sea: It is bounded on the East by the little Kingdom of *Imeretta*, on the South by the Black-Sea, on the West by the *Abca's*, and on the North by Mount *Caucasus*. The *Corax* and *Phasis*, two famous Rivers in the ancient Histories, now called *Coddours* and *Rione*, part it, the first from the *Abca's*, and the other from *Imeretta*. The Length of it is about 110 Miles, and the Breadth sixty. It was once fortified against the *Abca's*, by a Wall of sixty Miles in Length, which is long since demolished, and become a thick Forest.

The Inhabitants of *Caucasus*, that border upon *Colchis*, are the *Alanes*, *Suanes*, *Gigues*, *Caracioles*, or *Caracberks*, i. e. Black *Circassians*, so called by the *Turks*, not from their Complexion, for they are the fairest People in the World, but from their Country, because it is always darken'd with Fogs and Clouds. They were also anciently Christians, but now profess no Religion, but live by Robbery and Rapine, having nothing that can entitle them to Humanity but Speech. They are very tall and portly, and their very Looks and Speech shew their Savage Dispositions, being the most resolute Assassins, and daring Robbers in the World.

The ancient Kingdom of *Colchis* was much larger than *Mingrelia* now is, extending itself to the Lake *Mæotis* on the one Side, and *Iberia* on the other. The Country itself is uneven, full of Hills and Mountains, Valleys and Plains. It is almost covered with Woods, except the manured Lands, which are but few, and those preserved by grubbing up the Roots, that are continually spreading into them. The Air is temperate, as to Heat and Cold, but very unwholesome, by Reason of the continual Wet, which being heated by the Sun, breeds Pestilences, and several other Distempers. It abounds with Waters, which descend from Mount *Caucasus*, and fall into the Black-Sea. The principal Rivers are the *Coddours*, of old called *Corax*; the *Socom* called by *Arrian*, *Terffen*, and by *Ptolemy*, *Thassaris*; the *Langus*, of old *Astulphus*; the *Cobi* called by *Arrian*, *Cobo*; the *Cianiscari*, called anciently, *Cianeus*; the

Tacheur

Tacheur called by *Arrian*, *Sigemus*, and the *Scheniscari*, i. e. River-horse, called therefore by the *Greeks*, *Hippos*: And the *Abascia*, called by *Arrian*, *Caries*; and *Ptolemy*, *Caritus*; which two last mix with the *Phasis* about twenty Miles from the Place where it falls into the Sea.

The Soil is very bad, and produceth little Corn, or Pulse, and the Fruits are almost wild, without Taste, and unwholsome, unless it be their Vines, which thrive well there, and produce most excellent Wine. The Earth is so moist in Seed-time, that when they sow their Wheat and Barley, they never plow it at all, but sprinkle it upon the Earth; for they say, that should they plough it, the Land would be so soft, that all their Corn would fall. They plough their Lands for their other Corn with Plough-shares of Wood, which make as good Furrows as Iron, because their Land is very moist and tender. Their common Grain is *Gomm*, which is as small as Coriander Seed, and resembles Millet. Of this they make a Paste, which they use for Bread, and prefer it before Wheat; which is not to be wonder'd at, for it is very acceptable to the Palate, and conducive to Health, being cooling and laxative. They have also great Plenty of Millet, some Rice, with Wheat and Barley, but very scarce. The People of Quality eat wheaten Bread as a Rarity, but the meaner Sort very seldom or never taste of it.

The ordinary Food of the Country is Beef and Pig, of which last they have great Plenty, and the best in the World. They have also Goats Flesh, but it is lean, and not well tasted. Their Wild-fowl is very good, but scarce. Their Venison is the Wild Boar, Hart, Stag, Fallow Deer, and Hare, all which are excellent Food. They have Partridges, Pheasants, and Quails in Abundance, with some River Fowl and wild Pidgeons, which are good Meat, and as big as a cramm'd Chicken. Their Nobility spend their whole Time in the Field, using Lanner-hawks, Gof-hawks, Hobbies, and others, for their Sports, to catch Water-fowl and Pheasants; but their most delightful Pastime is the Flight of the Falcon at the Heron, which they catch only for the Tuft upon his Crown, to put upon their Bonnets; for they let him go again when they have cut it off, that it may grow up a-new.

6. Mount *Caucasus* produceth a great Number of wild Beasts, as Tygers, Leopards, Lions, Wolves, and Jacals, which last make great Havock amongst their Cattle and Horses, and often disturb their Houses with their dreadful Howlings. They have large Numbers of Horses, and those very good ones, which every Man almost keeps in great Store, because their Keeping stands them in little or Nothing, for they neither shoe them, nor feed them with Corn. They have no Cities nor Towns, except two by the Sea-side; but their Houses are so thick up and down the Country, that you can hardly travel a Mile, but you meet with three or four. There are nine or ten Castles in the Country, of which the chiefest is called *Ruis*, and it is the Court of the Prince. Their Houses are all built with Timber, which is plentiful, and the poorer Sort never raise above one Story, nor the rich above two. The lower Rooms are always furnished with Beds and Couches to lie down on or to sit upon, because of the Moisture of the Earth, but are inconvenient, because they have no Windows nor Chimneys.

They have but one Room for their whole Family, and so lie all together. The Men are well shaped, and the Women so handsome, that they seem born for commanding Love. They all paint their Eye-brows, and their Faces abominably. They dress themselves with all the Curiosity they can, their Habit being like the *Persians*, and their Head Attire like the *European* Women, even to the Curling of their Hair. They are witty and civil, but to ballance that, haughty, deceitful, cruel, and impudent. The Men have also as many mischievous Qualities, and there is no Wickedness to which they are not addicted; but that which they most practise and delight in is Theft. This they make their Employment and Glory. They justify it as lawful to have many Wives, because, they say, they bring us many Children, which we can sell for ready Money, or ex-

change for necessary Conveniencies; yet when they have not wherewithal to maintain them, they hold it a Piece of Charity to murder Infants new born, as also they do such as are sick and past Recovery, because, they say, they free them from a deal of Misery.

The Gentlemen of this Country have full Power over the Lives and Estates of their Tenants, to sell and dispose of their Wives and Children as they think fit, and every Country-man is bound to furnish his Lord with as much Corn, Wine, Cattle, and other Provisions as he wants. The Lords decide the Quarrels of their Vassals; but if they themselves are at Variance, they decide it by Arms, which makes them go all armed with a Lance, Bow and Sword. Their Habit is peculiar; they wear very little Beard, and cover their Heads with a thin Felt Cap in Summer, and a furr'd Bonnet in Winter: Over their Bodies they wear little Shirts, which fall to their Knees, and tuck into a strait Pair of Breeches; but they never have above one Shirt, and one Pair of Breeches, which lasts them a Year, and in all that Time never wash them above thrice, only once or twice a Week they shake it (for a certain Purpose) over the Fire.

The whole Family, without Distinction, eat all together, both Males and Females. The King with all his Train, to his very Grooms, and the Queen with her Maids and Servants. They dine in the open Courts in fair Weather, and if it be cold, they make a rousing Fire, for Wood costs them nothing. Upon Working-Days the Servants have nothing but *Gomm*, and the Masters Pulse, dried Fish, or Flesh; but on Holy-days, or when they make Entertainments, they kill an Hog, Ox, or Cow, if they have no Venison. They are very great Drinkers, both Men and Women, and at their Feasts provoke their Friends, as much as they can, to Drinking. They drink their Wine pure, and beginning with Pints, proceed to much greater Quantities. Their Discourse at their Merry-Meetings is, with the Men, about their Wars and Robberies, and among their Women obscene Tales of their Amours.

Mingrelia is but thinly peopled, by reason of their Wars, and the vast Numbers sold to the *Persians* and *Turks* by the Nobility. All Trade in it is driven by way of Barter, for they have no set Price of Money among them; the Species current are Piastres, *Dutch* Crowns, and *Abassi's*, which are made in *Georgia*, and stamp'd with the *Persian* Stamp. The Revenues of the Prince of *Mingrelia* amount at most to 20,000 Crowns, which arises from the Customs of Goods exported and imported, the Slaves he sells, Impositions and Fines; and this he lays up, for his Slaves serve him for nothing, and his Crown-Lands furnish his Court with more Provision than he can spend. He is not able to raise above 4000 Men fit to bear Arms, and those are all Cavalry for the most Part, for he has not above 300 Foot to join with them. His Court, upon solemn Festivals, consists of 200 Gentlemen, but upon other Days of about 120.

7. The Religion of the *Colchians* was formerly the same with the *Greeks*, being converted, as the Ecclesiastical Historians say, in *Constantine's* Time, by a Slave: But the *Mingrelians* say, St. *Andrew* preach'd among them in the Place call'd *Pigivitas*, where now stands a Church, whither the *Catholicos*, or chief Bishop goes once in his Life-time to make the Oil call'd *Myrone* by the *Greeks*; but now the *Mingrelians* are fallen into a profound Abyss of Ignorance and Darkness, and have not the least Idea of Faith and Religion, but look upon Life Eternal, the Day of Judgment, and the Resurrection, as meer Fables devised by Men. Nor do their Clergy perform any Ecclesiastical Duties, for there is hardly one of them that can either write or read. They have utterly lost the true Knowledge of the Service of God; but the Priests make a publick Profession of foretelling Things to come, and make the People believe, that their Books show them the Course of future Events.

The *Catholicos* of *Mingrelia* is Head of all the Clergy of that Country, as also of *Abca*, *Gureil*, Mount *Caucasus*, and *Imeretta*; but the Prince appoints or deposeth him as he pleaseth. His Revenue is very great, for

for he has 400 Vassals under him, who furnish his House with all Things necessary for human Life, and many Superfluities. He sells their Children to the *Turks*; and when he visits the Dioceses under his Jurisdiction, it is not to reform the Clergy, nor instruct the People, but to spoil them of their Goods, and rake together great Sums. He will not consecrate a Bishop for less than 600 Crowns, nor say a Mass for the Dead under 800, nor any other Mass under one hundred.

The Sanctity of this Prelate consists in a continual Abstinence from Flesh and Wine in *Lent*, and in long Prayers Day and Night; but he is so ignorant, that he can hardly read his Breviary and Missal. He has six Bishops under him, who take no Care of the Souls of their People, nor ever visit their Churches and Dioceses. They suffer the Priests to live in all Manner of Errors, and the People to contaminate with themselves the grossest Vices; they understand not the Form of Baptism, let Polygamy be practised, and permit the Mothers to bury their new-born Children alive. All their Business is in Feasting and Banqueting, where they are drunk almost every Day. They are rich, and go very sumptuously apparel'd, oppressing their Vassals, and selling their Wives and Children to maintain their Luxury. They abstain from Flesh, as the *Greek* Bishops do, and place the whole Christian Religion in the Practice of Fasting, and think not themselves obliged to do any other Duty. Their Cathedral is pretty neatly kept, and well adorn'd with Images, which they deck with Gold and Jewels, believing, that in so doing they satisfy God's Justice, and atone for their Sins. They are clothed in Scarlet and Velvet, as the Seculars are, and differ from them only in this, that they wear their Beards long, and their Bonnets black, round, and high.

There are also in *Mingrelia* certain Monks, of the Order of *St. Basil*, who wear the same Habit, and live after the Manner of the *Greek* Monks, wearing black Bonnets, eating no Flesh, and suffering their Hair to grow; but they mind nothing of Religion, but to observe their Fasts exactly. They have also Nuns of the same Order, who observe their Fasting Days, and wear a black Veil, but they have no Nunneries, nor are under any Vows or Subordination, but quit their Habit and Temperance when they please.

The Priests of *Mingrelia* are very numerous, but a Sort of miserable Creatures. They till their own Ground, and the Lands of their Lords, being no less Slaves than the Seculars; nor have they any Respect shewn them, but when they bless their Food at Meals, or say Mass. Their Parish-Churches have no Bells, but they call the People together by knocking with a great Stick upon a Board, and they are kept as nasty as Stables, the Images being foul and broken, and cover'd with Dust. The Worship which they pay to their Images is idolatrous, for they adore them not with a relative Adoration, but pay their Devotion to the material Substance. They worship such most, as are finest adorn'd, or fam'd for their Cruelty, and if they swear by any of these, they will never break the Oath. *St. Giobas* is one of their most formidable Images, and him they will not approach nearer than they can just see him, but pray to him, and leave their Present at that Distance; for they report, that he kills all that approach him very near.

The Christian Saints they have no Value for, unless it be *St. George*, whom they account their chief Saint, as do also the *Georgians*, *Muscovites*, and *Greeks*. Their Mass is after the *Greek* Manner, and the Priests celebrate it without any other Sacerdotal Habit but their Surplices. Their Cup or Chalice is a Goblet of Wood, and the Cover is of the same Matter; and their Patten is a Wooden Dish. In *Lent* they never say Mass, but on *Saturdays* and *Sundays*, for they hold, that the Communion spoils their Fasting. They consecrate unleavened or leavened Bread, without any Difference, and never mix Water with Wine, unless it be very strong.

They laugh at Transubstantiation, and say, How can Christ get into a Loaf? For what Reason should he leave Heaven to come down to the Earth? They anoint the Foreheads of their Children with the Oil called *My-*

ron, as soon as they are born; but baptize them not till a long Time after, and then they wash them all over with Water: but none will baptise their Children till he is able to make a Feast for the Priest, God-fathers and Guests, and that is the Reason many of their Children die unbaptized. They do not believe that Ordination imprints a Character not to be defaced, and therefore they ordain a-new such Priests as have been degraded. Their Marriages are a Contract by Way of Bargain and Sale, for the Parents of the Maid agree upon the Price with the Person that desires her; the Price of a divorced Woman is the least, of a Widow something more, but of a Maid most. When the Bargain is made, the young Man may company with the Damsel till the Money is paid, and it is no Scandal if she be with Child. If any one has married a barren Woman, or of an ill Disposition, they hold it not only lawful, but requisite to divorce her, as a Match not made by God, who only does good. There is none that understands the Bible, or reads it, but the Women will repeat several Stories of the Gospel, which they have by Tradition. They observe the same Fasts almost as the *Greeks*, for they keep the four great *Lents*, viz. the first before *Easter*, which is forty eight Days; that before *Christmas*, which is forty Days; *St. Peter's* Fast, which is near a Month; and the last, which the Eastern Christians observe in Honour of the Virgin *Mary*, which continues fifteen Days. They make the Sign of the Cross when they drink Wine and eat Pork, but not as any Mark of Christianity. Their Prayers are all address'd to their Idols for their temporal Benefits, viz. their own Prosperity, or Ruin of their Enemies. They offer Sacrifices like the *Jews* and *Gentiles*. They never make Holiday upon *Sundays*, or abstain from Works but at the Festivals of *Christmas* and *Easter*, which they celebrate only in Eating and Drinking to Excess in their Houses. Their greatest Festivals are when an Idol is carried through their Country, when they put on their best Cloaths, make a great Feast, and get ready a Present for the Idol. Their Mourning for the Dead is altogether barbarous, and like that of People in Despair, the Women rend their Cloaths, tear their Hair and Flesh, beat their Breasts, cry, yell, and gnash with their Teeth, like People mad or possessed; the Men also tear their Cloaths, and thump their Breasts.

8. Their Neighbour Nations live and act after the same Fashion almost in all Respects, only they that live near *Persia* and *Turkey* are more civil in their Manners, and more honest and just in their Inclinations, whereas those that border upon the *Tartars* and *Scythians* are more barbarous, having no Idea, or outward Form of Religion, and observing no Laws.

On the Confines of *Mingrelia* lie the Principality of *Guriel*, and Kingdom of *Imeretta*. The Country of *Guriel* is very small, bordering upon *Imeretta* on the North, Mount *Caucasus* on the East, *Mingrelia* on the West, and the Black-Sea on the South. It lies all along by the Sea-shore from the River *Phasis* to the Castle *Gonie*, which is held by the *Turks*. The Inhabitants are of the same Nature and Manners as the *Mingrelians*, and have the same Inclinations to Lewdness, Robbery and Murther.

The Kingdom of *Imeretta* is something bigger than the Country of *Guriel*, and is the *Iberia* of the Ancients. It is encompassed with Mount *Caucasus*, *Colchis*, the Black-Sea, the Principality of *Guriel*, and Part of *Georgia*. It is twenty six Miles in Length, and sixty Miles broad. The Country is full of Woods and Mountains, like *Mingrelia*, but the Valleys are more pleasant, and Plains more delicious, producing Corn, Pulse, Cattle, and Herbs of all Sorts. There are some Iron Mines. They have also some Money current among them, which is coined in their Kingdom, and several Towns; but their Manners and Customs differ little from the *Mingrelians*. The King has three good Castles, one called *Scander*, seated on the Side of a Valley, and two on Mount *Caucasus*, call'd *Regia* and *Scorgia*, being both almost inaccessible, as being built in Places that Nature itself has wonderfully fortified, the River *Phasis* running between them. The Fortrefs of

of *Cotatis* was once in this Prince's Jurisdiction, but the *Turks* are now Masters of it.

The King of *Imeretta* govern'd the *Abca's*, *Mingrelians*, and People of *Guriel*, after they had all four freed themselves from the Power of the Emperors, first of *Constantinople*, and then of *Trebisond*: But in the last Age, setting up for themselves, and revolting from one another, they were involved in continual Wars among themselves, till calling in the Assistance of the *Turks*, they were all made tributary to them. The King of *Imeretta* pays eighty Boys and Girls, from ten to twenty Years of Age. The Prince of *Guriel* pays forty-six Children of both Sexes; and the Prince of *Mingrelia* sixty thousand Ells of Linnen-Cloth made in that Country. The *Abca's* seldom paid any Thing at first, and now pay Nothing. The King of *Imeretta*, and Prince of *Guriel*, send their Tribute to the Bascha of *Akalzike*, but a *Chiaux* gathers it at *Mingrelia*.

9. Leaving *Isagour*, October 4, he pass'd by the Mouth of the River *Astolphus*, called *Langur* by the *Mingrelians*, one of the biggest Rivers in *Mingrelia*, and on the 5th came to *Anarghia*, a Village two Miles from the Sea, consisting of two hundred Houses, but so far distant the one from the other, that it is two Miles from the first to the last. Hither the *Turks* come to buy Slaves, and have Barks ready to carry them away. It is thought, that the fair and large City, called *Heraclea*, stood in the same Place. At this Town there is Plenty of Provisions, and that very cheap, viz. Wild Pidgeons, Fowl, Porkers and Goats in Abundance, and Wine is plentiful. From *Anarghia* he sail'd up the River *Astolphus*, and went to a Place called *Sapias*, which is the Name of two little Churches, of which the one is a Parish Church of *Mingrelia*, and the other belongs to the *Theatins*, a Sort of Friars, who first came into *Mingrelia* in 1627, and were admitted there as Physicians, and have built themselves several Apartments about it, after the Manner of the Country. They have some Slaves, and two Families of Country People their Tenants. They have good Employment as Physicians, but none will embrace their Religion, their very Slaves refusing to communicate in their Services; so that they would have long since left the Country, had it not been for the Honour of the *Roman Church* and their own Order.

After a Month's Stay with the Monks, it not being safe to travel, because of the Troubles in the Country, he return'd again to *Anarghia*, and having hired a *Turkish Feluke*, for *Gonie*, November the 11th, staid till the 27th to take in Loading and Passengers. While he staid here he was invited to two Christenings, and Curiosity engaged him to be present at them. The Manner was this: The Priest being sent for about ten a Clock in the Morning, sat himself down in the Buttery, and fell to reading a Book half torn, about the Bigness of a New Testament, in *Osavo*. He read very fast, and with a low Voice, in such a careless Manner, as if he regarded not what he did, any more than the rest did what he said, for the Father, Godfather and Child, who was about five Years old, went to and again all the Time.

When the Priest had read an Hour, there was a Bucket of warm Water got ready, into which when the Priest had poured about a Spoonful of Oil of Wallnuts, he bid the Godfather undress the Child; which done, he set him upon his Feet in the Water, and washed his Body all over well, and then the Priest gave him a small Quantity of *Myrone*, or Oil of Uction, with which he anointed the Top of his Head, Ears, Forehead, Nose, Cheeks, Chin, Shoulders, Elbows, Back, Belly, Knees and Feet, the Priest still reading, till the Godfather dress'd the Child, and then the Father bringing in Wine, Bread and Pork, they all sat down to eat and drink, and were all extremely drunk before they parted. Their Mass they perform with the same Irreverence and Carelessness.

Departing from *Anarghia* in fair and clear Weather, he discover'd the high Lands of *Trebisond* on the one Side, and of the *Abca's* on the other, and came to the River *Kelmbel*, which though not so broad nor rapid as *Langur*, yet is deeper.

10. On the 30th he came to the River *Phasis*, which, taking its Rise in Mount *Caucasus*, runs at first in a narrow Channel, though swiftly, about *Cotatis*, and sometimes so low, that it is easily fordable; but where it dischargeth itself into the Sea, which is about ninety Miles from *Cotatis*, the Channel is a Mile and half broad, and sixty Fathom deep, being augmented in that Course by divers Streams. The Water is muddy and thick, but very good to drink. There are several Islands at the Mouth of it, which being covered with thick Woods, make a delightful Prospect. *Arrian* says, That upon one of these Islands stood the Temple of *Rhea*, but there are no Remains of it now, though there are some Historians who say, it was standing in the time of the *Grecian Empire*, and was, in *Zeno's* Reign, dedicated to the Worship of Christ. On this River, and the Black-Sea about it, are Plenty of Pheasants, or *Phasiani*, so called from the River *Phasis*. All the Coasts of this River are a low sandy Soil, cover'd with Woods so thick, that one can hardly see six Paces up the Land.

On the 30th, he arrived at *Gonie*, which is about thirty Miles from *Phasis*, the Sea-Coasts being exceeding high Land and Rocks, some being woody, and others naked. *Gonie* is a large Castle, in the Territories of the Prince of *Guriel*, built four square, of hard and rough Stones of a very large Size. It hath no Trenches, but Walls only, and two great Guns. In it are about thirty small poor Houses, made of Boards, and without is a small Village of about as many more, all inhabited by Mariners, and other boorish People. There is a Custom-house here, the Officers whereof are extremely rude, and imperious, and severe to the People of the Country, but extravagant to the *Europeans*, not regarding any Man's Person, nor any Recommendations from the Port, but searching all Things strictly, and exacting what they please.

From *Gonie* he went to the Castle of *Akalzike*. The Way lies over Mount *Caucasus*, which is one of the highest Mountains, and one of the most difficult to pass over in the World. The Top is always cover'd with Snow, over which the Natives pass in a kind of Sandals, made flat like a Racket, to keep them from sinking. It is usual for the Guides here to make long Prayers to their Images to keep the Winds from rising, for if the Wind be high, it buries all the Travellers in Snow.

This Mountain, though not inhabited for some Leagues together in many Places, yet is fruitful to the very Top, yielding Honey, Wheat, Gom, Wine, and Fruits, and feeding Hogs, and large Cattle. The Vines are so luxuriant, that they run up to the very Tops of their highest Trees, so that the People cannot gather them. The Country People dwell in wooden Huts, of which every Family has four or five. The Women grind their Corn as they want it, and bake their Bread on Stones, or upon their Hearth, and yet the Crust is very white, and the Bread good. These Inhabitants are for the most part Christians, after the *Georgian Ceremonies*; they are fresh complexion'd, and their Women are handsome. At the Bottom of the Hill is a very fair Valley, rich and fertile, being watered by the River *Kur*, which has many Villages, and in them the Ruins of several Castles and Churches, which, the People say, were destroy'd by the *Turks*.

Akalzike is a Fortress built upon Mount *Caucasus*, fortified with double Walls, and flank'd with Towers built with Battlements, after the ancient Manner, and defended with a few great Guns. Upon little Hillocks about it stands a large Town of 400 Houses, which have nothing of Antiquity, but two *Armenian Churches*. It is inhabited by *Turks*, *Armenians*, *Georgians*, *Greeks* and *Jews*, who have their Churches and Synagogues. The River *Kur*, anciently called *Cyrus* and *Corus*, which rises in the Mount *Caucasus*, runs by it. A Bascha lodges in the Fortress, and his Soldiers are quarter'd in the adjacent Villages. It was built by the *Georgians*, from whom the *Turks* took it.

From *Akalzike* he went to *Gory*, and pass'd by *Usker*, where the *Turks* have a Castle, built on a Rock, with a

Garrison

Garrison and Custom-house, under the Command of a *Sanziac*, and two Leagues farther, you cross over the Mountains which part *Persia* and *Turky*, from whence you see several Villages, in which are the Ruins of many Castles, Fortresses and Churches, the miserable Remains of the Grandure of the *Georgians*, before the *Turkish* and *Persian* Wars destroyed them.

At the Foot of the Mountain lies a Town and Fortrefs, both called *Surham*. It stands on a very lovely Plain, full of Censés, Villages, Hillocks, Houses of Pleasure and little Castles belonging to the *Georgian* Lords, and has a Fortrefs containing a Garrison of 100 Men. All the Country is very well tilled, and mighty pleasant and delightful, as far as *Gory*, except that on the Right-Hand lies a great City almost in Ruins, as not containing above 500 Houses inhabited, whereas formerly, by Report, it had 12000.

Gory is a small City, seated on a Plain, between two Mountains, upon the Bank of the River *Kur*, and by it is a Castle on an Hill, garrison'd by native *Persians*. The Houses and Market-places are all built with Earth, but the People are all very rich and wealthy, and it is furnished with all Necessaries for human Life at a cheap Rate.

11. From *Gory* he departed December the 16th, and travelling upon the Banks of the River *Kur*, through pleasant Plains, with great Numbers of Villages on all Hands, he passed through *Calicata*, a City almost totally ruined, and came on the 17th to *Teflis*, the Capital City of that Part of *Georgia*, lying in the Province of *Cartbueli*. The Country of *Georgia*, which is under the Jurisdiction of the *Persians*, borders at this Day to the East upon *Circassia* and *Muscovy*, to the West upon *Armenia* the Lesser, and to the North upon the Black-Sea and the Kingdom of *Imeretta*. It is extended from *Tauris* and *Erzerom* to *Tanais*, and was anciently call'd *Albania*. It is a Country very Woody and Mountainous, unless in the Middle, where it is more even and level. The River *Kur* runs through the Midst of it, and empties itself into the *Caspian* Sea.

The *Grecians* are thought by some to have called it *Georgia*, from *Georgoi*, Husbandmen; but others will have the Name deriv'd from St. *George* the Patron Saint of all the Christians of the *Greek* Church. The Temper of the Air is very kindly in *Georgia*, being very dry, cold in the Winter, and hot in the Summer. The fair Weather does not begin till *May*, but then it lasts till the End of *November*. The Soil being well watered, produces all Sorts of Grain, Herbs and Fruits in Abundance, so that a Man may live there deliciously and cheap. Cattle are there very plentiful and good, as well the larger as lesser Sort; their Fowl is incomparable, especially their wild Fowl; their Boars Flesh is as plentiful and good as any in *Colchis*; and, indeed, the common People live upon nothing else almost but young Pigs, which are excellent Meat, and never offend the Stomach. The *Caspian* Sea, which is next to *Georgia*, and the *Kur*, that runs quite through it, supplies it with all Sorts of salt and fresh Fish. There is no Country that drinks more and better Wine, and they transport great Quantities of it into *Media*, *Armenia* and to *Ispahan*, for the King's Table. They have great Quantities of Silk, but know not how to weave it, and therefore they carry it into *Turkey* to *Erzerom*, and the Parts adjoining, and drive a great Trade with it. The Complection of the *Georgians* is most beautiful, you can hardly see an ill-favour'd Person among them; and the Women are so exquisitely handsome, that it is hardly possible to look upon them, and not be in Love with them. They are tall, clean limb'd, plump and full, but not over fat, and extremely slender in the Waste: But this Beauty they spoil with painting and dressing with sumptuous Habits and Jewels. The *Georgians* are naturally very witty, and would be as learned Men and great Artists as any are in the World, if they had the Improvements of Arts and Sciences; but having a mean Education and bad Examples, they are drowned in Vice, are Cheats and Knaves, perfidious, treacherous, ungrateful and proud. They are irreconcilable in their Enmities,

for though they are not easily provok'd, yet they preserve their Hatred inviolable.

Drunkenness and Luxury are such common Vices among them, that they are not scandalous in *Georgia*. The Church-men will be as drunk as others, and they keep male Slaves in their Houses, which they use for their Concubines, at which No-body is offended, because it is so commonly practis'd, that Custom makes it thought lawful; yea, and they say, he that is not drunk at their great Festivals of *Easter* and *Christmas*, cannot be a good Christian, and deserves to be excommunicated. The *Georgians* are very great Usurers, and will lend no Money without a Pawn. The lowest Interest they take is two *per Cent.* for a Month. The Women are as vicious and wicked as the Men, and contribute more than they to that general Debauchery, which overflows the Country. In their common Conversation they are civil and courteous, grave and moderate. Their Habit is much like the *Polonian*, and their Bonnets like theirs, their Vests are open before down the Breast, and fastened with Buttons and Loops; their Hose and Shoes are like the *Persians*, and their Womens Cloathing is wholly in the same Taste.

The Houses of their Grandees, and all their publick Edifices, are built according to the *Persian* Model, and they imitate the *Persians* in their Sitting at Table, in their Beds, and Manner of Diet. The Nobility exercise an absolute Tyranny over the People, who are their Vassals, making them labour as long as they please for them, without Food or Wages, challenging a Right over their Estates, Liberty and Lives, and selling their Children, or making them their own Slaves. They were converted to Christianity by an *Iberian* Woman, in the fourth Age, but have nothing left of Christianity, but the Name; for they do not observe the least Precept of *Jesus Christ*; they place all their Religion in Fasting, and making long Prayers.

There are several Bishops in *Georgia*, with a Patriarch, whom they call *Catholicos*, and an Archbishop, whose Sees, as often as they are vacant, are disposed of by the Prince, though he be a *Mahometan*, and he generally gives them to his Relations, and the present Patriarch is his Brother. The Churches in *Georgia*, especially in their Cities, are kept something more cleanly than in *Mingrelia*, but in the Villages are full as nasty. The *Georgians* and their Neighbours build their Churches upon high Mountains, in remote and inaccessible Places, and bow unto them at great Distances, but scarce go into them once in ten Years, leaving them to the Injuries of the Weather, and for the Birds to build their Nests in. They can give no other Reason for all this, but that it is a Custom; though we may suppose, it is rather to avoid repairing and adorning them. *Georgia* was made tributary to the *Persians* by *Ishmael* the Great, and though it has several Times revolted, yet still continues in Subjection to them.

The City of *Teflis*, the Capital City of *East Georgia*, is one of the fairest Cities in all the King of *Persia*'s Dominions, though not so big as some. It is seated at the Bottom of a Mountain, and on the Eastern-side of it runs the River *Kur*, which rising in the Mountains of *Georgia*, joins itself to the *Araxes*. The most Part of the Houses built by the River-side, stand upon a Rock, and the whole City is encompassed with strong and beautiful Walls, except on the Side next the River, and is defended by a Fortrefs on the South-side, wherein are none but native *Persians*. This Fortrefs is a Sanctuary for all Manner of Criminals.

Teflis has in it fourteen Churches, which is very much in a Country where there is so little Devotion. Six of them are appropriated to the *Georgian* Service, and maintained by them, and the other eight belong to the *Armenians*. The Cathedral called *Sion*, is built all of hewn Stone, and stands on the Bank of the River. It is an ancient Building, in good Repair, composed of four Bodies, and has a great *Duomo* in the Middle. The great Altar stands in the Middle of the Church, and the Inside is full of Paintings, after the *Greek* Manner. The *Armenians* have also several Monasteries

ries here, in one of them, they say, they have St. George's Skull.

There is not any Mosque in *Teflis*, though it be under a *Mahometan* Prince, and though the *Persians* have attempted to build one several Times, they could never accomplish their Design, for the People mutinied and beat down their Work; which Action, though very affronting to the *Persian* Religion, yet the Emperor of *Persia* is afraid to come to any Extremities with them, lest they should revolt to their Neighbours the *Turks*, and so *Teflis* and all *Georgia* enjoy their Liberty to retain almost all the exterior Marks of their Religion; for, on the Top of all the Steeples of their Churches stands a Cross, and in them they have Bells, which they often ring. Every Day they sell Pork openly, as well as other Victuals, and Wine, at the Corners of the Streets, which vexes the *Persians* to see, but they cannot help it. Some few Years since they built a Mosque in the Fortrefs, and the *Georgians* could not prevent it: But when the Priest, after their Custom, came up to the Top, to make Profession of his Faith, and call the *Mahometans* to Prayers, the People so ply'd him with Volleys of Stones, that he was forced to fly down in Haste, and never dared to appear there any more.

The publick Buildings, viz. their Market-places, Inns and Magazines, are well built of Stone, and kept in good Repair. The Prince's Palace is a noble and beautiful Building, being adorn'd with Halls and Rooms of State, Gardens, Aviaries, and spacious Courts, to which the Viceroy of *Caket's* Palace is not much inferior.

The Out-parts of the City are adorned with several Houses of Pleasure, and many beautiful Gardens, of which the Prince's is the biggest; but the Trees are such only as serve for Shade and Coolness.

The *Capuchins*, who were sent into *Georgia* about the Year 1657, by the Pope, have an Habitation in this City, as also at *Gory*, where they are highly esteemed as Physicians, which is the Title they give themselves, but they make very little Progress in the Conversion, of the *Georgians*; for besides that these People are very ignorant, and take little Care to instruct themselves, it is so rivetted into their Heads, that Fasting, as they observe it, is the essential Part of the Christian Religion, that they do not believe the *Capuchins* to be Christians, though they fast as they do, because they are informed, they do it not in *Europe*.

The City of *Teflis* is very well peopled, and there are as many Strangers resort thither as to any Place in the World, for there is a great Trade driven there, and the Court is very numerous and magnificent, becoming the Capital City of a Province. The *Georgians* do not call it *Teflis*, but *Cala*, i. e. *The Fortrefs*, which is a Name they give to all Habitations encompassed with Walls, and some Geographers call it, *Tebele-Cala*, or, *The hot City*, either by Reason of the hot Baths, or because the Air there is not so cold and boisterous as in other Parts of *Georgia*.

12. On the 28th he departed from *Teflis*, and passing thro' *Sogan-lou*, or the Place of Onions, standing upon the River *Kur*, came to *Kupri-Kent*, or the Village of the Bridge, because there is a very fair Bridge over the River *Tabadi*, in the Arches of which are made little Chambers and Portico's, and in every one of them a Chimney, on Purpose to lodge Strangers, and in the middle ones Balconies, to take the cool Air in the Summer; *Melick-Kent*, or, the Royal Village, and so to *Dely-Jan*, a Village of 300 Houses, seated upon the River *Acalstapha*, which runs at the Foot of an high and dreadful Mountain, part of Mount *Taurus*. Here is Plenty of Water, and the Ground is very fertile, and a great many Villages to be seen on every Side, some of which stood so high upon the Points of the Rocks, that they were almost indiscernable. They are inhabited by *Georgian* and *Armenian* Christians, but not intermix'd, because they have such an inveterate Enmity one against another, that they cannot live together in the same Villages. The most Part of the Houses of these Villages are no better than Caverns or hollow Places made in the Earth; the rest are built with Timber, and covered with Turf.

VOL. II. N° 128.

These Sort of Buildings are very convenient, being cool in Summer, and warm in Winter. The Borough of *Dely-Jan*, and all the Country round about for six Leagues, is govern'd by its own natural Princes, from Father to Son, and holds of *Persia*, as *Georgia* does. It is called the Country of *Casac*, the People being stout and fierce, descended from the *Cosaques*, who inhabit the Mountains on the North-East of the *Caspian* Sea, and is at present under a Prince called *Kamshi-Can*. He lodg'd at *Kara-Phishish*, a large Borough, seated at the Bottom of the Mountains, which separate *Georgia* from *Armenia*. It stands on the Banks of the River *Zengui*, and passing *Bichni*, where there is an *Armenian* Monastery, our Author arrived at *Erivan*, Jan. 7, 1673.

13. *Erivan* is a great City, but dirty. The Vineyards and Gardens make the greatest Part of it, there being no ornamental Buildings in it. It is situated in a Plain, encompassed with Mountains on every Side, between two Rivers, the *Zengui*, and *Queurk-boulack*. The Fortrefs itself may pass for a small City, containing 800 Houses, inhabited by *Persians* only; for though the *Armenians* have Shops there to work and trade in in the Day-time, yet they return to their Houses in the Evening. It is surrounded with three Walls of Earth, and Brick made of Clay, with Battlements, and flank'd with Towers, and strengthen'd with Ramparts, according to the Custom of the Ancients, and in it is constantly maintain'd a Garrison of 2000 Men. The Governor of the Province's Palace is within this Castle, and is a very spacious and delightful Place in Summer.

The City stands about a Cannon-shot from the Fortrefs, but the Space between is filled up with Houses and Market-places, which are such pitiful Structures, that they may be removed in one Day. There are several Churches in this City, of which the Episcopal See, called *Ircou-ye-rize*, and *Catovike* are the Chief; the rest are small, sunk deep in the Earth. Near the Episcopal Church is an old Tower, built of Free-stone, of antique Work, with several Inscriptions, but none can read them; nor is it known when, by whom, or for what Use it was built. At a little Distance from it is the *Grand Meydan*, or great Market-place, 400 Paces square, where they use all Exercises, both for Horse and Foot, as Caroufels, Racings, Wrestling, and Managing of Horses for War. There are many Baths and fair Inns in it. The Air is good, but a little thick and cold, for their Winter lasts long, and they have Snow sometimes in *April*. The Country is very delightful and fertile, and produces Fruits in great Plenty, especially Wine, which is there good and cheap.

The *Armenians* have a Tradition, that *Noah* planted his Vineyard near *Erivan*, and some pretend to shew the Place, about a small League from the City. The River and Lake, which is twenty-five Leagues in Compass, furnish the City with excellent Fish of nine Sorts, of which the Trouts and Carps are famous all over the East. In the Midst of the Lake is a small Island, where stands a Monastery, whose Prior is an Archbishop, and takes upon him the Title of Patriarch, refusing to acknowledge the Grand Patriarch. The *Armenians* hold this City to be the most anciently inhabited Place in the World; for they affirm, that *Noah* and all his Family dwelt there, both before the Deluge, and after he came out of the Ark, and that the earthly Paradise was there: But all this is a Story without Foundation, reported by Persons equally ignorant and vain-glorious.

Two Leagues from *Erivan* stands the famous Monastery of the *Three Churches*, the Sanctuary of the *Armenian* Christians. The *Armenians* call it *Ecs-miazin*, which Name also the principal Church bears. It is a substantial, but dark Structure, all built of large Free-stone. The Monks shew several Reliques preserved in it, as a Finger of St. Peter, and two of St. John the Baptist, a Rib of St. James, Bishop of Jerusalem, and an Arm of St. Gregory, &c. but they must be very credulous and superstitious, that can believe them such. The two other Churches that stood near this are, St. *Caiana* and St. *Repsma*, the Names of two *Roman* Virgins, who fled into *Armenia*, as they say, in the 9th Persecution,

and suffer'd Martyrdom in the same Places where those Churches stand.

Within the Territory of *Erivan*, which reaches about twenty Leagues round it, there are twenty-three Convents for Men, and five for Women, which are so poor, that being continually employ'd in getting a Livelihood, they never perform holy Duties, but upon Holidays. They hold the Opinions of the *Monophysites*, but in other Points are very ignorant. Two Leagues from *Erivan* Eastward, is to be seen the famous Mountain where *Noah's Ark* is said to have rested. The *Armenians* hold, that the Ark is still upon the Top of the Mount called *Maus*, but that no Man can ascend to it. The Governor of *Erivan* is a *Beglerbeg*, i. e. a Lord of Lords, and has also the Title of *Serdar*, or General of the Army. His Revenue is 32,000 Tomans, which is above 112,000 *l.* Sterling a Year, besides Fines, Presents, and indirect Ways of enriching himself, which amount to 50,000 Pounds more.

14. While he staid at *Erivan*, he saw a Wedding of the Governor's Steward's Brother. Matrimony in *Persia* is very expensive, so that only Men of Estates will venture upon it, lest it prove their Ruin. The meaner Sort content themselves with a Concubine or Slave. The *Mahometans* that follow the Tenets of *Haly*, take their Wives after three Manners, viz. By Purchase, Hire, or Marriage. All these Ways their Religion allows, and their Civil Law acknowledges the Children born in any of them legitimate. The Wives, who are Slaves, are called *Canize*. Of these the Law allows a Man as many as he can maintain, and takes no Cognizance how they are used. He is Master of their Chastity, yea, of their Lives, and it is their Honour to serve their Master as his Wives. The hired Wives are called *Moutaa*: Of these also a Man may take as many as he pleaseth, and as long as he pleaseth for the Price agreed on, and at the End of the Term they may part with them, or renew the Bargain. A handsome young Maid at *Ispahan* may be hired for 35 *l.* a Year, besides Cloaths, Diet, and Lodging. If any break off before the End of the Term, he must pay the whole Sum contracted for, and the Woman, after Dismission, must tarry forty Days before she lets herself to another. These Days they call, *The Days of Purification*.

The espoused Wives are called *Nekaa*, and of these the *Mahometan* Religion allows a Man to marry four; but they never marry above one, to avoid Expence and Disorder, for every one will command, and their mutual Jealousy causes a perpetual Confusion; wherefore, if they cannot content themselves with one Woman, they use their Slaves. In *Persia* they usually marry by Proxy, because the Man never sees his Wife till after he has consummated the Marriage, which sometimes he does not till several Days after his Wife has been at home. One would think, that this Way of Marrying should produce unfortunate Matches; but it doth not, for Marriages are not more happy in any Country than this. If either of the Parties dislike one another, and resolve to unmarry themselves, the *Mahometan* Religion permits a Divorce, and they may separate either before a Judge, or a Churchman, giving each other a *Talaac*, or *Bill of Divorce*, and then the Parties are at Liberty to marry again where they please themselves.

Upon this Dissolution of their Marriage, if the Man has sued the Divorce, he is obliged to return the Woman her Dowry; yet if the Woman sought it, she loseth her Portion; but if the Persons repent the Act, they may renew the Marriage again three Times: Yet, the *Persians* rarely make Use of this License to part with their Wives, only some Citizens and Tradesmen make their Advantage of it. Persons of Quality count it so dishonourable, that they will rather die, than divorce their Wives, and the meanest Sort cannot part with the Portion, and so, if they desire a Divorce, which is rare, they effect it by ill-using their Wives, to force them to sue for a Divorce, and thereby sacrifice all to their Liberty.

The *Armenian* Patriarch lives in this City, and has an Episcopal Palace. He, with all the rest of his Clergy, is much addicted to *Simony*, as are also all the Eastern

Sects. Their chief Gain lies in selling the Oil called *Myrone*, at a dear Rate, which, they teach the People to believe is a Remedy that physically cures all the Distempers of the Soul, and confers the Grace of Regeneration and Remission of Sins, saying, that in Baptism it is the Oil, not the Water, which is the Matter prescribed. The Patriarch consecrates this Oil, and sells it to the Bishops and Priests, who get great Sums by it.

15. April the 8th he parted from *Erivan*, and travelling through a Country somewhat hilly, but full of Villages, came first to *Daivin*, and then to *Kainer*, leaving the Mountain of *Noah* on the Right-hand. On the 10th he went on the same Road, which led him through a fertile and fair Country, and leaving *Sederec*, a great Town, and the Capital of the Province of *Armenia*, called *Charour*, where the Sultan resides, came through *Nouratchin*, and over the River *Harpasony* to *Nacchivan*, which is thought to be the ancient *Artaxate*. It is now little else but a Heap of Ruins, not containing above two thousand Houses which are inhabited, and those in the Heart of the City, with Inns, Baths, and other publick Houses, where they sell Tobacco and Coffee, whereas formerly the *Persian* History assures us, that it contained forty thousand.

Five Leagues to the North lies a great City called *Abrener*, i. e. the fertile Field, and seven others near to it, all whose Inhabitants are Papists, and their Bishops and Curates *Dominicans*, who perform their Church Service in the *Armenian* Language. These Towns were brought into Subjection to the Pope by an *Italian Dominican* of *Bologna*. Twenty Villages more acknowledg'd the same Ecclesiastical Jurisdiction, but are returned to their first Religion, and their Obedience to the *Armenian* Patriarch; and it is not likely that the rest can hold out long, for the Governors of the Province use them violently, and lay heavy Impositions upon them, for withdrawing from their Jurisdiction.

From *Nacchivan* he passed to old *Julpha*, through a dry stony Country, where there is Nothing to be seen but Hills of Stones. It is a ruined City, and thought by some Authors to be the ancient *Ariammene*. It is said to have contained four thousand Houses, though the Ruins do not shew above half so many. At present there is Nothing but Holes and Caverns in the Mountains, fitter for Beasts than Men to live in.

This City was ruined by *Abas* the Great, for the same Reason as *Nacchivan*, viz. to hinder the Invasions of the *Turks* for Want of Provisions. By *Julpha* runs the River *Araxes*, which separates *Armenia* from *Media*. It rises in the Mountain where *Noah's Ark* is said to have rested, from which perhaps it takes its Name, and empties itself into the *Caspian* Sea. It is very large, and of so rapid a Course, especially when it is swelled by the Thaws of the Snows that come down from the Mountains, that no Bridges can stand upon it, nor Dams resist its Force, and the Noise of the Waters astonishes the Ears of the Beholders.

16. *Media*, which formerly ruled all *Asia* with an Imperial Dominion, at present makes but one Part of a Province, though the largest in the *Persian* Empire, called *Azerbeyan*, or *Asapaican*. It borders on the East upon the *Caspian* Sea and *Hyrcania*, on the South upon *Parthia*, on the West upon *Araxes* and the Upper *Armenia*, of which *Assyria* is a Part, and on the North on *Dagestan*, which is that mountainous Country that borders upon the *Muscovite* Cossacks, and Part of Mount *Taurus*. The *Persians* affirm, that the Name of *Azerbeyan* implies the Country of Fire, by reason of the famous Temple of Fire which was there erected, where was kept that Fire which the Fire-worshippers hold to be a God: *Nimrod* is said first to have brought in this Worship, and there is a certain Sect, called *Guebres*, which still maintain it.

From *Julpha* he travelled through a Country full of little Hills, leaving a spacious Plain upon the Left-hand, where many bloody Battles between the *Turks* and *Persians* were fought, and particularly that between *Selim* the Son of *Solyman* the Great, and *Ishmael* the Great, to *Alacou*, and from thence, through a more even Country, to *Marant*, a very fair Town, consisting

ing of about two thousand five hundred Houses, and which has so many Gardens as take up as much Ground as the Houses. It is seated at the Bottom of a Mountain, at the End of a Plain, watered by the little River *Zelou-lou*, from which the People have drawn several Cuts into their Grounds and Gardens.

In the Places adjoining grow Plenty of Fruits, the best in all *Media*; but that which is most peculiar to these Parts, is this, that here they gather Cochineal, though in no great Quantities, nor for any longer Time than only eight Days in Summer, when the Sun is in *Leo*; for before that Time, the People say, it doth not come to Maturity; and after the Worm, from which they draw the Cochineal, makes an Hole in the Leaf in which it grows, it is lost. The *Persians* call Cochineal *Kermis*, from *Kerm*, which signifies a Worm, because it is extracted out of Worms. The *Armenians* have a Tradition, that *Noah* lies buried here.

17. From thence he travelled among the Mountains to *Sophian*, a little Village full of Rivulets and Gardens, and fruitful to a Wonder, and so he went to *Tauris*, which is fifty three *Persian* Leagues from *Erivan*. This City is very large and potent, being the second in *Persia* in Dignity, Grandeur, Riches, Trade, and Number of Inhabitants. It is neither walled nor fortified, and the little River *Spingteba* runs a-cross it, which sometimes carries away the Houses on the Side of it, and makes dreadful Havock. On the North-side runs the River *Agi*, or the Salt River, whose Water is made salt by the little Rivulets, which passing through the Salt Marishes, fall into it, and so can nourish no Fish. It is divided into nine Wards, and has fifteen thousand Houses, and as many Shops in their Market-places, among which are three hundred Inns, and some so large, as to lodge three hundred People, and many Cabarets for Coffee, Tobacco, and strong Liquors. There are three hundred and fifty Mosques, three Hospitals, which relieve the Poor with Victuals twice a Day; and a fair Hermitical *Hali's Eye*.

The Inhabitants have been formerly computed to be five hundred and fifty thousand. This City is full of Strangers, who come hither to trade from all Parts of *Asia*, because it is full of all Sorts of Merchandizes, and abounds with Artists in Cotton, Silk, and Gold. The fairest Turbans in *Persia* are made here; and it is said, there are six thousand Bales of Silk consumed in this Manufacture. The Air of *Tauris* is good, healthy, and dry, but the Cold continues long, because it is exposed to the North, and the Snow lies nine Months in the Year upon the Mountains; the Winds blow every Day, Morning and Evening, and Rains often fall.

It abounds with all Things necessary for human Support, as Corn, Fish from the *Caspian* Sea, Venison, and other wild Beasts. Bread may be bought there for three Pound a Penny, and Flesh at three half Pence a Pound. There are said to grow no less than 60 Sorts of Grapes in and about *Tauris*. Near it is a Quarry of white Marble, a Mine of Gold, and another of Salt. There are several Mineral Waters, all sulphureous, of which some are cold, and others boiling hot. Most of our Geographers of best Note, as *Ortelius*, *Ananias*, *Molets*, &c. are of Opinion, that this City is the ancient and celebrated *Ecbatana*, so frequently mentioned in holy Writ, and in the ancient History of *Asia*, but there are no Remains of the magnificent Palace of *Ecbatan*, where the Monarchs of *Asia* kept their Courts in Summer, nor of *Daniel's*, to justify this Notion.

From *Tauris* he travelled first to *Vaspinge*, a great Borough, surrounded with Gardens and Groves of Poplars and Tylets, and watered with several Brooks, which make it very pleasant; then to *Agi-agach*, by which are the Plains which afford the best Pastures in all *Media*, and perhaps in the whole World, where the choicest Horses in the whole Province are put to Grass from April to June, to purge, refresh, fatten and strengthen them. These Plains are the *Hippopotkon* of the Ancients, of which they write, that the Kings of *Media* kept here a Breed of fifty thousand Horses.

The Road from hence leads by several Circles of large hewn Stones, which the *Persians* affirm to be the

Places where the *Caous* or Giants, when they made Wars in *Media*, held their Councils, it being a Custom among these People, that every Officer that came to the Council brought with him a Stone, to serve him instead of a Chair, and so carries you over Hills and Dales, all fruitful and delightful, to Admiration, through *Turiman*, so called, because that in the Fields about it there is a great Number of Shepherds with their Flocks, that are called by that Name, to *Purware*, an handsome large Village at the Bottom of an Hill, and upon the Banks of a little River.

From thence he proceeded in his Journey, and crossing the River *Miana* several Times, by Reason of its Windings, passed through the Town of the same Name adjoining, both so called because they part *Media* from *Parthia*, and ascended a Ridge of Mountains, which are a Branch of Mount *Taurus*, at the Top of which stands a Castle, call'd the *Virgin's Castle*, because *Artaxerxes* is said to have built it on Purpose to imprison a Princess of the Blood.

As soon as you have passed these Mountains, and the River *Kesil-buese*, which is at the Foot of them, you perceive a Change of the Air; for whereas *Media* is moist and cloudy, subject to high Winds and much Rain, the *Parthian* Air is dry to the highest Degree, without Clouds or Rain for six Months sometimes, and the Soil sandy, so that nothing will thrive without good Husbandry and Pains.

18. *Parthia*, which was so long the Seat of the Empire of *Asia*, is now a large Province of the *Persian* Monarchy. It is the proper Demeans of the Shah, and therefore has no Governor, as the rest of the Provinces. It is extended 200 Leagues in Length, and 150 in Breadth, being bounded by the Province of *Chorassan* on the East; by *Fars*, which is properly *Persia*, on the South, by *Azarbeyan* or *Media* on the West, and *Guilan* or *Mezanderan*, which compose the Province of *Hyrkania*, on the North.

The Air is dry, and though the Mountains produce nothing but Thistles and Briers, yet the Plains are fruitful and pleasant, where there is Water. This Province has above forty Cities, which is much in *Persia*, because it is not peopled according to its Extent. The *Parthians* took their Original from the *Scythians*, who were the *Tartars*, who now inhabit the North of *Persia*, called *Uzbeks*, and formerly *Bactrians*. The first Village you come at is *Zerigan*, which is fam'd for its Antiquity, being founded, according to the *Persian* Records, in the Reign of *Ardechir-babexon*, several Ages before *Christ*, and then passing over delightful Plains, you come to *Sultany*.

This City is seated at the Foot of a Mountain. It seems afar off a very neat well-built Place, but does not appear so when you are within it; yet some of the publick Buildings are very remarkable, both for the Materials and Architecture. It contains about three thousand Houses, and besides, there are very vast Ruins, which makes it probable, that it was once the largest City of the Kingdom, as their Histories relate. Provisions are very plentiful and cheap there, and the Air wholesome, though very changeable, the Mornings, Evenings, and Nights being very cold, and Days hot. It is said to be the most ancient City in *Parthia*. The Predecessors of *Ishmael Sophi*, and the last *Armenian* Kings, resided there, and then it is said that it contained four hundred Christian Churches; but being demolished by *Tamerlane*, and several other *Turkish* and *Tartarian* Princes, the Christians have deserted it.

From hence he travelled through a lovely Country, and passing through several Villages, surrounded with Meadows, and Groves of Willow and Poplar, he came to *Ebber*, a small City for the Buildings, as containing not above 2500 Houses, but taking up a large Extent of Ground, because they have so many large Gardens. A small River runs through the Midst of it. It is thought to be anciently called *Barontha*. The Situation is delightful, the Air wholesome, and Soil plentiful. It is govern'd by a *Darogue*, or Mayor; and the *Mirtsheki-Bashi* has his *Tabvil*, or Salary, charged upon the Revenue of this City. The *Persian* Geographers assert, that

that this City was built by *Kei-Cofrou*, and that *Darab-Reiboni*, or *Darius*, began to build the Castle; and that *Skender-Roumi*, i. e. *Alexander the Great*, finished it. At *Ebber* they begin to speak the *Persian* Language, which is spoken all the Way to the *Indies*, more or less pure, as the People are more or less distant from *Schiras*, where it is spoken in the greatest Perfection.

19. From *Ebber* he travelled to *Persac*, leaving *Casbin* five Leagues on the Left-hand. This great City stands in a delightful Plain, three Leagues from Mount *Alou-vent*, one of the highest and most famous Mountains in *Persia*. It is six Miles in Circumference, containing 12000 Houses, and 100,000 Inhabitants, of which there are forty Families of Christians, and one hundred *Jews*, but all very poor. It was formerly walled, but they are now all fallen down. The chiefest Ornament and Grace of *Casbin* is the King's Palace, and the great Number of the Seats of the *Persian* Grandees, who attend upon the Court, which has its continual Residence there. There are but few Mosques in *Casbin*, but the Royal Mosque, called *Metshid-sha*, is one of the largest and fairest in all *Persia*. This City has no great Plenty of Water, but it is supplied, with all it has, by subterraneous Channels called *Kerisees*.

The Air is thick, and not very healthful, and the Soil dry and sandy, yet it abounds with Meat, and all Manner of Provisions, which are brought thither from the Countries adjoining, which having many well water'd Plains, feed a World of Cattel, and produce prodigious Quantities of Corn. The fairest Grape in *Persia*, called *Shaboni*, or the Royal Grape, being of a Gold Colour, and transparent, of which the strongest and most luscious Wine in the World is made, grows here. The Air is very hot in Summer all the Day long, but the Nights are so cold, that if a Man expose himself never so little to the Air, after he is undressed, he is sure to fall sick. Some of our *European* Geographers affirm it to have been the City, which the *Greeks* called *Ragea*, or *Rages*, afterwards *Europa* and *Arfacia*, and now *Casbin*, from a King of that Name. It is govern'd by a *Darogue*, or Mayor, chosen every Year, whose Office is worth to him 600 Tomans, or 2000 Pounds.

Having passed *Casbin*, he came to *Kaiare*, and having lodg'd there, travelled the next Night (for that's the general Way of travelling all over the East, to avoid the Heat of the Sun, which would hurt both Man and Beast in the Day-time) by *Segs-abad*, which signifies, *the Habitation of Dogs*, to *Sava*, a great City, seated in a sandy and barren Plain. It is two Miles in Circuit, and walled round, but so miserably built, that, unless it be in the Midst, it runs to Ruin for want of Inhabitants. The Histories of *Persia* unanimously agree, that the whole Plain of *Sava* was formerly a Salt-Marsh, or Lake; but how it was dried is not certainly known: Some fabulously report, that *Haly*, *Mahomet's* Son-in-Law, drain'd it by a Miracle; and to preserve the Memory of it, the People built this City in the Midst of it.

19. Just over against *Sava*, Eastward, at four Leagues Distance, stands a Place of Pilgrimage, most famous for the Devotion of the *Persians*. They call it *Ech-mouil*, that is to say, *Samuel*; for they believe, that this Prophet was there interr'd, and over his Tomb is built a most sumptuous *Mausoleum*, in the midst of a magnificent Mosque. Over-against it is still to be seen some Remnants of the City of *Rey*, which is reported to have been once the biggest City of *Asia*, next to *Babylon*. The *Persian* Histories relate, that it was divided into ninety-six Quarters, every one of which had forty-six Streets, and every Street 400 Houses, and ten Mosques; that there were in it 6400 Colleges, 16600 Baths, 15000 Towers of Mosques, 12000 Mills, 1700 Channels, and 13000 Inns, and People almost numberless.

The Chronicles of the *Magi* make *Cbus*, the Grand-child of *Noah*, to be Founder of it; and *Ptolemy* calls it *Raquai*; but the vulgar Opinion is, that it was founded by *Housheing Pishdadi*, or the Chief Justiciary, and enlarged by *Marroutsher*, his Successor. It was destroyed by the *Mahometans*, who being divided into two Sects, viz. Of *Shia* and *Sunnis*, made War one upon the

other for sixty Years together. The Sect of *Sunnis* called in the Assistance of the *Tartars*, and, by their Help, bore down the Sect of *Shia*. In these Wars the *Tartars*, by their frequent Incurfions, destroy'd the potent City of *Rey*, and reduced it to nothing before the 600th Year of their *Hegyra*. The Soil about it is fertile and pleasant, and produces great Plenty of Fruits; but the Air is unhealthy, making the Skin swarthy, and breeding Agues.

Departing from hence, he passed by an Hill, called *Coub-Telisin*, which has this remarkable and peculiar to it; that as you approach nearer and nearer to it, it shews a different Form, and varies both in its Bigness and Figure; that the Top or Point of it is always in Sight, and you would think, that it turned that Side, which Way soever you stood to look upon it. It consists of a black Earth, that crumbles like that of the burning Mountains; but it is not known to have vomited Fire. The People of the Country say, that they that ascend that Mountain never come back again.

20. Having passed it, he came to *Com*, a large City, seated in a Plain, by a River-side. It contains 15000 Houses, as the People say, and is surrounded with a Moat and Wall, flank'd with Towers, but half ruined. On the River-side are two fair Keys, and at the East of the City a fine Bridge. It contains many large and beautiful Market-places, both for Wholesale and Retail: Though it be a City of no great Trade, yet they export large Quantities of Fruit, dried and raw, and particularly Pomegranates; Soap, Sword-blades, and Earthen Ware, both white and varnish'd, which hath this peculiar Property, that it cools the Water in Summer both wonderfully and suddenly, by Reason of its continual Transpiration. It contains a great Number of fair Inns, *Mausoleums* and Mosques, wherein the Grand-Children and Descendants of *Ali*, which are the *Persian* Saints, called *Yman-Zade*, Sons of the Apostles, lie interr'd. One of these Mosques is the most celebrated in the East: It has four Courts, of which the first is planted with Trees and Flowers, like a Garden, with Terrasses on each Side; the second is not so beautiful as this, but the third is nothing inferior to it, being surrounded with Apartments two Stories high, and having a Terrace, Portico and Canal. In the fourth are the Chambers and Lodgings for the Priests, Governors and Students, that live upon the Revenues of the sacred Place. Fronting these Courts stands the Body of the Structure, consisting of three great Chapels upon a Line. To the Middlemost belongs a Portal, eighteen Foot high, of white Marble. The Top is a large Half-Duomo, overlaid without with large square *China* Tiles, painted with *Moresco* Work, and embellish'd within with Gold and Azure. The Folding Doors are plated with Silver, gilt with Vermillion.

In it stands the Tomb of *Fatima* in the Midst, which is overlaid also with *China* Tiles, painted *A-la-moresco*, and overspread with Cloth of Gold, which hangs down on both Sides. It is enclosed with a Grate of massy Silver, ten Foot high, distant half a Foot from the Tomb, and at each Corner are Apples of fine Gold. In the two Chapels on each Side stand the Tombs of the two last Kings of *Persia*, viz. *Abas* and *Sophi*, both very magnificent; but on that of *Abas* are written in large Characters of Gold, seven Elegies upon *Mahomet* and *Haly*, made by the Learned *Hasan-Caza*.

These are rare Pieces of Eloquence, and in them may be seen not only the Genius of *Persian* Poetry, but the Transports of the *Mahometan* Devotion. This City contains several other beautiful and sumptuous Edifices, and would be a very pleasant Place, were it not for the Heat, which is excessive, there being no Place in all *Persia* where the Sun scorches more violently, yet is the Air wholsom, and Soil fruitful, especially in Pistachio's. The People are very courteous and civil. The River that passeth by it is but a small Current in Summer, but being swell'd with the Snow-waters that fall from the Mountains, it sometimes overflows great Part of the City.

From

From *Com* he travelled four Leagues over very fertile Plains, abounding with fine Villages, to *Cassem-abad*, a Town consisting of about 300 Houses, belonging to the Queen-Mother, as her Dowry, from whence he passed over a dry sandy Plain, without Villages or Water, to *Abishirin*, or Sweet Water, because there is a Fountain of fair Water, and went from thence to *Casban*.

21. This City is seated in a large Plain, near an high Mountain, a League in Length, and a Quarter of a League in Breadth, running out from East to West in Form of an Half-Moon. There is no River near the City, but it is supplied with Water by Canals, deep Wells, and Cisterns. It is encompassed with a double Wall, flank'd with round Towers, after the old Fashion, and hath five Gates. The City and Suburbs, which are the most beautiful, contain 6500 Houses, as the People say, forty Mosques, three Colleges, and about 200 Sepulchres of the Descendants of *Ali*. The principal Mosque stands right against the Market-place, and has a Tower, like a Steeple, of Free-Stone. The Houses are built of Earth and Brick, but are none of them remarkable for their Beauty.

The Bazars and Baths are well built and kept, and the Royal Inn is the fairest in all *Persia*. The Wealth and Trade of *Casban* consists in the Manufactory of all Sorts of Stuffs, and Tissues of Gold and Silver, plain and flower'd, Sattin and Velvet; and there is no City in *Persia* that makes more. *Casban* stands in a good Air, yet so violently hot, that it is ready to stifle you in Summer, which is occasion'd by the Reflection of a Mountain, that stands on the South of it; but the greatest Inconvenience that attends this City, is the great Number of Scorpions which infest it, and the Parts adjoining, when the Sun is in *Scorpio*, and therefore there is Nobody but has by him several experienced Remedies against the Sting of this Creature.

Cattle and wild Fowl are not plentiful, but the Country abounds in Corn and Fruits. They furnish *Ispahan* with Fruits, especially Melons and Water-Melons, all the Season. Several *European* Authors think this City to be *Ambrodux* or *Ctesiphon* of the Ancients. It is said to be founded by a Virgin, who therefore laid the first Stone of it when the Sun enter'd *Virgo*; and nam'd it *Casban* from her Grandfather. It is govern'd by a *Darogue*, or Mayor, who holds his Place two Years.

From *Casban* he passed over a Mountain, and then descended into a deep Valley, very narrow and about a League in Length, which is well fill'd with Houses, Vineyards and Gardens, so close one to another, that they all seem but one Village. Several delightful and clear Streams preserve the Summer so wonderfully cool here, that the Roses were not blown, nor Corn or Fruit ripe, when the Harvest was quite got in at *Casban*. Several modern Authors assert, that *Darius* was murdered by *Bessus* in this Valley, and that not improbably, because History says, *Bessus* fled to *Bactriana*, and *Nabarzanes*, to *Hyrcania*, and here the Road begins to these two Provinces, and so by *Mousbacour*, a large Village of 500 Houses, to *Ispahan*, which is so thick encompassed with Villages, that you would think you are in the Suburbs two Hours before you come near them.

22. There are two other Roads, which it is necessary that Travellers should be acquainted with, which I shall briefly describe, viz. From *Warsaw* to *Ispahan*, and from *Ispahan* to *Moscow*.

Warsaw, which is seated upon the Left Hand of the *Vistula*, is the ordinary Residence of the King of *Poland*. Beginning your Travels here to *Ispahan*, you must go to *Lublin*, which is six Days Journey, and in five more you may get to *Iluove*, where the Customers open all the Bales of the Merchants Goods, and exact five in the Hundred. From *Iluove* you go to *Jaslovieer* in twelve Days. This is the last City of *Poland* next *Moldavia*. Here, if you sell any Goods, you must pay five *per Cent*.

From thence you go to *Yasbe* in eight Days. This is the Capital City of *Moldavia*, and the Residence of the *Wayvod*, which the Grand Signior sends to govern that Country. Here all Bales of Merchan-

dizes are opened, and there is a Roll of all that the Merchant is to pay, which amounts to five *per Cent*.

From *Yasbe* the Way lies through *Oursbaye*, to which you come in three Days. This is the last City in *Moldavia*. From hence to *Akerman* you go in four Days, and the Customs amount to four *per Cent*. but they take the Merchant's Account. From *Akerman* you go to *Ozou*, where they take two *per Cent*. and so to *Precep*, where they pay two and an half *per Cent*. but they trust to the Merchant's Word at both Places.

From *Precep* the Road lies to *Kaffa*, where also the Custom is three *per Cent*. And the Journey from *Warsaw* to *Kaffa* is fifty one Days by the Waggon, which is the usual Way of Carriage in that Country, and the Customs in all come to eighteen and an half *per Cent*. to which you must add the Carriage and Passage by Sea to *Trebisond*, where you pay three Piasters for every Mule's, and four for every Camel's Load. To avoid something of this Charge, the *Armenians* ship their Goods usually at another Port, called *Onnie*, which is a very good Port, and where they never pay above a Piafter and a half for a Camel's Load.

There is another Road from *Warsaw* to *Trebisond* shorter by three Days Journey, viz. From *Warsaw* to *Yasbe*, in the former Road, and from thence by *Galas*, a City of *Moldavia*, *Megin* and *Mangalia*, the best Port in the Black-Sea to the West, to *Trebisond*, from whence to *Erzerom* five Days Journey, from which to *Ispahan* you go the usual Road.

The other Road from *Ispahan* to *Moscow* lies thus. You must travel the usual Road before-mention'd, to *Shamaki*, and from thence to *Derbent*, which the *Turks* call *Demir-Capi*. This is the last City in the *Persian* Jurisdiction, by which the River *Shamourke* runs. From *Derbent* you may travel to *Tetarck* in eight Days, where hiring Barks with twelve Oars, you may be at *Astracan*, by the Help of a little Sail which they put up, if the Wind serves, in four or five Hours, but if you row only it will take up nine. When you embark upon the *Caspian* Sea, you must provide yourself Water for the first three Days, because the Water on the Coast is bitter for that Time, but afterwards it is very good. At *Astracan* the Merchants are all searched by the Customers, and they take five *per Cent*.

From *Astracan* to *Moscow* you take Shipping in great Barks, that make Use both of Oars and Sails, rowing against the Tide, and weigh all you carry aboard, for which you must pay fourteen Caya, and three Abaffi's and an half for every Pound. From *Astracan* you sail to *Corinya*, and so in Order by *Sariza*, *Sarataf*, *Samarat*, *Senuriskat*, *Coulombe*, *Casan*, *Sabouk-sha*, *Godamijan*, *Triguina*, *Mouron* and *Casin*, to *Moscow*, which they count 2950 *Shagarons*, or 590 *Italian* Miles.

At *Sarataf* you may go a-shore, and so go by Land to *Moscow*, in Waggon, when the Snow is gone, and on Sledges while it lies, and then the Way lies through *Inferat*, *Tymnek*, *Canquerma* and *Valodimer*, a City bigger than *Constantinople*; to *Moscow*, which Journey may be finish'd in thirty five Day; but this Way is never used, but upon Necessity, when the River is frozen, because in the Passage from *Sarataf* to *Inferat*, which is ten Days Journey, there is nothing to be had for Man or Horse. At *Moscow* the Customs are the same as at *Astracan*, viz. five *per Cent*. and all the *Asians*, viz. *Turks*, *Persians*, *Armenians*, and others, lodge in a Sort of Inns; but the *Europeans* lie in a Place by themselves all together.

23. There are few Countries in the World that are so little visited by *European* Travellers as those about the *Black Sea*, and indeed there are several Reasons for it. In the first Place, the *Turks* will suffer no Trade to be carried on by Sea in any other than their own Vessels, and so jealous they are on this Head, that when the *Russians* were Masters of *Asoph*, and shared by that Means in the Navigation of the *Black Sea*, they were never easy. It is, in the next Place, a very rare Thing, even for such as travel for Pleasure through the Dominions of the Grand Signior, to strike out of the com-

mon Road purely to gratify their Curiosity, nor indeed in such a Country as this would that be always safe. And lastly, The common Reports of most of these Countries place both them and their Inhabitants in so so bad a Light, that few have any Curiosity to be better acquainted with them. Our Author's Journey was by mere Accident, he took this Route to *Persia* as the most convenient at that Time for his Purpose; and it was also by Accident *M. de la Motraye* took many Years after the same Route, and their Accounts agree, generally speaking, very well; but some Points in both seem to stand in Need of Explanation.

Our Author has given but a very short Account of the *Crim Tartars*, and therefore it is necessary to say something more of them. Authors differ very much as to the Condition of this Nation, that is to say, whether they ought to be considered as free and independent, as Allies, or as Subjects to the *Turks*. Instead of endeavouring to discuss these Questions, we shall leave them to the Decision of the Reader, after reporting a few Matters of Fact. There are not many Towns in this *Tartary*, and in those that have any Fortresses, the *Turks* have Garrisons. The *Tartar* Princes are rarely admitted into, and never allowed to lodge in them. *Cassa*, we have elsewhere shewn, was once a very fine City, and is still a good Port, which is in the Power of the *Turks*; so is *Baluclawa*, which is still a better Port, and, if we may depend upon the *Turkish* Writers, is not exceeded by any in the World, either for the Depth of Water, or Security from Winds. The Town of *Chirck*, upon the Streights of *Daman*, has also a very fine Port, but it is an open Place, and belongs to the *Tartars*. The Capital of this Country, properly speaking, is *Bascia Sarai*, which is the Residence of the Khan, was taken by the *Russians* in the late War, and totally destroyed. The Khan of the *Tartars* though a Sovereign Prince, is appointed and deposed by the Grand Signior, but he is always succeeded by a Prince of his own Family, and this presumptive Successor, whether he be the Brother or the Son of the reigning Prince, is stiled *Sultan Galga*. The second Prince of the Family is stiled *Hor Bey*, the third *Noradin Bey*, and the rest of the young Princes have particular Titles. It is to be observed of the *Tartars* in general, that even the meanest and most stupid of them is so much Master of his Genealogy, as to know exactly of what Family he is descended, and to what Tribe his Family belongs. The Truth of the Matter is, that they resemble exactly *Highland* and *Irish* Clans, and like them, are commanded by Chiefs.

Every distinct Family or Clan of the *Tartars* is by them stiled *Horda*, and the chief *Mursa*, or as others write it, *Mirza*. Amongst the *Crim Tartars* there are four great Tribes, to which all their Hords belong, and the Chiefs of these four Tribes are the Councillors of the Khan, without whose Consent he can undertake Nothing of Importance. Hereditary Right is the fundamental Law of all the *Tartars*, and the Dignity of *Mirza*, or Chief, descends from Father to Son. The Khan of *Crim Tartary* can bring eighty thousand Men into the Field, but his Contingent, when called to assist the Grand Signior, consists of thirty thousand Horse. All the World knows, that these *Tartars* are very far from being handsome, but they are, generally speaking, brave, hardy, active, and enterprising, and their Horses resemble them, for worse looking, or better Beasts for Service, the World does not produce. As for Riches, they consist in Horses and in Slaves; and as for their Manner of Living, it is equally coarse and barbarous in the Opinion of all other Nations, and honourable and happy in their own. They are very hospitable and kind to one another, so that every Man is at home in his Neighbour's House. Neither are they less civil and respectful to such Strangers as come among them, who are very welcome to what they have, and would be as welcome if they had more. One Thing is remarkable, when any Stranger comes to their Tents, he is served by their Children, and not by their Slaves, let the Quality of the Master be what it will. A Gentleman who was in the Service of *Charles XII.* passing

through this Country in his Way to *Bender*, where that Monarch then was, lodged in the Tent of a principal *Mirza*, and when it was Time to go to Rest, his Son made up for the Stranger a Bed of Skins, by the Side of which he set a little Stool, with a Pipe, a Box of Tobacco, and a Bottle of excellent Sherbet. In the Morning he came and rolled up the Bed, presented him Cakes, Butter, Coffee, and Milk, and brought him likewise his Boots. The Father, who was a Kind of Prince, when the Gentleman expressed some Astonishment at his putting his Son upon such Offices, made him this Answer; "Friend, this World is a Lottery, in which there are many Blanks to a Prize; though I have many Slaves, yet by the Fortune of War my Son may become a Slave; it is fit therefore he should learn to behave in all Conditions; the Khan does the same Thing; and besides, let me tell thee, Stranger, that among the *Tartars*, we hold the meanest Office done to a Friend as the highest Honour, and therefore never share it with our Slaves."

As the *Tartars* are chiefly known to the rest of the World, by their Excursions, we cannot describe them better, than by showing in what Manner they act on such Occasions, wherein, without doubt, they discover an extraordinary Genius for this Manner of making War, which however barbarous it may seem to us, answers all the Ends of War to them, by furnishing Slaves and Booty in Abundance, which supplies them with the Means of Happiness in Time of Peace. It is very true that they run through great Hazards and Hardships in Time of War; but then these Hazards and Hardships are all that they sustain, for when they return to their Tents, they are free and independent, have neither Care nor Solitude, but are Princes in their own Family, and live in what Manner they like best, without any Apprehensions or Constraint. To us, indeed, even their Repose and Luxury appears a most shocking and hideous Course of Life; but it appears otherwise to them; and, after all, if there be any Thing certain in this World, it is this, that the true Standard of Happiness is Opinion. But to come to the Point; every *Tartar* that goes into the Field, carries with him two Horses, which are taught to follow without being led, and are consequently useful to, without embarrassing their Master. On these Horses they lay a Sack of Rye Meal, and another with Bisket and Salt, which is all the Baggage and Provisions wherewith they are encumbered. It is only a few of the Commanders that are provided with Tents; the rest pass the Night in the following Manner. They carry with them four sharp Stakes, which they drive into the Ground, and upon these they fix their Mantle, which serves for a Bed; their wooden Saddle supplies the Place of a Pillow, and a coarse, thick Cloth, which is thrown cross the Horses Back under the Saddle, becomes a Coverlid. The Horses are tied to the Pickets with pretty long Cords; and while their Masters sleep, the Beasts very handily remove the Snow with their Forefeet, and feed upon the Grass that is under it, taking now and then a Mouthful of Snow to moisten it. When a Horse tires, his Master cuts his Throat upon the Spot, and distributes his Flesh among his Friends, who make him the same Compliment when Occasion offers. The best Part of the Flesh they cut in Slices, of an Inch thick, and these they place very neatly under the Saddle of the Horse they ride upon. When they have travelled three or four Leagues, they dismount, turn all the Pieces of Flesh, and mix them very carefully with the Sweat, which they turn up with their Fingers, then to horse again, and at Night they sup upon this dainty Dish, which they take ready dressed from under their Saddles.

In this Manner they will traverse two or three hundred Leagues of Ground, without ever lighting a Fire, which they carefully avoid, to prevent being discover'd; and they chuse the Depth of Winter for their Expeditions, that the Bogs, Lakes, and Rivers being frozen, they may avoid all Interruptions, and prosecute their March with greater Expedition. Thus the *Tartars* march one hundred in Front, that is three hundred Horses; every one of them has two, which serve for Relays,

lays, as has been said before; their Front may extend eight hundred or one thousand Paces, and they are eight hundred or one thousand in File, which reaches four long Leagues, or three when they keep close; for at other Times they extend above ten Leagues. This is wonderful to those that have not seen it, for eighty Thousand *Tartars* make up above two hundred thousand Horses. Trees are not thicker in the Woods than Horses are at that Time in the Field; and to see them at a Distance, they look like a Cloud rising in the Horizon, which increases as it rises, and strikes a Terror into the boldest; I mean those who are not used to see such Multitudes together. Thus these mighty Armies march, halting every Hour about half a Quarter of an Hour to give their Horses Time to stale; and they are so well managed, that they do it as soon as they stop; then the *Tartars* alight and piss too. They remount immediately, and go on, all which is done only by the Signal of a Whistle; and when they are come within three or four Leagues of the Borders, they lie still two or three Days in some Place chosen for that Purpose, where they think they are concealed; there they give out Orders, and refresh their Army, which they dispose of in this Manner: They divide it into three Parts, two Thirds are to compose one Body, the other Third is subdivided into two Parts, each making a Wing, one on the Right, the other on the Left. In this Order they enter the Country.

The main Body moves slowly, which, in their Language, they call *Coche*, with the Wings, but continually without halting Day or Night, allowing but an Hour to refresh till they are got sixty or eighty Leagues into the Country, without doing any Harm. But as soon as they begin to march back, the Body holds the same Pace; then the General dismisses the two Wings, which have Liberty, each on its own Side, to stray ten or twelve Leagues from the main Body; but that is to be understood Half of the Way forward, and the other Half Sideways each Wing, which may consist of eight or ten thousand Men, is again subdivided into ten or twelve Squadrons, of five or six hundred Men each, who run up and down to the Villages, encompass them, making four *Corps de Garde* about each Village, and great Fires all the Night for Fear any Peasant should escape them: Then they fall to Pillaging and Burning, kill all that make any Resistance, and take and carry away all that submit, not only Men, Women, and Sucking Babes, but the Cattle, Horses, Cows, Oxen, Sheep, Goats, &c. As for the Swine, they drive and shut them up in a Barn, or such-like Place, and fire the four Corners; so great is the Loathing they have for those Creatures. The Wings being allowed to stray but ten or twelve Leagues, (as has been said) return with their Booty to their main Body, which is easily done; for they leave a great Track, marching above fifty in Front; so that they have nothing to do but to follow, and in four or five Hours they join their Body again, where, as soon as they are come, two other Wings, consisting of the like Number as the former, go out on the Right and Left, to make much the same Havock; then they come in, and two others go out, and so continue their Excursions without ever diminishing their Body, which, as has been mentioned, makes two Thirds of the Army, and move gently, to be always in Breath and ready to fight their Enemy, if they should meet them, tho' their Design is not to meet, but to avoid them as much as possible. They never return the same Way they broke in, but take a Compass the better to escape; for they always fight in their own Defence, nay, and they must be forced to it, without they know themselves to be ten to one; and yet would they consider of it before they fell on; for these *Tartars* do not enter *Poland* to fight, but to pillage by way of Surprise. When the *Polanders* meet them, they make Work, forcing them to get home faster than their usual Pace. At other Times, after they have sufficiently plundered and robbed, they enter upon the desert Plains in the Frontiers, thirty or forty Leagues in Length, and being in that Place of Safety, make a great Halt, recovering Breath, and put-

ting themselves into Order, if they were in any Confusion, on Account of meeting the *Polanders*.

At their Return from such an Incurfion, the Khan receives his Tenth of the whole Booty, which is afterwards divided amongst the several Hords, and every Mirza receives the Tenth of the Share that belongs to his Hord; after which, what remains is divided fairly and regularly amongst all that served in the Excursion. It is, undoubtedly, one of the most shocking Spectacles that can be beheld, to see the unhappy People of all Ages, Ranks and Sexes, that have been thus carried away, separated from each other, and torn away by their relentless Masters, who either keep and employ them in servile Work, or sell them, if they think proper, to the *Turks*, *Persians*, *Circassians*, or any of the adjacent Nations, or to the Merchants who come up into their Countries on Purpose to buy Slaves. It is from their Fortune in these Kind of Excursions, that the *Tartar* Princes become rich and potent; for what they receive from their Parents is very inconsiderable, and they make no Scruple of telling Strangers, when they admire the Number of their Tents, Horses, Cattle and Slaves, that what they have, was acquired by their Sword and Bow; and that if they had been less lucky in their Expeditions, they had been as poor and as miserable as any of their Subjects. By leading this Kind of Life they become very active and vigorous, capable of enduring prodigious Fatigue, so as to go without Sleep for many Nights together, and with little or no Food for many Days; but when they come to have more Leisure, they will fetch this up by sleeping forty eight Hours upon the Stretch, and will crowd three or four Meals into one. Their good and bad Qualities are peculiar to themselves, and seem to be derived entirely from the Kind of Life they lead; for though they will fight very bravely, yet they must be forced to it, chusing much rather to fly, if it be practicable. They will drink very freely upon certain Occasions, but upon such Occasions only, for at other Times they are both abstemious and sober. The *Crim Tartars* are very far from being jealous, and are, generally speaking, content with one Wife, seldom making use of their Slaves as Concubines; but then they are merciless Masters, treat their Slaves in the same Manner as their Cattle, and sell them with as little Ceremony. Under Misfortunes they are patient, or rather sullen, but what little Education they have makes some Difference amongst them, as appears by such of their Khans as are banished to *Rhodes*, which is the common Place of their Exile when deposed, where they live very handsomely, and without any Dejection of Spirit. Indeed this Misfortune happens so frequently, that they cannot be much surprized at it. In the Court of the Khan's Palace at *Bascia Saray*, there are two Tombs of Princes that died in Possession of that Dignity, and, it is supposed, were erected there as Curiosities in that Respect. I have dwelt the longer upon this Subject, because I take it to be both instructive and entertaining.

In order to apprehend clearly the Nature of our Author's Voyages and Travels, we must consider the Countries that lie upon the *Black Sea*, which is every where shut in by the Land, except at the narrow Straights of *Constantinople*. On the West-side lies the *European Coast*, viz. the maritime Parts of *Moldavia*, *Bulgaria*, and *Romania*, extending from South to North, that is, from *Constantinople* to *Oczakow*, in a straight Line, about three hundred and twenty Miles. On the North-side lies the *Little Tartary*, the Peninsula of *Crim*, and the great Country of *Circassia*, that circumscribe the *Palus Meotis*, which communicates with the *Black Sea* by the Straights of *Daman* or *Theman*, which have the Peninsula of *Crim* on one Side, and *Circassia* on the other. Thus it appears, that *Circassia* makes the North East Boundary of the *Black Sea*, and stretches itself quite to the *Caspian*. The Countries lying on the West-side of the *Black Sea*, and to the South of *Circassia*, are *Mingrelia*, *Immoretta*, and *Guriel*, of which our Author has given a large and very good Description.

These

These Countries are all mountainous and narrow, having behind them towards the *Caspian*, the large Country of *Georgia*, which borders immediately on the *Persian* Dominions, having *Circassia* on the North, the Countries of *Mingrelia*, *Immoretta*, *Guriel* and *Armenia* on the West, the *Caspian-Sea* on the East, and the Territories of *Persia* to the South. The several Nations that inhabit these Countries are, properly speaking, *Tartars*, or very little better; and though there are some Towns, and even Cities, yet most of the Inhabitants live in Tents. The Princes of the *Circassians*, are hereditary Chiefs of Clans, like other *Tartars*, and it is certainly a Degree of Complaisance to esteem them Christians. It must be however allowed, that they are not quite so barbarous, or to speak with greater Propriety, so far removed in their Manners from ours, as other *Tartars*, notwithstanding their unnatural and detestable Custom of selling their Children; for it is certain that they take a good deal of Pains in their Education, but with no other View than that of bringing them to a better Market. The Boys, besides Riding, Hunting, Shooting and martial Exercises, are taught several Languages, and as they are very active in their Persons, have quick Wits, and are of bold and enterprizing Natures, they rise frequently to great Perfections, both in *Turkey* and in *Persia*; as for the Girls they are likewise taught the *Turkish* and *Persian* Tongues, Music, Dancing, and to repeat amorous Novels and Romances. If it may be accounted wonderful to see Parents part with their Children with so much Ease as they do, it is certainly not at all less strange, to see the Children quit their Fathers and Mothers not only without Pain, but with the utmost Alacrity, the Girls more especially. This arises from the Stories they are told, of the vast Fortunes that their Countrywomen have made in different Parts of the World, which fills them with aspiring Thoughts, and to say the Truth, their Slavery is none of the hardest, for the Merchants who buy them, take as much Care as is possible to improve their Education,

and are so far from making any Attempts upon their Chastity, that they are the most jealous Guardians of it in the World, because all the Hopes they have of selling them to Advantage, are founded in the extreme Fondness the *Mahometans* have for Virgins, and when they are sold, it is at so high a Price, that those who buy them, must be both able and disposed to maintain them in Affluence.

There is no need to add any Remarks on the remaining Part of this Section, because whatever requires farther Explanation, will be set in a clear Light in the subsequent Sections; only it may not be amiss to observe, that since the Declension of the *Persian* Empire, the *Russians* have taken many of the *Circassian* and *Georgian* Princes under their Protection, and it is highly probable, that in Time the rest will follow their Example, which perhaps may render the Country more accessible, and prove the Means of drawing the Inhabitants out of their present State of Barbarism. If this could be done, and they once civilized, and brought under one Sovereign, or even two or three that lived in tolerable Harmony with each other, there is no doubt that they might be able to defend themselves against any that should attack them, and by the Happiness of their Situation, between the *Euxine* and *Caspian* Seas, and the many valuable Commodities their Country produces, they might very speedily establish a much more profitable, as well as reputable Commerce than that which they have hitherto carried on. The late *Schah Nadir*, who had great Views with respect to Trade, was very desirous of forcing a Passage to the Black-Sea, where he intended to have established a Port from which he expected vast Things, but very probably these great Designs will fall with him, and as the present Generation is not like to see his Equal, we must leave to Posterity the Hopes of beholding these Countries and their Inhabitants in a better Situation than they are at present, for which they seem to have been designed by Nature; in a worse, however, they cannot well be.

SECTION II.

A copious and circumstantial Description of the great Empire of *Persia*, its Situation, Extent, Distribution of its Provinces, Climate, Rivers, Seas, Soil, Produce, and the chief Cities throughout the Country, so as to afford a perfect Idea of its Condition, in past and present Times.

Collected from the Writings of the most famous Travellers, particularly from those of HERBERT, CHARDIN, TAVERNIER, THEVENOT, LE BRUN, and others, their several Remarks and Observations being all digested into a regular and easy Method.

1. The Situation and Extent of the *Persian* Empire, with a succinct Account of the Reasons why a clear and perfect Notion of the Territories which compose this Empire, is of such Importance towards a right Idea of general History and Geography.
2. A distinct and accurate Description of the several Provinces under the Dominion of the *Persian* Emperor, their ancient and modern Names, Situation, Extent, chief Cities and Ports.
3. The Air and Climate of *Persia* in its different Parts; with an Account of the hot and stifling Winds so dangerous to Travellers on the Sea-Coasts.
4. The Rivers in this Country, and the various Methods made Use of to diffuse the Water by Canals and Aqueducts; and an Account of the Seas upon which it borders.
5. Of the Appearance of the Country in general, and of the Diversity of Soils in *Persia*.
6. Of the particular Husbandry used in this Country, the Produce of arable Lands and Gardens.
7. Of the Variety of Fruits, Trees, Flowers and Shrubs that grow therein.
8. Of medicinal Drugs that are brought from *Persia*, particularly Opium, *Assa Fœtida* and *Bezoar*.
9. A large and curious Account of the Animals, tame and wild, in the several Provinces of *Persia*.
10. Of the Fowls, Birds and Fish in this Country, and the Reason why the latter is so scarce at *Ispahan*.
11. Of the Minerals in *Persia*, and of precious Stones, particularly the *Turquois*, held to be peculiar to this Country.
12. Of the Manner of Building in *Persia*, how well adapted to their Climate, and of the Methods

Methods used to keep their Houses cool and pleasant, even in the hottest Seasons. 13. A particular Description of the Capital City of Ispahan or Spahawn, with its peculiar Beauties and Blemishes. 14. A distinct Description of the Royal Palace and of the Imperial Mosque. 15. Of the Bagnio's, Gardens and Bridges in the City of Ispahan, and in its Neighbourhood. 16. A large Description of the Borough or Suburb of Julpha, with an Account of the Armenians who inhabit it. 17. The noble City of Schiraz described, with an Account of the adjacent Country, and its Produce. 18. An Account of the noble Antiquities at Tchelminar, the Remains of the ancient Persepolis, justly esteemed the most glorious Antiquity in the World. 19. Of other Places of Note in Persia, more especially upon its Sea-Coast, and of the Design of Shach Nadir to have removed the Capital of the Persian Empire, with the Reasons upon which that Project was founded. 20. A Comparison between the past and present State of Persia, in Regard as well to the Fertility and Riches of the Country, as of the great Cities and Ports. 21. Remarks historical, political and critical, upon the foregoing Section.

1. **T**HERE is scarce any Country in the World, which makes a greater Figure in Histories sacred or prophane, ancient or modern, than this of which we are speaking. In the Scriptures the Deliverance of the Jews by Cyrus, the Protection they received from his Successors, the memorable Preservation of the whole People from the dark and deep laid Plot of Haman, all refer to this potent Empire and its Monarchs. In Reference to the Greek History, the earlier Parts of it turn entirely on the Disputes between the free States of Greece and the great King, as the latter contain nothing more than the History of the Subversion of the Persian Empire by Alexander the Great, and the Division of its several Provinces after his Decease, among his Captains. In Regard to the Roman Histories again, we find the Parthians continually disputing the Progress of their Arms in the East, and the most considerable Part of the Constantinopolitan History before the Irruption of the Saracens proved fatal to both Empires, comprehends the Disputes between the Successors of Constantine the Great, and the Emperors of Persia. From the Time the Saracens became Masters of this Country, the Succession of their Caliphs forms a principal Branch of the Oriental History down to the Extinction of their Dominion. Since that Time the several Conquerors of this Empire have sufficiently distinguished themselves to deserve Notice, and even the Frequency of Revolutions in this Country, make the History of it more curious and more entertaining. We know very little of the Etymology of the Word Persia, some say it was so called from the Hero Perseus Son of Jupiter and Danae, but that seems to be a very ridiculous Fable; others derive it from Perseus, a Nobleman of that Country, in Times of great Antiquity, but with Respect to this also, there wants both Probability and Proof; neither is the third Account of the Matter, which derives its Name from Paras, that signifies a Horse, very satisfactory; and as for the modern Persian Word Fars, it is visibly derived from Persia, and therefore cannot help us to explain it. As to the Oriental Writers, they know it not at all by this Name, but stile it constantly Iran. In order to apprehend the Meaning of this Name, which is absolutely necessary to the Understanding their Histories, we are to know, that an ancient King of this Country, or rather of the Upper Asia, whose Name was Ferri-doun, had two Sons, Tour and Irag, who succeeded him in his Dominions, the former had all the Country on the other Side the River Oxus, which by the Way, the Orientals stile Gihon, and the other the Country on this Side. Hence arises the Distinction of all the Countries in the Upper Asia (China and the Indies excepted) into Touran and Iran, the former comprehending great Tartary, and all the Countries bordering or depending upon it, and the latter Persia, in like Manner, with all its Dependencies. As for the modern Writers in the Persian Tongue, as they stile their Sovereign Shah, so they give his Dominions the Title of Shahistan, or the Territories of the Shah.

We will proceed next to the Situation of this Country, and this is best shown, by marking the Dominions of these Princes that confine it; for as to the distinct and precise Limitations of this Empire, it is impossible to lay them down with Accuracy or Certainty, because they depend upon the Power of its Monarchs, which

fluctuates every Day. On the East it has the Dominions of the Great Mogul, the Ocean and the Gulph of Persia towards the South, the Territories of the Grand Signior on the West, and the Country of Circassia, the Caspian Sea, and the River Oxus, which divides it from the Usbeck Tartary, on the North. It may not be amiss to observe, that the Northern and Southern Boundaries seldom or never vary, as being fixed by Nature, but on the East and West the Persians sometimes encroach upon, but in later Times have been oftener encroached upon by their Neighbours, as will appear more clearly when we come to speak particularly of its Provinces.

As to its Extent, it reaches from South to North about twenty Degrees, that is, from twenty-five to forty-five Degrees of North Latitude. It contains pretty near the same Number of Degrees of Longitude, the nearest of its Provinces lying in the Longitude of forty-five, and the most distant about sixty-six Degrees East from the Meridian of London. According to the ordinary Computation, allowing for the Division made by the Caspian Sea, it is a Square of between eleven and twelve hundred Miles, which shews plainly, that it is one of the most considerable Countries of Asia; and if it was as thoroughly inhabited as the Excellency of its Situation, Climate, and Soil deserve, its Monarchs would be, doubtless, as powerful as any sovereign Princes in the World; though at present, from a Multitude of concurring Accidents, it seems to be thinner in People, and weaker in Point of Government, than any of the other four Asiatick Empires. As Persia, properly so called, is but a very small Country in Comparison of what now goes under that Name, so the different Times and Occasions by which the other Districts that now depend upon it were annexed thereto, render it extremely difficult to fix the Number, the Names, and the Situation of its Provinces, about which hardly any two Geographers or Travellers have been hitherto able to agree; therefore the Reader will not think it strange, if the Account we give of them differs from those he has met with before.

2. In order to deliver as plain an Account of this Matter as is possible, we shall observe, that the most accurate of the Persian Writers themselves divide their Country into thirteen Provinces, and therefore it appears most reasonable to follow that Division; and it may likewise be convenient to pursue their Method of describing them, as this is a Thing altogether arbitrary, and there seems to be the same Cause to take it one Way as another, provided that when the Method is once chosen it is closely pursued, that the Reader may be able to trace it exactly, without Confusion, and even to form in his Head, as it were, a Scheme of the whole Country that is laid before him. We shall begin then with the North East, and so passing along Southward, describe all the Countries of Persia that lie towards the Frontiers either of Tartary or India. We shall then describe the Provinces on the Ocean and the Persian Gulph, together with such as lie within Land; those on the Frontiers of the Turkish Empire will follow these, and we shall end with the Provinces that lie North West and North on the Coast of the Caspian Sea.

I. Astarabat, or Estarabat, is situated on the Coast of the Caspian Sea, to the South of the Opening of the River Amu or Oxus; it hath Chorasan on the East, and

on the South the Province of *Masanderan*, on the West the *Caspian* Sea, and Part of *Tartary* on the North. It is but small, having thirty five Leagues in Length from West to East, and fifteen in Breadth from North to South; for which Reason many of our Geographers include it within the great Province of *Chorasán*. In regard to Fertility, as well as to its Climate, there is not a finer Country in *Persia*. A Ridge of Hills that run through it furnish abundance of small Rivulets, and some fine Rivers, that running through it into the *Caspian* Sea, cloath, the Country for a great Part of the Year, with continual Verdure. The Capital of this Province has the same Name with the Province itself, and is one of the best built Cities in *Persia*; and as it is a Frontier towards *Tartary*, it is tolerably fortified, and has commonly a good Garrison. It stands upon a Gulph of the same Name, and has a very good Port for small Vessels that do not draw any great Depth of Water. There are in it both Silk and Woollen Manufactures, and the Inhabitants drive a great Trade in a Sort of Camblets, that are much esteemed both for Beauty and Strength. The Country about is well cultivated, and as for the Western Part of the Province, it is a perfect Orchard, abounding with Fruits of all Kinds, as well as with fine Trees for Shade and for Timber; but the same Thing cannot be said of the Eastern Part of the Province, which being exposed to the Inroads of the *Usbeck Tartars*, is so depopulated, that in Spite of the Kindness of Nature, it looks like a perfect Desert.

II. *Chorasán* is esteemed the fairest, richest, and most fertile Province of the whole Empire, and is the Country known to the Ancients by the Name of *Bactria*; it is divided by the Mountains of *Balck* from *Great Bucharia*, has the Principality of *Candabar* on the East, the Province of *Segistán* on the South, the Provinces of *Yerack* and *Masanderan* to the West, and the Province of *Esterabat* and the River *Amu* on the North. It is thought to be about one hundred German Leagues in Compass. The Climate is very temperate, the Soil extremely fruitful, abounding with rich Fruits, fine Pasturages, producing excellent Corn, Wine, and Silk, and affording besides rich Mines of Gold, Silver, and precious Stones. It was formerly the best peopled, the best planted, and the best built Province in *Persia*, but of late the Incursions of the *Usbeck Tartars* have laid one half of it waste; and though for a few Years they were kept in Awe by the Shah *Nadir*, who drove them out of this Country, for which he had a peculiar Affection, yet it is not to be supposed, while the Affairs of the *Persian* Empire are in Confusion, that they can be long restrained. The chief City of this Province is *Meschid*, or *Tbous*, of which we shall have Occasion to speak more hereafter; and besides this, there are many other considerable Places, such as *Nichabour*, *Herat*, *Tcharkez*, *Amonoye*, &c.

III. *Sablustán*, bounded on the North by the Provinces of *Chorasán* and *Candabar*, which latter is sometimes reckoned a Part of this Province, on the East by the Dominions of the *Great Mogul*, and on the South and West by the Province of *Segistán*. The Climate is tolerable, but the Soil is extremely mountainous and barren; the Inhabitants are, generally speaking, boorish and rude, at least in Comparison of the rest of the *Persians*, yet the Capital of the Province, which is the City of *Bost*, is large, well built, well inhabited, and the Country about it is exceedingly well cultivated; all which arises from its lying in the direct Road to the *Indies*. It is a Place of great Trade, abounds with Manufactures and Strangers from all Countries, and with the District about it, looks so very unlike all the rest of the Province, that it seems to have dropt into it from the Clouds. Some other Towns there are, but of no great Importance, only it is fit to remark, that the People of this Country make the hardiest Soldiers, and are the best Infantry in the *Persian* Empire.

IV. *Segistán*, which seems to have been the *Drangiana* of the Ancients, is bounded by *Sablustán* on the North, the Territories of the *Great Mogul* on the East, by the Provinces of *Makeran* on the South, and by Part of the Province of *Kerman* on the West. This Country is to-

lerably fruitful, and is particularly remarkable for its Palm-trees and its excellent Dates, but it is greatly exposed to Winds, which sometimes drive the Sands in such a Manner, as to cover the Houses, and even whole Villages. It was formerly famous for its Gold Mines, which, if we may trust the *Persian* Authors, were the richest in the World, the Veins sometimes pushing to the very Surface, in which they are countenanced by some very ancient *Greek* Authors. This Province has produced both Heroes and learned Men, who have from thence borrowed the Surname of *Segistani*, which by the Way is a Practice very common in *Persia*. The Capital is the City of *Zereng*, more commonly stiled *Segistán*, but a Place of no great Note. There are besides two other Places of some Figure in this Country, *Gobin* and *Mastich*.

V. *Macran*, or *Macheran*, supposed to be the ancient *Gedrosia*, is bounded by *Segistán* on the North, by the Dominions of the *Great Mogul* on the East, by the Ocean on the South, and by the Province of *Kerman* towards the West; it is looked upon as one of the worst Provinces in *Persia*, the Air being very indifferent, and the Soil barren; it is but indifferently peopled, and the Inhabitants are esteemed barbarous and faithless. The chief Towns in it are *Makeran*, *Passir*, and *Gest*; the North-part of it is entirely a Desert of ten Day's Journey; it has indeed a Port at *Guadel*, but of no great Consequence, for it is capable of receiving only small Vessels, and is besides not very secure.

VI. *Kerman*, which is without doubt the *Caramania* of the Ancients, a very large and noble Province, which may be well esteemed one of the most beautiful in *Persia*. It is bounded by *Segistán* and *Makeran* towards the East, the Ocean towards the South, the Province of *Fars* towards the West, and by a Desert which separates it from the Province of *Yerac Agemi*, towards the North. Some Part of it is mountainous and barren enough, but the Valleys are wonderfully fertile, producing Fruits, Roots and Flowers in vast Abundance; it is in this Province that such vast Quantities of Roses grow, as enable the Inhabitants to carry on a considerable Trade in Rose-water, which is highly esteemed not only throughout all the East, but in *Europe*; they have also very rich Mines in this Country, particularly those of *Turquoises*, of which we shall speak hereafter; admirable Steel, out of which they fabricate all kind of Arms, and they have besides great Manufactures of Tapestry. But after all, the principal Glory of this Country is its Sheep, the Wool of which is esteemed the finest in the World, and they have a very singular Way of coming at it, for at a certain Season of the Year they pull it from the Backs of the Animals with their Fingers, so that the Sheep are entirely naked; this Wool is all wrought in its natural Colours, and without Dye, it is of three Sorts, the first brown, the second of a speckled grey, and the third of a Milk-white; this last is the most esteemed; but there is none of it that ever goes out of the Country, for it is intirely employed in making Garments for their *Moulbas*, or Men of the Law, and Priests, who wear nothing else. There are in this Province more of the *Gubers*, *Gaurs*, or Fire-Worshippers, who are the Remains of the ancient *Persians*, than in all the Empire beside; and these frugal and industrious People manufacture from the other two Sorts of Wool, several Kinds of light Stuffs, which in Point of Beauty and Lustre are not at all inferior to Silk. The City of *Kerman* is the Capital of the Province, it is large and well peopled, Provisions are cheap there, and in the Neighbourhood they have a Manufacture of Earthen Ware, which comes very near *Porcelain*. The Fort of *Gambroon*, and the Island of *Ormus*, are by some Authors reckoned dependent upon this Province, which has produced several great Heroes, learned Physicians, excellent Poets, and in a Word, famous Men of every kind; amongst the rest, the celebrated *Achmet Kermani*, who was Poet Laureat to *Tamerlane*, and composed in *Persian* Verse the Acts of *Alexander the Great*, of *Gingishcan*, and of his Patron.

VII. *Fars* or *Farsistan*, as the *Persians* call it, is the ancient *Persia Proper*, the *Orientalis* say, that it derives its

its Name from *Fars*, the Son of *Azaz*, that is, *Arphaxad*, the Son of *Shem*, the Son of *Noah*; but what Authority they have for this, is more than I can determine; it is bounded on the East by *Kerman*, by the Gulph of *Persia* on the South, by the Province of *Chufistan* towards the West, and by a great Desert called *Naubendighian* upon the North, which separates it from *Yerac Agemi*. This sandy Desert is of a vast Extent, and reaches to the Frontiers of the Province of *Chorasan*; it is the same we have mention'd before, in speaking of the Province of *Kerman*. This is a rich and noble Country, abounding with all the Necessaries of Life, but more especially famous for producing in the Neighbourhood of *Shiraz*, the richest and finest Wine in *Persia*; but the Imperial Grape of *Tauris* is esteemed most pleasant and luscious for Eating. They have also an admirable Glass Manufacture in this Province, where they blow Bottles of an enormous Size, some that are said to hold three Gallons of our Measure; but they keep their Wine in earthen Vessels, as we shall have Occasion to show hereafter. The chief Cities in this Country are *Shiraz*, which will be described elsewhere. *Lar*, formerly the Capital of a little independant Principality; *Bander Congo*, a Port upon the *Persian* Gulph, to which we may add, though as I have said some comprehend it under the Province of *Kerman*, the famous Port of *Gambroon*, or *Bander Abassi*. On the opposite Shore of *Arabia*, there is a small Territory, called from the principal Place therein, *Elcatiff*, which formerly belong'd to the *Persians*, and was sometimes annexed to the Government of *Farsistan*, which is one Reason why I mention it here; another is, that in several Maps, and in many oriental Authors, the *Persian* Gulph is from hence called the Sea of *Elcatiff*.

VIII. *Chufistan*, the *Susiana* of the Ancients is bounded on the East by the Provinces of *Farsistan*, and *Yerac* by the Gulph of *Persia* on the South, by the Territory of *Bassora* on the West, and by the Province of *Curdestan* on the North; the Capital of this Country is *Schouster*, believed with Reason to be the City of *Shushan*, mentioned in the Book of *Esther*, famous for a noble Palace built here by the *Persian* Monarch *Artaxerxes*, who is the *Abasuerus* of the Scripture, and for the Tomb of the Prophet *Daniel*, of neither of which there are now any Remains, though a *Persian* Author of great Credit assures us, that the latter was standing in his Time, and that he had seen it.

IX. *Curdestan*, or *Curdistan*, part of the ancient *Affryria*, bounded on the West by the Dominions of the Grand Signor, by the Province of *Chufistan* on the South, by *Erac Agemi* on the East, and by *Arderbeitzan* or *Media* on the North; it is with very little Reason that this Country finds a Place among the Provinces of *Persia*, for the *Curds* are a Nation that sometimes own the Protection of the *Porte*, and sometimes profess a Dependance upon the Shah, but are in Reality Subjects to neither; they are, to say the Truth, a very extraordinary Race of *Highlanders*, governed by their own hereditary Chiefs, and the Reason that I stile them extraordinary is, because their Force consists in Horse, of which some Chiefs can bring Hundreds, others Thousands, and it has been known, that a Chief has brought twenty thousand into the Field, where they behave as well as any Troops in the World. As to their Religion they call themselves *Mahometans*, but except Circumcision and Abstinence from Wine, in both which they are very strict, they observe no other Precepts of the *Alcoran*, and have neither *Moulaks* nor *Mosques*, except in two or three of their great Towns. The Mountains of which this Country is full, are rude and barren, but the Valleys are fertile and pleasant, producing great Quantities of Tobacco and Vines; of the former they make a great Profit, but they make no Wine of the latter, which they convert into Raisins. The chief City in this Country is *Betlis*, and besides this, there are some other Places of Note, indifferently built, but well inhabited. *Thamas Kouli Kan* attacked these People often, but with very little Success, and they have more than once defeated both the *Persians* and the *Turks* in pitched Battles, yet they act generally on the Defensive, and seldom fight out of their own Country.

X. *Erac Agemi*, or as some write, *Azemi*; the Reason of this Addition is to distinguish it from a Province of the *Turkish* Empire which is called *Erac Arabi*, and is precisely the ancient Province of *Babylon*; whereas *Erac Agemi* is the ancient *Parthia*. This noble Province is bounded on the North by *Aderbeitzan* and *Ghilan*, by the Province of *Chorasan* on the East, by *Chufistan* and *Farsistan* on the South, and by *Curdestan* on the West. The chief City is the Capital of the *Persian* Empire, viz. *Ispahan*, or *Spahawn*, situate in the Latitude of 32 Degrees, 40 Minutes North, and in the 50th Degree of Longitude East from the Meridian of *London*; there are also in this Province several other considerable Places, such as *Cashin*, supposed to be the ancient *Arasfa*, Com, described in the last Section; *Sava* mentioned there likewise; *Hamadan*, a very fine City on the Frontiers of *Curdestan*, the Country about it extremely fruitful in Rice, the Mountains in the Neighbourhood supplying several fine Rivulets, which render its Territory wonderfully fruitful. The *Turks* became Masters of it by Storm in 1623, and almost totally destroyed both it and its Inhabitants. *Casham*, which lies about seventy Miles North of *Ispahan*; *Yezd*, which is situated one hundred and five Miles to the Eastward of that Capital.

XI. *Gilan*, under which the modern *Persian* Geographers comprehend not only the Country properly so called, which comprehend precisely the *Hyrkania* of the Ancients, but also the Provinces of *Mazenderan* and *Tabrestan*; so that, considered in this Light, it is a very extensive Country, bounded by the *Caspian* Sea on the North, by the Province of *Chorasan* on the East, by that of *Erac Agemi* on the South, and by the great Country of *Aderbeitzan* on the West. The whole of this Province is wonderfully fair and fruitful. It is distinguished from almost all the Provinces of this great Empire by some very particular Advantages. In the first Place, its Situation is very peculiar, for on the one Side it is covered by the Sea, and towards the Land it is surrounded with Mountains and Rocks that rise like so many natural Fortifications, with this singular Circumstance, that while they are rude, inaccessible, and terrible on that Side, which is turned towards the rest of the Provinces of the Empire, they are on the Inside respecting this Province, of gentle Ascent, covered with perpetual Verdure and covered with Groves of Citrons, Oranges, Olives, and Figs. The very Summits of the Mountains shaded by Cypress-trees and other excellent Timber, which may be easily transported to the Sea-side; for through this Rampart of Rocks, Nature has formed several Passages so wide, and with such a Slope, as render them perfectly easy; and yet so well fenced on each Side, that a small Barricade will render them impregnable. Another singular Benefit which this Country enjoys, is its unbounded and amazing Fruitfulness, which with very little Cultivation pours out such prodigious Abundance of all Things necessary and desirable, as is scarce to be believed; for it is equally famous for its Silk, its Oil, its Wines, its Rice, its Tobacco, and a vast Variety of Fruits. In other Parts of *Persia* their Houses are but mean, and the Moveables of the common People very coarse; but here on the contrary, every Peasant has a good House, and most of his Furniture is made of Box, of which they have the largest and finest Trees in the World, and a large Garden full of Citrons, Oranges, Figs, and Vines, so large, that the Branches of them are frequently as big as a Man's Body. A third Commodity, in some Measure peculiar to this Province, is a vast Abundance of Fish in their Rivers, and in that Part of the *Caspian* Sea which washes their Coasts; from whence, as the People draw an immense Profit, so the Shah derives from thence a great Revenue. The Capital of this Province is *Resech*, which stands in the Latitude of 37 Degrees of North, a large and populous City; besides which, there are *Kesker*, *Astara*, and other considerable Places within its Bounds. Two Things more deserve our Notice; one is, that the People of this Province are of the *Turkish*, and not of the *Persian* Religion, that is, they are Followers of *Omar*, and not of *Ali*: The other, That by the Treaty between the Emperor *Peter* the Great and the Shah in 1723, this Province

was

was yielded to the *Russians*. *Mazanderan* and *Tabrestan* are also very considerable Countries, but so like to *Gilan* in their Produce, that it is not necessary to describe them particularly.

XII. *Aderbeitzan*, which comprehends the greatest and best Part of the ancient *Media*, is a very noble and beautiful Country, bounded by the Province of *Sbirwan* on the North, by *Gilan* and the *Caspian Sea* on the East, by *Erac Agemi* and *Curdestan* on the South, and by the River *Aras* or *Araxis* on the West, which divides it from *Georgia*. The famous City of *Tauris* or *Tabris*, which is described in the foregoing Section, is the Capital of this Country, and was one of the finest Cities of *Persia*, till destroyed by the *Turks* in their last War with the *Persians*, when they are said to have put one hundred thousand Persons of all Ranks Ages and Sexes to the Sword. *Ardevil* is another great and fine City in this Country, standing about thirty Miles from Mount *Tauris*; and *Sultania*, which was destroyed by *Tamerlane*, was scarce inferior to any City in *Persia*, as the Ruins that still remain sufficiently testify at this Day. It is still a good Town, containing about six thousand Inhabitants, but is particularly remarkable for a most noble Mosque, in which is the Tomb of the Founder of this City, the famous Sultan *Mahomet Chodabende*. This Mosque has three great Gates, all of polished Steel, and the Tomb is seen through a Grate of the same Metal, finely wrought in Foliages and Branches of Trees; and though some of these are of the Thickness of a Man's Arm, yet they are so exquisitely finished, that there is not so much as a Joint to be perceived in the whole; from whence the Inhabitants persuade themselves, and would willingly persuade Strangers, that it is made of one entire Piece, and affirm that it was seven Years in making.

XIII. *Sbirwan*, or according to the *Persian* Orthography *Schirwan*, contains the Northern Part of *Media*, and is by many Authors made only a Part of the foregoing Province; but we comprehend within it, for the Sake of keeping within Bounds, the little Province of *Dagestan*, and so much of *Georgia* and *Armenia* as belongs to the *Persians*; and taking it in this Light, it is thus bounded; by *Circassia* and the *Russian* Territories on the North, by the *Caspian Sea* on the East, by *Aderbeitzan* on the South, and by the *Turkish Armenia* and *Georgia* on the West. *Schamakie* is the Capital of this Province, and stands in the Latitude of 40 Degrees 50 Minutes North, between two Mountains well fortified, and is a Place of great Trade. *Derbent*, or *Debircan*, which signifies an Iron Gate, is a famous Pass between the Mountains and the *Caspian Sea*. *Baku* is the only tolerable Port on the West-side of the *Caspian*; it is large and safe, but not deep; the Town is small, but well peopled, and commanded by a Citadel; it was given up to the *Russians* by the Peace of 1723. The Province of *Dagestan* is at present, for the most Part, in the Hands of the *Tartars*, and to curb this fierce Nation, who are able to bring twenty thousand Men into the Field, the *Russians* built the Fortress of St. *Andrew*, not far from *Tarku*, which is the Capital of this Country, as *Teffis* is of that Part of *Georgia* which belongs to *Persia*. That Part of *Armenia* which belongs to this Country is stiled *Aran*, and the Capital of it is *Erivan*, which has been before described. Within the Bounds of this Province stands also the City of *Nacksvan*, which the Inhabitants are fully convinced is the oldest in the World, having been built by *Noah* and his Children upon their coming out of the Ark, of which, if you will credit them, there are still some Remains on the Mountains that are not far from hence. Thus we have compleated a regular and Geographical Description of all the Parts of this great Empire, which will enable the Reader to comprehend perfectly all that follows in the ensuing Section. And we dare also assure him, that he will find it of very great Use towards understanding all the Histories of, and Travels through this Country, already published, as well as the Accounts we may hereafter receive from thence, which might otherwise appear very unintelligible.

3. *Persia*, extending from the 25th Degree of Latitude to the 45th, the longest Day in the South is

thirteen Hours and a Half, and in the North above fifteen Hours. In so great an Extent of Country it is natural to suppose that the Air and Seasons are very different, as in Fact we find them to be. In the Middle of the Empire, their Winter begins in *November*, and continues till *March*, with severe Frosts and Snow, which falls in great Quantities on their Mountains, but not so much in the champaign Country; from the Month of *March* till *May*, the Wind is usually high, and from thence to *September* they have a calm serene Heaven, without so much as a Cloud; and though it be pretty hot in the Day-time, the refreshing Breezes which blow constantly Morning and Evening, as well as in the Night, make the Summer very tolerable, especially since the Nights are near ten Hours long. The Air is so pure, and the Stars shine with that Lustre, that one Man may know another very well by their Light, and People travel much more in the Night, than the Day. In this Part of *Persia*, there are very seldom any Hurricanes or Tempests, and very little Thunder and Lightning, nor is it subject to Earthquakes, and the Air is so extremely dry in the Summer Season, that you will not find the least Dew or Moisture on any thing that is laid abroad all Night, or even in the Grass, and it very seldom Rains in the Winter. No Country is more healthful than the interior Part of *Persia*, as appears by the hale Complexion of the Natives; they are strong and robust, and, generally speaking, enjoy constant Health. As for Foreigners, who come thither, it is a common Observation, that those who are healthy at their Arrival continue so, and that those who are sick, seldom recover.

The Air in the Southern Part of *Persia*, particularly about *Gombroon*, is very unhealthy in the Spring and Fall: Our *European* Factors never pass a Year without a dangerous Fit of Illness, which frequently carries them off. It is an ordinary Thing for two of them to agree, that if one of them die, the Survivor shall possess the other's Fortune. Nor is this any great Prejudice to their Relations, for if a Man leaves private Trustees, or makes the Company his Executors, the Heir of the deceased will meet with great Difficulties in Recovering the Testator's Effects. The Months of *June*, *July* and *August* are healthy enough, but so very hot, that both Natives and Foreigners get up into the Mountains at that Time. The hot Winds which blow from the Eastward, over a long Tract of sandy Deserts, are ready to suffocate them, and sometimes there happens a Pestilential Blast, which strikes the Traveller dead in an instant. It rains but very seldom here, any part of the Year, and the Water they save then is very unwholesome.

The Provinces of *Georgia*, *Sbirwan* and *Adirbeitzan*, are very dry and warm in the Summer, but subject to Storms and Tempests in the Winter, and as severe Frosts for six Months as any Countries on the Continent, in the same Latitude; but as this Part of *Persia*, is very mountainous, there is frequently a vast Difference between the Air on the North and the South-side of the Mountains, and in a few Miles travelling People think themselves in a different Climate; but however cold the Mountains in the North may be, they are extremely healthful. On the contrary, the flat Country of *Gilan* and *Mezenderan*, which lies upon the *Caspian Sea*, and was the ancient *Hyrkania*, is very damp, full of stinking Morasses, and unhealthy, insomuch that the Inhabitants in the Summer retire into the Mountains, all the Water they have being foul and corrupted in the hot Season; and here, and in *Chorasan*, it is said Earthquakes are very common.

4. It is observable, that there is no Country in the World of so large an Extent as *Persia*, where there are so few navigable Rivers; there is not so much as one River in the Heart of the Country that will carry a Boat of any Burthen, and you may travel several Days Journey, without meeting with any Water whatever, in some Parts. The River *Oxus* indeed which divides *Persia* from *Usbeck-Tartary*, is a large Stream, but as there are no Branches of it, that arise in the *Persian* Dominions, it is of little Use to them. The Rivers *Kur* and *Aras*

Aras, anciently called *Cyrus* and *Araxes*, which rise in the Mountains of *Ararat*, and run through *Georgia*, *Shirvan* and *Adirbeitzan*, and having joined their Streams, fall into the *Caspian* Sea, are much the most considerable Rivers in the *Persian* Dominions. However, there are several small Rivulets which fall from the Mountains, and are conveyed by subterraneous Channels or otherwise to their principal Cities.

Water being so scarce in *Persia*, there is no Place, where they husband it better, or have more ingenious Contrivances, to convey it to their Cities, and into their Corn-fields and Gardens. This is the Care of the Government, and there is a great Officer in every Province, who has the Charge of the Conveyance and Distribution of the Waters. They turn all their little Rivulets and Springs to those Parts of the Country, where they are most wanted; they dig Wells also of a prodigious Depth and Breadth, out of which they draw the Water with Oxen, in great leathern Buckets, which being emptied into Cisterns, is let out as there is Occasion for the Service of the Country. They have also vast subterraneous Aqueducts, through which they convey Water twenty or thirty Leagues to the Places assigned. These are two Fathom high, and arched with Brick, and at every twenty Paces Distance, there are large Holes like Wells, which were made for the Conveniency of carrying on the Arch without Working under Ground too far, and the more easy repairing them. The Distribution of the River and Spring-water, is made one Day to one Quarter of the Town, and another Day to another, as Occasion requires, when every one opens the Canal or Reservatory in his Gardens to receive it, for which every Garden pays a certain Sum yearly to the Government, particularly about *Ispahan*; and as it is very easy for one to divert his Neighbour's Water into his own Channel, this is a Fraud that is severely punished. They give a greater Rate for River Water, than they do for Spring-water, which is not found so proper for the Improvement of their Grounds.

Besides the Ocean, there are two Seas belonging to *Persia*, one on the North, and the other on the South-west, viz. The *Caspian* Sea, and the Gulph of *Bosfora* or *Persia*, which have been already mentioned. The *Caspian* Sea is about a hundred Leagues in Length, from North to South, and ninety Leagues in Breadth, and has near a hundred Rivers running into it, of which the Chief is the *Volga*, at the Mouth whereof stands *Astracan* but this Sea has no Communication with any other, and though so many Rivers fall into it, there is no visible Way by which it discharges itself of its Waters, but they remain, always of the same Height, and do not either ebb or flow. The *Russians* have in a great Measure the sole Navigation of this Sea, which is very profitable to them, and might be made much more so by the new Trade that has been set on Foot, from *Europe* to *Persia*, through *Russia*.

The *Shah Nadir* was very desirous of becoming a maritime Power on this Side also, and employed a Gentleman of a certain Country, to build him Ships of Force for this Purpose, but considering the Revolutions that will probably attend his Death, these Designs are like to fall to the Ground. The *Persians* were formerly entirely Masters of the Gulph that separates their Country from *Arabia*, for which they were in a great Measure indebted to us, who assisted them in dispossessing the *Portuguese* of the Island of *Ormuz*, upon which they had opened a very advantageous Port, allowing us half the Customs arising from the Goods imported and exported here. But *Shah Abbas* the Great, thought that Consideration too large, and therefore when he transferred the Commerce to his new Port of *Gambroon*, or *Bander Abassi*, i. e. the Port of *Abbas*, he allowed the *East-India* Company no more than One thousand *Tomans*, which makes three thousand three hundred thirty three Pound six Shillings and eight Pence of our Money. It was in this Gulph, on the Coast of the Island of *Baherem*, that they had the finest Pearl Fishery in the World, which produced annually above fifty thousand Pounds, but in the late unsettled State of their Empire, the *Arabians* have seiz'd

or rather recovered this Fishery, and are in Possession of it, at least for the present.

5. As we have now given a clear Account of the Rivers and Seas of this Country, we will next speak of the Soil and its Produce; and in the first Place we must observe, that there is not a Country in the World, which has more Mountains, and fewer Rivers than *Persia*, and some of their Mountains are looked upon to be the highest on the Face of the Earth. Mount *Taurus*, which receives different Names as it branches itself out into different Provinces, runs quite through the Country, from West to East. The loftiest of these Mountains are those called *Arrarat* in *Armenia*, the Mountains which separate *Media* from *Hyrcania*, and those between *Hyrcania* and *Parthia* or *Erak*. Those also which divide *Fars* or *Persis* from *Carmania* are exceedingly high, the most famous of which is called Mount *Jarron*, but they are generally dry barren Rocks, without Trees or Herbage upon them, except those of *Gylan* or *Hyrcania*, and the Mountains of *Curdestan*, which are covered with Woods and very Fruitful, where they are manured. There are vast sandy Defarts, several Days Journey over in this Kingdom, where there is scarce a Drop of Water to be found, and the Land in general upon the Frontiers lies uncultivated, to discourage their Enemies from invading them; and in Fact there is not the least Subsistence to be met with for several Miles, whether you enter this Empire from *Turkey* or *India*. There are however some fruitful Plains and Vallies, in which their principal Cities stand, which yield Plenty of Grain, and Herbage, and no Country is more fruitful, than the Provinces which lie upon the *Caspian* Sea, as has been already observed. But then *Hyrcania* is very unhealthy in Summer time, which some apprehend proceeds from the Multitude of Snakes and Insects, which lie rotting upon the Ground, when the Waters are dried up, as well as from the Foulness of the Water itself, which is so thick and muddy, that there is no drinking it at that Season of the Year.

As to *Persia* in general, there is not a tenth Part of it cultivated, not but that there are many Valleys which bear neither Grass nor Grain at present, which formerly when greater Care was taken to turn the Waters into them, were fruitful Countries. In some Provinces, there are hundreds of fine Aqueducts, choaked up and buried in Ruins, so that it is not so much a Defect in the Soil, as the Want of People, or at least of Husbandmen, which renders *Persia* barren. The Soil in some Parts is a hard Gravel, and in others a stiff whitish Clay, almost as hard as Stone, but either of them are fruitful enough, when well watered, and will bear often two Crops, and sometimes three in the Compass of a Year; and if we give any Credit to ancient Authors, there was not a more plentiful Country in the World than *Persia* was formerly; the Reason of this Alteration some ascribe to the different Dispositions of the People, who have inhabited it. The ancient *Persians*, the Fire-worshippers, it is said, were obliged by the Precepts of their Religion, to cultivate the Soil, and it was by them accounted a meritorious act, to plant a Tree, to bring the Water into a Field, and make a barren Spot of Earth produce Grass or Grain, while the *Mahometans* seem to have no Genius for Improvements, or even to keep up what their Ancestors have built or planted, but let every Thing run to ruin; however, one Reason of this Neglect may be, that the Properties of the People are in no Security, and no Wonder they have but little Inclination to make Improvements, when they have no Certainty of reaping the Advantage of them.

6. Near great Towns they improve their Grounds with the Dirt and Dung of the Streets, but at a greater Distance, they throw their Fields into little level Squares, which they bank about, and then turn the Water into them, letting it stand in the Field all Night, which having soaked it, the Water is let out next Morning, and the Sun shining with almost perpendicular Rays upon the moist Earth, renders it fit for the Production of any Sort of Grain or Plants. Where the Ground is Light

they plow with two or three Oxen or Buffalos; but in *Gilan* and other Countries, where they meet with a stiff Clay, it is as much as eight or ten Oxen can do to draw their Ploughs which are very large. Rice, Wheat and Barley, are almost the only Kinds of Grain growing in *Persia*; Oats they have none, and little or no Rye. Their Seasons are not the same in the North as in the South, but when they are Sowing in one Part of the Country, they are reaping in another, and in some Places, it is not more than three Months between Seed-time and Harvest.

Their Land never lies fallow, but it is sown once every Year, at least, it is so meliorated and enriched by being flowed, and the Heat of the Sun afterwards working on the Mud, that it is never out of Heart. As to the Rice, it must be constantly supplied with Water till the Harvest; but for other Grain, the Land is only flowed before the sowing, to render it prolifick. Their Kitchen Gardens are well furnished with most of the Roots and Salads we have in *Europe*; they have no less than twenty several Sorts of Melons during the Season they last, which is about four Months, the common People make them their constant Food, those which come to Maturity first in the Spring are round and small, those that ripen in the latter Part of the Season are the best and largest, some of them weigh eight or ten Pounds, and are as sweet as Sugar itself; at the Tables of Persons of Quality they have them all the Year round, there being a Way to preserve them under Ground till the Season returns again, and it is said, some Persons will eat eight or ten Pound of Melons at a Meal, without being sick. The best Melons grow in *Chorassan* near *Tartary*, and they are carried as far as *Ispahan* for the Shah's Use, and as Presents to their Friends. Cucumbers are another Fruit much eaten by the common People, one Sort of them has scarce any Seeds in it, and is eaten without paring or dressing, and is not reckoned unwholesome.

7. Of Grapes they have several Kinds, and some of them are so large, that a single Grape is a Mouthful. They make their Wine at *Ispahan* of the *Kismish's*, a little round Grape, and without any Stone that can be perceived, but much the best Wines are made at *Shiraz*. They keep their Grapes all Winter, and let them hang a considerable Time on the Vine, wrapped up in Linnen Bags; the Air is so dry, that it preserves all kinds of Fruit as long as they can desire. Dates are reckon'd one of the most delicious Fruits in this Country, they are no where so good as in *Persia*, the Pulp which encloses the Stone is a clammy Substance, as sweet as Honey; they are laid on Heaps when they are ripe, and melting, candy or preserve themselves without Sugar. Foreigners are advised to eat moderately of them, because they Heat the Blood, and occasions Ulcers in those who are not used to them, and sometimes weaken the Sight, but have no ill Effects upon the Natives; the Tree which bears them is slender, but very tall, and like other Palms, has no Branches but on the Top, and the Fruit grows in Clusters of thirty or forty Pounds Weight; the Tree does not bear till it is fifteen Years old, but continues bearing above a hundred Years. There are in *Persia* most of the Fruits which are to be had in *Europe*, and they would be in much greater Perfection, if they knew any Thing of Gardening, but they understand neither grafting, inoculating, or the Art of managing Dwarf-trees; all their Trees run up very high, and are loaded with Wood. They have excellent Apricots of several Kinds, which are in Season one after the other, and their Nectarines and Peaches weigh sixteen or eighteen Ounces a-piece; there is an Apricot red within, which is call'd, the Egg of the Sun; these are dried and exported in vast Quantities; they are boiled in Water, which is thickened by the Juice of the Fruit, and makes a perfect Syrup without Sugar.

Apples and Pears grow chiefly in the North Part of *Persia*, they have also Pomegranates of several Kinds, with Oranges, Quinces, and Prunes, and such Variety of Fruits, that Sir *John Chardin* says, he has seen above fifty Sorts at an Entertainment, some of which grew three hundred Leagues from the Place. The Pistachio Nuts are

almost peculiar to *Persia*, and are transported all the World over; here are also Small-nuts, Filberds and Almonds. Olives grow in *Hyrcania*, near the *Caspian* Sea, but they neither know how to preserve them, nor draw Oil in the best Manner from them. They have also Plantations of Sugar and Tobacco.

8. Among other Trees in their Gardens, they have the Cypress, the Palm, and the Mulberry, of the last there are large Plantations for their Silk Worms, which they don't suffer to grow up to be great Trees, because the Leaves are best, when the Shoots are young. They root up the Trees therefore when they grow old, and plant their Grounds afresh. But the Tree which is in as great Esteem as any in *Persia*, is the *Senna*; the Body of this Tree is very large, and frequently forty or fifty Foot high, and stait as the Mast of a Ship, having no Branches but on the Head of it; the Bark is of a bright Grey, and the Wood serves them to make Doors, Rafters, and for other Uses in Building. The Trees that are most common in *Persia* are the Plane-tree, the Willow, the Fir, and the Cornel-tree; the Plane-tree the *Persians* imagine is a Preservative against the Plague, and other contagious Distempers, and observe, that the Plague has never raged in *Ispahan* since this Tree was planted in their Streets and Gardens. The Trees also which bear the Gall Nut is very common in many Parts of *Persia*, and there are Trees which yield Gum Mastich, and Frankincense; that which produces Frankincense very much resembles a Pear-tree, and abounds chiefly in *Carmania*.

There are likewise Trees which produce Manna of several Sorts: The best Manna has a yellowish Cast, a large coarse Grain, and comes from *Chorassan* or *Bactria*; there is another Sort called *Tamerisk*, because the Tree it drops from is so named, and is found in large Quantities in the Province of *Susiana*; and there is a third Sort gathered about *Ispahan*, which falls from a Tree much like the *Tamerisk*, but larger; the Leaves of this Tree drop liquid Manna in Summer-time, which the Natives take to be the Sweat of the Tree congealed upon the Leaf in the Morning; the Ground under it is perfectly fat and greasy with it, and this has as sweet a Taste as other Manna.

The Cotton-Tree is common all over *Persia*, and they have another little Tree, which yields a kind of filken Down, used for Quilting and Stuffing of Pillows; there is also a Plant, called *Hannab*, that bears a Seed which they beat to Powder, and colour their Hands and Feet, and sometimes rub over their Faces with it, apprehending it keeps their Skin smooth, and preserves their Complexion; they sometimes bruise the Leaves of it, which serves them for the same Purpose.

There are found in the Desarts of *Carmania*, two little Shrubs of a poisonous Quality, the first is called *Galbad Samour*, or the Flower that poisons the Wind; some People imagining that it is this occasions those killing Winds which blow in this Province in the hot Season; the other Shrub is called *Herzebre*, the Trunk whereof is about as big as a Man's Leg, and grows about six Foot high; its Leaves are almost round, and it bears a Flower like the Sweet-Briar. There are scarce any Trees to be found on the Mountains, or wild Fields in *Persia*; these are for the most Part destitute of all Manner of Verdure, while in their Cities, and the Villages for three or four Leagues round them, the Streets as well as Gardens are so well planted, that the Houses are hardly to be discerned at a Distance; when you have travelled some few Leagues, indeed you meet not either with House, Tree, or Shrub, for many Miles, but all looks like a barren Defart, notwithstanding which, great Part of this Soil, were it watered, would be as fruitful as the other, and actually was so some Ages since, when a more industrious Generation, than the present, possessed the Country.

From their Trees, I pass on to their Flowers, and of these there is a great Variety to be found in some Provinces. The South Part of *Persia* has much the fewest; excessive Heat being as destructive to them, as extreme Cold; but nothing can be more beautiful than the Fields of *Hyrcania*, where are whole Groves of

of Orange-trees, Jessamins, and all the Flowers we have in *Europe*. The East Part of this Country, which is called *Mazenderan*, is one continued Parterre from September to April; the whole Country at that Time is covered with Flowers, and this, though it be their Winter Season, is also the best Time for Fruits. In the other Months the Heat is so excessive, that the Natives find themselves under a Necessity of retiring to the Mountains.

In *Media* the Fields produce Tulips, Anemonies, and Ranunculus's; about *Ispahan*, and some other Towns, Jonquils grow wild. They have also Daffodils, Lillies, Violets, and Pinks in their Season, and some Flowers which last all the Year round; but they have the greatest Quantity of Lillies and Rose; they export abundance of Rose-water to other Countries; in the Spring, there is vast Plenty of yellow and red Gillyflowers, and another red Flower which resembles a Clove, of a beautiful Scarlet Colour, and every Sprig bears thirty of these Flowers, which form a fine Head as large as a Tennis Ball.

Their Roses are white, yellow, and red, and others white on one Side and yellow on the other; but notwithstanding all this great Variety of beautiful Flowers, their Gardens are not comparable to those of *Europe*. As Flowers are so common they are very little regarded; you see them intermix'd with Fruit-trees and Rose-bushes without any Order; but large Walks planted with Trees, Fountains, Canals, Cascades, and Pleasure Houses at proper Distances, are all that must be expected in their finest Gardens; nor do the *Persians* take any Manner of Pleasure in walking in them, any more than in the Fields; but set themselves down in some Alcove or Summer-house as soon as they come into them, totally negligent of that exquisite Variety that every Foreigner is charmed with.

8. *Persia* also affords great Plenty of physical Drugs, as *Cassia*, *Senna*, *Antimony*, *Nux Vomica*, *Gum Armoniac*, *Galbanum*, *Sal Armoniac*, and a Kind of *Rhubarb*, with which they purge their Cattle; but the best *Rhubarb* comes from *China*, or rather from *Eastern Tartary*, which lies to the Northward of *China*. The *Persian* Poppies are in great Esteem from the Quantity of Juice they yield, and the Strength of it; they grow four Foot high in some Places, and have white Leaves. They extract the Juice from them in June, when they are ripe; by making little Incisions in the Head of the Poppy, a thick Liquor distills from them, which is gathered very early in the Morning before Sun-rise. It is said to have such an Effect on the People, who are employed in this Work, that they look as if they had been buried and taken up again, and their Limbs tremble as if they had the Palsy. The Liquor which is thus drawn from the Poppies, in a little Time grows thick, and is made up into Pills. The *Persians* give it the Name of *Afioun*, and we, probably from thence, call it *Opium*. The *Persian* Bakers strew Poppy-seed on their Bread, which incline those that eat it to Sleep, and the eating it is not reckoned unwholesome after their Meals; the common People eat the Seed at any Time almost for Pleasure.

Saffron grows plentifully in *Persia*, and *Asa Fetida* is to be had every where almost, which is much admired by the Natives of *Persia* as well as *India*, and frequently eaten with their Food; that which to us is most offensive of all Scents, by them is esteemed a Perfume. *Asa fetida* is a Liquor which distills from the Plant called *Hiltot*; it thickens after it is drawn, and grows as hard as Gum; there is the white and black Kinds of it, of which the white is reckoned the best to eat. The Smell of this Drug is so very strong, that if any Goods be near it in a Ship, the Smell is communicated to them, let them be wrapped up ever so close, and it is almost impossible to clear them of it; nay, it affects the Colour, and therefore Sir John Chardin tells us, the Vessels used in transporting it are frequently broke up and burned, to prevent other Goods from being spoiled by being carried in them, from which no Package can save them.

The *Persian* Bezoar is esteemed preferable to that of *India*, which having already described, we shall not

dwell upon it here. It is sufficient to observe, that the Reasons it is not so much esteemed in *Europe* as it was formerly, are these; in the first place, it is frequently sophisticated, notwithstanding that several Methods are in Use for detecting these Frauds, of which I shall mention a few. The genuine Bezoar, at least that which comes from *Persia*, has a very fine Smell resembling that of Ambergrease, but not near so strong; if thrown into hot Water, and left there for three or four Hours, it loses Nothing either of its Colour or Weight; if prickt with a hot Iron, no Smoke arises; if rubbed upon a Leaf of *Dutch Vellum*, it leaves a yellow Impression; if broke or cut, it appears to be composed of several Coats unequally disposed, in the same Manner as appears in cutting an Onion. Another Reason why it has lost its Credit, is the Humour People have of embracing the contrary Extream to that of their Ancestors; heretofore Bezoar was sold very dear, and was held to have many and great Virtues, and now it is fashionable to affirm that it has little or no Virtue at all; which though it has driven it out of Use, has not much beat down its Price, because in the East, and even in other Parts of *Europe*, it is still in Esteem.

A third Reason is, our giving it in two small Doses, so that its Virtues are not discernable. A famous *Persian* Physician had a great Secret for curing Lunacy, which he sold to a *French* Gentleman for a large Sum of Money, and this Secret consisted in giving equal Quantities of Bezoar, Musk, and Camphire, as I found in a *French* Manuscript of Receipts, in which it is said, that very singular Cures were performed by it; but the Quantities of these Drugs in a Dose were not mention'd.

In the Province of *Chorasan* they frequently find human Bodies preserved in the Sand, the Flesh of which they sell under the Name of *Mummy*, for medicinal Uses; and there are also such Bodies found in a Cavern not far from the Borough of *Abin*, in the Province of *Farsistan*. It is however necessary to inform the Reader, that in the *Persian* and *Turkish* Languages, the Word *Moum*, from whence we have formed *Mummy*, signifies literally a soft clammy Substance, of the Consistency of Balsam, which explains sufficiently what is meant by mineral Mummy, which is a Kind of natural Balsam distilling thro' the Rock of a large Cavern in the Province of *Lar*, esteemed so precious, that the Shah keeps it entirely for his own Use, the Doors of this Cave being sealed by the Governor of *Lar*, who opens it only once a Year, to take out the Balm, the Quantity of which seldom exceeds ten Ounces. A Multitude of Virtues are ascribed to it, particularly in the Cure of Fractures, in which it is said to perform Wonders; but it may very well be doubted, whether any of this was ever brought into *Europe*.

9. We will now proceed to speak of the Animals that are found in *Persia*, and in Reference to these, the Camel, for a Beast of Burthen, much excels all the rest, whether we consider the Weight he carries, the Dispatch he makes, or the little Charge of keeping him. Of these Camels there are several Kinds; some have two Bunches upon their Backs, and others but one, and there is a third Sort, ingender'd between a Dromedary or Camel, with two Bunches, and a Female with one, which are esteemed much the best, and sold for twenty or thirty Pounds a-piece, for they are seldom tired, and will carry nine hundred or a thousand Weight. Those which travel between the *Persian* Gulph and *Ispahan* are of a much less Size, and do not carry above five or six hundred Weight; but these, notwithstanding, are almost as serviceable as the other, for they are much swifter, and will gallop like a Horse, whereas the others seldom go faster than a Foot Pace. These swift Camels are kept by the Shah and great Men, and serve to transport their Women from Place to Place, and carry their Baggage; they are usually adorned with embroidered Cloths, and silver Bells about their Necks; a String of six or seven of them are tied together when they travel, and governed by one Man; they use neither Bridles nor Halter to hold them, or Whips to drive them, but they are directed by the Driver's Voice, who sings or plays to them as they travel; good Usage

Usage only moves them, for they are naturally so obstinate, it is in vain to beat them if they tire.

When they are to take up their Burthen, the Driver touches their Knees, whereupon they lie down on their Bellies till they are loaded, groaning however, and giving Signs of Uneasiness, under a Sense of the Fatigue they are about to undergo; they let them graze by the Road-side, with their Burthens on their Backs, on Weeds and Thistles, and sometimes they feed them with Balls made up of Barley Meal and Chaff, into a Paste, with which they often mix the Cotton-Seed; but the Camel is the least Feeder of any Beast, considering his Bulk. It is very happy also that they can live without Water two or three Days together, there being scarce any to be met with in those Deserts the Caravans are forced to cross. They shed all their Hair every Spring, and are perfectly naked. Of the Camels Hair, abundance of fine Stuffs are made, as we shall shew in Speaking of Manufactures; these Creatures are very tame and tractable, except when the lustful Fit is upon them, which lasts thirty or forty Days, and then they are very unruly, which makes their Drivers increase their Burthens at that Time, to keep them under. When once the Male has cover'd the Female, he grows sluggish, and does not care for stirring out of the Stable: They go with young eleven Months, and some say twelve.

Oxen, Buffaloes, Asses and Mules, are also used indifferently for carrying of Passengers, or Burthens, and their Land being plowed by Buffaloes and Oxen, these Beasts are very seldom killed for Food, though some *Persian* Governors, in the South of *Persia*, have extorted considerable Sums out of the *Indian Banians*, who reside thereabouts, under Pretence they would order them to be butchered, if the *Banians* did not redeem their Lives by a considerable Present. The Asses of *Persia*, are much larger and swifter than ours, and will perform a Journey very well.

But the finest Beasts are their Horses, these are beautiful Creatures, and no where better manag'd than in *Persia*. They have fine Forehands, and are exactly well proportion'd, light and sprightly, but only fit for the Saddle, or or at least, not used for any other Purpose; they are never gelt, and wear their Tails at their full Length; but though they are lovely Creatures to look on, they are neither so swift as the *Arabian*, nor so hardy as the *Tartar* Horses, and the *Shah* therefore has always a Stable of the *Arabian* Breed. Horses are very dear in *Persia*, some of them being sold for two or three hundred Pounds, and seldom any that are good for less than Fifty. It is not so much the Scarcity of them, as the Selling such Numbers to *India* and *Turkey*, which enhances the Price.

They have Mules also that carry very well, and are valued, some of them at thirty or forty Pounds a-piece, and some Asses at not much less, after they have been taught to pace. The ordinary Food for Horses is Barley and chopt Straw; they have no Mangers in their Stables, but give their Horses their Corn in Bags. In the Spring they cut green Grass for their Horses, but never make any into Hay to be eaten dry; sometimes they feed their Horses with Balls made of Barley-Meal, as in *India*; instead of Litter their own Dung is dried, and beaten to Powder, and laid a Foot deep for them to lie on; and if any of it be wetted, it is dried in the Sun the next Day. Their Horses Hoofs are much sounder and harder than ours, and they are shod with thin Plates, as the Oxen are, on Account of their travelling over the stony Mountains. They daub their Horses Legs in Winter with a yellow Herb, called *Hannah*, and sometimes anoint their Bodies with it as high as their Breast, to keep out the Cold as it is said; but it seems to be rather by Way of Ornament, for in some Places it is done all the Year round.

The *Shah* has large Stables of Horses, dispersed throughout the Kingdom, almost in every City, for the Publick Service. A Horse is seldom denied to any Man that demands one, if he will keep him, but then such Persons are accountable to the Government for them, when they shall be called out into the Field; but they have the Liberty of riding them in the mean Time.

These Troopers Horses are sometimes quartered upon People, who would gladly be excused from the Trouble and Charge of keeping them, and if any Horse dies in their Hands, Oath must be made, that it did not die for Want of Corn, or looking after. Their Horses are subject to many Distempers, sometimes their Legs swell, and a Humour rises on the Breast, which proceeds from eating too much Barley; and in this Case, they clap a hot Iron to the Swelling, or lance it, and keep the Sore open, by running a Willow Twig through it, but a hot Iron applied to the Part is the most general Remedy for lame or distemper'd Horses.

Of Sheep and Goats there are great Plenty in *Persia*; the Natives seldom eat any other Meat, their Sheep are large, and remarkable for their fat Tails, which weigh eight or ten Pound, and some it is said are above twenty Pounds in Weight; they are remarkable also in some Parts of *Persia* for having more Horns than ours. Some have six or seven Horns standing strait out of their Forehead, so that when their Rams engage, there is usually a great deal of Blood spilled in the Battle. The *Persian* Goats are not only valuable for their Flesh, but the fine Wool they yield, of which great Quantities are annually exported, more especially from *Carmania*. Hogs there are scarce to be met with, for as the *Mahometans*, who are the governing Part of the Country, abhor this Animal, their Christian Subjects do not endeavour to encrease the Breed, unless towards *Georgia* and *Armenia*, where the Christians are numerous.

Wild Beasts there are not many, either in the Middle, or the Southern Part of *Persia*. Deer they have some, and Antelopes, which are much of the same Nature, except that they are spotted, and have finer Limbs. In *Gilan* and *Curdistan*, the woody Parts of the Country, wild Beasts abound, such as Lions, Tygers, Leopards, wild Hogs, Jackals, &c. And in *Media* and *Armenia*, there are Abundance of Deers, wild Goats, Hares and Rabbits, and there are some found on the Mountains almost all over the Country, but not many.

Insects they are not much troubled with in the Heart of *Persia*, which is very dry, unless it be with Swarms of Locusts, which visit them sometimes in such Numbers, that they look like a Cloud, and perfectly obscure the Sun, and wherever they light destroy the Fruits of the Earth; but there are certain Birds which generally visit the Country about the same Time, and eat up the Locusts, and so prevent the Ruin of the Husbandmen. That Part of the Country which lies upon the *Caspian* or *Hyrcanian* Sea, is full of Serpents, Toads, Scorpions, and other venomous Insects, which in Summer-time die, many of them for want of Water, and infect the Air, rendring that Part of the Country very unhealthy at that Season.

Scorpions particularly there are of an immoderate Size, and their Sting is mortal, if proper Remedies be not immediately applied, and at best a Person stung by one of them, is in such Torture, that he becomes raving mad for some Time. Musketoes or Gnats are very troublesome in the flat Country, near the *Caspian* Sea; and there is a white Fly no bigger than a Flea in *Persia*, which makes no Noise, but its Sting is like the Prick of a Pin. Here is also the Millepedes, almost like a Caterpillar, and whose Bite is as pernicious as the Sting of a Scorpion, the *Persians* call them *Hezar-pai*, or a thousand Feet.

10. There are the same Sorts of tame and wild Fowl in *Persia* as in *Europe*; as Geese, Hens, Ducks, Partridges, Snipes, &c.; but more of them in the North than in the South Part of the Country. Turkeys have been carried to *Ispahan*, but they do not thrive. The Breed of Pidgeons they take all imaginable Care to increase and propagate, on Account of their Dung, with which they raise their Melons. Their Dove-houses are five Times as large as ours, of a round Figure, and handsomely built of Brick; of these, it is said, there are not less than three thousand in the City of *Ispahan* only. The Dung is always sold for four Pence the Bisty, or twelve Pounds Weight, and the Government, it seems, lay

lay a small Tax upon it. Their Partridges are reckoned the largest and best tasted that are to be met with.

The Pellican, which the *Persians* call *Tacob*, or the Water-drawer, is as remarkable as any of their Fowls, for the Body of it is said to be as large as a Sheep, its Head at the same Time wondrous small, but a large Bill of sixteen or eighteen Inches long, as big as a Man's Arm, and under the Bill there is a large Bag, Travellers tell us, which will hold a Pail of Water; they build their Nests in the Desarts, where there is no Water, and consequently no Inhabitants for their Security, and frequently go two Days Journey for Water for their young ones; but then they bring enough in the Receptacle above-mentioned to last for some Time, if we may give entire Credit to these Accounts.

There is another extraordinary Bird, mentioned by Travellers, in the Province of *Chorassan*, which has such an Appetite towards the Water of a certain Spring in that Country, and such Sagacity in discovering it, that they will follow any Person that carries it in a Bottle, several Hundreds of Miles. As to Eagles, Hawks, Falcons, and other Birds of Prey, there is no Country where they have more, or where they are better instructed than in *Persia*. The Shah has eight hundred or a thousand of them, and there is no Man of any Figure without his Hawks and his Falconers; and their Hawks are taught not only to fly at Birds, but at Hares, Deer, and all Manner of wild Beasts, and by fixing themselves on the Head of the Animal, and beating him with their Wings, he is so terrified and distracted, that the Dogs and Huntsmen which follow have very little Difficulty in taking him; and the *Persians*, it is said, breed up the very Crows to fly at Game.

There are the same Kinds of Singing-birds in *Persia* as with us, such as the Linet, the Chaffinch, the Nightingale, the Lark, &c.; and some Birds there are which are taught to speak, but no Parrots or Parroquets on this Side *India*. However, there are several party-colour'd Birds to be seen in *Persia*, with a Plumage of blue, green, and yellow, beautifully mixed. Of Sparrows there are such Numbers, that they are very troublesome to the Husbandmen, who are forced to place their Servants in the Fields all Day long when the Harvest approaches, to keep them from their Corn.

In the Heart of *Persia* there are scarce any Fish to be met with, the few Rivulets they have hardly supplying the Country with Water for necessary Uses, and in the Summer time they are almost all dried up; even the River *Zenderhood*, to which the Government, at a prodigious Expence, have joined other Streams for the Supply of the City of *Ispahan*, is perfectly lost in the sandy Desarts about twenty Leagues from thence; and it may be doubted whether there be one Stream which rises in the Middle of the Kingdom that ever reaches the Sea in the Summer; tho' in the Spring, when the Snow melts on the Mountains, they make a considerable Figure. In the *Caspian* Sea and the *Persian* Gulph, there are great Plenty of Sea-fish of all Kinds almost, and the Rivers *Kur* and *Arras*, which fall into the *Caspian*, have Plenty of River-fish, but they lie at too great a Distance from *Ispahan* to supply that City; so that Fish is very rarely eaten there.

II. We are to speak next of the Metals and Minerals in this Country; and to proceed methodically, we ought to begin with those of Gold and Silver, if any were now wrought in *Persia*, but there are not; for, notwithstanding what old Writers relate of the rich Mines in *Bactriana*, and that almost all the *Persian* Authors agree that there are Mines of this Metal in *Chorassan*, yet from the Neighbourhood of the *Tartars* they have been long neglected; and it is the same with respect to the Silver Mines in other Places, tho' from the Accounts lately given by *Tavernier*, one would suspect that the *Persians* are but indifferently skilled in the Art of Mining, and that of refining of Metals; they have, however, good Mines of Iron, Steel, Copper, and Lead. The Iron and Steel Mines are in *Hircania*, *Media*, and the Provinces of *Erak* and *Chorassan*; their Steel is so full of Sulphur, that if the Filings are thrown into the Fire, they will give a Report like Gunpowder; it has a fine

Grain, but is as brittle as Glass, and the *Persian* Artificers, who do not understand how to give it a due Temper, cannot for that Reason make Wheels or Springs, or any minute Pieces of Workmanship. Their Copper Mines are most of them near *Seris*, in the Mountains of *Mazenderan*; they mix it with *Swedish* and *Japan* Copper, and the Proportion is one Part foreign to twenty of their own Metal.

The Lead Mines are, most of them, near the City of *Yezd*, and in these are found the greatest Quantity of Silver. Sulphur and Saltpetre are dug in the Mountain *Damaverd*, which divides *Hircania* from the Province of *Erak*. Antimony is found in *Carmania*, but it is a bastard Sort. Emery is had near *Niris*; Vitriol and Mercury they have none, and their Tin is imported from abroad. There are two Kinds of Salt in *Persia*, the one upon the Surface of the Ground, the other dug out of the Rock: There are Plains of ten or twelve Leagues over quite covered with Salt, as others are with Sulphur and Alom. The Salt is so hard in some Parts of *Carmania*, that the poor People make use of it instead of Stone to build their Cottages.

Their Marble is either white, black, or red, and some veined with white and red; it is dug near *Hamadani*, and in *Chusistan* some of it will break into large Flakes or Tables like Slate, but the best comes from *Tauris*, which is almost as transparent as Crystal. This Kind is white mixed with green. In the Country about *Tauris* also is found the mineral Azure, but this is not so good as that which comes from *Tartary*, losing its Colour by Degrees. In the Provinces of *Fars* and *Shirvan* there is found abundance of Bole Armoniack, and so rich and fat a Marl, that the Country People use it instead of Soap. There are some Mines of Isinglas in the same Country. In several Parts of *Persia* we meet with *Naptha*, both white and black; it is used in Painting and Varnish, and sometimes in Physick, and there is an Oil extracted from it which is applied to several Uses. The most famous Springs of *Naptha* are in the Neighbourhood of the Town of *Baku*, which furnish vast Quantities; and there are also upwards of 30 Springs about *Shamaschy*, both in the Province of *Shirvan*. The *Persians* use it as Oil for their Lamps, and in making Fireworks, of which they are extremely fond, and in which they are great Proficients.

But the most valuable Product of the *Persian* Mines is the *Turquoise*, concerning which there have been so many Mistakes made, that notwithstanding we find ourselves pressed for Room, we cannot avoid treating somewhat largely upon this Subject. In the first Place, it is asserted, that it derives its Name from *Turkey*, which is true enough when rightly understood, but absolutely false according to the common Acceptation; for there neither is, or never was, any of these Stones found in the Dominions of the *Turks*, but in the Country of *Turcomania*, which was indeed the Seat of that Nation, tho' for any Thing I know, this has never been observed by the Writers upon this Subject. These Stones are distinguished into *Oriental* and *Occidental*. The *Oriental* Turquoises come from *Persia*, and from *Persia* only; and these are distinguished into those of the old, and those of the new Rock; the former are taken out of the Mines of *Nichapour* and *Carasson*, and, as Sir *John Chardin* justly observes, differ greatly from other Stones that bear the same Name. They are hard, firm, of a beautiful Blue, inclining a little to a Green, take a fine Polish, and are never observed to lose their Colour. The Shah endeavours to preserve these entirely for himself; and though after chusing the largest and the finest, he permits the smaller Turquoises to be sold, yet foreign Merchants are not contented with that Manner of Dealing, but have struck out a better. The Officers belonging to the Mines, and their Servants, frequently deceive the Shah, and, instead of sending him the finest and largest, vend those for their own Profit, but always to *Europeans*, that they may be less liable to Discovery; and by this Means very fine Turquoises find their Way into these Parts of the World. The new Rock is at five Miles distant from the old, and the Stones are softer, less firm, veiny, of a green, inclining

inclining to blue, and are apt in Process of Time, to lose their Colour. The occidental Turquoises are found in *Bohemia*, *France*, and other Countries, but they are not valued, and have generally the same Faults with those taken from the new Rock.

Dr. *Cromwell Mortimer*, in the last Transactions of the Royal Society, for the Months of *January* and *February*, 1747. has given us a much better Account of these Stones than I have ever met with before, and distinguishes them very justly into true and false Turquoises; the former he says, is a true mineral Substance, impregnated with Copper Ore, which is highly probable, for there is no Country in the World that has more Copper Mines than *Persia*; the latter is an Ivory or bony Substance, tinged also with some metallick Juice, and probably that of Copper, which is a Discovery worthy of Notice, as it frees this Subject from Abundance of Difficulties, under which it has hitherto laboured.

12. After having taken a View of the Country, and of its Produce, we will speak next of the Habitations erected upon it, and this will naturally lead us to the principal Cities that yet remain to be described; but without taking a previous View of what with them passes for magnificent Buildings, such Descriptions would be in a Manner unintelligible. The Houses of Persons of Quality here, are generally built in the Middle of a fine Garden, and make little or no Appearance to the Street, for there you see nothing but a dead Wall, with a great Gate in the middle of the Wall, and perhaps a Skreen or Wall within the Gate, to prevent People looking in; so fond are they of Privacy and Retirement. Another Thing that the *Persians* differ from us in, is, that they seldom have more than one Floor, which is laid out in this Manner; in the Front of the House stands a little Piazza or Cloyster open before, where they sit and transact their ordinary Affairs; beyond this is a large Hall, eighteen or twenty Foot high, which is used at great Entertainments, or on any solemn Occasions: On the farther Side of the House is another Piazza with a Basen or Fountain of Water before it, beyond which runs a Walk of fine Trees, as there does also from the Street to the House: At each Corner of the Hall, is a Parlour or Lodging-Room (for it serves for both Purposes;) between those Parlours on the Sides, there are Doors out of an Hall into an open square Space, as large as the Rooms at the Corners; there are also several Doors out of the Hall into the Piazza, before and behind the House; so that in the hot Season, they can set open nine or ten Doors at once in the great Hall, and if there be any Air stirring, they will have the Benefit of it.

In some Palaces there is a handsome Basen, and a Fountain playing in the Middle of the Hall, which contributes still more to the Coolness of the Place. The Walls of their Houses are built sometimes of burnt Bricks, but more commonly of Bricks dried in the Sun. The Walls are of considerable Thickness, and the Roof of the great Hall is arched, and five or six Foot higher than the other Rooms about it. The Roofs of the Buildings on every Side of the Hall are flat, and there is a Pair of Stairs up to the Top, where the *Persians* walk in the Cool of the Day, and sometimes carry up a Mattress, and lie there all Night, there being Ballisters all round the Top of the Building. As for the Kitchens and other Offices, they are at a Distance on the right or left, and it is observable, that all their Rooms, except the Hall, stand separate, and there is no Passage out of one into another, but only from the Hall; Chimneys there are some, but usually, instead of a Chimney, there is a round Hole, about four or five Foot broad, and a Foot and a half deep in the Middle of the Room, in which a Charcoal Fire is made, and the Place covered with a thick Board or Table, about a Foot high, so close, that no Smoke can get out, and over that Table is thrown a large Carpet, under which they put their Legs in cold Weather, and sit round, there being a Passage for the Smoke by Pipes laid under the Floor. The Doors of their Houses are narrow, and seldom turn upon Hinges as ours do, but there is a round Piece left at the Top and Bottom of the Door which are

let into the Frame above and below, on which they turn, and the very Locks and Bolts are frequently made of Wood.

As to their Furniture, it consists only in Carpets spread on the Floor, with Cushions and Pillows to lean on, and at Night, there is a Mattress brought to sleep on, and a Quilt or two to cover them, but very seldom any Sheets are used. As to their Servants, they lie about in any Passage upon Mats, and take up very little Room. The Floors of the Rooms are either paved or made of a hard Cement, on which they lay a coarse Cloth, and over that a Carpet: The Sides of some of their Rooms are lined with fine Tiles about a Yard high, and the rest of them well painted, or hung with Pictures.

13. *Ispahan*, or as it is pronounced *Spabawn*, is situated in thirty two Degrees, forty Minutes, North Latitude, and in the fiftieth Degree of Longitude, reckoning from the Meridian of *London*. It stands in a fine Plain almost surrounded with Mountains, which lie about two or three Leagues from it, and the Form is pretty near oval. The River *Zenderhood* runs by it at about a Mile Distance, but there are several Channels and Pipes above the Town, which convey the Water from it into Canals and Basens, for the Service of the Court and City. The Town is without Walls, and about ten or twelve Miles in Circumference. Those who extend it ten Leagues take in the Town of *Julpha*, and several others. There were formerly twelve Gates to the Town, but four of them are now closed up, the others are always open; as for the Walls which some Travellers mention, it is probable there was a Mud-Wall formerly, but there is no Part of the Wall visible at present. There is an old Castle, it is true, without Artillery, which runs to Ruin, but is no more tenable than the Town.

The Streets of *Ispahan* are for the most Part narrow and crooked, and either exceeding Dirty or Dusty, for scarce any of them are paved, and though there are no Coaches or Carts, yet all People of Fashion riding through them with great Trains of Servants, renders the Passage not very pleasant. There are however some very fine Squares in the Town, particularly the royal Square or *Meydan*, into which there opens two of the Palace Gates. On the Sides of this Square, which is one third of a Mile in Length, and more than half as much in Breadth, are Buildings with Shops on both Sides, where every particular Trade has a Quarter assigned, and there is a second Story where the Mechanics have their Working-Shops. There seems to be little Difference between these Exchanges and ours, but that those of *Ispahan* have no Windows but great Openings at proper Distances to let in the Light, and People ride through them as they do along the Streets.

In the Middle of the Square there is a Market for Horses and Cattle, and all Manner of Goods and Provisions are exposed to Sale, though the great *Shah Abbas*, who built the Square, designed it for manly Exercises, and particularly those of Horsemanship, and handling the Bow and Lance, at which no People are more dextrous than the *Persians*. On that Side of the Square next the Palace, there is a fine Row of Trees planted, and a handsome Basen of Water, and some great Brass Guns, which were taken from the *Portuguese* at *Ormuz*, serve to make a Show.

There stands a great Mosque at the South End of the Square, and another Mosque on the East Side over against the great Gate of the Palace; several Streets in *Ispahan* are covered and arched over, which makes them pretty dark, and this seems to be peculiar to the *Persian* Towns. Another Thing they seem to be particular in is, that their Houses and Shops are never in the same Places, and it is a common Thing for a Tradesman to go half a Mile in a Morning to the Bazar, or Market-place, where his Shop is, and in the Night-time, they lock up their valuable Goods in Chests and Counters, and the rest they leave packed up, sometimes in the open Square, and it is very rare any Thing is lost; so careful are the Watch appointed to guard their Market-Places, or so very little given to Thieving are the People in this Part of the World, and no Doubt the speedy and exemplary Punishments inflicted upon Pilferers, is one great Means to deter them from it.

As

As to Foreign Merchants, they lodge their Goods in the publick *Caravanfera's* about the City, which serve them also instead of Inns for Lodging and Diet; but there is this Difference between an Inn and *Caravanfera*, that every Person finds his own Bedding and Cookery in the *Caravanfera*, whereas in our Inns we have not that Trouble. There are two Things, however, that render a *Caravanfera* preferable to an Inn; one is, that a Person is not subject to the Extortions of an Inn-keeper, but buys his Provisions at the best Hand; and the other, that let the Merchant take up ever so many Rooms, he shall not be disturbed in them, and pays but a Trifle for his Warehouse or Lodgings; and upon the Road he pays Nothing. There are not, it seems, less than fifteen hundred of these publick *Caravanfera's* in *Ispahan*, which have been erected by charitable People for the Use of Strangers; most of them are built after one Model, and differ only in the Dimensions. There is a handsome Portal at the Entrance, on each Side of which are Shops, from whence you enter into a Square, about which there is a Cloister or Piazza, and within are Lodging-Rooms and Warehouses for Goods: There is also Stabling and Conveniences for Horses and other Beasts on the outside, or they may be brought into the Square and fastened there, as is frequently done upon the Road more especially where there is Danger of Robbers.

As to Taverns, there are none at *Ispahan*, their Religion prohibiting Wine. However, some of the *Persians* will drink pretty plentifully in private. There are very handsome Coffee-houses in the principal Parts of the Town, where People meet and talk Politicks, though they have no printed Papers in them, and there we meet with some Amusements peculiar to the Country, as the Harangues of their Poets, Historians, and Priests, who hold forth and get a Crowd about them; and it seems they expect a small Present from their Audience for their Amusements and Instructions.

14. The Buildings of the Palace, with the Gardens belonging to it, take up above a League in Compass. The two Gates which come up to the Royal *Meydan*, or Square, are, one of them called *Alicapi*, and the other *Doulet Cuna*; over one of them is a Gallery, where the Shah used to sit and see martial Exercises performed on Horseback. No Part of the Palace where the Court resides comes up to the Royal Square; but having entered the principal Gate, there is a Hall or Court on the Left-hand, where the Vizier and other Judges administer Justice on certain Days; and on the Right are Rooms where Offenders are allowed to take Sanctuary. From hence to the Hall, where the Shah usually gives Audience, is a handsome Walk: It is a long Room well painted and gilded, and supported by forty Pillars; it is divided into three Parts, one a Step higher than the other, on which the great Officers stand according to their Rank. As to hereditary Nobility, there is no such Thing in *Persia*. On the third Ascent is the Royal Throne, raised about a Foot and a half above the Floor, and about eight Feet square, on which is spread a rich Carpet; here the Shah sits on it cross-legged up on solemn Occasions, having a Brocade Cushion under him, and another at his Back.

As to the rest of the Apartments of the Palace, and particularly the *Haram*, or Womens Apartment, neither Foreigners or Natives can give an exact Description of them, none being permitted to enter but the Eunuchs; but in general we are told, that they consist in separate Pleasure-houses dispers'd about the Gardens, much of the same Form with the Houses first described, and that their great Beauty consists in the fine Walks, Fountains and Cascades about them. Beyond the Gardens the Shah has a large Park walled in, where the Ladies hunt and take their Pleasure with the Prince. In this City are above one hundred and fifty Mosques or Temples, covered with Domes or Cupola's, which appearing through the Trees that are planted almost all over the Town, in the Streets and Gardens, afford a noble Prospect; but the common Buildings are so low, that they are hardly discerned by one who takes a View of the Town on the Outside.

All Christians being prohibited to enter their Mosques, or even to come within their Courts, under severe Penalties, it is not easy to meet with a particular Description of them. There is a Gate which leads to the great Mosque covered with silver Plates. Through this Town you proceed to a Court with a Piazza or Cloyster on each Side, where the Priests lodge who belong to the Mosque. Opposite to the great Gate are three large Doors which open into it. The five Isles the Mosque is composed of are beautified with Gold and Azure. In the Middle is the Cupola, supported by four great square Pillars; the Isles on the Sides are lower than that in the Middle, and born upon thick Columns of Free-stone; two great Windows towards the Top of the Middle Isle give Light to the whole Mosque; on the Left-hand towards the Middle stands a Kind of Pulpit, with stone Steps to go up to it; the Bricks and Tiles on the Outside of the Building are painted with various Colours, after the Manner of *Persia*, and the Floor of the Mosque is covered with Carpets, all People putting off their Shoes as they enter it; there are no Seats or Pews as in the Christian Temples, or any Kind of Imagery or Pictures. The Outside is Stone, and the Walls lined fifteen Foot high with white polished Marble; and in the Middle of the Square before the Mosque is a large Basin, where they wash themselves before they enter the Temple. The Mosques have, most of them, Cupola's, with Steeples or Towers, whither the *Molla's* go up to summon the People to their Devotions, according to the *Mahometan* Mode, making no Use of Bells.

15. The numerous Hummums or Bagnio's in this City are another Subject of Travellers Admiration; some of these are square Buildings, but most of them globular. The Stone of which they are built is usually white and well polished; the Tops are covered with Tiles painted blue; the Insides are divided into many Cells or Chambers, some for Pleasure, and others for Sweating, and the Floors are laid with black and white Marble. The *Persians* bathe almost every Day, looking upon it to be extremely conducive to Health, an effectual Remedy for Cold, or Aches, and many other Distempers. But what is admired as much by Foreigners as any Thing about *Ispahan*, is the *Charbag*, being a Walk above an hundred Yards wide, and extending a Mile in Length, from the City to the River *Zenderhood*; on each Side are planted double Rows of Trees, and in the Middle runs a Canal, not continued upon a Level, but at every Furlong's Distance the Water falls into a large Basin and forms a Cascade, and the Sides both of the Canal and Basins are lined with hewn Stone, broad enough for several Men to walk a-breast upon them. On each Side of this Walk are the Royal Gardens, and those of the great Men, with Pleasure Houses at small Distances, and all together form as agreeable a Prospect as can be imagined.

At the End of this Walk is a Bridge over the River *Zenderhood*, which leads to the Town of *Fulpha*; there are also two other Bridges, one on the Right, and the other to the Left, by which the neighbouring Villages have a Communication with the City, and which most of our Travellers are pleased to call its Suburbs, though they are distant a Mile from *Ispahan*, and on the other Side the River. These Bridges are taken Notice of for the Oddness of the Architecture, for it seems on each Side, both above and below, are arched Passages, thro' which People ride and walk from one End of the Bridge to the other, as in the covered Streets of the City; and at little Distances there are Openings to admit the Light. The Arches of these Bridges are not very high, there being no Vessels to pass under them, for this River is not navigable any more than the rest of the *Persian* Streams. It is true, in the Spring, on the melting of the Snows in the Mountains, it makes a pretty good Appearance, but at the latter End of the Summer the Channel is exceeding narrow and shallow, insomuch that there is not Water enough for the Gardens which belong to the City; to supply the Want whereof they have abundance of Wells about *Ispahan*, of very good Water for all Domestick Uses.

16. The Town, or rather the Borough of *Julpha*, stands on the South-side of the River *Zenderbood*; and though there are many who look upon it as a Suburb of *Ispahan*, yet it certainly deserves to be considered by itself, as being a very large and a very considerable Town, the Buildings of which are more regular, and to the full as magnificent as those of *Ispahan*. It is generally reckoned two Miles in Length, and about a Mile in Breadth, and is beyond Comparison, taking all Circumstances together, the finest Place in *Persia*; for, with respect to Houses, Trade, Manufactures, and Industry, there is nothing comes near it; and as to beautiful Walks of Trees, cooling Shades, delightful Fountains, pleasant Gardens, and magnificent Summer-houses, they are every where to be met with. The principal Inhabitants are the *Armenians*, and besides these, there are *Georgians*, *Circassians*, *Mingrelians*, and other Christians, but no *Mahometans*, who dwell in it. The Foundation of this Place, and the Rise of the *Armenians*, who are now as considerable Merchants as any in the World, are Events that deserve our Notice.

It was the famous Shah *Abbas* who first took Notice of the Candour, Affability, Diligence, Penetration, and Integrity of the *Armenians*, in the Management of their little Concerns in their native Country, where they were liable to the Incursions of the *Persians* and the *Turks*. He was not only an ambitious and powerful, but a very wise and prudent Prince; he was desirous of introducing Trade into his Dominions, where, till his Reign, it was hardly known; and no less desirous of inspiring his Subjects with the same Views, who were little acquainted therewith. In order to accomplish these great and laudable Designs, he thought it proper to establish a Staple Commodity, by Way of Foundation, and for that Purpose, fixed upon Silk. He then transported twenty or thirty *Armenians* into the Province of *Gilan*, where they acquitted themselves so well, that in a very short Space of Time vast Quantities of Silk were made there. Encouraged by this happy Beginning, he demolished the Town of Old *Julpha* in *Armenia*, as has been shewn in the former Section, and transported the Inhabitants into the Neighbourhood of *Ispahan*, where by his Royal Munificence, and under his powerful Protection, they built the Place of which we are now speaking, and by his Direction undertook to distribute all the Silk that was not wrought up by *Persian* Manufacturers, through *Asia* and *Europe*, a reasonable Price being first fixed, which at their Return they were obliged to pay, all the Profit being left to themselves; when it was necessary, the Shah advanced them Money for carrying on their Commerce, but by Degrees, and as they grew wealthy, the Government no longer took any Share in their Trade.

In this Manner, from the right Notions of one Man, and from his just Views for the Benefit of his Subjects, arose all the Trade of the *Armenians*, who are now become a Nation of Merchants, and carry on the most extensive Dealings of any People in the World; for besides their Establishments here, and in all the great Cities of *Persia*, they spread over the whole East, carry on a prodigious Trade in *Russia*, and have Factors of their own Nation in most of the great Trading Cities in *Europe*. In short they are become as noted in this respect as the *Jews*; but what redounds eternally to their Reputation, their Application to Trade, and their Dealings as Brokers, has not in the least lessened their Character, for Candour or Probity; they are diligent, affable and discreet, but content with a moderate Profit, serve those that employ them faithfully, are grateful to their Benefactors, love each other as Brethren, and are extremely useful to all the Countries in which they are settled. This Digression in Favour of such a Sort of Men, and in order to explain the Prudence and publick Spirit of *Shah Abbas* their Patron, and such of his Successors as chose to tread in his Steps, we thought might be agreeable to the Reader, though it carried us a little out of our Road, to which we shall now return, in order to continue the Description, we have promised of the principal Cities in *Persia*, before those Confusions began that have produced such fatal Alterations.

The City of *Schiras* or *Sheraz*, as we pronounce it, lies about two hundred Miles to the Southward of *Ispahan*, in twenty nine Degrees, fifty Minutes of North-Latitude, and is usually reckoned the second City of the Kingdom. It is the Capital of the Province of *Fars*, or the ancient *Persia*; some will have the Name derived from *Cyrus* the Great, there being a Tradition that he was buried there; others say it is derived from *Sherab*, which in the *Persian* Tongue, signifies a Grape, because that Fruit abounds in this Place; and others from the Word *Sheer*, which signifies Milk; but as it is not very material from whence the Name is derived, so I believe it is impossible to determine at this Day. The Town is seated in a pleasant fertile Valley, about twenty Miles in Length, and six in Breadth, and has a Rivulet running through it, which in the Spring has the Appearance of a large River, and sometimes encreases to such a Torrent as to bear down the Houses in its Way, but in the Summer is almost dry. There are no Walls about the Place, nor does it contain above four thousand Houses at present: The Compass of it is reckon'd to be about seven Miles, but then it is to be consider'd that much the greatest Part of this Space is Garden.

The publick Buildings taken Notice of, are the Vice-roy's Palace, the Mosques, Bagnio's, the vaulted Streets and Caravanferas's, which being of the same Model as those of *Ispahan*, do not need a particular Description here; only it is observable, that they let most of their Buildings run to Ruin, as in other Towns of *Persia*; every Generation chusing to build new Houses, rather than use those of their Ancestors. It is remarked also, that there is no Place where the *Mahometan* Superstition prevails more than here, there being a Mosque or Temple to every twenty Houses almost, their Domes covered with blue varnished Tiles, make a pretty Appearance among the Trees; here is also a College where the liberal Arts are studied, of which the Fame is great for breeding many Persons of renown'd Learning.

The Streets of *Sheraz* are, for the most part, narrow and dusty, but there are some broad ones with Canals and Basons, faced with Stone: But what *Sheraz* is most remarkable for, is, the fine Gardens and Vineyards about it. The Cypress-Trees, of which their Walks are chiefly composed, are the tallest and largest that are any where to be found, and grow in a pyramidal Form; intermix'd with these are several broad spreading Trees, and all Manner of Fruits, as, Pomegranates, Oranges, Lemons, Cherries, Pears, Apricots, Dates, &c. None of these are planted against Walls as with us, but stand in the Allies, and sometimes irregularly, as in a Wilderness. They have also Abundance of sweet Flowers of various Colours, but not planted in that regular Order as in the Gardens of *Europe*. Their Vineyards and Wines are preferable to any in *Persia*, and the Canals, Cascades, Fountains, and Pleasure-Houses in their Gardens, are not at all inferior to those of *Ispahan*. The Shah's Garden here is no less than two thousand Paces square, and surrounded with a Wall fourteen Foot high, but of late Years, the Gardens, as well as the Buildings of *Sheraz*, have been pretty much neglected.

18. Thirty Miles to the North-East of *Sheraz* are found the noblest Ruins of an ancient Palace or Temple, that are now to be seen on the Face of the Earth; even *Rome* itself, as it is said, has nothing comparable to these venerable Remains of Antiquity; the Place at this Day is called *Chilmaner*, or forty Pillars. Mr. *Herbert* says, it was built upon a Mountain of dark coloured Marble, and the Steps hew'd out of the solid Rock; but others who have viewed it more narrowly since, observe, that the Steps are composed of large Stones, fifteen or sixteen Foot in Length, and of such a Thickness, that six or seven Steps are cut out of one Stone, the whole being so artificially joined, that they appear to be but one Piece, which might easily occasion Mr. *Herbert* to mistake. It is seated at the North-east End of that spacious Plain where *Persopolis* once stood, and generally held to be part of the Palace of *Darius*, who was conquered by *Alexander the Great*. The Front of this Palace stood towards the West, and was about five hundred Paces in Length, the whole taking up near threescore

threescore Acres of Ground. The Ascent to it is by ninety five Steps, thirty Feet in Length, and twenty Inches broad, but not more than three Inches deep, so that a Horse may easily go up or down them. The Stair-Case divides as you ascend, one Branch winding to the right, and the other to the left; each having a Wall on one Side, and a Marble Ballustrade on the other; afterwards both Branches turn again, and end at a large square Landing-place, from whence you go into a Portico of white Marble, twenty Foot wide. On it are carved in *Bass-relievo*, two Beasts as big as Elephants, but their Bodies are like Horses, and their Feet and Tails like Oxen.

Ten Feet farther stand two fluted Columns of whitish Stone, about sixty Feet high, besides their Capitals and Bases, and as thick as three Men can fathom; a little farther stand two other Pilasters, carved like the first, only that the Beasts on the latter have Wings and Men's Heads. Beyond this Portal or Hall is such another double Stair-Case, leading to the upper Rooms, twenty five Feet broad, but incomparably more beautiful than the former, for on its Walls are carved in Bass Relief, a kind of Triumph, consisting of a great Train of People, in distinct Companies, carrying some Banners, and others Offerings, and after all comes a Chariot drawn by several Horses, with a little Altar upon it, from whence the Flames of Fire seem to ascend. On the other Side are carved wild Beasts fighting, and among others, a Lion and a Bull are cut with great Exactness, and so hard is the Stone, that to this Day the most curious Part of the Workmanship is preserved. On the Top of the second Stair-case is a square Place, which has been surrounded with Columns, whereof seventeen only are now standing, but there are a hundred Pedestals; those that are left are of red and white Marble fluted, some of them sixty, and others seventy Foot high, and twelve of them near three Fathom round. These, some Antiquaries imagine, supported the Temple of the Sun.

On the same Floor near those Columns is a Place fifty Foot square, enclosed with Walls six or seven Foot thick, of a much finer Marble than any that hath been yet mentioned, and so wonderfully carved, that it would take up several Days to view all the Figures; which Way soever a Man turns himself in this second Floor, there appear Figures cut in Bass and half Relieve. Here you see Men fighting with Lions, and in another Place, a Man holding a Unicorn by the Horn; in a third you see the Figures of Giants, and in a fourth, a Prince giving Audience to his People or Ambassadors, and numberless other Scenes. Here are also abundance of Inscriptions, in lasting Characters, which have been transcribed, and brought into *Europe*, but none of them understood at this Day by the learned, any more than they are by the People of the Country: This glorious Palace or Temple, with the whole City of *Persopolis*, the noblest and wealthiest then in the World, was burnt to the Ground by *Alexander the Great*, about the Year of the World, 3724, at the Persuasion of *Lais* the *Athenian* Harlot, as is said in Revenge for the Towns the *Persian* Emperors had destroyed in *Greece*.

19. In the former Section, and in this, almost all the great Cities have been described, as they stood in Time past, and as they are represented to us by such as had seen them; yet these Accounts bear but very little Relation to those Places at this Day, for in the Course of the Civil Wars and Confusions, with which this Empire has been overwhelmed, there is hardly any one of these Cities that has escaped. *Tauris* has been plundered over and over, *Schiras* burnt to the Ground, and even *Spahawn* has suffered not a little. The Port of *Gambron*, or *Bander Abassi*, had been always considered since the Time of *Shah Abbas*, as one of the richest Jewels of the *Persian* Diadem; and notwithstanding the Badness of the Air, and some Inconveniences that attended the Port, it was always a Place of great Trade, and might have been a Place of much greater Trade, if the succeeding Monarchs of *Persia* had been Princes of the like Spirit, and had conceived as just Notions of Commerce as he did.

VOL. II. N^o 130.

By their Fault it was, that the greatest Part of the *Persian* Trade came to be carried on by Land, through *Turkey*, which was neither agreeable to the Interests of the *Persians*, nor requisite for transporting their Commodities to *Europe*, for which other Means might have been employed. But when *Shah Nadir* had assumed the Empire, and by his amazing Successes had acquired so great a Power, that he thought himself in no kind of Danger from his Neighbours, he began to entertain Notions of Commerce, which, like all his other Notions, were of a Stamp peculiar to himself, and which do not seem, from any of the Accounts that we have met with, to have been at all understood in *Europe*. He saw plainly, that the *Turks* were prodigiously enriched by the carrying on of the *Persian* Trade for Silk through their Country, and this he was resolved to prevent at any Rate. It was with this View, that he formed a Project, which we have more than once mentioned, of forcing a Passage to the *Black-Sea*, and thereby opening a direct Trade with *Europe*, which, with all his Power, he could never effect. He then turned his Thoughts towards the *Caspian*, and having recovered the Province of *Gilan* from the *Russians*, and provided effectually against any Impressions they could make upon his Territories by Land, he resolved to carry on the Trade of *Persia* that Way, by the Assistance of the *Armenians*, and to restore the Credit of that Nation, which had been very much sunk in *Persia*, by the vast Losses that had been sustained by their Establishment at *Julpha*, which, in the Course of the Civil Wars, has been almost totally ruined.

But besides these Schemes, he had another, the Grounds of which it would take up too much Room to explain, and therefore I shall content myself with barely saying, that from certain Motives, that appeared to him reasonable, he determin'd to remove the Capital of *Persia*, and instead of fixing, as his Predecessors had done, the Imperial Residence at *Ispahan*, he resolved to transfer it Northward, and so place the Seat of his Empire in the Province of *Chorassan*, to which perhaps he might in some Measure be determined by his Fondness for his native Country. He fixed there upon the Town of *Mesched*, which had been formerly the Capital of the Province. It is to be observed, that the Word *Metschid*, signifies both in the *Persian* and *Turkish* Languages, a House or Temple consecrated to the Service of God, and it is from thence that we have framed our Word *Mosque*. The Name of this City therefore implies a great Mosque, and it was so called from one of the finest in that Part of the World, erected over the Tomb of the Iman *Riza*, a great Saint, which rendred it a Place frequented by Pilgrims, who out of Charity erected there several publick Structures of great Magnificence. It was besides famous for its Manufactures of all Sorts, such as Gold and Silver Brocades, Tapestry, rich Silks; and woollen Stuff, as beautiful and as dear as Silks, there was besides a Manufacture of earthen Ware, which was looked upon as the best in *Asia*, on this Side China; so that an Age ago this City for Mosques, publick Baths, Caravansera's, Bazars, and other publick Structures, was not in the least inferior to any City in *Persia*; but the *Usbeck Tartars* had so totally destroyed it, that it made but a very indifferent Figure when the *Shah Nadir* made Choice of it for the Seat of his Empire.

The City of *Mesched* is situated in the Latitude of thirty five Degrees twenty Minutes North, upon a small Stream that falls into the River *Kurgan*, which separates the Province of *Chorasan*, from *Astarabat*; and it may be very truly affirmed, that a happier Situation there is not in the World. The Air is extremely mild and temperate, the Soil about it wonderfully fruitful, and while it continues the Capital of the Empire, there is no doubt that the Tartars will be kept at a sufficient Distance. While *Shah Nadir* was employed in his Expedition against the Mogul, his eldest Son *Riza Kuli Mirza* resided there with the Title and Authority of *Shah* of *Persia*; by his Care the City was rebuilt and restored to its ancient Lustre, and such Privileges granted to the Inhabitants, as not only came up to, but exceed-

ed those that former *Shah's* had granted to the People of *Ispahan*. This young Prince was not contented with barely attending to the Civil Government of the Empire, he was desirous of displaying also his Military Capacity, which induced him to attack the Khan of *Balkh*, the Sovereign of the Southern Part of *Great Bucharica*; which Country, together with its Capital, he reduced, and thereby gained not only an Accession of Territory, but one of the greatest and best Cities in those Parts, *Balkh* having been, for several Ages, the Center of the Commerce carried on by Land to and from the *Indies*.

By this Establishment, and these Conquests, the Face of Affairs in *Persia* is absolutely changed, and this is a Thing that has not hitherto been sufficiently considered. It is possible, and indeed it is probable, that the Southern Provinces of the *Persian* Empire will suffer extremely by this Alteration; and it is not altogether unlikely, that if a civil War arises from the Death of the late Shah, a new Principality may be erected in the Southern Parts, of which *Spahawn*, or some other great City, may become the Capital; but still *Mesched* will, in all Probability, remain the Seat of the *Persian* Empire, and the Monarchs who govern there will extend their Conquests Northwards, through Countries formerly indeed dependent upon the *Persians*, but which have been for many Ages in the Hands of the *Tartars*; and if this should be the Case, we must consider ourselves extremely happy in having set on Foot a Trade through *Russia* into *Persia* by the *Caspian* Sea, by which the most lucrative Part of the Commerce of that Empire will fall into our Hands, and may be justly esteemed the Fruits of our great Naval Power, and the Effects of sending our Squadrons into the *Baltick*, which gave the Court of *Petersbourg* such an Impression of our Power to assist or distress them, as it is our Interest to take Care that Time shall never efface.

20. We promised to say somewhat of the ancient and present State of the Country and People of *Persia*, considered in a comparative Light, and we will endeavour to execute this as succinctly as possible. The learned Dr. *Hyde* wrote an admirable Treatise in *Latin*, of the Religion of the ancient *Persians*, a Work equally curious and useful, and which, notwithstanding, was so ill received by the Publick, that the Doctor boiled his Tea-kettle with the greatest Part of the Impression, which has made it so scarce, that from its natural Price of Ten Shillings, or less, it is now sold for two Guineas, and even at that Price will not be esteemed dear by such as can judge of its real Value. It is from this learned Book that we are informed of what we should otherwise never have known, that the ancient *Persians*, on whom the *Greeks* bestowed the Name of *Barbarians*, were in Reality the best governed, the politest, and the most civilized Nation upon the Face of the Earth. Their Religion was far more incorrupt than those of *Egypt*, *Greece*, or *Rome*, for they worshipped only one God; and though they were over-run with Superstition, they never degenerated into Atheism or Idolatry. The common People were, from Principle, extremely industrious; they cultivated their Country with the utmost Care, inasmuch that those Districts that are now sandy Deserts, were then perfect Gardens; and many rich and populous Cities were seated in Places that at this Day are waste and howling Wilderesses. Yet there even still remain clear and indisputable Proofs of the Truth of what this learned Gentleman has asserted, and these are of two Kinds, First, The Ruins and Remains of this ancient Magnificence, which even the Iron Teeth of Time have not been able to destroy, as appears from what the Reader has been told of *Persepolis*; and next from the Temper and Disposition of that Remnant of the ancient *Persees*, *Gubers*, *Gaurs*, or Fire-worshippers, that are still left in this Country and in *India*, and who are, beyond all Controversy, the most quiet, industrious, and most inoffensive Nation, if we may yet stile them so, on the Face of the Globe. The Seat of their present Habitations is the wildest and worst Part of the Province of *Kerman*, and yet even there the small Districts they possess, appear a Kind of Para-

dise in Comparison of the Country round about; and by them those Wollen Stuffs are wrought, which the modern *Persians*, from a true Principle of Luxury, think too good for any Bodies Wear but their own, and therefore never suffer them to be carried out of their Dominions.

As for these People, it is no Wonder that they have brought the same Discredit upon the large and fruitful Provinces they inhabit, that the *Turks* have done upon the Land of *Canaan*; and indeed it is the Genius of the *Mahometan* Religion to deface all Marks of former Improvements, as well as to receive no Benefit from such Examples. The Wars, by which this Empire has been continually wasted since it fell into the Hands of its present Possessors, has contributed not a little to thin it of People; so that now there are not above a twentieth Part of the People in *Persia* that there were at the Time that *Alexander* invaded it. Besides this, there are several Nations scatter'd up and down it, that are rather Vassals than Subjects to the Shahs, and live after the Manner of the *Tartars* in their Tents. The Want of a settled Nobility, and the little Security that the People in general have for their Fortunes, is another great Obstacle to the cultivating their Lands, and the Improvement of their Cities. We may add to this, the Revolutions and Civil Wars which have been so frequent in *Persia*; as also the Incurfions of the *Tartars* and other barbarous Nations, from which they are hardly ever free. As to the Laziness and Luxury of the *Persians*, though it is in one Sense a Cause of the wide Difference between the past and present State of their Empire, yet considered in another Light, it is the Source of what little Commerce they have; for as they are not willing to work themselves, they are very ready to let other Nations dwell amongst them; and provided they reap the Fruits of their Industry, treat them fairly and civilly enough, without any Mixture of that haughty, insolent, and unbridled Temper, which is so hateful and so intolerable amongst the *Turks*. Besides, as they spend without the least Consideration, all they get, this occasions a quick Circulation of Money, so that the *Armenians*, *Indians*, and other Foteigners that live amongst them, pick up a tolerable Livelihood, and are not imposed upon and oppressed as in the Territories of the Grand Signior.

It is the Want of People that makes a great Part of *Persia* lie waste and barren; and the natural Fertility of the Country is another Cause of this, for even the few Parts that are now cultivated, produce much more than is necessary for the Subsistence of its Inhabitants; and it is from thence that their Trade and their Riches arise; for since there are no Mines now wrought in *Persia*, what Gold and Silver they have comes into that Country by the Purchase of their Silks, and other rich Commodities; whence the Reader will easily discern, how powerful and how happy the People might be under a settled Government, that paid some tolerable Respect to the Welfare of its Subjects; but after all, this is hardly to be hoped for while in the Hands of the *Mahometans*, who, on the one Hand, are very little inclined to any Kind of Industry themselves, and, on the other, are very apt to be jealous of their Christian Subjects thriving, tho' they are the better for it. While the *Russians* were Masters of *Gilan*, which was but for a very short Space, the Inhabitants were so sensible of the Change, that there was Nothing they dreaded so much as returning again under the Dominion of their old Masters; and when this actually happened, great Numbers of them quitted their Habitations, and retired into the neighbouring Parts of *Georgia*, *Dagestan*, and *Armenia*, that they might avoid falling under the Yoke of *Thamas Kuli Kan*, notwithstanding that was as light, at least in Time of Peace, as any of the former Shahs.

21. It is to very little Purpose that we increase the Stock of our Knowledge; by reading, unless we enable ourselves to make some Use of it by Reflection; as a Trader does not thrive by having his Warehouses stocked with Goods, but by his knowing where and how and to carry them to Market. We see plainly from the

the Description of the *Persian* Empire, at the Beginning of this Section, that in Point of Territory, the Shah's of *Persia* are very little inferior to any of the great Monarchs in the Universe; but we know experimentally, that for all this, the Princes of this Country, from the Time of Shah *Abbas*, have made but a very indifferent Figure, and are not like to make a better in Time to come. This shews us the terrible Effects of arbitrary Power, a Thing altogether insupportable; but from the Wisdom of some great Princes, who by dissembling and letting it down, preserve it. Shah *Nadir* had this in his Will, but never in his Power; he had acquired his Authority by being at the Head of an Army, and he found it impossible to sustain it any other Way than by remaining at the Head of it; for he neither durst disband his Troops, nor could he trust them any longer than they were employed; this was the true Reason of his *Indian* Expedition, and this must be the Case, till such Time as the Army, by which he attained his Sovereignty, is in some Measure worn out, and then perhaps, the Feebleness of the State may draw upon it foreign Invasions.

If either the Extent, or the Quality of Countries, could make Princes easy or happy, the Sovereigns of *Persia* might be so without making Slaves of their Subjects, or disturbing their Neighbours. We may from hence also discover the Value of right Principles with Regard to Industry and Commerce, which always include due Respect to Liberty and Property, without which the former can never subsist, and the latter can never be attained. If we could, with any Probability, suppose that a well-constituted Government could take Place and be thoroughly established in *Persia*, it is very evident, that in the Space of a Century, not only the Affairs, but the very Face of the Country would be changed; their great Cities would be repopled, the Trade through *Persia* to *India* and *Tartary* would be revived, their Silk-works and Manufactures would be restored, and Multitudes of People would flock into all their Provinces for the Sake of that Plenty, which, in such a Situation of Things, they would be sure to enjoy. But as this Supposition is, on the one Hand, improbable; so, on the other, it is very evident, that for this very Reason the *Persian* Monarchy must, for a long Series of Years, continue broken and weak;

for it is by Commerce only that the People of that Country can become formidable; for while, on the one Side, they want a Naval Power to maintain the Sovereignty of the *Caspian* Sea, to which they pretend; and on the other Hand, to have no Fortresses of great Strength to secure their Frontiers against the *Usbeck Tartars* on the North, and the *Turks* on the West, they will always be in Danger from both those Neighbours.

These Things are so plain, that they cannot be denied or doubted. The single Inference I would draw from this is, that so far as human Foresight reaches, there seems to be a Disposition in Providence to overturn the *Mahometan* Powers every where; for if we compare the present State of Things with the past, we cannot help seeing, that they are much in the same Situation that the *Greeks* were at the Time their Empire began to decline; and though it may be some Centuries before their total Destruction comes on, yet we must shut our Eyes against Evidence, if we are not convinced that it is coming. We must indeed allow, that there were some visionary People here in *Europe*, who apprehended mighty Things from the Shah *Nadir*, and believed that he would overwhelm the *Turkish* Empire; but there was no Kind of Reason for this, except the known Weakness of that Empire; and if it were not for this, we might with more Reason expect, that the *Turks*, at this Juncture, should make some Impression upon *Persia*, which however I am persuaded will not happen. But if the Feuds of Christian Princes were once laid asleep, there is no Improbability in the Conjecture, that the *Russians* might make themselves Masters, at least, of some of the Provinces of this Empire, which lie nearest to the *Caspian* Sea; and whenever it shall happen, it may prove a Beginning to much greater Revolutions, since there are Multitudes of Christians in the adjacent Countries, who are either of the *Greek* Religion, or very little removed from it; and if their Spirits should once revive, the Weakness of the *Mahometans*, both here and elsewhere, would be quickly seen. I know very well how little Heed the present Generation will give to Remarks of this Nature; but I flatter myself, that how weak or how impertinent soever they may be now esteemed, Experience will justify them to Posterity.

SECTION III.

Of the Disposition and Temper of the *Persians*, their Persons, Habits, Manner of Living, their Artificers and Mechanicks, the Respect paid to Merchants, the Method in which their Inland Trade is carried on, the past and present State of the *English* Commerce, and other Particulars; together with some curious Observations on the Nature of the Silk Trade, and a Computation of the annual Balance in Favour of *Persia*.

Collected as well from private Memoirs, as from Accounts that have been published.

1. An Introductory Account of the Subject of this Section, the Difficulty of drawing National Characters, the likeliest Way of coming at the Truth, the general Temper, Disposition and Genius, of the modern *Persians*.
2. Of their Persons, Dress, great Value of their Turbants, and of the Magnificence and Profusion into which all Ranks of People are apt to run in that Country, in every Thing that regards Appearance and Equipage.
3. Of the Womens Habits, their Painting, their Head-dresses usually adorned with Feathers, frequently set out with Jewels, and more especially with Pearls, which were esteemed the best in the World; so long as the *Persians* were possessed of the Island of *Baharen*.
4. The Manner of Living in *Persia*, the Method of eating and drinking, their Customs at their Meals, the Commonness of Cooks-Shops and Ordinaries amongst them, and of the open and general Hospitality in *Persia*.
5. A View of their Entertainments, the Ceremonies and Civilities that pass upon such Occasions, their laudable Temperance

Temperance and great Sobriety, and of the Manner in which, by the Use of Opium, they supply their Want of strong Liquors. 6. The Manner of Travelling in Persia, the Nature of Caravans, how they supply the Want of Wheel-Carriages, of their Foot-Posts, and of the wonderful Swiftneſs of their Shatirs or Running-Footmen. 7. Of their Artificers and Mechanicks of all Sorts, the Neatneſs of ſome and the Inexpertneſs of other Workmen, and of the Nature of their Companies, and the Rules by which they are governed. 8. Of the Silken, Woollen, and Mohair Manufactures, that are carried on in this Empire, the Management of their Domeſtick Traffick, the great Uſe of Brokers; the Manner in which their foreign Trade is carried on, and the Reaſons that hinder Mahometans from becoming Merchants; with ſome political Remarks upon that Subject. 9. The Nature of the Engliſh Trade in Persia, the Meaſures, Weights, Money, generally uſed in that Country, and the Alterations that have happened by the Removal of the Capital from Iſpahan to Meſched. 10. A ſuccinct View of the ſeveral Routes by which foreign Commodities are introduced into Persia, with a clear View of the Advantages ariſing from the new Trade to that Empire, through Ruſſia. 11. A ſhort Representation of the Value of Silk, conſidered as the Staple Commodity of Persia, and of the Advantages that would reſult to this Nation by the joint Endeavours of the Ruſſian, Levant, and Eaſt-India Companies, to import Perſian and China Silks, on the cheapeſt Terms poſſible.

1. **A**FTER taking a View of the Country of *Persia*, and its Product of all Kinds, it is very natural for us to come next to the Inhabitants, for whoſe Sake the other Deſcription was held neceſſary, and made intirely with a View to render this more clear and intelligible. It muſt indeed be owned, that there is ſomething very difficult and hazardous in attempting to characteriſe a whole Nation, and nothing is more common than Inſtances even of great Authors falling into Miſtakes on this Head; yet as the Thing is neceſſary, ſo it is alſo very feaſible; Nations certainly have their Characters as well as private Men, and theſe are frequently hit, though to be ſure ſometimes they are miſtaken.

The Means of hitting them, is to obſerve carefully the Points in which all Travellers agree, for theſe, without doubt, are founded in Truth and Nature; when a ſufficient Number of theſe are fixed, they will ſerve to guide you in the reſt, for the Humours of Men, though of ſeveral Sorts, and vaſtly different from each other, yet have a Connection among themſelves, that is to ſay, one Humour aſſorts with, and joins eaſily with another, while there are ſome Humours that never come together, or are found in the ſame Breſts. That there really is ſuch a Thing as national Characters, appears from hence, that the Inhabitants of the ſame Country, through a great Diverſity of Ages, and deſcribed by Authors of various Diſpoſitions, keep pretty nearly the ſame Character; of this, the Deſcription of the People of *Paris*, by the Emperor *Julian*, is a remarkable Inſtance, and others might be mentioned, if that before us were not as good a one as any of the reſt; for whoever conſiders attentively what is ſaid of the Temper, Genius and Cuſtoms of the *Persians*, independant of their Religion and Government, by the *Greek* and *Latin* Writers, and compares theſe with the Writings of modern Travellers, will be amaz'd to ſee what a Conformity there is between them, and be from thence convinced, that national Characters are nothing leſs than imaginary. But to come to the Point, and to that Deſcription which will juſtify this Obſervation, at the ſame Time that it carries on the Thread of our Diſcourſe, and performs the proper Buſineſs of this Section.

The *Persians* are Men of bright Parts, and Abundance of Vivacity, fond of Glory, and known to excel their Neighbours of *India* in Point of Courage, inſomuch that the *Mogul* prefers them to the greateſt Poſts, both in his Court and Army; and as they were obſerved anciently to be of all Men the moſt civil and obliging, they retain the ſame Diſpoſition to this Day, eſpecially towards Foreigners, who admire their Hoſpitality and Benevolence; they are far from being guilty of that brutiſh Behaviour towards Chriſtians, as the *Turks* are; what they ſeem to be moſt juſtly and univerſally charged with, is Vanity and Profuſion in their Cloaths, their Equipages and Number of Servants; as to Voluptuouſneſs in Eating and Drinking, this does not appear to be their Vice, at leaſt we are much more guilty of it in *Europe*; for the greateſt Part of their Food is Rice, Fruits, and Garden Stuff; they have not any great Variety of Fleſh,

neither have they many Ways of dreſſing it; *Pilo* ſeems to be the ſtanding Diſh, even among thoſe of the beſt Quality. And as for ſtrong Liquors, though they drink them now and then by Stealth, Drunkenneſs is very far from being common; Liquor is never forced, and every Man may retire from an Entertainment without Ceremony when he ſees fit, without a Breach of good Manners.

No People have a greater Genius for Poetry, inſomuch that there it not a Feſtival or Entertainment made, but a Poet is introduced and deſired to oblige the Company with his Compoſitions; and theſe Gentlemen are often found with a Crowd about them in Coffee-houſes, and other Places of publick Reſort. The *Persians* are by ſome looked upon to be very covetous, but by this they muſt mean covetous in getting, for as to hoarding up Money they are generally abſolved. They only get that they may ſpend, and when they have furniſhed themſelves with an Equipage, Houſe and Gardens ſuitable to their Mind; they rather lay out their Money in building *Caravanſera's*, Mosques, and on other publick Occaſions, than let it lie by them, inſomuch that ſome Travellers obſerve, that there are no People in the World that take leſs Thought for Tomorrow. A Man who happens to have eight or ten thouſand Pounds fall to him, ſhall in a few Weeks lay it out in purchaſing Wives and Slaves, Cloathing, and Furniture, without conſidering where he ſhall meet a Supply, and in two or three Months after, you will ſee him diſpoſing of them again for Subſiſtance. Theſe People, it is obſerved, have a great Command of their Paſſions; they are not eaſily moved, and when they are, it proceeds very ſeldom to Blows. The Quarrel generally ends in ill Language, and perhaps ſome hearty Curſes; and to ſum up all, they call one another *Jews* or *Chriſtians*. They are of a very inſinuating Addreſs, and a moſt obliging Behaviour; few *European* Nations are more polite.

2. The *Persians* are generally of a good Stature, well ſhaped, clean limb'd, and of agreeable Features, and in *Georgia* and the Northern Provinces, of an admirable Complexion; towards the South they are a little upon the Olive. However, the great Men having had their Wives and Concubines chiefly from *Georgia* and *Circasſia*, for a hundred Years paſt, their Complexions are very much mended even in the Southern Provinces. Their Eyes and their Hair are generally black, and they wear only one Lock on the Crown of their Heads, like other *Mohometans*, by which they expect *Mahomet* will lift them up to Paradife.

As to their Beards, the Shah and the Great Officers of State, and Soldiery, wear only long Whiskers on the upper Lip, which joined to a Tuft of Hair on the upper Part of their Cheeks, grow to a very enormous Size, inſomuch that ſome of them, it is ſaid, are near half a Foot long. Their *Mollahs* and religious People wear their Beards long, only clipping them into Form, and the common People clip their Beards pretty ſhort, but none of the *Persians* ſuffer any Hair to grow upon their Bodies. They wear large Turbants on their Heads,

Heads, some white, and others striped with red or other Colours, and the Great Men have Flowers of Gold and Silver woven or marked on the Cloth. They have also a Scull-cap under their Turbant, and all together does not weigh less than seven or eight Pounds, sometimes a great deal more. Next to their Skins they wear a Shirt of colour'd Silk or Calico, generally blue, which they seldom or never wash; this Shirt has an open Bosom, but neither Neck nor Wristbands, and is made close to the Arm; they have also a Pair of Breeches, or rather Drawers, close before, they reach half down their Legs; their Stockings are made of woollen Cloth, but not at all shaped to the Leg; over the Shirt they wear a Waistcoat, and upon these a Coat with close Sleeves, and Buttons and Loops before, tied with a Sash; this is wide at Bottom, and hangs a little below their Knees; besides this, they put on another Coat frequently, without Sleeves, the uppermost Coat being the shortest, and in the Winter Time over all they have another loose Coat lined with Furrs: Instead of Shoes they have piqued Slippers, turned up at the Toes, and made of *Turkey* Leather, which are neither tied nor buckled, and when they ride, they have Boots of yellow Leather; their Bridles, Saddles and Housings are immoderately fine, being almost covered with Gold; the Housings are so large, that it almost hides the hinder Part of the Horse, and whether on Foot or on Horseback, they wear a broad Sword, and a Crice or Poniard. Their Ladies have also a Dagger at their Sides, especially those of high Rank.

3. The Garb of the Women is not very different from that of the Men, except it be, that the Women neither wear Turbants on their Heads, nor Sashes about their Waists, and their Coats or Vests reach almost down to their Heels. If ever they go into the Streets, which Women of Quality seldom do, they have a white Veil which covers them from Head to Foot. The Girls wear a stifened Cap upon their Heads, turned up like a Hunting-Cap, with a Heron's Feather in it, their Hair being made up in Tresses, and falling down their Backs to a very great Length, and the Quality have Pearls and Jewels interwoven and mixed with their Hair. The married Women comb their Hair back, and having bound it about with a broad Ribbon, or rich *Tiara*, set with Jewels, which looks like a Coronet, let the rest of their Hair fall gracefully down their Shoulders, than which there cannot be a more becoming Dress. As for Gloves, neither Men nor Women ever wear them, but their Arms and Fingers are usually full of Rings and Bracelets enriched with Jewels.

As black Hair is the most common, so it is in most Esteem, and the thickest and broadest Eye-brows are thought the finest; the Women, if their Eye-brows be not black, will colour them, and commonly paint their Faces; they rub their Hands and Feet with an Orange-coloured *Pomatum*. Some will have Feathers stand upright in their *Tiara*, and others have a String of Pearls or precious Stones fastned to it, which hangs down between their Eye-brows; they wear also Jewels in their Ears, and Rows of Pearls fall down their Temples, as low as the Neck, and in some Provinces bordering on *India*, they have Jewels in their Nostrils, which to the *Europeans* do not seem very becoming, for hanging down to the Mouth, it makes them look as if they had Hare-Lips, but the Ladies of *Ispahan*, never wear these Nose-Jewels. Their Necklaces are either Gold or Pearl; they fall upon the Bosom, and there always hangs a little golden Box to them, filled with most reviving Perfumes.

As their Clothes are of the richest flower'd and brocaded Silks, it appears that their Dress is no inconsiderable Article in *Persia*, where People of mean Fortunes endeavour to vie with the Quality, and will have fine Clothes, though they want Food. An ordinary Turbant cannot be purchased under Ten Pounds, and they frequently give twice as much, and they must have Variety of them, lest they should be known by their Clothes. Their Sashes also are brocaded, and cost from twenty to a hundred Crowns, and over this they have frequently another of Camel's Hair, of which the Workmanship

is so curious, that it seldom costs less. Those who wear Sables, which they will not be without if they can purchase them, seldom pay less than a hundred Pounds for a close bodied Coat; all this, with the rich Furniture and Equipage they have, when they ride out, amounts to a vast Sum; and this, as it well may, keeps them exceeding poor. The common Mode of living is thus:

4. Early in the Morning they usually drink a Dish of Coffee. About Eleven they go to Dinner, when they eat Melons, Sweetmeats, Fruit, Cheese, Curds, or Milk, but their principal Meal is in the Evening, when you may depend on a Dish of *Pilo*, which is boiled Rice well buttered, and season'd with a Fowl, a Piece of Mutton or Kid served up with it; they have an excellent Way of boiling their Rice all over the East, the Water is perfectly dried away, by that Time the Rice is enough, after which they season it with Spices, and mix Saffron or Turmerisk, with it, giving it a yellow, or what other Colour they think fit; but there is very little Variety either in their Food, or Way of Dressing it; if they have a large Joint, it is baked, instead of being roasted, but their usual Way is to cut their Flesh into little Slices, and Spitting or Scuring them together, roast them over a Charcoal Fire, and whether they boil or roast, it is always done to Rags, or it would be impossible to pull the Meat to Pieces with their Hands, as they do without Knives or Forks. Pork is never eaten here any more than Veal, nor do they eat Hares or other Animals prohibited to the *Jews*, Beef but seldom; they do not deal much in Venison, Fish or wild Fowl, they dress only plain Dishes, being Strangers to Hashes, Ragouts and other Compounds, and seldom have any other Sauce than a Slice of Lemon, or some Pickles. Bread they have baked in thin Cakes the Moment they use it, but eat much more Rice. They use no beaten Pepper, only whole, and not Abundance of Salt in their Seasoning, nor is there any brought to Table: Meat is never salted before it is dressed. They usually kill their Meat and Fowls the same Day they use them, and set by nothing to be eaten cold.

They sit down cross-legg'd at their Meals, and a Cloth is spread upon the Carpet. Then one of the Persons who has the Provision before him, distributes Rice and Flesh to the Company. They use no Spoons, except for Soup and Liquids, but take up their Rice by Handfuls. They seldom sit above half an Hour at Table. They wash both before and after their Meals, making use of their Hankerchiefs instead of a Towel. The common People of *Ispahan* seldom dress their Victuals at Home, but when they have shut up their Shops of an Evening, go strait to the Cooks, of which there are great Numbers in that City, and buy *Pilo* for their Families. The Cooks have Kettles or Coppers fixed in Brick-work, in their Shops, and Stoves, over which they dress most of their Meat, making scarce any Use of Chimnies. It is remarkable of the *Persians*, that they are so far from shutting their Doors at their Meals, that they invite every one to eat with them, who happens to come to their Houses.

5. When a Person makes an Entertainment, it is usually a Supper, notwithstanding which the Guests generally come at nine or ten in the Morning, and spend the whole Time at the Place to which they are invited. They discourse, they smoke, eat Sweetmeats; and pass away the Time with a thousand Amusements; sometimes they hear Poems repeated in Honour of their Prince, sometimes the Singing Women are introduced, who sing, and dance, and play, and show antick Tricks, to divert the Company; and if any one of the Guests are disposed to withdraw with any of these Dancing-Girls, they are shewn into a private Room, and when they return Nobody takes any Notice of it. When Supper is served up, the Son or some Relation of the Master of the House, takes the Honours of the Feast upon him, and helps the Guests to their Meat.

They generally provide Variety of Sherbets on these Occasions, their usual Drink being nothing but fair Water, and even this, it seems, they drink with Ice;

it is the Employment therefore of Abundance of People about *Ispahan*, in the Winter-Season, to heap up vast Quantities of Ice together, and keep it in Repositories under Ground all the Summer, when they sell it to great Advantage. Wine is made in several Provinces of *Persia*; but the *Armenians* and other Christians drink the greatest Share of it. The Officers will indeed sometimes indulge themselves in this Liquor, and other People drink it as they pretend for their Health, but that is not common; much the greatest Part of it is either transported to the neighbouring Countries, or drank by the Christians, who are dispersed through the *Persian* Dominions.

But those who abstain from Wine out of Conscience, because it is prohibited by Law, raise their Spirits with *Opium*, Bang, Poppy-seed, and other intoxicating Ingredients. The *Persians* like other Eastern Nations, take Pills of *Opium*, which some of them gradually increase to such a Dose, as would destroy half a Dozen *Europeans*. Within an Hour after they have taken the Pill, it begins to operate, and a thousand pleasant Scenes present themselves to their Imagination; they laugh and sing, and say Abundance of humorous Things like Men intoxicated with Wine, but after the Effect of it is gone off, they find their Spirits exhausted and grow pensive and melancholy, till they repeat the Dose again; and some make it so necessary to them that they cannot live without it. There is also a Decoction of the Seed of Poppies, sold in most Cities of *Persia*, and in these Houses you will see People looking and talking as Men do when they are drunk: As long as they keep to the Letter of the Law, and abstain from Wine, it is no Matter how much they disorder themselves, they think they shall never be accountable for that.

6. There are no Wheel-Carriages in this Country, but all People travel upon Camels, Horses, Mules or Asses. The Women who are to be concealed as much possible, are put into a square wooden Machine, of which they hang one on each Side of a Camel; they are about three Foot deep, and just large enough for one to sit down in, and over-head are three or four Hoops like those which support the Tilt of a Waggon, with a Cloth thrown over them. Their Asses are much larger and nimbler than ours, and will trot ten Miles at a pretty good Rate, but they are very obstinate, and frequently throw their Riders. People usually travel in this Country with the Caravan, consisting of four or five hundred Camels, besides other Beasts, and there is no Place where they travel with greater Security and less Expence, there being Caravanferas at proper Distances, where they have their Lodging *Gratis*, and purchase Provision at the best Hand; and though the Roads are frequently steep and mountainous, yet such Care is taken in laying Bridges and Causeways, and to level and enlarge the Ways, that a Traveller seldom meets with any Difficulties but what are easily surmounted.

Here are no General Posts, but if any Person has Letters to send, he dispatches a *Shatir* or Footman with them on Purpose, who will travel a thousand Miles in eighteen or twenty Days, and not ask more than twenty Pence or two Shillings a Day for his Trouble: They carry with them a Bottle of Water, and a little Bag of Provision, which serves them thirty or forty Hours: They generally leave the high Road, and cross over the Country the nearest Way. There are a great many Families which make this their only Employment, and breed their Children up to it, obliging them to run from their Infancy.

The Shah, and all the great Men, have several of these *Shatirs* or Footmen in their Retinue, but before a Man can be admitted one of the Imperial Footmen, he must give a very extraordinary Proof that he does not want Heels or Breath; for he must run from the great Gate of the Palace called *Aly Capi*, to a Place a League and half from the City, twelve Times in one Day, and every Time bring an Arrow along with him, which is delivered him by those who stand at the End of the Race, to shew that he has run the whole Course; and this he performs between Sun-rise and Sun-set, in thirteen or fourteen Hours at most, being no less than

a hundred and eight Miles. It is always some Favourite Servant of the Shah's who is admitted to this Honour. On the Day of Trial the Elephants and Horsemen are drawn up in the Royal Square, with the Musick, Drums and Trumpets sounding, and as if it was a Festival. All the Great Men make Presents to the *Shatir*, and several of them ride the Course with him to ingratiate themselves with the Shah; and the Mob attend him every Time he returns with their Shouts and Acclamations. The Chams and Viceroys, who admit a *Shatir* into their Service, make him run the same Number of Miles, and they are caressed and presented by all their Dependents in the same Manner the Royal *Shatirs* are, though not so largely; for it is a very common Thing to see the Shah's *Shatir* presented with above a thousand Pounds on such an Occasion. This is a very strong Mark of the Spirit of this Nation, and of that Disposition they have to display their Generosity, sometimes at the Expence of Justice, but without Regard to Prudence always.

7. With respect to their Artificers, Manufacturers, and common Tradesmen, the Regulations that are made in this Country are extremely well contrived, for every Company has a Head or Master, who with a small Number of his Brethren, form a Kind of Council, and settle such Rules and Orders for the general Benefit of such as are engaged in the particular Branch of Trade he superintends as to him and them seem requisite. Whoever intends, to set up a Trade, goes to the Master, and registers his Name and Abode, and no Enquiry is made who was his Master, or whether he understands the Business or not; nor is there any Restraint laid upon them that they shall not encroach upon any other Profession; for Instance, the Braziers are at Liberty to make Silver Vessels, as they frequently do, without being in Danger of any Disturbance from the Silversmiths. Neither do they take Apprentices for a Number of Years, but hire their Servants, and allow them Wages from the first Day they entertain them. Every Trade almost is bound to work for the Shah when ever he requires it, and those who are not, pay an annual Tax to the Government for an Exemption.

Their Armourers make very good Broad Sword Blades, and damask them as well as any *European*. The Barrels of their Fire-arms are not amiss, they make them very strong, and as thick at the Muzzle as at the Breech. Their Stocks are but ill contrived, being thin and light at the Butt, and not fit for a Man's Shoulder; and for Locks to their Guns, or any other Locks that have Springs, they do not pretend to make them any more than Watches or Clocks, which they either purchase abroad, or employ *European* Workmen to make for them. Knives, Razors, Scissars, and some other Cutlery Wares, they make very well, and little Steel Mirrors, which they use instead of Looking-glasses; they are almost all convex, and the Air is so perfectly dry, that they seldom rust or grow dull. The Art of making Looking-glasses they do not understand, but have them from *Europe*. However, they have a Manufacture of Glass, which serves for Windows and Bottles. The Glass of *Sbiraz* is the best in the Country.

As the Use of the Bow is what the *Persians* value themselves much upon, there are no where better Bows made; the chief Materials are Wood and Horn with Sinews bound about them; they are painted and varnished, and made as fine as possible. The Bow-string is of twisted Silk, of the Bigness of a Goose-quill; their Quivers of Leather, embroidered or worked with Silk. This is a Trade they are as well versed in as any thing, especially the Gold or Silver Embroidery, either on Cloth, Silk, or Leather. They cover their Saddles and Housings almost with Embroidery, and their stitching of the Leather is much beyond any Thing we do. Their Saddles are made after the *Morocco* Model, and the Stirrups mighty short; they have a Kind of Breast-plate to them, and where we use Brasses about our Furniture, their Men of Quality have Gold. The Leather which we call *Turkey* Leather, from its coming to us through that Country, is all made in *Persia*. The Shagreen also comes from thence, which is made of the Skin of an Ass's Rump. The Tanners dress their coarse Skins

Skins with Lime, and use no Bark, but Salt and Galls instead of it.

The making Earthen Ware is another Manufacture the *Persians* excel in; it is much beyond the *Dutch*, and some say almost equal to *China* Ware. The Places where it is chiefly made, are, *Sheraz*, *Metsch*, *Yezd*, and at *Kerman*: And mending of Glass and Earthen Ware, is a particular Trade in *Persia*; they will drill Holes through them, and fasten the Pieces together, so that a broken Bowl or Plate will hold Liquids, as well as it did at first. Their Gold Wire-drawers, and Thread-twisters are Artists also in their Way; they will draw a piece weighing a Drachm, to the Length of three hundred *Persian* Ells. Their Lapidaries understand the Grinding of soft Stones, and cutting them pretty well. Their Dying is preferred to any Thing of that Kind in *Europe*, which is not ascribed so much to the Artist, as to the Air, which being dry and clear, gives a Liveliness to the Colours, and fixes them.

The *Persian* Taylors work very neatly; and as the Men's Clothes are made of the richest flower'd and brocaded Silks, they are fitted exactly to their Bodies without the least Wrinkle, and their Sowing is incomparably beyond that of our Workmen, as the fine Materials they work on require it should. They work Flowers also upon their Carpets, Cushions and Window-Curtains, so very nicely, that they look as if they were painted.

With Taylors, we must not forget to mention their Barbers, who are no less excellent in their Way; for they will shave the Head almost at half a Dozen Strokes, and have so light a Hand, that you can scarce feel them; they use only cold Water, and hold no Basen under your Chin as with us, but have their Water in a Cup, about the Bigness of a little China-Dish: After they have shaved a Man, they cut the Nails of his Feet and Hands, with a little Iron Instrument like a Bodkin, sharp at the End; then they stretch his Arms, and rub and chafe his Flesh, which is an Amusement, that the *Europeans* as well as the Natives are pleased with, in these hot Countries. But notwithstanding this, these Artists are nothing comparable in their Way to those of *India*, and these again fall as short of the *Chinese* Barbers.

8. We are now to proceed to the more material Parts of the *Persian* Commerce, from whence their national Riches flow, and by which they draw to themselves the Wealth of other Countries; for as we before observed, Gold and Silver are no longer the Produce of *Persia*, but are brought thither in Payment for their Commodities. Silks are the principal Manufacture of the Country, such as Taffaties, Tabbies, Sattins and Silk mixed with Cotton or Camel and Goats-hair, Brocades and Gold Tissue, of the single Brocade there are a hundred Sorts, the double are called Duroy or Two-faces, because both Sides are equally good; they are the richest that are to be met with any where; and the Gold Velvet which is wrought in *Persia* is admirable; all their rich Stuffs are very durable; the Gold or Silver does not wear off or tarnish while the Work lasts, but keeps its Colour and Brightness. The finest Looms for these Stuffs are at *Ispahan*, *Cashan* and *Yezd*. Those for Carpets are chiefly made in the Province of *Kirman*, what are commonly called *Turkey* Carpets are indeed *Persian* but obtained that Name from being brought to us by Way of *Turkey*.

The Camel Hair Stuffs are made in *Carmania*, it is mighty soft and smooth, and almost as fine as Beaver Wool, but the Stuffs they make with it are not very strong. Camblets and Silk, and worsted Druggets are made in the same Province. Goats-hair Stuffs are made in *Hyrcania*, and near the Gulp of *Bassora*. There is some Callico-Cloth made in *Persia*, and they know how to paint and stain it, but it is not comparable to the *Indian* Callicoes. A Merchant is a very honourable Profession in *Persia*, and the more so, because there is no such Thing as hereditary Nobility, which descends from Father to Son; as to those in great Posts, their Honour and their Profits terminate with the Office; and their Lives and Fortunes are both in perpetual Hazards, especially under a weak and cruel Prince. The Trader seems more independant than any other

Subject, and notwithstanding the Government be despotick, they are usually encouraged, because they bring in a considerable Revenue to the Crown; and another Thing is, the greatest Ministers do not think the Business of a Merchant beneath them, even the *Shah* himself, within our Remembrance, has had his Factors and Agents in the neighbouring Kingdoms, and exported Silks, Brocades, Carpets, and other rich Goods, and his Agents at the Mogul's Court, and elsewhere, have frequently had the Character of Ambassadors conferred upon them, when indeed their Business was chiefly Commerce.

All Business of Consequence is carried on in *Persia* by Brokers, who are very cunning; after they have agreed and talked over the Matter at the Sellers-house, they agree about the Price upon their Fingers, putting their Hands under a Cloth; the Finger's End it seems stand for one, the bent Finger for Five, and the flrait for ten, the Hand open for a hundred, and if shut a thousand; and they keep so even a Countenance all the while they are transacting the Affair, that it is impossible for a Stander-By to gather any Thing from the Circumstances. But notwithstanding the *Mahometans* are the governing Part of the Country, they are not the greatest foreign Traders. The *Armenian* Christians, and *Banians* of *India*, have much the largest Share.

The *Mahometan Persians* trade from one Province of their own Country to another, and to *India* pretty much, but the *Armenians* manage the whole *European* Trade: One Reason whereof is, that the *Mahometans* do not Care to go into Christian Countries, because they cannot there observe the Customs their Religion prescribes, for their Law it seems forbid them to eat Flesh killed or dressed by a Man of a different Religion, or drink out of the same Cup with him, and even prohibits the touching of Persons in some Circumstances, whom they look upon to be polluted. Another Thing, which is a Disadvantage to their Trade is, that the taking up Money at Interest is unlawful, though they are at Liberty to make what Advantage they can in buying and selling. It appears from hence, that from the very Nature of their Religion, all *Mahometan* Powers stand excluded from Commerce, and this is the true Secret of the Declension of their Governments; for as Trade produces Shipping, as Shipping in Process of Time begets Naval Power, and as it is a Maxim, justified by Experience, as well as founded in Reason, that naval Power will in the End get the better of all other Power; it follows that the *Mahometans* wanting this, can only prey upon each other by Land, from whence Revolutions in Power, but no Accession of Power can ever arise. Whereas if Christians should turn their Arms upon the *Mahometans*, so as to make Conquests, and come into Possession of their Countries, the Case would be altered, their Commerce would follow them, and the new erected Principalities would in a short Space of Time acquire a Naval Power, and so be in a Condition to extend their Conquests at the Expence of their *Mahometan* Neighbours.

9. We are indebted to Mr. *Lockyer* for the best, indeed for the only tolerable Account we have of the Method Trade is carried on in *Persia*, and therefore from him we must borrow what is necessary for the Reader's Information upon that Subject. Their great Weights are Maunds only, and these differ according to the Nature of the Commodities to be delivered by them. Sugar, Copper, Tutanague, all Sorts of Drugs, &c. are sold by the Maund Fabrees; which in the Factory and the Custom-house is nearest six Pounds and three Quarters, *Averdupois*; but in the *Bazar* it is not above six Pounds and a Quarter, which one ought to have Regard to in buying out of the Shops.

Eatables and all Sorts of Fruit, as Rice, Raisins, Prunelles, Almonds, Onions, &c. are sold by the Maund Copara of seven Pounds and three Quarters in the Factory, and from seven Pounds and a Quarter to seven Pounds and a half in the *Bazar*. Fine Goods, as, Gold, Silver, Musk, Acheen, Camphir, Bezoar, Coral, Amber, Cloves and Cinnamon, Oils, dried China, Silk, &c. are sold by the Miscal, six of which

are

are commonly counted an *Averdupois* Ounce ; its just Weight is 2 dw. 23 gr. 24 d. ps. *Troy*. The Maund Shaw is two Maund Tabrees, used at *Ispahan*. All Bargains in *Gambron* are made for Shahees, and the Company keep their Accounts in them, reckoning them worth four Pence each, though that Coin is rarely met with, but in its Stead Coz and Mamooda's are current every where. Horses, Camels, Housfes, &c. are generally sold by the Toman, which is two hundred Shahees, or fifty Abaffes, and they usually reckon their Estates that Way ; such a one, they say, is worth so many Tomans, as we say, Pounds in *England*. The Laree is used about *Ispahan*, nor are Abaffes to be got without allowing seven or eight *per Cent.* for the Difference in Exchange, yet Returns to Fort St. George, and other Parts of *India*, are commonly made with them. Next to these, Chequeens are the most profitable ; there are several Sorts of them, but the *Venetian* is better than the rest by one and a half or two *per Cent.* at *Surat*, and several other Ports on the *Malabar* Coasts, whither vast Quantities are sent every Year. When a Parcel of *Venetian* Ducats are mixed with others, the whole goes by the Name of Chequeens of *Surat* ; but when they are separated, one Sort is called *Venetians*, and all the others Gubbers indifferently.

The *English East India* Company, as has been observed, do not only receive the Sum of three thousand three hundred and thirty three Pounds six Shillings and eight Pence of the Government of *Persia*, in Lieu of the Service the Company did them in taking the Island of *Ormuz* from the *Portuguese*, but they have an Exemption also from Customs, and whatever Ships trade under their Protection have the like Exemption, only paying the following Port Charges, *viz.* Two *per Cent.* on the Sale of Goods to the Company, one *per Cent.* Consulage to the Agent, one *per Cent.* to the Broker. Boat or Franky Hire for landing Goods is thirty Mamooda's *per* 2000 Maund Tabrees. Hamalgae, or Cooly Hire at Weighing, one Coz of every twenty Maund Tabres. The Company do not meddle at all with the Trade between *Persia* and *India* ; this they leave altogether to their Factors and Servants, and to such Country Ships and private Traders as put themselves under their Protection, and are content to pay the Port Duties above-mentioned.

It is to be observed, that the *Turkey* Company having always had an Opportunity of sending great Quantities into *Persia* from *Aleppo*, abated much of the Commerce which the Agents of the *East-India* Company would otherwise have carried on in that Empire. Of late the *Russia* Company have also interfered in this Trade, by transporting great Quantities of *English* Goods by the *Caspian* Sea ; and it is generally believed, that so long as we maintain an amicable Correspondence with the Court of *Petersbourg*, this Trade will not only go on, but increase, which must be attended with great Advantages to the Nation. As this appears to be a Matter of far greater Consequence to us than any thing that has occurred in this Section, it is but reasonable that the Point should be fully explained, as well for the Advantage of the present Age, as for the Benefit of Posterity.

10. In order to set this Affair in as clear a Light as it is possible, we shall observe, that all foreign Commodities are brought into *Persia* by four great Routs ; and that by each of these, more or less of *British* Commodities have been, or may be introduced into this Country, where there always has been, and, if we are true to our Interest, there always must be, a very high Demand for them. Of these Routs the first is that of *Balsora*, or *Bassora*, a great City at the Bottom of the *Persian* Gulph, subject to its own Prince, and a Kind of Emporium or Magazine of *Turkish*, *Persian*, and *Indian* Commodities. The Goods that are brought hither for the *Persian* Market, come by Land by the Caravan from *Aleppo*, in about thirty Days, and are transported from thence either to *Bandar Abassi*, or *Ispahan*. It is by this Caravan that the *Turkey* Company transport *English* Cloths into *Persia* in Exchange for Silk, which they purchase at *Aleppo*, and consequently this Trade is either greater or less, according to the good Correspondence be-

tween the two Empires of *Turkey* and *Persia*. By this Means also we were led into Errors about Carpets, Leather, and other Commodities which pass for *Turkish*, because imported by the *Turkey* Company from *Turkey*, though really of *Persian* Growth and Manufacture.

The next great Rout is that of *Gambron*, or *Bander Abassi*, with respect to which we have already given a large Account from Mr. *Lockyer*. Goods are brought hither by Sea, but not directly, as many apprehend, from *England* ; on the contrary, they come from some *Indian* Port, and consequently are charged with a very high Freight, and with other incident Charges, which render them very dear ; notwithstanding which, in Times of Peace, and when Things were well settled in *Persia*, the Shah keeping his Court at *Ispahan*, there was large Vent for them, and our Agent there lived with all the Pomp and Splendour of a Prince. The Reader will easily discern from hence, how great a Change must have been wrought in the Traffick carried on by this Canal, by the Disturbances which lasted so many Years in *Persia*, and by the Change of the Capital of that Empire, which is now removed to a prodigious Distance from *Bander Abassi* ; and if he desires any Proof of this Fact, there calling the *English* Agents from *Ispahan* and *Bandar Abassi*, may pass for incontestable Evidence.

The third Rout is that through *India* to *Bost*, which, as we have shewn in the Description of the *Persian* Empire, is the Eastern Magazine, as *Bandar Abassi* is the Southern, and *Bassora* is the Western for all that enter into *Persia*. By this Means it is very far from being impossible that the *East India* Company should introduce *English* Goods into this Empire ; but whether they are actually carried thither by this Road, is more than I am able to say ; and if they are, I presume it is done by *Indian*, *Armenian*, or *Jewish* Merchants.

The fourth or last Rout is by the *Caspian* Sea, and the *English* Commodities that are sent this Way, must of Necessity pass through *Russia*. For the carrying on this Trade Magazines must be erected at *Astracan*, and from thence the Goods are transported into the Provinces of *Gilan* or *Astarabat* ; from which last Province the Caravans go in a Week to *Mesched*, which is the present Capital of *Persia*.

It may be said, that this is going a great Way about, and taking a vast Compass before our Goods arrive at Market. To this there are two Answers ; the first is, that let the Inconveniencies that attend this Commerce be what they will, they must be born, for we have before shewn, that little or nothing can now be expected from transporting of Goods to *Bandar Abassi*, much less from *Aleppo*, which lies still at a much greater Distance from *Mesched* ; so that we are under a Necessity of taking this Compass, if we will not entirely lose the *Persian* Commerce, and therefore it is to no Purpose to complain, even supposing the Objection were well grounded. The second is, that there is not either Truth or Force in the Objection, for Goods may be transported from *Petersbourg*, from thence through *Russia* to *Astracan*, cross the *Caspian* to *Gilan*, and so to *Mesched*, and the Returns made the same Way in half the Time that they could be made by the Way of *Gambron*.

We may add to this, that we now go to the Market and sell our Goods, or rather barter them for *Persian* Silk upon the Spot, whereas formerly we went a great Way about ; and notwithstanding this, the *Persian* Factors went also a great Way to get at us, since before we could ship the *Persian* Silk, it must either be carried by Land to *Aleppo*, which was three Months Journey, or to *Bandar Abassi*, which was above two. Besides, it is highly probable, that when our Commerce at *Mesched* is as well fixed as it was at *Ispahan*, we shall be able to transport *English* Cloths into the remotest Parts of *Tartary*, and thereby reap most of those Advantages that were heretofore wished for and expected from the Discovery of a North West Passage. It was by this very Canal, and in spite of all the Inconveniencies with which it has been supposed to be attended, that the *Dutch* disposed of prodigious Quantities of their Cloths in *Persia*, which for that Purpose were bought up by the *Armenian* Merchants ; and it was by this Way also, that

that the *French* were in Hopes of establishing a Trade to *Persia*, as appears by a very curious Memoir presented to the *French* Ministry upon that Head, the Subject of which is inserted in the Dictionary of Commerce, one of the best and most useful Works that was ever published. But there is still somewhat behind with which the Reader ought to be acquainted, in order to frame a true Notion of the Value and Importance of this Trade, about which so many Disputes have been of late Years raised in this Kingdom.

II. We have already enumerated the Commodities of *Persia*, and shall not therefore pretend to meddle with them again; for in order to give the Reader a View of the Trade of this Empire, it will be sufficient for our present Purpose, to insist barely upon the Silk, of which there are four Sorts; the first is, that which in *Persia* they call *Shirvan*, but which we in *Europe* call *Hardafs*; the second, is what they call *Karvary*, but we usually stile it *Legee* or rather *Legy*, from the little Town of *Legiam* in *Gilan*, from whence the greatest Part of it is brought; the third is in their Language called *Ked-Coda-pensend*, which is as much as to say, Traders Silk; the last is what they and we call *Sherbaffle*, or, as the common People stile it, *Turkey Silk*, from the Mistake which has been so often mentioned.

Of all these Kind of Silks, the Provinces of *Georgia*, *Gilan*, *Mezanderan*, *Shirwan*, *Chorasán* and *Kirman*, produce annually, about Twenty two thousand Bales, each of about two hundred and fourscore Pounds Weight. Of these it is computed, that not above two thousand Bales are wrought up in all the Manufactures of *Persia*, from the coarsest Carpets, to the richest Brocades. At this Rate, there are between five and six Millions of Pounds of Silk yearly carried out of *Persia*, and as it is worth about ten Shillings a Pound on the Spot, the Reader will easily apprehend, that raw Silk is a kind of Gold Mine to the *Persians*, since it furnishes them with between two and three Millions annually, above one half of which is receiv'd in ready Money.

In the next Place it is to be shewn, how the bringing in vast Quantities of Silk turns to the Advantage of this Nation. In respect to our Silk Manufactures, what we bring of this Sort serves only for the Shoote, for the Warp of all our raw Silks is, as we have elsewhere told the Reader, *Organzine* or *Italian Silk*, which is prodigiously dear. If therefore we can abate the Price

of this, we may the better afford to pay for that; or if we can obtain the Quantities we want, in Exchange for our Manufactures, this will prove a very great Saving; and whatever can be saved in this Way, will enable us to work so much the cheaper.

It has been suggested, that it might be attended with Inconveniencies for our *Turkey* and *Russia* Companies to interfere with each other in this Trade, which I confess, surpasses my Comprehension; and I am so far from believing that any bad Consequences will result from thence, that I think it may be demonstrated, this is the only, or at least the most practicable and best Method of making Companies useful, by engaging them to vie with each other in exporting *British* Commodities and Manufactures, and provided this can be done, it is of no real Consequence to the Nation who does it. But there is another Thing that, joined to this, would be of still greater Consequence, and that is, the *East-India* Companies, exerting themselves in procuring of Silk from *China*, which would supply the Place of the *Piedmontese* or *Organzine* Silk; and thus by the united Efforts of these three Companies, it is very possible that twenty or thirty *per Cent.* might be saved in the prime Cost of Silk to this Nation; and of what prodigious Benefit such a Saving would prove in our Manufactures, and how much it would contribute to enable us to work cheaper than our Neighbours, I leave every sensible and studious Reader to judge.

I know very well, that in order to bring such a Project as this to bear, there must be some Application made to Parliament for an Alteration in the Duties; and I am persuaded that no great Difficulty would be found in obtaining this, if the Reasonableness of the Thing was fairly shewn, and as it might be, fully made out. Our great Misfortune is, that Commerce is not sufficiently explained or understood, the Reason of which I take to be, that none concern themselves about the Theory, but those who are engaged in the Practice; and as these must be always interested, it will very rarely happen that they can be impartial Judges. It is from this Motive that I have so often turned my Pen to this Subject, with a View, if possible, to excite a more general Attention to what is certainly in itself the most considerable and important Object of all political Considerations.

SECTION IV.

Containing an Account of the Government and Constitution of *Persia*, the Nature of the *Shah's* Power, the Distribution of Civil, Ecclesiastical and Military Offices, the interior Policy of the Empire, the regular Forces kept up there, both Horse and Foot, and the Nature and Amount of the publick Revenues.

The whole digested into Order from the best Authorities.

1. An Introductory Account of the Reason and Subject of this Section, in which the Constitution of arbitrary Monarchies is explained, and applied to the present Purpose.
2. Of the Power of the Persian Monarch, how far absolute and terrible; and how, notwithstanding mild and equal enough, with Respect to the Bulk of the People.
3. Of the Constitution of the Persian Court, the principal Officers therein, their Ranks and Subordination, and the Duties of their respective Offices.
4. Of the Ecclesiastical Constitution in *Persia*, and the Difference between the Head of the Mahometan Church there, and in *Turkey*.
5. Of the Government of the Provinces, the several Checks contrived for the Safety of the Prince, and the Preservation of his Subjects.
6. Of the regular Troops or old standing Army of the Persian Empire, how composed, under what Discipline, and the Methods by which it was subsisted.
7. Of the new standing Army introduced by the *Shah's*, intirely dependant upon them, how model'd and provided for, and how corrupted and rendred useless.
8. Of the Art Military among the *Persians*, their Manner of making War, acting offensively, defensively, and particularly their Method for securing themselves against Invasions.
9. Some further Observations on the military Affairs of this Empire, on the Advantages

antages enjoyed by, and the Disadvantages under which the Persians labour, from the Regulations established amongst them in this Respect. 10. Of the State of Property in this Empire, whence the Imperial Revenues arise, how levied, and their Amount. 11. Observations and Remarks on several Particulars delivered in the Course of this Section.

1. **A**S at this Juncture the *Persian* Empire, by the Murder of the Shah *Nadir*, is in such Confusion, that it may be in some Measure considered as dissolved and no longer a Government at all; so it might seem excuseable, if we had passed by this Section altogether; yet considering that even in absolute Monarchies, Revolutions are but convulsive Motions, and that as soon as they cease the Body Politick recovers its natural Constitution, we could not but think it very requisite, for the Reader's Information, that a View should be given of the Form of the *Persian* Government, and this for three Reasons: First, Because we are very apt to confound all absolute Monarchies one with another, and to suppose that there neither is, nor well can be, any Difference between them; whereas, in Truth, the Form of such Governments may, and actually do vary, as much as any other of the milder Forms, as the Reader will see by this Instance. Secondly, Of all the absolute Monarchies in the East, the Constitution of the *Persians* was very justly held to be the best; and therefore it deserves, of all others, to be represented to the View of the Reader, who from hence will learn by what Modification the arbitrary Power of a Sovereign may be rendred in some Measure beneficial to his Subjects. Thirdly, Because, in all human Probability, the *British* Nation may hereafter have a closer Communication with, and enter into a more extended Trade amongst the Inhabitants of *Persia* than in Times past; so that it is highly requisite we should enter, at least briefly, into a Subject that may, to us or our Posterity, become of extraordinary Importance.

It is by no Means fit, that so large and so regular a Collection as this should be governed by temporary Views, or that we should take the Liberty, because this Country is at present unsettled, to slip over its Government, which we have a moral Certainty will be re-established, perhaps before this very Collection is completed. Besides all this, there are a great Variety of Articles which naturally fall within the Compass of this Section, that tend to give us a fuller and more perfect Notion of the State of this Empire and its Inhabitants, than can be obtained by the Perusal of any single Book of Travels, in which the State of the Country is represented, as it stood at the Time the Author visited it. But notwithstanding that, the Force of these Considerations have determined us to insert this Section; we shall not forget the Obligation we are under to keep Things within their due Bounds, and shall therefore labour to deliver, as succinctly as it is possible, without Prejudice to their Perspicuity, the several Articles that we think ourselves obliged to handle for the Reader's Instruction and Entertainment, and in order to render our Account of *Persia* consistent with the general Plan of this Work.

2. The Shah of *Persia* is an absolute Monarch, and has the Lives and Estates of his Subjects entirely at his Disposal. There is no Prince in the World more implicitly obeyed; let his Orders be ever so unjust, or given at a Time when he is so little Master of his Reason that he knows not what he says, or does, nothing can save the greatest Subject if he determines to deprive him of his Life or his Estate; neither Zeal for his Person, Merit, or past Services, will avail in the least. If he be in a Humour to ruin them, it is done by a Word of his Mouth, or by a Sign, and executed in an Instant, without any Form of Law, or Evidence of Facts. The common People, who are at a Distance from the Court, have much the better of the Quality in this Respect; there are very seldom Instances of any Oppression or severe Judgments executed upon these, but they seem to enjoy as much Security as in any Country in the World; and perhaps the Magistrates are the more inclined to govern equitably, in regard they know nothing can screen them from the Resentment of their

Sovereign, if they are guilty of any sinister Practices. The *Persians*, out of Conscience, it is said, obey all the Commands of their Prince without Reserve, and believe that his Orders ought to be obeyed against the very Laws of Nature, inasmuch that if the Son be commanded to be his Father's Executioner, or the Father the Son's, it must be complied with. But if he command any Thing in Prejudice of their Religion, they are not obliged to him, but ought to suffer any Thing rather than violate the Law of God.

Yet nothing makes the *Persian* Government appear so tyrannical, as the Custom of executing the Governors of Provinces, and great Officers of State, without giving them an Opportunity of making their Defence, or being informed of the Crime they are charged with; it is usual for the *Shah* two or three Times in a Year to send every Governor the *Calaat* or Royal Vest, and these are sent by such Persons as the Court intends a Favour to, for the *Cham* or Governor, to whom they are sent, always makes a considerable Present to the Messenger.

When he comes within two or three Miles of the Place where the Governor resides, the Messenger sends him Word to come and receive the *Calaat*, but instead of a fine Coat, the Governor is sometimes presented with a Halter, and is dispatched without any farther Ceremony.

This makes the Governors very circumspect in their Conduct, and they are always under dismal Apprehensions, when they hear the *Calaat* is arrived, knowing how common it is to have their best Actions misrepresented to their Prince. The *Persians* say in Defence of this Practice, that the Court seldom proceeds with that Severity, but in extraordinary Cases, where the Fact is notorious, and there is Danger of Rebellion, if they should cite the Person accused to answer; that if it be otherwise, they always give him an Opportunity of answering his Charge.

As for those about the Court, whom the *Shah* looks upon as Slaves he has purchased, he does not think himself obliged to observe these Formalities, but dooms them to be punished, or put to Death, as he sees fit. The *Shah* of *Persia* has no Council of State, as in the *European* Governments, but he acts as he is advised by his Prime Minister and great Officers; that which most perplexes the Ministry, is the Cabals that are carried on by the Women in the *Haram*; the Resolutions that are taken here, frequently thwart their best laid Schemes, and the Ministers do not only run the Risque of having their Counsels rejected, but they very often turn to their own Destruction, if they are not suitable to the Inclinations of the Ladies most in Favour. This is not an Evil peculiar to *Persia*, but a kind of Curse, throughout all Eastern Courts; and perhaps some in the West are not altogether free from it.

3. The Royal Family of *Persia* are, generally speaking, more unhappy than the Princes of the *Ottoman* Blood, for though they are not put to Death so frequently as the former, yet they usually have their Eyes put out, and live in that miserable Condition many Years. They have the *Tartar* Title of *Mirza* added to their Names, which is equivalent to our Title of Highness, and is never given but to those of the Imperial Line. The first Minister in the Empire is the *Atamadoulet*, a Word which signifies the Support of the Empire. In Petitions, or when they speak to him, they stile him the Grand Vizir, or Vizir *Azem*. No Business of Consequence is transacted in the State but by the Direction of this Minister, nor any Grant or Act of State of the *Shah's* held to be valid, till counterseal'd by him.

The Reason whereof is said to be, that their *Shah's* being bred up in the Women's Apartment, and perfectly ignorant in Affairs of State, it is necessary, for the Safety of the People, and the Preservation of the Government, that their Orders should be considered by some wife

wife Minister, before they are put in Execution. The Grand Vizirs in *Turkey*, it is observed, seldom die a natural Death; on the other Hand, the Prime Minister of *Persia*, if it be thought fit to discharge him, is usually permitted to retire, and end his Days in Peace with his Family. The second Post in the Government is, that of the *Divan Beghis* or *Bey*. This great Magistrate is the last Resort in all Causes, Civil and Criminal, unless where the *Shah* in Person sits in Judgment. The *Divan Bey* can command any Cause to be removed to his Tribunal, from any Court in the Kingdom; and during the late Reigns it has not been known that their *Shahs* have ever sat in a Court of Justice, or concerned themselves in examining the Decrees of the *Divan Beghi*.

In the third Rank come the Generals, and first the Generalissimo when there is one. The next Place is the General of the *Courtchis*, which are a Body of thirty thousand Horse, of *Turk* or *Tartar* Original. The third is the General of Musqueteers, a Body which serve on Horseback, but fight on Foot like our Dragoons. The fourth is the General of the *Coulars*, or Royal Slaves as they are called; and the last the Master of the Ordnance. After the Generals, the *Vacनाविश* or Secretary of State, possesses the next Post. This Officer registers the publick Acts, and has the Care of the Records; he also appoints a Deputy in every Province of the Empire, who transmits all Affairs of Consequence to him, to be laid before the Ministry. The last great Officer is the *Mirab*, or Lord of the Water. Every Province has its particular *Mirab*, who takes Care to distribute the Waters of the Rivers and Aqueducts in such Proportion, that every Part of the Country may have an equal Share.

These are all the principal Officers of State. Those of the Household are first the *Nazir*, who is both Lord Treasurer and Steward, and it is with this Gentleman, that all Ambassadors and Foreigners transact their Affairs, but there is a Comptroller and several other Officers which are a Check upon him, as he is on the Prime Minister, and those two have a very great Influence in the Court of *Persia*. But to prevent the *Shah's* Treasury being misapplied, no Sums are paid out of the Treasury, but the Order passes under the Seals of the Prime Minister, the *Nazir*, the *Divan Bey*, and two other Officers of the Revenue. The next is the *Ichicagasi Bassa*, who commands all that attend in the outward Palace, and the Guards.

When the *Shah* goes out, this Lord marches before him with a great Staff, covered with Gold and precious Stones; he does not sit, as several Officers do of inferior Quality, but stands always ready to obey his Imperial Majesty's Orders, and see them executed. And after him is the great Huntsman, who has not less than a thousand Huntsmen and Falconers under him. After this Officer the principal Physician and principal Astrologer take Place, which are Posts of great Honour and Profit.

4. As to Ecclesiastical Officers in this Empire, the Grand Pontif is usually stiled the *Sedre* in *Persia*; they also give him the Titles of Prince, Head of the true Church, Substitute of *Mahomet*, and Lieutenant of the twelve *Imans*, or *Caliphs*, who succeeded their Patriarch *Haly*. The Churchmen and bigotted Part of the *Persians* hold, that the Dominion of the Laity is an Usurpation, and that the Government belongs of Right to the High-Priest; but that of the Majority is, that the Regal Power exercised by their Princes is derived from God, and that the High-Priest and his Brethren ought not to meddle with Politicks, yet the *Sedre* and his Substitutes are the ordinary Judges in all civil as well as Ecclesiastical Causes; Lawyer and Divine are Terms of the same Signification in *Persia*, their ecclesiastical and civil Laws being indeed the same. The temporal Judges have no written Laws to go by, but their Decrees are founded upon ancient Custom, or the Equity of the Case, and the Judges in their temporal Courts are usually Men of the Sword. The *Sedre* is the supreme Judge in the Ecclesiastical Courts, and takes Place in all publick Assemblies next to the *Atamadoulet* or Prime Minister.

The second Ecclesiastical Judge, is the Ancient of the Law, whom the *Persians* style *Cheik Islam*; his Jurisdiction is little inferior to the *Sedre's*, and the People seldom appeal from one of these Courts to the other; but to the *Divan Beghi*, who is the supreme Judge in all Causes, ecclesiastical as well as temporal. The *Cadi* is the third Ecclesiastical Judge in *Persia*, he takes Cognizance of the same Causes with the two former, but his Authority is confined to some particular Town or District. The *Mufti* is the fourth, who has not that Authority here as in *Turkey*, for he cannot controul or Reverse the Proceedings of inferior Courts; but is revered however as a Person well skilled in the Ecclesiastical Laws, and his Opinion frequently demanded by the other Judicatures, who notwithstanding act as they think fit. These Judges do not sit all in one Court, but have each their respective Tribunal, and the People apply indifferently to the one or other, as they are inclined.

5. There is in every Province of this Empire, a Chan and a Vizier; the Vizier has the Government of all those Towns and Villages which are the King's Demefne Lands, or which belong to the Crown in Propriety, and the Chan of the Province in general. This Word *Chan*, or *Caun*, as we pronounce it, and *Cham*, signify the same Thing, namely, viz. a puissant or mighty Prince; and this is the Title of all the *Tartar* Princes in *Asia*; and the *Persian* Provinces being of the Extent of Kingdoms, and formerly distinct Sovereignties, the *Persian* Court have thought fit to give their Governors the Titles of sovereign Princes; and the *Shah* of *Persia* is frequently stiled now, as his Predecessors of old, *King of Kings*. Indeed the Chans in their respective Provinces, live almost in as much State as their Sovereigns, having exactly the same Kind of Officers as are in the *Shah's* Court with the same Titles, there being scarce any Difference but in Numbers and Pensions. The Chan commands the Militia of the Province, and assigns Lands for their Maintenance; he reviews them at certain Times, and sees that they are fit for Service, their Arms and Horses in good Order, and that they all perform their Exercises well; but every Soldier is permitted to live in his own House in Time of Peace.

The Chans or Governors of Provinces have their Posts for Life, and if they behave well, their Children after them. There are two Degrees of these Chans, the greatest is called *Beglerbeg*, or Lord of Lords; the other is stiled *Coulembeg*, or Lord of Slaves. The Governors of the Frontier Provinces are for the most Part *Beglerbegs*, as the Chan of *Armenia*, from whom the Chans of *Churs*, *Marega*, and other Districts, in Time of War, receive their Orders, and are obliged to march under his Standard. Sometimes these inferior Governments are made independent of the Chan of the Province. In every Province there are three Officers put in by the Government, who are independent of the Chan, namely, the *Janitelim* his Lieutenant, the Vizier or Receiver General of the *Shah's* Revenues, who hath also the Management of the Lands belonging to the Crown, and the Government of all Places where the Crown Lands lie; and the *Vacनाविश*, or Secretary, whose Business it is to take an Account of all Transactions of Moment in the Province, and transmit them to Court.

One principal Design of placing these Officers about the Chan, is to observe his Conduct, and oppose him if he should undertake any thing against the State. Besides these, the Governors of Cities and Castles, who are called *Darogas*, are put in directly by the *Shah*, and have their Lieutenants and *Vacनाविश* also independent of them; and the same Person who is Governor of the City is never made Governor of the Fortress which belongs to it. The Ministers of State, and Generals of Armies, have also their Lieutenants and Comptrollers, to superintend their Conduct, with secret Orders how to act on certain Emergencies; but it is observed, that unless in Matters where the Safety of the State is concerned, those Officers have a very good Understanding, and agree so well together, that the *Shah* is no less

cheated

cheated and deceived than if the Management was in one Hand. Besides, the *Daroga* or Governor, the *Vizier* and *Vacनाविश*, there are also in every Town the *Cadi*, or Civil Judge, before whom all ordinary Causes are heard; the Head Officer among the Trading People, the Provost or Sheriff; and every particular Trade has a Warden or Master. There is an Officer also who has a Watch, and is principally concerned in keeping the Peace in every great Town in the Night-time.

The Governor of every Town is the Judge in the last Resort in criminal and civil Cases too, if he pleases to interpose, and may inflict any Pains on Offenders short of Death. Capital Punishments are very rare in *Persia*, and the Sentence is, in most Cases, passed by the Shah himself. The usual Punishment is a Fine, which always goes to the Shah, or rather to the Governor of the Province, who generally brings the Crown indebted to him in his Accounts. When a Governor or *Vizier* is sent into any Province, he has his Instructions in Writing; wherein are contained the Extent of his Government, of the Revenues, and the Manner in which he is to treat the People; and Instructions, in like Manner, are given to every Officer of State when he enters on his Post. On the other Hand, when a Governor or other Officer returns from his Command, which he never does but by express Order of the Court, he waits without at the Gate of the Palace, and gives Notice by some of his Friends of his Arrival, and that he begs to throw himself at his Imperial Majesty's Feet; whereupon Orders are usually given for his Admittance; but sometimes, if the Person has misbehaved in his Post, instead of an Answer in the ordinary Style, Orders are issued to take off his Head.

6. The *Persians* are naturally a brave People, but the Sloth and Inactivity of their Princes had of late render'd them not so formidable as they used to be. In the last Century, under *Abbas* the Great, they made considerable Conquests on the Side of *Turkey*, as well as *India*, though their Troops were always much inferior in Number to the Armies either of the Grand Signior or Great Mogul; but they sunk in our Time so much below what they were in that Reign, that every little *Tartar* and *Arabian* Prince insulted their Frontiers, and robbed them of some Part of their Territories, before the late Shah *Nadir* assumed the Government.

The Forces of *Persia* are divided into the Troops of the State and the Shah's. The Troops of the State are entertained by the Governors of the respective Provinces, and paid out of certain Lands appropriated for that Purpose, and are divided into Militia and regular Troops. The regular Troops are called *Courtchis*; they were originally of *Tartary*, a stout hardy Race of People who lived in Tents. These are the Soldiers which are properly called *Cooselbashis*, or Red-heads, so stiled when they came to the Assistance of *Cheik Sefi*, the Founder of the late Imperial Family, for which Service he allowed them the Honour of wearing red Caps or Turbants, of a particular Form, like that he wore himself. These *Cooselbashis* remained in their Tents, as well in Time of Peace as War, and employed themselves in feeding, buying and selling of Cattle, from whence they were called *Courtchis*, or Shepherds.

The Service they did to *Cheik Sefi*, and their Zeal for the Religion of the *Imans*, procured them great Respect, and they possessed the chief Posts both in the Court and Army; and from these the *Persian* Soldiery, and afterwards all the *Persians* in general, obtained the Appellation of *Cooselbashis*, a Name formidable to the *Indians*, *Turks* and *Tartars* in the last Age; and it was by this Generation that the *Turkish* Language was introduced into the Court of *Persia*, and the Northern Parts of that Kingdom, where they speak it much more than the *Persian*. The *Cooselbashis* held the first Rank in the Kingdom till the Reign of *Abbas* the Great, who endeavoured to suppress them upon account of the unreasonable Influence he observed they had in all Affairs of State, deposing and setting up what Princes they thought fit, like the *Turkish Janizaries*. He was so jealous of his own Son, on account of the Respect he had observed they paid him, that he caused him to be put to

Death, and dispersed the *Cooselbashis* in small Detachments through all the Provinces of the Empire. These Troops serve on Horseback, carrying a Bow and Arrows, a Sword, Poinard, and Lance, with a Hatchet at the Saddle-skirts; and for Defensive Arms have a Shield and Helmet; they are commanded always by their own Officers, and their General is called *Courchibathi*, or Commander of the *Courtchis*.

Both the *Courtchis* and *Militia* have their Pay out of the Lands of the State of the respective Provinces, and enjoy it as their Inheritance, from Father to Son, if they do not refuse to bear Arms: They are obliged to march to the Place of Rendezvous on twelve Hours Notice, and every Year pass in Review before a Commissary sent from Court, or before the Governor of the Province.

7. The Troops of the *Shah* are two Bodies, which *Abbas* the Great instituted. One consists of twelve thousand Men, and are called the Musketeers, because instead of Bows and Arrows they carry Muskets, and though they march on Horseback, yet like our Dragoons they fight on Foot. *Shah Abbas* used to oppose them to the *Turkish Janizaries*, of whom he had observed the Enemy made great Advantage in their Engagements with him. Before this Time neither Foot-Soldier or Fire-Arms were ever heard of in *Persia*, and their Neighbours the *Tartars* have no Foot among them to this Day. The other Body consisted of Ten thousand Horse; these were called *Coulars*, and carried Fire-Arms also instead of Bows. They were called *Coulars* or Slaves, to signify their Devotion to their Sovereign, or as some say, because they come from those Countries from whence the *Persians* had their Slaves, as *Georgia*, *Circassia*, &c. Part of them are sent as Presents to the *Shah* when they are young; and the rest are descended from the People of those Countries, who are settled in *Persia*. They almost all profess the *Mahometan* Religion, though descended from Christian Parents. *Abbas* the Great had a particular Affection for this Body, and used to call them his Horse *Janizaries*. They are tall well-made Fellows, in whose Courage and Fidelity the Shah has a particular Confidence; for as they scarce know the Country or Relations from whence they sprang, and can have no other Views, than to recommend themselves to their Master by their Services, they are entirely devoted to the Crown, and obey every Order without Hesitation; and from among these, the Court usually prefers Men to the highest Posts; so that considering the Number of *Georgian* Women which are married into *Persia*, and the Posts the Men who derive themselves from thence possess, the *Persian* Court may, one half of them, probably be of *Georgian* Extraction.

It is observed, that in *Persia*, as well as *India*, the Word *Slave* is an honourable Title, and preferable to that of Subject; nay, a certain *French* Author tells us, that the Word *Koulam Shah*, or King's Slave, is equal to that of Marquis in *France*, because all that have that Denomination are sure to be preferred to some Post if they behave well. Besides these, there are two other small Bodies, the one called *Sophi's* or *Sephi's*, instituted for a Guard to the King's Person by *Cheik Sefi*; these are not above two hundred Men, and wear the *Sophi's* Cap on their Heads, and for their Arms have a Sabre, a Poinard, and an Ax, which they carry on their Shoulders. The second, called the *Ziezari*, or the Six hundred, who are all of the Size of Grenadiers, stout young Fellows, instituted by *Abbas* the Second for a Guard to his Person, Anno 1654. The Monarchs of *Persia*, before that Time, had no Guards in the Palace, or when they went abroad, for the *Sephis* only served to make a Show at Festivals, and on publick Occasions; they wear long red Caps of the Form of a Sugar-loaf, and their Arms are a Musket, Sabre, and Poinard, which are adorned with Silver, and exceeding fine; they are under the Command of the General of the Musketeers, and a small Party of them do Duty at the Palace Gates.

All the Troops of *Persia* are comprehended under these two Names, of *Courtchis* and *Coulars*, that is, Shepherds

Shepherds or Slaves, by which they understand the Soldiers of the old or new Establishment. The Shah finds all the Troops with Horses, Arms, and Accoutrements, but every Man provides himself with Cloaths according to his Fancy, the Soldiers having no particular Livery, any more than the Servants of the King's Household, or of any great Man. There was in the Reign of *Abbas* the Great, a Body of twelve thousand Men, that belonged to the Artillery, but they were discharged in the Reign of *Abbas* the Second, and the *Persians* had no Artillery, unless some useless Guns in the Front of the Palace at *Ispahan*, and in some other great Towns, which are more for Show than Service; till they were new disciplin'd of late Years by *Shah Nadir*.

8. Their Armies were never large, considering the Extent of the Empire: *Abbas* the Great, who made such considerable Conquests, had never more than a hundred and twenty thousand Men in his Service in all the Provinces; and the Soldiers have been so ill paid in the late Reigns, that they have deserted, and gone into foreign Service, or applied themselves to other Employments, which the Courtiers winked at, putting their Pay in their Pockets, and never filling up their Places. The *Persian* Troops not being troubled with Artillery or Baggage, make prodigious swift Marches, and fall upon an Enemy frequently in his Camp or Quarters, with incredible Fury, when he least suspects such a Visit. At other Times they cut off his Provisions, and turn the Waters from their usual Course, and having sufficiently harraßed him in a long March through a desert Country, when he is fatigued and dispirited, fall upon him. When an Enemy makes Head against them they will fly till they have drawn him into some disadvantageous Ground, and then return to the Charge again.

In their Retreat, as has been observed, they shoot more Arrows than when they advance, as History acquaints us was the Practice of the ancient *Parthians*. The *Persians* never throw up any Intrenchments about their Camps, their Fortification is some Mountain or difficult Pass; but in Sieges they intrench, and usually take a Place by undermining it; and it is thought that no People understand Mining and subterraneous Works better than the *Persians*. It was thus they took *Erivan*, the Capital of *Armenia*, from the *Turks* the last Time. This City, in a very short Space, found almost every Part of it undermined; but as the *Persians* do not trouble themselves with Artillery, so neither have they any Bread-waggons or Sutlers amongst them, and yet their Camp is generally as well supplied as a Camp need to be, the Country People continually following them with Provisions. Indeed, as Rice and Fruit is almost all they want, it can be no difficult Matter to supply such small Bodies as take the Field in *Persia*, especially as they are perpetually in Motion, and seldom stay long in a Camp.

When they are apprehensive of an Invasion, their constant Method is to withdraw all the People on the Frontiers, and destroy the Country in such a Manner as the Enemy may find Nothing to subsist on, not leaving so much as a Spire of Grass, or a Tree upon the Ground; but they give the Husbandmen Time to secure their Grain, Fruits, and Forage, by burying them, with most Part of their Utensils, in deep Pits, which they will do in such a Manner that it is almost impossible to discover them; and as the Earth is very dry, they receive no Manner of Damage. The Army having thus destroyed the Country for eight Days Journey together, they encamp near it in separate Bodies, and as they see Occasion, fall upon the Enemy and distress him in his March; sometimes they fall upon one Quarter of his Camp, and sometimes on another, in the Night-time; and if they cannot by this Means put a Stop to his March, they retire farther into the Country, driving the People still before them, and destroying every Thing as before; and by these Means they have defeated the greatest *Turkish* Armies.

When the Enemy are retired, every Man returns to his Lands again. As for the Houses, those of the common People are no great Loss, they are soon run up with Clay or such Materials as they find upon the Place.

The *Persians* are said to found their Conduct upon this Dilemma, either the Enemy will invade us with great Numbers, or but few; if he brings great Numbers, considering the Extent of desert Ground he must march over, it is impossible he should subsist; if their Numbers are but small, we shall harraß them in their March till they come to Nothing, without running the Hazard of a Battle.

9. The *Persians* are excellent Marks-men, as well with their Fire-Arms, as their Bows and Arrows. Their Colours are made of rich Silks, in much the same Manner as our Horse Standards; for a Device, they write some Passage of the *Alcoran*, or part of their Confession of Faith, and sometimes have a Lion, with the Sun rising over his Back, wrought in them. The great Standard-Bearer, whom they call *Alemdar Bassa*, is one of their principal Military Officers. The Management of the Soldiers Pay is much commended, because they do not suffer it to pass through their Officers Hands, but every Man receives it of the Farmers of such Lands as are appropriated for that Purpose; the Officers Pay is very good; the General of the Musketeers, and the General of the *Coulars*, have each of them above three thousand Pounds a Year; and as the Lands assigned for the Payment of it are valued mighty low, it is thought to amount to four Times as much.

In time of Peace, they usually keep a Body of six or seven thousand Men in *Chaldea* towards *Babylon*, to prevent the Incursions of the roving *Arabs*. The Governor of *Armenia* has about five thousand Men under his Command, and the Governor of *Georgia* a like Number. In *Chorassan* they have usually eight thousand Men to bridle the *Usbeck Tartars*, and such another Body in the Province of *Candabar*, towards *India*, and these Troops being the Outguards of the Empire, and almost in constant Action, were esteemed pretty good; but as for the rest, who are cantoned in the Inland Country, they enjoyed so long a Peace, that even Travellers observe, they had not the Air of Soldiers.

In those Parts of the Country, where they have Sea for a Boundary, they keep scarce any Troops, inasmuch, that in *Gilan*, and *Mazenderan*, which lie on the *Caspian* Sea, the *Cossacks* have landed small Parties, and plundered the Country for several Days together; and here the *Muscovites* very lately fixed themselves with very little Opposition, though it be one of the richest and most fertile Countries in the Empire. The *Persian* Generals are perplex'd with nothing so much as the stupid Conduct of the Court, in attending to the Predictions of their Astrologers. These Men are ever averse to War, because they are obliged to take the Field with the Prince, and therefore seldom fail to pronounce it unlucky to enter into one on any Consideration whatever; and if ever they are brought to approve of a War, they must prognosticate the lucky Minute, when to encamp, and when to march, &c. So that the Generals lose the great Advantages which might be made sometimes, by waiting till they consult the Stars. The favourite Women, and the Eunuchs are no less averse to War than the Astrologers; for in losing their Prince, they lose their all, and therefore they constantly fall in with the Astrologers, to divert their Lord from every Enterprize which carries a Face of Danger.

All this must be understood of the old Line of which *Thamas* the Son of *Hussein* deposed by *Mer-Ways*, and afterwards restor'd, depos'd again, and at last put to Death, by *Thamas Kuli Kan*, or with his Privy, who thereupon assumed the Title of *Shah Nadir* was the last. It is a Thing surprizing, that considering the great Extent of Coast which they have upon the *Persian* Gulph, and the Ocean on the South, and the Number of their Provinces bordering upon the *Caspian* Sea, they should never think in Earnest, or to speak with the greater Propriety, should never think at all of raising a Naval Force, which if they had done, would have rendered them secure at Home and respected Abroad.

The only Reason that can be assigned for this is, their Neglect of Trade, which Defect in their Constitution, if the ingenious Reader will attentively consider, he will without Difficulty discover, that it is the sole

Source of the frequent Troubles, Rebellions, and Revolutions, which have so often brought the *Persian* Government to the Brink of Ruin. This will be the more obvious to the Reader, when we come to state the Nature of Property among the *Persians*, from whence it will appear, that the landed Interest in that Country is tolerably secured; but as the like Provision is not made for the Money'd Interest, People do not turn themselves sufficiently to those Methods of Subsistence that would make the Government easy, and themselves happy.

10. The Lands of *Persia* are either such as are cultivated, or such as are uncultivated, and uninhabited, of which the latter are ten to one more than the former. The Lands in Occupation are of four kinds; the Lands of the State, the *Shah's* demefne Lands, the Lands of the Church, and lastly, those belonging to private Men. The Lands of the State contain much the greater Part of what is cultivated, and are in the Possession of the Governors of the respective Provinces, who out of them take their own Revenue, and assign the rest for the Payment of their Officers, and the Troops they are obliged to maintain; for every Soldier has his Pay assigned him upon some Village or Farm, in the same Manner as in *Sweden*. The Demefne Lands are the *Shah's* particular Estate, out of which are paid the Officers of the Household, and the Troops he maintains over and above those which are maintained at the Charge of the respective Provinces, and the Residue are given among the Courtiers and Favourites; or managed by the Viziers and Intendants, who remit the Produce of them into the Treasury.

The Lands which belong to the Church, are the Donation of Princes, or private Men, and are accounted sacred, so that they are never taxed or confiscated for any Crime whatever, and after one Year's Possession, the Title of them cannot be called in Question, on any Account whatever. The Lands of private Men are held of the Crown for the Term of ninety nine Years, paying an inconsiderable Quit-rent; and at the Expiration of the Term of ninety nine Years, they are allowed to renew their Lease for the same Number of Years on advancing one Year's Income. As to the cultivated Lands, if any Person desires to build upon them, or to convert any Part of them into plowed Fields or Gardens, the King's Officers procure him a Grant for ninety nine Years, under a small Rent, which Terms are renewed as other private Estates; so that all Ranks of Men derive their Estates immediately from the Crown, and by this Method have a Perpetuity, on Payment of their Fines and accustomed Rents.

The Officers of the Shah, as well as private Owners, let out their Lands to Husbandmen, upon Condition of receiving a third Part of the Produce usually, but the Rent is more or less, according to the particular Agreements of the Parties; and the Grain in *Persia* being subject to be destroyed by Hail, Drought, Locusts, and other Insects, the Tenants never fail to insist on an Abatement in these Cases. When the Destruction is very great, the Husbandmen take the withered Branches of Trees, and the damaged Ears of Corn, and resort to the Shah's Officers, complaining of the Season, and their Inability to pay their usual Rent, if they have received never so little Hurt; their Complaints are very loud, and they frequently make an Advantage of the Misfortune.

Private Landlords are less subject to be imposed upon in these Cases, having the Lands under their Inspection, but then their Tenants are not so much oppressed, and subject to such Hardships as the Tenants of the Crown. The Shah's Officers frequently pretend they have no Authority to make Abatements, and thereupon whole Villages go up to Court, and deliver their Petitions to the Shah in Person, insomuch that there is seldom less than seven or eight thousand People attending at *Isfahan* on these Occasions. The Court usually sends Orders hereupon to the Provinces to make such Allowance as the Nature of the Case requires, or depute Commissioners to enquire into the Truth of the Complaint, but in either Case the Crown is usually defrauded; for the Countrymen so well understand the Force of Bribes,

that they commonly make a Purse, and procure a favourable Representation of the Case from the Officers sent to check them.

The Shah and private Owners have the like Profits of the Husbandmen's Cattle, as they have of their Corn, as the third Fleece, and the third Part of the Breed; and of Fruit, the Crown has still a greater Share, there being not that Charge of manuring and cultivating Fruit-trees, as there is of the Grounds which produce Grain.

The Governors of Provinces receive the same Profits out of the Lands of the State, towards the Payment of the Officers, and Troops of the Province; as the *Shah* does out of his own Lands, and every Province besides makes large Presents, from Time to Time to the Court, of the best the Country affords, whether Silk, Grain, Fruits, Cattle, or whatever is in Esteem among them; and these are sent up in such Quantities, as are sufficient to supply the *Shah's* Household, and therefore may be accounted a considerable Part of the Revenue. The *Shah* has also the seventh Fleece, and the seventh of the Breed of the Cattle, in those Lands which are not appropriated to his Use, and this is a great Addition to his Revenue, for the Shepherds of *Persia*, like the ancient Patriarchs, possess vast Flocks and Herds, on which they continually attend, living in Tents, and removing from one Place to another, as they can meet with Pasture for them; for those Lands which are not the Property of particular Persons, are at Liberty for all Men to graze upon, though the *Shah's*; and this Payment of the seventh Beast seems to be an Acknowledgment of his Property in them. These wealthy Shepherds the People of the East call, *Saranetchin*, from whence we have the Word, *Saracen*, that is to say, an Inhabitant of the Plains, for they live in Tents, far from Towns, two or three hundred together, and sometimes you see a thousand or two encamped in one Place; they perfectly cover the Plains with their Flocks and Herds, that sometimes you may be two or three Hours in passing through them; and the *Shah* has an Officer called *Ichomban Bakh*, or chief of the Shepherds, residing in every Province, who takes the seventh of the Cattle for the *Shah's* Use, viz. of Sheep, Asses, Mules, Camels and Goats; as to Horses, it seems the *Shah* is entitled to every third Colt; of Silk and Cotton also, it is said the *Shah* has a third Part over the whole Kingdom.

Minerals and precious Stones belong to the Shah only, and he has Two *per Cent.* of all Money. The Money that is raised by the Waters is another considerable Part of the Revenue, for every Person pays for their being let into his Fields or Gardens; nothing will grow in that parched Country without it. A Tribute is also paid to the Crown by all People who are not of the Religion of the Country, whether Natives or Foreigners, and this amounts to a Ducat a Head; and there is a Tax of ten Pence on every Shop of the handicraft Trades, and twenty Pence on the rest. The Customs and Port Duties are another Branch of the Revenue, but these do not amount to much here, for they have no considerable Port except *Gambron*. As for the Merchandize carried into *Persia*, or out of it, by Land, they only pay a small Sum for a Camel's Load, and proportionably for every Mule or Ox, without examining what the Packs contain. But that Part of the Revenue which is merely casual, exceeds all the rest, viz. what arises by the confiscated Estates, and the Presents which are made by the great Lords, Governors of Provinces, &c. and particularly those which are made on New Year's Day. They present the Shah with wrought Silks, Horses, Asses, beautiful Boys and Girls, Gold, Silver, precious Stones, Perfumes, and every thing which is rich and curious, and may serve for Use, Ornament, or the Pleasures of Life; and as there are several handicraft Trades which pay no Duties to the Crown, as Carpenters, Masons, and some others, these are obliged to work for the Shah when he requires it, without Pay, whatever Buildings or Palaces the Shah erects or repairs, he has only the Materials to find, the Warden or Chief of the Trade is obliged to send a certain Number

Number of Workmen, which saves the Treasury a great deal of Money, and therefore the Labour of those People may well be esteemed Part of the Revenue. The Maintenance of Ambassadors, and the providing them with Carriages, is done also at the Charge of the Country, and costs the Shah Nothing. When he has a Mind to reward any Person for any signal Piece of Service, this is done also at the Expence of another; he sends him perhaps to one of the Chans or great Courtiers, with the *Calat* or Royal Vest, for which the Chan makes the Messenger a Present usually of ten times the Value or more, according to the Post he is in. The Shah sometimes expresses the very Sum he expects should be paid, which is commonly exceeded out of Respect, and as a Proof the Person values the Prince's Favour. But notwithstanding the Impositions above-mentioned, the People do not seem to be oppressed or impoverish'd; even the Tradesmen and Husbandmen appear to be in easy Circumstances, and few of them but have Rings on their Fingers and Arms. One great Advantage to the Subject is, that scarce any of the Duties are farmed, and in Times of Scarcity the Court is very indulgent and ready to make Abatements of their Rents and Taxes in Proportion to the Occasion. As to Poll or personal Taxes there are none in *Persia*, unless that which is levied upon those of a different Religion; nor are necessary Provisions of any Kind taxed.

What the Revenue of the Crown may amount to in the whole, is very uncertain, depending so much as it does upon Casualties; those who have attempted to compute it, say, that one Year with another the Revenue amounts to four Millions of our Money; which, considering their Troops are most of them paid out of the Lands of the State, that are not reckoned into this Account, is very considerable; but as the Splendor and Magnificence of the *Persian* Court is much beyond any thing we have in *Europe*, possibly very little of it may remain in the Treasury at the Year's End. The Court, whether it remains at *Ispahan*, *Mesched*, or any other Capital, or removes from one Province to another, as it used to do during the Summer, if we consider the Women, the Eunuchs, and other Officers and Servants, seldom consists of less than ten thousand Persons which belong to the Household, not including the Troops, or the great Men and their Dependants, which it must require an immense Sum to maintain. The Officers of the Revenue send every Year up to Court the State of their Province, and what every Town and Village produces, examined and attested by the principal Inhabitants of the respective Places, which are looked upon as so many Debentures; and these given in Payment to those who are entitled to Pensions or Salaries from the Crown. In like Manner every Governor pays all the Officers and Soldiers of his Province, with Assignations on the Lands belonging to the Province; there is very little Money disbursed on those Occasions, and where the Pay is small, as that of the common Soldiers, and inferior Servants, one Man is deputed from the Troop or Company to receive the Wages of the rest, and the Residue, after all Demands are satisfied, is remitted into the Imperial Treasury.

It may not be amiss to add a few Words concerning the Seals under which Acts of State are passed in *Persia*; they have five Seals which are used in five several Branches of Business, one in all such Affairs as concern the demesne Lands. A second for Commissions, Letters Patents, &c. The third only in Military Affairs. The fourth about the Revenue; and the fifth in Things relating to the Household. There are no Arms engraven upon them, but on one there are the Names of the twelve *Imans* or Patriarchs, on the others, a Scrap of the *Alcoran*, or some pious Expressions, shewing their Dependence on God, and his Prophet *Mahomet*. The Form of one of the Seals is round, two others are square, and the other two are of an irregular Form. The largest are about the Bigness of a Crown-piece, and the others about half that Bigness. They are made of Turquoises, Rubies, Emeralds, or some other precious Stones. The principal Seal the *Shah* always wears about his Neck, and on every *Friday* all Instru-

ments which require these Seals, are carried to the Palace, and sealed in the *Shah's* Presence. The Impression is made on the Paper, with a kind of thick Ink, and not on Wax as with us; the same Usage prevails in most of the *Eastern* Courts.

II. The Generality of the World will agree from this View of the *Persian* Policy, that there is no Reason, so long as their Government continues in a settled Condition, to look upon the whole Nation as Slaves and Beasts of Burthen. It is very certain, that there are great Errors in this, as well as in all the Constitutions founded in the *Khoran*, and it must be so, for that Book itself is a mere System of Tyranny; and which is worst of all, it is pretended that this System came from God. It is upon this Principle, that the absolute Power of their Princes is built; for as to all the Qualifications besides, they are brought in from the Remains of the old *Persian* Government, which by their apparent Wisdom, and natural Rectitude, have continued in Use through all Invasions, and in Spite of all Changes of Government. Thus the Governors, Treasurers, and Secretaries of Provinces, are precisely mentioned, both by sacred Writers, and by the *Greek* Historians, as well as modern Travellers. The profound Respect born to the *Shah*, is the Remains of that Reverence paid to their Emperors of old, of which the Heathen Writers are full, which *Alexander* would have transferred to himself, and for which chiefly the *Romans* looked upon the *Parthians* as a barbarous Nation.

But above all, the new-Years Gifts are the strongest Testimonies of the Difficulty there is in extirpating ancient Customs amongst any Set of People. This was the Practice in the most early Times, and the *Persian* Emperors with all their Pride were then very humble to and familiar with their People. They eat and drank with them in Publick; they gave Audience to all who desired it, and as they received Presents even from the meanest, so they received every Man's Petition, and granted almost every Man his Request.

There are many other Things, in which the modern *Persians* resemble very much their remotest Ancestors, but in nothing more than in their natural Inclination to and wonderful Genius for Poetry. This is so universal, that every *Chan*, and indeed every rich and powerful Man, keeps a Poet in his House, to whom occasionally they give Themes, and it is wonderful how well and how suddenly they execute them. These Sort of People also frequent Coffee-houses, and other publick Places, where, for the Amusement of idle People, they repeat their Performances with infinite Spirit, and with inimitable Grace. It is certain, that the *Persians* are very nice in their Rhime, but somewhat loose in their Numbers, that is to say, they regard Cadence more than Quantity. Yet no Nation in the World has more of that Enthusiasm, which is the Essence of Poetry, the very sound of their Verses sufficiently distinguishes the Subject, even to the Ears of those who are little acquainted with their Language; so that Foreigners are never at a Loss to know, whether their Poems are merry or melancholy, humourous or grave, intended to instruct, or calculated only to divert.

In short, almost all their Learning consists in Poetry, for their *Proverbs* are in Rhime, so are their Fables, and they have Histories in Verse of a great Length, which though sufficiently crouded with Fable, are seldom or never without a Ground of Truth. It is true that their modern Writers, many of them, make Use of Prose, but even this is intermixt with Verse, and they are also very apt to quote Verses in Conversation, which they are observed to do with great Propriety. But it is worth our Notice, that no kind of Writing is here so much in Fashion, as Satyr, which is mostly national, and falls, generally speaking, upon their Neighbours. As for Example, they represent the *Turks* as Brutes and Barbarians; and whenever they have a Mind to represent a Blockhead, they are sure to paint him in a *Turkish* Dress. The great Indolence, Effeminacy, and Luxury of the *Indians*, are likewise common Topicks of Railery, and so are the Faults and Follies of the *Tartars*; the Pride and Self-sufficiency of the *Georgians*; the Cunning

ning and Self-interestedness of the *Russians*, and the Covetousness of the *Europeans* are frequently exposed by their Wits.

They are far from being ignorant of Musick as a Science; they learn by Rule, and they play by Note, though in a Manner so different from ours, that it is a long Time before it becomes pleasant to a Stranger's Ear. There is no such Thing as Singing in Parts, but they sing one after another, and they generally sing to some stringed Instruments, like the Lute or Viol: Their Men sing better than the Women, but there are not many of them that practise it, Singing being look'd upon as a scandalous Employment in *Persia*, as well as Dancing. People of Condition will not suffer Children to learn either the one or the other, but it is left almost entirely to the common Wenches and Prostitutes, as it is indeed all over the East. It is reckoned an Indecency in People of any Reputation to sing, and it would render a Man contemptible who should attempt it in Company. The *Persians* call their Singing-women *Caine*, intimating that they derive their Skill from the Daughters of *Cain*, who they pretend were the first Inventors of Singing and Musick in the East.

They have a great Number of Instruments both of String and Wind Musick, some in Shape like our Hautboys and Flutes, others like the Viol, Harp, Virginals, Kettle-drums, and Trumpets; but surely their Trumpet is the most monstrous Instrument for Size and Sound that can be met with; it is commonly seven or eight Foot long, and proportionably wide at the great End, and as much as a Man can hold up; these and their Drums, in a Manner, drown all other Sounds, though the lesser Instruments, as has been observed, have no great Harmony in them: And indeed their Musick, as it is called, serve chiefly instead of Clocks, to let People know the Time of Day or Night, sounding constantly at certain Hours, for Bells they have none; and when the Shah or any great Man goes out of his Palace, you have always Notice of it by these Drums and Trumpets, who stand over the Palace Gate, or in some Balcony or Gallery and play upon such Occasions, being heard at a vast Distance. In some Places the Musick and Dancing Girls make Part of a great Man's Equipage, and run before him when he goes abroad.

It is observable, that the Strings of their Instruments are never made of Gut, the touching of any thing belonging to a dead Animal, especially the Entrails, being held a Pollution; they make them therefore of twisted Silk, or Brass Wire, and it is not only indecent, as has been observed, for People of Condition to play upon a musical Instrument, but it seems also to be prohibited by their Religion, and therefore their Ecclesiasticks and Devotees will not so much as be present at such Entertainments.

Astronomy is studied in *Persia* purely for the Sake of Astrology, which last they term the Revelation of the Stars. The People of the East look upon Astrology as the Key to Futurity, and they have an insatiable Curiosity for prying into Things to come. This seems to be the principal End of their Studies, and they look upon a Person to be stupid and ignorant to the last Degree, who speaks slightly of this Science. The Astrologers of *Persia*, at least the most celebrated, are all Natives of the Province of *Charasan* or *Bactria*, and the most noted among them of the Town of *Genabed*. The Shah never entertains an Astrologer who is not of that Town. The Reason that the Astronomers here have more Skill in their Art than elsewhere, it is said, is because the Air is drier and purer, by which Means they have a better Opportunity to observe the Motions of the Stars. If we consider the Number of Astrologers that are found in *Persia*, the Rank they hold, and the large Pensions they receive from the Crown, we may easily guess at the Confidence that People put in them; they are paid by the Government no less than four hundred thousand Pounds *per Annum*.

To the Post of chief Astrologer to his Imperial Majesty there is annexed a Pension of ten thousand Pounds *per Annum*, and to the second Astrologer five thousand Pounds *per Annum*, and to the rest according to their

Skill. They have also in Presents annually two hundred thousand Pounds, and yet they are sometimes arbitrarily punished, and put to Death for the most trivial Offences, and even for Actions the most innocent in themselves, according to the Caprice of their Prince. Sir *John Chardin* relates, that in the Reign of *Sefi*, when the Shah and all the great Men were assembled to see some Criminals of State cut in Pieces, and the Chief of the Astrologers was there among the rest; the Shah viewing attentively the Countenances of his Courtiers, observed that the principal Astrologer shut his Eyes at every Stroke of the Sabre, as not able to behold so horrid a Slaughter; he thereupon called to the Governor of a Province who sat near him, and bid him put out the Eyes of that Dog who sat at his Left Hand, since he did not use them; which was executed in an Instant on the unhappy Astrologer, which Part of his Destiny the Stars never revealed to him.

There are constantly a certain Number of Astrologers in Waiting at the Royal Palace, and always some of the chief of them about the Shah's Person, except when he is in the *Haram* with his Women, who advertise him of the lucky or unlucky Moments. Every one of them carries an Astrolabe hanging at his Girdle, in a neat little Case not bigger than the Hollow of one's Hand; they are consulted not only in Affairs of Importance, but frequently upon the least Trifles; for Instance, if his Imperial Majesty shall go abroad; if it be an auspicious Hour to enter the *Haram*; if it be a proper Time to eat, or to give Audience, &c. When these Questions are asked, the Astrologer immediately takes out his Astrolabe, observes the Situation of the Stars, and by the Assistance of his Tables makes his Astrological Conclusions, to which they give entire Faith as to an Oracle, offending against which would be dangerous.

Their Astronomers observe pretty justly the Eclipses of the Sun and Moon, and often foretel the very Moment wherein those Luminaries will be obscured; but there are Instances of their being mistaken half an Hour, and especially in Eclipses of the Sun; but they differ from us in Nothing more than in the Calculation of the Vernal Equinox, there being sometimes an Hour's Difference between them and the *Europeans*. Comets, they apprehend, always portend some great Calamity, but generally suppose their malign Influences are directed against some other Empire than their own. They had neither Celestial Globes, or Charts, or Telescopes, to observe the Constellations, till the *Europeans* imported them, they have since indeed endeavoured to imitate their celestial Globes, and had only some Representations of the Constellations before in a Book called, *The Schemes of Abdal Rhamen*. It is observable however, that the Figures were much the same as on our Globes; the Longitudes and Latitudes of the Stars are also marked, but a little different from ours. The *Persians* generally make forty eight Constellations, and the Names of them, for the most Part, are the same we give them; but some of them are different. The only Instruments they use in any of their Operations, are the Astrolabe and *Jacob's Staff*; and as it is with these alone they take the Elevation of the Pole, it cannot be supposed that their Latitudes are very exact; their Astrolabes, it is true, are very curiously made, and commonly by those who use them.

The *Persian* Almanack is called *Takumi*; it is properly a Mixture of Astronomy and judicial Astrology, containing an Account of the Conjunctions, Oppositions, Aspects, Longitudes, Latitudes, and, in short, the whole Disposition of the Heavens. It contains also Prognosticks of the most notable Events, as War, Famine, Plenty, Diseases, and other Accidents of human Life, with the lucky or unlucky Times for transacting all Manner of Affairs, directing the People to regulate their Conduct accordingly. The Festivals also are marked, as in our Almanacks, but whereas we divide the Year into four Parts, they make only two, Winter and Summer. What is most observable is, that though there are great Numbers of these Almanack-makers, and though they frequently disagree even in their Astronomical Calculations, as well as their Predictions,

dictions, they are nevertheless looked upon as infallible ; a Thing scarce to be credited, if we had not some Examples of the same Kind nearer Home.

Their Prognostications are generally taken from the Moon, their Artists believing that this sublunary World, as it is called, is much more influenced by this Planet, than by the Sun. And these Astrologers, like other Oracles, endeavour constantly to deliver themselves in dubious and equivocal Expressions, which may bear various Meanings ; so that if their Predictions prove true in any Sense, or but in Part, they are sure to meet with Applause tho' they should fail in some Circumstances. They seem to regard the Earth more than the Heavens, and to be govern'd by the Consideration of probable Circumstances, rather than the Constellations, and their Predictions on that Account are frequently found true. For Instance, their Almanacks are always published in the Spring, when the Winter is passed, and according to the Weather they then had, it is no difficult Matter to foretel, whether they shall have good or bad Crops in the Summer, especially in a Climate where it does not vary as in *Europe* ; and from the same Premises they will be able to pass a tolerable Judgment on the Health or Sickness of the ensuing Seasons. But above all, as the Astrologers are always about the Court, and have so great a Share in the Administration of Affairs, and such Credit with all the World, they may be supposed to make very shrewd Guesses in Relation to Politics. They cannot but observe the Humours and Dispositions of the Prince and his Favourites, the Likelihood there is that one will be restored, and another disgraced. Nay they know very well what an Influence themselves have in these Cases, insomuch that there very rarely happens a considerable Alteration in the State, but it is brought about, and is indeed the Effect of some of their own Predictions.

But Astrology is not the only Foible of this kind, for they have various other Sorts of Divination, which have grown into Use by Degrees, under the several Changes of their Government. It is true, that for the most Part their Astrologers practise these, but not exclusively, for there are others who practise them likewise, more especially Geomancy, which is the favourite Method of Divining throughout all the East. Charms and Amulets against Diseases and Enchantments, are another Part of their Superstition ; you will not find a *Persian* without his Amulet, and some of them almost loaded with them, they put them also about the Necks of their domestick Animals ; these Amulets have certain Inscriptions on Paper, and sometimes on precious Stones, and these Inscriptions they wear in little Bags about them ; they contain some Passages of the *Alcoran*, or Sentences of their Saints or Prophets, applicable to the Disease or Enchantment they would avert : The *Persians* also are extravagantly superstitious in Relation to Days and Times. They depend in these Cases, as much on the Diviners and Astrologers, as a Child upon its Nurse ; for Instance, when the *Shah* is upon a Journey, the Astrologers will make him rise at Midnight, and begin his March in the worst Weather that can happen, and perhaps out of the high Road, to avoid the unfortunate Hour, or his evil Stars, as from Ignorance or Knavery they most impudently call them.

We must not however imagine, notwithstanding these Follies are very general, that there is not some kind of real and useful Learning amongst this great Nation. Moral Philosophy is in high Credit with them, and is not only taught but practised ; they have many excellent and judicious Books upon this Subject, in which the Vicissitudes of human Life, and the Folly of placing Happiness in sensual Enjoyments, are very fully and very finely stated. As for the ordinary Parts of Education, and such as may fit Youth for common Business, they have as many Conveniences as other People. There are abundance of Schools in every Town, where, besides the *Persian*, is taught the *Arabick*, which is their learned Language ; the *Alcoran*, and their other sacred Writings, are all in this Language, and the *Alcoran* is looked upon as the Standard of good Language both for Grammar and Rhetorick. People of Condition

chuse to have private Tutors for their Children, rather than send them to these publick Schools ; and no Nation it is said, is more intent on the Education of Children, and breeding them up to manly Exercises than the *Persians*. Their Schools are called *Mekteb*, which signifies an Entrance ; this being, say they, the Gate by which Lads enter into the Sciences.

There are, as has been said, many in every Town, and the Expence of Scholing is very small. They learn the *Persian* and *Arabian* Languages, with Writing and Accounts, which when they are arrived at some Perfection, in, they are removed to some College, or *Medres*, as they call them, which signifies a Place where their Doctrine or Principles of their Religion are taught. Their Colleges are all endowed, and some of them very richly ; the largest have fifty or sixty Apartments, and to each of them belong two Chambers. In those Colleges that are best endowed, every Scholar has about two Shillings a Day allowed him, which he lays out as he thinks fit, for they do not common together.

There are some Colleges where the Students have no more than a Penny a Day, and yet Interest is made to get into one of these, on account of having a Lodging *gratis*, and some other casual Advantages. Many here are, who get in without any Design to study, and live and grow old in those Houses, and are allowed to have their Wives and Children with them, whose principal Design seems to be in Ease and Idleness. There are abundance of Colleges in the great Towns of *Persia*, and some in the Villages. The *Persians* lay out the greatest Part of their Charities in publick Foundations. In the first Place, they usually build a Caravan-fera for the lodging of Travellers *gratis* ; afterwards a Bagnio, a Coffee-house, a Bazar or Market-place, and they purchase also a Garden, and these they let out, and apply the Revenues arising from them towards the building and endowing of a College. The Founder and his Heirs have the Appointment of the Head and Governors of the Society, and if the Founder's Estate happens to be forfeited to the Crown, the Shah has the Nomination. In *Ispahan* there are fifty seven Colleges, most of them of Royal Foundation, or which have devolved to the Crown ; there are Professors who teach the Sciences in every College, to whom the Scholars make an annual Allowance for their Trouble ; but as there are several who read Lectures *gratis*, the Scholars frequently resort to these, and forsake their proper Tutors.

Those Students who are Men of Parts and Learning, may have a handsome Salary in any great Man's House for instructing his Children ; for these never send their Children either to Schools or Colleges, but have them educated in their own Houses. The Head of the House admits or excludes whom he sees fit, and pays the Students their Pensions monthly, so that they shew him abundance of Respect. Besides their Colleges, there are in every Town those who teach the Liberal Arts *gratis*, and these are frequently great Officers who have been discarded, or have voluntarily retired from Court. These frequently allow their Disciples Books and Paper, and entertain them at their own Expence certain Days in the Week, and sometimes cloath their Pupils and give them Money, and by this Means they endeavour to recover their Reputation with the People, for nothing gives a Gentleman such a Reputation in *Persia*, as the instructing great Numbers of Scholars at their own Expence, and the being Patrons of Learning and Learned Men. These are Circumstances that must effectually prove, that the *Europeans* have no Right to treat the *Persians* as a rude and barbarous People.

As the Customs and Manners, so the Reading and Learning of all Nations must differ, and the wider and more remote these Differences are, the readier the Vulgar on both Sides seem to be in deriding and contemning each other ; but as this Humour proceeds from the same Principle in both Cases, *viz.* that of presuming themselves to be the Standard by which the Wisdom and Civility, the Learning and Politeness of all other Nations are to be determined ; and as this is a Point not to be defended, it ought to be given up as

no better than a popular Error in both. It has been already observ'd, that a great Part of the modern Constitution of *Persia* is derived from the ancient Form of Government that prevailed under their old Emperors, that is, the Series of Princes, who governed that which is so well known to the learned World, by the Title of the second general Empire, allowing the *Affyrian* to be the first. It is therefore well worthy our Notice, that Constitutions judiciously settled, are of so permanent a Nature, and have such an interior Strength and Solidity, as not only to resist the Power of Time, but even of repeated Invasions, to which it is certain, that no Country in the World has been more subject than this of which we are speaking. We may from hence discern, that though Nations waste away, and are lost, as well as all the Monuments of their Power and Greatness, yet the Effects of their Wisdom remain, and the Conquerors themselves are content to receive and submit, for their own Sakes, and from a Conviction of their Excellence, to the Laws of the Conquer'd.

We know that this has been heretofore observed of the *Egyptians*, we know that in much later Times it has been confessed in Reference to the *Chinese*, but I do not remember to have seen this Remark made before as to the *Persians*. Yet I arrogate nothing to myself upon this Head, for whoever reads Dr *Hyde's* learned Book, and compares it with the modern Accounts of *Persia*, must discover it at first Sight. At this Day the whole Plan of the *Persian* Constitution, except the Ecclesiastical Part of it, which is changed by the Introduction of *Mahometanism*, is very near the same that it was three thousand Year ago; and yet the *Persees*, who are the Remains of the ancient People of *Persia*, to whom that Constitution belonged, are now reduced to so inconsiderable a Remnant, that it is doubted whether there may be ten thousand Souls left in *Persia* of this Race. Those that are left indeed preserve their primitive Customs, and are authentick Witnesses of the Truths reported of them by the most learned Writers. It is indeed true, that there is another small Colony of these People in the *Indies*, and it may not be amiss to put the Reader in Mind of a Conjecture, mentioned in *Commodore Roggewin's* Voyage, that some Islands, discovered by him in the *South-Seas*, are actually peopled by the Relicts of these ancient *Persians*.

I had myself an Opportunity of conversing for several Years with a very sensible Physician, who went that Voyage, to whom I was indebted for many of the Particulars published therein, and who is dead since they were published. Of this Gentleman I very carefully enquired what the Reasons were which induced him and his Companions to advance that Notion, which at first Sight is none of the most probable. He told me the Causes were chiefly three, First, that their Complexions, in the Sentiments of those who had seen some of the *Gubers* in *Persia*, very much resembled them, and were very unlike either the Inhabitants of *Africk*, or of *India*; for whereas the former are of a black, and the latter of a reddish or Iron Colour; these were of a light Olive, and yet their Aspects differed absolutely from the *Chinese* and *Tartars*. The second Cause he assigned, was their worshipping the Sun and Fire, turning towards the East when they prayed, and using a low or whispering Voice, all of which are suitable enough to the *Gubers*, or *Gaurs* as the *Turks* call them. The third was the Innocency of their Manners, the quiet and peaceable Life they lead, the Pains they took in cultivating their Lands, and their great Industry in several ingenious Manufactures. I shall not take upon me to determine what Credit is due to these

Conjectures, but shall content myself with observing, that they are worth remembering; and considering perhaps, our Posterity may have an Opportunity by conversing with these People, to enter into them more minutely.

One thing more I recollect that passed upon this Subject, and it was this, that ingenious Gentleman observ'd to me, that though we had various Travels through and Accounts of *Persia*, yet we had no general or correct History of it, by which a curious Person might see in a little Time, what Changes had happened therein, from the earliest Ages down to the present, which he thought might be of very great Use, even though it were digested into a very narrow Compass. Upon mature Deliberation, I saw the Truth and Expediency of this in the strongest Light, and that nothing disabled us so much in this Part of the World, from forming a right Judgment of Affairs in those Parts, as the not having distinct and correct Views of the Successions of their Princes.

The famous President *Briffon*, so barbarously murdered by the Leaguers, in the Reign of *Henry III.* of *France*, was long ago satisfied of this; and to remedy an Evil, the Consequences of which he judged of very truly, he composed a large History of *Persia*, which he published in *Latin*, and digested therein an Account of the Affairs of that Nation from the earliest Ages to his own. This without doubt was a very curious and a very useful Work, with respect to Men who occupy the higher Forms in Learning, but to the Bulk of the People, I mean of that Sort of People, who believe themselves to make a Part of that learned World, it was in Reality of no Service at all. In the first Place, the Book itself is very large, written in a learned Language, and in a harsh and perplexed Stile even in that Language; for it is observable of him and of *de Thou* his Cotemporary and Countryman, that they brought the Stile of the Bar into the Narration of History, and generally stated Cases, or as the *French* Lawyers term it, wrote *Factums*, instead of giving us a natural and easy Detail of Facts. Besides, President *Briffon's* Book was chiefly grounded on the *Greek* and *Latin* Historians; what he derived from the *Persian* Writers, he had thro' the Canal of some *German* Pedants, which instead of the best, rendred it the worst Part of his Book, in which there are large Chasms; so that notwithstanding what the Title promises, it is nothing less than a compleat History; though I believe at the Time it was wrote, it would have been impossible for any to have given us a better; and it is plain, that before him, none had thought it worth his Time and Pains to give us one so good.

After making these Reflections, I became more sensible of the extreme Difficulty of representing the Scheme of the *Persian* History within so narrow Bounds as I am tied to in this Work; and yet I was sensible, that without this, all I had done was imperfect, and that the Reader must necessarily have Recourse to other Books in order to understand mine; which Inconveniency perhaps I had submitted to, if I could have told him where to have sought for better Information; but that being also out of my Power, I found myself under an absolute Necessity of trying what might be done for his Relief; this produced what follows, so that all I have said is not calculated to enhance the Value; but to excuse the Imperfection of the ensuing Section, which being the first Attempt of its kind, may be allowed some Degree of Merit, though it falls, as I am very sensible, extremely short of Perfection.

SECTION V.

A Succinct View of the *Persian* History, from the earliest Accounts down to the present Time ; in which is contained a concise Representation of the several remarkable Revolutions in that Empire, ancient and modern, the Conquests thereof by several Nations, and the Succession of their respective Monarchs, so far as is necessary to illustrate what has been delivered in the foregoing Sections.

Collected as well from the Oriental Writers, as from the Greek and Latin Historians.

1. An Introductory Account of the Nature and Design of the following View of the Persian History, and of the State of that Nation in the earliest Times, according to their own Historians.
2. Of the Persian Empire, considered as the second of the four great Monarchies, from the Origin thereof under Cyrus, to its Destruction by the Greeks.
3. Of the Invasion and Conquest of Persia by the Macedonians, and of the Situation of Affairs after the Death of Alexander the Great.
4. Of the Revival of the Persian or Parthian Empire by Schapour or Sapoors, to the entire Destruction of the ancient Persians, under the Reign of Jesdegerde Shehriar, the last of their Monarchs.
5. The Conquest of Persia by the Arabs or Saracens, under their Caliph Moavia ; and of the Time they possessed this great Country, down to the last Khalif of Bagdad.
6. The Conquest of Persia by the Mogul Tartars, and the Succession of their Princes, so long as they possessed or claimed this Country.
7. The great Irruption of that Tribe of Turcomans, distinguished by the Title Kara Kuyonlu, i. e. of the Black-Sheep, and of the Time they remained in Possession of Persia.
8. Of another Tribe of Turcomans, stiled Aku Kuyonlu, i. e. of the White-Sheep, and of their Dominion in this Country.
9. Of Shah Ishmael Sefi, the Founder of the late Imperial Family, and the Succession of his Descendants down to Shah Abbas III. who was crowned in his Cradle by Thamas Kouli Kan.
10. A brief Account of the History of Shah Nadir, from his first Appearance in the World to the Time of his being murdered.
11. An Account of Ali Kuli Kan, now stiled Adi Shah, the present Possessor of the Persian Monarchy, with some Remarks on the principal Events that fall within the Compass of this Section.

1. **T**HE ancient Histories of all Nations are, generally speaking, intermix'd with Fables, notwithstanding which the Knowledge of them is of great Use, because the Antiquities of every Country are grounded upon these traditional Histories, and without being competently versed in them, even modern Relations are full of Doubts and Difficulties ; and this we know experimentally, not only by the Perusal of Greek and Roman Authors, but from our own History, which, how obscure soever in its Original, has notwithstanding been esteemed worth knowing, and even worth the Pains of being sifted thoroughly by the most learned and intelligent Persons. It is very true, that the modern *Persian* Historians are of a very late Date, in Comparison of those Times to which their Histories refer ; but then it is to be considered, that they transcribe from their Neighbours the *Tartars*, who though it may sound harsh in our Ears, have always had amongst them very ancient and authentick Records, and from the Books of the *Persees*, or primitive Inhabitants of *Persia*, whose Writings deserve as much Credit as those of any *Eastern* Nation whatever. According to them the most ancient Monarchy of this Country began in the Province of *Aderbeijan*, or *Media*, where the People, weary of enduring those Evils that are inseparable from *Anarchy*, made choice of *Kayomars* for their Sovereign. This *Kayomars*, if we may depend upon their Accounts, was the Son of *Aram*, the Son of *Sbem*, the Son of *Noab*, and consequently his Monarchy began at no great Distance of Time from the Flood. If there was nothing in their History more extravagant than this, it might perhaps be well enough defended ; but all that they relate afterwards, of the Succession of his Descendants, whom they reckon Eleven in Number, is so fictitious, that little or no Credit can be given to it ; they stile this their first Dynasty, the *Pischedadians* from *Houschenk*, the second Monarch, Grandson of *Kayomar*, who from his strict Regard to Justice, had the Surname of *Pisheadad*, which is to say, the Just, or rather the great

Distributor of Justice. The last Monarch of this Line was *Gustasb*, which is the same Name that the *Greeks* call *Hystaspes* ; it is not easy to give any Account of these ancient Monarchs, so as to reconcile them with other Histories, but in general it may be affirmed without Prejudice to the Truth, that under this first Race of their Monarchs, the ancient *Persians* comprehended all the Princes that ruled in their Country, before the Age in which *Cyrus* was born ; so that this may be properly stiled, the fabulous or obscure Age in the *Persian* History, taking in all the Time, from the Flood to the Empire of the *Medes*, who as other Histories better known to us record, had once the Sovereignty over *Asia*.

2. The second Race of the *Persian* Monarchs is, by their Historians called, the Dynasty of the *Kanites* ; and this is, strictly speaking, that Race of the *Persian* Kings, recorded by the *Greek* Historians, who reckon up twelve, and allow them to have reigned all together two hundred and six Years, that is, from *Cyrus*, who began his Reign five hundred thirty six Years before Christ, to *Darius Codomanus*, who ended his three hundred and thirty Years before Christ. It must be allowed, that there is a very wide and almost irreconcilable Difference between the *Greek* and *Persian* Historians, with Regard to this Period of Time, and the Actions of these Princes, as the inquisitive Reader may discover, by perusing their Accounts distinctly stated in the Universal History, the noblest and most comprehensive Work of its kind, that has appeared in our own, or in any other Language.

The only Fact in which these two Histories seem tolerably to accord, is in the Appearance of the great *Persian* Legislator, whom in their Language, they call *Zerdusht*, and whom the *Greeks* stile *Zoroaster* : He flourished, according to both Histories, under the Reign of *Gustasb* or *Darius Hystaspes*, who began his Reign in the Year before Christ Five hundred and twenty two. It was this great Man *Zerdusht*, who modelled
and

and reduced into Order the Religion of the *Magi*, the fundamental Maxim of which was the Worshipping only one God under the Symbol of Light, and because they in a particular Manner revered the Sun, and paid their Devotions before a Fire, which was kept continually burning upon an Altar, the *Greeks* measuring the Religion of others by their own, took it for granted that they worshipped the Sun and the Fire; and according to that remarkable Facility they had of supplying by Fiction the Want of better Authority, they have given us very large Accounts of the *Persian* Religion, which have only served to mislead and deceive such as trusted to their Relations; for beyond all Question, what they have set down of human and other Sacrifices offered by the *Persians* to several of their Divinities, is one continued Chain of Fables, utterly repugnant to the fundamental Principles of their philosophical and theological Systems.

The *Persian* Histories relate the last War between their Monarchs and the *Greeks*, in a Manner very differently from what is contained in the Writings of the last-mentioned Nation; the former stile the last Monarch of their Second Dynasty *Darab al Asgar*, which is as much as to say, *Darius the Lesser*, or *Darius the Second*; whereas the *Greeks* reckon him the Third of that Name. The *Persians* also say, that he was a cruel and tyrannical Prince, and that by his Male-Administration he so estranged the Hearts, and lost the Affections of his Subjects, that some of the great Men about him privately called in *Alexander of Macedon*, with a Promise to betray their Master into his Hands. To us this appears wild and incredible, but that *Nadir Shah* was actually so called in by the Ministers of the Mogul, passes for true History; which very possibly may appear strange in the next Age, and ridiculous to Posterity. The *Persian* Historians say, that *Alexander* found *Darius* yet alive, when he fell into his Hands; that he bequeathed to him his Daughter *Rouschenk*, which Name the *Greeks* have changed into *Roxana*, for a Wife, and advised him to leave the Government of the Provinces of his new Empire to the *Persian* Grandees, which *Alexander* promised and performed. They add farther, that repenting of this some Time after, he resolved to remove them to make way for *Greeks*; but that he was dissuaded from this Measure by *Aristotle*, who suggested to him, that the latter would not be able to maintain themselves against the general Confederacy of the *Persian* Princes; and that the only Way to prevent such a Confederacy was to allow several of those Princes a greater Measure of Power under his Government, than they could hope for under a Monarch of their own Nation.

3. The *Persians* stile *Alexander* the Great, *Eskender al Roumi*, that is, *Alexander* the Greek; *Eskender ben Philicus*, that is, *Alexander* the Son of *Philip*; and *Eskender Dbulcarnein*, that is, *Alexander* with two Horns, and give a very different Account of his Expedition into and Conquest of *Persia*, from what we meet with in either in the *Greek* or the *Latin* Historians; wherein as in many Things they err, so in some perhaps they are in the right, and probably it might furnish a learned Man, perfectly well acquainted with the *Greek* and Oriental Tongues, with an Opportunity of writing a very useful and entertaining Dissertation, by way of Comparison between these Histories, as it would afford him an Opportunity of clearing up a Multitude of Passages in both, that seem at present either very dark or absolutely unintelligible. Something of this Kind, with respect to the last mentioned of his oriental Titles, has been attempted with Success by the very learned Dean *Prideaux*, out of whose excellent Performance Mr. *Rollin*, in his ancient History, has borrowed whole Sheets at a Time, and his Authorities from the Ancients into the Bargain, which is a new Way of writing Universal History, in which I am afraid he will have but too many Followers.

The *Persian* Writers tell us, and I believe very truly, that not long after the Death of this great Conqueror, many of their Princes set up for Petty Sovereigns in the Provinces which were committed to their Government, and that the *Persian* Empire was ruled in this

Manner for seventy two Years. These Princes they stile in general *Moluk Thaovais*, that is, the Princes of the Provinces, and make a distinct Dynasty of them, which is their Manner of distributing their Histories, and a very perspicuous Method it is, as the learned Reader will easily discern, by consulting *Abul Ferrajus*, who has digested his Work in this Manner, and from thence has given it the Title of the History of *Dynasties*; nor do I know any universal History extant, in any Language, that considering its Conciseness ought to be compared to his. We need not wonder that there is a good deal of Confusion in that Part of the *Persian* History which relates to the Time immediately after the Death of *Alexander the Great*, and we are the less able to rectify it, because neither the *Greek* nor the *Latin* Historians treat of it clearly, but mention it only incidentally, contenting themselves to mention it from Time to Time as it falls in their Way; and from History thus wrote by Starts, it is a very difficult Thing to collect such a Number of Facts, as may enable one to reduce it under any certain Method, and yet this is absolutely necessary, in order to preserve the Thread of our Discourse.

4. The *Greeks* say, that under the Reign of *Ptolemy Philadelphus*, an *Armenian* Prince, revolted and formed a new Empire in the East. This *Armenian* Prince was *Arfaces*, the Founder of the *Parthian* Empire; the Oriental Writers call him *Aschek*, and make him the first Prince of their Dynasty of *Askanians*, and they likewise reckon him amongst the *Moluk Thaovais*, or the Princes that ruled after *Alexander*; so that he seems to have acquired a Dominion over several petty Princes, who were once his Equals, and his assuming this Dominion seems to be by the Concurrence both of the *Persian* and *Greek* Writers, well enough fixed to the Year 250 before Christ. It may not be amiss to observe, that *Mirkond*, and some other *Persian* Writers, appear to be very much at a Loss in regulating the Succession of these Princes, for which the true Reason seems to be this, that they found no regular Memoirs concerning them in the old *Persian* Writers, who did not consider them in the Light of their natural Princes. It was however under this Race, that the *Parthians* became known to, and capable of making Head against the *Romans*; and therefore in their Histories we find the Names and principal Circumstances of the Reigns of most of these Princes. The last of this Race was *Ardevan*, who was Cotemporary with the *Roman* Emperor *Commodus*, and with him the *Parthian* Empire fell, or rather the Sovereignty of the East was restored to the *Persians* in the Person of *Artaxerxes*, after it had lasted upwards of four hundred and thirty Years.

This great Prince the *Persian* Chronicles stile *Ardesbir Babegan*, and make him the Founder of their fourth Dynasty, called the *Sassanians*; he was not only the Reviver of the *Persian* Empire, but the Legislator of it also, and left behind him a famous Book, intitled, *Adab alaisch*, i. e. *The Rule of Life*, which is still preserved, admired, and revered throughout the East, as the most compleat System of Government and Morals that was ever published. It would not in all Probability be much esteemed in this Part of the World, even if we had it; being penned entirely in the *Eastern* Manner; as for Instance, one of the Capital Maxims, which he lays down for a Prince to follow, is this, *never employ a Sword, where a Cane will do as well*; by which he meant, that a Monarch should never resort to Capital Punishments for light Offences.

I mention this particularly, to show, that there was a great Difference between the Genius of the *Parthian* and *Persian* Governments, and that the latter were naturally mild, even though their Monarchs carried their Claim to absolute Power, as high as the former. The Laws of the *Medes* and *Persians* were indeed no other than the Will of the Prince, but they were irrevocable and immutable even by their Princes; and therefore *Ardesbir Babegan* having restored the Empire, thought himself at Liberty to lay down Rules for his Government, which were no less binding on his Successors than his Subjects. He it was that fixed the Tenure of the

the Lands, the Modus betwixt the Farmer and Tenant, the Rights and Revenue of the Crown, and distinguished all the Artificers and Tradesmen in his Empire into different Companies, over whom he appointed Masters and Wardens; with many other Regulations, most of which subsist to this Day.

The Descendants and Successors of this Prince, were those famous and powerful Emperors of *Persia*, who contested the Dominion of the East with *Constantine* the Great, and the following *Greek* Emperors, till by Degrees, and chiefly by the long and bloody Wars they carried on against each other, both Empires were much weakened, and at last brought so low, as to be overrun and ruined by a Race of Barbarians, that had been taught the Art of War by serving as Mercenaries in both their Armies. The *Persian* Writers reckon twenty three Monarchs of this Dynasty down to *Jesdegerde Shebriar*, who was the last, and in whom not only his Family, but his Nation ended. Long before his Time the Empire began to decline, Princes became Tyrants, their Subjects, and even their Sons, conspired against them, their Religion grew corrupt, and the People dissolute; this encouraged their Neighbours to invade them on all Sides, and a prodigious Multitude of *Turks* breaking in on the North East, *Jesdegerde* marched against them into the Province of *Chorasan*, but before he came to a Battle, he had Intelligence that the *Arabs* had invaded *Persia* on the other Side; upon which he determined to march against them; but whilst Things were in this Situation, and before he could assemble Forces sufficient to act against so formidable a Power, Grief and Distraction of Mind brought him to his End when he had reigned about nineteen Years. His Death is, by the best Authors, referred to the thirty first Year of the *Hegira*, and consequently to *Anno Domini* 650. It may not be amiss to observe, that the famous *Æra*, which is denominated from this Prince, does not commence, as one would imagine, with his Death, but from the Beginning of his Reign, and therefore answers to the eleventh Year of the *Hegira*, and to *Anno Domini* 632.

5. As we have already marked the precise Time when the *Arabs* became Masters of this Country, we shall only observe, that the first of their Khalifs was *Mowavia*, the Fourth lawful Successor of *Mahomet*, who reigned twenty Years; it would lead us into a vast Field, if we should pretend to give even a short Account of the Succession of these Priests and Princes; for under Pretence of being Successors to the Prophet, or, as the Word *Khalif* literally signifies *Lieutenant*, they assumed the supreme Power in spiritual as well as temporal Affairs, and executed it for the most Part with great Severity. It was this that led them to treat with unrelenting Cruelty, the unhappy Race of the ancient *Persian* Nation, whom they were bent upon extirpating, from a ridiculous Notion of their being Infidels and Idolaters; whereas it is very difficult to say, whether their Religion is not as near the Truth as that of *Mahomet*; but without entering into this Dispute, it is sufficient for our Purpose to say that they succeeded so far therein, as to reduce that numerous People to a very handful, and even these were forced to take Shelter in Woods, in Mountains, and in Desarts, to secure themselves from the Effects of their religious Fury.

At length, after a Succession of fifty four Princes who bore this Title, though in that Space there happened many Revolutions, the Power of the *Arabs* or *Saracens* sunk and grew weak, in the same Manner as all other Nations do, that is to say, their Monarchs grew drunk with Power, and the People were debauched by Luxury. In this melancholly Situation they were continually disturbed, either by Invasions from Abroad, or by Conspiracies at Home, till at last the Strength of the Empire, unable to support such continual Fatigues, sunk under them. *Mostadhem*, or *Mostazem Billah Ben Mostanser Billah*, the thirty seventh Khalif of *Bagdat*, or *Babylon*, saw the End of that Empire; he succeeded to the Government in the Year of the *Hegira* 640, and from the very Beginning of his Administration was un-

fortunate in all his Undertakings. *Holokou* was at that Time Kan of the *Tartars*, a Prince so powerful, and whose Dominions were so extensive, that he for some Time deliberated whether he should push his Conquests through *Poland* into *Germany*, or turn them against this Khalif, and he was determined to the latter by the Advice of *Nassireddin*, a famous Astrologer, who being disobliged at the Khalif's Court, went to the *Tartar*, and advised him to fall upon his old Master. It fell out that this unfortunate Prince had still a Traytor about him greater and more dangerous than this Astrologer.

The Name of this perfidious Monster was *Mowadeddin*, who was Vizier to the Khalif, but was of the opposite Sect in Point of Religion; he perceived the Design of the *Tartars*, and advised his Master to disband his Forces, under Pretence that he was so much revered by his Neighbours, that there was no Fear of his being disturbed, if he did not open a Pretence for it by appearing armed. The Khalif, who naturally loved Money and Pleasure, swallowed the Bait, applied himself solely to the heaping up Wealth, and taking his Diversion, till of a sudden the News came, that the *Tartars* had invaded a distant Part of his Dominions; upon which, by the Advice of this trusty Minister, he ordered all the Forces in his Service to march against them. By this Means his Capital, the glorious City of *Bagdat*, the fairest and richest of the East, and perhaps of the whole World, was left in a Manner unguarded. The *Tartar* Khan, who foresaw and expected this, marched immediately with a choice and powerful Army to invest it; and as soon as that was done, the Vizier, under Pretence of proposing Terms of Peace, went to the Camp of the Enemy, from whence he never returned. The City was soon after taken by Storm; the Khalif, who was then forty six Years of Age, was made Prisoner, together with his Consort and an only Son, his eldest being killed in the Attack. The *Tartar* Prince behaved towards him with great Inhumanity; he caused him to be dragged through the Streets till he died, and put his Son also to Death; this happened in the Year of the *Hegira*, 656, *Anno Domini* 1258. At the same Time the City was destroyed, and almost all its Inhabitants, without respect to Sex, Age, or Rank, put to the Sword.

6. In this Manner the *Saracens* or *Arabs* lost Possession of *Persia*, after they had kept it six hundred Years; and as for this *Tartar* Prince *Holokou* or *Olaku Khan*, he was the Grandson of that mighty Conqueror *Jengiz Khan*, and raised in a very short Space one of the most powerful and extensive Empires the World ever had, though most of the *Tartar* Historians affirm, that when he conquered *Persia*, he acted only as Lieutenant to his Brother *Manchu Kan*, whom he afterwards succeeded. He had the Reputation of being a just and good Prince, and though he returned into *Tartary* to quiet some Disturbances that broke out there, yet he was so pleased with the Country of *Media*, that he quickly came back thither, and spent the Remainder of his Days. He left his Dominions to his Son *Abkay Khan*, who was succeeded by his Brother *Hamed Khan*, the first of this Race, who became a *Mahometan*; after whom there followed a Succession of six Princes of this Family, the last of whom was *Abu Said Babudar Khan*, who deceased in the Year of *Hegira* 736, *Anno Domini* 1335, in whom this Race ending, the Government fell into great Confusion, which continued till *Persia* fell under the Power of the Successors of the great *Timur*, whom we call *Tamerlane*. This celebrated Prince having, in the Course of his glorious Reign, added the greatest Part of *Persia* to his other Dominions, left them to his Family, among whom continual Wars and Dissensions reigned; so that in the Space of about forty Years, there were no less than twelve of his Race who stiled themselves Monarchs of *Persia*, and actually possessed *Chorasan*, and some other Provinces of that Empire. In the mean time, another Hord of *Turcomans* grew very powerful in *Diarbeck*, and made *Bagdat* the Capital of their Dominions, from whence they made Incursions into *Persia* for many Years with various Success, till at last they defeated *Mirza Abuকের*, the

Grandson of *Timur*, and the last of his Race that reigned in *Persia*, whom they slew in the Year of the *Hegira* 811, *Anno Domini* 1408.

7. By this Victory *Kara Isuph*, that is, *Joseph the Black*, who was Chief of the Tribe of *Kara Koyunli*, or the *Black Sheep*, so called from their bearing this Figure in their Standards, became Sovereign of *Persia*, which he governed fourteen Years, and died in the Year of the *Hegira* 823, *Anno Domini* 1421. He was succeeded by *Amir Scander*, who reigned in *Tauris*, and was all his Life long engaged in various Wars with great Diversity of Fortune, till he was killed by his own Son in the sixteenth Year of his Administration. He was succeeded by his Brother *Joon Shab*, who, though one of the lowdest and wickedest Princes that ever sat upon a Throne, extended his Dominions by his Success in War, and ruled *Persia* thirty two Years, till surprized in a March against his Enemies, when drunk and asleep, he was cut to Pieces. His Successor was his Son *Hafsan Ali*, the last of his Family, who being defeated by *Ozun Acen Beck*, who had killed his Father, lost his Dominions, which fell under the Power of the Conqueror in the Year of the *Hegira* 872, *Anno Domini* 1467.

8. This *Ozun Acenbek* is the same that in most of our Histories is called *Uzun Chasan*, and was the first of the Family of *Ak Kuyunli*, or the *White Sheep*, another Tribe of *Turcomans*, who reigned in *Persia*; he engaged in a long War with Sultan *Mahomet* the *Ottoman* Emperor, with very bad Success; however, he held the Government for eleven Years, and then left it to his Son Sultan *Kalil*, who, after a short Reign of six Months, was killed by one of his Brothers. He was succeeded by *Yacub Beg*, another Brother, who was a Prince of great Learning and Moderation, and governed his Dominions for twelve Years with much Lenity and Wisdom, till at length he was taken off by Poison; and then followed a Scene of Blood-shed and Confusion under a Succession of five Princes, either Descendants of or allied to this Family, till Sultan *Morad*, whom some Eastern Authors make the Son of the last mentioned Prince was entirely defeated, and driven out of *Persia* by *Ishmael Sefi* in the Year of the *Hegira* 914, *Anno Domini* 1508, and in him ended the Line of the *White Sheep*, which gave Place to that Imperial Family, which continued to govern *Persia* to our Times.

9. It would take up too much Room for us to enter into the History of this Prince's Family, which is besides so well known, that it would be needless; we therefore think it sufficient to observe, that he gave himself out to be a direct Descendant from *Mortis Ali* the Son-in-Law of the Prophet *Mahomet*, and made his Way from a private Station to the Empire of *Persia*, by very high Pretences to Sanctity, and setting up for a Kind of Prophet himself. He it was that introduced the new Sect into *Persia*, and changed that Sort of Men to whom his Father had given Red Caps, as a Mark of their being his Disciples, into a regular Militia, from thence called *Kuzzlebasbes*, that is, Red Heads, who under his Successors became the Janizaries of *Persia*. He was certainly a Man of great Parts and extensive Genius, as appears plainly from the Manner in which he prosecuted his Wars, sharing every Thing with his Soldiers till he had made himself Master of the whole Empire of *Persia*, and then under Pretence of Care for their Interest, introducing those Sorts of Military Tenures, which have been before described. He preserved, as long as he lived, the Confidence and Esteem of his Subjects, who looked upon him as one superior to the ordinary Race of Men, in Point both of Piety and of Wisdom; to which his great Victories against the *Tartars* on one Side, and the *Turks* on the other, contributed not a little; so that the *Persians* always considered him as one, through the Favour of God, invincible. He died at the Age of Forty-five, *Anno Domini* 1525, in full Possession of one of the greatest Empires, and of the Character of one of the ablest Princes in the East.

He was succeeded by the eldest of his four Sons, Shah

Thamas, who was then about eighteen Years of Age. We have very different Characters of this Prince from different Authors, and yet it is not at all impossible that they may be true. In Time of Peace he led a quiet, lazy, inactive Life, and left Things pretty much to his Ministers, which gave an ill Impression of his Capacity; but when he came to be engaged in a War against the *Turkish* Emperor *Solyman*, he convinced those, who had taken up this Opinion, that they were absolutely mistaken, for he managed that War with great Address, and forced the *Turk* to quit his Country, notwithstanding that he attacked him with very unequal Forces, and harassed him so much in his Retreat, that of five hundred thousand Men that *Solyman* brought into the Field, he scarce carried fourscore Thousand back to *Constantinople*. This War enabled Shah *Thamas* to rid himself of two of his Brothers; for one revolting to the *Turk*, he attacked, defeated, and cut him to Pieces; and, suspecting the other had the like Design, he caused him to be taken off by Poison. As to the Third, he died a natural Death; so that all the Countries, which had been assigned them by their Father, were again united to the Empire. This Shah *Thamas* removed the Capital of his Dominions, and instead of the City of *Tauris*, resided at *Casbin*. The worst Action of his Life was the putting to Death Sultan *Bajazet*, the Son of the *Ottoman* Emperor *Solyman*, who had fled to him for Protection; which, however, procured him an advantageous Peace with the *Turks*, that lasted all the rest of his Reign. He died in 1556, in the Sixty-eighth Year of his Age, and the Fortieth of his Reign, and bequeathed the Empire to his third Son.

The great Officers of State having more Regard to their Constitution than to the Will of their deceased Monarch, sent to his eldest Son *Mahomet Codabende*, who was Governor of *Khorasan*, and desired him to take the Title of Shah; but he signified to them, that the Empire was a Weight too great for his Shoulders to bear, and advised them to set his Brother *Ishmael* upon the Throne. This Prince was about Forty-three Years of Age, twenty of which he had spent in Prison, where his Father had confined him out of Jealousy. *Ishmael* II. was one of the bravest Men, as well as one of the greatest Captains of his Age, but suspicious and cruel. His Father caused him to be treated very gently in his Confinement, and sent him several fine Women; but he would never touch them, alledging, that it was enough to be miserable himself, without begetting a Race of Wretches. His Severity was so great, and his Views to the Prejudice of his Family so apparent, that it is said his Sister, at the Request of the Nobility, poisoned him, when he had reigned only two Years.

His elder Brother *Mahomet Codabende* was forced to take the Title of *Shab* upon his Decease, against his Will. He loved Privacy and Retirement, from a particular Turn in his Temper, and not from any Want of Parts or of Vigour. He used his three Brothers very well upon his first Coming to the Crown; but finding that they were inclined to revolt to the *Turks* who invaded his Dominions, he put them to Death without Mercy. In the first Year of his Reign, he gained a signal Victory over the *Turkish* Forces on the Frontiers of *Armenia*, and in 1578, he beat them again near *Babylon*, in which Battle they lost fourscore thousand Men upon the Spot. The Year following he gave them another Blow, for having sent twenty-five thousand Horse, and five thousand Camels to forage in the Spring, under an Escort of thirty thousand Foot, the *Persian* Monarch by long Marches came upon them in the Night, and took his Measures so effectually, that neither Man nor Beast escaped. This *Persian* Prince, who notwithstanding all these Victories, is said still to have regretted his ever leaving his Station in *Khorasan* for a Crown, and who treated all the Pomp and Grandeur of it with the utmost Contempt, died in 1585, leaving behind him three Sons, the eldest of which, *Emir Hemse*, succeeded him; but was soon after killed by the Intrigues of his Brother *Ishmael*, who had not been long seated upon the Throne, before he had his Throat cut by his Barber, which made Way for the third Brother.

This

This was the famous *Shah Abbas*, who by the many glorious Actions of his Life, justly acquired the Title of *Great*: He was Governor of *Khorasan* during the Life of his Father, and at the Time he was called to the Imperial Dignity, was about eighteen. He began his Reign with some Acts of Severity, which he thought necessary to fix his Government on a stable Foundation. When this was done, he took a Resolution of recovering all that had formerly belonged to the *Persian* Monarchs, and with this View marched into the Province of *Khorasan*, the greatest Part of which had been conquered by the *Usbeck Tartars*. This War lasted three Years, and was terminated at last by the total Defeat of *Abdallah Khan*, the Sovereign of those *Tartars*, who with his Brother, and three Sons, was taken Prisoner. *Shah Abbas* caused their Heads to be struck off, that he might have the more Leisure to turn his Arms against the *Turks*. They were much more powerful and troublesome Enemies, for at that Time they were in Possession of a Track of Country of 150 Leagues, from South to North, to which *Shah Abbas* had a just Claim from his Predecessors. All this he not only recovered, but pushed his Conquests as far as the *Black-Sea*, made himself Master of the City of *Balsora*, a great Part of *Arabia*, and by the Help of the *English*, recovered *Ormus* from the *Portuguese*. He was beyond all Question one of the ablest Princes that ever reigned in *Persia*, but withal, ambitious beyond Measure, and cruel to the last Degree. He found the Nobility very powerful, and the *Kuzzlebasbes* not a little insolent, he humbled the former, and weakened the latter, by introducing, as has been shown elsewhere, a new Militia of his own Forming, and entirely depending upon the Crown. He conceived an unreasonable Jealousy of his only Son *Sefi Mirza*, on Account of the great Qualities with which he was endowed, and the high Respects paid him by his Subjects in general, and the Soldiers in particular. To free himself from these groundless Apprehensions, he caused his Son to be put to Death, and repenting the Crime, as soon as it was committed, passed the rest of his Days in Sorrow and Regret. He built the City of *Ferabat*, on the Coast of the *Caspian-Sea*, where he died in the Year 1629, at the Age of Sixty three, after he had governed the Empire forty five Years.

He was succeeded by his Grandson *Sefi Mirza*, who was but a Child; as he grew up he discovered all the bad Qualities of his Grandfather, and none of the good ones, for which his Father had been so much beloved. He put out the Eyes of his only Brother, and murdered almost all the old Servants of his Grandfather. His Severities were so great, and the Murders he committed so frequent, that the Women in his *Haram* conspired against his Life, and gave him a Dose of Poison, under which he struggled for two Months, and at last recovered. The Pains he took to reach the Bottom of this Conspiracy were so great, that at Length he discovered all who had any Concern therein, and in one Night caused forty four Ladies to be buried alive in his Garden, amongst whom, it was said, were his Mother and his Aunt. He was brave in his Person to a Degree of Rashness, but never fortunate in War, and the two strongest Fortresses in the Empire were lost in his Reign, *viz.* *Khandabar* and *Bagdat*, chiefly through his own Fault. Amongst many Vices, he had hardly any Virtues to compensate them, but in Excuse of this, it is said, that his Grandfather being afraid he might prove as great a Man as his Father, had caused so much *Opium* to be mingled with his Food, while a very Child, that it affected his Brain. To abate that Coldness which this occasioned, he was advised by his Physicians to drink Wine, to which he took such a Liking, that in the latter Part of his Life, he was almost always drunk, and in one of these Debauches, he ended his Days, in 1642, after a Reign of twelve Years. His excessive Cruelty caused a Suspicion that he was poisoned.

He was succeeded by his Son *Abbas II.* who was his only Child, and yet it was by the Virtue of an Eunuch, that this young Prince was in a Condition to succeed him. In one of his drunken Fits, he ordered that Eunuch to pass an Iron before his Son's Eyes, by which he

meant a Plate of Iron red hot in order to blind him, but making Use only of the Word Iron, the Eunuch very charitably fulfilled his Master's Command literally, but at the same Time, directed the Child to counterfeit Blindness, which he did so effectually, that his Father had not the least Suspicion of his Seeing, even when he lay upon his Death-bed. It was then that he deplored the Cruelty that he had been guilty of, in such moving Terms, that the Eunuch, who was by his Bed-side, told him, he had a Secret for restoring the young Prince's Sight, which rejoiced him so much, that it kept him alive till the next Day. As *Shah Abbas II.* was barely thirteen when he succeeded his Father, and had been till then considered as blind, and consequently incapable of the Imperial Dignity, we may easily conceive, that he could not take very early any Share in the Government, the Care of which devolved upon his Mother and the Prime Minister, who was a Creature of hers.

Things continued in this Situation during the three first Years of his Reign, when the Minister having unluckily, from the Peevishness incident to old Age, let fall an Expression somewhat disrespectful towards his Master, *Jehean Khan*, one of the most powerful Lords of the Court, followed him to his House and put him to Death as if it had been by the Order of the Shah. This exceedingly alarmed the Princess his Protector, who demanded Justice of her Son with all the Impetuosity natural to her Sex and to her Character; but *Abbas*, instead of disavowing what had been really done without his Consent, gave to *Jehean Khan* the Post of Prime Minister, the vast Estate of the Deceased, and soon after made him Generalissimo of all his Forces. The wisest of Monarchs has said, *That the Hearts of Kings are deep*. One would have imagined, that in so young a Prince, these high Favours had been either the Marks of Confidence, or the Effects of Timidity, but they were neither; *Shah Abbas* had a Mind to see whether this Lord had acted out of a true Zeal for his Service, or from other Motives; he had also a Mind to discover how far his Interest reached, and to what his Views tended. It was not long before he discovered all. *Jehean Khan* knowing how much he was hated by the Shah's Mother, formed a Design of killing her in the *Haram*, which being made known to the Shah, he in a great Council gave him the first Stroke with his own Poinard, and with the Assistance of his Guards cut off him and all Friends at once. This necessary Severity discovered his true Character, and made him feared by his Ministers, and revered by his Subjects.

He was very far from being free from Vices, being much given both to Wine and Women; but was, for all that, a very great Prince. He retook *Khandabar*, which had been lost by his Father, and recovered several Places from the *Turks*, and was preparing to have attacked them with all the Forces of his Empire, when he was taken off by Death. There is one Point of his Conduct which ought not to be passed in Silence: He was a constant Protector of the Christians, and when the *Sedre*, or Chief of the Ecclesiastics in *Persia*, remonstrated against it, he made him this remarkable Answer, *The Dominion of the Mind belongs to that Supreme Being who has given me Power over the Persons of my Subjects, yet he allows them Freedom of Sentiment, and has thereby taught me, that it is not my Duty to force it. While they are good Subjects, whatever their Religion be, I shall consider them as good Men.* I will not say, as others have done, that this Maxim should be written in Letters of Gold, but I will say more, that it ought to be writ in nobler Characters, I mean, in the Hearts of Princes. *Shah Abbas II.* died in the thirty eighth Year of his Age, on the 25th of September, 1666, in the 23d Year of his Reign.

He left behind him two Sons, *Sefi Mirza*, and *Hamzeh Mirza*. In a great Council held by his chief Officers after his Decease, it was resolved to raise the youngest to the Throne, because he was the most likely to be governed; but to give this a colourable Pretence, those who gave into this Opinion, suggested that *Shah Abbas*, when he set out for *Tabrestan*, had returned suddenly to *Ispahan*, when he was a Day's Journey from it, and that he

came

Came back melancholy ; from whence they presumed he had put out his eldest Son's Eyes ; the rather, because he had brought the younger Prince along with him. The Governor of the young Prince, who was thus preferred from an unparallel'd Virtue and Integrity, was the only Man that oppos'd this Resolution ; he said it was injurious to the Constitution, and to the Memory of the late Shah ; he undertook, on the Peril of his Life, that the Fact was false, and as there is often an irresistible Force in Truth, he brought over all the rest to his Sentiments, and was deputed by them, who hitherto concealed the Death of Shah *Abbas*, to go to *Isfahan* and present their Duty to his Successor. The Mother of that young Prince was alarmed at his Arrival, and at his demanding to see her Son ; it was an Hour before he could be torn from her Embraces ; but her Sorrow was soon turned into Joy, when she was informed, that by the Death of his Father he was become the Sovereign of *Persia*.

He became so, as his Subjects believed, in an ill Hour, for after he had reigned two Years with little Capacity and less Success, he was solemnly crowned a second Time, in Hopes of removing the malignant Influence of the Stars at his first Coronation ; and then it was that he changed his Name from *Sefi* to *Solyman*, as we are informed by Sir *John Chardin*, who was an Eye Witness of this second Coronation. If it served for any Thing, it was to shew the Folly and Absurdity of these Astrological Precautions ; for notwithstanding all the Pains they took to fix upon a lucky Hour for this important Ceremony, his Administration was not a Grain more fortunate than before. In short, under him the *Persian* Empire began to decline, which sunk and crumbled to Pieces under his Son. Shah *Solyman* had Vices, which, no doubt, were prejudicial to him, but his Follies were more so ; he loved Wine and Women to Excess, Faults in themselves very great ; but another, which might seem more excusable was more fatal. He was indolent to the last Degree ; he confided not only the Care of his Person, but of his State to his Eunuchs, and out of these half Men formed a Council for governing a great Empire.

The Consequences that attended this scandalous Management, were such as might well be expected from it, that is to say, his Councils were ill taken and worse executed, few able Men were raised either to Posts in the Government or in the Army, and as soon as these few were discovered, they were constantly removed. When weak and bad Men are at the Helm, Calms are more dreadful than Storms, for these naturally fright them from their Posts, and call those to Power who know how to employ it. Shah *Solyman* reigned twenty eight Years, dying on the last of *July*, 1694, at the Age of forty eight Years, leaving behind him the Character of one of the weakest, meanest, and bloodiest Princes that ever disgraced the *Persian* Diadem.

His conversing so much with Women and Eunuchs made him suspicious ; his being often drunk, and always half drunk, rendred him cruel, as the Want of Understanding caused him of Necessity to be capricious. His Character was admirably drawn by one of his Courtiers ; *I never leave the Shah's Presence*, says he, *without feeling my Neck, that I may be sure my Head is still upon my Shoulders*.

He left behind him two Sons, *Mirza Abbas* and *Mirza Hussein*. The Council of Eunuchs were to be the Judges which was the fittest to wear the Crown ; the late Shah made them so by his Management ; but what is still stranger, he made them so by his Will. The Approach of Death commonly gives unusual Force of Mind ; it did so to Shah *Solyman* ; but it was a left-handed Sense, for after reigning like a Fool, he died a Knave. *You have it in your Power*, said he to his Eunuchs, *to live under what Government you like best, when I am gone ; your Choice, if you would have a martial Prince, must fall upon Abbas ; if you would rather have a pacifick Reign, you must raise Hussein to the Throne*. One need not, even at this Distance from *Persia*, be at a Loss about the Resolution formed in this wise Council ; weak Men know well enough, that they can never hold their Places but

under a weaker King ; and therefore the sagacious Disposers of a Crown most unanimously fixed upon the Prince that was unworthy of it. The Character of *Mirza Abbas* was truly given by his Father ; he had all the great Qualities, and wanted none of the good ones necessary to a Monarch ; he was brave, but not fierce, and affable without Falshood. As to the Character of *Hussein*, it may be very truly described in a very few Words ; there never lived a better Man, or a worse Prince.

He had been bred in the severe Study of the *Alchoran*, and at the same Time that he was very knowing in the *Mahometan* Religion, he was very sincere in the Belief of it.

He gave a strong Testimony of the Uprightness of his Disposition in refusing to put out the Eyes of his Brother *Mirza Abbas* ; he was content at first to say it was inhuman, but finding himself continually excited thereto, by such as directed him in all other Things, he told them fairly, that when his Brother and he first read the Law together, they had sworn upon that holy Book, never to put out the Eyes of each other, which ever came to the Throne ; and he would not incur the Guilt of Perjury. Indeed his Nature was so tender, that firing a Pistol among his Ducks, which by Accident had Shot in it, he cried out when he saw them wounded, that he was defiled with Blood, and gave a large Sum, in Alms to the Poor, to wipe out the Stain. His Ministers saw his Indolence with Pleasure, and his Weakness with Delight ; but his Integrity and Rectitude of Mind gave them infinite Concern. It was therefore for some Time, their sole Business to study how they might corrupt him ; they thought at last of a proper Method, and they made Choice of his Mother to carry it into Execution. That Princess pretended to be at the Point of Death, and that the Physicians had declared nothing could save her Life but drinking Wine. The *Shah*, out of Piety, had forbid the making it in any Part of his Dominions, and out of Respect to the Law of *Mahomet* had never tasted it himself. He caused it to be got however to save his Mother's Life, and because she would not drink unless he drank to her, he took off a large Glass, which left such a Relish on his Palate, as gave him an Inclination to it ever after.

By Arts like these Shah *Hussein* was drawn to become the great Instrument of his own Ruin, and that of his Subjects. The Eunuchs, first admitted into Council by his Father, contrived under him to shut out all others. The Prime Minister himself was excluded ; and thus *Persia*, for the first Time, was blest'd : But why should I not speak plain ? was cursed then, let me say, with a Cabinet-Council. It is true, the ancient Form was kept up, the great Officers of State met, the Assembly was as regular as numerous, and to the Populace appeared for some Time as august as ever : But it was a mere empty Show, for only the White and Black Eunuchs had the Power, and which sure never happened in any Country but this, dictated their Orders through the Mouth of their Sovereign. We cannot dwell upon this extraordinary Subject ; we cannot enter into the Detail of the Steps by which this Monarchy fell to Ruin ; we leave those to the Imagination of the Reader, and esteem ourselves happy, that by so reasonable an Excuse, we can discharge ourselves of so disagreeable a Task.

Let it suffice then to say, once for all, that through this loose and scandalous Administration the Constitution was dissolved, and the whole Frame of Government fell to Pieces. The Ecclesiasticks were noted for irreligious Notions and Depravity of Manners ; the Governors of Provinces had as little Power as Will to protect, but were allowed to plunder, that others might squeeze them ; the Viziers fleeced the People for some Years, and were then fleeced themselves ; the Soldiers were robbed of their Pay, which forced them to work for a Subsistence ; and as this furnished them with Money, Part of it was given to their Officers to wink at their Neglect of Discipline ; which was the more readily complied with by Men trusted with Commands, tho' they knew little or nothing of martial Discipline themselves. In such a State of Things one would think there

there must be Complaints, more especially in a Country where the Law not only tolerates, but encourages such Complaints. But what then? The Shah shut himself up in his Palace, and would not hear them. Memorials and Petitions might be drawn, and Means might be found to get them presented. All this was done, but the Shah would never trouble any Body but his Eunuchs to read them; and when Felons are Judges, Virtue is the only Thing that is thought a Crime.

Affairs being thus in a State of Depravity, and the Empire in a Manner ripe for Destruction, we are next to see how this was brought on; and indeed it happened in a Manner, which, for any Thing that has occurred to me, there is nothing in History can parallel. At the Time *Georgia* submitted to Shah *Abbas*, it was agreed, that the Princes of that Country should be dependant only upon the *Persian* Emperors, in the same Manner that *Crim Tartary* does upon the *Turks*; and this Capitulation was strictly observed till this wise Ministry thought fit to violate it more than once, which induced the reigning Prince, to take such Measures as he thought requisite to set him beyond the Reach of their Power. The Council of Eunuchs were too cunning for him; they were informed, that his Army consisted of several small Bodies of Troops commanded by their respective Chiefs; to these they offered large Sums of Money, and by Degrees drew the greatest Part of them to quit the Service of the Prince; upon which he retired with his Family and his Riches into the Mountains. Upon a little Reflection, he conceived an Opinion, that those who bribed with Money, might be bought with Money; and therefore sending an Agent to *Ispahan*, he cancelled his Crime with Gold, and got himself restored. Some Time after, the Mogul sent an Embassy, in which he demanded the City and Principality of *Khandabar*, in Terms that astonished the Cabinet-Council of Shah *Hussein*. If they were attacked by the Mogul, it was requisite to have a General and an Army; and therefore like great Politicians, because they knew this Prince of *Georgia* would fight, they sent him to command in *Khandabar*, and allowed him to name a Lieutenant to command in his own Principality. This restoring a Man after a Rebellion, and giving him a second Principality for the Courage he had shown in his Rebellion, was a Policy so refined, that none but these great Men could ever have found it out.

The Prince of *Georgia* was sent to *Khandabar*, in the Year 1704, and he had not been long there, before he discovered a Person as capable of making that Principality revolt, as he was of raising an Insurrection in his own Country. The Name of this extraordinary Person, was *Mir Vaez*, whom our Gazettes call *Miriweis*, and whom they represent as sprung from the Dregs of the People; this however is an Untruth: He was a Man of great Quality in that Country, and a kind of Receiver-General of the *Shah's* Revenue, in which Post he behaved with such Honour towards the Court, and so much Tendernefs towards the People, as gained him Credit with the one, and procured him the Affection of the other. The new Khan was by no Means pleased with him, and represented therefore to his Friends at *Ispahan*, that this Man must be sent for. If either he or they had struck off his Head, for presuming to be wise and honest under such an Administration, there had been an End of the Matter, but they brought him to *Ispahan*, and there he soon saw that his Wisdom was much superior to that of the Cabinet Council; but that as for Honesty, it was become a useless and dangerous Thing; so he parted with it immediately, and became as arrant a Courtier as the best of them.

In 1709, he made a Journey to *Mecca*, with much Show of Religion, one of the best Cloaks in the World for a bad Design. His Countrymen were not of the established Church, but of the Sect of *Sunnis*, which is the same Religion with the *Turks* of *Mecca*; therefore he got a *Festa* or solemn Decision of the Head of the Law, importing, that his Countrymen might very lawfully take up Arms against their Sovereign, as a Here-

tick, and break all their Oaths to him without Perjury. Upon his Return to *Ispahan*, he contrived a Story of an Attack that was to be made upon the *Persian* Empire by the *Muscovites* and by the *Mogul*, suggesting, that it was highly probable, that the Prince of *Georgia's* Lieutenant would revolt to the former, and himself go over to the latter. Upon this the Eunuchs sent *Mir Vaez* to watch over the Prince's Conduct at *Khandabar*, and it is certain, that he took Care the Prince of *Georgia* should do them no Hurt, for under Colour of a Reconciliation, he assassinated him in his own Palace, and by the Assistance of his Countrymen, massacred most of his Troops; sending up a very formal Excuse to *Ispahan*, that the Prince was an Oppressor, and his Soldiers observed no Discipline, and therefore they had been tempted only to take the Liberty to knock their Brains out, but hoped they would believe, that notwithstanding this, they were as good Subjects as ever,

At this very Moment *Mir Vaez* had declared himself Prince of *Khandabar*, and upon producing the *Festa* beforementioned, all his Countrymen adhered to him; it was however two Years before they were thoroughly persuaded at *Ispahan*, that the Thing was really so, and that they had no more to do with *Khandabar* as Sovereigns, than with any Province in *China*. This forced them to raise an Army under the Command of the new Prince of *Georgia*, to which they added a Body of *Persians*, and sent them against *Mir Vaez*; but partly through the Dispute between the two Nations, and partly through the Treachery of some of the Council at *Ispahan*, who held a Correspondence with *Mir Vaez*, this Army was routed, and their Commander killed. Some other Attempts were made, but made in a more feeble Manner, and at last the Thing was no more thought of, so that *Mir Vaez* lived and died an independent Prince at his Capital of *Khandabar*, in 1717, after a Reign of about seven Years.

His Countrymen made Choice of his Brother to succeed him, and that Brother was inclined to Peace, but *Mir Mahmud*, the Son of *Mir Vaez* then about seventeen, conceiving that this would be prejudicial to his Interest, slipped into his Uncle's Room one Night when he was asleep, and cut off his Head. He then summoned the People, charged his Uncle with being a Traytor to them, and produced Papers under his Hand, to prove his Design of submitting to the *Persians*. This had the desired Effect, the People approved his Conduct, and declared him their Prince. But it is necessary to inform the Reader, who these People were, because till about this Time, their Names were never heard of in *Europe*. The *Afghans* are a Nation who inhabit *Khandabar*, and most of the mountainous Countries on the Frontier; we meet with large Descriptions of them in the *Persian* Authors, but they may be all reduced to a single Word, which will convey the Idea of them distinctly; they are Highlanders; their Drefs, their Manners, their Clans, their Discipline, and their Hardiness are precisely the same; they only differ in Religion, for the *Afghans* are *Mabometans*, mostly of the *Turkish* Sect, and zealous to the last Degree.

Mahmud was first for drawing in the rest of the *Afghans* in the adjacent Countries to be his Confederates; but their Chiefs thought themselves as good Men as he; upon which he resolved to bring that to a Tryal, and by beating them, made them ready to do what he would have them. When this was brought about, he resolved to invade *Persia*, though all the Men in his Country were not capable of furnishing an Army any Way equal to such an Undertaking. He executed it however with the Forces he could get together, advanced into the Province of *Kirman*, and surpriz'd the Capital. Thus far Things went well, but the *Shah* having cast his Eyes upon the Brother of his first Minister, *Lust Ali Kan*, and made him General of his Forces, he advanced with a numerous Army against the *Afghans*, defeated them totally, and drove them back to *Khandabar*. The Cabinet Council apprehensive that so great a Service might free the Prime Minister from his De-

pendance upon them, alarmed the *Shah* in the Night, pretended that Minister was coming to murder him, and obtained an Order to seize and put out his Eyes, and another Order for securing his Brother. Both these were executed; and as soon as *Mir Mahmud* was informed of it, he resumed his Design, and entered *Persia* a second Time with a much greater Army.

This second Invasion was in the Month of *January* 1722, and was not at first attended with Success. He was baffled in the Siege of *Kirman*, his Forces being no Way fit for Sieges; but borrowing Courage from Despair, though many of his People returned home, he marched on towards *Ispahan*. In his Passage he met and fought the *Persian* Army, and by the Disagreement between the Generals, defeated them, and afterwards laid Siege to the Capital; which, however, he had never taken but for the Misunderstandings in the Place, and the Intrigues he entered into with some about the *Shah*, who at last betrayed him into his Hands, in Consequence of a scandalous Treaty, by which he agreed to resign the Empire to *Mahmud*, and to give him his Daughter, which he performed, and by this Means that Captain of *Banditti* came to have the Title of Sultan *Makomet*, Oct. 22. 1722.

His Conduct, after this unaccountable Success, appeared very unequal; sometimes he behaved with such Moderation and Prudence, that he seemed to deserve all that he had acquired; at others, he acted with such Fierceness and Barbarity, as disgraced the very Nation from whence he came; but the Murders he committed, and more especially his inviting three hundred of the *Persian* Nobility and Gentry to a Feast, and then cutting their Throats, was such an Act of Baseness and Cruelty, as ought for ever to stigmatize his Character, as the Reflection of it afterwards turned his Head. The Escape of *Mirza Sefi*, the eldest Son of *Shah Hussein*, increased his Fury; and on the 27th of *January* 1725, he caused most of the Princes of the Royal Blood to be massacred in his Presence, except two Infants the Sons of *Shah Hussein*, whom that unfortunate Prince covered with his own Body, and had his Hand run through by parrying a Thrust made at them, before he could place them behind him; which so mollified the Heart of the Usurper, that he suffered them to live. Not long after this he was seized with a Leprosy, and his lucid Intervals grew shorter and less perfect; upon which the *Afghans* sent for his Cousin *Asbruff*, whom he kept in Prison at *Ispahan* for Conspiracy, and made him their Prince.

He was the Son of that Uncle by cutting off whose Head *Mir Mahmud* made himself Prince of *Kbandabar*, and in Return he ordered his Cousins to be cut off in the same Manner, which put an End to a turbulent Reign of about two Years and a half. *Asbruff*, who was now Master of *Ispahan*, is said to have put to Death a Son that *Mahmud* had by *Shah Hussein's* Daughter; but it is certain that he married another Daughter of his himself, and treated the old *Shah* with much Lenity for some Time, though afterwards he caused him to be put to Death; but when or where, the Accounts we have hitherto had from this Country, does not enable us to mention with Certainty.

About the Time that the *Afghans* besieged *Ispahan*, it was resolved to set up one of the young Princes as his Father's Lieutenant-General. *Mirza Sefi*, the eldest of them, had been tried before, and after having been at the Head of a small Body of Troops for about a Month, he declared himself incapable of publick Affairs, and retired again, of his own Accord, into the *Haram*. The second Prince had disobliged the Eunuchs, and they persuaded the old *Shah* to confine him; so that it was now resolved, that his third Son *Mirza Thamas* should be sent out to make an Experiment of his Fortune. He marched accordingly at the Head of five hundred Men, and had the good Luck to make his Escape. He showed some Bravery, but very little Judgment; for when he had got a few Troops about him, he differed with and even attacked the Prince of

Georgia, the only Person from whom he could have expected any Assistance.

We have no very distinct Account of his Actions while *Mir Mahmud* held the supreme Power; but it is certain that his Successor Sultan *Asbruff* drove him into *Mazenderan*, from whence, with some Difficulty, he got into *Khorasan*, and there he took the Title of *Shah* on Account of his Father's abdicating the Government. His Affairs wore a very indifferent Aspect, till such Time as he placed *Fatteh allah Khan Kajar* at the Head of his Army, who brought his Concerns into some Order. In 1726, he took *Nadir Kuli*, afterwards known to the World by the Name of *Thamas Kouli Kan*, into his Service, who insinuated himself so into his good Graces, that in the Spring of the Year 1728, he prevailed upon him to put his old General to Death, and to give him the sole Command.

His Affairs were then in a very indifferent Situation, the *Turks* were Masters of all the Western Provinces, *Asbruff* and his *Afghans* were in Possession of the Middle of the Empire, and the *Abdollee Afghans* had actually invaded *Khorasan*. His whole Army consisted only of twenty thousand Men, with which *Nadir Kuli* engaged and defeated the *Abdollee*s totally. This awakened the Attention of *Asbruff*, who in *September* 1729, marched from *Ispahan* in order to attack him. *Nadir Kuli* posted himself with sixteen thousand Men in a very advantageous Camp, and there waited for the *Afghans*, who attacked him with great Fury; but, after an obstinate Dispute, were entirely routed. This raised his Reputation highly, and as the greatest Reward the *Shah* could then give him, he bestowed his Name upon his General, who thence forward was stiled *Thamas Kouli Kan*.

The Fame of this Victory enabled him to increase his Army soon after to forty thousand Men, with which he defeated *Asbruff* a second Time; and this so much dispirited the *Afghans*, that they resolved to plunder, burn and abandon *Ispahan*; but the *Shah* did not give them Time to put this barbarous Design in Execution, but marched with such Vivacity towards the Capital, that they were obliged to leave it with great Precipitation, in the Month of *November* 1730. This great Stroke, that in all outward Appearance seemed to set him above the Reach of Fortune, was very soon followed by a Step that made Way for his Ruin. He thought that his General was slow in pursuing the *Afghans*, he therefore pressed him to use more Expedition. Upon this *Kouli Kan* told him roundly, that he was well informed of the Manner in which his Father's Generals had been treated, that when they were in the Field, they were ill supplied; and that he was resolved to lay down his Command, unless he would give him the Power of raising Money in what Manner he thought fit: To this, though with much Reluctance, the *Shah* consented; and, in Hopes of uniting his General more closely to him, gave him his Aunt in Marriage.

Kouli Kan then followed the *Afghans* to *Sbiras*, tho' it was in the Depth of Winter, defeated them totally, took all their Baggage and Treasure, and *Asbruff* endeavouring to make his Retreat towards *Kbandabar*, was surprized by a Body of the *Balluches*, who cut him and the few Troops he had about him to Pieces. *Shah Thamas* then turn'd his Arms against the *Turks*, but was unluckily defeated by *Achmet Bashaw*, who soon after his Victory, offering reasonable Terms of Peace, the *Shah* accepted them. In the Month of *August*, 1732, *Thamas Kouli Kan* having settled all the Eastern Provinces of the Empire, returned to *Ispahan* with an Army of sixty thousand Men, and insisted upon breaking the Peace with the *Turks*; to which the *Shah* showing some Unwillingness, *Kouli Kan* soon after seized his Person, and sent him Prisoner to *Mazenderan*. He next took his Son, though a Child in his Cradle, and declared him *Shah* by the Title of *Abbas* the III^d.

By this Means having secured the Tranquillity of *Persia* for the present, he turned his Arms against the *Turks*, whom in the Space of two Years, he defeated in various Battles, and at last dispirited them to such a Degree,

Degree, that they no longer kept the Field; upon which he determined to lay Siege to *Bagdat*.

While he was before this Place, he received Advice, that *Mahommed Kan Ballucke* had revolted, and declared for *Shah Thamas*, and made himself Master of *Shiras*. Upon this he raised the Siege immediately, marched directly against this General, whom he treated as a Rebel, had the good Luck to defeat him; after which he plundered the City of *Shiras*, and put Numbers of People to Death. He then returned to *Ispahan*, from whence he soon after marched into *Georgia*, reduced the City of *Teffis*, which is its Capital; over-run *Armenia*, and by the very Terror of his Name, frightened the *Russians* out of *Gilan*, which Province they had seized during the Troubles in *Persia*.

After all these Victories he summoned the Chief of the *Persian* Nobility to his Army, which then consisted of 150,000 Men, and there partly by Fear, and partly by Promises, made them consent to the total Subversion of their Constitution, both in Church and State, by agreeing to make the Crown hereditary in his Family, to renounce for ever the ancient Line of their Princes, and to admit an Union between the two Sects of the *Sunni's* and the *Schia's*, which being opposed by the *Mullah Bafsi*, in a set Speech, he answered his Arguments, by strangling him upon the Spot, and on the 21st of *March*, 1736, he caused himself to be proclaimed Sovereign of *Persia*, by the Title of *Nadir Shah*. The first publick Act of his Administration was to seize, or as he was pleased to call it, resume all the Church Lands in *Persia*; but finding that the Clergy were irreconcilable to him, he thought the Dispute would be less dangerous, if they were stript of their Property, which was very considerable, their Revenues amounting to a Million of *Tomans*, which is upwards of three Millions Sterling.

In *June* following he was crowned at *Casbin*, and from thence he marched to *Ispahan*, where he staid about six Months, during which Time he was acknowledged by the Grand Signor, and the Great Mogul. He spent his Time in preparing for his Expedition against *Kandabar*, and marching thither in the Beginning of 1737, he appointed his eldest Son *Reza Kuli Mirza*, to govern *Persia* in his Absence, who fixed his Residence at *Mesched*, whither *Shah Thamas* was afterwards conducted, and as it is said, by order of the young Prince, who no doubt acted therein by his Father's Direction, was there put to Death, to prevent, as far as possible, any future Revolts in his Favour, or in Support of any of his Family. *Nadir Shah* was as fortunate in his Expedition against *Khandabar*, as in any of his former Undertakings, reducing it much sooner than could have been expected, considering the great Strength of the Place. And it was while he lay before this Place, that he received an Invitation from some of the *Mogul's* Ministers, to invade that Empire. As we have given a very large and full Account of this Transaction in our former Volume, in speaking of the Succession of the Descendants of *Timur Bek*, in the Empire of *Indostan*, we shall not insist farther upon it here, but content ourselves with first giving the Reader a short View of the Life of this extraordinary Person, and then resuming the History of his Reign, at his Return from the *Indian* Expedition.

10. We have had various Reports in *England* concerning the Birth of this famous Conqueror and though they are now grown ridiculous, there was a Time when they were better received. It must be allowed, that on one Hand, it is extremely difficult for us to obtain any true Accounts from Places at so great a Distance, and it is no less true on the other Hand, that we are extremely careless in our Endeavours to procure them. The *Dutch* at *Batavia* require their Factors at different Forts throughout *India*, to send them Intelligence, and it is from these Letters, that they judge of the Abilities of the Persons they employ so that by this Method they are able to give their Masters in *Holland*, a tolerable View of the whole State of Affairs in the East, once in the Year. It is but very lately, that we have had any

distinct and true Account of this Hero, who was the Son of the Chief of one of the Clans of the *Afsbars*, a *Turcoman* Tribe divided into three Families, of which his was the second, and inhabited a District of the Province of *Chorasan*. He was born in the Year 1688, and as he was the eldest Son of his Father, was considered according to the Laws of that Nation, as his apparent Successor. In order to form a right Notion of this, the Reader is to be told, that there are several Tribes of the *Turcomans*, who inhabit this and other Provinces of *Persia*, where they live after their own Manner, in Consideration of certain Services that from Time to Time they are called upon to render to the Government of *Persia*; and the particular Service of his Family was to defend a Fortress commanding the Valley which they inhabit against the *Usbeck Tartars*. As to his Father's Name, we know it not; but that which he bestowed upon his Son at the Time of his Circumcision, was *Nadir Kuli*, which signifies literally the Slave of the Wonderful, but the true Sense of it is, the Servant of God.

His Father dying in his Minority, his Brother, the Uncle of *Nadir*, became, according to the Custom of the *Turcomans*, the Tutor of his Son, and the Chief *pro tempore* of the Clan. He took Care of the Education of the young Man, whom he bred up a zealous *Mahometan*, according to the Sect of the *Sunni's*, who are looked upon by the *Persians* as Heretics, and who, on their Side, consider that whole Nation in the same Light; he caused him likewise to be taught his Exercises, and showed him for several Years a great deal of Kindness and Respect. But when he came of Age, and would have taken upon him the Command of the Fortress and of his Clan, his Uncle did not care to resign; and being a Man of great Art, he had brought the People into such a Dependence upon himself, that his Nephew found they were little inclined to do him what he called Justice; and the Spirit of the young Man was such, that scorning to live in Subjection, in a Place where he conceived it his Right to rule, he resolved to put himself into the *Persian* Service. It was for this Reason he went to *Mesched*, which has been considered as the Capital of *Chorasan* ever since *Shah Abbas* the Great instituted Pilgrimages thither, on Purpose to hinder his Subjects from visiting the Tomb of their Prophet at *Mecca*, before which time the City of *Herat* had that Title. *Nadir Kuli* was well received by the Governor, who gave him a small Post in his Family, and another small Post in the Army. His Behaviour here was very regular, and very insinuating; he showed all possible Respect for his Superiors, was very kind and condescending to his Inferiors, and very exact in the Discharge of every Branch of his Duty.

By Degrees he gained the Confidence of the Governor to such a Degree, that he was raised to the Rank of a *Mim-Bafsi*, a Command equivalent to that of a Colonel of Horse in our Service; and then it was that he began to display the extraordinary Qualities he received from Nature. He affected a very different Conduct from that of his Brother Officers, for he was as attentive to Discipline as they were negligent in it; he despised Perquisites, kept his Corps constantly full, and by doing strict Justice to Merit, made his Soldiers not only content with their Lot, but pleased with their Profession. He was often employed in Service, and was always successful, which was chiefly owing to two Things, the strict Discipline of his Troops, and his keeping them Complete, which gave him a vast Advantage of the *Tartars*, and distinguished him from all other Officers, who for that Reason hated him heartily. The Confusion in the latter Part of the Reign of *Shah Husein*, as it encouraged the *Usbecks* to make frequent Incursions into *Chorasan*, so it gave him many Opportunities of raising his Reputation, by repressing their Insolence, and obliging them often to retire, notwithstanding their Superiority of Numbers. But in 1720, the *Usbecks* invaded the Province with a numerous Army, to which the Forces of the Governor were so unequal, that in a great Council of War, the Officers were unanimously

nimously of Opinion, that it was impossible for them to look the Enemy in the Face; and therefore they advised the Governor to retire into the Heart of the Province, and act wholly upon the defensive. *Nadir Kuli* opposed this, he magnified the Spirit and Courage of the *Persian* Cavalry, and insisted, that notwithstanding their Superiority of Numbers, if they marched and attacked the *Tartars*, instead of waiting for them, there was the greatest Probability of their giving a Check to their Expedition in its Beginning; which might stop their Progress, and save the Country from Ruin; the Governor, who was a Man of Spirit, closed with his Sentiments, gave him the Command, and he very fortunately executed, even more than he had promised; for he totally defeated the *Tartars*, and pursued them with such Vigour in their Retreat, that not one half of them escaped into their own Country.

The Governor promised to use all his Interest at Court to procure *Nadir Kuli* a Recompence from the *Shah* equal to his Service; but the rest of the general Officers representing to the Ministry, that this new Hero was no Friend of theirs, an Order was procured to the Governor for dispossessing him of his Command, and giving it to that Nobleman's Nephew, who had never seen Soldiers in his Life but at a Review. *Nadir Kuli* was at this Time thirty two Years of Age, and yet his Resentment was so much stronger than his Reason, that taking Things according to their first Appearance, and without staying to enquire how far the Governor had been just to him, he went and expostulated with that great Man, in such rough Terms, that he ordered him to be bastinadoed on the Soles of his Feet, and turned him out of his Service. He was now totally undone, without Fortune, without Friends, and without Hopes. In these dismal Circumstances he picked up a Couple of Fellows as desperate as himself, and with them robbed a small Caravan, which put them in Possession of a considerable Sum of Money, with this they bought Horses, Arms and Ammunition, and in a short Time, they associated twenty daring and undone Fellows, with whom they committed many Robberies, and in the Space of a few Months, encreased their Number to five hundred Men. At the Head of these, he not only committed Depredations through the greatest Part of the Province, but laying hold of the Confusion of the Times, encreased his Forces to such a Degree, that the Government, instead of being in a Condition to punish him, really stood in Awe of him.

Things were in this Situation, when a Commander of *Shah Thamas's* Army being traduced to his Master, and in Danger of his Life, fled to *Nadir Kuli* with fifteen hundred Horse. His Uncle having Intelligence of this, thought it was high Time to take some Method to reconcile himself to his Nephew; in order to which, he made Use of his Interest with the *Shah* to procure his Pardon; which was no sooner intimated to *Nadir Kuli*, than he promised his Uncle to repair to him, in order to make such Submissions as were necessary to cancel the Memory of his former Offences. This, however, was all Artifice; for being of an implacable Nature, he surprized his Uncle's Castle the first Night he lay in it, and put him to Death, notwithstanding which barbarous Action, he was now become so formidable, that the *Shah*, to save himself the Trouble of reducing him, confirmed his Pardon, and took him into his Service.

We have already shewn, how grateful and loyal a Return he made for this undeserved Favour, and in what Manner he assumed the Title of *Shah* in 1736; as also the principal Transactions that followed till such Time as he invaded the *Mogul's* Territories. He returned from hence in the Year 1739, contenting himself with the Cession of all the Countries to the West of the River *Attock*. He knew very well, that it was impossible for him to have preserved his Conquests in *India*, if he had intended it; and he knew as well, that if he did not keep them, it was impossible for him to provide better for his own Security, than by leaving them in the Hands of their own Possessor *Sultan Mo-*

hammed, a weak, inactive Prince, and consequently least likely and least able to incommode him. *Shah Nadir*, on his Return to *Persia*, meditated several great Designs, but executed none of them effectually, except that of transferring the Capital to *Mesched*; for though he carried on the War against the *Turks* successfully, defeated them in several Battles, and wintered with his Army in their Dominions; yet he found himself so often disturbed with Insurrections, that he was never in a Condition to prosecute or improve his Victories.

He turned his Arms sometimes against the *Lefgis*, the *Curds*, and the *Georgians*, but without any Success, and these Disappointments increasing, the natural Hastiness and Severity of his Temper, he began to make himself odious by a continual Series of Cruelties, some of which he exercised upon his own Family, causing his eldest Son *Riza Mirza* to be put to Death, at the Age of thirty two; and some Accounts say, that his second Son met with the same, or a worse Fate, that of having his Eyes put out. He grew insatiable also in Respect to Money, oppressing his Subjects to the last Degree.

He was always partial to his own Country, and to his own Nation. His little paternal Castle of *Calot* he endeavoured to render impregnable, and there he laid up all his Treasures; the Guard about his Person was entirely composed of *Affbars*, as supposing nothing could corrupt their Fidelity to their Chief. In this however he was mistaken, for his Nephew, who revolted against him, who is the Son of that Uncle he so basely murdered, had such an Interest amongst them, that he engaged them to make *Shah Nadir* Prisoner, and this occasioning a Disturbance; those who had seized him, to put an End to it, and to secure themselves, cut his Throat when he was in the twelfth Year of his Reign, and the fifty ninth of his Life. He had the two Sons that have been already mentioned, by Wives whom he married while he served as a *Mim Bashi*, under the *Beglerbeg* of *Khorasan*; by the Sister of *Shah Hussein*, whom he married at the Time that *Shah Thamas* declared him Generalissimo; he had only one Daughter; but by other Ladies in his *Haram* he left three Sons that were very young at the Time of his Decease, and of whom we shall have Occasion hereafter to make Mention.

II. When his Oppressions and Cruelties had rendered the very Name of *Shah Nadir* odious in all *Persia*, and when it was visible, that even his Soldiers rather feared him than loved him, many of the great Men began to consider whether it might not be possible, under Colour of Attention to the publick Good, to pluck the Crown from his Head. These Intrigues could not be so secretly carried, but that he discovered some, and was informed of others; which produced such bloody Executions, that at Length, the Disaffection to him became so general, as to induce *Ali Kuli Kan* his Nephew, to think of setting up for himself; to which he was chiefly moved by three Considerations; the first, that the Discontent was become general amongst the Army, as well as the People; the second, that he was himself at the Head of a considerable Corps of Troops, on whose Fidelity he knew he might depend; the third, that his Uncle was grown suspicious of him, so that Submission was to the full as dangerous as Rebellion; excited by these Considerations, about the latter End of last Year he began to recruit and increase his Army, to pay no Regard to the Orders that came from *Shah Nadir*, and to carry on a close Correspondence with some of the Officers that were near the *Shah's* Person.

Amongst these was *Mahomet Kouli Kan*, *Kourtschibachi*, to whom, when he was in Readiness to march towards *Mesched*, he sent Orders to make himself Master of the Person of the *Shah*, which he performed; but finding that there was no keeping him with Safety, and that there began to be great Cabals amongst the Officers who commanded under him, he took a Resolution of putting him to Death, which he executed without Delay, and immediately dispatched an Express to *Ali Kouli Kan*, intreating him to hasten his March to *Mesched*. On

On his Arrival there, that Prince was immediately saluted *Shah* by all the great Officers of the Crown, and the chief Commanders of the Army: He took Care to make himself Master of the Fortrefs of *Calot*, where he found all the immense Treasure of his deceased Uncle, by raising of which he had made himself so many Enemies, and by a wise Distribution of which, his Successor has made a Multitude of Friends.

The new Monarch, at the Time of his Inauguration, took the Name of *Adil Shah*, which signifies the just Prince, and one of the first Acts of his Reign was to publish a Manifesto, from whence we have taken most of these Particulars, and in which, after inveighing bitterly against the Mal-Administration of his Predecessor, who he says received the just Reward

of a Tyrant, he remits to the People all Arrears of the extraordinary Taxes imposed upon them, exempts them from every Imposition for two Years, and promises ample Restitution to such as have had their Estates confiscated under the former tyrannic Government. He is said however to have thought it necessary to his own Security, first, to put out the Eyes, and then to poison his three Nephews. Time will shew whether this was an Act of Necessity, or whether it flowed from a Blood-thirsty Disposition: In the mean Time he has given the strongest Assurances to the Grand Signior, and to the *Czarina*, of his Intention to maintain the Peace and Friendship, subsisting between their Empires and his own, and is at present exercised in settling his new acquired Sovereignty upon the only solid Basis, that of the Zeal and Affection of all his Subjects.

CHAPTER III.

A Description of the *North-East* Parts of *Asia*, and the extensive Empire of *China*, with the Countries dependent thereon, and the Manners and Customs of the several Nations that inhabit them.

SECTION I.

The Travels of his Excellency E. YSBRANTS IDES, Ambassador from *Peter* the Great to the Emperor of *China*, through *Great Ustiga*, *Siriana*, *Permia*, *Siberia*, *Daour*, &c. to the Frontiers of *China*; containing an exact Description of the Extent and Limits of those Countries, the Nations by which they are inhabited; with a curious and copious Account of their Religion, Government, Marriages, Dwellings, Diet, daily Occupations, &c.

Faithfully translated from the Author's Original Journal, printed under the Direction of the Burgo-master Witzen, the greatest Critick of his Time in Holland, and dedicated to the late Czar Peter the Great.

1. An Introductory Account of the Author, and of the Character and Credit of his Work; with the Reasons for inserting it in this Collection.
2. The Manner of his setting out from Moscow; his Voyage down the River Dwina, with a curious Account of the Inhabitants of the Province of Sirene.
3. His Passage from thence to Solikamskoi, with a large Account of the Salt-works in the Neighbourhood of that City.
4. The Author enters Asia, and visits the Country of the Wogulski Tartars, whose Manners and Customs he describes.
5. That Subject continued and concluded.
6. He continues his Journey through the Country of Tumeen, the Woods of which abound with a Kind of Animal that furnish the richest Furs in Russia.
7. A Description of the City of Tobolesk, the Extent of the Country of Siberia, and the Manner in which it was reduced under the Power of the Russians.
8. The River Irtysh described; the Manner of training Dogs to draw Sledges, and a Description of that Kind of Carriage over the Snow.
9. The Author's Arrival at the City of Surgut; an Account of the adjacent Country and of the Foxes, Beavers, and other wild Beasts.
10. The Course of the River Oby described; an Account of the Ostiacks who inhabit its Banks, their Customs and Manner of Living.
11. The Author visits one of their Princes, and gives a large Detail of the miserable State of him and his Family.
12. The difficult and dangerous Passage of the River Keta, and the extraordinary Risk the Author ran of perishing thereon.
13. A very copious and curious Relation of the Manner of finding Mammut's Teeth, with Conjectures concerning the Nature of that Beast, which is invisible during its Life-time.
14. An Account of the Skammanskoy or Negromantick Water-Fall, and of the Manner in which Ships pass down and are towed up it.
15. Our Author makes a Visit to the Schaman or Necromancer; a large Account of him, and of the Methods he makes use of in deceiving the Tungusians, with a Detail of the Manners and Customs of these People.
16. The Author's Arrival at Buratskoy; the Burattians, a Pagan People described, and a particular Account of their strange Ways of Living.
17. A very large and distinct Account of the Yehiam or Musk-goat, with the different Manners used in preparing that rich Perfume.
18. An Account of the Lake of Baikol, and a singular Instance of the Author's good Sense and Courage.
19. He continues his Journey to the City of Telimba; his Adventures in that Journey, with an Account of the Country he travelled through, and the People he met with.
20. His Journey to, and a Description of the City of Nerzinskoy, the adjacent Territories described, as also the two Nations of Tungusians, their brutal Manners and barbarous Customs.
21. Our Author proceeds to the utmost Limits of the Russian Dominions in Asia; of the Frontiers of which Empire he gives a very curious and copious Description.

1. **A**FTER giving an Account of the Persian Empire, it was requisite, that as we had described that of the Mogul in the former Volume, and given the Succession of Princes down to our Times, to proceed to the fourth great Sovereignty of *Asia*, the most extensive and most celebrated Empire of *China*. But at the same Time we had this in View, it seemed also no less requisite to give some Account of the Countries that lie between *Russia* and *Persia*, and the Frontiers of that vast Empire, the Omission of which would have left a great Part of *Asia* unsurvey'd. In order to attain this End, there seemed

to be no Method so proper, as giving the Travels of a Person who had passed through these Countries with a publick Character, who survey'd them at Leisure, had very extraordinary Opportunities of examining every Thing that was curious and worthy of Notice, and who afterwards compos'd his Work for the Information and Satisfaction of the Czar *Peter the Great*, of glorious Memory, to whom it was dedicated, and who was so well pleas'd therewith, that he testified his Respect for the Author, by honouring him with the Office of a Privy Councillor. It is however requisite to observe, that in 1699, there was printed at *Amsterdam* an Account of this Embassy, and the Travels of the Ambassador, by one Mr. *Adam Brand*, who accompanied him in his Journey as one of his Domesticks; but whether it happened through Want of Care in keeping an exact Journal, from a natural Incapacity in the Author, or from his entring into too great Liberties, grounded upon the Licence that Travellers take, more especially such as pass through unknown Countries, or from whatever Cause it fell out, so it was, that this Relation contained a Multitude of Things equally inconsistent with Probability and Truth; notwithstanding which, it gained Credit for a Time, and pass'd current for a true Relation of this celebrated Embassy. But when our Author's own Work appeared, the Folly and Weakness of this surreptitious Account became manifest to the whole World, and *Brand's* Romance has been ever since as much decried as the following Performance has been universally esteem'd. There is no Need of saying any Thing more, either by way of Introduction or Recommendation of a Piece that has been long in Possession of the highest Character from the properest Judges. All therefore that we shall add is, that the Reader has it here entire in the Author's own Words, compared with the last and best Edition of the Original.

2. The most illustrious Czars, *John* and *Peter Alexowitz*, having resolv'd to send a splendid Embassy to the Great *Bogdaichan*, or Sovereign of the famous Kingdom of *Kitai*, by Europeans commonly called *China*; this oblig'd me with a favourable Opportunity of travelling through Part of the famous, but hitherto unknown *Siberian* and *Kitaian* Countries, and informing myself by credible Witnesses of the Remainder of those Lands, as well as obtaining certain Knowledge of several Things with which the World hath not been hitherto truly acquainted. For by God's paternal Providence, and the particular Favour of their Czarish Majesties, I obtained the great Honour of being dispatch'd their Envoy to the *Chinese* or *Kitaian* Court, furnished with sufficient Credentials and other Necessaries.

The Preparation of my Retinue and Equipage took me up so much Time, that I did not set out before the 14th of *March*, 1692, when I went from *Moscow* in a Slead. The Beginning of my Journey prov'd very uneasy, by the violent Rain which accompanied us from *Moscow* to *Vollogda*, and occasioned such an Inundation, that our Sleads almost swam over the remaining Ice of the Rivulets and Brooks, and deep Roads. However, by the Divine Assistance, though not without Difficulty, we reach'd the City of *Vollogda*, where I rest'd three Days in Expectation of better Weather, which happen'd according to my Wishes; for within two Days it froze so hard, and snow'd so violently, that all the Water was froze up in four and twenty Hours; so that we could easily pass all the Rivulets and Ditches in our Sleads, without any Apprehension of Danger. The 22d of the same Month, I set forwards from *Vollogda* to *Suchina*, where I arriv'd on the 23d, and without stopping advanced to the City of *Great Ustiga*, where the Rivers *Suchina* and *Irga* unite, and thereby compose the famous River *Dwina*; the Name of which imports a double River.

The Course of the *Suchina* is almost full North, thro' a fertile Country, and its Banks on each Side are adorn'd with well inhabited Villages, besides *Totma*, an indifferent City, situat'd on its left Shoar; and several Travellers annually pass this River, going from *Vollogda* to *Archangel*, in small Ships well laden, as long as the River is open: But the Stream running in a stony

Channel, those Ships which pass it must be provided with good Plank at both Ends, by reason of the hidden Rocks, and the Rapidity of the Stream, which would otherwise sink them to the Bottom. At the Mouth of this River is situat'd the City of *Great Ustiga*, where I was oblig'd to stay about twenty four Hours. Leaving that Place, I came the 29th of *March* to *Solowitzjogda*, a very large City, inhabited by many considerable Merchants and curious Artificers, especially in Silver, Copper, and Bone. Here are also a great many Salt-pits that yield vast Quantities of Salt, which are transported to *Vollogda*, and all over the adjacent Countries.

I set out from this Place on the first of *April*, and the same Day reach'd the Province of *Sirene* or *Wollost Usgy*; the Inhabitants of which speak a Language that has not the least Affinity with the *Muscovite*, but is somewhat like the barbarous *German Livonian* Language; for some of my Retinue who understood that, could understand a great Part of the Speech of these People. They are of the *Greek Church* and subject to his Czarish Majesty, to whom they pay their Tribute; though they are not under the Jurisdiction of any Viceroy or Waywode, but chuse their own Judges amongst themselves, and important Causes which cannot be decided before them, are removed to the Foreign *Posolsche* or Ministers Court at *Moscow* to be determin'd. The Stature and Habit of both the Men and Women are not very different from those of the *Russian* Peasants; all which consider'd, I cannot but think that these People might anciently transplant themselves hither from the Borders of *Livonia* or *Coral*. I asked some of them out of Curiosity, concerning their Original; but they were not able to give me any Account, whether their Ancestors came thither out of foreign Countries, or not; nor could they give any Reason why their Language has no Affinity with the *Russian*. They generally live by Agriculture, except that Part of them which are employ'd in the Manufacture of Grey Furs, near the River *Zizol*. They inhabit a considerable Tract of Land, which extends to the City of *Kaigorod*, and is about seventy *Sumka's* long, each *Sumka* being a large *German* Mile. These People do not live in Cities or Towns, but for the most Part in small Villages built in the large Woods, and their Houses are like those of the *Russians*.

This Country terminating in a great Forest, we were again infest'd with a violent Rain, and such a Thaw, as in the Space of one Night swelled the Waters to that Degree, that I could not pass them without great Difficulty. In this uneasy Condition I remain'd four Days, during which Time I was oblig'd to struggle with all the incident Inconveniencies; our Sleads swam continually, and the Rivulets and Brooks on each Side of the Woods pour'd in upon us, so that, as though we had been in a Sea, we could neither proceed forwards, nor return backwards: Nor would the Ice of the great Rivers bear any longer; notwithstanding which, by the Help of Bridges and other proper Means, at last, on the 6th of *April* I reach'd *Kaigorod*, an indifferent large but very strong City on the River *Kama*.

3. From thence I design'd to have set forwards immediately to *Solikamskoi*, the chief City of *Great Permia*, in order to prosecute my Journey to *Siberia* over the Mountains of *Werchaturia*; but the Thaw at the End of Winter continuing, forc'd me to alter my Resolution, and stay there several Weeks, till the opening of the River *Kama* favour'd my Departure by Water; during which Time I made all necessary Preparations for my Journey. Another Thing which occasion'd my Stay, was the great Damage that the City of *Kaigorod* had suffer'd lately by Robbers.

This Misfortune, which fell upon the Commandant of the Place who had that Post when I was there, happen'd in the following Manner: On a *Sunday* about Noon, several well mann'd Barks, with flying Colours, Drums and Hautboys, came sailing on the River *Kama* to the City; the Men leaped on Shore, whilst the innocent Inhabitants suspected no Harm in Time of Peace, and in a quiet Country, but took

took them for Friends and Acquaintance from the neighbouring Villages, met together to divert themselves; but the Robbers set the South Part of the City on Fire, and falling upon the Inhabitants of the *North* Quarter, cut all of them to pieces that came in their Way, and at last went to the *Waiwod's* Apartment, which they plundered, and committed all Manner of Insolencies and Outrages on his Servants; after which carrying off whatever they pleased, they returned to their Boats and sailed down the *Kama*. But diligent Search being made after these Birds of Prey, they were found to be a Rabble of runaway Servants got together, some of which were at last taken, tortured, and punished according to their Crimes. I caused Wood for Firing to be brought to warm me, and kept still upon my Guard, appointing strong Watch by Water and by Land.

After my Vessel was equipped, and the *Kama* free of Ice, on the 23d of *April* we set forwards, and safely arrived on the 27th in the City of *Solikamskoi*, from whence I should have gone over the Mountains of *Werchaturia*, which is only practicable in Winter; the Multitude of the Morasses, and Deepness of the Roads, rendring that Way utterly impassable in Summer; for which Reason all Officers, as well as Merchants, are obliged to lie still the whole Summer in *Solikamskoi*, till they meet with hard Winter Roads. It is true indeed, that it is possible to sail round these Hills; but for certain Reasons that Passage is absolutely forbidden, neither Commanders nor Merchants being allowed to go that Way. Notwithstanding which, the Governor of *Solikamskoi* knowing that my Embassy would admit of no Delay, ordered me to be supplied with as many small Barks as were requisite to pass the River *Suzawaia*.

Solikamskoi is a very fine large and rich City, where several very considerable Merchants reside. Here are also many Salt-works or Pits, and very near fifty *Saline* Springs, from twenty-five to thirty-five Ells deep, out of which great Quantities of Salt are taken and boiled, and thence shipped off in great Tide-ships built for that Purpose; each of which will easily stow from One hundred to one hundred and twenty, thousand *Poods*, that is, from one thousand six hundred to two thousand Tun; mann'd with about seven or eight hundred Sailors and Labourers, and furnished with Kitchens, Bagnio's, and all Sorts of Conveniencies. These Vessels are from thirty-five to forty Ells long, and carry a Mast; to which is fixed a Sail of thirty Fathom broad, which they make use of to sail up the River when the Wind is good; but when they go down, they only row, and that chiefly to keep the Ship's Head right, which the Rudder alone is not strong enough to do. They are flat bottomed, and have no Nails, or other Iron-work in them, but are made entirely of Wood. They float along the *Kama* with the Tide, till it falls into the famous River *Volga*, where they are forced to be towed up against the Tide, or sail up if the Wind be favourable; but the Salt is unladen from *Kasan* to *Nisna* on the *Volga*, and at several convenient Places.

The 14th of *May* I set forwards from *Solikamskoi* by Water, and passed on the *Ufolkat*, a small River about Half a Mile from the City, again into the *Kama*: On which River we drove entirely out of *Europe* into *Asia*. So on *Whitsunday* I went on Shoar, and upon a high and beautiful green Hill eat my last Dinner in that Part of the World on the Grass. And after I had drank a Glass of Wine, as a Farewell to dear *Europe*, I immediately returned on Board, in order to proceed on our Voyage along the River.

4. Having thus entered the *Asiatick* River *Suzawaia*, we found it far less agreeable than the beautiful *Kama*; which is a fine River, abounding with all Sorts of Fish, and from *Solikamskoi* to this Place adorned with very fine large Villages and Towns, several very expensive Salt-works, fertile Corn Grounds, fruitful Lands, spacious Fields beautified with all Sorts of Flowers, Woods, &c. all wonderfully pleasant. But though the Banks of the *Zawaja*, which falls Westward into the *Kama*, are not less beautiful and fruitful; yet we found our passing this River very tedious; for by the high Water we made but a very small Progress in several Days, being

obliged to be towed along with a Line; however, at last, after twelve Days, and tiresome tugging against the Stream, we came to, and touched at a pleasant Shoar on the 25th of *May*, amongst the first *Siberian Tartars*, called *Wogulski*. I must acknowledge, that the well peopled Countries on the Sides of this River, deserve to be reckoned amongst the most charming in the World. And when in the Mornings or Evenings I stepped on Shoar to divert myself, and went within Land towards the Hills, I every where found the most beautiful Flowers and Plants, which emitted a most agreeable fragrant Scent, and all Sorts of Wild Beasts running about in great Multitudes. But the *Wogulskian Tartars*, to which this River led us, are stupid Heathens, which induced me to pry more narrowly into their Religion, Manner of Living, and other Circumstances; and for this End I went on Shoar, and lodged a Night amongst them.

They are naturally robust, and have remarkably large Heads. Their whole Worship consists in making an Offering once a Year; when they go in Crouds into the Woods, and kill one of each Species of Beasts, of all which they prefer the Horse and Tyger as best; they flea off the Skins, hang up the Carcass on a Tree, and fall prostrate to the Earth, and in their Way pray to it; after which they eat the Flesh together, and return Home; which done, they are free from the Trouble of praying for that Year. What need of Praying any oftner than once a Year, say they? They are not able to give the least Account of the Original or Import of their Faith, but only that their Forefathers did so, and they think good to follow their Example.

I asked them concerning their Knowledge of God; Whether they did not believe that there was a God and Lord in Heaven above, that had created, preserved and governed all Things, and gave Rain and fair Weather? To which they replied; We may very well believe that, for we see, that the Sun and Moon, those two bright Lights which we worship, and the Stars also, are in Heaven, and there is one which rules them. They would not in the least hear of the Devil, because he never appeared, or revealed himself to them. They acknowledge a Resurrection of the Dead, but are ignorant what Sort of Rewards to expect, whether corporal or not. When any of them die, they bury the Carcass without any Grave-stone; and be it Man or Woman, all his or her best Apparel and Ornaments, besides some Money, according to the Ability of the Deceased, are buried with the Corps; to the End that he may have some Cloaths on, and something to spend at the Time of the Resurrection. They cry over the dead Corps in a dismal Manner, and the Husband is obliged to continue a Widower a Year after the Death of his Wife. If a Dog dies, that in Hunting or any other Way has been serviceable to them, they erect in Honour of him, a small wooden Hut, on four Props of Earth; in which they lay the dead Dog, and suffer him to continue there as long as the Hut lasts. They take as many Wives as they can keep, and when any of these is pregnant, and near her Delivery, she is obliged to retire into a Hut in a Wood, erected for that Purpose, where she is delivered; and the Husband and she are not permitted to come near each other for the Space of two Months after.

5. When a Man desires to marry, he is obliged to buy the Bride of her Father. They have very few Marriage Ceremonies besides treating the nearest Relations; after which the Bridegroom goes to Bed to the Bride. They have no Priests, nor marry any nearer than the fourth Degree of Consanguinity. Amongst other Discourse I admonished them, that it was Time to acknowledge Christ the Saviour of the whole World, and turn to him; which would secure their temporal and eternal Welfare. To this they answered; As for what concerns Temporals, we daily see vast Numbers of Poor *Russians*, that can hardly get a Piece of dry Bread, and nevertheless some of them believe in Christ; and as for the eternal Things they left them to themselves; and at the same Time declared, that they would live and die in the Opinion of their Forefathers, whether right

right or wrong. The Habits of Men and Women, as well as theirs and their Childrens Shape, are expressed by the annexed Cut, which shews they are neither extravagant nor ridiculous.

Their Dwellings are quadrangular wooden Rooms, like those of the *Russian* Peasants; only instead of Ovens they use Hearths, on which they burn Wood, and dress their Victuals. The Smoak-hole which is in the Roof, is covered with Ice; as soon as the Wood is burnt to a Coal, which keeps the Warmth in the Room, and the Light strikes through the clear Ice. They have no Chairs, but instead of them a broad Bench round the Room, about an Ell high, and two Ells broad, on which they sit like the *Persians*, with their Legs across under them, and sleep on them at Night. They live upon what their Bow and Arrows furnishes them. Their chiefest Game are *Elks*, whole Herds of which are found here; these they cut in Pieces, and hang in the Air round their Houses to dry; if it happens to rain upon them, and they begin to stink abominably, they dry them again, and eat them as a Delicacy. They do not eat either Cocks, Hens, or Hogs. They have a pleasant Way of catching wild Beasts, for they place a Sort of great Bows in the Woods, fastning a String to them, to which they fix some Corn, or other Bait, leaving only a Place for the Game to enter, so that the *Elk*, or any other Beast that comes in there, cannot pass by without touching this Snare; and when the Bow lets fly, the Arrows enter the fore-part of the Body, and he presently falls down. They also dig great Pits in the Woods, which they cover with Reeds and Grass, so that if any Beast comes thither, he falls in and is taken. These *Tartars* live in their Villages all along the River *Iuzawaia* to the Castle of *Utka*, and are under the Protection of his *Czarish* Majesty, to whom they pay Tribute, and live in Security and Peace. The Extent of Land, which they inhabit, reaches about 800 *German* Miles in the North part of *Siberia*, and even to the North *Samojedes*.

6. After leaving these Heathens, we arrived at the Castle of *Utka* on the first of *June*. This Place is a Frontier Fortification against the *Baskirian* and *Uffimischian* *Tartars*. When I was there, an *Uffimischian* *Tartarian* Gentleman, an Inhabitant in his *Czarish* Majesty's Dominions, came thither in Search of his Wife, to whom he had been long married, and who had eloped without any Provocation. But when he could not find her amongst the Peasants, he comforted himself, saying, that he was the seventh Husband she had left, who were all alive; by which it seems that the Lady was Lucky enough to meet often with new Lovers.

On the 20th of the same Month, setting forwards from *Utka* in Waggon drawn by Horses, we passed the Castle of *Ajada*, and crossed the River *Neuia*, which runs round it. After which we proceeded by the River *Reesch* to the Castle of *Arsamas*, and from thence to the Castle of *Neuianskoi*, on the abovementioned River *Neuia*. This Journey by Land to *Neuianskoi*, proved one of the pleasantest in the World, since I met therein with most charming Fields, Woods, Brooks, and standing Waters, as also extraordinary fertile and well tilled Grounds, perfectly well inhabited every where by *Russians*, and furnished with all Necessaries at a very cheap Rate. At *Neuianskoi* I again took Water, and we drove with the Tide, betwixt two populous Shores, adorned with well built Villages and Castles, inhabited by *Russian* Christians, down to the River *Tura*, which terminates Westward in the River *Tobol*.

On the 25th of the same Month we reached the City of *Tumeen*, which considering its Situation is strong and populous, mostly inhabited by *Russians*; and the Remainder being about one fourth Part, with *Mahometan* *Tartars*, who drive a considerable Trade to the *Kalmick* Countries, *Bucharia*, &c. Great Numbers of these live dispersed all round in the Country, subsisting on Agriculture and Fishing. This and the neighbouring Places do not afford any Quantity of other Skins, than those of red Foxes, Wolves and Bears; but a few Miles distant is a Wood called *Heetkoy-Wollok*, which abounds with the very finest Grey Squirrels, that keep their Co-

lour both Summer and Winter; they are as large as the common Squirrels; besides which the Leather prepared from them is very strong, and they are not to be found any where in the whole *Muscovite* Empire besides. It is forbidden under a great Fine, to sell them to Merchants; for they are ordered to be preserved for the Use of the *Czar*. These Beasts are said to have the strange Quality of killing and eating all other Species of Grey Squirrels, that come into their Wood.

Whilst I was in this City, its Inhabitants and all their Neighbours were in great Fear of the *Kalmakian* and *Kosack-Orda* *Tartars*, who had joined and made an Irruption into *Siberia*, laid several Villages waste, cut the Inhabitants in Pieces, and also threatned this City, from which they were not above fifteen Miles distant. But the Governor very expeditiously raised a considerable Force out of *Tobolska* and other Cities, and sent them against these roving *Tartars*, whom they soon drove back with great Loss.

For this Reason, I was not willing to stay any longer here, but as soon as I had obtained fresh Rowers, and Soldiers for Convoy, I left that Place on the 26th of the same Month, and went farther down the River *Tobol*, the Shoars of which on each Side are low and moist Ground, which in the Spring is under Water, so that it is scarce, if at all inhabited; though for several Miles farther in Land on each Side it is abundantly peopled, partly by *Mahometan* *Tartars*, and partly by *Russians*; and the River produces all Sorts of excellent Fish.

7. On the first of *July*, I arrived safe at *Tobolesk*: Which City is surrounded with a large Stone Cloyster, with high Watch-Towers, which may pass for a Fortification. This Place is situated on a high Hill of a vast Circuit about, the Bottom of which, along by the River *Rhitisch*, is inhabited by the *Mahometan* *Tartars* and *Buchars*, who drive a great Trade up the *Rhitisch* or *Irtis*, into the *Kalmakian* Territories, and carry their Goods to *China*; so that if it were safe to travel the *Kalmakian* Country, the most expeditious Way to *China* would be to pass the *Jamuschowwa* *Osera*, or *Jamuschian* Lake.

Tobolesk, *Tobolska*, or *Tobolskoi*, is the chief City of *Siberia*, whose Jurisdiction extends Southward beyond *Baraba*, from *Werchaturia* to the River *Oby*; Eastward to *Samojedia*, Northward to *Ostiaski*, and Westward to *Ussa* and the River *Zuzawaja*. This Province is every where very well peopled, as well by *Russians* who depend on Husbandry, as by all Sorts of Nations, particularly *Tartars* and Heathens, which pay Tribute to his *Czarish* Majesty. Corn is so very cheap there, that 100 *German* Pounds of Rye Flower may be bought for sixteen *Cops*; and as for Flesh, the Price of an Ox is commonly from two *Rixdollars*, to two and a half, about eleven Shillings *English* Money; and that of an indifferent large Hog is from thirty to thirty five *Styvers*. Besides, the River *Irtis* produces such a prodigious Quantity of Fish, that a Sturgeon, weighing forty Pounds, may be there bought for five or six *Styvers*; and these Fish are so far from being lean, that when they are boiled, their Fat appears of the Thickness of a Finger. Here are great Plenty of all Sorts of wild Beasts, as, Elcks, Stags, Deer, Hares, &c. and of wild Fowl, viz. Pheasants, Partridges, Swans, wild Geese, Ducks, and Storks; all which are cheaper than Beef. This City is defended by a strong Garrison, which upon Order from the *Czars*, can bring 9000 Men into the Field; besides which are several Thousands of *Tartars*, who serve all on Horseback on Occasion.

Inursions into the West Frontiers, are very frequently made by the *Kalmucks*, the *Kosack Orda*, and the Subjects of the *Teshichan* or Governor of the *Bucharian* *Tartars*: Besides which the *Uffimur* and *Bakirian* *Tartars* commit such like Insolencies sometimes; but these are immediately opposed and repulsed by the *Toboleskians*. This City is also the Place of Residence of the Metropolitan or chief Ecclesiastick, who is sent from *Moscow* hither, and exercises spiritual Jurisdiction over all *Siberia* and *Dauria*.

About an hundred Years ago, this City and the whole Province of *Siberia* became subject to the Czar, by the following Accident. *Jeremak Timefeiewitz*, a very famous Robber in the Reign of Czar *Ivan Wasilewitz*, having plundered these and all the adjacent Countries, had greatly injured the Subjects of his *Czarish* Majesty; when he was pursued, he and his Companions fled up the River *Kama*, and from thence into the River *Iuzawaja*, which falls into the *Kama*, where lie the Lands of *Strogino*, famous for his vast Estate and Iron Works, which take up the greatest Part of the Shoar, and stretch to the Length of seventy *German* Miles. It was this rich Man's Grandfather that he applied himself to for Protection, and begged his Interest in obtaining his *Czarish* Majesty's Pardon, offering at the same Time by Way of Attonement, to reduce the whole Province of *Siberia* to be subject to the Czar. Pursuant to which he also obtained from the abovementioned *Strogino*, Assistance of Barks, Arms, and necessary Workmen; and thus provided and accompanied with his Fellow Robbers in light Barks, he passed up the River *Serebrenskoy*, which runs by the North-east Part of the *Werchaturian* Hills, and falls into the *Iuzawaja*; thence he conveyed his Equipage by Land to the River *Tagin*, on which he sailed into the *Tura*, took the Fort of *Tumeen* situate thereon, razed it to the Ground, and advanced up the River *Tobol* to *Tobolska*, where then resided a *Tartarian* Prince, aged about twelve Years, whose Name was *Altanai Kutzjumowitz*, whose Descendant is still honoured with the Title of the *Siberian Czarewitz*. This City he likewise attacked and took with small Loss, after which he carried the Prince Prisoner to *Moscow*, and put the conquered City into a better Posture of Defence.

After this Success he proceeded down the River *Jetisch*; but was set upon in the Night by a Party of *Tartars*, not far from *Tobolski*, who cut off a great many of his Men, and he himself endeavouring to step from one Bark into another, leaped short, and by Reason of his heavy Armour, sunk to the Bottom; his Body was carried away by the Force of the Stream and never found. In the mean while *Strogino* had obtained the Czar's Pardon for *Jeremak*, and several hundred *Muscovite* Officers and Soldiers came and garrisoned the Places which he had taken; and from this Juncture the Czar's Sovereignty over *Siberia* is to be dated.

The *Tartars* that live round *Tobolska*, for several Miles, are all *Mahometans*. I being somewhat curious to see their religious Worship, the *Waiwode* went with me, and by Virtue of his Authority, gave me an Opportunity which they will not allow another Person. Their *Metschets*, called by other Authors *Mosques*, or Churches, had large Windows round them, all which were set open: The Floor was covered with *Tapistry*, besides which there was no other Ornament. All Persons at their Entrance leave their Shoes or Slippers at the Door, and set themselves down in Rows, with their Legs under them: The Chief-priest sat there in a white Callico Habit, and a white *Turkish* Turbant on his Head. Then I observed one behind the People cry with a hoarse loud Voice, and after he had said something to them, they all fell on their Knees; then the Priest uttered some Words, and afterwards cried out, *Alla, Alla, Mahomet*, which the whole Assembly roared out after him three Times successively, prostrating themselves on the Ground: This done, the Priest looked into both his Hands, as though he designed to read something there, and repeated *Alla, Alla, Mahomet*: Then he looked first over his right Shoulder, then over his left, which all the People did after him, and so their short Devotion was ended.

The *Mufti* or Chief Priest is an *Arabian*, whom they highly reverence; and they very much esteem any Person that can either read or write the *Arabick* Language. This Priest invited us to his House, which was near the *Metschet*, and treated us with a Dish of Tea. There are also in this *Calmackian* Country great Numbers of *Tartars* that are used for Slaves; as also some long imprisoned *Calmackian* Princes; all which are the Consequences of Wars, which one Tribe of these barbarous Nations have carried on against another, and this in

a desert Country, more than wide enough for them all.

8. After I had provided myself with Barks, Soldiers for Convoy, and other Necessaries, I set forwards in the Name of God, on the 22d of July from the City of *Tobolski*, falling down the River *Irtis*; passing *Tartarian* and *Ostackian* Villages, and the Towns *Demonoskoy*, *Jamin*, &c. all on the South-side, where *Pennonka*, a small River, falls into the *Irtis*. On the 28th of the same Month we arrived safe at *Samarosky-Jam*, where I took in fresh Rowers, and ordered the Masts to be erected in our largest Vessels, in order to sail up the River *Oby*, if the Wind proved favourable; for the *Irtis* discharges itself into the *Oby*, not far from this Town of *Samarosky-Jam*.

The River *Irtis* appears to be a white light Water; it rises from the Hills in the *Kalmackian* Country; its Course is from the South to the North-East; and it passeth down through the two Lakes of *Kabako* and *Saisan*. Its whole South-East Shore, from Beginning to End, is all high Hills, on which grow some Cedars dispersed here and there. The North-West Shoar is low Pasture Ground, and on this Side are a prodigious Number of great Black Bears, Wolves, and Red and Grey Foxes. Not far from *Samarosky-Jam* is a Rivulet, called *Kasunka*, which runs into the *Oby*, and upon its Banks affords the best Grey Squirrels in all *Siberia*, (except only the Wood of *Heetkoy Wollock*) which are called from the River, *Kasunka*.

Here I am to relate what the Inhabitants told me as a Truth: That last Year, in Harvest-time, early in the Morning, an extraordinary large Bear broke into one of the Cow-Houses in this Town, seized a Cow, held her fast by the Shoulder with his two fore Feet, and carried her off, going on his hinder Feet only. Upon the Lowing of the Cow, the Owner and several of the Neighbours came out, saw it, and all run at the Bear with Fire-Arms and Clubs; notwithstanding which, he would not part with his Prey till they fired and killed the Cow.

Most of the Inhabitants here are *Russian Jemskicks*, who are in the Pay of his *Czarish* Majesty, for which they supply the *Waywodes* that are ordered this Way, and all other Persons who travel on the Czar's Affairs in *Siberia*, with free Carriages and Men to work; and are obliged to carry them by Water in Summer, and over the Ice in Winter, as far as *Surgut*, situate on the *Oby*, at a very reasonable Price. These People keep great Numbers of Dogs, which they make use of to travel with in Winter, for it is utterly impossible to pass this Country with Horse-Sleads, by Reason that sometimes the Snow on the *Oby* is above a large fathom deep, so that no Horse could travel.

These Dogs are yoked two to each *Narta* or Slead, which is for that Purpose made very light and thin; and carry from two to three hundred *German* Weight. The Slead nor the Dogs are not hurt by the Snow, but both run very swiftly over, leaving a Trace only of the Depth of a Finger's Breadth. Some of these Dogs know beforehand, whether there is like to be any Work for them, as we were vainly told; and if they are likely to be employed, they herd together in Crouds, and howl in a dismal Manner, whence their Masters draw their Presages. If when they are on the Way, they are inclined to hunt, the Master takes his Gun on his Shoulder, and puts on his long sliding Shoes, with which he goes over the Ice, takes his Dogs with him, and steps a little Way into the Wood, turns up all Manner of wild Game, perhaps a fine black Fox; and then they divide what is taken fairly, for the Skins of the Game are the Masters, and the Flesh belongs to his Dogs. Thus they make a very profitable Use of these draught Dogs; which are middle sized, sharp Nosed, with long erected Ears, and carry their Tails crooked; some of which are very like Wolves or Foxes, insomuch that as they lie asleep in the Woods, they are sometimes by Mistake shot for one of those two Species: To countenance which, it is also affirmed, as a Thing certain, that these Dogs mix their Strain, by a promiscuous Copulation with that of Wolves and Foxes;

*Russians Traveling with

Solemn Oath*

Foxes; whence, as our Informers asserted, whenever a Courfing Match happens among the Inhabitants, they find a great Number of both Species near the Villages, as has been frequently observed.

Having all Things prepared by the *Samaroffschian Femskicks* in order to advancing on my Journey, I departed thence on the 29th of *July*, and with my two large *Dofchenicks* or Tide Ships, I drove down the most convenient Arm of the *Irtis*, to the celebrated River *Oby*, which I reached early the next Day. I found her Eastern Shoars abounding with Hills; but the West intirely flat Land, as far as was visible to us. The *Oby* was half a Mile over at this Place.

9. On the 6th of *August* we reached the City of *Surgut*, situate on the Eastern Shoar of the *Oby*: The inland Country for some Distance Eastwards of *Surgut*, as also farther up the *Oby*, about or near the City of *Narun*, produces Sables, some of which are pale, and others as black as Pitch, the finest and largest Ermines in all *Siberia* and *Russia*, and above all black Fox-Skins, which are the very finest and richest any where: Among the best of these Fox-Skins, which are reserved for his Czarish Majesty, there are some which are valued from two to three hundred *Rubels* a Skin, that are so very black, that the blackest *Daurian* Sable is not comparable to them. These Foxes are caught by Dogs; of which the Inhabitants related the following very remarkable Accident, in strong Terms, but let the Reader believe as he pleases.

Last Year, near a Village adjacent to *Surgut*, by Day-light, an extraordinary fine Fox discovered himself, upon Sight of which a Boor let loose his Dogs: The Fox was within Sight of the Peasant, and the Dogs soon got up to him; but when this subtle Animal saw that it was impossible to escape the Hounds by Flight, he fawning run to meet them, tumbled on his Back before them, and licked their Mouths, run backwards and forwards and played with them; the unexperienced Dogs softned by his fawning Treatment, did the fly Fox no Manner of Hurt, but suffered him to escape into the Wood; so that the poor Peasant having no Fire-Arms at Hand, notwithstanding all his Vigilance, did for that Time lose Sight of this rich Booty.

But two Days afterwards the same Fox returned to the same Place; which the Peasant was no sooner aware of, but he took another, and his best Dog with him, which was white haired; and full freight with fresh Hopes of this rich Game, he runs this Dog at the Fox, but the black Dogs flew towards him, and while he was fawning on them, the white Hound was so cunning as to fawn at first, but being come within Reach, he took a good Leap at him, and had certainly seized him, if he had not, by leaving a Piece of his Side behind him, sprung nimbly from him, and escaped into a thick Wood, where it was in vain to look for him.

The Boor was at last however too hard for this subtle Fox, for he coloured his white Dog all over black, that the Fox who was become shy of him, might not know him; which done he went the third Time on this Course with his dy'd Dog, and was so fortunate that his Hound smelt him out; upon which the Fox seeing the disguised Dog, fawn'd on him without the least Fear, taking him for one of the first black Hounds, with whom he designed to play again; and in this Posture they approached each other, when the Dog watching his Opportunity, grasped the careless Fox, and so caught this fly Beast with his fine Skin, which proved very well worth the Peasant's Trouble, he selling it for an hundred *Rubels*.

Here are great Numbers of those which are called Cross-Foxes, whose Skins are of a mixt black and grey, but very few perfect black. Red Foxes and *Hyæna*'s, as also Beavers are very plentiful in this Country; but the *Hyæna*'s are very mischievous and live on Prey.

They, like the *Linx*'s, place themselves in the Trees, lie very still and close, till a Hart, an Elk, a Doe or an Hare runs under the Tree; from which they leap upon him, eat a Hole in his Body, and continue gnawing, till the Beast by Force of Pain falls down, and consequently comes to their Share. One of the *Wairwods*

kept a *Hyæna* alive for his Diversion, which he put into the Water, and let two Water Dogs loose at him; but he immediately leaped upon the Head of one of them, and held him so long under Water till he drowned him; after which he swam to the other, whom he had treated in the same Manner, if he had not been interrupted by throwing Wood at him, till the Dog, taking his Opportunity, swam out.

But with Regard to the Beavers, which herd here in great Numbers, some very strange Particulars are related as Truths, though they seem ridiculous; wherefore I take it to be worth my Pains to touch a little on their Properties, of which the following are all seriously averred to me. The greatest Part of their Food being Fish, they harbour on the Shores of those Rivers which abound most with Fish, and which are not much troubled with Passengers. In the Spring they not only herd together, but assemble themselves into a Society, and pick out some, and seize others as Prisoners, whom they carry to their Holes, and oblige them to serve as Slaves. They fell Trees with their Teeth, carry them to their Dwellings, and there hack out their Wood to a certain Length, which they artificially fix together like Joyners-work, and Chefts, and there they lay up separately all their Summer-store of Provisions. And about the Season of this Preparation, the Time of the Female Beavers Bringing-forth approaches; upon which the Inhabitants told me improbable Things of their Practices. They say, that against that Juncture the whole Neighbourhood go together, and frequently gnaw a Tree of above an Ell Circumference, for the Length of above two Fathom, even to the inner Pith, till it falls down; that they are expert enough to bring it to their Holes by Water, and that they can rear it upright before the Entrance of their Holes, so artificially, that the Tree stands perpendicularly in the Water above an Ell deep, and yet touches no Ground; and that so firm and immoveable in its Line or Centre, that though the Wind blow ever so hard, the Tree remains firm in its Place. All which seems unnatural; and yet all the *Siberians* that I ever discoursed unanimously affirmed it; and added several other Things concerning these Beasts, which seem rather the Effects of human Reason, than within the Compass of that Instinct which guides irrational Brutes; all which I shall not trouble myself to describe at large.

At the same Time, some ascribe this Erection of the Tree before the Beaver-holes, to the Conjuraton of the *Ostiacks*, and other Heathens, who live in all Parts thereabouts. Whether it is so or not, God knows; but it is certain, that these Beasts have Slaves amongst them, which in all Parts here are known to the Peasants, by reason they are lean, and their Furr worn off by Labour.

The *Russians*, as well as the *Ostiacks*, which go out a Beaver Hunting, always avoid the Destruction of a whole Nest or Kennel; for if they kill or shoot all the rest, they leave a Couple, Male and Female remaining, in order to furnish them with fresh Game in the same Place the next Year.

10. Having passed several Miles up the *Oby*, Part of which we sailed, and towed the rest with a Line, on the 13th of *August* we passed by the Mouth of the *Wagga*, which riseth out of the *Truganian Mountains*. This is a large River, its Water is brown, and its Course North-North-West into the *Oby*, on this Side of *Narun*, at which City we arrived on the 24th of the same Month. It is situated on the Side of the River in a fine Country, and is provided with a Fortress or Castle, and an indifferent Garrison of *Cossacks*. All the Country around this City abounds with Cross and Red Foxes, Beavers, Ermines, Sables, &c. which afford fine Furs.

The Banks of the *Oby* to this Place are inhabited by a People called *Ostiacks*; who worship Terrestrial Gods, but acknowledge, that according to Nature there must be a Lord in Heaven, that governs all; nevertheless, they do not pay any Worship at all to him, but have their own Gods made of Wood and Earth, in several human Shapes. Some of the richest amongst them dress these Deities in filken Cloaths, made after the Fashion of those of the *Russian Women*. All of them have

have these Idols placed in their Huts, which are made of Barks of Trees, sewed together with Harts Guts. On one Side of the God hangs a Bunch of human and horse Hair, and next that a wooden Vessel with Milk Pap, with which they daily supply their Idols, and thrust it into their Mouths with a Spoon made for that Purpose; but in as much as these Idols cannot swallow this their Milk Diet, it runs out again at both Sides of their Mouth, down their whole Bodies, in such a filthy Manner as is sufficient to disgust one from eating of that Food. When this nice God is to be worshipped or prayed to, his Adorers stand bolt upright, and tols their Head up and down, without bending their Backs in the least; besides which, they chirrup or whistle thro' the Lips, as we do when we call a Dog; and in these Fooleries consist their Devotion.

They call their Gods *Saitan*, and might indeed very well say *Satan*. Once several *Ostiacks* came on board the Ship in which I was, to sell us Fish, and one of my Servants had a *Nurenburg* Bear in Clock-work, which, when wound up, drummed and turned his Head backward and forward, continually moving his Eyes till the Work was down. Our People set the Bear at Play a little; and as soon as ever the *Ostiacks* saw it, all of them performed to it their customary Religious Worship, and danced excessively to the Honour of the Bear, nodding their Heads, and whistling at a great Rate. They considered our Bear as a right *Saitan*, crying out, What are our *Saitans* which we make? If we had such a *Saitan*, we would hang him all over with Sables and Black Fox Skins. They also asked, whether this Clock-work was to be sold; but I ordered it out of their Sight, to avoid administering any Occasion to Idolatry.

As for what farther concerns these Heathens, they have as many Wives as they can maintain, and marry their near Relations without any Scruple: If a Relation dies, they cry incessantly for several Days, covering their Heads, and sitting on their Knees in their Huts, and will not suffer themselves to be seen; but they carry the Corps on Poles to the Ground to be buried. They are a poor People, and live very miserable in sorry Huts. They might, indeed, live very happily and well, since all Parts near the *Oby* abound with great Quantities of rich Furs; besides that, there is extraordinary good Fishing in that River, in which are very fine Sturgeons, Jacks, &c. insomuch that twenty great Sturgeons may be bought of them for three Penny-worth of Tobacco; but they are so horrid lazy, that they do not desire to get any more than will barely suffice them annually for the Winter: For when they travel, they eat mostly Fish, especially when they are on the Water fishing, for then they live on nothing else. They are all of a middle Stature, most of them yellowish or red hair'd, and their Faces and Noses disagreeably broad; they are weak and unable to labour hard, not at all inclined to Wars, and unfit for Military Exercises. Bows and Arrows are their Weapons, with which they shoot wild Beasts, tho' they are not much addicted to this neither. Their Cloaths consist of Sturgeon and other Fish Skins; they use neither Linnen nor Woollen; their Shoes and Stockens are fastened together, and they wear a short Coat with a Cape and Hood, which in Case of Rain they pull over their Heads. Their Shoes are also made of Fish-skins, and are sowed fast to their Stockens, but not closely; so that their Feet must necessarily be always wet. When they are upon the Water, notwithstanding the Thinness of their Cloathing, they will bear extraordinary great Cold; for if it be but a common Winter, they are no better clad than has been mentioned; but if the Winter prove hard, those who are thus clad are compelled to put another Coat of the same Sort of Fish-skins over that; and they express this severe Weather amongst one another, by saying, *Do you like the Winter that forces one to wear two Coats of Skins?* They sometimes go a Hunting in the Winter with a single Coat only, and their Breasts bare, depending upon warming themselves quickly with sliding and running over the Ice in their Schaits or sliding Shoes; but if,

as it several Times happens, they are overtaken by an extraordinary severe Frost, and it seems utterly improbable to escape it, or save their Lives, they with the utmost Haste throw off their Fish-skin Coat, fling themselves into the deep Snow, and voluntarily freeze to Death; the Reason why they pull off their Coat is, only that they may die the sooner, and with less Pain.

The Womens Cloaths are almost like the Mens; the Mens greatest Diversion is Bear-hunting, to which Sport they gather together in Crouds, armed with no other Weapon than a sharp Iron like a large Knife, fixed to a Stick about a Fathom long. As soon as they have put up a Bear, they run at him with these short Spears, and having killed him, they cut off his Head, stick it upon a Tree, run round it, and pay the profoundest Respect to it: After which, they run to the dead Body with repeated Cries, asking the Bear, *Who killed you?* The *Russians*, they answer, themselves. Who cut off your Head? *A Russian* *Av*. Who cut up your Belly? *A Knife* which a *Russian* made. And more such-like Follies. In a Word, the *Russians* bear all the Blame, and they are entirely innocent of the Murther of the Bear.

11. They have a Sort of Petty Princes amongst them, one of which is called *Kneska*, or Prince *Kurza Muganak*, whose Authority extends over some Hundreds of Huts; and he lays on and collects the Tribute which they are obliged to pay to the *Wairwodes* of his Czarish Majesty. This Potentate came with all his Princely Family and Servants on board me, paid his Compliment, and brought me a Parcel of fresh Fish as a Present; which I requited by presenting him with some Brandy and Tobacco, with which he went on Shoar very well contented; but returned immediately, and invited me to his Princely Palace. I being very curious to see this great Lord in his sumptuous Place of Residence, went thither, though I had no great Appetite to his Entertainment. Coming on Shoar, the introductory Ceremonies were not very particular. He acted the Master of the Ceremonies himself, and without much Solemnity brought me to his magnificent Apartment, which, like the other Huts of the *Ostiacks*, was composed only of Barks of Trees slightly sewed together. I found here four of his Wives, two old and two young; one of the young ones had a red Cloth Coat on, and was set off with all Sorts of Glass Corals about her Neck and her Middle, and in the Curls of her Hair, which hung down on both Sides of her Head in two Rows; she had also in her Ears great Thread-wrought Rings, with long Strings of Coral hanging at them. Each of these Princesses presented me with a Barrel made of Birch-Bark sewed together, and full of dry Fish; but the youngest gave me a Barrel of Sturgeon Fat, which was as yellow as Gold. After I had received these Presents, I caused them to be treated with Brandy and Tobacco, which is a great Delicacy amongst them. In this whole Princely Building, I saw no other Furniture than some Cradles and Chests made of Barks of Trees sewed together, in which the Bed-Cloaths lay, being of planed Wood-Shavings, which yet were almost as soft as Feathers. These Cradles stand at one End of the Hut, to avoid the Fire which is kindled in the Middle, and the Children lie naked in them. I also saw a Copper Kettle there, and some other Kettles composed of Barks of Trees sewed together, in which they boil their Victuals on the live Coals or Embers, for in the Flame they cannot do it.

To smoke Tobacco, (to which all, both Men and Women, are very much addicted) instead of Pipes they use a Stone Kettle, in which they stick a Pipe made for that Purpose, and at two or three Drawings, after they have taken some Water in their Mouths, can suck out a whole Pipe; and they swallow the Smoak, after which they fall down and lie insensible, like dead Men, with distorted Eyes, both Hands and Feet trembling for about Half an Hour. They foam at the Mouth, so that they fall into a Sort of Epilepsy; and we could not observe where the Smoak vented itself, and in this Manner several of them are lost. For as they

they are upon the Water travelling, or sitting by the Fire, some of these violent Smoakers fall into the Water and are drowned, or into the Fire and are burned; but some, after they have sucked in the Smoak, let it out at their Throats again, and these are in a better Condition than the other, tho' some weaker Constitutions are sometimes suffocated even thus with the Smoak which they let down into their Bodies.

It is further observable, that they are very angry, if any of their Relations, though long dead, are named or mentioned. They are utterly unacquainted with all Things before their own Life-time, and do not pretend to give any Relation of them; nor can they either write or read; and though they are very fond of Bread when they meet with it, they never trouble themselves with the Tillage of Land, or Culture of Gardens.

They have neither Temples nor Priests. Their Shipping or Boats, on the Outside, are Barks of Trees sewed together, and the Inside Ribs of very thin Wood; these are two or three Fathom long, and but an Ell broad; and yet they can secure themselves in them in great Storms till they get on Shore. In Winter-time these *Ostiacks* live entirely under Ground, there being no other Entrance to their Caves, but a Hole left open on the Surface of the Earth to let out the Smoke: If, as is frequent, a great Snow falls, it happens that, as according to their Custom, they lie asleep naked round the Fire, Part of their Body which lies a little distant from the Fire, is two or three Fingers thick covered with Snow; when they perceive themselves cold they turn about to the Fire, and bestow the best Place on the cold Part of their Body a little while, and so take no more Notice of it, being a very hardy People in respect to the Variation of Weather.

When an *Ostiack* is jealous of one of his Wives with another Man, he cuts some Hair from the under Part of a Bear's Skin, which he carries to the Man whom he suspects: If he be innocent he then accepts it, but if he be guilty, they believe he dare not venture to touch it, but must acknowledge the Truth, and then amicably makes up the Business with the Husband, and the Wife is sold; for if any should presume to be so rash as to take the Hair though he was guilty, they tell us they are assured, that the Bear's Skin from whence that Hair was cut off, will again become a living Bear, which after the Expiration of three Days will appear in the Wood, and tear the perjured Wretch to Pieces. On this Occasion they invoke Bows, Arrows, Axes, and Knives, and firmly believe that if the guilty Person takes any of these, he shall certainly be killed by those individual Instruments which he accepts, within the Space of a few Days; which is not only averred by themselves, but unanimously vouched also by the *Russians* who live in the Neighbourhood of these Parts. But enough of these *Ostiacks*. The Shore of the River *Oby*, on which they live, is all untilld Land from the Sea to the River *Tom*, by reason of the extreme Cold; so that no Corn, Fruit, or Honey, is here produced; there being only a few Nuts which grow on the Cedar-trees.

12. After having passed some Weeks on the River *Oby* amongst the barbarous *Ostiacks*, we went by the City of *Keetskoy*, situate on the River *Keta*, which falls North-west into the *Oby*. On the 28th following I passed by the Cloister of *St. George*, and the 3d of October I went by the Village of *Worozeikin*; and on the same Day died *John George Weltsel*, a Painter, one of my Retinue, who was born at *Sleswick*, after he had kept his Bed fourteen Days on Account of a Swelling just above his Heart, which was aggravated by a Fever.

On the 7th of October, I safely arrived at the Village *Makofskoi*, and there caused *Weltsel's* Corps to be buried on a Hill near the River, in the Middle of the Village. I must own that this Voyage upon the River *Keta* was the more irksome and melancholy than all the whole Way before; we were obliged to labour for five Weeks against the Stream, without seeing so much as any Man, besides now and then an *Ostiack* that appeared, and immediately hid himself in the Woods. This Sort of *Ostiacks* speak a different Language from those on the *Oby*; but their Idolatry is the same.

In this tedious uneasy Passage, I was exposed to much Care and Anxiety; for our Provisions, and especially the Meal, grew very low, by reason I had not recruited otherwise than with Fish since my Departure from *Tobolska*, and had been too charitable to the *Ostiacks* on board our Ship, who when we found it requisite, were obliged to tow us along with a Line; by which continual Fatigue they were become so weak, that we were obliged to keep a perpetual Watch over them to prevent their Desertion.

Notwithstanding all this Care, no Day passed in which some did not run away. And at last the Coldness of the Season, and their perpetual Labour, rendered them perfectly unserviceable; and if I had not before-hand written to the Governor of *Jenizeskoy* for Men to assist me, which he dispatched away to meet me with the first Opportunity, I and my Retinue had been probably lost; for not being within thirty Miles of the Village when the Assistance came, we had been certainly frozen up in the River, and had perished by Famine, and the deep Snows, which fall there; for this River is utterly unnavigable in Winter.

I was scarce got from *Makofskoi* before the River froze up. The Course of this River is, for the most Part, through an even Country, abounding with Woods and small Shrubs; the Water in some Places runs in such a crooked Channel, that where we dined at Noon, we were obliged to sup at Night, or at least not far from thence. Here are great Quantities of Woodcocks, Pheasants, Partridges, and other Wild-fowl; and it was a very diverting Sight to see great Flocks of Woodcocks and Pheasants come to the Brink of the River to drink, which gave us an Opportunity of shooting as many as we pleased in our Passage, and when our Provisions grew scarce, afforded us no small Assistance. Here grow also Strawberries, black and red Currants and Black-berries; but the River doth not yield great Quantities of Fish.

13. Amongst the Hills which are situate North-east of, and not far from hence, the *Mammuts* Tongues and Legs are found, as they are also particularly on the Shores of the Rivers *Jenize*, *Trugan*, *Mongamsea*, *Lena*, and near *Jakutskoi*, even as far as the Frozen Sea. In the Spring, when the Ice of this River breaks, it is driven in such vast Quantities, and with such Force by the high swollen Waters, that it frequently carries very high Banks before it, and breaks off the Tops of Hills, which falling down, discover these Animals whole, or their Teeth only, almost frozen to the Earth, which thaw by Degrees. I had a Person with me, who had annually gone out in Search of these Bones; he told it to me as a real Truth, that he and his Companions found the Head of one of these Animals, which was discovered by the Fall of such a frozen Piece of Earth. As soon as he opened it, he found the greatest Part of the Flesh rotten, but it was not without Difficulty that they broke out his Teeth, which were placed in the Fore-part of his Mouth, as those of the Elephants are; they also took some Bones out of his Head, and afterwards came to his Fore-foot, which they cut off, and carried Part of it to the City of *Trugan*, the Circumference of it being as large as that of the Waist of an ordinary Man. The Bones of the Head appeared somewhat red, as though they were tinged with Blood.

Concerning this Animal there are very different Reports. The Heathens of *Jakuti*, *Tungusi*, and *Ostiacki*, say that they continually, or at least by Reason of the very hard Frosts, mostly live under Ground, where they go backwards and forwards; to confirm which they tell us, that they have often seen the Earth heaved up when one of these Beasts was upon the March, and after he was passed, the Place sink in, and thereby make a deep Pit. They further believe, that if this Animal comes so near to the Surface of the frozen Earth as to smell the Air, he immediately dies, which they say is the Reason that several of them are found dead on the high Banks of the River, where they unawares came out of the Ground.

This is the Opinion of the Infidels concerning these Beasts, which are never seen.

But the old *Siberian Russians* affirm, that the *Mammoth* is very like the Elephant, with this Difference only, that the Teeth of the former are firmer, and not so freight as those of the latter. They also are of Opinion, that there were Elephants in this Country before the Deluge, when this Climate was warmer, and that their drowned Bodies floating on the Surface of the Water of that Flood, were at last washed and forced into subterraneous Cavities; but that after this universal Deluge, the Air which before was warm, was changed to cold, and that these Bones have lain frozen in the Earth ever since, and so are preserved from Putrefaction till they thaw, and come to Light; which is no very unreasonable Conjecture. Though it is not absolutely necessary that this Climate should have been warmer before the Flood, since the Carcasses of the drowned Elephants were very likely to float from other Places several hundred Miles distant, to this Country, in the great Deluge which covered the Surface of the whole Earth. Some of these Teeth, which doubtless have lain the whole Summer on the Shoar, are entirely black and broken, and can never be restored to their former Condition: But those, which are found in good Case, are as good as Ivory, and are accordingly transported to all Parts of *Muscovy*, where they are used to make Combs, and all other such like Things, instead of Ivory.

The abovemention'd Person also told me, that he once found two Teeth in one Head that weighed above twelve *Russian Pounds*, which amount to 400 *German Pounds*; so that these Animals must of Necessity be very large, though a great many lesser Teeth are found. By all that I could gather from the Heathens, no Person ever saw one of these Beasts alive, or can give any Account of its Shape; so that all we hear said on this Subject arises from bare Conjecture only.

But to return to my Travels, in which I durst not venture to proceed any farther by Water, but was obliged to go by Land from the abovementioned Village of *Makofskoy*. After I had advanced sixteen Miles, on the 12th of *October* I safely arrived at the City of *Jenizeskoy*, where I rested for some Time, being obliged to wait till the Roads were sufficiently frozen to be passable with Sleds. Though in the Interim, I prepared to proceed on my Journey as soon as I should be informed that the Rivers *Tunguska* and *Jenizea* were entirely frozen up. This Delay furnished me with an Opportunity of thoroughly observing the City of *Jenizeskoy*.

Which is so called from the River, and in Order to make the adjacent Country the more distinctly known. The River which runneth by and below the City, is called *Jeniza*, ariseth out of the *Calmackian* Mountains, and takes its Course Northwards, almost in a direct Line, to the *Tartarian* or *Frozen Sea*; very different from the *Oby*, which discharges her Water out of her Bosom, which is afterwards conveyed to the Sea by indirect Branches. Below the City the River is a full third part of a Mile over; its Water is white and light, but doth not much abound with Fish. Somewhat above seven Years past the Citizens of *Jenizeskoy* fitted out a Ship, and sent her on the Whale Fishery; but the Enterprise did not succeed, and they never yet heard where their Ship was lost. Wherefore they imagine that it was swallowed up in a violent Inundation of Ice. But from the City of *Fuganai*, situated lower down this River, several Persons go out yearly on the Whale-Fishery; but they carefully watch their Opportunity, when the Wind blows from the Land, and the Ice drives towards the Sea, at which Season they pursue their fishing very successfully, and without Danger. The City of *Jenizeskoy* is large and populous, and the Fortress indifferently strong. Several Villages and Cloisters extend themselves for the Space of some Miles round the City: And the Land is very proper for Agriculture. Corn, Flesh, Cattle, and wild horned Beasts, and Fowl are very plentiful here. Subject to the Jurisdiction of this City are several *Tunguzian* Heathens, who mostly live on the *Jenizea*, *Tunguskay* and the Inland Neighbouring Country. These pay a Tribute of Furs to the Czar for every

Bow, taking that to be a Man and Woman reckoned together. No large Fruit-Trees grow here, by Reason of the extream Cold, and the only Fruits are black and red Currants, Strawberries, Gooseberries, and such like.

14. After a long Stay at this Place for the Sake of Refreshment, I set forwards in a Slead, and on the 20th of *January* reached the Island *Ribnoy*, which signifies *Fish-Island*. This Isle is situate in the Midst of the River *Tunguska*, which is plentifully stored with Fish: Here are Sturgeon, Jacks, and Roach of an extraordinary Size. The Island is chiefly inhabited by *Russians*. On the 25th of the same Month we came to the City of *Ilinskoy*, situate on the River *Ilui*, which runneth from the South South-West to the North North-West, and falls into the *Tunguska*. Thus far the River *Tunguskoy* is a little inhabited by *Tunguzians* as well as *Russians*.

Some Days Journey from hence is the great rocky Waterfall, called *Schaman Schamanskoy*, or the *Negromantick* Fall, because of a famous *Schaman* or *Tunguschan* Conjuror who lives there. This Waterfall is a Descent of half a Mile long. Its Shoar is covered with high Rocks, so that the whole Ground of this Water is pure Stone, which indeed affords a hideous Prospect, and makes such a dismal loud Noise, that its rapid Course over both visible and invisible Rocks, may in still Weather be heard at the Distance of above three *German Miles*. The *Dofchanicks* or Ships which are obliged to come up it against the Stream, require five, six or seven Days, though empty, to tow up this dangerous Water, by casting of Anchors and the Help of several Men; nay farther in some shallow Places where the Water is very low, and the Rocks lie high, they are obliged to tow a whole Day before they can get forwards so much as a Ship's Length, and the Ship frequently stands an End on the Stem; a Thing incredible almost except to Eye Witnesses.

The Ships which pass up and down, are always unladen, and their Cargoes carried by Land till they get past this dangerous Place, when they are again loaded. I have myself seen the Ships which sailed down this Torrent, perform it in twelve Minutes; so prodigious rapid is this Descent: And there are very few either *Russians* or *Tunguzians* that know how to bring down the Ships, which must be provided with a Rudder fore and aft, and Rowers on both Sides; the Pilots give their Orders very dexterously to the Rowers by a Handkerchief; for no Voice can be heard, by Reason of the Noise of the Water. The Ships are also close shut every where, that the Waves which frequently fly over them, may not find Entrance into, and consequently sink them. Several Ships, notwithstanding these Precautions, are cast away here every Year, especially when unexperienced Pilots undertake the bringing them down, being very often shattered to Pieces against the hidden Rocks. And the Men are in such Cases inevitably lost, and immediately stifled by the rapid Stream, or dashed to Pieces by the Rocks; wherefore their Bodies are very rarely found; and the Shoars are full of Crosses, erected in Remembrance of those drowned there. In the Winter Season, the Water of this River is so high that it stands almost level with the Flood, and it hath been so overflowed from the Icy-Sea, that several have passed over it with Ice-Sleds: But in the Summer the Water is very low as we have already hinted.

Some Miles from hence live several *Tunguzians*, amongst others, their famed *Schaman* or *Diabolical Artist*. The Reports which passed concerning this Cheat made me very desirous to see him. Wherefore in order to gratify my Curiosity, I went to those Parts, to visit him and his Habitation. I found him a tall old Man, that had twelve Wives, and one who was not at all ashamed of the Art he pretended to: He shewed me his Conjuring Habit, and the other Tools which he used. First I saw his Coat, made of joined Iron-work, consisting of all Manner of Representations of Birds, Fishes, Ravens, Owls, &c. besides several Beasts and Birds Claws, and Bills, Saws, Hammers, Knives, Sabirs, and the Images of several Beasts, &c. so that all the Parts of this Diabolical Robe being fix'd together by Joints might,

*Religious Ceremonies of the
Nisovian Tunguzians*

*The Hairy Bull of
Buratskoy*

Inhabitants of Buratskoy

Yekiam or Musk Deer

might at Pleasure be taken to Pieces. He had also Iron Stockings for his Feet and Legs suitable to his Robe, and two great Bears Claws over his Hands. His Head was likewise adorned, with such like Images, and fixed to his Forehead were two Iron Bucks-Horns. When he designs to conjure, he takes a Drum made after their Fashion in his Left-Hand, and a flat Staff covered with the Skins of Mountain-Mice in his right Hand; thus equipped he jumps cross Legg'd, which Motion shakes all these Iron Plates, and makes a great Clangor; besides which, he at the same Time beats his Drum, and with Eyes distorted upwards, and a strong bearish Voice makes a dismal Noise. These were the Prologues: But his Conjurations were performed in the following Manner.

If the *Tunguzians* have any Thing at any Time stole from them, or desire to be informed of any Thing, in the first Place, he must be paid before Hand: After which he plays such Tricks as are already related, jumps and roars till a Blackbird comes and sits on the Top of his Hutt, which is open above to let out the Smoak: As soon as he gets Sight of the Bird, he falls into a Swoon, and the Bird vanishes immediately: After he hath remained bereft of his Senses for about a Quarter of an Hour, he comes to himself, and tells the Querist who hath robb'd him, or answers his Question of what Sort soever; and they tell us, that all that he says prove true. His Robe was so heavy, that I could scarce lift it with one Hand. This Conjuror had a great Quantity of Cattle, which Crouds of People that flock to him from very distant Places had presented him, they always giving him his full Demands.

These Heathens are called *Nisovian Tungusians*: They are tall and strong Men, and have long black Hair, which being bound up in the Shape of a Horse's Tail, hangs upon their Backs: They are broad faced, but their Noses are not so flat, nor their Eyes so small as the *Calmackians*. Both Men and Women go naked in the Summer, except only a leather Girdle of three Hands Breadth, that they mostly cut in the Shape of Ribbands, which they wear about their Waist, and cover their Privities. But the Women adorn their Hair with Coral and Iron Figures. Both Men and Women carry a Pot on their left Arms, continually furnished with old smoaking Wood; which preserves them from the Biting of the *Moschitoes*, or *Gnatts*; with which the Country along the River *Tungusky* and the Woods are so abundantly pestered, that if not only the Face, but the Hands and Legs are uncovered, their biting becomes insupportable; which however the Natives do not feel so much as Strangers, because their Skin being all over bitten by them becomes thereby hardened. These People are Admirers of Beauty, according to their Notion of it. To improve which, they adorn their Foreheads, Cheeks and Chins in the following Manner: They with a Needle run Threads greased with black Grease through the Skin, in Representation of several Figures, and leave the said Threads therein for several Days; after which they draw out, and leave their Traces behind them, and very few of them are without this Embellishment.

Their Winter-Habit is a Coat made of Doe-skins, which is bordered at the Extremities with Dog-skins, besides which they have also a Breast-piece hung with Tails of Horse-hair. They are wholly unacquainted with either Linnen or Wollen Cloaths; but to supply their Necessities, they make Nets and sowing Thread of Fish-skins. Instead of Caps on their Heads, they wear a Roebucks Skin, with the Horns sticking up on the Crown of their Heads, especially when they go a Buck-hunting; by which Means they easily deceive their Game, which they creep close to in the Grass, and the unwary Animals mistaking them for their own Species, void of Fear, never remove their Station, whilst they having their Bow and Arrow ready, and being gotten so near, are sure to shoot him down. When they are inclined to divert themselves together, they form themselves into a Ring; and one of them stands in the Middle, having a long Staff in his Hand, with which, in turning round, he strikes at the Legs of one of the Company,

who so nimbly lifts them up, and so dextrously avoids the Blow, that it is very seldom that any of them are hit; but if any one is touched, he is duck'd till he is all over wet.

They lay their Dead upon the Trees, and after they are rotten, their Bones are buried in the Earth.

They have no other Priests but their Conjurors. They have in their Huts carved wooden Idols, about half an Ell long, with the Representation of human Faces, which they feed as the *Ostiacks* do, with their best Sort of Food, which runs out of their Mouths over their Bodies. Their Huts are hung round with Horses Mains, Tails, and other Baubles, and are made of Birch-Bark: Before which they hang their Bows and Quivers, and very few of them are found without several dead young Dogs hanging near them. Their Boats or Canoa's are made of Birch-Bark sewed together, which notwithstanding will carry seven or eight Persons; they are long, slender, and without any Benches; they sit in them upon their Knees, and make use of a Sort of Oars broad at both Ends; which they hold in the Middle, and row or paddle, first with the one, then with the other End; and when they row all together, the Boat goes at a great Rate. With these slight Canoa's they can bear up against violent Storms without any Danger. They generally subsist themselves in Summer by Fishing, and in Winter by hunting all Sort of furred Game, Bucks, Does, &c.

16. I left these People without any other Occurrence remarkable, and arrived on the 1st of *February* at the Fort *Buratz*; which Place, and all along to the Lake *Baikal*, is watered by the River *Angara*, and inhabited by the *Burattians*, a Pagan People.

On the 11th of the same Month we reached the Fortrefs of *Bulaganski* in this Country, situate between the Hills and the Vallies, in a Champion Ground, on which live several *Burattians*, who are stocked with Cows, and a hairy Sort of Bulls. They all live in low Dwellings made of Wood joined together, and covered with Earth; on the Tops of which a Hole is left to let out the Smoak. Their Fires are made in the Midst of these Apartments. They are utterly ignorant of all Sort of Agriculture, or the Management of Gardens: Their Houses, as in Villages, stand next each other, and are commonly situated near the River; but they do not change their Habitations like the *Tunguzian*, and other *Heathens*. Close by their Doors several Poles are stuck into the Ground, on some of which are stuck Bucks, on others Sheep, and some fasten Horse-hides on them. In Spring and Autumn they go out by Hundreds in a Troop on Horseback, to hunt Stags, wild Sheep, and Roebucks, which they call *Ablavo*. When they have found a Place where there is Game, they range themselves in a circular Order, so that they can easily come near one another, by which in such a Ring they will hunt together and encompass some hundreds of Beasts; and having once got them within the Reach of their Bows, every one lets fly, so that very few escape, each Hunter being so well provided as to make thirty Shot successively.

After the Hunting, each Sportsman easily finds his own Arrows by their peculiar Mark; but there is a very great Misfortune which attends this Way of Hunting, which is, that in such a confused Mixture, they unawares frequently shoot one another, and several Horses are wounded. They flea their Game, cut the Flesh from the Bones, and dry it in the Sun; on which Provision they live as long as it lasts, and when it is done, go out a Hunting again. Here are vast Quantities of wild Beasts, and I have for the Distance of a Quarter of a Mile been able to see nothing else but wild Sheep, which like Snow covered all the Hills; but in the Country for five or six Miles round hereabouts, very few furred Beasts are found, except only a few Bears and Wolves, which sometimes appear, but very rarely.

Those who want Oxen or Camels of an extraordinary Largeness for their travelling to *China*, are obliged to buy them of these People, who will not deal for Money, but receive in Exchange of the Buyers, pale Sables,

bles, Pewter, Copper Basons, red *Hamburg* Cloths, Otters-Skins, *Persian* shaggy Silk of all Colours, and Gold and Silver Bullion: In which Commodities the Price of an Ox that weighs from 800 to 1000 *German* Pound Weight, is not above four or five Rubels, and a Camel is not valued at more than ten or twelve Rubels. Both the Men and Women of this Country are robust, large, and according as Beauty goes here, have handsome Faces, being a little like the *Chinese Tartars*. In the Winter both Sexes wear long Coats made of Sheeps-skins, with a broad Girdle tipped with Iron. They have a Sort of Caps that they call *Malachaves*, which they can draw over their Ears in cold Weather. In Summer several of them wear Coats of slight red Cloth. Comparatively speaking, their Faces and their Bodies look like young Devils, by Reason that they know, or at least practise Nothing of Washing at any other Time than when they are born; nor ever cut the Nails of either their Hands or their Feet.

The Virgins whole Head of Hair sticking fast together in Plaits, stands on End, and makes them look just as Envy is represented by the Painters. The Women have only two Plaits which hang down on each Side of their Heads, adorned with all Sorts of Tin Figures. When any of them die they are buried with their best adorned Cloaths, Bows and Arrows. Their Religion consists in the worshipping dead Bucks and Sheep, which are spitted upon the Poles before their Doors, at several Times in the Year, as long as they continue unputrified. Their Adoration of them is performed by bowing the Head, whilst they sit on their Knees with clasped Hands, without either Prayers or so much as speaking one Word. This is the only divine Service that they are acquainted with, nor will they ever hear of any other: They have indeed several Priests, which when they think fit, they kill first, and afterwards bury them, together with Cloaths and Money, alledging, that it is necessary to send them before to pray for them, and that lest they should be driven to Necessity, they ought to have Money to spend, and Cloaths to wear.

If they are obliged to the taking of any Oath amongst themselves, they go to the Lake *Baikol*, near which is a Hill that they esteem Sacred, to which they can ride in two Days. Upon this high Mountain they take their Oath, and firmly believe the false Swearer shall never come down alive. To this Hill they frequently offer up all Sorts of slaughtered Cattle, and have paid a Veneration to it for many Years. But upon what Tradition this Reverence is built is not known.

17. In this Neighbourhood *Musk-Cats* are also found, which are shaped more like a Goat. This Animal is almost like a young Buck, without Horns, with this Difference, that its Hair is a little black, and the Head inclines more towards that of a Wolf. The Musk is contained in a certain Swelling at the Navel, like a little Purse, which is composed of a thin Skin, covered with a very fine Hair. The *Chinese* call this Animal *Tebiam*, which is *Musk-Hart*, by Reason of its Likeness to a Stag; but besides the Dissimilitude of the Head, it hath also two Tusks like those of a wild Boar, which stick out of its Mouth.

Philip Martinus, in his *Chinese Atlas*, reports, that this Animal is chiefly found near the City of *Leao*, in the Province of *Xanxi*; as also in that of *Xenxi*, and more especially in that of *Hanchungfu*; and that there are also some in the Province of *Suchuen*, the second Division of *Paoningfu*, about the City of *Kiating*, near the sixth fortified City *Tienciben*; in several Parts of the Province *Junnan*, and several other Places Westward. He further gives us the following Description, which may contribute to the Satisfaction of the curious Reader. "The Musk Cat, saith he, is almost like a young Hart or Doe, only that he is somewhat browner, and so slow and unactive, that the Hunter's greatest Difficulty is to put him up; for that once done, he is immediately shot, for he suffereth himself tamely to be killed, without either defending himself or stirring. The Musk of which there are various Sorts of different Value, is prepared from this Beast in the following Manner;

"After he is taken, all his Blood is drawn off and reserved; and from under his Navel is taken off a Bladder, that is filled with Blood, or some other odoriferous Liquor there concentered; after which the Animal is flea'd and cut to Pieces.

"When the *Chinese* design to make the best Sort, they take the hinder Part of the Animal, beginning from the Kidneys, which they stamp and bruise to a Jelly, which they dry, and therewith fill the small Bags, which they make of the Skin of the Beast.

"But if they desire a slighter Sort of Musk, which should yet be very good, and not at all sophisticated, they then beat all the Parts of the Animal together, without any Distinction, to a Jelly, with a little of his Blood, in a Mortar, with which, as before, they fill up the Bags made of the Hide.

"Besides these two, there is another Sort of Musk, which is also highly valued, though not so good as the precedent. This is prepared from the Fore-part of the Animal to the Kidneys, which they particularly lay by the rest of his Body in order to make the common Musk; so that none of this Creature is thrown away, but all Parts of it are good; whence it is said to be better dead than alive." Thus far *Martinus*; but whether these Barbarians make the same Use of the Musk-Cat as the *Chinese*, is not certainly known.

After travelling some Days amongst this Nation, I arrived at *Jekutskoi*, a City situate on the River *Angara*, the Course of which is from the North to the South, but its original Source is the *Baikol-Meer*, about eight Miles distant from this Place. This City not long since was rebuilt and strengthened with very strong Fortifications. The Suburbs are very large: All Sorts of Grain, Salt, Flesh, and Fish are very cheap here, a hundred Pound (*German* Weight) of Rye not yielding above seven Kopties or Styvers; for round about this City, and to *Wergolensko*, some Miles distant from thence, the Land is very fruitful, and Corn grows in great Abundance; besides great Numbers of *Russians* have settled here, and taken up some hundreds of Villages, all which with great Industry and Success promote Agriculture.

Opposite to the City on the East-side is a *Burning-Cave*, which for several Years burnt very violently, but now seems extinct, very little or no Smoke issuing out at present. It is a large Cleft in the Earth, whence the Flame formerly ascended vehemently, which now ceases; but if a long Pole be put into it, it feels very warm.

Over against this City, where the River *Jekut* falls into the *Angara* and so runs to the *Meer*, is a very fine Cloyster. Earthquakes are here frequent in Autumn, which yet don't prove very prejudicial. Here resided a *Taiffcha* or *Mongolian* Baron, who had put himself under the Protection of their Czarish Majesties, and embraced the *Greek* Christian Religion.

He had a Sister, which according to the *Mongolian* Custom, lived in the devoted spiritual State, and was almost inclined to receive the Christian Faith. When she was discoursed on that Subject, she replied, "I am satisfied that the Christians God must necessarily be a strong God, since he hath beaten our God out of Heaven: But he will return thither, though he shall the second Time be beaten down." When she enters the Chamber, she salutes no Person, as the *Mongolians* are yet accustomed to do, but her Order doth not admit of it. She had a Rosary or String of Beads in her Hand, which she continually passed round through her Fingers. I found a *Lama* or *Priest* with her, who had also such a String of Beads in his Hand, according to the *Mongolian* and *Calmakkian* Fashion, which he very swiftly and incessantly turned over through his Fingers, continually moving his Lips, as though he were at his private Devotions; and with this perpetual telling of his Beads, his Thumb was worn through the Flesh and Nail up to the Knuckle; which rubbing off by slow Degrees did not at all pain him.

After a short Stay to rest myself in *Jekutskoi*, on the first of *March* I set forward by Land in Sleads, to the

the Lake or *Meer* of *Baikol*, which I reached on the 10th of the same Month, and found it frozen up very hard.

I passed over this Lake and safely arrived at *Kabania*. This *Meer* is about six *German* Miles broad, and forty long: The Ice in it was full two Ells thick, and is very dangerous when the Passengers are overtaken by a great Snow, or a high Wind; and the Horses which draw the Sleads must be very sharp shod, by Reason the Ice is all over very slippery, and even on Land here is no Snow found to lie, but it is immediately driven away by the Wind. Here are several broken Places or Wind-holes, that are not frozen up, which prove very dangerous to Travellers when surprised with tempestuous Winds; for the Horses, if not sharp Shod, by the Fury of the Winds are driven on so violently that they cannot tread sure, but sliding and falling on the glib Ice, are hurried on by the Wind, till they and the Slead too are swallowed up in one of these open Places; by which several Men and Horses are lost: Besides, to augment the Danger, the Ice of this Lake is sometimes torn open several Fathoms by sudden Winds, which make a Noise as loud and terrible as Thunder-Claps, but after the Expiration of a few Hours, the Ice joins again, and becomes quickly as close as before.

The Camels and Oxen, which Travellers take with them for their Journey to *China*, are also obliged to go this Way from *Jekutskoi*, in order to which the Camels have a kind of Boot tied about their Legs, which is very sharp at Bottom: The Oxen also are provided with sharp Irons struck through their Hoofs, without which it would be impossible for them to go forwards. The Water of this Lake tastes very fresh, is clear, and yet of a deep Green, like that of the Ocean. Where the Ice was open we often observ'd a great many Sea-Dogs, all blackish, and not variegated, like those in the white Sea. Here are also great Multitudes of Fish, as large Sturgeons and Jacks, of which I have seen some that weighed two hundred *German* Pounds. The only River that issues from this Lake is the *Angara*, whose Descent is to the North-North-west: But amongst the Rivers which fall into it, is the *Silinga*, the principal River, the Source of which is in *Mongalia*; the Remainder are several Rivulets, which fall from the Hills: There are also some Islands in this Water. Its Shoar and adjacent Country is inhabited by *Burattians*, *Mongolians*, and *Outkotians*. In all Parts hereabouts there are very fine black Sables, and *Caberdines* are also frequently caught here.

I observed, that when I entred upon this Sea, and left the Cloyster of St. *Nicholas*, situated at the Entrance of the *Angara*, on the Sea-shore, I was very zealously entreated by several Persons, that when I came upon this dangerous Water, I should not call it a still Water or Lake, but a Sea; alledging, that formerly several considerable Persons, who had been on this Sea, and ventured to call it an *Oser* or standing Water, were immediately overtaken by violent stormy Winds, and were in Danger of their Lives: But I could not help Laughing at this wild Notion, that the Waters should resent Affronts, and stand up for their Honour. However I went forward in the Name of God, and being got to the Middle, I called for a large Glas of Sherry, and drank a Health to all sincere honest good Christians, and my Friends in *Europe*, adding, *which I take you Osera, or still Water to witness*; and the Wine proved very refreshing, and I observed, that the farther I went, the Wind, which before was somewhat rougher than ordinary, began to decrease; so that I landed with Sun-shine and clear Weather, at the Castle of *Kabania*, the first *Daurian* Fortification beyond the *Meer*, without having the least Satisfaction taken of me. I heartily laughed at the Folly of those, who gave Credit to such ridiculous Superstitions, and trust not in God, who created, and governs all Things; to whom the Sea and all the Winds are obedient, either to serve or destroy them for their Sins, or perhaps to chastise and terrify them to Righteousness; since otherwise the Sea is deaf and stupid, and utterly incapable of resenting or revenging.

19. Leaving the Castle of *Kabania* the following Day, on the 12th of *March* we arrived at *Ilinskoy* or *Bolsoy Saimka*, a very large Town, most of whose Inhabitants are *Russians*, which in the Winter go a Sable-hunting, not tilling any more Ground than Necessity requires; wherefore the Land is every where deformed with great barren Hills, which, by an industrious People, might be rendred pleasant and fruitful.

Departing thence, on the 14th of the same Month we reached the Castle of *Tanzienskoy*, which was provided with a strong Garrison of *Cossacks*, to cover this Country from the Incursions of the *Mongolians* which border on it. Without any Delay I went forwards with the first Slead that went off, and on the 19th Instant came to *Udinskoy*, which City or Fortrefs is situated on a high Hill; but most of its Inhabitants live below the Fortrefs, at the Foot of the Hill, on the River *Uda*, which falls into the *Silinga*, about a Quarter of a Mile Westward below the City, which bordering on the *Mongolians*, is constantly supplied with a strong Garrison of *Russian Cossacks*.

The City of *Udinskoy* is accounted the Entrance of the Province of *Daur*, and in Summer-time the *Mongolians* frequently come hither, and carry off the Horses of the Inhabitants, which are grazing in Sight of the City; and besides a little Pasture, this Land, which is every where mountainous, is very improper for Tillage; tho' it plentifully abounds with Cabbages, Turneps, Carrots, and such-like Vegetables, which belong to the Culinary Garden: But here is not a Tree to be seen.

After having rested here some Days, one Night at Nine of the Clock happened a violent Earthquake, which terribly shook the Houses of this City, thrice within the Space of an Hour, but went off without any Damage.

The River *Uda* yields very little Fish, besides a few *Jacks* and *Roach*. But annually in *June*, from the Lake *Baikol*, great Shoals of a certain Fish swim hither against the Tide: The Inhabitants call them *Omuli*; they are as big as Herrings, and proceed no higher up this River than the End of this City, by a fallen Mountain, where they stay some Days, and then return back. During which Time they swim so incredibly thick and close, that the Commandant told me, he threw several Lime-stones into the Water, which did not sink, but continued lying on the Shoals of Fish. When the Inhabitants are desirous to catch them, they use no other Net than a Bag, a Shirt, or a Pair of Linnen Stockins; with which they go to the Shoar, and draw greater Quantities than they want of these Fish on Land. I was obliged to a tedious melancholy Stay here, before my Camels and Horses were ready, and was indeed very glad, that at last I got from hence on the 6th of *April*.

On the 26th of the same Month we travelled by Land to the River *Ona*, which flows from the North-North-West, and falls into the *Uda*.

On the 27th I reached the River *Kurba*, which also proceeds from the North-North-West, and falls into the *Uda*. We travelled hither upwards on the River *Uda*, at about half Flood, but were frequently obliged to go off from it, and sometimes to such a Distance, that we lost Sight of it.

On the 29th of the same, I had the good Fortune to put an End to my Travels in this uncouth, uninhabited Road, and to reach the Fortrefs of *Jarauna*. I was not a little glad that I once more came within Sight of Towns, for from *Udinskoy* to this Place is wholly uninhabited, and we were obliged to travel over high and dismal Rocks. The Castle of *Jarauna* is garrisoned by *Cossacks*, and also inhabited by several *Russians*, who depend upon Sable-hunting. The Heathens, which possess this Country, are called *Konni Tunguzi*, being a Sort of *Tunguzians*, which live along the Banks of the River *Angara*; though their Language is entirely different from all others. If any one of them die, he is buried with his Cloaths and Bows under Ground; upon his Grave, Stones are laid, and a Pole erected, to which is fastened his best Horse, being first shot to Death. They live entirely on Sable-hunting, and the

Furrs of these Animals are extraordinary black in this Place : Here are also very fine Linxes, and a Sort of Squirrels, the Furrs of which were formerly taken off by the *Chinese*. On the North-side of this Castle are three large Lakes near one another, each of which is full two Miles in Circumference, and are plentifully stored with Fish, more especially with Jacks, Carps, Pearch, and such-like. From hence there are two Roads which lead to *Zitinskoy* or *Platbischka*. I ordered Part of my Retinue to go one of these Roads ; but the Caravan and Convoy went directly Southwards, along the Lake *Schackze-Oser*, which plentifully abounds with Fish ; and the other proceeded forwards over the *Jablusnoy* or *Apple-Mountains*, on which, though they bear that Name, there grow no Apples, but only a Sort of red Fruit on the Trees, which indeed taste very like them. But I myself, accompanied with a Retinue of Forty Men, took the other Road, which proved very Morassy, and lay betwixt high Rocks, which continue all the Way from *Jarauna* to the City of *Telimba*. In this last Fortification live several *Russians*, who in Winter go out a Sable-hunting ; and indeed this Country yields such rich black Sables, that better are not to be found in the whole Province of *Siberia*.

Lodging here one Night, a *Tunguzian* Knezets or Prince, whose Name was *Liliulka*, came to visit me ; he had prodigious long Hair, which for that Reason he bound up in a Leathern Band, and wound three Times about his Shoulders. I was very curious to satisfy myself, whether his Hair was really so long as I was told ; to which Purpose I caused him to be intoxicated with Brandy ; by which Civility I obtained the Favour of having his Hair loosened, and I found it to be all his natural Hair only, for I examined it very narrowly, and measuring it with an Ell, to my great Surprise, was convinced that it was four *Dutch* Ells long. He had a Son of six Years of Age, whose Hair growing in Imitation of his Father's, hung down over his Back the Length of an Ell wanting an eighth Part. This Sort of *Tunguzian* Heathens live on the Hills in great Multitudes. Part of them grow rich by catching the most fine and beautiful Sables, for which they receive great Sums of Money.

We were obliged to travel two Days from hence over high rocky Hills, running North-West and South-East. Very far Northward there rises a Spring, from whence the River *Konela*, afterwards called the *Wittim*, proceeds, which runs North-East, and falls into the River *Lena*, that empties itself into the North Frozen-Sea ; and about half a Mile beyond the high Hills, the River *Zita* arises, which falls into the River *Ingoda* or *Amur*, and pursues its Course on to the *Amurischian* or *Eastern Sea*, into which it flows.

Arriving safely on the 15th of May at *Platbischka*, which Place the Caravan also reached the next Day, having run through several Dangers, by reason that the withered dry Grass was burned off the Fields every where, the Fire of which was very prejudicial to the Caravan, and often caught the Horses Tails ; besides which, the Beasts wanted Forage, and were frequently obliged to go a Mile out of the Way in Search of some Grass, which was not yet burned on the Side of the Hills, to relieve the poor Cattle.

We were obliged to stay several Days in the Village *Platbischka*, situate on the River *Zita*, partly to refresh our Beasts, and partly to make Floats, to drive down the Rivers *Ingoda* and *Sbilka*, to *Nerzinskoy*, this being a very shallow Water, on which no other Sort of Shipping can be made use of. And even these Floats can scarce pass over the rocky Places without Danger, two of ours being broken to Pieces in our Passage, so that we had Trouble enough to save our Goods.

20. All Things being ready, I caused the Camels, Horses, and Oxen to go first over the Mountains for *Nerzinskoy* ; but I went from thence on the 18th of the same Month, and on the 19th reached the River *Onon*, which runs Northward, taking Rise in the South out of the *Mongolian Pool*, and, after it is united with the *Ingoda*, takes the Name of *Sbilka*. The Water of this River is very white, and its Shoar is inhabited by

great Numbers of *Mongolians*, who make frequent Incursions over the *Sbilka* to *Nerzinskoy*, though not always with Success ; for sometimes they are not only driven from their Prey, but caught themselves, and punished as Robbers ; and the *Russian Cossacks* themselves, by way of Reprisal, make Sallies up the *Onon*, destroying whatever comes in their Way.

But through Divine Mercy we arrived, without being once attacked, on the 20th Instant at *Nerzinskoy*, which lies on the River *Nerza*, that runs from North-North-East, and about a Quarter of a Mile from the City falls Southward into the *Sbilka*. This City is tolerably strong, provided with several Brass Guns, and a great Garrison of *Daurian Cossacks* both Horse and Foot. It is situate between high Mountains, notwithstanding which it has Champion Ground enough for the Inhabitants to graze their Camels, Horses and Cows ; and some Parts of the Hills afford Spots of Ground a Mile or two over, that are very proper for Tillage, and afford Room to plant and sow enough to supply their Necessities.

From four or five Miles upwards to ten, below on the River *Sbilka*, live several *Russian* Gentlemen and *Cossacks*, who subsist on Tillage, Grazing of Beasts, and Fishing : Amongst these Hills, and round the City, are likewise several very fine Garden-Trees and Plants, as also *Rhaponticum* or *Bastard Rhubarb*, of an extraordinary Thickness and Length, and very fine white and yellow Lillies. Here are vast Quantities of red, and also of Snow white *Paeonies*, which diffuse an extraordinary fragrant Scent, and several other Flowers, with which I was unacquainted. Here are Rosemary, Thyme, Marjoram, Lavender, and several other odoriferous Plants unknown to me, which grow spontaneously in great Abundance : The Fruits here are only red and black Currants, &c. agreeable to the Climate.

Here are two Sorts of Heathens which have for a long Series of Years lived in Subjection to the Czar ; the *Konni-Tunguzians* and *Olenni-Tunguzians* : The former of which are obliged to be ready on Horseback, at the Command of the *Waywod* of *Nerzinskoy*, or whenever any Incursions are made on the Frontiers by the Roving *Tartars*. And the *Olenni-Tunguzians* are obliged on all Occasions to be ready on Foot, and appear armed on any Exigence in the City. The chief of the *Konni-Tunguzians* is the *Knees Paul Petrovitz Gantimur*, whose *Tunguzian* Name is *Catana Gantimur*, born in the Country of *Nienbeu* ; he is an old Man, that was formerly a *Taischa* or Baron there, subordinate to the Emperor of *China* ; but falling into Disgrace, and being displaced, he, attended with his entire *Horde* or Clan, retired to *Dauria*, put himself under the Protection of their Czarish Majesties, and embraced the *Grecian* Religion. This *Knees Paul Catana* can on any grand Occasion in one Day raise three thousand Horsemen, well equipped and provided with good Bows, all which are valiant and fearless Soldiers, of whom it is frequently observed, that fifty of them attack four hundred *Mongolians*, and very frequently beat them. All of these Heathens which live near the City subsist themselves by grazing, but those on the River *Sbilka* and *Amur* depend on Sable-hunting, because the Beasts in the Forrests are there very black, and their Furrs valuable.

They all live in Huts, called in their Language *Jurten*, the Inside of which is composed of wooden Poles jointed together, that whenever they are willing to remove their Dwellings, as they frequently do, they may conveniently pack them up and carry them altogether.

This wooden Work when set up is thatched all over with Hair and Rubbish, except only the Smoak-hole left open at the Top. They place their Fire in the Midst of their Huts, and sit round it upon Turves. Their Religion is the same with that of the *Daorn* or *Daurians*, from whence they pretend to be descended : So that indeed throughout all Great-Tartary, to the Beginning of the *Mongolian Tartars*, there is a very great Similitude in Religion, as I shall hereafter evince. Both Men and Women in this Country are very strong, broad faced, and both Sexes, not excepting the young Girls, ride

A Tunguzian Prince whose Hair was Four Dutch Ells long and his Son's near an Ell long.

The Knez Paul Petrowitz Gantimur Chief of y^e Konni Tunguzians Subject to the Czar.

*A The Wooden Castle Inhabited by the Governor. B. The Church.
The Inhabitants of this City are all Soldiers who trade to China & have great Immunities.*

ride on Horseback, and are equally armed with Bow and Arrows, in the Use of which they are very expert. The Female Dress is the same with the Male; of both which our Print drawn from the Life is an accurate Representation. Their common Drink is Water; but the better Sort drink *Kara't Za*, or Black Tea, which is a particular Species of that Plant, the Infusion of which, instead of greenish, tinctures the Water blackish. They boil it in Mares-Milk and Water, to which they also add a little Lard or Butter. They also draw off a Sort of Brandy from Mares-Milk, which they call *Kunnen*, or *Arak*, and is distilled in the following Manner. The new Milk is first boiled, then put into a Fat, to which is added some stale Milk, and this Mixture is stirred every Hour: After which this soured Milk is put into a Pot, and closely covered with another Pot which shuts tight upon it, into which a Reed is stuck, and the Pot firmly luted, and set over the Fire to distill as in *Europe*: But the Spirit must be twice drawn off; then it is fit to drink, being as clear, and strong, as Malt Spirits, and very soon intoxicates. It is really very surprising that none of the Cows in *Siberia* and *Dauria*, as long as their Calves suck them, will ever permit themselves to be milked, nor will they after the Calf is removed from them give any more Milk: Which is the Reason why Mares-Milk is so much used by these People, which is also richer and more agreeable than Cows-Milk.

In Spring and Autumn these Heathens go a Hunting, like the *Burattians*, in order to provide themselves against Summer and Winter with sufficient Store of Flesh, which they also as well as that Nation dry in the Sun. Instead of Bread they gather the Pods of yellow Lillies, which they call *Sarana*, and having dried and beaten them to Meal, they dress them several Ways to eat. They are very expert at Shooting Fish in the Water with a Sort of Arrows, which are round, solid, and about three Fingers thick at the Head; at the End of which under the Iron Point is a Ball of Bone bored through, which occasions a loud whistling Noise in its Flight. These Arrows are so heavy that they do not shoot them farther at most than fifteen or twenty Fathom, and chiefly at large Fish, as Jacks and Trouts, which harbour in clear Water on the rocky Ground near the Shores. And when these Arrows hit, they make a surprising large Orifice, which looks as if it were a Cut given by a Hatchet.

These Heathens have a very odd Custom of taking solemn or testimonial Oaths: An Instance of which appears in the following Story of two noble *Tunguzian* Hostages at *Nerzinskoy*. To illustrate which Relation, the Reader ought to be informed that it is usual on these frontier Places (by Reason a great many Sorts of People put themselves under his Czarish Majesty's Protection, which live dispersed in *Siberia*) to keep some Children of the principal Men, and if they are very great, themselves in the *Amandivor-atzkoy* or Hostage-Court for some time, all the while providing them amply with Eatables and other Necessaries; which is done by Way of Security that they shall not desert, and that when they have staid sometime, others shall come in their Places. It happening that two of these *Tunguzian* Hostages falling out, one accused the other before the *Waywode*, of having conjured his deceased Brother to Death. The *Waywode* asked the Accuser if he would, according to the *Tunguzian* Custom, put the Accused to his Oath? To this he answered in the Affirmative; after which the Accused took a live Dog, laid him on the Ground, and with a Knife stuck him into the Body, just under his left Leg, and immediately clapped his Mouth to the Wound, and sucked out the Dog's Blood as long as he could come at it; after which he lifted him up, laid him on his Shoulders and clapped his Mouth again to the Wound, in order to suck out the remaining Blood, as the Print expresses it. An excellent Drink indeed! And this is the greatest Oath and most solemn Confirmation of the Truth amongst them; so that on Credit of this the Accused was set free, and the Accuser punished for his false Accusation. Thus far concerning the Customs of these Heathens, which, barbarous and ridiculous as they

are, plainly prove these People apprehend the Necessity of Oaths to determine Differences, and that Providence will interpose to preserve Innocence, and punish Perjury. Thus we clearly discern, that the Brutality of this Nation does not arise from their Want of intellectual Faculties, but from their Supineness, Negligence and Nonusage of those Faculties.

21. I was obliged to stay some Weeks at *Nerzinskoy*, and furnish myself with Camels, Horses, Oxen, Provision and all other Necessaries for the Prosecution of my Travels. All which being carefully performed, I set forwards from thence in God's Name, on the 18th of *July*, passed the following Day by the River *Borschofka* over the *Schilka*, and after ten Days travelling, on the third of *August* safely arrived at the Castle of *Argunskoy*; which is the last Fort and utmost Frontier of the Czar's Dominions, towards the East Country. This Fortress is washed by the River *Argun*, which flows from South-west to North-East, and falls into the River *Amur*, and divides his Czarish Majesty's Territories from those of the Emperor of *China*: And on the other, or Eastern Side of the River, the great uninhabited *Tartarian* Wilderness hath its Beginning. I was obliged to stay here some Days, to get a good Number of Carts with two Wheels, for the farther Pursuit of my Journey; and this was the first Time that this Way from *Argun* through *Tartary* was ever travelled with Waggon.

The Way from *Nerzinskoy* hither was mostly over high, stony, and mountainous Land, though in some scattered Places intersected by fine large Valleys, and little Rivulets, which Intervals are richly overspread with all Sorts of fine Herbs, Flowers, Grass, lofty Cedars, and Woods of Birch-trees. This Country is also very populous, by Reason the *Tunguzians* (which, though Heathens, are all subject to his Czarish Majesty) live in great Multitudes throughout all Parts of this Country where there are Rivers, and pay a voluntary Tribute to that potent Emperor.

In several scattered Places in the Valleys, I observed Hundreds of old, and, in Part, fallen Castles, built with Rock-stones, which, as the *Tunguzians* told me, were built by several Warriors long since, when the *Mungalian* and *Western Tartars* made joint Incursions into this Kingdom of *Nieucheu*. Which Monarchy, according to their Computation, comprehended the whole Land from *Nerzinskoy* to *Nieucheu*, as the *Chinese* call it, and from the River *Amur* down to the *Albanian* Mountains and *Leaoting*. And it is not long since that Waggon Wheels bound with Iron, and large Millstones, were found in this Country; from whence I conjecture, that the *Nieucheuers*, which border on the said Province of *Leaoting*, formerly followed their Trade and manual Employments in this *Russian Dauria*, since they make use of these Waggon-wheels bound with Iron, which are no where else to be found amongst the *Mongolians*, &c.

I also saw several *Tunguzian Tombs* covered with many Stones, by which great Stakes were placed, and several dead and putrified Horses upon them. Besides which, I observed that the River *Argun* separates two very different Sorts of Lands. On our Way to this River, the Hills abounded with Woods, but on the other Side of it Nature varies, and very few or scarce any Woods are to be seen, but only inconsiderable Numbers of scattered dry Trees.

About eight Miles from *Argunskoy*, from which I departed the 5th of *August*, the River *Zerebrenkoy*, or the Silver River, called in the *Mongolian* Dialect *Mongagol*, falls into the River *Argun*. This Silver River is so called, because that formerly, about two Miles up that Water, there were Silver Mines, out of which the *Nieucheuers* and *Mongolians* dug immense Quantities of that Metall, and great Numbers of Pits, in which the Metall was melted, are at present to be seen; but these Mines, by the Course of Time, and lying unwrought for many Years, are now fallen in, and covered with the Hills which have tumbled upon them. Notwithstanding all which, I brought a Proof of their Metall into *Muscovy*, and doubt not but to restore them, if his Czarish Majesty would immediately order

a Begin-

^a Beginning to be made, it being very well worth the Pains, and they are very conveniently situated in a Place where there is no Want of Wood.

In the Year 1693, on the 8th of *August*, we were obliged to cross the River *Argun*, and pass two whole Days on our Way with the Merchants which were with us; and on the 9th at Night, we again travelled South Eastward, upwards in the great *Tartarian Wilderness*, all the Way betwixt Hills and Vales, and next Day reached the River *Calabu*; which being but a small one, we easily forded it with our Horses, Camels, and Waggon. This River arises out of the Hills, and falls Westward into the *Argun*. It was observable, that it was so cold this Night, that the Ice froze the Thickness of a Crown-piece.

On the 12th of this Month we reached the River *Terbu*, which is also but small and shallow, and likewise falls Westward into *Argun*. On the next Day we came to the River *Gan*, which occasioned us a very troublesome Passage, it being so deep by reason of the swollen Waters, that no Camel could reach the Bottom; so that we were forced to search for Trees, (in this desolate uninhabited Wilderness, where no other Hope was left) which having felled, we bound in Couples, to carry over our Goods and travelling Provisions: And for our own Passage we also made a Sort of Boats of small Twigs, which we covered with Ox-hides sewed together, which proved tolerable Barks, and would carry about a thousand Pounds Weight. The Horses, Oxen and Camels were swum over, which indeed the last did very easily; for as soon as they loose Footing on the Ground, they turn themselves on one Side, without stirring their Feet, like a floating Leathern Bag; no more Care being necessary, than to bind five or six of them fast together by the Bridles and Tails, and let some body swim a Horse before them, which is fastened to the Bridle of the first, and consequently tows him along, without which Precaution they would drive several Miles down the Stream before they got over; and even notwithstanding this, they drove considerably downwards. This tedious, uneasy Passage cost us some Days Time, the River being broad, and the Tide rapid and strong. This River comes out of the East, and falls Westward into the *Argun*.

Breaking up from thence on the 19th of the same Month, on the 21st we reached the River *Merdeen*, which admitted us without the least Uneasiness or Interruption to ford it, being but small and shallow. It also comes from the East, and falls Westward into the *Argun*; and thus we travelled to this Place off and on, betwixt East and South. On the 23d we came to another River called *Kailar*, the Water of which being low, we passed it without any Trouble. This River falls also from South-South-East, Westward into the *Argun*. On the 25th we as easily passed the River *Zadun*, which riseth in the South-East, and falls North-West into the *Kailar*.

Before this Book of our Author's was published, we had no distinct or clear Account at all of these Countries, the very Names of which was scarce mention'd in

our Histories, and the Countries themselves appeared only as a vast Desert in our Maps. Yet here we find, that these Parts are very far from being either uninhabitable or uninhabited, and that though their Cities are not very thick, yet some of them are pretty considerable Places; as for Instance, *Nerzinskoy*, of which we have lately seen his Description, and which, though the very Name of it may be new and strange to us, is so well known notwithstanding in those Parts of the World, that there are few Places more famous. In this City was held a Congress for determining the Disputes between the *Chinese* and *Russian* Empires, the last of which was in 1689, when Father *Gerbillion* signed a Treaty of Peace there, by which the Limits of both Empires were plainly settled, and the River *Amur* made the common Boundary on that Side.

As this River falls into the Eastern Ocean or Sea of *Japan*, the *Russians* were always very desirous of being entirely Masters of it, and for that Reason they attempted, notwithstanding the Treaty, to settle on the other Side of the River, supposing that the *Chinese* would be sometime before they had perfect Intelligence of this Infraction of the Treaty, and that they would not incline to commence a War immediately, but rather set on Foot a new Negotiation, for amicably terminating their Differences. In this it seems the *Russian* Ministers were, however, somewhat mistaken, for the *Chinese* quickly made Complaints of the Progress of the *Russian* Troops; and finding these Complaints made no Impression, they ordered their Subjects the *Mongals* to take Possession of the Country lying on the South of the River *Amur*; and as this intirely overturned the Schemes of the Court of *Petersbourg*, they found the Task of Negotiating turned upon themselves, which was one of the principal Motives to their sending our Author on this Embassy.

The Reader, perhaps, may not be displeased at meeting with these Remarks at the Close of the Section, which we chose to place here, rather than interrupt the Thread of our Author's Narration, who, in this Part of his Travels which we have already given, has described the *Russian* Dominions lying in *Asia*, with much more Accuracy than any other Writer whatever: The making ourselves acquainted, at least in some Measure, with these hitherto so little regarded Countries, will be very soon found to be both of great Use and considerable Importance, since it is on this Side that the *Russians* are prosecuting those Discoveries, upon which the Eyes of all *Europe* are turned at present. In these Countries likewise they have, within these few Years, discovered very rich Silver Mines, of which we have a Hint in our Author; and if these can be wrought, it will quickly change the Face of Things on this Side, and, in the Space of forty or fifty Years, our Posterity will find some of these Countries represented in a Manner very different from that in which they have been heretofore set forth. But let us now return to our Author's Travels, and attend him in his Progress through the *Chinese* Dominions.

SECTION II.

SECTION II.

Travels through the Countries of the *Mongal Tartars*, lying between the *Russian* and *Chinese* Empires, the Passage through the famous Wall, and from thence through several considerable Places to the City of *Peking*, the Capital of all *China*; with Observations Historical, Physical, Topographical, Critical, and Political, on the several Nations conversed with by our Author, and the Countries by them inhabited; with some Conjectures also as to their former Inhabitants.

Taken from the Original Journal of his Excellency Everard Ysbrants Ides.

1. *The Author's Reception at the first Chinese Guard, an Account of the Targasian Tartars, their Customs and Manner of Living, with a brief View of the beautiful and pleasant Country they inhabit.*
2. *He is met by a Chinese Mandaryn, at the Village of Xixigar; the great Civility and Politeness of his Reception, and of the mutual Courtesies that passed between the two Ministers.*
3. *A Description of the Country of the Mongals, and of the Inhabitants, their Hospitality, respectful Behaviour, and the Manner in which they live under the Chinese Emperors.*
4. *The Author, in Company with the Chinese Mandaryn, passes through a Country in which there are several decayed and abandoned Cities, of which he gives a very curious and copious Account.*
5. *They arrive at a Chinese Village inhabited entirely by Lama's or Tartarian Priests; a Description of it, and of the Country round it.*
6. *The Manner in which the Emperor of China hunts annually in this Neighbourhood for some Weeks, with an Account of the Game, and other Particulars.*
7. *The Author's Arrival at the famous Chinese Wall; a very curious and circumstantial Description of it, and of the Materials of which it is composed.*
8. *The Author's Arrival at Galkan, his magnificent Entertainment there by a Chinese Mandaryn, the Customs of the Chinese People of Quality on such Occasions, and an Account of a Play he saw acted.*
9. *The City of Xantunnung described, the Idol Temple of Jugangu, and a City which is inhabited entirely by the Emperor's Concubines.*
10. *He proceeds to the Cities of Kixu and Tunxo; a Description of the latter, and of the famous Market for Porcelain or China Ware that is held there.*
11. *A Digression in reference to the Excellency, Origin, and History of that Manufacture; interspersed with several new and curious Observations, by way of Supplement to the Author.*

I. **T**HE Plainness and Simplicity of our Author's Relation gives us the greatest Reason to believe, that he pays a strict Regard to Truth; for it is worth observing, that he never magnifies his own Courage or Conduct, or talks loudly of the Dangers he has run through; but very modestly sets down what occurred to him in his Journey, and very carefully distinguishes between what fell immediately under his own Inspection, and what he received from the Report of others. What is contained in this Section, relating to that vast Tract of Country bordering upon *China*, appears to me extremely curious, because out of this Country originally proceeded that famous Race of *Mongal Tartars*, which assumed the Empire of *Asia*, and, after conquering *India*, *Persia*, *Affryria*, and a considerable Part of *Europe*, threaten'd an Irruption into *Germany*; and had very probably conquered all *Muscovy* and *Poland*, if they had not been diverted partly by their Civil Wars, and partly by the Invasion of *China*. One cannot help therefore being pleased with our Author's Description of the original Seat of these mighty Conquerors, at the same Time that it very much confirms what we meet with in the Writings of *Marco Polo* and other ancient Travellers, whose Relations we have inserted in our former Volume. We may from hence be taught not to be too rash in censuring what we cannot immediately reconcile either to our Reason or our Experience: One of the best Lessons that the former teaches us is, its own Weakness; and there is nothing that we learn with so much Certainty from the latter, as that without due Care we may be easily deceived. All that has a plausible Appearance is not therefore to be accounted Reason; nor is every Thing that we hear or read to be looked upon as Experience. If there is nothing absurd or impossible in what a Man of a fair Character relates as an Eye-Witness, his Testimony ought not to be slighted.

ed; and when we sit down to learn what passes, or what has passed in Countries with which we have been hitherto unacquainted, it is irrational to expect, that all we meet with should be smooth, clear, and intelligible. When we are Children, we read with Astonishment of the great Actions of the *Greeks* and *Romans*, and these are impressed upon our Minds so, that as we grow up, they pass for incontestable Proofs; yet read these Histories to illiterate People, and they will make more Difficulty of believing them, than we do at receiving what is delivered concerning the Natives of these Eastern Countries, where Empires have risen without our Notice; and, after flourishing for many Ages, have sunk again before they came to our Cognizance. But let us dwell no longer on Reflections, it will be better to attend our Author on his Journey, who, in speaking of the Prosecution of it towards *China*, proceeds thus.

On the 1st of Sept. I came to the *Falischian Mountains*, lodged there, and found my Post-Messenger, who was a *Russian* Gentleman that I had dispatched to *Xixigar*, was returned, and arrived here before me, and had already waited some Days for me. He was accompanied with a *Chinese* Captain and ten Men, which were sent to meet me. When I ordered him to be brought to me, he complimented me from his Lords, who had expressly sent him to meet me; and in their Name presented me with some necessary Refreshments, as fifteen Sheep, some Tea, Loaf-Sugar, and twenty Horses for my Use, which I thankfully accepted, and in Return made the Captain several Presents.

These Hills are called the *Falischian Mountains*, from the River *Falo's* rising amongst them; its Source being united to several Rivulets which fall from the Hills; and the Head of this River being not above two Fathom broad. As we climbed up these high Mountains, on the North Side we found them not one third Part so steep as at our Descent on the South. Besides

which, we observed a very remarkable Alteration of the whole Country on the South-side of the Hills.

From the River *Kailar* to these Mountains, we travelled thro' steep Rocks and high Hills, with which the Valleys, which we passed thro', were encompassed on both Sides. There are also a few small Thickets scattered up and down, besides which the whole Way is void of all Trees or Wood; which sometimes gave us the Trouble of carrying the Wood which we wanted for our Kitchen, from one Lodging-place to another.

These Valleys are wholly covered with fine Grass, as the Mountains are stocked with all Sorts of Herbs and Flowers; besides which, this Country plentifully abounds with large Harts, Roebucks and wild Sheep, which frequently appear in great Herds of many Hundreds together. Here are also large Flocks of wild Geese, Ducks, wild Turkeys, and Partridges; but none of the Rivers, which I passed from the *Argun* to this Place, abound with Fish, excepting only Roach and Jacks. The Air is temperate, or rather cool. But on the 2d of *September*, quitting the Hills and travelling along the Side of the River *Jalo*, we were entertained with the Sight of very fine Oak and Lime-trees, as well as a great many Hazel Bushes, which did not grow above an Ell above Ground, and yet bore vast Quantities of Nuts. We proceeded two Days in such an agreeable Road, and on the 4th Instant, to our mighty Satisfaction, reached the first *Chinese* Guard, which was placed upon a high Mountain, that afforded them a very large View, and commanded the whole adjacent Plain. As soon as this Watch espy any Persons, they summon them, and conduct them to their main Guard, under their Commanders on the *Mergeen*, as they also did by us.

Without any farther Interruption, we proceeded on our Journey, and on the 5th Instant got Sight of the first *Targazinian* Huts; and the next Day we passed by the last of them. The *Targazinians* are a separate independent Hord or Clan, which are obliged to pay Tribute to the Emperor of *China*: They are governed by their own Chief, but obey those who are most potent in *Tartary*. They are an Infidel Heathen Nation, and are said to worship the Devil: They are of a middle Stature, and broad-faced like the *Mongolians*. Their Summer-dress is composed of Blue *China* Callicoe and Tanned Leather; but it being cold betwixt the Mountains here in the Winter, they wear Coats made of Sheep skins. Their Language is very little different from the *Tunguzians*; and they live in Huts made of thin *Bamboes* or Reeds. They depend chiefly on the Tillage of Land for the Production of Barley, Oats, and Millet; the Remainder of what they do not consume themselves, they transport and sell amongst the *Xixigarian* Villages. Their Cattle are chiefly Horses, Camels, Bulls, Cows and Sheep; the last of which are very fine and large, the Tail being a large Span thick, and two Spans long, all of which is fat, and they are so very heavy, that they cannot go fast, much less run. These People ride very commonly upon Oxen; and are very expert Archers; they make great Quantities of Bows, which are esteemed the very best in all *Tartary*, and are therefore sold very dear. We passed by these People on our Journey on the charming Banks of the River *Jalo* with the utmost Pleasure; but now turned our Eyes from thence downwards towards the South. I cannot help owning, that the Side of this River is perfectly a Paradise, as consisting of beautiful Pasture-Grounds, Silver Streams, and the pleasantest Woods in the World; and the most delicious Entertainment of the Eye is not a little improved by the Prospect of the rising Ground, and beautiful trowning Hills, which offer themselves to our View, at about a Mile and half Distance on each Side, and are a perfect Warren or Park of Wild Game; Great Numbers of Wild Swine, Harts, and vast Herds of Tygers and Panthers harbouring under these shady Mountains. Here are Multitudes of Wild-Ducks; a small Sort of Geese called *Turpani*, adorned with all Sorts of variegated Feathers, like those in *India*; and a particular Sort of extraordinary beautiful Partridges, the Feathers of which are

of several Colours, their Tails about an Ell long, which prove very delicate, being in Taste, as well as Size and Shape, like Pheasants: They harbour in plain Fields, in the long Grass, and in low Nut-bushes; and being sprung, in their Flight clap their Wings with a Noise as loud as a Stork.

On the above-mention'd Day being obliged to leave this charming River, I turn'd off on the Left, from it to the South-East, and spent the 8th, 9th and 10th Days in Travelling betwixt Mountains and Rocks on each Side, where we were afflicted with the Want of Wood and Water, being obliged to content ourselves with what the Pits yielded of the latter, which was of a deep brown Colour and almost stunk. But on the 11th we got out of the Hills, and came to a Plain, but so barren a Field, that nothing at all grew upon it; the best was that we had but one Day's Journey to *Xixigar*, to pass in this desert Field, so that we held our Night Encampment this Evening not above half a Mile from that Place.

2. Having under the Protection of Heaven reached the Borders of *China*, I immediately dispatched away a Messenger Post to the *Adaganda* or *Mandaryn* who had been sent from *Pegu* to receive me, and on the 12th, early in the Morning, I set forwards, having ranged my Retinue in good Order; and was quickly informed by the Return of my Messenger, that the *Mandaryn* accompanied with eighty Men, would ride from the Town of *Xixigar* to meet me, and was already advanced on his Way.

We approached each other but slowly, and met about a Quarter of a Mile short of the Town, where I was very civilly welcomed by the *Mandaryn*; and after mutual Compliments were passed, we rode forwards together in Order, (making a very good Appearance) till we reached the Town, where a very good House was provided for me, and those of my Retinue were well lodged suitable to their Characters, as well as the *Cossacks* which I had with me, in the best Houses in the Town.

This Province is situated in a very variable, and withal unwholesome Climate. About Noon generally rises a high Wind, that continues about two Hours; but otherwise the Sky is very seldom overcast, so that the Sun continues to shine very hot almost always, by Means of which and the constant Wind the Earth is so dried, and driven upwards, that the subtil white Dust is scarce supportable. I was very particular in my Observation of the Alteration of the Air, when I came from betwixt the Hills. About five Miles from *Xixigar*, I perceived the Air to be cloudy as far as the Mountains extended, but no farther; and particularly, where the Hills ended, the Air was clearly and visibly separated by a windy Arch, from the West to the East, towards the *Albanian* Mountains; a very extraordinary Phænomenon, which I assert as an Eye-witness.

As for what happened to myself, the *Mandaryn*, who was an agreeable well bred Man, very civilly invited me to take a Meal with him on the 14th Instant, at which I was received with particular Expressions of Kindness, and splendidly treated: The Entertainment was composed of good Soops, savoury Herbs, roast and baked Meats, all which were followed with a Banquet of Sweet-Meats and *Chinese* Fruit. His Men and Soldiers were all disposed in the best Order, each as perfectly and respectfully knowing and taking his Station as is possible in *Europe*. What alone was very uneasy to me, was, that I was obliged to sit with him on the Tapistry, with my Legs across and under me, which is to Strangers a very troublesome Custom.

On the 15th I treated the *Mandaryn* in Return, having caused him to be invited the Day before. I entertained him in the *European* Manner, and put a Glass of good Sack briskly about, causing the Trumpets and other Musick to play; all which wonderfully pleased this Gentleman, so that he and his Company returned Home pretty mellow, and mightily satisfied with *European* Civility.

On the 25th, the same *Mandaryn* again entertained

Harts Sleds*

us, and the following Day dined with me. During which Interval of Time, I caused all necessary Preparations to be made for me and my Retinue, in order to our Proceeding on our Journey to *Peking*. I informed the *Mandaryn* that I was ready, who immediately answered very civilly, that pursuant to the Order of his *Amologda Chan* or King, as many Coachmen or Waggoners as were necessary were prepared to wait on me, if I pleased to accept of his Company, and set forwards on the 28th Instant. Before I invite the Reader to accompany me in this Journey, I think myself obliged in few Words to describe what appeared to me remarkable amongst the Inhabitants of this Province of *Xixigar*.

3. About a Quarter of a Mile from this Frontier Town, runs the River *Naun*, on which is situate the City of *Naunkoton*, lately built, and encompassed with earthen Walls, well lined, and covered on the Outside with massy Timber. The Inhabitants of this City, and the six large Southern Villages subordinate to it, are call'd *Daori* or *Old Dauri*; and at present this Country is called *Dori*, by the *Tartars* which inhabit all along the River *Nauna* and *Jallo* to *Albazin*. These People have very rich manured Lands, and all Sorts of Garden-Fruits, and several Tobacco Plantations; but their Religion is impious and Diabolical; for according to their own Report they are all *Schammans* or Conjurers, which invoke the Devil. Several Neighbours of both Sexes frequently assemble together about Midnight; one of them lies with his Body extended on the Earth, and the By-standers with exalted Voices make a dismal Howl: Others beat on a Sort of Drums; which ceasing for a small Interval, the Howl is renewed, and sometimes lasts for two Hours, until he that lies on the Earth, seems returned to his Senses, and after a tedious Howling, rises up and relates where he hath been, and what he hath seen and heard; after which, whatever any of the Company are desirous to be informed of concerning future Events, or other Particulars, is proposed to him; and while I staid there, no Night passed without this hideous Howling of these Diabolical Ministers.

They keep their Dead three Days in their Houses, then bury the Corps in a high-raised Grave in the Gardens or Fields; after which it is daily visited by the Relations of the Deceased, a Hole being left open at the Head, to which Place they bring the Dead all Sorts of Victuals and Drink, conveying these Edibles by a Spoon made for that Purpose to the very Mouth of the deceased; but leave the Drink standing in small Tin Cups round the Grave: This Practice lasts for several Weeks, which ended, they bury the stinking Carcass, a good Way deeper in the Earth.

They live in Houses of Clay or Earth, covered with Reeds or small Bamboes, somewhat like the Peasants thatched Houses in *Europe*. The Walls on the Inside are partly white, being plaistered with Lime. The Middle of the House is furnished with an erected Pillar, about which are wound the Entrails of Beasts, by which hang a little Bow and Arrows, Pikes and other Arms; to all this they sometimes, by bowing and Prostrations, pay an idolatrous Sort of Worship. Their Houses are not partitioned into Chambers, nor have they any Garrets; but almost one half of the House close to the Walls is taken up all round, with a large Bench of an Ell high, and about two Ells broad, covered with red Matts; under these Benches pass a Chimney, through which the Fire is kindled by the Door of the House, and the Smoak goes out at the other Side of it. And this Chimney in Winter serves instead of a Stove, though the Habitation is not much warmed by it; but the Inhabitants which sit on this Bench in the Day Time, and lie on it at Night, are indeed somewhat the better for it. There are constantly in these Dwellings two fixed Iron Kettles, in one of which is warm Water to make Tea, and the other is reserved for Boiling of Victuals. The House is all round provided with square Windows, which are latticed with Paper instead of Glass, and in warm Weather they are set open with a

Stick to make Way for the cool Breezes to pass through the Apartment.

These People are generally well-shap'd, but more especially the Women. The Men, Women and young Girls, wear the same Habit as the *Mansiourian Tartars* in *China*. The Secretaries of the *Mandaryns*, which are in the Service of the *Chan*, and are sent hither or to any other Place in *Tartary*, whenever they are inclined to Venereal Pleasures, seize for their own Use as many Wives as well as young Virgins as they like, at Pleasure; and I have frequently seen them carry off the most beautiful Creatures on Waggon, as to the Slaughter. Some Men being obliged to send their Wives after these Courtiers, boast of it as a very particular Favour, that they have the Honour to have such a Lord for their Brother-in-Law; but others, though perhaps not very well satisfied with this Custom, for Fear of falling into Disgrace and being punished, are obliged to bear it patiently, though a barbarous Practice, especially amongst a polite People.

Leaving this frontier Nation on the 28th Instant, and setting forward with the *Mandaryn* from *Xixigar*, by the Evening we reached a Village where we passed that Night. On the 29th we passed through several Villages, and arrived on the other Side of the *Jalo*, where it falls into the *Naunda*. We forded the *Jalo* without any Difficulty, it being but shallow, but the *Naunda* is very broad, strengthened with a high Sand and Earth Bank on each Side. The Stream is not very rapid, by reason it is deep; its Water looks brown; it abounds with Sturgeon, Jacks, and several Sorts of small Fish; and several Mother of Pearl Shells are found on its Shoars.

On the 30th we turned off from the River *Naunda*, and left it on the Left; its Course is farther extended downwards, East-South-East, between large Mountains; but we travelled over Mountains of Sand and Earth till the Evening, when we first reached the *Mongolian* Rivers. These *Mongolians* are subject to the Emperor of *China*. Here we were obliged to content ourselves with the Water we took out of Wells or Pits, which did not indeed look very well; and about twenty Huts were erected in the open Field, and covered with Felts, for me and my Retinue; in each of which Cottages an Iron Kettle was set on the Fire, and a *Mongolian* appointed for our Service.

Near this Place we found three *Ooferes* or small Lakes of standing Water, which were utterly useless, by reason the Water was brackish in Taste, and in Colour as white as Milk. Here the Land began to appear high and mountainous towards the West, whilst East and Southward the Low-downs presented themselves to our View; and we were forced to make shift with Well or Pit-water, which was very bad, there being no Rivers near.

4. After four Days travelling without the Sight of so much as one House, we came to an old ruined City, encompassed with a Quadrangular Mud-Wall, about a *German* Mile in its Circumference. The Land appear'd hitherto both East and West as before; and after six Days more travelling over a Hilly Country utterly destitute of Houses, we reached another old desolate City, called *Taimingzingh*, fortified with a square Wall, and Bulwarks: There are in it two Towers or Turrets, one very high and the other less: The largest was an *Obtagon*, the Front of which was built with Brick, and about ten Fathom from the Ground, there was, on each of the eight Sides, Stones placed, on which were carved several Histories. Upon some of them are expressed some great Personages or Kings, as big as the Life, sitting with their Feet under them, and Attendants on each Side of them: Others shew us several Figures which seemed to represent Queens folding their Hands together, with their Servants on each Side; the Queens having Crowns on their Heads, and the other being adorned with Rays or Lustres, as Saints are commonly painted, and also folding their Hands; all which seems to hint that this Tower must be built by Christians.

Other Parts of it represented Warriors with Pikes, after the *Chinese* Manner, and the King bare-headed,

in the middle with a Scepter in his Hand, and all the By-standers appearing with hideous Diabolical Visages, and the Proportion of all these Images so exactly observed, that they looked like the Works of *European* Masters.

This Turret was perfectly close on all Sides, with no Kind of Ascent without, or Entrance into it. Several large Heaps of Bricks lay in the City, besides a great many Stone Statues as big as the Life, in the Figures of Men and Idols, Grave-Stones, great Stone Lions, and Tortoises of an uncommon Largeness; by all which this seemed to have been a Place where some *Chan* or King had formerly resided.

One Part of the City was divided from the other by an earthen Wall; the Bulwarks were extraordinary large and high, and this great City had but four Ports or Entrances, into which ran Multitudes of Hares, as far as the Grass grew, there being scarce any Men in the Town, or rather Village erected within the Town of late by the *Tartars*.

The *Chinese* relate, that many hundred Years past, *Utaichan*, or *Un-Chan*, a *Tartarian* King, governed here, but was conquered and driven out of his Country by a *Chinese* King. The City, as near as I could guess, was above a *German* Mile in Circuit.

In several Places amongst the Mountains we observed Brick Turrets standing, which seemed to be ancient Burying-places of the *Tartars*. In these Hills I observed an infinite Variety of known and unknown Plants, extending for the Space of several Miles as thick with Thyme and Marjoram as Grass.

After having travelled four Days farther, we came to *Burgan Koton*, or *Idol City* as it is called, which is likewise utterly laid waste: It takes its Name from being a Place where formerly only the principal Heathen Priests lived. It had a Mud-Wall, most of which is at present fallen down. In the middle of the City is a high octangular Stone Turret, built in the *Chinese* Manner, and hung with several hundreds of small Iron Bells, which whenever the Wind rises a little, chime with a Silver Sound, which is very agreeable. There was an Entrance into this Steeple, by which I sent some of our People up, to see what was to be found in it: They informed me, that in several dark Holes, they saw many thousands of *Chinese* or Heathen Idols of several Shapes, and that they were very glad they were got back again. On one Side of this Turret were several Holes, out of which the Stones had fallen by the Decay of Time; and these Holes were filled with Inscriptions by the *Mangols*, in the *East Tartarian* Language, which were placed there by the Travellers that passed by that Way, particularly by their *Lama's* or Priests; for others who cannot write satisfy themselves with setting up Figures moulded in Clay.

5. Half a Mile from hence is a *Chinese* Village, mostly inhabited by *Lama's*, (for where the Corps is thither the Eagles flock) they entertaining all *Tartars* travelling this Way, and instructing them in the dark Errors of their ancient Idols. We passed on over sandy and downy Land, on which was a low Hill, with some old Birch-Trees standing on it: This Hillock is according to their Manner esteemed sacred by the *Mongolians* and the neighbouring *Tartars*. And those who travel by it, as a religious Offering in Honour of this Place, in order to obtain a good Journey, hang something which they have about their Body here, either Caps, Cloaths, Purfes, Boots, Breeches, Shirts, Switches, &c. upon the Trees, which from the Top to the Bottom are so full charged with this Trumpery, that they seem to be Shops; and it is thought very scandalous to remove any of them, for they must hang and rot upon the Principle of their Religion.

At last we came to the River, which is called *Schara Murin* or *Yellow Horse*; which proceeds from the West, and falls Eastward into the River *Karga*: It is about thirty Fathom broad, and fordable with Camels and Horses. Advancing farther we came to the River *Logaa*, which rises in the South, and falls into the mentioned *Schara Murin*. The Land here on each Side is rocky, but in the Valleys are some fine Villages, and well cultivated Grounds. Prosecuting our

Journey we came to a large Village, in which was an old fallen *Chinese* Idol-Temple, without any Idols in it; as also another in which a great Lord lived, who was married to one of the reigning Emperor of *China's* Daughters. After this we reached a small City called *Kara-Katon* or *Black City*: Which is Quadrangular, and encompassed with Oaken Pallisades driven into the Ground; which serve rather to defend it from Tygers and Leopards than the Enemy: The Land all about being covered with high Rocks, on which grow Thickets of Oaks, and great Quantities of Grass, where Multitudes of those Beasts harbour, as well as wild Swine and Harts; for which Reason, from hence to the great Wall, is thought so dangerous, that no Persons venture to travel it by Night: And all the Horses, Asses, Camels, and Cows have Iron Bells fastned about their Necks, which somewhat frightens the Tygers. The Inhabitants told us also, that frequently, Men that have only gone amongst the Hills in Day time, have been torn to Pieces: Wherefore the *Mandaryn* cautioned me to give Order that none of my Attendants should venture to turn out of the Road, or go amongst the Hills, that they might not be devoured by these wild Beasts, who by Day harbour on the Mountains Tops, and by Night go in Search of their Prey, and are then excessively bold and ravenous.

6. The Emperor of *China* annually in *August* comes a Tyger-Hunting to this Place, accompanied with two or three thousand of the best Archers in *Tartary*, and a Party of Lancers. When the Tygers are to be put up, the Emperor himself goes to the Foot of the Hill along with the Men that attend him armed with Lances, Bows, and Arrows, who invest the Hill, and beset it very well up to the Top; and when they find the Tygers there, they seeing themselves beset, endeavour by Leaping to break through the Croud, but are hunted with Drums and Bells till they come to the Place where the Emperor himself is, who shoots down the Game with Bow and Arrow, without any Hazard of his Person; for if there happen but the least Danger, he is encompassed with so many Men, that they easily defend him from the wild Beast with their Lances. The Emperor passes some Weeks in this Sport; by Intervals putting up also some edible wild Game, as Swine, Harts, Roebucks, Hares, besides Wolves and Foxes. And this I have heard not only from the Inhabitants, but from the Jesuits, two or three of which were obliged to go this Progress with him.

We observed hereabouts, in the Fields and Trees, a Sort of Birds, in Size and Shape very like a Heron, the Feathers of which are very beautiful, their Neck and Breast being white, their Wings and Tail of a bright Scarlet, their Flesh firm and very good Meat; we saw also another Bird which was as big as a Parrot, his Bill crooked, his Tail a full Ell long, and chequered with all Sorts of fine Colours, but he is so very wild that he will not suffer any to come near enough to take him: Here are likewise Partridges with long Tails and beautiful variegated Feathers.

Not far from hence we came to a steep Rock, the Ascent of which was very crooked and winding, and was for above two hundred Fathom hewn through by Men, and a Way cut which was seven Fathom broad, probably for the Convenience of Travellers, the other Side of this Rock, by Reason of the deep Morafs, being impassable. We passed hereabouts continually by steep Rocks, furnished with Oaks and Limes, and in the Vales Chestnut and large Nut-trees as well as Vines grew wild. From hence we went forwards and came to a very high Rock, sharp-pointed at the Top, and, by reason of its Steepness, impossible to be climbed: On one Side of which, about half Way up, is an Idol Temple hewn out of the Rock: It hath four Windows, and instead of Idols, we saw four Stone Statues in a sitting Posture. It is not a little to be wondered how it was possible for Men to come there, and perform such a great Piece of Work; the Rock on that Side being so extraordinary steep, that a Mouse cannot get up it. This Temple, according to the Report of the Inhabitants, hath been built several hundred Years.

F. An Idol Temple.
G. The Chinese Guard & Watch Towers.
H. Idol Temples on the Walls.

7. On the 27th of *October* we reached some Watch-Towers on the Pinacles of the Rocks, from whence we got Sight of the *Zagan Crim*, that is, the great Wall, which we came to on the same Day. This really seems to be one of the Wonders of the World. About five hundred Fathom from this famous Wall is a Valley, each Side of which was provided with a Battery of hewn Stone, from one of which to the other a Wall about three Fathom high is erected, with an open Entrance. Passing through this Fore-wall, we came to the Entry of the great Wall, through a Watch-Tower, about eight Fathom high, arched over with hewn Stone, and provided with massy Doors strengthened with Iron: The Wall runs from East to West, across the Valley and up extraordinary high Rocks, and about five hundred Fathom distant from the other hath on the Rocks on each Side of it a Tower built on it. The Foot of this Wall was of large hewn Quarry-stone for about a Foot high, and the remaining upper Part was composed of Brick and Lime, but, as far as we can see, the Whole was formerly built with the same Stone. Within this first Port we came into a Plain full one hundred Fathom broad; after which we came to another Guard-Port, which had a Wall on each Side, and like the first Wall, was carried quite across the Vale; and this, as well as the first Port, was guarded by a Watch of Fifty Men. On the first or great Wall stands an Idol-Temple, with the Ensigns of the Idol and the Emperor flying on the Top of it. The Wall is full six Fathom high, and four thick, so that six Horsemen may easily ride a-breast on it, and was in as good Repair as if it had not been erected above twenty or thirty Years since; no Part of it being fallen, nor annoyed by the least Weed or Filth, as other old Walls are observed to be.

8. After this last Watch-Tower, we came into a Vale about three hundred Fathom over, on which grew some large Willows, and on the West-side, at the Foot of the Rock, was a magnificent Temple; a Musquet-shot from whence we came to the City of *Galchan*, which is encompassed with a high quadrangular Wall, but is not very populous. Here I was welcomed by the Discharge of three Iron Guns, and continued all Night in the Suburbs. The Streets were so beset with the Concourse of People, that it was difficult to pass them, being drawn together by the Sound of our Trumpets and Bagpipes, which seemed very strange to them, they never having heard any such Musick before. In the Evening the *Mandaryn* sent to compliment me, and invited me to sup with him at the Royal Palace, where the Emperor resides when he passes this Way. Upon my coming thither, besides the *Mandaryn*, I found there the Governor and the greatest Officers of the City; and after we had drank some Dishes of Tea, I was entertained with a noble Supper, all the Action of a Play, and a Specimen of Musick, after their Fashion, consisting of all Sorts of Kettle-Drums and stringed Instruments, which made a hideous, confused Noise; so that I could have rather wished myself at a Distance, than near it. They sat on Stools by Couples, no more than two at each Table. These Tables were finely japanned, and covered with exquisite Needle-work Silk Carpets. They use no Table-cloths, Napkins, Knives, Forks or Plates; but only two small round Sticks of Ivory or Ebony were laid upon the Table, which was its whole Furniture; but indeed they are so wonderfully expert in the Use of these Sticks, that they can with them take up any Thing, though of the Size of a Pin's Head. They hold them in the Right-Hand betwixt the Thumb and the two Fore-Fingers. All their Victuals, whether Soops, Rice, stewed or roasted Meats, are brought to Table in *China* Vessels, and not in Dishes: Each Sort of Roast is served up alone, cut into small Pieces; but the Banquet of Sweet-meats and Fruit was dished up in little *China* Basins. Their Soops and Pottages are extraordinary grateful to the Taste, as being enriched with very delicious Herbs and Spices, as Mace, Cinnamon, &c. The Herb they boil in their Soops grows on Rocks in the Sea, and, being boiled, appears slimy, and when dried is green, as it also looks in the

Soops. This Plant hath no Leaves, but grows with interwoven Branches, and is of a very agreeable Taste, and esteemed very wholesome; some think it to be abortive *Satyron* or Birds-Nest. They also dress striped Shrimps, and Pigeons Eggs with the Whites tinged red and yellow; they have besides fine Salleting, especially Endive cut in small long Slips, being very agreeable both to Taste and Smell; this they lay uppermost in their former Dish. Their Soops are not to be mended by our *German* Cooks, or perhaps any other.

Instead of Saltfellers, they have small Saucers of Pickle or Brine, into which the Meat is dipped. By reason they use no Spoons, each Person takes the Cup of Soop set before him, and sips it up; but that Part, which is too gross, he guides to his Mouth with the round Sticks, that nothing may run besides or foul their Cloaths, using no Napkins, though indeed their Handkerchiefs hang by their Sides, with which they only wipe their Mouths.

In the publick Eating-houses or Ordinaries the Carver stands at the Table with the Roast-Meat before him, which, in Presence of the Guests, he cuts into small Bits, puts them into little Cups, and sets them on the Table. This Carver makes Use of no Cloth to wipe his Hands, but cuts off what is best dressed round the Bone as long as he can, and tears off the Remainder with his Hands, which are greased up to the Elbows so plentifully, that the Sight of them alone is enough to give the Spectators a Meal, more especially such as have squeamish Stomachs.

Their Drinks are Brandy, which they call *Arakka*, and a Sort of Wine they drink warm, called *Tarasu*, which is a Decoction of green or half-ripe Rice; and after it hath been kept a Year or two, in Colour, Taste, and Strength, is very like the best *Rhenish* Wine.

Whilst we were at Table, the Master of the Band of Players upon his Knees presented the *Mandaryn* with a Book of red Paper, containing a List of Plays written in black Letters; which the *Mandaryn* perusing, told him which Play he chose; after this, bowing his Head to the Earth, he arose and began the Performance immediately.

First entred a very beautiful Lady, magnificently dressed in Cloth of Gold, adorned with Jewels, and a Crown on her Head, singing her Speech, with a charming Voice, and agreeable Motion of the Body, playing with her Hands, in one of which she had a Fan. The Prologue thus performed, the Play followed, the Story of which turned upon a *Chinese* Emperor long since dead, who had behaved himself well towards his Country, and in Honour of whose Memory the Play was written. Sometimes he appeared in Royal Robes, with a flat Ivory Sceptre in his Hand, and sometimes his Officers shewed themselves with Ensigns, Arms, and Drums, &c. and by Intervals a Sort of Farce was acted by their Lacqueys, whose antick Dress, and painted Faces, were as well as any I have seen in *Europe*; and, as far as was interpreted to me, their Farce was very diverting, especially Part of it, which represented a Person who had in his Marriage been cheated by a debauched Wife, and fancying her constant to him, had the Mortification to see another make Love to her before his Face. They also, according to their Manner, danced to the Lute; and after three several Plays were acted, and it grew towards Midnight, I took my Leave, rid Home, set forwards on my Journey the following Day, and over a floating wooden Bridge passed the River *Lungo*, which comes from the West, and flows South-Eastward into the Sea of *Corea*.

9. Upon my Arrival at the City of *Xantunnung*, near that of *Lania*, we were welcomed by the Discharge of several Guns, and lodged in the Suburbs. The *Mandaryn* sent to compliment and invite me to Supper, in Compliance to which, in Company with the Governor and principal Officers of the City, I went accordingly, where I was splendidly entertained at the Emperor's Country Palace, and again diverted with Farces. On the same Day we passed the *Xungo*, which also rises

in the West and flows Eastward near the City of *Lania*, and happily reached the City of *Xantunung*. Time enough to lodge there, where, as in the other Cities, I was entertained by the *Mandaryn* at the Imperial Apartment with a Supper and Play till Midnight. Next Day I went on, and passed a Morass, over which lay a very fine Stone Bridge, with numerous Arches, all of square Stone, and adorned with all Sorts of Imagery, but especially Figures of Lyons. We passed through several considerable Towns and large Villages, all of which were very populous, and very conveniently provided with Horses and all Manner of Necessaries for Travelers; here we observed more especially great Numbers of Inns, Cooks-Shops, and Tea-Houses. In the Evening we came to the City of *Xungunxa*, where the *Mandaryn*, as before, invited me to Supper; but being indisposed, and very much tired with a tedious Day's Journey, I civilly refused him, and staying at Home, refreshed myself with the charming Fruits of that Country, such as Grapes, Limons, Oranges, Apples, Pears, Chestnuts, large and small Nuts, &c. all exquisite in their respective Kinds.

The following Day we travelled up a high Rock, passing by the Temple called *Jugangu*, the Front of which appeared very beautiful, being all of square Stone, and seemed to be a strong Fort or Castle. Next Day we passed on the left Hand or East Side over a high Mountain, by a beautiful Cloyster, and several Towns and Villages. This Temple is in the Province of *Peking*, and very famous, by Reason the Image of an ancient *Chinese* King, or false God, is kept there, which induces several Husbandmen, not only from the neighbouring Villages, but even as far as the great Wall, to come hither in Pilgrimage in the Spring to implore a fruitful Summer, and after Harvest to thank their Deity for a good Crop; to perform which Office whole Villages and Families resort hither with their Priests. The Women being dressed in their best Apparel ride on Asses in the Middle of the Procession. The Priests carry painted and metallick Representations or Images of several Idols; and some of the Men carry a Sort of long Trumpets, others Flutes, Drums and Kettle Drums, with which they make a horrid Noise. They are all followed by a *Lama* or Idolatrous Priest, with a Basket fastened to his Body, in which he carries triangular folded Papers, some gilded and other silvered over; these he scatters on the Way about 100 Fathom from the Cloyster, in Honour of this *Wonder-worker* or *Idol*. Another carries burning perfum'd Tapers, which last till they come to their designed Place. These Pilgrims stay several Days there, passing their Time in all Manner of Diversions as well as Devotions.

Prosecuting our Journey we passed by a City inhabited only by the Emperor's Concubines, and their Retinue, where that Monarch stays several Days when he goes a Hunting. The City is not large, but hath a great many fine Stone Palaces covered with red Tiles; is full of Idol Temples, and encompassed with a high Stone Wall. About three Cannon Shot West of this Place is a Spring of boiling hot Water, of which a hot Bath is made.

10. After having passed many Towns and Villages, we came the next Day to *Kixa*. Here the Hills on both the East and West Sides of us began to disappear; though on the Mountains, on the South-East and Western Sides, we could yet see the great Wall. Going from hence we passed over a Stone-Bridge on the River *Xangu*, and reposed that Night at *Xangole*.

On the 2d of *November* we passed through several Towns and Villages, and over a Stone Bridge over the River *Tungo*, which brought us to the City of *Tunxo*, which is fortified by a great Wall, and is situate close to the River *Tungo*. About as far as the mentioned Bridge, the Governor of the City and principal Officers, with a great Train of Horsemen, came to welcome me. The *Mandaryns* told me that this Governor was a very great Nobleman, by Birth a *Mongolian*, or *East-Tartar*, and a very affable, well bred Man. He invited me and the *Mandaryns* to Dinner, and gave us a noble Entertainment, suitable to his Quality and Character.

The City of *Tunxo* is very large, populous, and a Place of great Trade, by Reason of the Water-Carriage from thence to *Japan* and the Provinces of *Nanquing* and *Corea*. On this River, and haled on Shoar by its Sides, lie a great many Jonks; besides several which belong to the Emperor, and are richly adorned with carved Work, Galleries, and Windows. In these Barges the Governors of Places are carried to their appointed Cities, landed, and afterwards brought Home again. Those Jonks which are haled on Shoar are inhabited in Winter like Houses, though there is indeed but very little Winter here, nor doth the River ever freeze up, though sometimes Ice appears on the Shoar. These Jonks or Barks are indifferent large, and built very strong. When they lie on the Wharfs the Joints, instead of Pitch and Tarr, are stopped and smeared over with a Sort of Clay mixed with some other Ingredients, which once dried keeps faster and firmer than any Pitch. The Masts are a Sort of *Bamboes*, hollow within, but yet very strong; and some of them are as thick as an ordinary Man's Waste. The Sails are a certain Sort of Rushes woven together, that when furled, fold up as pliable as Flags, which is somewhat surprizing. The Forepart of these Ships is very flat, being built Arch-wise from Top to Bottom, and very conveniently fitted for the Sea. Inasmuch that, according to the Report of the Inhabitants, with a good Wind, in one of these they can reach the *Koreaschian* Sea in three or four Days; and supposing the Wind favourable, can in four or five Days Sail, gain from thence to the Kingdom or Empire of *Japan*, so little are they Novices in Sailing.

Passing thro' this City, I rode thro' the *China* Earthen Ware Market, where I saw vast Quantities of the finest *Porcelain* in the World. I also observed Abundance of *Pagods* or *Idol Temples* and Cloysters; and after I had lodged a Night in the Suburbs, and got every Thing in good Order, departed next Day, and proceeded forward till I entred *Peking*, this being the last Lodging-Place in my Way, to that celebrated Capital of this extensive Empire.

As our Author contents himself with speaking only of those Things that he has seen, and says no more of them, than what he has seen, I thought it would not be disagreeable to the Reader, if, upon his mentioning so great a Market for *China* Ware, I took the Opportunity of inserting a short Memorial, that has lain some time by me, upon this Subject, as it may otherwise run the Hazard of being lost; and as I am persuaded, that, upon Perusal, it will be thought worthy of a better Fate, the rather, because at present we have nothing very distinct or very methodical upon this Subject, except in *Du Halde's* History of *China*, where it is spun to such an excessive Length, that very few People will be at the Pains to read it, and I know some that have repented of their Perseverance. Without farther Introduction then take this Memorial, which runs thus.

“ There are very few Subjects that deserve more Attention or Care to be bestowed upon them, than the Efforts of the human Understanding, in producing and perfecting useful Arts. Amongst these there are but few that deserve the Preference of *Porcelain* or *China* Ware, so universally admired upon its first Appearance, which has kept its Credit now for the Space of two Centuries, and which is generally esteemed, notwithstanding the vast Quantities of it that are continually imported, as much as when it was first known. It is indeed true, that a great Part of its Value is derived from the Opinion of the Ladies; neither can I think that this is any Objection to it, for on the one Hand, they are the most conversant with it, and on the other they are the best Judges.

“ Their Sentiments therefore ought to fix it in our Esteem; but while they consider it in the Light of a beautiful Curiosity, it may deserve our Pains to enquire into the principal Points that regard it, which cannot be done without a tolerable Share of different Kinds of Learning. I dare not therefore presume to hope I shall be able to set the Subject in the fullest and most perfect Light, but if I lead the Way, and trace out a proper Method of Handling it, I conceive that I shall not lose my own Time, and
“ that

The River Tungo

CHINESE Pilgrimage of a Whole Village to the Temple JUGANGU to obtain a fertile Year

“ that possibly I may excite some Master of a better Pen to do that Justice which it deserves to so entertaining and so useful a Subject.

“ In the first Place, we will consider the Excellency of *China* Ware, a Thing that has struck some of the learned so much, that according to their usual Custom, they would needs entitle the Ancients to it, just as they have bestowed upon them, the Use of the Compass and of Telescopes, without considering that there leaving no clearer Testimonies of their Titles to such admirable Inventions, does them infinitely more Discredit than the Notion of their Want of them. According to the Sentiments, or rather to the Whim of those who doat upon Antiquity, the *Vasa Myrrhina* ought to be translated Vessels of fine *Porcelain*. These were first seen at *Rome* in the Triumph of *Pompey*, and were afterwards esteemed valuable, I might say invaluable Curiosities.

“ This gives us indeed a very high Notion of the Excellency of *China* Ware, but I am very much afraid no very just one; for if *Pliny*, who with Respect to Things he had seen, was certainly a very just and a very exact Author, has given us a right Description of these Vessels, they were of a Kind of precious Stone, which had a white Ground, intersected with Veins of different Colours, which Stone was found, as the same Author tells us, in some Parts of *Persia*; so that, except their being very fine, of a vast Price, and coming from the East, there are no Arguments to prove that they were *Porcelain*. But however that Matter may be, most certainly if the Ancients had any Knowledge of this kind of Ware, they thought it inimitable, for as yet I have not met with any Antiquary that has ventured to assert the *Romans* themselves made any Thing of this Kind, and yet they were not Novices either in the Art of Earthen Ware.

“ It is true, that in *Persia* they carried such a Manufacture to a great Height, neither is it yet lost among the Inhabitants of that Country, who make a very fine Sort of Earthen or Stone Vessels, which would be imported, and highly valued in *Europe*, if, notwithstanding their Beauty, they did not fall very far short of *China*. In *America* also, and especially in the very Heart of *Mexico*, they make extraordinary handsome Vessels, of a kind of red Earth, little if at all inferior to that of the same Kind, which we receive from the *Indies*; but still this is nothing to the Purpose, for with Respect to the Fineness of the Grain, the perfect Transparency, the snowy Colour of the White, the wonderful Beauty of the other Colours, Blue especially, the Dexterity with which they are laid on, or rather wrought in, and the Strength and Soundness even of the thinnest Pieces, no Manufacture that has been hitherto seen, can be truly said to vie in Excellency, if I may be permitted that Expression, with the Ware of *China*.

“ The *French* indeed have boasted, for what is there which they will not boast? that they have come up to it, but it is in their Eyes only. At present great Part of the World is persuaded to prefer the *Dresden* Manufacture, for which, the best Reason that can be given is, that it is more costly. But with regard to the Properties before-mentioned, for as to other Properties I contest not, *Chantilli* and *Dresden* must both yield. Yet if we consider what a Spirit of Imitation the bringing over this Ware has excited, what wonderful Advances our Potters have made, and what a new Field of Industry this has opened in *Europe*, I presume there are few Politicians who will not agree with me, that we have no great Reason to regret the Silver it has cost us. In this Light, when we consider Luxury, we perceive that the Wisdom of Providence continually extracts Good from Evil, and that Nicety, Elegance, and even Profusion, are made the Parents of Labour, Diligence, and a comfortable Subsistence to the Poor, who at first Sight seem to be injured by those Vices, which, in Reality, and without the Intention of the Vicious, turn to their Benefit and that of the Publick.

“ But not to dwell too long upon moral Reflections, which however have their Use, and serve to convince very well-meaning People, that the Notions they receive, under an Appearance of Truth, are at the Bottom frequently groundless. I say, to leave these Reflections, let us consider next the Antiquity of *China*. It was first imported by the *Portuguese*, and came from *Lisbon*, in very small Quantities, to the several Courts of *Europe*. *Cavendish*, the famous Traveller in the Reign of Queen *Elizabeth*, is held to be the first that presented his Royal Mistress with Vessels of that Ware, which came directly to *England*. Thus far our Journey is easy, but at the same Time it is very short: We have traced its Naturalization, but the Difficulty is to fix its Origin in its native Country, which is a Point of Difficulty indeed. Those who pretend to be best acquainted with the *Chinese* Story, cut the Knot, which they cannot untie, and tells us very bluntly, that there are no Records of this Invention extant. Men of more Modesty perhaps would have said, that hitherto no such Record had reached their Hands, for some other Accounts that they give us, leave us not altogether without Hopes, that this Tale may be one Day contradicted.

“ A Person, well versed in *Chinese* Learning assures us, that there is not a Province, a District, nor even a City of *China*, where they have not a natural, a civil, and a political History of the Place; in the former they set down all that Nature produces, and all the Improvements made upon her Productions by Art. In the second, they give Place to all the remarkable Persons, Male and Female, that, in the Course of Ages, have dwelt therein, and the Acts for which they became famous. In the third, they preserve the Succession of their Governors, the most remarkable Events that happen, the Privileges they obtain, and the Misfortunes they suffer. Now and then it is said, that a Purse of Gold dictates to the Scribe, but a special *Mandaryn*, who is a Native of the Place, is sent once in forty Years by the Emperor, who, in Conjunction with the Person then intrusted with the Administration, reviews these Memoirs, and strikes out all the Passages that there is any Reason to suspect ought to have been writ in Gold Letters.

“ In Records so curious, and written with so much Circumspection, we might expect that a Line at least should have been spared to so esteemed and so important an Invention. It may be, there is such a *Memorandum* as this, though hitherto it has escaped the Curiosity of the *Jesuits*, yet one of these Fathers, more happy than his Fellows, has come pretty near it, and assures us, that since *Anno Domini* 442, the *Chinese* Emperors have taken this valuable Manufacture more immediately under their Care, and have appointed two *Mandaryns*, to inspect all that is furnished for the Imperial Use. With this then we must rest satisfied, till we receive some better Information.

“ But here I must have Leave, to observe that though *Porcelain* and *China* Ware; are with us synonymous Terms, yet they are not so in that Empire, in all the Provinces of which they make Earthen Ware, but not in above two or three they make *Porcelain*, or what we call *China*. The Place where it is made in the greatest Perfection, in the *Chinese* Manner of Writing, is called *Kim te tchim*; the last of these marks only the Nature of the Place, and signifies, that though it is much beyond a Village, yet it is not a City. It would lead us too much out of the Road to explain this largely, and therefore it may be sufficient to say, that it is a great Town, and, like *Manchester* in our own Country, owes the Figure that it makes to the Ingenuity and Industry of its Inhabitants. It seems there is something peculiar to this Place, which renders it fitter for the Manufacture of the finest *China* than any other; for when many of the Inhabitants, for the Sake of Gain, removed to *A-moy*, then the only Port open to Strangers, in Hopes of carrying on their Trade to greater Advantage, they were able to make nothing of it; and when by

“ the

the Emperor's Command, they were removed to *Peking*, and all imaginable Care taken to furnish them with proper Utensils and Materials, to intitle the Capital to so valuable a Branch of Trade, the same Misfortune happened to them, and the Emperor very wisely determined thereupon, to leave the *Porcelain* Manufacture where Chance or Nature placed it.

Thus much may suffice in Regard to the Origin and Antiquity of this elegant Manufacture; for tho' more may be expected, yet I know not where it is to be found: Perhaps in Time, when the *Chinese* Learning comes to be regularly studied in *Europe*, we may come to have a clearer Insight into this Affair, since though the best *China* be made at *Kim te tchim*; yet as Perfection is not attained at once, it is very highly probable, that the Art was invented elsewhere, and that the particular History of the Place of its Invention may hitherto have escaped the Inquiries of the *Europeans*. We will now say a Word or two as to the Name of this Manufacture. Some have imagined that *Porcelain* was either a Derivation or Corruption of the *Chinese* Appellation; but this is so far from being true, that the *Chinese* have no such Sounds in their Language, and consequently no Characters to express them. The Word is absolutely *Portuguese*, and in their Orthography is writ *Porcelana*. It signifies literally and strictly speaking a Cup, a Basin, or a Saucer, and was first applied to those Kind of Shells which we call Cowries, and which pass for Money on the Coast of *Africa*. The Inside of these Shells having a glossy, beautiful white Colour; when the *Portuguese* first saw this admirable Earthen Ware, they bestowed upon it the same Name, either because they thought it would give their Countrymen an Idea of its Beauty, or possibly from a Persuasion that it might be made of such Shells, or of some Composition that resembled them. As for the *Chinese* themselves, the Word they commonly use to express what we call *China*, is *Tseki*, or rather, according to their Manner of Writing and pronouncing it, *Tse ki*.

We will now come to the Ingredients of which it is composed. We had heretofore very strange Notions in *Europe* upon this Head; some People were persuaded that Egg-Shells were the principal, if not the only Matter of *China*, and that the *Chinese* were extremely careful and secret as to the Method of preparing it. After this another Fable was invented, of a kind of Clay that was suffered to rot for one hundred Years, after which Time, and not before, it was fit to make *Porcelain*. This Story it is thought, took Rise from the supposed Difference, between new and old *China*, which was to be accounted for thus; the former, for the Sake of Expedition, and to supply the increased Demand for this kind of Ware, was made, if we may be allowed the Expression, of half ripe Clay, and therefore fell short in Beauty of the latter, composed of Clay that had rotted its full Time. Some other Notions I have met with in *German* Writers, which are not worth repeating, as being founded like the former purely in Fancy and Conjecture.

What I have to offer as more satisfactory, has never yet appeared in our own Language, and is taken from a short Treatise written upon this Subject, by *Dennis Kao*, a *Chinese*, converted to the Christian Religion, and is the more likely to be true, because it is very simple and intelligible. There are, exclusive of the Colours, three principal Ingredients in *China*; and not to trouble the Reader or myself with *Chinese* Terms, which neither of us would understand, I shall tell him in plain *English*, that these Ingredients are a dry Earth, a moist Clay, and a stony Oil. It is very remarkable, that not one of these Ingredients is to be found in the Neighbourhood of *Kim te Tchim*, where the best *China* is made, but are brought thither from several Places; and it is thought that the Situation of that Place, surrounded, though at a moderate Distance, with Hills of considerable Height, has something so peculiar in the Temper of the Air, and in

the Quality of its Waters, that these Ingredients, wrought with ever so much Diligence and Circumspection in another Place, never succeed so well. Be this as it will, we will keep close to our Subject, and speak distinctly of each Ingredient.

That which is stiled a dry Earth is in Reality a kind of Fire-Stone cut out of Quarries, and sent by Water to the Place where the Manufacture is carried on.

There it is beat to Pieces, and reduced into a gross Powder; then with an Iron Pestle it is beat in a Brass Mortar till it becomes as fine as possible but they do not give themselves the Trouble of Sifting, from an Apprehension that the finest Parts would fly off in the Operation. On the contrary, they throw it, thus beaten into Water, and giving it Time to settle, skim off, with great Niceness and Dexterity, the Cream, and this, in their figurative Way of speaking, they stile the Flesh of the *China*. As for the moist Clay, it is undoubtedly a kind of Fuller's Earth, for they describe it to be of a greyish white, very even, clammy, and, in short, a Sort of natural Soap. This is likewise brought by Water, and is, generally speaking, made up in the Form of Bricks; but as the *Chinese* are for the most part strongly tinctured with the Spirit of Fraud, they very often adulterate this precious Clay, though it is not of a very great Price, with other Things that are however of less Price; and this obliges the Manufacturers to be at a great Deal of Trouble in refining it, which is done by the Help of Water; for it is a settled Rule, with Respect to these two Ingredients, never to make Use of Fire.

This moist Clay is intermixed naturally with a Sort of sparry Substance, which to the Eye looks like the Inside of Oyster-Shells, and with which the whole Mass is so thoroughly impregnated, that when it is purified and cleansed from all other Mixtures, the smallest Particle of it, if broken, will discover Spectra of this sparry Matter. This second Substance, when perfectly pure, they dissolve in Water till it has acquired the Consistency of the former, and this they call the Bones of the *China*. For the finest Sort these Materials are equally mixt and incorporated; for the middle Sort, there are three Parts of dry Earth to two of moist Clay; for the coarsest *China*, they mix three Parts of the former with one of the latter.

The third Ingredient is the Oil which is drawn from the dry Earth or Stone, by a very curious Process, and this, they mingle with another Oil extracted from Lime seven times burnt. There is a very great Art in making this Mixture, for in certain Proportions these Oils will incorporate, but those Proportions vary continually, according to the Nature of the respective Liquors. The great Point therefore is to hit this exactly and when this is done, there results from these two Oils a third, which is the last Ingredient, and serves for a Varnish to the *China*.

In the Manufacture the several Pieces go through different Hands, but the most troublesome Part is preparing the Paste, composed of the two first Ingredients, which are kneaded together upon Tiles, or rather upon Floors made of Tiles, till they become so close and even, that, upon breaking, there does not appear the least Vacuity; for a Hair, a Grain of Sand, the smallest Fragment of any Metal, if taken up in the Paste, will infallibly spoil the Piece into which it happens to light.

When all this is performed, it comes into the Hands of the Potters, who first adjust the Weight of what they are to make, and then raising it in a rough Way, pass it from Hand to Hand, every Man taking that Share of the Work, in which his particular Talent lies; so that one applies it to the Mold, another pares it with the Chiffel to a proper Thinness, a third smooths its Edges, and, in this Manner, a Cup and Saucer shall sometimes pass through seventy Hands. When it is clear of the Potters, it comes to those who give it the Oil or Varnish, and with them it passes from Hand to Hand, according to their various Capacities, and their Address in finishing different Sorts of Work.

The

“ The Body of Painters receive it next, and as slight
 “ as we make of them, for indeed they have no other
 “ Instructor than Nature, yet it is very wonderful how
 “ much Care and Pains they take. One traces the
 “ Border, another gilds it, he who draws the Outlines
 “ of a Flower never colours it, one Hand paints Clouds,
 “ another Water, a third Animals, a fourth Insects, a
 “ fifth human Figures, and so on. Last of all it ar-
 “ rives at the Furnace, and is committed to the Care
 “ of the Bakers; neither are their Tasks less difficult
 “ than those of the other Workmen, for an exact
 “ Knowledge of the Degrees of Fire, how to raise, how
 “ to distinguish, how to heighten, how to reduce them,
 “ are requisite in these People, who possess wonderful
 “ Talents in their Way.

“ Besides the five separate Corps, which make up
 “ what may be filed, the regular Workmen in this
 “ Manufacture, there are a Variety of Branches be-
 “ longing to it, that occupy as great a Number of Peo-
 “ ple, such as those who prepare the several Ingredi-
 “ ents, those that make the several Instruments and
 “ Tools that are required in the Progress of the Work;
 “ those that distil an Oil from transparent Flints for
 “ the superfine *China*, of which none comes to *Europe*;
 “ those that extract and prepare the Colours, who are
 “ also exceeding skilful in their Way, are in-
 “ comparable in their Preparations of Blues and Reds,
 “ and understand perfectly the Art of compounding,
 “ so as by a judicious Intermixture of the primary
 “ Colours, to produce all the rest with Truth and
 “ Beauty. After what has been said, the Reader per-
 “ haps will not think it altogether incredible, when he
 “ is told, that in *Kim te tcbim*, there are not fewer than
 “ one thousand Furnaces or Laboratories; to each of
 “ which belong distinct Companies, of Workmen;
 “ that the settled Inhabitants amount to eighteen thou-
 “ sand Families; and that the Number of Souls main-
 “ tained by, and depending upon this Manufacture in
 “ this Place, is computed to fall very little short of a
 “ Million.

“ If this had been laid down simply, and as a direct
 “ Matter of Fact, without premising any Circumstan-
 “ ces, or bringing the Reader to reflect on the Me-
 “ thod in which these kind of Works are carried on,
 “ it must necessarily appear a very improbable, if not
 “ a very incredible Assertion; whereas now, when the
 “ Thing is better understood, and we have some kind
 “ of Grounds for our own Computations, it will wear
 “ quite another Appearance, and the closer we look
 “ into it, the more we shall incline to believe that those,
 “ who have affirmed this Fact, were neither imposed
 “ upon themselves, nor had any Inclination to impose
 “ upon others.

“ It is allowed, that vast Quantities of this Ware
 “ are exported annually to *Europe*, which, like most
 “ other Branches of their Commerce, must be extremely
 “ beneficial to the *Chinese*, who in Point of Oeconomy,
 “ must be acknowledged the wisest Nation upon the
 “ Face of the Globe: For though they love Magnifi-
 “ cence, are no Enemies to Pleasure, and indulge Soft-
 “ ness and Luxury to a very great Degree, yet what
 “ the *French* call their *Police*, is so extremely well re-
 “ gulated, that these seldom or never create any Diffi-
 “ culties to the State. They encourage and work by
 “ *European* Patterns, from a very wise and judicious
 “ Notion of pleasing their Customers; but besides the
 “ *European* Market they vend vast Quantities of *Por-
 celain* elsewhere; as for Instance, they supply the
 “ whole Empire of *Japan*, they send vast Quantities by
 “ the Caravans into different Parts of *Tartary*, they
 “ supply all *India* and *Persia*; and the *Dutch* and *Por-
 tuguese* take off very large Affortments for the *Eu-
 ropean* Settlements in the *East-Indies*, and for the other
 “ Countries with which they trade.

“ But notwithstanding this, the finest, richest and most
 “ valuable *China* remains in that Empire, and is not
 “ exported at all, or at least very rarely; there is par-
 “ ticularly a yellow *China*, which is destined to the Im-
 “ perial Use, and is prohibited to all others, tho’ we
 “ are told, that the Grand Signior always eats out of

“ this kind of Porcelain; but how he comes by it, is a
 “ Secret I have not been able to penetrate. They
 “ have a kind of *Crimson China*, which is very fine
 “ and very dear, because great Quantities of it are spoi-
 “ led in the Baking. They have another Sort of a
 “ shining White, purfled with red, which is done by a
 “ dextrous blowing the Colour through a Gawse, so
 “ that both the Inside and the Out is equally beautified
 “ with *Crimson Spots*, no bigger than Pins Points, and
 “ this must be excessively dear, since for one Piece that
 “ succeeds, a hundred are spoiled. They have *China*
 “ purfled in the same Manner with Gold, which is
 “ highly valuable for the same Reason. They have a
 “ kind of *China*, which by drawing Lines with a Hair
 “ Pencil, dipped in Oil of Flint, before it is varnish-
 “ ed, looks like *Mosaic Work*, or as if the *China*
 “ had been cracked thorough in a thousand Places, and
 “ was set together again without Cement. They have
 “ a kind of Violet colour’d *China*, with Figures com-
 “ posed entirely of green Specks, which is done by
 “ blowing the Colour at once through a Figure pierced
 “ full of Holes, and this succeeds so rarely, that a very
 “ small Bason is worth two or three hundred Pounds.
 “ They have a kind of white *China*, excessively thin,
 “ with blue Fishes painted on the Metal between the
 “ Varnish, so that they are invisible but when the Cup
 “ is full of Liquor.

“ It is reported that the Secret of making this *China*
 “ is lost, and that vast Sums have been spent in endea-
 “ vouring to recover it. I must confess I doubt much
 “ of this, as well as of another Circumstance universally
 “ believed, which is, that the old thick, and as the
 “ *Chinese* very properly call it, silent *China*, because
 “ though perfectly found it will never ring, is a Curio-
 “ sity not to be attained in our Days. Father *Anthony*
 “ *Solis*, a *Portuguese* Missionary, who resided forty
 “ Years in *China*, and died at *Macao*, wrote a Treatise
 “ which was never printed, though it very well deserved
 “ it of the Frauds of the *Chinese*, and amongst these
 “ he reckons old *China*. He tells us, that no Country
 “ in the World abounds so much with *Virtuosi* as this,
 “ and that these People, by giving high Prices for an-
 “ tique *China*, have brought it into great Credit, but
 “ that by the Help of a yellow Clay, Oils of several
 “ Kinds, some of which are Metallick, and laying the
 “ *China* for some Months in Mud as soon as it comes
 “ from the Furnace, they produce the very same Sort
 “ that is so highly valued by the Vulgar, for being five
 “ or six hundred Years old. But after all, it is a most
 “ high Perfection in this Ware, that it is capable of en-
 “ during so long, not only without Loss, but with an
 “ Accession of Beauty; for though the Lustre of the Co-
 “ lours decay, yet this is more than compensated by
 “ that Softness and Mellowness, which results from that
 “ kind of Fading; and the Art of procuring this De-
 “ gree of Elegance in a short Space, is a wonderful
 “ Proof of the Application, as well as Ingenuity of
 “ this Nation.

“ There is but one Thing more that I shall add to
 “ this Discourse, and that from the same Author; it is a
 “ Description of an ancient Painting making one Side
 “ of a Summer-House, thirty three Foot in Length, and
 “ seventeen in Height, which seems to be a single and
 “ perfect Plate of *China*, though it is certain, that they
 “ can bake nothing of any Thing like that Size in a
 “ single Piece. But upon a strict Inspection, it appear’d
 “ to be a Wall made of *China* Bricks, the Face paint-
 “ ed, varnished, and thoroughly baked by a Fire
 “ raised before it, and kept up a proper Time. It ap-
 “ peared by the History of the Town, that the *Man-
 daryn*, at whose Expence it was done, failed twelve
 “ Times in the Attempt, and that this was the thirteenth
 “ Wall of this kind that had been erected.

“ Every Trade in *China* has its peculiar Deity or ra-
 “ ther Idol, and therefore it cannot be supposed, that
 “ so noble, so gainful a Manufacture should want one,
 “ and yet this was the Case for some hundreds of
 “ Years; at last a bold Potter formed the glorious
 “ Design of deifying himself, and giving his Profession
 “ a Protector, as other Trades had. The Fact happen-

“ ed thus ; A certain Emperor ordered a Number of
 “ Veffels to be made of a Size fuperior to any in Ufe
 “ before his Time, and many Trials were made to no
 “ Purpose ; for notwithstanding they increafed the
 “ Thicknefs of the Plates to feveral Inches, yet when
 “ the full Heat was given, they melted and funk down
 “ into a fhapelefs Mafs. At this the *Chinefe* Workman
 “ was at Length fo much provoked, that growing fran-
 “ tick with Defpair, he threw himfelf into the Furnace,
 “ and was there confumed to Afhes in a Moment ;
 “ and what was furprizing, the Attempt that was next
 “ made fucceeded happily ; and the *Chinefe* Emperor
 “ had, according to his Wifh, fuch *Porcelain* as never
 “ adorned the Tables of his Predeceffors. To reward
 “ the Courage of fo great a Hero, of which by the
 “ Way there are but few in this Country, and to per-
 “ petuate the Memory of fo extraordinary an Action,
 “ it was agreed, that he fhould be honoured as the tute-
 “ lary God of *China*-Ware, and his Idol is to this Day
 “ worfhipped by all the Fraternity of *Porcelain-makers*,
 “ under the Name of *Pou fa*, to which they offer Pray-
 “ ers, cut Paper, and Incenfe, as to the other Idols.

“ We fhall however be much miftaken, if we con-
 “ fider *Pou fa* as the only Martyr of this Trade, for in
 “ Fact there have been many thoufands, or rather Mil-
 “ lions ; for the Fatigues which they endure in every
 “ Branch of the Manufacture, but more efpecially fuch
 “ as attend the Furnace, is fo great, that a quick Suc-
 “ ceffion in their Labours is occafioned thereby. The
 “ Hills which furround the famous Town of *Kim te*
 “ *tehim*, are crouded with the Graves of thefe poor
 “ Labourers ; but though fuch Numbers are buried there,
 “ yet there are far greater Numbers that die fo poor as
 “ not to leave wherewith to bury them at all. For
 “ the Reception of thefe unhappy Wretches, there are

“ vaft Pits dug at the Bottom of the Hills, into which
 “ their Bodies are hurled without either Ceremony or
 “ Covering, except it be quick Lime, of which half
 “ its own Weight is beftowed on every Corpfe. By
 “ this Means the Flefh is quickly confumed ; and once
 “ a Year, the *Bonzes*, from a Principle of Charity, as
 “ they pretend, come and collect the Bones which are
 “ burnt, and the Pit being purified by vaft Fires, be-
 “ comes again a Repository for thefe Relicks of Mor-
 “ tality.

“ Thus we have purfued the Hiftory of this Manu-
 “ facture, and the Manufacturers thereof, as far as we
 “ can well go ; we have feen how long it has been in
 “ Ufe, what Miftakes have been made upon it, how
 “ remote thefe Miftakes are from the Matters of Fact
 “ they were invented to explain, what real Excellencies
 “ belonged to this Trade, what a prodigious Instance
 “ of Industry the State of it exhibits in *China*, from
 “ how many various Quarters Wealth is derived, from
 “ the Sale of this admirable Ware ; while yet the fineft
 “ and the beft remains behind, which fhows the
 “ Wealth of this Country to be by far fuperior to
 “ that of all other Countries with which it engages in
 “ Commerce. Thefe and many incidental Circum-
 “ ftances may ferve to exercife the Thoughts, and ex-
 “ cite the Curiofity of the Reader to a clofer Enquiry
 “ into all the Branches of this comprehensive Subject,
 “ the Heads of which, if we have fo touched as to me-
 “ rit Attention and Pardon, it is all that we expect ;
 “ for as to Approbation and Applaufe, they are the fu-
 “ preme Rewards of Learning, and ought to be be-
 “ ftowed upon Works of greater Labour, and greater
 “ Extent, and which muft be confequently the Product
 “ of a fuperior Genius.

SECTION III.

The Author's Reception at the Court of *China*, the great Civilities paid him there ; the wonderful State and Magnificence of the Imperial Palace ; the Ceremonies of a Publick Audience ; the Person and Manners of the Emperor described. An Account of the Curiofities of the City of *Peking* ; the grand Eftablifhment of the Jefuits there ; Civilities paid by them to the *Ruffian* Minifter ; remarkable Things obferved by him during the Time of his Stay in the Imperial Refidence ; the pompous Ceremonies of his Audience of Leave ; his Return from *China* by Land ; the Accidents attending his Journey ; the many and great Hardfhips he fufained therein, notwithstanding his Intereft in both Empires, and his fafe Arrival, after fo many Hazards, and enduring fo great Fatigues, at *Moscow*.

*From the Original Journal of his Excellency EVERARD YSBRANTS IDES, Plenipo-
 tentiary from their Czariſh Majefties John and Peter, to the Emperor of China.*

1. The Author's Entrance into the Imperial City of *Peking*, with an Account of his Reception and Entertainment there, and the many Civilities paid him till the Emperor was ready to give him Audience.
2. He receives his firſt Audience, is there ſumptuouſly entertained, and eats in the Prefence of the Emperor of *China*, November 16, 1693.
3. The Civilities uſed by his Imperial Majeſty at his Departure. A Deſcription of his Apartment, Retinue, Perſon, and the Behaviour of thoſe about him.
4. He viſits the City of *Peking*, and is ſhown every Thing remarkable therein by the Emperor's expreſs Order.
5. An Account of the annual Feſtival which laſts for three Weeks, as alſo of the Author's Audience of Leave, from which he returns to his own Apartment in a Carriage drawn by an Elephant.
6. He is invited, by the Emperor's Permiſſion, to viſit the Jefuits, who entertain him in a moſt ſplendid Manner. He viſits the Emperor's Stables, and ſees there Abundance of Curioſities.
7. The Author leaves *Peking* on the 19th of February, 1694. An Account of his Journey through the *Chineſe* Territories, and the Accidents that attended

attended it, 8. His Arrival at the River Sadun, where he is joined by a Chinese Envoy, and the great Hazard they run of being burned in their Tents. 9. The Difficulties and Inconveniencies to which they were exposed in this Journey, from the great Scarcity of Provisions and other Accidents, together with the Methods they used to alleviate them as much as possible. 10. They relieve themselves in some Measure by Hunting and Fishing. His Interview with a Tungusian Conjurer, and the Success of an Express sent to Argun for a Supply of Provisions. 11. The long-expected Provisions arrive, by which they are delivered from all their Difficulties. The Ambassador continues his Journey through the Territories of the Czar, and at length arrives safely at Moscow on the First of January, 1695, after having spent two Years and ten Months in his Travels.

1. **A**BOUT Ten in the Morning we approached within half a Mile of *Peking*, and went by several magnificent Country Seats, belonging to the Inhabitants as well as *Mandaryns*; both Sides of the Way were adorned with these noble Buildings; before which were wide Channels, which served to carry off the falling Water, with small Stone Bridges over them opposite to the Houses. The Gardens were most of them fenced with Stone-Walls, and adorned with carved Gates, and very fine Garden-Houses; the largest Paths were planted on each Side with Cypressess and Cedars, which afforded a charming Prospect and Passage through them. The Gates of the finest Gardens were set open, I suppose on my Account. These pleasant Seats continued on each Side the Way to the Entrance of the City. It is also observable, that from the great Wall to *Peking*, at the Distance of about every half Mile, are Watch Towers, in each of which are five or six Soldiers, who Night and Day display the Emperor's Flags and Ensigns, which are yellow: These *Turrets*, like Beacons, serve on Occasion of any Enemy appearing from the East, to light Fires on, to convey Notice of it to the Emperor, which is done so expeditiously, that in a very few Hours it reaches *Peking*.

The Land from the City of *Lania* hither is plain, and good arable Ground, on which grows Rice, Barley, Millet, Wheat, Oats, Pease and Beans, but no Rye. The Roads here are very broad, perfectly strait, and very well kept; for if but one Stone be found on them, it is immediately thrown to the Side by Persons expressly appointed for that Purpose. In all the Villages we saw Pails filled with Water standing ready for the Camels and Asses to drink: And to my no small Wonder, I observed that the great Roads through the Country, were as noisy by the Multitudes of Travellers and Waggon, as if they were the crowded Streets of a populous City. So wonderfully stocked is this vast Empire with Inhabitants.

After I had caused our Caravan with all the travelling Baggage to be dispatched into the City an Hour before, I rode on in order with my Convoy, and those who were ordered to ride before me, making in all ninety Persons, besides several *Cossacks*. The Crowd at the Gates, and the Concourse of People with which the Streets were lined, gave us some Interruption at our Entry into the City. Notwithstanding there were several of the Emperor's Boschy, or Harbingers, appointed to make Way for our Passage; yet they had enough to do to make us bare passing Room; the *Chinese* being very curious to see Novelties. Being come near to the Ambassador's Court, several *Mandaryns* came to meet and compliment me on my Arrival. Both Sides of the Streets were lined with Soldiers as well as the Court. Riding through which, they brought me to my Apartment, where not myself only, but all my Retinue were instantly stocked with all Manner of Provisions and Refreshments. And we every Morning returned Thanks to the great God, who after a long and difficult Journey of one Year and eight Months, had at last conducted us safe and well to our desired Place, without the Loss of any more than one Man, whose Death for that Reason has been particularly mentioned.

2. After a Repose of three Days, I expected to be informed when it would please the Emperor to admit me to Audience: And, according to the Custom of this Country, that Day the Emperor's Orders came for me to appear, and receive a Welcoming or Meal. Upon which I prepared myself, and several great *Mandaryns*

were appointed to conduct me up into the Castle, where the Viceroy, *Sungut Doriamba*, Uncle to the Emperor, and four of the greatest Lords of the Empire, received and welcomed me. Here the Floor was overspread with Carpets, upon which having seated myself with them, the Viceroy, in the Name of the Emperor, acquainted me that the Emperor his Master presented me with this Table or Entertainment; and though he could not himself be present, yet desired I would accept this Meal, as a Welcome after such a long Journey. After which the Table was covered with cold Meats, as roast Geese, Chickens, Pork and Mutton, besides all Sorts of Fruit, and Confections; the Table appointed for me alone was about an Ell Square, upon which the Dishes, that were all of Silver, and piled one upon another, amounted as I told them, to the Number of Seventy.

They were entertained with Tea, and I with *Tarafoen* and *Rhenish* Wines. The Viceroy and other Lords diverted themselves by Smoking Tobacco, and he made his Compliment to me in the following Words; He desired, that I would accept of this Entertainment, as a Testimony of the Emperor's Favour, and expect his Orders in a few Days, to bring their *Czarish* Majesties Credentials, and receive my publick Audience; upon which rising up and thanking him for the Emperor's Favours, I return'd to the Ambassadors Court.

On the 12th of November the Viceroy sent some *Mandaryns* to give me Notice to appear with their *Czarish* Majesties Credentials next Morning in the Castle; for which I accordingly prepared myself. At Eight in the Morning three principal *Mandaryns* came to advise me that it was then a proper Time to wait on the Emperor: Besides their common Habit, they were also dressed in Robes, which were embroidered, some with Dragons, others with Lyons, and a third Sort with Tygers and Cranes on the Breast and Back, work'd with Gold Thread: They brought with them fifty Horses for my Retinue. According to the *European* Mode, I advanced with their *Czarish* Majesties Credentials, and was attended by my Retinue in good Order towards the Court.

Coming to the outer Gate of the Castle, there is a Pillar, with some Characters engraven on it, where I was told I must alight, according to their Custom; so that I went on Foot through five outer Courts to the Castle itself. I found a great Number of *Mandaryns* at the Court, all cloathed in their richest Embroidered Robes, such as they wear in the Emperor's Presence, who waited for me.

After we had mutually exchanged Compliments, the Emperor appeared on his Throne; upon which I delivered his *Czarish* Majesty's Credentials, and after the usual Ceremonies, and a short Speech, was conducted back.

On the 16th of the same Month, I was informed that I was invited to eat before the Emperor: Wherefore in the Morning, accompanied with the *Mandaryns* thereto appointed, and the chief Gentlemen of my Retinue, I rode to Court. And in the sixth Court, a great many Lords and *Mandaryns* were standing in Rows in their best Robes; and shortly after an Order came for us to appear above in the Palace. As soon as I entred, the Emperor ascended his exalted Throne, having near him some Persons who played very finely on the Fife, and a Life-Guard of twelve Men with gilt Halberds without any Point to them, but adorned with Leopards and Tygers Tails. As soon as the King was seated,

seated, the Musick ceased, and the Halbadiers seated themselves cross-legg'd on each Side below the Throne. The Emperor's Table was furnished with cold Meats, Fruits and Sweetmeats, served up in Silver Dishes, and the whole covered with yellow Damask. The Viceroy, the Emperor's Uncle, and two other of the principal Nobles stood on each Side of his Imperial Majesty, and I was placed on the Right-Hand of the Throne, about four Fathom distant from the Emperor; who looking very earnestly at me, ordered the Viceroy (who received his Commands on his Knees) to bring me nearer. Upon which he took me by the Hand, and placed me about two Fathom distant from the Emperor, and my Retinue were placed about six behind me. The Emperor a second time sent the Viceroy to me with the utmost Respect, to ask after the Health of their Czarish Majesties; to which I returned the proper Answer. Then he caused his Table to be uncovered by taking off the Damask Covering, and desired me to eat, a Table being spread for me only: The other Lords and *Mandaryns*, about two hundred in Number, took their Places according to their Quality, sitting two at each Table, in the *Persian* Manner, upon Carpets, with their Legs under them; which Custom I was obliged to comply with, as it is not to be dispensed with here.

The Emperor sent me from his Table, a roast Goose, a Pig, a Loin of very good Mutton, and soon after several Dishes of Fruit, and a Sort of Drink composed of boiled Tea, fried Meal and Butter, which looked not unlike Bean or Coffee Decoction: Having received all which, with due Respect, his Majesty ordered the Viceroy to ask me, what *European* Languages I understood? To which I answered, I could speak the *Muscovite*, *German*, *Low-Dutch*, and a little *Italian*.

Upon which he immediately dispatched some Servants to the hinder Part of the Palace; which done, there instantly appeared three Jesuits, who approached the Throne. And after Kneeling, and performing their Reverence to the Emperor, he commanded them to rise. One of these was Father *John Francis Gerbillon* a *Frenchman*; and the two others were *Portuguese*, one of them called Father *Anthony Thomas*. The Emperor ordered Father *Gerbillon* to converse with me; who coming towards me, speaking *Italian*, asked me in the Emperor's Name how long I had been travelling from *Moscow* to *Peking*, and which Way I came, by Waggon, on Horseback, or by Water? To which I return'd satisfactory Answers: On which returning to his Majesty, he informed him; who immediately answered, *Gowa, Gowa*, which is very well. The Emperor then ordered the Viceroy to acquaint me, that it was his most gracious Pleasure, that I should approach nearer the Presence, by coming up to the Throne; upon which I arising, the Viceroy taking me by the Hand, after having led me up six Steps, set me at the Table opposite to the Emperor. After I had paid my most humble Respects to his Majesty, he talked with Father *Gerbillon*, who again asked me, How long I had been on the Way hither? In what Manner I travelled? and, in what Latitude *Moscow* was situate, and how far distant from *Poland*, *France*, *Italy*, *Portugal*, or *Holland*? To all which I observed my Answer proved very satisfactory. Upon which he gave the Viceroy a Gold Cup of *Tartarian* Liquor called *Kumis*, in order to hand it to me; which with due Respect I accepted, and having tasted, return'd it. This *Kumis*, according to the Report of the Attendants, is a Sort of Brandy distilled from Mares Milk. After this, the Emperor ordered my Retinue to advance within three Fathom of his Throne, and entertained them with the same Liquor; which being done, I paid my Compliment in the *European* Manner, and the Viceroy took me by the Hand, conducting me to my former Place, where after sitting for a Quarter of an Hour, I was desired to rise.

3. After this the Emperor arose, and having saluted me, descended from his Throne, and went out of the Audience Hall by a Door on the Left-hand, in order to go to his Royal Apartment. As he was leaving the Hall, he sent the Viceroy to ask me, whether I had heard any News out of *Europe* concerning Father *Gri-*

maldi, who had been dispatched thither on the Emperor's Affairs: To which I answered, that when I left *Moscow*, I was informed that he, with a Retinue of twenty-five Persons, arrived at *Smyrna*, and resolved to prosecute his Travels through *Persia* and *India*. He replied, I am informed he is safely arrived at *Goa*, and is upon his Departure thence in order to his Return hither, and it is seven Years since he left *China*. Hereupon I took my Leave, and retired to my Apartment.

Designing to take another Opportunity to give an Account of what I could observe concerning the Court, I shall at present only describe the Outside of the Palace, and the Throne on which the Emperor sate. The Palace is an oblong quadrangular Brick Building, which is twice as long as broad, and the Roof covered with yellow glazed Tiles, on which were fixed Lyons, Dragons, and all Sorts of Imagery; the Height of this Building to the Roof was about eight Fathom; the Ascent to the Hall was up several Steps, and the farther Part or Entrance of it was provided with certain open Places or Windows, which were not glazed but peaked with Paper. At the Ends of this Hall were two Doors, the Tops of which were adorned with a Sort of carved Work, somewhat like a Crown, which was extraordinary well gilt. This Building hath neither any Room over it, or arched Roof, but the Height of the Room is to the very Top of the Roof, which was composed of curious Pannels, beautifully colour'd; japan'd, and finely gilded. This Hall is about thirty Fathom long and ten broad. The Floor, according to the *Tartarian* Mode, was covered with Carpets, adorned with Landships and Figures.

The Throne is placed opposite to the Eastern Entrance, against the back Wall, and is about three Fathom broad, and as many long; before it are two Ascents with six Steps each, adorned with Rails and Representations of Leaves very well gilt: On the right and left Sides were also Rails of cast Imagery, which some report to be Gold, and others Silver, which are also extraordinary well gilt. Exactly in the Middle of this raised Place is a Throne, somewhat like an Altar, which opens with two Doors, and in it the Emperor's Seat, about an Ell high, covered with black Sables, on which he sate with his Legs across under him. This Monarch was then aged about fifty Years, his Mein was very agreeable, he had large black Eyes, and his Nose somewhat rising; he wore small black Mustaches, but had very little or no Beard on the lower Part of his Face; he was very much pitted with the Small-pox, and of a middling Stature. His Dress consisted of a common dark-colour'd Damask Waistcoat, a Coat of deep blue Sattin, adorn'd with Ermines; besides which, he had a String of Coral hanging about his Neck, and down on his Breast. He had a warm Cap on turned up with Sable, to which was added a red Silk Knot, and some Peacocks Feathers hanging down behind. His Hair, plaited into one Lock, hung behind him. He had no Gold nor Jewels about him. He had Boots on, which were made of black Velvet.

Whilst he was at Dinner, such a reverential and profound Silence was observed amongst the *Mandaryns*, that not only no Noise was heard, but they forbore so much as speaking to one another, all sitting very still with modest down-cast Eyes, amongst them the highest Mark of Respect.

4. On the next Day the Emperor sent two *Mandaryns* with fifty Horses for my Retinue, and a Message, importing, It was his Majesty's Pleasure, that if I desired to see the City, all that was worth my View should be shewed me. Pursuant to which, I caused my Horse to be saddled, and rode out with these *Mandaryns*, who, by the King's Command brought me to a Sort of Play-house, or Court of Diversion, which was a very lofty and capacious Building. In it was a great Stage adorn'd with carv'd Imagery, finely painted, which the Players had the Use of for an annual Rent. In the Middle of this Palace was an open Place encompassed with Galleries, in which the *Mandaryns* desired us to sit down on Chairs; and having entertained me

me with Tea and *Tharasin* Wine, I and my all Retinue were treated with a Comedy, and the Diversion of seeing a great many different Sorts of exquisite Juglers, who, by a dextrous Slight of Hand, seem to produce not only all Sorts of Fruits, as Oranges, Limons, Grapes, &c. but live Birds and Crabs, and perform all the Dexterities of that Kind practised in *Europe*. Others so nicely play'd with round glass Balls, as big as a Man's Head, at the Point of a sharp Stick, tossing them several Ways, without breaking or letting them fall, that it was really surprizing. After this a *Bamboe* Cane, about seven Foot high, was held upright by six Men, and a Boy about ten Years old crept up to the Top of it as nimbly as a Monkey, and laid himself on his Belly upon the End of it, turning himself several times round; after which rising up, he set one Foot on the *Bamboe*, holding fast to it with one Hand, and then loosing his Hold, clapped his Hands together, and run very swiftly down, and shewed several other Feats of Agility, which were very wonderful as well as highly entertaining.

The Comedies had also a very good Effect, by reason they were acted in the best Manner by the Emperor's Players. They frequently appeared in Changes of very rich Dresses, embroidered in Gold and Silver; and the Plot turned on the Story of a Triumphant Hero, in which was brought in their Idols, and a late Emperor, whose Face was painted of a Blood Colour; which was intermix'd with a Farce, or diverting Entertainment, of two young Women richly dress'd, who stood each on a Man's Shoulder, and nicely play'd with their Fans, bowing to one another, and keeping Time to the Musick as exactly as if they had danced on the Ground. Two little Boys play'd *Hosicki* or *Harlequins*, in very fantastick Habits, and recited their Parts very well. After the End of the whole, I thanked the *Mandaryns* and return'd home. On the same Day the Emperor went out a Tyger-hunting, without the great Wall, pursuant to his annual Custom, and returned in a few Days to *Peking*.

On the same Day I was invited to a Repast by the Viceroy, or *Sungut Doriamba*, with which Invitation I complied, and after some Discourse passing betwixt us, he led me by the Hand out of his Bed-chamber into his best Hall, or Parlour, where several Tables and Stools stood ready; the Tables were adorn'd with rich Tapestry Carpets of Silk and Gold, which were full wrought with Figures. I was seated on one, and the *Mandaryns* on the other Side of the Viceroy. The Tables were also set off with very fine Flower-pots, full of Flowers of all Sorts of Colours, work'd in Silk, which not only looked very beautiful, but very natural; Crimson Velvets, and the most charming colour'd Silks being chosen to make them, it being Winter, when no natural Flowers were to be gathered: On the fore-part of these Tables were also placed Silver Cups, in which was laid lighted Pieces of the fragrant Wood *Kalamba*, which afforded a very good Perfume; next which stood fine Wooden Images, and Variety of small Figures or Puppets, finely painted and gilt. The Chairs or Stools on which the Viceroy and I sat, were, according to the *Tartarian* Fashion, hung at the Back with Leopard and Tyger Skins, which appeared very magnificent; and a larger Dish of Tea than ordinary, in which was put peel'd Walnuts and Hazle-nuts, with a little Iron Spoon to take them out on Occasion, was placed before each Person. After the Tea was drank off, which tasted very agreeably, several little Agate Cups, filled with Brandy mix'd with distill'd Waters, were serv'd about; and after that, several Dishes, or rather Cups, of fry'd or broil'd Fish, cut into small Pieces, were set in Heaps one upon another, garnished with fine Herbs and Flowers, and as an Ornament set on the Fore-part of the Table in a Row; by them were placed six Cups of very agreeable Soops, dish'd up with very fine stew'd Flesh and Fish; and when we had eaten of these, we were regaled with several Courses of the richest Edibles, which were followed by all Sorts of fine bak'd Meats; and after this last Course all Kinds of delicious Confects, as candy'd Grapes, Limons, Oranges, Chestnuts, and Shell'd Nuts.

During our sitting at Table in the Room where we eat, was acted a Play, interlarded with Songs and Dances, by little Boys dress'd in Girls Cloths, who very skilfully measured their Steps in Proportion to the Time of the Song, and play'd on the Flute, withal distorting their Bodies into antick Postures, and playing with a Fan in their Hands. His Lady and Daughter also appeared at the farther Part of the Hall, standing at a Door, which was but half open: They were very richly dress'd according to the Mode of the *Mongolian Tartars*. After I had very agreeably spent three Hours there, accompanied by my Retinue, I rode to my Apartment.

Some Time after I was invited to the House of the Treasurer of the Empire, who is called *Schiloy*, where I was splendidly entertain'd. His Hall was very well furnished according to the *Chinese* Fashion: The Floor of it was laid with a Sort of fine Stone, at three Corners of which, on Ebony Feet, were three extraordinary white Marble Tables naturally shaded with black Veins, which represented beautiful Woods, Mountains, and Rivers: On these Tables were placed high Silver Flower-pots, very naturally adorn'd with all Sorts of fine Flowers. The Pillars, clear up to the Roof, were painted with very fine Colours. While we sat at the Table we were entertained with a Ball, and after this very agreeable Entertainment, I arose and took Leave, extremely satisfied with all the Civilities that were paid me.

When this Lord accompanied and conducted me through the principal Markets, where Silk, Cloath, Gold and Silver, Jewels, and all Sorts of fine Manufactures, were sold, I was desir'd to alight, and conducted to the Emperor's Dispensary, which I was willing to make some Scrutiny into, it being richly stock'd with all Sorts of Roots, Herbs, and Medicines. I was here treated with a Dish of Tea, and observ'd while I staid there, that according to the *European* Custom, several Prescriptions of Physicians were brought in, which were methodically prepar'd. Next to this was a Toy-shop, which I enter'd, and bought what I liked. The Master of it had a very fine Garden-House, in which were all Sorts of Flowers, young Stocks, and Limon-Trees, in Pots: And amongst other Things, he shew'd me a large Glass full of Water, in which were several living Fish about a Finger's Length, which naturally looked as if they had been gilt with the finest Gold; and the Scales of some of them being fallen off, discover'd, to my great Surprize, the Colour of their Bodies to be the most beautiful Crimson in the World.

After we departed from thence, we went through all the Markets; each Shop had a great Board set before it, on which is very orderly written the Shopkeeper's Name, and the Commodities which he deals in. We also went through the Fish-Market, in which are all Sorts of living Fish, but more especially Carps, Carottes, and Water-Snakes, (which they eat here) Crabs, Shrimps, &c. all which stand in Tubs to be sold, in great Abundance. Passing through another Market, I saw great Numbers of Harts, Roebucks, Hares, Pheasants, Partridges, &c. and several other wild Game, to be sold.

5. On the 7th of *January* the customary annual Festival happened, which they observe for three Weeks. It began late at Night with the Appearance of the new Moon, and first the great Bell at the Emperor's Court was rung, and their large Drums, expressly kept for, and used, in their idolatrous Worship, were beaten, and several Cannon discharged; upon which all the People in the City, of what Degree soever, according to their Ability, express'd their Joy by Rockets, Serpents, and all Sorts of Fire-works, to which they also added the Beating of an infinite Quantity of Drums, and, according to their Custom, the Sounding of Trumpets by the *Lama's*, or idolatrous Priests, in their most innumerable Temples and Cloysters; insomuch, that from Ten at Night till next Day Noon, there was as great a Noise, as if two Armies of one hundred thousand Men were in the Heat of Battle one against another. In the Day-

time the Streets were crouded with all Sorts of Processions, with their Idols, which were carried in various Shapes, and the *Lama's* marched by them with Incense-Pots, and Strings of Beads; the Drums and Kettle-Drums beating, Trumpets founding, and other Musick playing, was endless. The carrying of these Diabolical Images, follow'd by a great Train of People, as well as a vast Number of *Lama's* or Monks, which preceded them, lasted three Days, during which Time all the Shops were shut, and all Merchandizing forbidden, on Penalty of severe Punishments. During this Time also the Streets were crouded with People of both Sexes, but more especially Women, who rode on Asses, or Chaises with two Wheels, cover'd all round, only before left open. The Servant Maids which sat behind, sung, some of them, whilst others blew on a Sort of Horn-Pipe; and some Ladies sat publicly taking a Pipe of Tobacco. The Women never appear in Publick thro' all *China*, except in the Province of *Peking* only, and more especially the City, which is inhabited by *Tartars*; the *Chinese* being obliged to live all about the City Wall, and the Suburbs, where all the chief Markets, and publick Places of Sale are.

Some Days after this, the Emperor sent two *Mandaryns* to desire me to be ready to receive my Audience of Leave the next Morning two Hours before Day: And accordingly three Hours before Day, three *Mandaryns* came to me on Horseback, and we rode to the usual alighting-Place; whence being conducted to the third Court, and desired to sit down, I was entertained with a Sort of Bean Decoction or Coffee, usually drank here in the Mornings. In the fourth Court appear'd all the principal Officers in their richest Robes, dressed after the *East Tartarian*, or *Mongolian* Mode. At break of Day I was introduced into the fourth Court, and seated amongst the *Mandaryns*, who, according to the particular Rank of each of them, were placed on the East and South Sides of the Court. After waiting half an Hour, we heard the Emperor approaching, accompany'd with an agreeable Consort of Fifes, and a Sort of Lutes. This was not the Hall in which I had my former Audience, but here was a Throne erected, and hung with yellow Damask, on this Occasion. On each Side of it were two great Drums, curiously gilt and painted, each of which being two Fathom and a half long, they lay upon a Stool made on Purpose for them. After the Emperor was seated, by his Command, the Herald which stood before the Throne, went to the Presence-Chamber Door, directed himself to the Lords which sat without in the Court, and uttering some Words with a shrill Voice, he thrice successively cry'd, *Bow down, bow to the Earth*. Whilst this was three Times done one after another, the Bells were rung, the Drums were beaten, the Lute was touched, and three Pipes, made for that Purpose, were very loudly founded. Then two principal Lords were, by the Emperor, sent to acquaint me, that it was his Majesty's Pleasure, that I should approach nearer the Presence; accordingly they led me by the Hand, from the Place where I was, being about eight Fathom distant from the Throne, where my Retinue were left sitting: And I sat down on one Side, about three Fathom from the Royal Throne, betwixt two great Lords, which were *Wannes* or Princes, and by Birth *Tartarians*; and after having paid a respectful Compliment to the Emperor, his great Bell was rung, and the large Drums on each Side were beaten, which made as great a Noise as a Volley of Guns; the Flutes were also played on, and the beforementioned Pipes nine times founded: Upon which I was desired to sit down; which having done, a Dish of Coffee or Bean Decoction, was presented to me, which I accepted, and drank up. And after I had dispatched the Affairs of their Czarish Majesties, with the Emperor, I rose up, and having paid my Compliment to him, he also arose from his Throne, and went out at the West-Door to his Apartment.

The Emperor's Life-Guard stood in this fourth Court; they were cloathed in red Callicoe, printed with red Figures as big as a Rixdollar; they wore small Hats adorn'd with yellow Feathers, that being the Imperial Li-

very Colour. They were arm'd with Scimiters by their Sides, and fine Lances, with Colours fixt to them, and stood ranked at a Distance from the Throne, on each Side of the Court, where also stood eight white Saddle-Horses for Shew. In the third Court of State, were also placed four extraordinary large Elephants, one of which was white. They were all covered with rich Gold embroider'd Cloaths; and all their Trappings, as Bridles, Cruppers, &c. were covered with Silver, and gilt; and on their Backs was placed a very fine carv'd wooden Castle, or Gallery, spacious enough for eight Persons to sit in. In this Court also stood the Emperor's Waggons with two Wheels, and his Chaises, all hung with yellow Damask Curtains: Besides all which, there were there placed several Stands, or Stools, for Drums, Kettle-Drums, Idolatrous Instruments, &c.

Being got out of the Castle, I mounted one of the Emperor's Waggons and was drawn to my Apartment by an Elephant; on each Side of which ran ten Persons, with a thick Rope in their Hands, fastned to each Side of the Elephant's Mouth, by the Help of which they lead and govern him: On his Neck also sat a Man with an Iron Hook in his Hand, which also contributes to hold him in and guide him. He went but at his ordinary Rate, which put his Leaders to run as swift as possibly they could in order to keep Pace with him.

6. A few Days after I was invited by the Jesuits, with the Emperor's Leave, to visit their Cloyster; pursuant to which, two *Mandaryns*, according to order, attended on, and conducted me thither. I was then introduced into the Cloyster, which was encompassed with a high Stone Wall, and provided with two exquisite regular Stone-Gates after the *Italian* Manner. On the left Side of the Entrance, under Shelter of a Roof, made for that Purpose in the Court, stand the celestial and terrestrial Globes, of an extraordinary Size, each being about a Fathom Diameter. From hence we proceeded on to the Church, which is a very beautiful *Italian* Building, furnish'd with a large Organ, made by Father *Thomas Pereyra*: And the Church itself, suitable to the *Roman* Catholick Usage, was richly adorn'd with fine Images and Altars; and was withal large enough to contain two or three thousand People. On the Top was a Clock and Chimes. Having seen the Church, the Fathers brought me into the *Museum*, which was compleatly furnished with all Sorts of *European* Rarities. After which they conducted me to an Apartment on one Side of it, where being asked to sit down, I was treated with all Sorts of Confections and Preserves: Nor did we forget, according to their Custom, to drink the Healths of all the Christian Princes of *Europe*, in rich Wines: And after a considerable Stay, I rode to my Apartment, very well satisfy'd with the Entertainment of these Fathers.

About this time, two *Mandaryns* came from the *Cham* to invite me to take the Diversion of seeing the City: Accordingly I mounted with my Retinue, and these *Mandaryns* conducted me to the Emperor's Elephant-Stable, where stood 14 of those Beasts, one of which was white: Having thus seen them, that was not enough, but they must shew several Tricks, and at the Command of the Master of the Stable, they roared like a Tiger, so dismally loud, that their very Stable seemed to tremble: Others lowed like an Ox, neighed like a Horse, and even sung like Canary-birds; but which was most surprising of all, some of them imitated a Trumpet. After this they were obliged to pay their Respects to me on their four Knees; to lie down first on one Side, then on the other, then to rise up. When they lie down, they first strike out their Fore-legs forward, and then throw out their hind Legs backward, and by this Means lie with their Bellies flat upon the Ground. One of these was not broken, and, by Reason he was very unruly, he was loaden with heavy Chains on two Feet, and, for the whole time he had stood there, had not been removed from his Place; and a great Pit was dug before his Stall, that in case he broke loose, he should fall into it, and be prevented from coming into the Court to do any Mischief. All these Elephants were extraordinary

extraordinary large, and the Teeth of some of them were a full Fathom long. The *Mandaryns* told me, that they came from the King of *Siam*, who annually sends several, by Way of Tribute, to the Emperor of *China*. Their Food was only Rice Straw bound up in small Trusses, which they take up one after another with their Trunk, and convey to their Mouths.

After a satisfactory Sight of what I desired, I rode with the *Mandaryns* to my Apartment; and as we were on our Way, I observed at the Door of a considerable *Mandaryn*, and a great Officer, some Persons fleaving of a fat Dog; upon which I ask'd the *Mandaryn*, wherefore that was done? Who answered, That it was a healthful Sort of Food, especially in Summer, it being very cooling. After I had handsomely treated these *Mandaryns*, they went away.

Next Day the Viceroy sent a Tyger, or Panther, in a Cage, to the Ambassador's Court, to be shewn to me; as also several Juglers with Monkeys and Mice, which had been taught several Tricks. These Apes, at their Master's Command, did really some very strange Things; they fill'd a Basket with Stuff Coats of all Colours, each of which an Ape took out singly at his Master's Command, never missing the Colour which he was ordered to take out and put on, always varying his Grimace with his Habit; after which, he not only danced upon the Ground, but on a tight Rope, in a very diverting Manner. There were also two Mice fastened to their Chains, who, at their Master's Command so entangled themselves in them, and immediately got loose, that it deserved Admiration: But what was most strange to me, was the odd Motions of these Vermine.

The Jesuits once told me, that about three Years past were sent to the Emperor as a Present, from an Island in the Eastern Sea, four Animals as big as ordinary Horses, each of which had two sharp Horns prominent before; and that these Fathers were sent by the Emperor's Order to his Park, about ten Miles from *Peking*, to see these Beasts, in order to inform his Majesty, whether they had ever seen any of them in *Europe*; but returning, they affirmed, that they had never before seen any of that Species. I was indeed very desirous to have seen them, yet it being too far out of Town, and the Time of my Departure approaching, it was impracticable.

After I had sent my Compliment to the Viceroy, I desired that I might be advertiz'd of my Departure eight or ten Days before the Time when it should please the Emperor that I should leave the Court and Royal City, which, pursuant to my Request, was accordingly done some Days after.

7. Upon which, having made all necessary Preparations for such a long Journey, and latterly, according to former Custom, having one Morning in a Week eat at the Emperor's Table, I left *Peking*, accompany'd out of the City Gate with a numerous Train of Great Officers of State, and *Mandaryns*, on the 19th of *February*, 1694, and on the 25th reached the City of *Galgan*, close to the *Daaurian* Wall. From thence we went on to *Naun*, and passed through several *Xixigarschean* Villages, to the *Tartarian* Frontiers, and the great Deserts, where we encamped and lay still several Days, and provided Saddles for our Camels, and all other travelling Necessaries, by reason that to *Argum*, on the Frontiers of their Czarish Majesty's Dominions, I was obliged to provide me with all Necessaries on my proper Cost, which I consider'd when in *Peking*; and Camels and Mules being very cheap there, I carried a good Number of the last loose along with me, they, as well as the whole Caravan, travelling free, at the Expence of the *Chinese*, hitherto, as well as my self and whole Retinue, who eat at the Emperor's Charge thus far.

If I had not made this Provision before-hand, but had depended on the Camels and Horses which I left at *Nuna*, we should have fared but indifferently, for of all that I left there, scarce eight hundred remained, all the

rest, which were a very considerable Number, being killed by the ill Forage and unwholsome Grass.

On the 2d of *February*, being ready to set forwards on my Journey, I treated the *Mandaryn* and his Retinue, who, by the Emperor's Command, had accompanied me thus far; after which, taking very civilly Leave of each other, we parted.

On the 26th Instant, in God's Name, we entered the great Desert, about the River *Sadun* and *Kallar*, being obliged to be on our Guard, by Reason that four *Mungessian Talischis*, or *Lords*, with about three thousand Men, who waited for me, were ready and willing to try their Fortunes with us: Upon which I gave all necessary Orders, and in the Night caused a strong Watch of sixty well armed Horsemen to be kept; but not encountering any thing from that Quarter, we next Day set forwards on our Journey. Reaching the *Talischian* Mountains, we found our Forage grew worse the farther we went, and our Saddle as well as Carriage Beasts began to look thin. Having travelled a whole Day over these Mountains, the Night proved very cold and snowy, and the Grass grew yet worse, being that of last Year, which was dried up in the Field; so that the Camels, but more especially the Horses, though they eat their Fill, were not much strengthened by it. I here deliberated whether I should take the old Way, or a By-way, which was the safest Method that could be taken to escape the *Tartars* who lay in Wait for us, and again proceed on Eastwards; preferring Certainty to an Uncertainty, I pitch'd upon the last, which proved very incommodious, especially for the Cattle.

We travelled but slowly through these steep, mountainous and deep morassy Ways, and that Day twelve Camels and fifteen Horses sunk under Foot, and for sixteen Days after we were obliged to wrestle with these difficult Ways, which daily occasioned several Camels and Horses to sink under their Loads and die; which happened from the heavy Burdens they were obliged to carry, as well as from the sapless and dry Grass, which afforded them no Nourishment. But our Difficulties increased with respect to Forage, for our Cattle had Grass hitherto, which, though dry and not sufficient to satisfy, yet served to keep them alive; but now we came to Fields that were intirely burnt up by the *Tartars*, which forced us, how feeble and incapable soever our Beasts were to perform it, to dispatch two Days Journey this Day, in order to come to a Place where there was some Grass left.

Several of our Merchants, who lost their Saddle-Horses, their others being sufficiently laden with Merchandizes, were obliged to go on Foot; and if many of them had not been provided with spare Horses and Camels, we should have been obliged to have left a great Quantity of their Goods behind in the Wilderness.

8. After various Fatigues and Miseries, with the greatest Difficulty in the World, we at last reached the River *Sadun*, where our Quarters began to mend, in some Measure, and the tender Grass to sprout up a little. We lay still two Days by this River, in order to refresh our Camels and Horses, which were unable to have held out any longer. During this Repose, a *Chinese* Envoy with an hundred armed Men, came up to me, who, by the Command of the Emperor of *China*, was, by the Viceroy of *Tartary*, dispatched from the City of *Merdeen*, with Orders to accompany me to *Nerzinskoy*, there to treat, concerning some Affairs, with the Governor. The Arrival of this Company was very welcome to us, for now we could make out full six hundred Men, and consequently had no Reason to fear any strolling Parties of Robbers. On the 15th of *March* we arrived at the River *Kailaan*, which we forded, the Water being low; and passing about a Mile farther in a Dale, we pitched our Tents there, though there was but little Forage to be found: Yet we passed the Night here, and in the Morning discovered a terrible Smoak to arise out of the North-west, which gave me some Apprehensions, that the *Tartars* having burnt

up the old Grass, lurked under these Pillars of Smoak, in order to obtain an Opportunity to set upon us with great Numbers. To provide against this, I caused the Camels and Horses which were left us in this horrible Desert, betimes, to be drove to a Place where there was some Grass, and which being behind a high Mountain, was securely shelter'd from the Fire. After which I caused an hundred Men to provide themselves with the Felts with which the Camels were covered, and be in Readiness, if the Smoak approached us, to disperse and drive it from our Camp as much as possible. Within the Space of half an Hour, the Air was wholly darkened with the Smoak, and the Fire driven on by a stormy Wind, flew swifter than a Horse could run, into the Vale, where the dry Grass was about half an Ell high; so that it was scarce possible either to escape or quench such a rapid Flame: The Fire flew, or rather flashed by our Camp, as swift as Lightning, so that whilst I turn'd myself round, it was got to the short Grass, and behind the Brow of a Hill: Notwithstanding its speedy Flight, we did not clearly escape it, for the Flame laying hold of our foremost Row of Tents, immediately sent ten or twelve of them burning into the Air: Great Quantities of our Merchants Goods were consumed, and fourteen Men struck down by it which were miserably burnt, and some of them taken up for dead; but after necessary Care was taken for their Recovery, only one *Persian* died. I was myself in great Danger, and if I had not in time run to a Hill where there was scarce any Grass, and been assisted by two Servants, which covered me with a Felt, to keep off the Heat, I should not have escaped better than those above-mentioned.

The Flame was no sooner past us than it visited the *Chinese* Ambassador, who was encamped at some Distance from us, amongst the Hills, where to his good Fortune, there happened to be very little Grass, so that the Fire passed about and over the Hill, but was not violent enough to catch hold of any thing, so that their Horses Tails only were a little burnt, or rather singed.

Before it was possible to have told two hundred, this Fire had reached the River *Kailaan*, (which was a Mile from our Encampment,) where it was quenched by the Interruption of the Water. After this Burning, the Land, as far as we could see from the Hills, was quite bare of Grass, and every where Coal-black. Upon this Disaster, I sent out my Guide, to try whether he could discover any Place for us to encamp for that Night; he return'd the next Day, with Information, that for two Days Journey all round, there was no Forage, the Fire having consumed it all; for though there were some few scatter'd Places which had escap'd the Flame, yet there was not half Grass enough to satisfy such a Number of Camels and Horses as ours; which was but melancholy News for me and the whole Camp.

Wherefore I consulted, whether it was not most advisable to repass the River *Kailaan*, where the Grass had escaped untouched; but in Opposition to this, the Danger of being fallen on by the *Tartars* which were on that Side of the River, offered itself; so that I rather inclined to chuse the travelling two Days in Want of Necessaries, than once more run the Risk of exposing ourselves to the Inhumanity of these Barbarians.

9. In the Morning then we broke up our Camp, which we pitched late that Night near a great Morass, after having endured a great deal of Misery and Fatigue that Day, by passing through Morasses and over steep Hills; which Hardship fell heaviest on the Cattle, in so much that in this Day's Journey only eighteen Camels and twenty two Horses sunk into, and remained in the Morasses, not being able to stir a Step further, which fell very hard upon us, and the farther we went, rendered us the more uneasy, since we were as unwilling to leave our travelling Necessaries and Provisions behind us, as the Merchants were to throw away their Goods; wherefore the Remainder of the Beasts must necessarily be the heavier laden.

The next Day we also passed through Morasses, Vales, and over steep Hills, and came to the River *Merdeen*,

where the Grass was not burnt off. Having forded this River, and proceeded on our Journey, though in a miserable Condition, as well by Reason of the ill State of our Cattle, which daily sinking under their Loads, obliged us to leave them behind, as on Account of the Scarcity of Provisions for so many Men, our Stock being at present very low, and consisting barely in a few lean live Oxen, which Travellers generally take with them in these Sort of Journeys, but not either Bread, Peas, Barley, or other Provisions, because the Merchants and *Cossacks* wanted Beasts for the Carriage of their Goods, and it would have been too chargeable to lade Camels with Provisions.

There being but a small Number of Oxen in our Camp, the People began to be very anxious, considering it was not possible to reach *Argum* on the Frontiers in less than ten or twelve Days; so that each Person, according to the Company he was engaged in, began to compute how long what they had would last, and contrive how to manage his Share best.

On the 18th of this Month, with great Difficulty and Fatigue, we at last reached the River *Gan*, which at low Water we forded, and on the other Side found fresh Grass for the Beasts, with which we were very well pleased, and mightily encouraged. Here I resolved to lie still three Days, and would have rested longer, if the Merchants, *Cossacks*, and Workmen, had not complained that they were pinched by Hunger, and that there was but a very small Number of Oxen remaining, considering how many hundred Men were to be subsisted by them; and they, by Example, shewed me the best provisional Methods which could be taken to prevent an entire Famine; for as soon as an Ox was killed, they saved his Blood, and boiled it to the Consistence of Liver; this they eat instead of Bread. Others cut the Hides into Slips, shaved the Hair off, and roasted them at the Fire, and this passed at that Time for good Food. Nor were any Part of the Entrails thrown away, so that if the Scarcity had endured longer, possibly their Nature had been changed into that of *Cassers* or *Hottentots*, who eat not only raw Flesh, but even the Excrements also.

10. In this Streight, being informed that the Country all about this River abounded with wild Game, as Harts, Roebucks, &c. I ordered some expert Archers to go a Hunting; which proved so successful, that they shot about fifty Roebucks, which were afterwards distributed to our famish'd Company, who greedily devoured them half dressed and half raw, and gave convincing Proof that Hunger, as 'tis commonly reported to be, is really a sharp Sword; but besides it must be owned that the assuaging it when it hath continued long, and is grown outrageous, is one of the greatest Pleasures of Life; though indeed a tedious Thirst is more intolerable and painful to human Nature.

In this Streight I sent a Gentleman, accompanied with eight *Cossacks* to *Argum* the frontier Place, charged with a Letter to the Governor, requesting that he would immediately send us a Parcel of Oxen, Sheep, Bread, Meal and other Provisions, under Convoy, by Reason we were driven to the last Extremity; and this Message did not prove unsuccessful, though the expected Relief did not arrive so speedily as we wished; each Day on these melancholy Occasions commonly appearing an insupportable Year.

Having dispatched this Messenger with his Orders, I thought it necessary to break up from the River *Gan*, and in the Interim to advance as far on our Way, and struggle as much as possible with our Uneasiness. And after we had travelled three Days, the hungry Complaints of our Company became incessant; the Roebucks were but a morsel amongst such a Number of People, and no Edibles were to be bought for Money in this Wilderness. During which Affliction we were obliged to make a Virtue of Necessity, and bear as well as we could what we were not able to remedy. In this Condition dispirited and faint we arrived at a Brook, which flowed from the Hills, and was richly stored with large Jacks, Trouts, and other Fish, of which we shot many with Bow and Arrow; for in clear Water the *Cossacks* and *Tunguzian*

Tunguzians, of both which I had several, are such expert Archers, that with their double pointed Arrows they very seldom missed the Fish they aim at, and but once touching, generally pierce through them, which instantly causes them to float on the Surface of the Water. This Fishery afforded a very considerable Refreshment to our Camp, which was also increased by some Bucks being shot that Evening and dressed as before.

Our Hunters discovered a Hutt amongst the Hills, where lived a *Schaman* or Conjurer and his Companion. This Magician was Uncle to our Guide, and a *Tunguzian*, which Nation abounds with such Pretenders, as we have already hinted. About Midnight I was waked by a horrible Noise, upon which running out of my Tent, and asking the Centry that stood there, what it was? He told me our Guide was making merry with his Uncle; which excited my Curiosity to that Degree, that led by one of the Centries, I stole thither softly to see what they were doing; approaching the Entrance of the Hutt, I found that they were Conjuring after their Manner; and though the greatest Part of it was over, I yet observed him fitting with an Arrow in his Hand, the Head of which was inclined towards the Earth, and the Point he held under his Nose; after which he rose up, making a louder Outcry, and after leaping all round, laid himself to sleep. In the Morning the *Cossacks*, whom I had sent a Hunting, and whom he had accompanied, told me that this Conjurer came to meet his Nephew, whom he in their Presence conjured out of their Sight, or carried away; which might easily be done without any Diabolical or other Assistance than the Darkness of the Night, and the uneven hilly Ground. My Messenger returned with the agreeable News, that within three Days we should be furnished with all Sorts of Provisions from *Argum*; the Approach of which appointed Time was not a little longed for amongst us.

II. On the 3d Day Heaven favoured us with our promised Assistance, which consisted of twenty five Oxen and Cows, Millet and Bread; but the Sutlers that brought this Convoy of Provisions, made the Merchants pay so very dear for it, that their Relief looked more like Extortion than Charity; they taking a *Rixdollar* for one Loaf, and for all the rest in Proportion; however cost what it would, this Supply was very welcome to us at that Juncture.

Thus invigorated, and also encouraged to find that the farther we advanced on our Journey the Grass grew better, on we went, till through the Mercy of God we got to the End of this barren Desert, in which we had suffered so many Miseries, and struggled with the greatest Difficulties in the World.

On the 27th Instant we joyfully reached the River *Argum*, which with the whole Caravan we passed: And on the 31st arrived very safe at the City of *Nerzinskoy*, returning our Thanks to Heaven, that through so many Dangers we were thus far advanced on our Way, and had got out of the Reach of pinching Necessity.

After having refreshed the Camels and Horses with good Grass, and rested ourselves for a convenient Time, we departed from *Nerzinskoy* on the 5th of *August*, and proceeding forwards by Land along the River-side, came on the 8th Instant to the City of *Udinskoy*; where we furnished ourselves with Barks, and assisted by an ebbing Tide, and a good Wind, in one Night reached the Frontiers of *Siberia*, and on the 12th arrived safe at *Jekutskoy*.

On the 17th we left that Place, and after running a great Risque by wading through the great Quantities of Water which were fallen, arrived safe at *Jenizetzkoy*.

On the 26th we went by Land from this City, and travelled through a Wood twenty Miles long, in which were harboured several wild and ravenous Beasts, that at our Approach took their Flight.

After which we arrived at the Village *Makoskoy*, where finding as large a Store of Shipping as I desired, we all embarked, and driving down the River *Keta*, on the 28th of *September* we reached the Castle of *Ketskoy* on the *Oby*; on which we drove down without meeting any Thing remarkable, and on the 16th of *October* came to the Town *Samorofskoy Jam*, at the Mouth of the River *Jalis*, on which Stream I spent fourteen Days in waiting for Sleds to pursue our Journey by Land. I took the very first Opportunity, so that on the 29th I safely reached *Tobolskoy*, where we rested three Weeks to refresh ourselves, and to provide ourselves with new Cloaths.

After which we set forwards with all possible Expedition, being very desirous to put an End to such a tedious Journey, and once more see the imperial Metropolis.

On the 24th of *November* we travelled through the City of *Wergaturia*, without encountering any Thing observable, and through the Mercy of God, arrived in Sleds safe at *Moscow* on the first of *January*, after having spent two Years and ten Months in these Travels, and endured several fatiguing Miseries, partly occasioned by Scarcity of Provisions as already hinted. We returned Thanks to Almighty God for graciously preserving us in such imminent Dangers, and at last conducting us to the Place from which we were sent by their Czarish Majesties.

SECTION IV.

A very copious and no less curious Account of the North-East Part of *Asia*; comprehending a distinct, particular and authentick Description of all that has hitherto passed under the general Name of *Siberia*, shewing the Extent and Situation of the several Districts thereof, their Climate, Soil and Produce, the Rise and Course of the principal Rivers, Descriptions of all the great Cities upon their Banks; of the several barbarous Nations that inhabit near these Rivers; of the Value of their Furs and Fisheries, with the Manner of their Commerce, and a clear and full Explanation of a Multitude of lesser Circumstances, as well as material Points of Fact, which contribute to the perfect understanding the Condition of this hitherto unknown Country, and all its Inhabitants. To which is added, a succinct Recapitulation of the State of the *Chinese* Empire towards the Close of the last

Century ; with some very impartial as well as judicious Remarks on the Temper, Genius, and boasted Oeconomy of that famous Nation ; with a free Censure of those Hyperbolical Panegyrics, that have been bestowed on the Progress of Science amongst them.

Being the Conclusion of his Excellency EVERARD YSBRANTS IDES's, Travels by Land from Muscovy to China, and of his Return from thence.

1. *The Author's Account of Siberia, the Extent and Situation of that Country, the Motives that led him to think of making a Map of it, the Methods used by him for that Purpose, and the Result of his Pains upon this Subject.*
2. *The Country of the Samojedes described, with an Account of this Nation, their Food, Carriages, Government, Arms, Religion, Marriages, Poetry and strong Disposition to Magick.*
3. *An exact and excellent Description of the Streights of Weygats, how far they are navigable, the Russian Fishery in them, Privileges that Nation formerly enjoyed, which are now taken away.*
4. *An ample and curious Description of the Mountain of Pojas, or Back of the World: Of the South Boundaries of Siberia, and of its principal Rivers, viz. the Jaka, the Tobol, the Oby, the Jenizea, and the Selinga.*
5. *The Source of the River Kugur, Description of the Uffinian Tartars, and their Neighbours, the Nature and Produce of their Countries, the Stature, and Complection, Habits, Language, and Religion of these People.*
6. *Of the Kalmucks or Kalmacks, who inhabit between the Tobol and the Oby. The Lake of Jamuschowa, famous for the excellent Salt it produces. The Country of Barabinsy, its Nature and Produce, the People that inhabit it, their Manners, Customs, Arms, Government, Religion, and Trade.*
7. *Of the famous Town of Tomskoy, its Inhabitants and Commerce, of the short Route from thence to China, and a concise Account of the Country between this City and that of Jenizeskoi.*
8. *Of the Country of the Kirgises, the History of that People, and of their Neighbours: Of the frontier Places belonging to the Mongals, with an Account of the three Princes by whom they are governed.*
9. *Of the Country about the Castle of Argum, of the People who inhabit these Parts, and of the River Gorbisa, which separates the Dominions of the Czar from those of the Emperor of China.*
10. *Of the Rivers Tugur and Uda, and of the Inhabitants of certain Islands that come thither to trade, extremely curious, and which occur in no other Author.*
11. *The City of Kamfatka described, with an Account of its Inhabitants, the Climate about the Icy-Cape, the Fish taken there ; the Manner in which the People live under Ground, and of the vast Mountains of Ice in the Sea.*
12. *Of the River Lena, and the City of Jekutskoi, Capital of the Northern Parts of Siberia, the Fishery there, the Nations that inhabit on the Side of this River, their Customs, Religions, Habits and Language. Of a certain Idolatrous Nation in these Parts. A Description of other Rivers that arise in this Country, and of the Lands they water.*
13. *A Description of the City of Wergolenskoi, the fruitful and pleasant Country about it: An Account of the River Jenizea from its Source to its Mouth, with a Description of the People that inhabit the Banks of that and other Rivers.*
14. *A succinct but curious and exact Description of China, with Remarks on the Genius, Temper and Disposition of the People.*
15. *Of the Author's Conversations with them, in Reference to religious and philosophical Subjects ; with other curious Particulars.*
16. *The Author's Sentiments with Respect to the high Notions that have been entertained in Europe, of the Wisdom, Learning, Policy, Arts and Manufactures of this Nation.*
17. *Observations Historical, Political, and Critical upon the foregoing Section.*

THE great Value of these Travels arises from their Plainness, Perspicuity, and apparent Veracity ; for it is easy to see that our Author had a true German Sincerity, and was far from allowing his Imagination to co-operate with his Judgment in the Composition of this Work ; what he saw with his Eyes, he has faithfully set down with his Pen, without Increment, without Diminution. But upon his Return to Muscovy, and communicating his Journal of his Travels, many Questions were asked him, and many Inquiries made, from which he was convinced, that a most useful and entertaining Supplement might be added to his Work ; and this it was that put him upon writing what composes this Section. It had been a very easy Thing for him, by digesting his Travels afresh, to have brought all his Observations and Remarks into their proper Places ; and this, without Doubt, would have render'd his Performance more elegant, at least if not more useful. His Love for Truth, however, was so great, that he resolv'd Things should appear as they really were, and instead of taking that Step, has given us his additional Remarks in that Order to which he was directed by the above-mentioned Enquiries ; by this Means he was obliged to retrace his whole Journey, which however he has done in such a Manner, as to mention little or nothing that he had given us before, and has taken such a Method, as will enable every attentive Reader to become absolutely acquainted with this great Country never described before,

and of which all Descriptions that have been made since fall very far short of his. Thus much I thought necessary to premise, without taking away any Part of his own Introduction, because I thought it but just to acquaint the Publick with this Author's real Merit, which in Point of Accuracy and Regard to Truth, I look upon as superior to most, and not inferior to any ; and I persuade my self, when he has perused it, that the Reader will be entirely of my Opinion, and will only regret, that in Collections of this Nature, so few Pieces of this Kind can be inserted.

In the past Relation of our Travels, solely aiming at Truth, we have represented her naked, without any hyperbolical or ornamental Illustrations to render her the more agreeable and surprising, according to the common Practice of Writers of Travels, who magnify Trifles, and crowd in various Particulars on the uncertain Reports of others, in order to furbish up the Book. This is indeed what I have all along carefully avoided in the Description of my Journey ; but finding I have not been so methodical as I could have wished ; that I have omitted some Particulars worth the Reader's Cognizance, or at least not related them as they ought ; for the first I beg Pardon, and shall endeavour to make some small Amends for the latter by a short Review.

My Travels then were through the whole Provinces of Siberia and Daur ; the Towns, Countries, and Rivers of which that I have passed through, or over, are already exactly describ'd. The Course of our Journey was from
the

the North to the East, that is, from *Weygats* to *Amur*; and from the West from *Uffa Baskiria* to the *Mongolian* Country, and from thence from the West to the South.

As for what relates to the Frontiers of *Siberia* in general, they are every where garrisoned with well armed Forces by his Czarish Majesty, who are not indeed very solicitous to subdue the Southern *Tartars* inhabiting the *Geliseeschian* Plains to his Majesty's Obedience, by reason it would not turn to any great Advantage. The Circuit of this Kingdom of *Siberia*, and the circumjacent Country is very large, as appears by our accurate Map, with regard to which I must acquaint the curious Peruser, that he ought to guide himself only by the Degrees; but as for the Distances betwixt Countries, Cities and Rivers, they are not to be expected exactly placed to a Mile: For this Country having never been travelled by Geographers, much less measured by Miles, I have only, as carefully as I possibly could, taken the Altitudes with a Mathematical Instrument, and from thence marked the Places, leaving to my Successors in these Attempts, the more thorough Search and Discovery of these untravelled Countries. I have indeed broke the Ice for them, being the first *German* that ever went through this vast Country to, and returned from *China*.

I must acknowledge that I am obliged for the first Light of a good Sketch of a general Map of these Lands, to the highly honourable and worthy *Nicholas Witsen*, President Burgher-master of the City of *Amsterdam*, whose Memory will be perpetually revered by all the learned World; he having first discovered to the *Europeans* all *Siberia*, the *Calmuckan*, *Mugalian*, and other Provinces, to the *Chinese* Wall; and described them by a Map. This Map I made use of as a Guide throughout my Journey, and as a Foundation, on which to build that annexed to my own Book. A short Sketch of my Journey is as followeth:

2. First we began our Travels in the North, in the *Samojedian*, which he before called *Sirenian* and *Waguliffian* Countries, which are also under the *Siberian* Government, being subject to the *Waiwodes* of *Pelun*, as far as the Sea. It is observable that there are various Sorts of *Samojedes*, very different from each other in their Language or Expression, as are the *Beresoffskians* and *Pustofersians*, which believe themselves also to be the same Nation: After these are those who live on the Sea-Coast beyond the East Side of the *Oby* to *Truchamskoy*, or *Mangazeiskoy*; as also those which for the greatest Part of the Year reside about *Archangel*, near the River *Dwina*, though indeed in Summer they set up Huts by the Water-side, and in the Winter far in the Woods: This last Sort are the Scum of those People who formerly lived together by the Sea-side, which now are come to this Country.

Besides these, are the *Samojedes* that inhabit all along the *Ice-Coast* of the Province of *Siberia*, which are a People that have not much more to pretend to than a humane Face and Figure; they have but a very small Share of Understanding, and in all other Particulars are very like Wolves and Dogs, for they eat all Manner of dead Carcasses, whether of Horses, Asses, Dogs or Cats, which die a natural Death; as well as Whales, Sea-Cows, Sea-Calves or Horses, &c. which are thrown upon the Shoar by the Ice; nor do they take the Trouble of Dressing these Meats, but devour them raw; and if they had but Wings they would certainly take their Flight to *Greenland*, and diet with the white Bears and Malmucks (a Sort of Birds of Prey) which feed on the flea'd Whales Carcasses: And notwithstanding all this, they inhabit a Country that richly abounds with wild Game, Fish and Flesh; but most of them are too idle to provide themselves with it.

They have a Sort of Governors amongst them, to whom they bring their Tribute, and these are obliged to carry the same to the Cities or Winter Places of his Czarish Majesty. A Gentleman who staid some time at *Postoi Oser*, told me, that their Hart-Sleads were very convenient, and that with them they went prodigiously swift over the Mountains covered with Snow. (The Fa-

shion of these Sleads, their Manner of Travelling, and their Buckskin Habit with the hairy Part outwards, together with their Bow and Arrows, are expressed in the annexed Print.) He added that he had seen the above-mentioned Governors in such Sleads as these, to which were sometimes harnessed six or eight Bucks; the Governors are commonly cloathed in Scarlet-Coats, but their Retinue in the Habit already described. Their Arrows, instead of being pointed with Steel or Iron, are only headed with the Bone of a Sea-Calf, or some other Animal.

They make a very disagreeable Figure all over, inasmuch that I may venture to affirm, that such a shocking ill looked People are not to be found on the Surface of the whole Earth. Their Stature is short and flat, they have broad Shoulders and Faces, flat and broad Noses, great blubber hanging Lips, and frightful Eyes like those of the *Linx*. They are very brown all over, their Hair is dishevelled, some of it being red or pale, but most of it is as black as Pitch; they have very little Beards; their Skin is brown and hard, and they are very swift Runners. The Roebucks, which they use to draw their Sleads in Winter, are horned and shaped like Harts, but have crooked hanging Necks, like those of *Dromedaries*; besides which, what is observed of them is very particular, that they are as white as Snow in Winter, and greyish in Summer: They are fed with Moss which grows on the Ground in the Woods.

These *Samojedes* are gross Idolaters, who have no Notion of any Religion otherwise than that, like the *Persians*, they worship the Sun and Moon, by bowing their Bodies Night and Morning; besides which, they keep near and in their Tents Idols that hang on Trees; some of them are wooden Images representing human Figures; others made of Iron, to which they shew some Respect: Their Tents are cover'd with Birch-barks sew'd together, and when they remove them, as they frequently do in Winter as well as Summer, they set up the Stakes round with the Points together, and upon these they lay the Covering of the fore-mentioned Bark over them, leaving a Hole at the Top for the Passage of the Smoke. Their Fire is made in the Middle of their Tents, round which they lie at Nights naked both Men and Women. They lay their Children in Boxes or Cradles made of Birch bark sewed together, filled with Shavings of Trees which are as soft as Wooll, and covered with Buck-skins.

They marry within the Degrees of Consanguinity without the least Scruple, and buy one another's Daughters for Wives, giving for them Bucks and Hides, and according to the Custom of several Eastern Nations, they take as many Wives as they can keep. When they design a Merry-making, they stand in Couples opposite to each other, throw up one of their Legs, and mutually clap the Soles of their Feet so hard with their Hands that it may be heard at a Distance. Instead of Singing, they make a howling Noise like that of Bears, they neigh like Horses, or chirrup like young Birds. They have a Sort of Conjurers that shew all sorts of diabolical Tricks, most, if not all of which are fraudulent Delusions. But here taking our Leave of these monstrous *Samojedes*, we shall turn our Discourse to another and more pleasant Subject.

Near this Coast, as far as *Weygats* and *Meseem*, are all Sorts of Quadrupeds, particularly Wolves, Bears, Foxes, and Harts, &c. The Fowls are Ducks, Partridges, &c. being Snow-white in Winter, which is so very severe, that about *Samojeda* I have my self seen Rooks and Magpies fall down dead in their Flight, being killed by the piercing Frost.

3. A great deal hath been said concerning the *Weygats*, by *English*, *Danes*, and *Hollanders*, who with Ships have endeavoured to bore through this icy Channel, which hath been done indeed once or twice, but then those who did it were repulsed, and forced to return to their own Country by the vehement Current of Ice in the South or Icy Sea; of which Mr. *Nicholas Witsen*, Burgher-master of *Amsterdam*, treats at large, that Gentleman having obtained an exact Account of whatever is remarkable, from several Persons who have been there; all which Observations he hath incomparably well digested in his Chart of *Weygats* and the Sea-coasts, to the

the River *Oby*; by which it plainly appears, that from *Weygats* to the *Icy* or *Holy Cape*, the Sea is utterly un-navigable with Ships, and should a second *Christopher Columbus* appear, and point out the Course of the Heavens, he could not yet drive away these Mountains of Ice: For God and Nature have so invincibly fenced the Sea-side of *Siberia* with Ice, that no Ship can come to the River *Jenisea*, much less can they come farther Northwards into the Sea. Not to mention the Voyage from the *Icy* or *Holy Cape*, round *Japan* and *Jedzo*, I shall only insert what I have collected from the Informations of the *Russians*, who several Times have failed through the Streights of *Weygats* to the *Oby*.

We go, say they, with our *Koiskt*, (a Sort of Barks fitted for the Sea) to the Streights of *Weygats*, to fish for Sea-calves, and if they do not meet with great Quantities of Fish, we sail directly into the *Weygats*; but if the Wind blows from the Sea, the whole Coast is covered with Ice, and we are obliged to put into some of the Creeks or little Rivulets which run inland, and withal not to venture too far, but stay there till the Wind turns about and blows from the Shore towards the Sea; upon which these Streights are so perfectly cleared of all their Ice, that it soon drives several Miles out of Sight at Sea; and making use of that Opportunity, we sail along the Coast till the Wind turns contrary, when we are again forced in, in Search of a Creek to shelter us; which if we fail of, the Bark is shatter'd to Pieces by the Clots of Ice.

About fifty Years past, the *Siberian Russians* had free Liberty to fetch their Provision, as Corn, Meal, &c. from the Sea-ports, and to carry their *Siberian* Commodities thither through the *Weygats*, supposing that they paid the proper Toll to his Czarish Majesty: But these *Siberians* abused their Sovereign's Favour to a very great Degree, and made use of it to bring in great Quantities of Goods by other Ways and Rivers into *Russia* by Stealth, whereby his Majesty suffered very much in his Revenue; for which Reason, ever since, the Importation of any Goods through the Streights of *Weygats* have been absolutely prohibited; but all are obliged to be brought over *Beresova*, the *Kamenskoy*, or the rocky *Pojas*; which Passages are not attended with small Difficulties, for when they leave *Beresova*, the Carriers are obliged to cut their Boats (which are cut out of a Tree) across in two, and in those half Boats draw themselves and their Goods over the high Mountains, and having spent some Days in this irksome Way of Travelling, till they are come to the North-side, they again fasten their Boats together, stopping the Joints close with Moss, and therewith pursue their Voyage to *Archangel*, or the other Places in *Russia* situated on the River *Oby*.

4. I shall now turn my Discourse to the *Pojas*, or Ridge of the World; which is a vast Quantity of Rocky Hills, that in their parting, according to the exactest Observation, make a Sort of Ridge or *Pojas*. This Ridge begins from *Petzerkay Ofer*, or *Pezerse Lanis*, and extends, without any Division, through the Province of *Wergaturia*, under which is comprised the *Wergatoerschian Wolok*; and this Mass of Hills is no otherwise to be travelled than by drawing over it. From thence it runs Southward by the Castle of *Utka*, to the *Uffinian Tartars* Country, out of which Mountains the River *Ussy*, and Eastward the River *Nitra*, *Tuna*, &c. originally rise, and the last falls North-Westward into the *Kama*. From hence this mountainous Ridge takes its Course Southwards, to the *Kalmuckian Borders*, out of which *Pojas*, the large River *Jaica*, so rich in Fish, rises Westwards, and disembogues itself into the *Caspian* Sea, and the River *Tobol* rises out of the North Side of it. Its Course Eastwards is along the *Kalmuckian* Country, and the Borders of *Siberia*, passing by *Asero Saisan*, and *Oser Kalculan*, two Lakes; from the first of which the vast River *Oby* springs, and from the second *Irtis*. From this great Lake *Oser Kalculan*, this Ridge of Mountains turns off again Southward, where the River *Jenisea* rises, which discharges itself into the *Tartarian Icy Sea*.

Farther Southwards this *Pojas* or Ridge of Hills inclines in the Shape of an Elbow to the North-East and

South. It runs along by the River *Jenisea* Northwards, and Southwards by the *Oser* or Lake *Kofogol*, out of which rises the River *Selenga*, which falls into the Lake *Baikal*. From hence the *Pojas* extends to the *Sandy Desert*, in the *Mongolian* Country, and being interrupted by some Days Journey through the mentioned Desert, proceeds onwards to the South, as far as the *Chinese* great Wall, and then turns off Eastwards to the *Carreeschian Sea*, as is delineated in our Map.

5. But to come to the Description of the People of these Provinces, and to inform the Reader to whom they are Tributaries. The Country from *Pelim* to *Wergaturia*, all along by the River *Zusawaja*, to the Province of *Uffinia*, is mostly inhabited by the *Wogulischian* Heathens, whose Tenets and Manner of living are already above described. The River *Kugur* where the *Uffinian* Habitations begin, rises out of the *Uffinschian* Jurisdiction, betwixt the Rivers *Zusawaja* and *Uffa*, and falls into the *Kama*. On this last River is situate the City called *Kungun*, in which his Czarish Majesty hath a Garrison. These *Uffinschian Tartars*, as also another Sort called *Baskinzians*, inhabit near the City of *Oessa*, and live dispersed in Villages and Towns, all which are well built after the *Russian* Fashion, along the Western Shoar of the River *Kama*, and by the *Wolga* Side, almost as far as the Cities *Sarat* and *Sarapul*, both which are situate on the River *Wolga*, and garrisoned by his Czarish Majesty, in order to the collecting of his Tribute, and to keep the *Tartars* in Awe. This Tribute they pay in Furs and Honey; and are a Sort of People that will not bear being too roughly handled by their Governors, but if so treated by them are sure to rebel, of which there have been several Instances formerly; but for a long Time they have not been guilty of any Disloyalty.

South-Westwards, in the District of *Astracan*, there are also other small Clans or Hords of that Nation, who being an independant People, in Conjunction with the *Kalmuckians* bordering on *Astracan*, rob and pillage in the Province of *Siberia*. Besides which, by Way of supplemental Maintenance, they apply themselves to the Tillage of the Ground, chiefly for the Production of Barley, Oats, and Buck-wheat: And as soon as the Corn is reaped, they prepare a Threshing-Floor in the Field, thresh it out, and stow it in the Barn. This Country as plentifully flows with Honey as any Part of the World. Most of the Men's wearing Cloaths are made of *Russian* white Cloths, the Coat being about the same Fashion with those of the *Muscovite* Peasants, with long Flaps hanging down on their Backs. The Women, when the Season is not too cold, cover the upper Part of their Body with a Shift only, which is curiously stitched with Silk of all Colours by Way of Stripe, from the Top to the Bottom; and about the lower Part of their Body they wear Petticoats, and a Sort of Shoes which not only cover their Feet, but reach above their Ancles. Their Head-dress consists in a Sort of Fillet about a Hand-breadth, which they wear on their Foreheads, and fasten it behind. This Fillet is stitched with Silk of several Colours, and adorned with a Sort of variegated Glass, in Imitation of Coral, which is strung, and hangs dangling near the Eyes. Some have these broader than others, as being full two Spans long, and of one Hand Breadth, and stitched through with Silk; these look like a thin Plank, and are adorned with Corals of all Sorts of Colours, which cover their Forehead. When they go abroad, they cover their Head-dress with a square Linnen Handkerchief, stitched with Silk, and edged with Silk Fringe.

These *Uffinschian*, as well as the *Kaskierschian Tartars*, are a valiant, warlike People; they fit their Horses well, and carry no other Arms than Bows and Arrows, in the Use of which they are extraordinary dextrous. They are vigorous and large Men, their Shoulders are broad, and they suffer their Beards to grow to a good Length. The Hair of their Eye-brows is so very thick and long, that it hangs over their Eyelids, and generally runs so far cross the Forehead as to unite the two Eye-brows. They have a Language peculiar to themselves, yet can partly understand the *Astracan Tartars*. Their Religion

ligion is Pagan, though indeed they partly incline to the *Mahometan*, which they have borrowed from the *Crim Tartars*, with whom they formerly conversed very much.

6. The Country betwixt the Rivers *Tobol* and *Oby*, to the *Jamuschowwa Ofer*, is inhabited by *Kalmockians*. This *Ofer* or Lake plentifully abounds with hard Salt, and lies under the *Kalmockian* Jurisdiction; notwithstanding which about twenty or twenty five *Dochenicks*, or *Russian* Vessels, guarded by a Convoy of 2500 well armed Men, come annually from *Tobolesk*, up the River *Irtis*, from whence they travel by Land to this *Ofer* or Lake, where they dig up the Salt like Ice from the Shore, and load their Ships with it. Indeed they generally have some Skirmishes with the *Kalmockians*, who will not allow of this Practice: But yet, whether they will or not, they are forced to suffer it.

Inclining lower down from this *Jamusawaian Lake*, near the River *Irtis*, lies the City of *Torre*, adjoining to the River *Tara*: This is the last Frontier Place which belongs to his Czarish Majesty, bordering on the Territories of the *Kalmockian* Prince *Bustuchan*. The Inhabitants of which are called *Barabinsky*, and stretch themselves Eastwards from the City of *Torre*, to the River *Oby*, opposite to the River *Ton*, and the City of *Tomskoy*. This Country of *Barnabu* is passable in Summer as well as Winter; but chiefly in the latter: For the *Oby* at *Surgut* and *Narin* being unpassable in the Winter, Travellers generally go this Way to *Siberia*, by *Tomskoy* and *Jenusefsch*. This Nation, which is called *Barabinsky*, consists of a Sort of *Kalmocks* which pay Tribute equally to the Czar, and the *Bustuchan*. They have amongst them three Governors or *Taischi*; the first of which is called *Karsagaz*, the second *Baikisch*; and the third *Baiduk*: These three Lords receive the Tribute of the *Barabinszes*, and bring the Czar his Portion. The *Karsagaz*, the first of them, brings his Part to the City of *Tora*; *Baikisch*, his Portion to the *Russian* Castle of *Telurwa*; and *Baiduk*, the Remainder to the Castle of *Kulenba*: All of these Tributes being paid in Furs. These are an insolent villanous Sort of People; they live in low built wooden Houses, like those of the *Siberian Tartars*; they are not at all acquainted with the Use of Stoves or Ovens, but make Use of a Sort of Chimnies or rather Smoak-holes. When their Wood is burnt, they stop the Smoak-hole, and warm themselves by the Coals as long as any Heat remains in them.

Their Houses are ranged into Villages; they set up high Hutts in the Summer, but in Winter retire into their warm wooden Dwellings. They are tolerably skillful in Agriculture, and sow Oats, Barley, Millet, and Buck-wheat, but are not fond of either Rye or Rye-bread: And though they like the Taste of it well enough, yet they chew it so awkwardly, and roll it upon their Tongues as if they had Dirt in their Mouths, and spitting it out, scrape the Remainder off their Tongue as after a Thing which they cannot swallow. They steep their Barley in Water, dry it a little, and then thresh off the Husk; after which they dry, or rather fry it in a very hot Iron Pan or Kettle; by which Management it becomes as hard as Bone; and this is their Bread which they daily eat, and is so hard and dry, that it crashes betwixt their Teeth. They also eat the *Saranna* or Bulb of yellow Lillies, dried, stamped, and boiled with Milk, as a Sort of Milk-pap. They drink *Kumis*, a Sort of Brandy extracted from Mares-Milk; and *Karaza*, i. e. *Karatcha*, or black Tea, which is brought thither by the *Bucharians*.

Their Arms are those common to the greatest Part of the *Tartars*, viz. Bows and Arrows. They keep great Numbers of Cattle, particularly Horses, Camels, Cows and Sheep: But neither keep or will eat Hogs. Their Country abounds with fine Sables, Martins, Squirrels, Ermins, Foxes, Hyena's, Beavers, Minks, Otters, &c. in which they pay their Tribute. This Country extends from *Tora* to the Rivers *Oby* and *Tom*; is not mountainous but plain even Land, abounding with Woods of beautiful Cedars, Larch-Trees, Birch and Pitch-Trees, which are intersected by several Chrystal-

line running Streams. In the Habits of both Men and Women, they follow the *Numgolschian* and *Kalmockian* Fashion; and marry as many Wives as they can maintain. When they go into the Woods in order to hunt furred Animals, they carry their *Saitans* along with them; which is a rough Image, as well carved in Wood as they can do it with a Knife: This they cloath in a Stuff Dress of all Sorts of Colours, in Imitation of the Habits of the *Russian* Women, and place him upright in a small Cafe, and carry him upon a particular Slead, both made for that Purpose; and to him they offer up their first Capture of what Sort of Beast soever it prove.

When they have killed great Numbers of their Game, they return Home very merrily, mount their Idol in his Cafe, to the highest Place in the House, and hang him behind and before, above and below, with Sables, Martins and all Sorts of Furs, in order to express their Acknowledgments to him for rendring their Hunting so successful; and all these rich Furs must hang there to be spoiled and putrified, they believing it a most unpardonable Crime to take off or sell any of these dedicated Hides; whence it is that we daily see so many fine Skins placed by these Images, that are eaten up by the Worms, which it is indeed a great Pity are not better employed.

7. Crossing the River *Oby* from hence, we come to *Tomskoy*, which is also a Frontier Place belonging to the Czar, situate on the *Buzuk*, and is a very fine and vast large City, strongly garrisoned by *Russian* and *Cossackian* Soldiers, to prevent the Incursions of the *Tartars* into *Siberia*; and in the Suburbs over the River live great Numbers of *Bucharstan Tartars*, who pay Tribute to his Czarish Majesty. This City lies on the River *Tom*, which rises in the *Kalmockian* Territories, and from hence the Subjects of the *Busuchtü Chan*, and the *Bucharstans*, drive a very considerable Trade to *China*, several *Russian* Merchants being concerned and sharing with them. This Way to *China* is very expeditious, it being practicable to go thither in twelve Weeks, and return back in as short a Time; but it is withal exposed to the greatest Inconveniencies and Difficulties in the World; for the Travellers are obliged to carry all Necessaries along with them upon Camels, nay even Water and Wood to dress their Victuals. They go directly through *Kalmockia*, and through *Cokoton*, a *Chinese* City without the Wall. But it is utterly impossible for *Russians* or other Nations to travel this Road, by Reason that it is infested with several Gangs of Robbers, which set on the Passengers, and very often deprive them of all that they have gained by so tedious and fatiguing a Journey.

From *Tomskoy* down to the City of *Janiseesch* is utterly desolate and uninhabited Land; the Country is an even Plain, on which appear some scattered Thickets: Also all about the two Rivers *Kia* and *Zuwin*, to as far as the Cities *Kusnezskoy* and *Krasnajar*, is very little or not at all inhabited, any where besides the Frontiers. The first peopled Country we find here is that of the *Kirgizens*, which are the Subjects of the *Busuchtü Chan*. The City of *Krasnajar* is very large, and defended by a strong Garrison of *Cossacks* placed in it by his Czarish Majesty, and they are always obliged to keep a very strict Guard to prevent the Incursions of the *Kirgizens*, for which Reason twenty Horses both Day and Night stand constantly Saddle and Bridled, in the Marketplace, before the Governor's House: For the *Kirgizens*, though at Peace with the *Siberians*, are a People who are never to be trusted. For frequently when they are not expected, they come in Parties, and steal both Men and Horses under the very Walls of the City, and out of the nearest of the *Siberian* Villages: But the *Cossacks* generally make severe Reprizals on them, by often killing and carrying off, several hundreds of Men and Horses from their *Hords* or Clans.

8. These *Kirgizens* extend their Habitations South-Eastwards as far as the *Mongolian* Districts. They are a warlike Nation, being generally vigorous, tall, and broad-faced Men, somewhat like the *Kalmockians*. Their Arms are Bows and Arrows, but they never go out in

quest of Booty without very good Coats of Mail and Lances, which they draw along by the Horse Side, with their Points on the Ground. They generally live in the Mountains, which naturally serve to defend them from Surprise. The greatest Part of their Language is *Kalmockian*, but they also speak a great deal of the *Crim Tartarian* Idiom, which the *Turks* partly understand.

From *Krasnoy* along the River *Jenisea*, as far down as *Jeniseesch*, is inhabited by some *Tungezians*; but chiefly by *Burattians*. This last-mentioned Castle just touches on *Mongalia*, and borders on the Ridge of Rocks between *Tunkinskoi* and the City of *Selinga*. The Frontier Fort butting on *Mongalia* is not large, but provided with a very strong Garrison, chiefly of Horse, in order to defend the Western-side against the *Mongolians*, and their subordinate *Tartars* the *Mirotians*, *Milyans*, and *Burattians*. Near this City grows a Sort of *Santalum* or *Sanders*, which is prodigious hard. The *Burattians*, which are under the Protection of his Czarish Majesty, formerly inhabited the Country all about *Selinga*; but by Reason some of them, at the Instigation of the *Chinese*, began to fly over to the *Mongolians*, the Remainder were, for greater Security, transplanted to the *Baicalian Lake*, round which they now live in the Mountains, and pay their Tribute to his Czarish Majesty in Sables and other rich Furs.

From this City to the Lake *Baikal* runs a continued Ridge of Hills, where are found very fine Sables and Cabardins. From the Lake *Kofogel* Eastward to the Sandy Desert, and from thence to *Dway*, or the *Mongolian Lake*, and so on to the Province of *Argun*, and thence again North-west as far as the Rivers *Onon* and *Sikoy*, is the Circumference and Boundary of the whole *Mongolian Territories*, or, as hath been formerly said, of the Jurisdiction of the Race of *Gog and Magog*, which is governed by three Regents, the Chief of which is the *Kuttucht*, who is also the High-priest of the Nation. The second Brother is the *Aziroi Sain Chan*, and the third is *Eliet*, whose Boundaries border on the West *Tartars*. The first two Brothers inseparably hold together, but the third robs and plunders wherever any Booty is to be come at; and is so bold as to venture sometimes even to the *Chinese Wall* with his Troops, carrying off all that comes in his Way, not sparing even the Emperor of *China's* Money which he sends as a charitable Present to the neighbouring *Tartars*, to engage them to a firm Continuance in their Allegiance. *Kuttucht*, otherwise call'd *Koetoegt*, and *Aziroi Sain Chan* his Brother, though their Country is of vast Extent, have yet put both themselves and that under the Protection of the Emperor of *China*, out of their great Fear of the *Baichitu Chan*, Prince of the *Kalmockians*, from whom they suffered very much in the Years 1688, and 1689.

9. But to stay no longer on the Frontiers of his Czarish Majesty's Territories, and to take a Turn Eastwards of *Ardum* Castle, which Fortrefs is built on the West-side of the River *Argun*, and garrisoned with *Russian Forces*; the People inhabiting all round are *Tungasi Konni*, who pay their Tribute to his Czarish Majesty in Sables, Linx, and grey Ferrets Skins, which there prove very fine. The *Tungusians* are a fierce, warlike People, and can, on Occasion, from these Borders only, bring into the Field four thousand Horsemen armed with Bows and Arrows; insomuch that no roving *Mongolians* dare ride or appear hereabouts, otherwise than by Night, when they sometimes drive away a few Horses and Cattle out of the Field. Their Winter Cloaths are Sheep-skins, and their Boots like those of the *Chinese*. Their Caps are turned up with broad Borders of Furr, which they can turn up or pull down as rainy or fair Weather gives Occasion. They wear about their Waistes a Girdle of about a Hand's Breadth, fasten'd with thin iron Plates, and an Arrow, upon which they make a Sort of piping Musick. In Summer-time they generally ride with bare Heads, shaven all round, leaving only one Lock hanging behind like the *Chinese*. Their Summer-dress is made of blue *Chinese Callico* quilted with Cotton; but as for Shirts they wear none. They naturally have very small, or indeed scarce any Beards,

are broad-faced like the *Kalmockians*, and very strong Men.

When they labour under Want of Provisions, they go in whole Hords or Clans out a Buck-hunting, where they encompass and shoot vast Quantities of them, and whatever they take, they socially divide, and rarely shoot but they hit their Game. The Wives are clothed much in the same Manner as the Husbands, being chiefly distinguished by two plaited Locks which they wear on each Side of the Head, and hang down on their Breasts, and are tied with Silver or Tin Rings. They marry as many Wives as they can keep, and buy them of one another, not being very nicely concerned at their having lived with another Man. They believe and acknowledge a God in Heaven, but they neither pay any Worship, nor address any Prayers to him. In the Night they apply themselves to the *Sutkur* or *Saitan*, by beating of Drums and performing of Exorcisms, especially when they are going a Hunting, or upon any Robbing Design, to enquire whether they are to expect good or ill Success. Their Liquor with which they make merry is *Arak*, a Sort of Brandy distilled from Mares Milk, which they suffer to turn acid. Instead of a Cauldron they draw off this Liquor in two Pots, one set upon the other, and well luted together, there being a wooden Pipe in one of them. This they draw off twice or thrice, and this Operation produces good Brandy; which even Girls, as well as Men and Women, sip to that Excess, that they become insensible and motionless for a long Space of Time. Their Wives and Daughters ride on Horseback, arm'd with Bows and Arrows, as well as the Men. Their Bread is a refined and dried Sort of Flour of yellow Lilly Bulbs, of which they make a Sort of Pap; besides which, they have no other Bread: But they also eat the mentioned Bulbs dry out of Hand, and are utterly unpractised in and ignorant of Agriculture. The Trade or Barter which some of this Nation drive with the *Targasinians* and *Xixigarhians*, which live under the *Chinese* Jurisdiction, is chiefly trucking Furs against blue Callicoes, Linnens, and Tobacco, and proves very advantageous to them, as it generally doth to all who follow it. They believe themselves to be the Descendants of the *Targasinians* of *Daorzi*, with several of whom they keep up an amicable Correspondence.

Near the before-mentioned Castle of *Argun*, about half a Day's Journey from it, amongst the Hills, is a Silver Mine, and it plainly appears, that formerly the People of *Nieuchieu*, or *Daourzen*, had several Foundations and Works there, which are at present run to Ruin. From hence to *Nerzinskoy*, the chief City of *Daour*, it is ten Days Journey by Land with Camels, and is also a fine Country, very conveniently watered with several running Brooks. Upon and betwixt the Hills grow the most charming Herbs and Flowers which Imagination can suggest: And the Vallies are covered with long Grass about half a Man's Height. Tillage is not very much practised here, by reason the Inhabitants are chiefly his Czarish Majesty's *Tartars*.

10. But leaving the River *Argun* again, and crossing over the vast River *Amur*, I come to the River *Gorbiza*, which separates the Dominions of his Czarish Majesty from those of the Emperor of *China*; from the Haven of the *Gorbiza* Eastwards to the Sea being subject to the *Chinese*, and the Western as well as the Northern Side of the said River belonging to his Czarish Majesty. If we steer Eastwards from the *Gorbiza* to the Rivers *Tugur* and *Uda*, which rise Northwards of the *Amur*, and fall Eastwards into the *Chinese Ocean* or *Amoerschian Sea*, we find the Country betwixt those Rivers yields great Quantities of black Sables, and the Shores of these mentioned Streams are inhabited by *Tunguzians*, *Alemurians*, and *Koreizians*; which last Nation seems originally to come from *Coela*, that Country lying not far distant from thence, it being easy to reach it in a short Day, with a favourable Wind. They are reported to have settled along the Banks of the River *Amur*, and afterwards spread themselves farther. Those who live on the Sea-coast depend chiefly on Fishing; but there are many of the Inland People very rich, great Numbers

bers of the best Sables and richest Furs being found here. This Country is subject to the Governor of *Jakutskoy*, and the Woods in this Neighbourhood are all strongly guarded in order to prevent the *Chinese Tartars* from hunting any Sables here.

To the Shores of these two Rivers, there come annually a Sort of People out of the Islands which lie in the Sea, but so near the Shore, that from thence they may be easily seen. These People appear very well dressed in very fine Furr Surtouts, under which they wear silken Coats almost as rich as those of the *Persians*. They are tall, have large Beards, and make a noble manly Figure. They come in small Barks to the *Siberian Tartars*, and buy Girls and Women of them, of which they are very fond, giving for them rich Sables and black Fox-skins; which they report they have in great Quantities on their Islands, and earnestly solicit the *Siberian Tungusians* to come and trade with them. They pretend that the Province of *Jakutskoy* was formerly subject to them; and their Language bears a little Similitude to the *Jakutshian*.

11. Northwards of these two Rivers rises the River *Ogota*, betwixt which and the *Uda*, near the Shore, and all along in the Sea, as far as the *Icy Cape*, abounds with Whales, Sea-horses, and Sea-Dogs. *Kamsatka*, and the Country farther along by the Sea-side, is inhabited by a People called *Xuxi* and *Koeliki*, each of which have a Language peculiar to themselves. Those who live near the Sea are clothed in Seal-skins, and dwell in subterraneous Caverns; but those who inhabit the inland Country are generally rich, and very much accustomed to Hart-hunting; they eat all their Flesh and Fish raw, and wash themselves with nothing else besides their own Urine; and are a very fly, treacherous People, that never keep their Words. Their chief Arms are Slings, in the Use of which they are very dextrous, and can throw a great Way. All hereabouts, near the *Icy Cape*, the Winter Snow lies on the Ground, though it is not very deep, and chiefly falls in the Beginning of the Winter, all the remaining Part of that Season being free from Snow. There is a Gulf which comes up to *Kamsatka*, that affords prodigious Quantities of Sea-Horses, and other Sea Fish, which are also caught in great Numbers.

If we put to Sea at the *Icy Cape*, we find, that the farther out we sail, the Course of the Sea is still the more interrupted by the Multiplicity of Islands; and not far above *Kamsatka* is a Passage which the Seal-Fishers and others make very good Use of. All *Anadjeskoy* and *Sabaliska* are inhabited by the already described Nations called *Xuxi* and *Koeliki*. The River *Salazia* abounds with fine Herrings, Sturgeon, Sterbeth, and Nebna. And in the Inland Country somewhat distant from hence, all along by the *Simaniko*, are several Winter-houses, which are inhabited by his Czarish Majesty's *Cossacks*, who collect his Taxes and Tolls. But notwithstanding that several Sables and Linxes are caught in this Province along by the several Rivers, yet the *Simonikoe* of *Muskoy* yields the most considerable Revenue, the greatest Quantity of Sables being caught there. The Climate of this *Icy Cape*, called in *Muscovite* Dialect, *Swetoinos*, otherwise the *Holy Cape*, is extraordinary cold, it freezing so hard, that the Sea is covered with thick Ice in several Places, which driven into mountainous Heaps by the Wind from Year to Year, increases and sticks so fast together that it seems but one Clot: From which, according as the Wind fits, are sometimes broke off great Pieces, which disperse themselves, and in Process of Time, in a boisterous Sea, become new Mountains of Ice: It sometimes happens that this Sea is frozen up for two or three Years successively, and it was observed that it continued so from 1694 to 1697.

12. From hence let us proceed farther on to the great River *Lena*, which rises out of the South-west near the Lake *Bakail*, where the Provinces of *Siberia* and *Daour* are divided from each other. Upon this River lies *Jakutskoy*, the Capital City of this Northern Province: From which Town in Summer-time, it is customary for small Barks to coast it along by the Shoar

Side, and go through the Cape to *Sabazia*, *Onodjeskoy*, and *Kamsatka*, in Search of Sea-Calves Teeth and Train Oyl, &c. The Neighbouring Heathens, or *Tartars*, make Use of little Leathern-Boats on this River, which are very swift. The Country about the City of *Jakutskoy*, and the River *Amga*, is inhabited by a Sort of People called *Jakutishians*, whose Habit is very particular, their upper Coats being made of various colour'd Furs sewed together, and the Edges bordered all round, with a Border about a Hand's Breadth of Buck's Hair, but in every Thing else made somewhat like the *German* Fashion, and open at the Sides and behind. They have long Hair, wear no Shirts, and believe that there is a great Being above in Heaven, who gave them Life, and lends them Food, Wives, and Children. And they celebrate a great Festival in the Spring, in which they make Offerings of *Kumis*, or *Arak*, distill'd from Milk, to this Being: And during the Continuance of this Feast, they do not drink themselves, but make great Fires, and continually sprinkle this *Kumis*, or *Arak*, towards the East; which is their Manner of Offering. When any one of them dies, his nearest Relation is buried alive with him; from the same Principles that, in several Places in *India*, the Women accompany the dead Bodies of their Husband on the flaming Funeral-Pile, in order to enjoy their Company in the other World.

About one half of their Language agrees very well with that of the *Mahometan Tartars* near *Tobolskoy*, which is derived from the *Bulgarian*. They take as many Wives as they can maintain. Their chief Beasts of Burden are their Stags, upon which they also ride, and thereby in a little Time go a vast Way: They are a valiant and a quick-witted People, and seem to be great Lovers of Truth. When the Governor of *Jakutskoy* proves to be a Person who governs remissly, they do one another all possible Mischiefs, by robbing, pillaging, and all other Exorbitancies: But when they have one that holds the Reins very tight, they are quiet and obedient, and no Outrages are heard of amongst them; but they praise his great Wisdom, and wish he may continue long in that Post. They venture to tell us, that their Ancestors originally came from *Kalmockia*, from whence they were driven by the *Russians*, and forced to take up their Quarters in the cold Parts of this District. They are very much afflicted with the Scurvy, which they soon drive away, by eating raw Fish, and taking of *Deugti*, which is a Sort of Tar.

13. The *Jugogayers*, a Sort of Heathens also which inhabit Part of this Country, usually, when any of their Relations die, cut off all the Flesh of his Corps to the Bones, dry the Skeleton, and hang it with Glass-Corals of all Colours, carry it round their Huts, or Dwellings, and thus pay Idolatrous Worship to the deceased. Along by this River *Lena* are annually found several Mammut Teeth and Skeletons, which fall off from the Mountains, and out of the frozen Earth near this River; these Hills, by the Current of Ice from the high-sworn Waters in the Spring loosing great Pieces, which are tumbled down into the River. The several fine Rivers which descend from the South and fall into the *Lena*, are the *Witim*, *Olekina*, and *Maja*, along which are great Multitudes of fine black Sables, and other Furs: In Winter 1000 Ermins being to be bought of the *Tartars* for three or four Roubels. All about the River *Maja*, as also at the Source of the *Lena*, at *Wergolenkolso* and *Kirenga*, grows all Sorts of Corn, the Land being very fertile, and serving to supply the Province of *Jakutskoy*, and that at so cheap a Rate, that an hundred Weight of Rye-Meal is commonly sold for ten or twelve Pence, and all Sorts of Cattle are proportionably cheap; so that living here doth not cost much, but Money is very scarce.

To take our Progress further along this Sea-Coast, from the *Lena* to the River *Jenisea*, which Extent hath not yet been travelled further by any, either by Water or by Land, than to the River *Tarsida*, by Reason the Sea is too full of Ice, and is utterly unnavigable: Most of the Inhabitants between *Tarsida* and *Jenisea* are found to be *Samojedes*, and a Party of *Tungoeschian Tartars*

and Heathens: What their Opinion is, has been hinted above. But the River *Jenisea* is, all along its Shoars, most-ly inhabited by *Russians*, and rises in the South-part of *Tartary*, in the *Kalmockian* and *Kirgizenian* Territories, and very plentifully abounds with Fish: Three very fine Rivers fall into it, which are the *Wergnaja Tunguska*, *Podkamenna Tunguska*, and the *Nisnaja Tunguska*; on the Sides of all which dwell great Numbers of a barbarous, wild sort of *Tunguzians*, which may very well be ranked with the *Samojedes*, the latter being only larger and stronger than the former. The *Tartars*, whenever they have wounded an Elk with their Bow and Arrows, (all their Arms) follow him by the Tract of his Feet, accompanied with their Wives and Children, sometimes for eight or ten Days, in the Woods, and taking no Provisions with them, but relying solely upon their Capture, they have a Sort of Stomacher, or Breast-Cap, which, by Reason of Hunger, they lace one or two Fingers Breadth closer; and having at last caught their Game, they kill it, pitch a slight Tent, and stay upon the Spot till no Part of the Beast but the bare Bones are left: But in the Interim if they get any Furrs, they immediately repair to the *Russian* Villages and Towns in order to sell them. Here are great Numbers of white and brown Foxes, Multitudes of Squirrels, but very few or no Sables. On this River are situate the two Cities of *Taugviskoy* and *Mungaseia*, both which drive a very great Inland Trade in Furrs, Sea-Horse and Mammut Teeth; and in Summer-time several Boats go from these Places to the Sea-side at the Mouth of the River, in order to catch Sea-Horses or Sea-Calves and Seals.

Believing we have in some Measure attained our End, and performed what we proposed in the Description of our Travels, we shall now subjoin a short, but very accurate, Description of the mighty Empire of *China*, written by a Native of that Country, whom I brought hither with me: This Description, which was never before printed, I have caused to be illustrated with several pertinent Annotations, extracted out of the best Descriptions of that Empire, in order to clear up some Difficulties, and satisfy the Reader; and this was not done by an illiterate Pen.

Notwithstanding which, before I take Leave, I am in some Sort obliged to say something in general, which is the Result of my own Observation, concerning that vast Empire, and was omitted in the Relation of my Travels.

14. The Empire of *China*, so far as I saw of it, to, and in *Peking* its Metropolis, I must indeed acknowledge seems to be a Land peculiarly blessed by Heaven; and I believe, that as this City is the Capital, so it lies under the best and most healthful Climate of all *China*. The Men there are vigorous, healthy, and tall: Corn, all Sorts of Fruits, Herbs, Roots, and indeed whatever is either necessary or convenient to human Life, very plentifully abounds there, except only that no Tea grows in that Province, nor are any silk Manufactures or Porcelain made there. In Winter it freezes so hard here, that the Ice will bear the People going over it; and the Summer Weather is but moderately hot; whereas on the contrary, in the other Provinces, whole Summer Days are useless, by Reason of the intollerable Heat. The present Descendants of the ancient *Chinese* are more sincere than the *Mansures* or *Manichean Tartars*. They live temperately and frugally; are very neat and clean in their Cloaths; are very greedy of Presents, and shameless in their Trade, and have Address enough to suit themselves to all Humours. They religiously observe their ancient Laws, in which appear some Traces of Barbarity. They never alter the Fashion of their Dress, nor suffer the Introduction of any new Laws; and some of their principal Lords told me, that no Chan or King, for the Space of twelve thousand Years, hath been empowered to make even the least Alteration in their Religion, Laws, or Habits.

So that it seems that the present Emperor *Ammologgan Kambi*, is the first who hath discovered a slight Opinion of the old barbarous Customs, and accordingly began a good Reformation of their Religion and Law, when in the Year 1692, he caused publick Proclamation

to be made in all his Empire, That whoever was desirous to become a Christian, had thereby free Liberty to apply himself to the *Romish* Clergy, and be baptiz'd. This was a grievous Thorn in the Eyes of the *Bonzies*, or Idolatrous Priests, but they were yet forced to bear it patiently, and be Eye-Witnesses to the Conversion of Thousands yearly to Christianity; and which is more, the Emperor himself is, in his Heart, a good Christian, but cannot possibly quit any of his 1236 Wives. He is a more absolute Legislator than we hear any of his Predecessors were; for, by Virtue of his despotick Authority, he is so formidable to his Subjects, that he governs them, without the least Restriction, according to his arbitrary Will and Pleasure.

15. The *Chinese* obstinately persist in denying, in their Map of the World, that there is any larger Country on the Surface of the terrestrial Globe, than their own; to confirm which preposterous Assertion, their Maps never mention any more than their own, and one great Sea, in the Middle of which they assign a small Point of Land, which faintly appears to the Eye, like one of the smallest Stars, for the rest of the Earth.

They honour their Prince like a Deity, calling him a *Son of Heaven*, and a *Terrestrial God*. Their Religion is perfect Pagan Idolatry, as appears by their hideous diabolical Images, exposed to View in their Pagods or Temples. They have frequently replied to Questions which I put to them concerning the Immortality of the Soul and eternal Life, That they were utterly ignorant of any such Thing; and that since their Forefathers did not believe it, so they could not. Their chiefest Pleasure consists in keeping several Wives, to which they are extremely addicted. They have no Notion of Sin, but whenever they have been guilty of any villanous Crime, for which they happen to be seized and brought to Justice, they take the Punishment inflicted by the Judge, for only a very small Scandal, without shewing any Remorse for the Wickedness and Dishonesty of the Fact.

Their Administration of Justice, and Judiciary Decisions, and whatever of that Nature which they take to be civiliz'd and reasonable, are indeed but rude and barbarous. Their Manufactures are principally those of Silk Stuffs, Porcelain, and varnished painted Works, which considering their great Distance from *Europe*, are somewhat surprizing. Their Wars are carried on by the sole Dint of Numbers, they very seldom taking the Field before they are two or three hundred thousand strong, as they did when they were engaged against *Bucksutchan* the West *Tartar*, from the Years 1686 to 1693; in which Wars, when their General *Alliganibo* happened to be killed in a Battle, they all fled, and each Man endeavoured to secure his Life by making all possible Haste to his own Home. They carry with them good Field-pieces, and are indifferent expert in the Use of them; but their Hand-arms are very wretched, the best of them being their Bows and Arrows. Their Horses are provided with very good Saddles, but when they ride, they cover them with Pillows, and Mattraffes above them; so that they sit very high and loose from the Horse's Back. In a Word, as their military Affairs are managed in a confused and disorderly Manner, so their Battles being utterly void of all Conduct, they act like wild Men; for they run headlong together with their whole Force upon the Enemy, by which Means they frequently are entirely routed.

16. In short, from my own Observation I conclude, that the great Share of Wisdom, Arts and Sciences, for which they are so highly extolled by many Writers, comes far short of the *Europeans*; though indeed some few *Chinese*, by the assiduous Diligence of the Jesuits, are instructed in the Mathematicks, Astronomy, and other Sciences; and therefore publish their Master's Fame to the World. The present *Ammologgan Kumbi*, or King of *China* and *Tartary*, is an East *Tartar*, or *Mongolian*, born at *Nieuchen*, near the River *Sagalien Oula*, or *Amoer*; he governs his Subjects very well, though he doth not heartily love the *Chinese*, but on all Occasions prefers his own Nation before them: And whenever a *Chinese* solicits to obtain any impor-

tant Post from the Chan, he is obliged to naturalize himself a *Mansur* or *Tartar*. Most of the Inhabitants within the Walls of *Peking* are *Tartars*, and the principal *Chinese* Markets and Goods are kept without in the Suburbs. All rich People keep a certain Number of Slaves for the Emperor's Service, for which they receive an annual Stipend from him; and these Men, in Time of War, are obliged to be kept ready armed, cloathed, and mounted on Horseback. The Jesuits who were at *Peking* when I was there were but eight; of which two were *Spaniards*, three *Portuguese*, two *Frenchmen*, and the last a *Roman*.

The *Chinese*, but especially the Courtiers, retain a very great Respect for these Fathers, and the other Ecclesiasticks; but the *Bonzies* look upon them somewhat obliquely. It must indeed be own'd, that the *Romish* Clergy discover a very great Zeal for the Propagation of their Religion. The *Russian* Nation hath also built a Church at *Peking*, and have converted and baptized several considerable Persons to the *Greek* Christian Religion. I do not think it at all necessary to touch on the Races of the Monarchs which have hitherto reigned in *China*, since the curious Part of the World may find an entire and exact List of them in the *Chinese* Chronology published by *Christian Menzelius*, Councillor and Physician of the Body to the King of *Prussia*, printed at *Berlin* in 1696.

As for what relates to the *Great Wall*, which encompasses Part of the Empire of *China*, I shall only add in short to what I have already said of it, that it is a prodigious Work, but not so much to be valued on account of any extraordinary Art shewn in the building of it, as the surprizing Labour and Expence employed in the erecting of it by the Emperor who raised it; for which the *Chinese* curse him to this Day, by reason he thereby thoroughly ruined the Empire. The Jesuit Father *Alexander* informed me, that by the Emperor's Order he travelled all along by this Wall, from the West where it begins, to the South-east, as far as the *Corfisken* Sea, and found it to be three hundred *German* Miles long, and had it stood all on a Level, it would certainly have stretch'd to four hundred Miles; but it is carried over several high Mountains, and hath four Entrances, viz. the *Leatongian*, *Daourian*, *Lelinger*, and *Tibetschian* Gates; besides which, it is so broad, that eight Horsemen may easily ride a-breast upon it.

I do not think it proper to offer any more Particulars concerning *China*, since my Residence there was not long, but desire the Reader favourably to accept this little, and give me Leave to refer him to the succinct Description annexed, in which he will find several Things very well worth his Attention.

17. It is very remarkable, that even in these Observations our Author very modestly excuses himself from the short Stay he made in *China*, and from his Manner of living there, as to giving any distinct, methodical and regular Account of that vast Empire and its Inhabitants. We very often meet with Writers, who, without having any of these Advantages, presume to enter into particular Descriptions of Countries and Nations, as if it were credible that in the Space of a few Months, a Man should either see, or hear, or read sufficient for that Purpose. There is another Thing no less extraordinary, our Author, though he is so circumstantial in every Thing that he says relating to both his Journeys, and to what passed at his several Audiences of the *Chinese* Emperor, yet he does not so much as drop a Syllable of the Business upon which he went. He says nothing of the Commission given him by their Czarish Majesties, of the Success of his Negotiation, or of the Advantages he procured thereby to the Court of *Russia*; and yet if he had been a vain Man, he might have done all this without any great Injury to Truth. A third Singularity there is which also deserves to be remembred. He acknowledges the Country to be one of the finest in the World; he admits that no body could be treated more politely, or with greater Respect than he was; but for all this he does not suffer himself to be led away with those fond and enthusiastical Notions with which many Travellers are possess'd, and to which the World owes

all those romantick and extravagant Stories they have been told of this Country and People.

The Character he gives of both is very simple, natural, and intilligible, and he gives it not with any Air of Sufficiency or Confidence, but barely as his own Sentiment, the Reception of which he leaves entirely to his Reader, after he shall have examined it with the like Care and Candour with which it was delivered. It must seem not a little strange to such as have read other Descriptions of this Country, to find our Author advancing two Things that seem to be directly opposite to all we have ever heard of this Empire and its Inhabitants. The first is, that the *Tartars* are wiser and more polite; the second, that the *Chinese* have naturally more Probity than the *Tartars*. But notwithstanding this, many Reasons may be alledged in Support of our Author's Opinions, and perhaps it will not fatigue the Reader much if we mention two or three. In the first Place let it be considered, that the *Chinese* were so much attached to their old Laws and Customs, that without regarding either the original Motives upon which they were established, or how far they were agreeable to that Situation of Affairs which the Changes and Revolutions that all Things, great and small, are liable to in this World, bring about, they persisted with inflexible Firmness, or rather incorrigible Obstinacy, in supporting them, without the smallest Alteration, from a Notion that any Thing of this Kind was the highest Instance of Impiety.

The *Tartars*, though they very wisely adopted the *Chinese* Constitution as the fittest for that Country, and by which alone it could be governed, yet they would never submit to this Notion of unalterable Laws; but on the contrary, made no Scruple of changing what either Reason inclined them to think wrong, or Experience had taught them to be so; and to this their Intercourse with other Nations, their opening their Ports to all Strangers without Distinction, and their sending and receiving Ministers, are so many incontestable Instances. Whoever considers these Points with any Degree of Attention, will very plainly perceive that our Author had Reason to prefer the Policy and civil Prudence of the *Tartars* to that of the *Chinese*.

Another, and yet a stronger Argument of the Justice of this Preference, may be taken from the History of the two Minorities which happened in this Empire immediately after the last Conquest of it by the *Tartars*. *Tsong té*, who subdued *China*, died in the Year 1644, almost as soon as he was seated on the Throne, and left the Empire to his Son *Chun tchi*, who was but six Years old, and confided the Care of the young Prince to his Brother *Ama van*. One would have imagined that this must have been fatal to a new and half established Government; and not only our Histories, but even those of the *Chinese*, by which I mean the natural and native Inhabitants of that Country, seem to confirm this. But it proved quite otherwise, the Protector finished the Conquest of *China* in the Space of about eight Years, without the least Prejudice to the Authority of his Nephew, and upon his Death the Administration was put into the Hands of his younger Brother, with the Assistance of a Council, in which it did not continue long.

They perceived very clearly that this kind of Rule was by no Means suited either to the *Tartar* or to the *Chinese* Constitution, and therefore with a Wisdom and Honesty of which there is scarce any Parallel to be met with in History, they laid down the Ensigns of their Power, and desired the young Emperor, who was then about fourteen, to take the Reins of Government into his own Hands. This was another Crisis that would have been fatal in almost any other Country, but it was favourable here, and the Emperor governed for ten Years with great Wisdom and Capacity.

Upon his Death succeeded *Cang Hi* his Son, who was no more than eight Years old, and according to the Direction of the deceased Emperor, the Regency was put into the Hands of four of the principal Ministers, and one would naturally apprehend, that this must have proved the Source of private Cabals, of various Factions, and in a short Space of Time of Discord and

Confusion. Yet nothing like this happened, the Council of Regency acted not only with Prudence and Unanimity, but what was more extraordinary still, with the utmost Vigour; they found that there were some Disorders in the State that needed Redress, that the Power of the Eunuchs was become too great, and that there was just Ground to fear, that the Emperor being a Child, these Evils might increase, or which was worse, might grow irremediable. To prevent which, they without Hesitation, cut off the Guilty, removed all suspicious Persons, and by maintaining a wise and virtuous Conduct at Court, gave a good Example to the *Tartars* and *Chinese* in general. But as this kind of Government is never submitted to in that Country, from any other Motive than Necessity, so this Emperor, like his Father, was very early called to the sole Management of the Affairs of his Empire, to which he showed himself always equal, as well in the tender Years of his Youth, as in his declining Age.

It was to him that our Author was sent, and he governed no less than threescore Years, in which Time he gave all the Marks of a truly great Genius. At the Entrance of his Reign, the *Chinese* rebelled, and it cost a long and bloody War to reduce them. The Emperor appeared in those Days rigorously severe, or rather cruel; he punished the smallest Faults with Death, gave a constant Preference to the *Tartars*, and expressed a strong Diffidence and Dislike to the *Chinese*. Under such a Prince, it might have been apprehended, that the Empire would have been very unhappy; it fell out quite otherwise, his Severity made every Body attentive and circumspect, the *Chinese* were glad to abandon their own and affect the *Tartar* Customs, that they might become agreeable to the Emperor, who in the Midst of his Severity had a strict Regard to Justice. When he saw that the Empire was thoroughly settled, the two Nations perfectly incorporated, and the rising Generation for the most part *Tartars* in Habit; and Manners he let fall his Severity by Degrees, and for the last thirty Years of his Life was acknowledged to be the mildest and justest Prince that ever sat upon that Throne. His Son and Successor proves as extraordinary a Monarch in every Respect, and this by the Confession of the Missionaries, notwithstanding that he has driven them not only from the Court, but in some Measure out of his Dominions. He has taken Pains to reform all the Abuses in the several Provinces of his Empire, applies himself wholly to the Cares of Government, receives every Memorial that is offered to him, reads and gives Answers to them all; such a Succession of Princes does Honour to a Nation. It is almost without Example in the *Chinese* Annals, and therefore it is a convincing Argument of our Author's Penetration, with Respect to the Superiority in Point of political Talents, of the *Tartars* over the *Chinese*.

A third Proof of this may be taken from their Conduct towards Foreigners. Before the Time of their becoming Masters of *China*, it was very difficult indeed, almost impossible for Strangers to find Admittance at the Imperial Court; that is now quite altered, and as these Travels plainly shew us, a Minister from a *European* Court is not only received and treated with Respect at *Peking*, but allowed to negotiate whatever Business he comes about as at any other Court. It is very true, that this is not only contrary to the old Customs of the *Chinese*, but is so very disagreeable to their Humour, that they never cease to oppose it, as much as in them lies; so that nothing but the Emperor's absolute Authority could get the better of their Obstinacy in this Respect, which very strongly confirms the Truth of his Observation.

It is remarkable that our Author gives the Title of *Bogdoy Khan* to the Emperor of *China*, but he does not explain the Reason of this, and therefore it is fit we should. The *Russians* called those *Tartars* who are now Masters of *China*, *Bogdoyes*, and therefore it is natural

for them to preserve that Way of speaking, with Respect to the *Tartar* Emperor, though he now resides in and governs *China*. Many of our modern Writers call these *Tartars*, *Manseurs*, which is only a barbarous Corruption of that Appellation, which they have bestowed upon themselves, and which in their own Language is written *Man tcheou*; and this is no more than the proper Name of the Father of that great Conqueror by whose Valour and Prudence they were established in *China*, and is a Mark of the Reverence and Respect which this whole Nation bear to his Memory. We may observe, that this Custom of calling themselves by the Name of some particular Person, from a Principle of Gratitude has been common in most of the Nations of the East, but has been particularly so amongst the *Tartars*, and like many other of their Customs, prevails through all their Tribes, how remote soever in Point of Relation or of Residence.

We have an Instance of this among the *Crim Tartars*, which as it is singular and curious, I will relate for the Amusement of the Reader. The reigning Family in that Country was, about a Century ago, by civil Wars, reduced into very distressed Circumstances, so that at Length there remained only one Heir Male, and he was concealed and bred up privately in the House of a very mean Person. The *Mirza's* or *Tartar* Chiefs, that had thus got rid of their *Khans* or supreme Lords, fell out amongst themselves, and by their Feuds, the whole Country came to be filled with Blood and Confusion. To remedy this, a general Council was called, in which both Princes and People lamented the Loss of the Royal Family, and confessed that they were justly punished by these dreadful Effects of their own Disobedience. The old Man, who had bred up the only surviving Prince in his House, took this Occasion to produce him, and he was immediately acknowledged *Khan*, and his Successors have governed *Crim-Tartary* to this Day: So great a Service demanded an extraordinary Reward, and the *Khan* offered his kind Protector to do for him whatever he pleased. The old Man whose Name was *Guirey*, only desired that his might become the Surname of the Royal Family, which was readily complied with, and all the Princes of the Blood Royal of *Tartary* bear it accordingly.

But to return to the *Tartars* that are in Possession of *China*; they are properly stiled *Moungals* or *Nieucheu Moungals*, to distinguish them from the *Calcha Moungals*. By these Words there is nothing more understood than Eastern and Western *Moungals*, and this in Respect to the Situation of their Countries with Regard to *China*. The former of these Nations, viz. the *Nieucheu Moungals* were, as we have shewn in another Place, once before Masters of that Empire, out of which they were driven by the native *Chinese*, Anno Dom. 1368. At present they have not only recovered the Dominion of this extensive Empire, but have also brought the Western *Moungals* to be dependant upon them, which the old *Chinese* Emperors could never bring to pass.

Our Author, that he might to the utmost oblige his Readers, and make his Work as perfect as they could desire it, thought proper to add to it a Description and History of *China*, written by a Christian Native, one *Dennis Koo*, who was a Surgeon by Profession in his own Country, and had also practised his Profession in several Parts of the *East-Indies*. The Reason that induced Mr. *Everard Ysbrant Ides* to do this, was the Succinctness and Accuracy of that Performance, which, that he might render the more useful, he procured Remarks and Observations upon it, to be collected from the most esteemed Works that were extant, and by this Means, made it, without extending it too much, a very compleat Thing, as we hope the Reader will allow upon perusing it, as it stands in the next Sections, with some additional Remarks, distinguished by inverted Commas.

SECTION V.

A Geographical Description of the extensive Empire of *China*, and of the Sixteen Provinces into which it is divided. In which is contained a succinct View of the Situation, Bounds, Produce, remarkable Curiosities, and whatever else is worthy of Notice in each Province, taken entirely from the Writings of the *Chinese* themselves, and more especially from their authentick Records and natural Histories penned by Direction of the State; with such incidental Accounts of their Antiquities and of the personal History of the most famous Emperors, Heroes, Statesmen, and Philosophers, as have been born or flourished in any of those Provinces through the Course of many Ages.

By DIONYSIUS KAO, a Native of China. Illustrated with many curious Observations and Remarks drawn from the best Authors who have treated of the Affairs of this Empire, both ancient and modern.

1. An Introductory Account of the Author of this Work, and of the Nature, Accuracy, and Usefulness of the Work itself.
2. A general Description of the vast Empire of China, and of the Sixteen Provinces into which it is divided.
3. The Province of Peking, and the Imperial City of the same Name, particularly described.
4. A large Account of the Great Wall, with Remarks thereupon from several Authors.
5. A Description of the Province of Xantung, and of the famous Philosopher Confucius, who was a Native of this Province.
6. The Province of Xanzi, with an Account of the great River Huangó, and other Curiosities in that District.
7. Of the Kingdom of Xienxi, with some Account of the Progress made both by the Christian and Mahometan Religions in that Empire.
8. The Province of Honan described, with an Account of the Manner in which the chief City, and most other Places of Note, were destroyed, and remain still in a ruined Condition.
9. Of the Province of Leatung, and of the original Inhabitants before it made a Part of the Chinese Dominions.
10. An Account of the Conquest of China by the Tartars for the last Time.
11. A copious Description of the Province of Nanking, and of the famous City of that Name, formerly the Capital of the Empire.
12. The Province of Chekiang, and the Cities therein described.
13. Of the Province of Kiangsi, including the History of Porcelain or China-ware, as formerly given by the Missionaries.
14. A copious Description of the Province of Huquang, including several other remarkable Particulars.
15. An Account of the Province of Suchuen, which is the smallest in the Empire.
16. Of the Province of Queicheu, and of the Number of Cities therein, and the Commodities for which the Country about them is famous.
17. The Kingdom of Junan described, with Remarks upon the Accidents that have befallen it.
18. An Account of the Province of Quoangsi, the Manner in which it became annexed to the Empire.
19. A copious Description of the Province of Quoangtung, or Canton, with some very curious Particulars relating both to Civil and Natural History.
20. The noble Kingdom of Fokien described, and the Manner in which it was reduced under the Power of the Chinese.
21. A Digression, containing the History of the Island of Formosa, the Conquest of it by the Chinese Fugitives from the Dutch.
22. The present State and Condition of the Province of Fokien.
23. Of the Boundaries and Distances of the several Kingdoms and Provinces of China; the Division of them into Inland and Maritime, larger and less; the whole intended as a Supplement to the Author's Description.
24. The political Anatomy of the Chinese Empire, from an Italian Manuscript.
25. Remarks and Observations Historical, Physical, and Philosophical, upon the principal Events in the foregoing Section.

THERE is scarce a Country in the World, that laying all Things together, deserves to be so perfectly known, as this which our Author has described; and for this Reason, without all Doubt, so many Pens have been exercised in making Descriptions; there are, however, three Particulars that seem to recommend this of our Author in an extraordinary Degree; the first is, that being a native *Chinese*, and bred up to Letters, he must have had greater Opportunities both with respect to Books and Conversation, of knowing his own Country than any Stranger, much less any Traveller could pretend to, and at the same Time must be less liable to commit Mistakes, even supposing he set Things down as they occurred to him, than they could be with all the Circumspection and Care in the World. In the next Place, as he had studied Physick, practised as a Sur-

geon, and had travell'd from Province to Province for many Years amongst the Christians, he must have had great Opportunities of seeing Things; that is, must have improved his Knowledge and Judgment very much. Lastly, his Description, after being often reviewed by his Excellency Mr. *Ysbrants Ides*, was judged to be the best he had seen, and seems to have appeared such in the Eyes of others, since it was translated into *Latin* and *High Dutch*, before it was printed in *Low Dutch*, with the Remarks that are now added to it, by the Care, and under the Direction of the famous Mr. *Witzen*. It may not be amiss to inform the Reader, that it was penned about the Year 1694, and that the Author, who also wrote several other Pieces, was esteemed a very worthy, honest, and pious Man, and appears to have written very impartially without any overweening Fondness for his Countrymen, or slavish Dependence upon the Jesuits.

What

What Additions were necessary have been very carefully added by the *Dutch* Editor himself, and we have also taken Pains to improve these as far as we were enabled to do it from subsequent Accounts, only as to the *Chinese* Orthography we must own ourselves not a little at a Loss, there being as yet no Rules fixed that can enable us to reduce the different Ways of Spelling, to any rational Standard; only this we know, that as the *Chinese* use none Monosyllables, later Writers generally follow that Method, though our Author seems to have neglected it for the Sake of keeping near the *Portuguese* Pronunciation.

2. This extensive potent Empire comprehends fifteen Provinces, which may more properly be called Kingdoms: For before they were united under one Head, above three thousand Years past, each of them had its peculiar King: As at present every Province hath its Viceroy, all which are subordinate to one supreme Sovereign the Emperor. The Province of *Leaotong*, though situate without the great Wall, is also reckoned amongst the rest, and passeth for the Sixteenth.

“*Nieuboff* places this Province within the Wall, in his Map affixed to the Relation of his Travels, and is herein followed by *Martinus Martini*; but are both clearly refuted by the convincing Testimony of our Author. The Jesuits *Le Comte*, *Bouvet*, and *Gobien*, unanimously confirm our Author's Assertion, they all affirming that the Province of *Leaotong* is only separated from part of *Corea* by an Arm of the Sea, and is on that Side of the Great Wall, viz. the Side on which *Corea* is: Though Father *Martinus* the Jesuit, in his *Chinese* Atlas hath not placed it on that Side, but within the Wall, and thereby misled almost all the Geographers since, they having very industriously continued his Blunder.

“Formerly all Authors reckoned but fifteen *Chinese* Provinces; but after the *Leaotungers* assisted the *Tartars* in the Conquest of *China*, that became one of the Provinces of that Empire, and doth accordingly enjoy all the Privileges of that Nation.

“*Le Comte* speaks yet plainer on this Head. The Geographers (saith he) are grossly mistaken in their Accounts of *China*. First they place the whole Province of *Leaotong* on this Side of the Great Wall; though it is certain that it lies not within, but without it; notwithstanding which it always belonged to *China*. This is an undoubted Truth, to be satisfied in which no more is requisite than to have been on the Spot as well as we.

“And yet farther he goes on, I do not take in as belonging to it (he is speaking of *China*) the Islands of *Formosa*, *Hanan*, and several others, which united would make a great Monarchy, any more than *Leaotong*, which lies without the Great Wall.”

These Provinces are divided into North and South.

The North (under which is also *Leaotong*) are *Peking*, *Xantung*, *Xansi*, *Xienshi*, and *Honan*, in all six. And the South Kingdoms or Provinces are the following ten: viz. *Nanking*, *Chekiang*, *Kianshi*, *Huquang*, *Suchuen*, *Queicheu*, *Junan*, *Quoangsi*, *Quoantung* or *Canton*, and *Fokien*.

Besides these, several Kings and Kingdoms are obliged to pay their annual Tribute to the Emperor of *China*: Of which Number are *Tunkin*, *Cochinchina*, *Laos*, *Liukin*, and *Chaoftien*. The two last of these, are Islands, situate very near *Japan*. *Corea*, *Japan*, *Siam*, and *Pegu*, were also formerly subject to this Empire, though not at present. I design to describe all these Provinces and neighbouring tributary Kingdoms separately, and geographically, as they butt and bound East and West, North and South, as briefly as possible.

Peking lies East of *Xansi*, as *Xansi* does West of *Peking*, and the Great Wall serves as a Northern Boundary common to them both.

Xantung is Southwards of *Peking*, and Northwards of *Nanking*; it borders Eastwards on the Sea, and Westwards on *Honan*.

Xansi, as is above hinted, lies Westwards of *Peking*, Eastwards of *Xienshi*, Southwards of *Honan*, and bounds Northwards on the Great Wall.

Xienshi the largest of all the sixteen Provinces, is situate West of *Xansi*, Eastwards of West *Tartary*, whence the *Lama's* come; Southwards of *Suchuen*; and Northwards of the *Tartars* at the End of the Great Wall. And the Source of the yellow River *Hoango* is also in the West part of this Province.

Honan is in the Middle of *China*, butting towards the South on *Huquang* and *Kiangsi*; Northwards on *Peking* and *Xansi*; Eastwards on *Xantung* and *Nanking*; and Westwards on *Suchuen* and *Xienshi*.

Leaotong borders Northwards on *Xantung*, which declines Southward from it; Eastwards it is opposite to *Corea*; it extends also Southwards to the Great Wall, and Northwards to *Tartary*.

Nanking is bounded by *Chekiang* on the South, and *Xantung* on the North; it stretches Westwards to *Honan* and *Huquang*, and Eastwards to the Ocean.

Chekiang touches on *Nanking*, from which it lies Northwards, as it doth to the South of *Fokien*; the Sea washes it Eastwards; and Westwards of it lies *Kiangsi*.

Kiangsi borders Eastwards on *Chekiang* and *Fokien*; Westwards on *Queicheu* and *Honan*; Southwards on *Quantung*, and Northwards on *Nanking*.

Huquang is bounded Northwards by *Honan*; Southwards by *Quantung*; Westwards by *Suchuen* and *Queicheu*; and Eastwards by *Kiangsi*.

Suchuen butts Eastwards on *Huquang*; Westwards on *Tibet*; Northwards on *Xienshi*; and Southwards on *Queicheu*, and *Junan*.

Queicheu lies Northwards almost on *Quansi*; Southwards on *Suchuen*; Eastwards on *Huquang*, and Westwards on *Junan*.

Junan looks Eastwards and Southwards to *Quoangsi*; Southwards to *Gannan*; Westwards to *Laos*, and Northwards to *Suchuen* and *Queicheu*.

Quoangsi or *Quamsi* hath *Quoantung* on the East; *Cochinchina* on the South; *Junan* on the West, and *Queicheu* on the North.

Quoantung or *Canton* is bounded on the East and North by *Fokien*, on the West by the *Yellow Sea*; farther Northwards by *Quoangsi*, and Southwards by the Ocean.

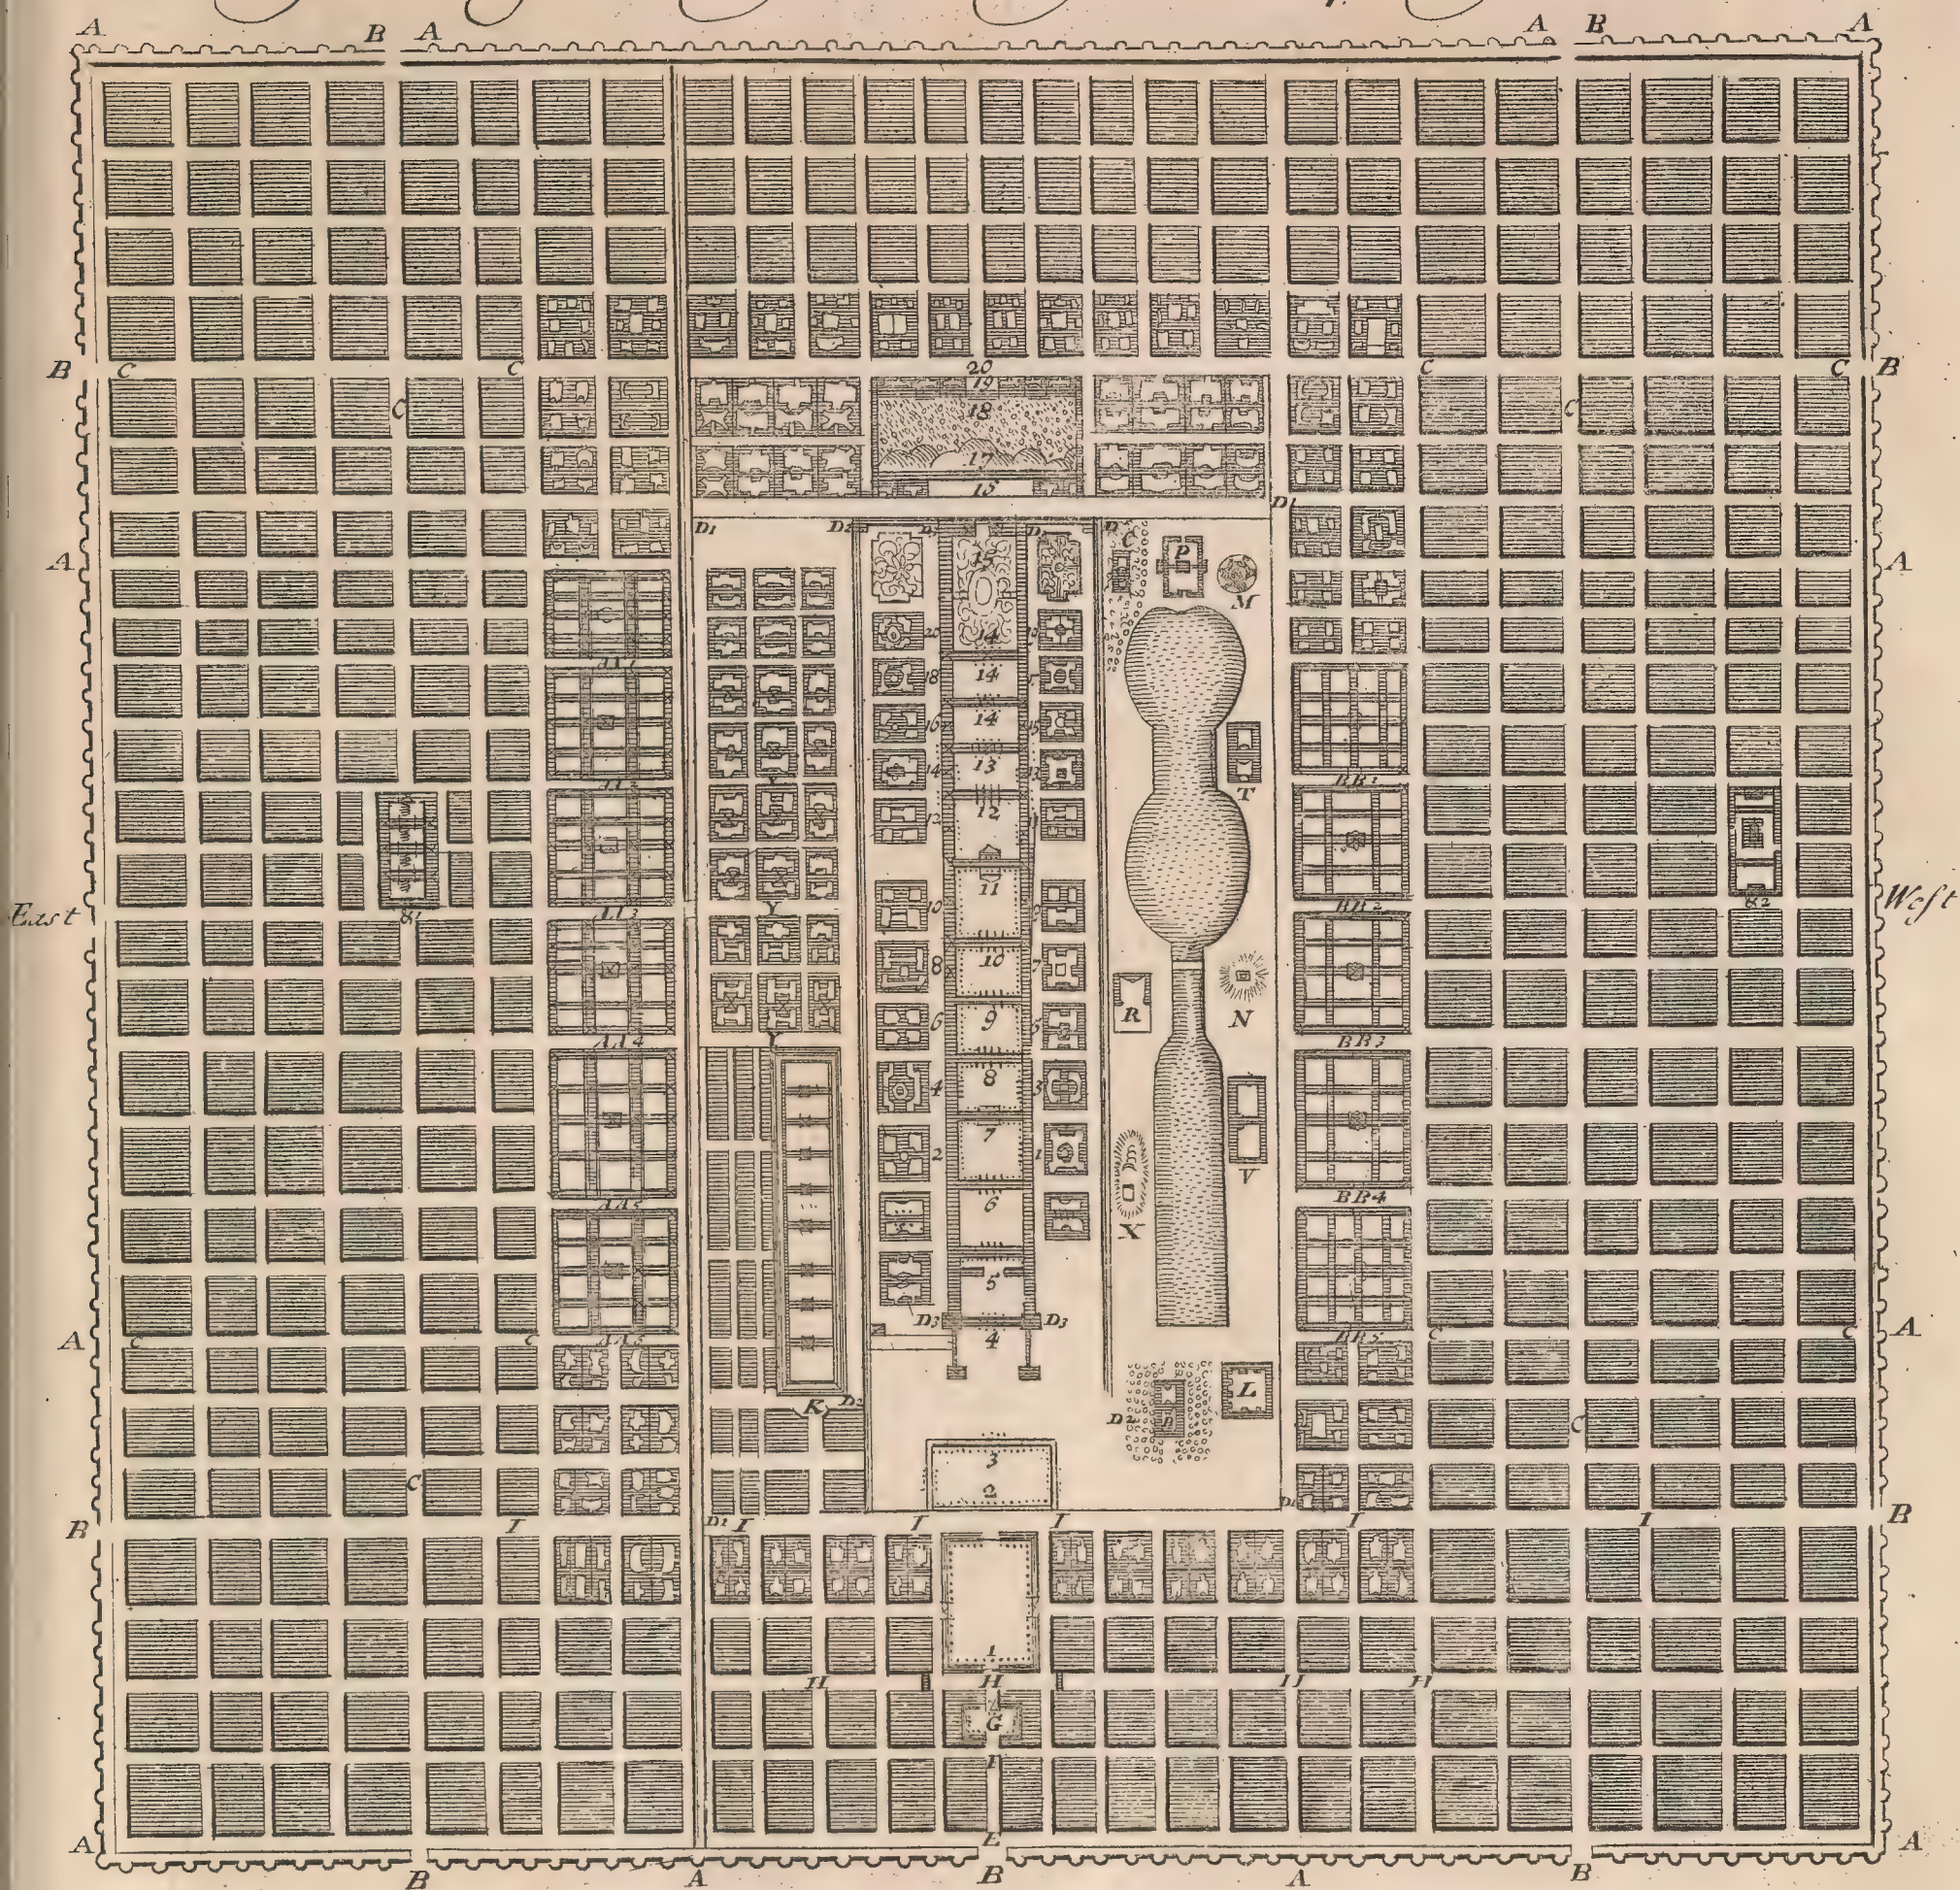

Fokien looks on the East and South-East to the Sea, and the Island of *Formosa*; Westwards of it lies *Kianshi*; Southwards *Canton*, and Northwards *Chekiang*.

3. *Peking* is a Royal Province, subordinate to which are nine lesser Provinces, or great Cities, with their dependant Districts, all which are distinguished by the additional Name of *Fu*. And these nine large have sixteen lesser Cities subjected to their Jurisdiction, which are also distinguished from them by the Appellative of *Cheu*; and the less considerable Places which are under the Government of the last Sort are denominated *Hien*.

The first Imperial City of this Province is *Xuntien Fu*, otherwise called *Peking*; it hath twenty six other Cities subjected to its Jurisdiction.

“*Xuntien Fu* is the ancient and true Name of this City; but since the Seat of the Empire was transplanted from *Nanking* to this Place, it hath assumed the Name of *Peking*; which imports the *North-Court*, as *Nanking* signifies the *South*. We shall speak of the Courts presiding at *Nanking* in our Description of that Province and City. This Metropolis however very justly lays claim to two Names, it being at present grown into two Cities, a new one being built near the old one: For when the *Tartar* established himself on the Throne, he so crowded this Place with such Numbers of his own Nation, that the *Chinese* were necessitated to build a new City without the Walls of the old one. This new built Town is full as large as the ancient one, which last is a perfect Square, of about four Miles Compass, and being inhabited by *Tartars* alone, is called the *Tartar City*: The new Town is as big as the other, but more populous, and is called the *Chinese City*: And both of them take up the Compass of six large Miles about, each Mile being reckoned at 3600 Paces, as appeared when it was measured by the Emperor's

PLANS of the Old & New City of PEKING & Metropolis of CHINA.

A Scale of 10 Chinese furlongs wth amount to 2730 Geometrical Paces one Chinese furlong making 273 Geometrical Paces

An EXPLANATION of the Plans of the City of PEKING

- A The Walls of the ancient City of Peking near 4 leagues in Circuit.
- B The 9 Gates of the same Wall.
- C The Streets of the City.
- D₁ The first Inclosure of the Palace in 10 leagues in Circuit.
- D₂ The second Inclosure.
- D₃ The third Inclosure where the Emperor resides.
- E The south and principal Gate of the City.
- F The first street wth you pass through upon your entrance into the City.
- G A Palace inclosed with a Marble Balustrade.
- H The second street wth two Triumphal Arches.
- I The first Apartment.
- 1 The street of perpetual repose.
- 2 A Apartment wth is the first within the outer inclosure of the Palace.
- 3 3^d called the Portal of the beginning.
- 4 4th The second Inclosure.
- 5 5th Called the Supreme Portal.
- 6 6th Called the supreme Imperial Hall.
- 7 7th Called the Hall thrice exalted.
- 8 8th Called the Supreme Hall in the Middle.
- 9 9th The Hall of sovereign Concord where the Emperor sits in Council wth his Collas.
- 10 10th The Portal of Heaven.
- 11 11th The Mansion of Heaven in wth and 12th next the Emperor lodges himself.
- 12 12th The Beautiful House.
- 13 13th The House which receives Heaven.
- 14 14th Courts and Gardens.
- 15 15th The last of the Inner Inclosure.

- 16 16th The High raised Portal on the south side with a place to manage Horses.
- 17 17th The Park and artificial Mountain.
- 18 18th Consisting of three Houses.
- 19 19th The Portal on the north side.
- 20 20th The Inclosure called 1/2 Portal of repose.
- 21 21st Are 20 particular places belonging to the Emperor for several uses.
- K The first Palace between the two Inclosures.
- L The second Palace.
- M 3 Palace upon the Lake.
- N 4 Palace upon a Mountain.
- O 5 Palace near the Lake.
- P 6 Palace near the Lake.
- BQ 7 Palace.
- R 8 Palace of the Fortrefs.
- S 1 Temple of 4 within 1/2 Palace.
- T 2 Temple.
- V 3 Temple.
- X 4 Temple.
- Y 24 Places for the Mandarin.
- Z 5 Temples in 1/2 new City marked 1 2 3 4 5.
- 8 1 Temple in the Old City.
- 8 2 Temple in the Old City.
- AA The 6 Tribunals marked 1 2 3 4 5 6 wth AA.
- BB The 5 Tribunals of 1/2 military Mandarins.

South

“ peror’s exprefs Command : It is indeed a large City,
“ but not to be compared to *Nanking*.

The Second, *Junging Fu*, hath fix Cities under her Command.

The Third, *Cbinding Fu*, hath twenty fix Cities.

The Fourth, *Quoamping Fu*, prefides over fix Cities.

The Fifth, *Thiemming Fu*, is chief of eleven Cities.

The Sixth, *Funming Fu*, governs fix.

The Seventh, *Hokien Fu*, governs feven.

The Eighth, *Paoding Fu*, ten Cities.

The Ninth, *Xunte Fu*, hath nine inferior Cities.

From this Rule, Superiority, and Power, which the great Cities as well in this, as in all the following Provinces, have over the leffer, though large and populous Cities, plainly difcover the Ability of each Province, and taken together difplay the vaft extended Power of this moft glorious Monarchy.

The Soil of this Province is not very fertile in any Thing but Corn, yet even of this it doth not yield fufficient to fupply its own Neceffities ; but is obliged to be furnifhed with what falls fhort in their own Growth, from other Countries.

Formerly *Nanking* was the Metropolis and Imperial Seat : But the Incurfions and Outrages of the neighbouring *Tartars*, occafioned the Removal of the Imperial Court to *Peking*, in order to be nearer the Great Wall and the Enemy.

“ The Emperors of the laft Race before the *Tartarian Manchou* (the Family or Nation which now reigns in *China*, and of which the prefent Emperor *Canghy* is the third) translated the Seat of the Empire to *Peking*, for the Reason hinted by our Author, that the Troops of the Houfhould being feveral thoufand ftrong, might be immediately ready and near the Enemy : But neither this Precaution, nor the Great Wall, of which we fhall fpeak prefently, could prevent their being forced, or rather hinder Prince *Tfon tè* (who was invited into *China* to oppofe a Tyrant and Ufurper) from eftablifhing himfelf on one of the moft auguft Thrones in the World.

4. This Wall, which is of a prodigious Length and Thicknefs, was built above 260 Years paft, by the *Chinefe* Emperor *Chien Churvoang*, by Way of Provision againft the Incurfions of the neighbouring *Tartars* ; and accordingly it covers the three Provinces of *Peking*, *Xanfi* and *Xienfi*. This Wall, exactly meafured with a Line, in Length is above fix hundred and fifty *French* Miles, or Hours travelling ; (and by the Way the Reader is defired to take all Miles mentioned in this Tract for *French* Miles of an Hour’s March each.) But if all its crooked Windings were meafured it would appear to be above one thoufand Miles long ; it being carried over very fteep Mountains and Rocks. Upon the higheft of thefe it is provided with Fortreffes and Towers, four of which are placed within the Space of every Mile throughout the whole. Befides all which it is full broad enough for eight Horfes to gallop abreaft without any Danger.

“ This Wall is reported to be built by the Emperor *Chius*, about 250 Years before the Birth of Chrift ; to the Performance of which fuch a vaft Number of Men were allotted, that the whole was finifhed within the Space of five Years, and was fo extraordinary firm, that no Nail could be driven into it. To raife Men for this great Work, that Monarch abfolutely commanded throughout his Dominions, that three out of every ten Men fhould work at it, and afterwards two out of every five were compelled to labour at this Undertaking : It is alfo faid, that though the Inhabitants of each Province wrought as near their own Abode as they could, yet either by the Length of their Journey, or the Difference of the Climates, almoft all thofe employed in this Building died fuddenly ; which raifed a Tumult in the Empire, that proceeded fo far as to murder the Emperor and his Son *Agutzi*, in the Fortieth Year of his Reign.

“ The *Jefuits*, who enjoy the Ear and Favour of the Emperor, are very expert in the Art of Menfuration,

“ as their printed Books difcover ; amongst thefe are the above-mentioned *Le Comte*, *Bobet*, and *Gobien*, and they tells us that the moft formidable Enemies the *Chinefe* ever feared were the *Western Tartars* ; wherefore an ancient *Chinefe* Emperor built this Great Wall to keep them off.

“ I have (faith *Le Comte*) four times traced and obferved it, very near Hand, and without any Hyperbole dare aver, that the feven Wonders of the World are not to be compared to it, and that Fame reprefents it lefs in *Europe* than I found it to be.

“ Two Particulars, continues he, furprized me very much.

“ I. That this Wall, in its long Extent from Eaft to Weft, is in feveral Places carried not only directly thro’ vaft and defolate Plains, but alfo over very high Mountains ; over which it feems to advance by flow Degrees, the intermediate Vacancies betwixt being ftrengthened with great Towers, which ftand about two Bow Shot diftant from each other. I meafured the Height of one of thefe, and found it one thoufand feven and thirty Geometrical Feet above the Horizontal Line ; and it is not eafy to conceive how fuch a prodigious Bulwark could be raifed to fuch a Height, in dry mountainous Places, to which Water, Stone, Lime, and all other Materials, muft of Neceffity be brought from Places far diftant.

“ II. That this Wall is not carried on in a direct Line, but in feveral Places winds and turns, according as the Shape of the Hills required, fo that one would be apt to fay, that three Walls inftead of one, cover a great Part of *China*.

He farther faith, “ That the *Chinefe* have exceeded the Antients in Fortification ; that they call this Wall *Vauli Tcham Tchun*, that is, of ten thoufand Furlongs : That its Extent is from the Oriental Sea to the Province of *Xanfi* or *Chanfi* : That though it is certain that it is not fo long as Report makes it, yet all the Turnings and Windings confidered, it cannot be much lefs than five hundred Miles long : That where-ever it feemed moft eafy to be forced, two or three Ramparts are clapped up one behind the other, fo that the hindmoft can eafily contribute to the Defence of the foremoft : That it is carried over the higheft Hills, or raifed or funk in Proportion to the uneven Ground it ftands on ; for (faith he) it is not to be imagined that it is every where level, but that whenever it takes its Courfe over lofty Mountains, it is extraordinary high, but otherwife it doth not exceed the Height of common City Walls ; and notwithstanding Writers fo widely difagree about its Breadth, it is not above five or fix Foot.

He adds, “ That it is built with Brick, but the Work fo good, that though it hath ftood fo many Ages, it is yet found and almoft intire. That as this Undertaking was the greateft in the World, it was alfo the moft ridiculous Attempt that ever was made, for admitting, that Prudence obliged the moft feafible Inlets to be fhut up, and fortified, it is nevertheless abfurd, to raife a Wall to thofe Mountain Tops which are fo high, that a Bird can fcarce fly over them, much lefs could the *Tartarian* Troops climb them, and to leave fome Places fo low and defencelefs as they are. It is indeed to be wondered at, how they found fuch excellent Artifts and proper Instruments, to convey the Materials fo high ; and more Workmens Lives were facrificed in this Building, than the utmoft Outrages of the *Tartarian* Armies would ever have killed them.

5. The Kingdom or Province of *Xantung* lies Southwards of *Peking*, and extends Eaftward towards the Sea ; and through this Province, or that of *Leaotung*, the Inhabitants of *Corea* bring their annual Tribute to *China*. The Soil is fertile, producing all Sorts of Corn and Fruits in fuch Plenty, that one Year’s Crop is fufficient to provide the Inhabitants of this Country for ten Years. All Sorts of Edibles, tending to the Support of Luxury, as well as fupplying Neceffity, bear but a very low Price here ; and this Province abounding with Rivers, Canals, and Lakes, this is the Rea-

son that Fish is here prodigious plenty; as also the Flesh of all Sorts of tame and wild Beasts. Nor are the Silk-worms backward in yielding great Quantities of Silk. But withal, this Country is more infested with Robbers and Thieves than the other Provinces of *China*, and they herd together in such Numbers, that they can raise a small Army. Subordinate to this are six great Cities, distinguished by the additional Appellative of *Fu*, the Signification of which is explained above.

And subject to these six are fifteen lesser Towns, distinguished under the Title of *Cheu*, under which are eighty nine yet lesser, called *Hien*.

The principal City is *Zinan Fu*, which hath under its Jurisdiction four *Cheu*, and sixteen *Hien*, which have again twenty under their Command.

The second large City is called *Junchu Fu*; it hath twenty four *Cheu*, and three and twenty *Hien*.

Tungchang Fu, the third large City, presides over three *Cheu*, and fifteen *Hien*.

Cbinceu Fu, the fourth, hath subordinate to it fourteen *Cheu*, and as many *Hien*.

Tengcheu Fu, the fifth great City, commands one *Cheu*, and seven *Hien*.

Laicheu Fu, the sixth, governs two *Cheu*, and five *Hien*: and these are the six great Cities of *Xantung*.

The most excellent *Chinese* Philosopher *Ciungfusius*, drew his first Breath in this Kingdom or Province.

This *Ciungfusius* or *Confutius*, left several Philosophical Tracts behind him, for which not only the *Chinese*, but also the neighbouring polite and knowing People, express the greatest Veneration, and carefully preserve them, as the most sacred and valuable Writings in the World; he is said to have flourished about five hundred Years before Christ. The *Chinese* so highly reverence him, that they bow down to the Ground at the very Sight of any Table or Plank, &c. dedicated to his Memory, and on which his Name is inscribed. Though indeed this Practice doth not always obtain, but at certain Solemnities, at certain Times and Places, that the Memory of such a learned Man and great Benefactor to Mankind may not die; to preserve which they make an Idol of him.

There are some small Islands which are also dependent on this Province, among which are the following three, *Feuxu*, *Xamuen*, and *Tenneng*, are the most considerable; and the last very remarkable for having five hundred *Chinese* Philosophers murdered there, though it is not so much rever'd on this Account as *Xantung* is for having given Birth to the great *Confutius*. The Story of that singular Massacre is this:

The Emperor *Xius* or *Cbi Hompti*, who built the great Wall (mentioned in the Description of *Peking*) being very much addicted to War, and an accomplished Soldier, but an utter Enemy to all Philosophers, whom he had peremptorily resolved to put to Death; commanded them all to repair from all Parts of his Kingdom to a particular Place, on the specious Pretext of discussing some very important Point; and they all being assembled together, he shipped them off to the mentioned Island, and caused them all to be murdered in a very inhuman Manner, though others say they drowned themselves. He was such an inveterate Enemy to all Literature, that he strictly commanded all his Subjects, on Pain of Death, to burn all the Books in the whole Empire, except only those which treated of Agriculture, Physick, and Necromancy or Magick.

Through this Province runs the River *Luen*, of which the Inhabitants relate very strange Things, many of which are found to be true.

"*Nieubof*, amongst other surprizing Things reports, "That if nine Sticks are thrown into it, six of them "will infallibly drive Southwards, and three to the "North; and that himself tried the Experiment and "found it succeed. *Sed credat qui vult*.

In this and other Provinces, is observed a Sort of Fishing Bird called *Louwa*, which is somewhat less than a Goose, and not unlike a Raven; having also a very crooked Bill towards the End. The Manner of Fishing with them is as follows: The Fishers having rowed themselves in their Boats to a proper Place, throw these Birds over-board, who immediately dive, and the very

Instant they have caught their Game, dart up to the Surface of the Water, when their Masters immediately seize them, and very expeditiously pull the Fish out of their Crops, it not being possible for it to descend lower, because it is stopped there by a Ring fix'd about the Bird's Neck, which is removed when the Sport is over, and the Birds let loose; after which they go a Fish-stealing with open Throats, and having satiated themselves, return to their Boats.

"*John Gonfales de Mendosa* says, they are fastened "under their Wings to a long Rope before they are "thrown into the Water, and that they fish every third "Day in the proper Season, after the Fish have spawn'd.

Near the City of *Cbincheu*, or *Junchu Fu*, a Stone called *Nieuboang*, is observed to grow in the Stomach of the Cows, which some take for a Sort of *Bezoar*, and is very highly esteemed by the *Chinese* Physicians, being an efficacious Remedy against Catarrhs, and other phlegmatick Disorders.

6. *Xansi* lies Westwards of *Peking*, extending Northwards to the Great Wall, and is divided into two Parts by a large rapid River which runs through it, though it rises in the Western Part of *Xiens*, from whence it turns Southwards, shortly after it winds to the North, and lastly inclining again Southwards, disembogues itself into the Sea.

"Writers differ very strangely concerning the Names "of this Province, City, River, &c. Our Author calls "the Province *Xansi*, another calls it *Cbansi*; the chief "City he names *Honang Fu*, others *Caifung*; he calls "the River *Huango*, another makes it *Hoamso*; and "there is also a Difference, though not a very wide "one, concerning its Source. *Le Comte* tells us, that "the *Hoamso* rises at the farther End of those Mountains which cover the West Part of the Province of "*Suchouen*; from whence it throws itself into *Tartary*, "where having run its Course without the Great Wall, "it repasses through it into *China*, betwixt the Provinces of *Cbansi* and *Cbens* (or *Xiens*), after which "it waters the Province of *Honang*, and running through "the Province of *Nanking*, having compleated its "Course of above 600 Miles, lastly empties itself, not "far distant from the large River *Kiam*, into the Oriental Sea.

It runs through four Provinces, beginning with West *Xiens* where it rises, and passes through that Side of that Province; after which it runs through *Xansi*, *Honan* and *Nanking*, where it falls into the Sea. The Breadth of this River in some Places is a French Mile, or a Mile and half, and in others, two Miles over; and by the Violence of its Tide, and Force of this great Mass of Waters, it very much damages the adjoining Lands, by sometimes overflowing not only particular Houses, but whole Villages and Cities, twenty or thirty Miles distant, sweeping before it Men, Cattle or whatever it finds. In the *Chinese* Language it is called *Huango*, which signifies the yellow River, by Reason the Water looks yellow or reddish, which is occasioned by its Passage over, and carrying along with it a Sort of yellow Earth on the *Tartarian* Mountains, that imparts its Tincture to it: For this River runs through Part of *Tartary* without the great Wall, and after taking a winding Course there, re-enters the Wall. It is in many Places very deep, but yet in most Parts of it unnavigable.

"This River hath formerly made vast Devastations, "and obliged the *Chinese* to keep off its Water, by "casting up high and strong Dikes or Banks; which "after all proved insufficient to the securing of the Cities from the ill Effects of its overflowing. Besides "which, the Cities in *Honang*, are all fenced round "about a Quarter of a Mile from the Town, to prevent an Inundation, in Case of this rapid River's breaking through all its Banks, as it did above fifty "Years since. For the Emperor, in order to raise the "close Siege laid to *Caifung*, the chief City of *Honang*, "by the Rebel *Libuang* (who had perfectly block'd it up "from all Relief,) and to confound his Army, caused "the Banks to be cut through. But their Delivery "proved more fatal to them, and did them more Mischief than the utmost Rage of the Enemy could: "For by that Means not only the City itself but al-

"most

“ most the whole Province, and several other Towns
 “ and Villages were laid under Water : So that above
 “ three hundred thousand Men, amongst which were
 “ several Missionaries, who had then a numerous Chri-
 “ stian Congregation in the said City, were all drowned
 “ and destroyed, losing at once both their Church and
 “ their Lives.

“ *Le Comte* saith, I have sailed on several Parts of
 “ this River, and found it every where broad and rapid,
 “ but shallow, and scarce Navigable.”

This Country is very mountainous, and though less
 than other Provinces, yet it is very populous and fertile ;
 its Jurisdiction extends over six *Fu*, eleven *Cheu*, and
 ninety five *Hien*.

The metropolitan City of the first large District is cal-
 led *Thayenfu* ; the second *Pautefu* ; the third *Pingiangfu* ;
 the fourth *Zuganfu* ; the fifth *Funcheufu*, and the sixth
Talingfu.

All these have several small subordinate Cities, which not
 affording any thing very remarkable, to avoid Prolixity
 I shall not enlarge on. But it is very observable, that in
 all Parts of this Province are found fiery Wells, which
 very conveniently serve for the Boiling of their Victuals
 in the following Manner : They cover them close with
 a Lid in which is left a Hole, to set the Kettle or Pot on,
 by which Means whatever is contained in it is boiled,
 without any other Assistance.

The valiant Warriour and great General *Quaninchang*,
 was born in this Province. This Hero had three bosom
 Friends all of them great Lords, who had sworn a mutual
 and inviolable Friendship, and to whom he proved very
 sincere and faithful. They were all three highly esteemed
 by the Emperor, but one of them was his peculiar Fa-
 vourite : And it happening that the Death of the Em-
 peror occasioned a Civil War, this Hero and the others
 endeavoured to set their Friend on the Throne ; in
 Pursuit of this End he several Times proved victorious,
 and won several Battles ; but it happening once that the
 Enemy had carried off his Friends Wives and their At-
 tendants ; the News no sooner reached his Ears, than
 with utmost Haste and equal Bravery, he reduced his
 Men to Order, beat the Enemy, and delivered the Cap-
 tive Ladies, and retired before and in Sight of a vast
 approaching Army, which pursued him close at the
 Heels for two Days and two Nights ; notwithstanding
 all which, he defended and preserved them from all
 Danger, and delivered them inviolate and untouched to
 his Friends. And for this glorious and gallant Action
 he is highly revered by his Countrymen ; in Remem-
 brance of such sublime Virtue they adore him as a God,
 and set up Images in their Idol Temples in Honour to
 him. It is but seldom that they will shew this Image,
 the Face of which is of a very deep Blood-Co-
 lour, like a Hero not debauch'd by *Bacchus*. And
 the military Men highly esteem that Sort of Counte-
 nance ; nay, the whole *Chinese* Nation imagine him
 very propitious to them, and fancy that such a fiery
 flaming Face will inspire them with Valour, and enable
 them to acquit themselves well.

7. *Xienfi* or *Xenfi*, is the largest of all the *Chinese*
 Provinces, and had formerly three Viceroy, though at
 present it hath but two. Its Breadth from East to West
 is three hundred and fifty, and its Length four hundred
 Miles. Its Plains as well as Hills are very fertile, and
 here are vast Herds of Kine, and large Flocks of Sheep.

“ This Province breeds as many Cattle of all Sorts as
 “ any Country in the World ; the Sheep and Goats
 “ come on so kindly, and thrive so well, that they are
 “ shorn thrice every Year, and their Wooll is wrought
 “ into very fine Cloths and Stuffs, fit for Cloathing or
 “ other Uses. This Country also produces great Quan-
 “ tities of Musk, which is extraordinary good, and
 “ grows at the Navel of an Animal like a Hart without
 “ Horns ; their Navels swell most in their Rutting-
 “ time, when they are taken and killed, the Navel,
 “ and what is contained in it is cut, and that proves
 “ the best unadulterated Musk ; a more particular Ac-
 “ count of which, illustrated with a Print, is inserted
 “ in *Mr Ysbrants Ides's Travels to China*.

This Province lies Westward of *Xanxi*, the Great
 Wall terminates in it ; it also borders on *West Tartary*,
 from whence the *Lama's* come, which are *Tartarian*
 Priests that wear yellow or red Habits.

“ The great or chief *Lama*, in their Language *Dalai*
 “ *Lama*, is the Head of their Religion, and him they
 “ honour as a Deity. When the first Embassy, sent by
 “ the *Dutch East India* Company to *China*, was at *Pe-*
 “ *king*, there was also an Envoy from him ; and by
 “ Reason, saith *Nieuboff*, they had formerly lived in
 “ *China* ; but before the *Tartar* had conquered that
 “ Empire, had been by the last *Chinese* Emperor driven
 “ out of it : Their Errand was then to request a Per-
 “ mission for the Return of their banish'd Ecclesiasticks
 “ on the old Foot, and a free Exercise of their Re-
 “ ligion.

This Province also borders on the upper Principality of
Tibet, which extends itself to the Territories of the *Great*
Mogul, from whose Dominions great Numbers of Mer-
 chants come to the vast trading City of *Zunning*, in the
 Kingdom of *Xienfi* : And the Door of Commerce being
 for some Time opened here, and Liberty granted to
 them, as well as *Muscovites* and *Tartars*, to trade there,
 they have with their Wares and Trade introduced the
Mahometan Religion, which, as Weeds grow apace, is
 spread over all *China* to that Degree, that there appears
 more of that accursed Seed than of the true Doctrine of
 Jesus Christ, which from Experience I speak with
 Sorrow.

In this Province are eight large Cities, which have an
 hundred and sixteen under their Jurisdiction. The
 principal City is *Sigan Fu*, which is not only large in
 Size, but also very fine ; the rest are *Hanchang Fu*, *Fun-*
giang Fu, *Pingliang Fu*, *Linxiu Fu*, *Vachang Fu*, *Hingang*
Fu, and *Singang Fu* ; these are the eight, subordinate to
 which, as I above hinted, are all the others.

Not far from *Sigan Fu*, somewhat above seventy Years
 ago, a monumental Table was found, upon which a
 Cross and several Letters were cut, whence the Eccle-
 siasticks prove, that the *Christian Religion* was anciently
 known in *China*, and that *St. Thomas* the Apostle, or
 some of his Disciples, were there.

“ The Jesuits *Kircher*, *Le Comte*, *Gobien*, and others,
 “ speak largely of this Cross and Table ; but I shall
 “ only make a short Extract of the principal Things
 “ which they treat of at full. They say then, that it is
 “ a long Marble Table, on the Top of which is engra-
 “ ven a Cross ; that in the Year 1625, some *Brick-*
 “ *layers* digging the Ground near *Signanfou*, in the Pro-
 “ vince of *Chienfi*, found a long Piece of Marble, which
 “ had formerly been set up as a Monument, but Time
 “ had sunk it under the Earth. This Stone was ten
 “ Feet long and five broad, and was the more narrowly
 “ examined, by Reason a well engraven large Cross ap-
 “ peared at the Top of it ; and somewhat below it a
 “ long Inscription in *Chinese* Characters, with some
 “ strange unknown Letters, which were found to be
 “ *Syriac*. The Emperor being informed of it, caused
 “ a Copy of it to be given out, and afterwards com-
 “ manded the Monument to be kept in a Pagode,
 “ where it is at present about a quarter of a Mile from
 “ *Signanfou*. The Inscription, which is too long to be
 “ transcribed here, mentions the *Messias*, and imports
 “ that an Angel brought the Tidings of his coming,
 “ and that *Olopouen* departed from *Judea* in the Year
 “ 636, and came to *China* ; that he being examined,
 “ his Testimony was found good, and that the Empe-
 “ ror published a Proclamation and Command in his
 “ Favour, in order to the building of a Church, &c.”

8. *Honan* is situated in the Middle of *China*, borders
 Southwards on the Provinces *Huquang* and *Kiansi* ; North-
 wards on *Peking* and *Xanxi*, Eastwards on *Zantung* and
Nanking, and Westwards on *Suchuen* and *Xienfi*. An-
 ciently, before all *China* was subjected to one Monarch,
 and each Province or Kingdom was governed by its own
 Prince, this was accounted the middle Kingdom, and di-
 stinguished by that Name, which is at present given to
China, by reason it is situated in the Middle of several
 Kingdoms : And accordingly the *Chinese* frequently say,
 South-

Southwards lie the Kingdoms of *Tunking* and *Siam*; Eastwards *Japan*, and some other Islands; Westwards *Pegu*; and the Country as far as *Bengal* and *Tartary*; Northwards are the *Barbarian Tartars*, which formerly paid Toll and Tribute as Subjects. Whilst *China* lying in the Middle of all these, is justly called in *Chinese*, *Chung Iwoi*, that is, the Middle Kingdom.

This Province consists of flat Land, without Hills, which is very fruitful, yielding a vast Plenty of Rice and other Corn, all which are to be bought here very cheap; a hundred Pound of Rice being frequently sold for no more than twelve Pence. In this Country was born the famous *Tchcon Tjong*, who, according to the *Chinese Annals*, invented the *Mariners Compass* a thousand Years before the coming of Christ.

It contains eight large Cities, which have subordinate to them an hundred and eight Towns or lesser Cities. The principal City is called *Schaifung Fu*.

This formerly was the Royal Court, but was overflowed and covered with Sand by a great Inundation; and at present a City is built opposite to it. *Quinte Fu*, *HinEte Fu*, *Vecse Fu*, *Vaking Fu*, *Honan Fu*, *Nining Fu*, and *Hojang Fu*, are the Names of the remaining Cities, making all together eight, having Jurisdiction over the above-mentioned hundred and eight.

“By this Inundation is to be understood the cutting of the Banks already mentioned in the Description of *Xanxi*, of the River *Hoanga*, which was done by the Emperor to deliver the City from the Siege which the Rebel *Lichuang* had laid to it, and to drown him and his Army: But alas! it proved the Drowning and Destruction of this chief City, and so many hundred thousand Men. I shall only add, that the Champion Ground of this Province hath continued ever since like a Pond or Morass: Projects have indeed been thought on to drain it, and reduce it to its pristine State; but the Undertaking is almost above human Ability, the Expence is unmeasurably great, nor is it possible to accomplish it; wherefore the Court hath given over all Thoughts of it; yet Time has done much towards it, and Things are now much altered for the better.”

9. *Leaotung* lies Northward of *Xantung*, Eastwards of *Corea*; but Southwards of *Tartary*. Through this Province the present *Tartar* Conqueror came into *China*. In the Reign of the Emperor *Vanli*, about the Year of Christ 1590, the *Tartars* also broke into *Leaotung*, but were repulsed by that Monarch. This was about the Time that Father *Matthew Ricci* the Jesuit came into *China*. This Emperor *Vanli* governed, and peaceably possessed *Leaotung* for forty nine Years: But after his Death the *Tartars*, by the Assistance of some exil'd traitorous *Chinese*, that lived in this Province, the utmost Boundary which divided *China* from *Tartary*; the *Tartar*, I say, assisted by these Traitors who had before behaved themselves ill at Home, again entred this Country. This happened when the Emperor was but young, and all the publick Affairs were directed by his Viceroy and Eunuchs. So they grew more Potent in this Province. And about the Year 1630, one *Lichuang*, a perfidious Rebel, rose up against him in the Province of *Xienfi*, of which he not only made himself Master, but also over several others before the Emperor so much as knew of it; his Eunuch Commanders industriously concealing it, so that the ill News never reached his Ears till it was too late to remedy it, that is, till this Rebel was advanced with his Forces so near *Peking*, that he entred it the next Morning.

“He was the last of the Race of *Taiminga*, whose Name was *Zungchi*: Of which Family *Chu* was the Founder. He drove out the *Tartars* who then lorded it over the *Chinese*; and his Descendants enjoyed the Empire for several hundred Years.

Upon the News of which the Emperor clapt his Hand to his Sword, not out of manly Resolution, but hurried thereto by Despair only, in order to kill his Imperial Consort, Concubines and Daughter, who expressed their Grief in Tears and Lamentations sufficiently pathetick to have moved the most obdurate Heart. Having thus prevented their future Misery by present

Death, himself climbed to the Top of a Mountain, within the Walls of the Imperial Palace, and to provide against falling into the Hands of this base Rebel, chose rather to die by his own, and accordingly hanged himself on a Tree.

After which *Lichuang* ascended the Throne, and established himself in the Possession of the Monarchy, as Sovereign Ruler of the People, but deposed himself like a Tyrant and Usurper: For he began his Reign with Cruelty: He commanded the Father to the Prince and General at the great Wall, and several other Noblemen, to be put to an ignominious and painful Death, for no other Reason than because he could not bring over his Son to the Rebels Side: Who afterwards not only attempted the Revenge of his Father's Death, but also to deliver the Empire from this Usurper.

For he then went to *Leaotung*, and invited the *Tartars* to his Assistance: But they very much distrusted him at first, to remove which he promised them on the Word of a General to be faithful to them, confirming his Promises with an Oath on the naked Sabre. After which he led them as their General, and they boldly followed him. The prevailing Usurper was come without the Wall, and also requested Aid of the *Leaotungers* but in vain.

“From this and what follows, as that *Lichuang* went without the great Wall to request the Assistance of the *Leaotungers*, it clearly appears that *Leaotung* lies without the mentioned great Wall, since this Princely General, by some called *Usangeii*, and by our Author *Vii Sangquei*, who then commanded, went from the great Wall and applied himself to the *Leaotungers* as well as the Usurper, and on the same Account. But in the Beginning of this Tract, to which we refer the Reader, this is so clearly proved, that no farther Evidence is in the least necessary.

This Heroick General bravely faced his Enemy, and in the first Place revenging the Murther of his Father, after an obstinate Resistance, he routed, put him to flight, and pursued him and his flying Army as far as *Peking*, where his Enemy made no Stop, but after he had taken out his hundred and ninety Concubines, and the richest Furniture and Jewels, set Fire to the Imperial Palace. The General pursu'd him accompanied with his own Forces, and some *Tartars*, leaving the rest at *Peking*.

10. The *Tartarian* Chan or Prince, though but invited, in order to assist the *Chinese*, having with him about seven or eight thousand *Tartars*, besides the *Leaotungers*, made Use of this fair Opportunity to mount the Throne of this mighty Empire. This happened about ten Years before the worthy Father *John Adam Schall* settled in *China*.

The General returning from the Pursuit of his Enemy, found the *Tartar*, whose Assistance he had implored, seated on the Throne, and himself obliged to obey him: And complying with Necessity, he consented to become his Relation by Inter-marriage. And the new Emperor created this Prince King of *Junan*.

The Bond of Affinity was yet too feeble, and the Crown of *Junan* too mean, to satisfy and restrain within Bounds this aspiring Prince, who aimed at the Empire itself. And accordingly after the Expiration of a few Years, he rose against the Chan; and stiled himself Emperor, by the Name of *Vii Sangquei*; reduced several Southern Provinces to acknowledge his Sovereignty: And after having carried on a vigorous War against the Chan, and conquered near half the Empire, he at last died, being arrived to a very great Age.

His youngest Son who succeeded him in his Pretensions, was, at the Time of his Death, a Minor, and as it generally happens in Revolutions, an irreconcilable Dissention arose amongst the Princes, which prevented his maintaining his Claim to the Empire: The eldest Son kept his Court at *Peking*, was by Marriage allied to the Emperor, and had three Sons; but though he was thirty five Years of Age, yet he and his three Sons were put to Death. And ever since the whole Empire of *China* hath been subject to one Sovereign, who is the Chan of the *Mantcheou Tartars*.

There

“ There is a Law in Force in *China* which extends
“ the Punishment of Rebels to the ninth Generation.
“ The present Emperor *Cangbi*, who is a mild Prince,
“ and discovers a very great Aversion to Cruelty,
“ found himself oblig’d, in Compliance with the Laws
“ of the Land, to put to Death the Children and some
“ other Relations of *Oufangeii*, by Reason he was con-
“ victed of Rebellion: But to testify his Aversion to
“ any such Practice, he caused Proclamation to be made
“ before-hand, that it was not he that had condemned
“ them, but that he was constrained by the rigid Laws
“ of the Empire, the general Assembly of the Princes
“ of the Blood, and the supreme Courts of Justice of
“ the Land, not to delay the Punishment of any Per-
“ son who was convicted of Rebellion.”

It is indeed true, that not long before some Lords
rose up against the Emperor, and carried on a War
against him, which did not prove successful, by Reason
of their mutual Divisions: Yet incredible Numbers of
Men were killed; some talk of forty Millions, others
say four Millions: Infomuch that human Blood (in
an unheard of Manner) streamed from Mountain Tops;
that the deep Channels were filled with dead Bodies, and
the deeper Vales piled up and levelled with the Hills.
This happened during the Minority of the present Em-
peror *Cangbi*, he being then not much above fourteen
Years old.

As his Father’s Accession to the Throne was not ac-
companied with any Fatigues or Uneasiness, so his Reign
was very peaceable; leaving the greatest Difficulties for
his Son to struggle with, who by his great Wisdom,
heroick Courage, Royal Virtues, and exalted Endow-
ments, hath overcome them all.

We shall now turn towards the Southern Provinces,
and take Leave of these Northern Countries, with say-
ing that *Leaotung* is a very fine though small Province,
containing not above twelve as well large as small Ci-
ties: And adding that in this Province grows the famous
Medicinal Root *Ginseng*, acknowledged by the Phy-
sicians to be an excellent Cordial Restorative. The *Chi-
nese* Doctors use it in Hectic Pestilential Fevers, and
several other dangerous Diseases: It is prepared
by Mixture with several other Drugs. Those of
these Roots which are large, bright and weighty, are
chosen as the best; they wrap them up in Paper, and
keep them in dry Earth, and also in Pepper: They
commonly boil two or three Grains of it minced small,
in Chicken Broth, or in fair Water: But particular
Care must be taken that the Pot be close covered, by
Reason that in an open Kettle a great Part of its Vir-
tue evaporates.

“ The Reader will naturally expect to have some
“ Account of this famous Plant, beyond what our
“ Author, to whom it was common and familiar, has
“ thought proper to set down here. The *Ginseng* is a
“ perennial Root that produces an annual Stalk of the
“ Size of a large Quill, which rises not very high, and
“ opens with five Leaves. Some say, that this Plant
“ bears white and beautiful Flowers; others, that it
“ produces no Flower at all. The Root, which is the
“ Part most valued, is of the Size of a small Parsnip,
“ not very unlike it, and generally divides itself into
“ two. It is held to be the greatest Restorative in the
“ World, and the *Chinese* Physicians have written whole
“ Volumes about it, in which they tell us many Things
“ that seem to surpass all Credit. It is however to be
“ observed, that the figurative Stile, and the very con-
“ cise Descriptions in these Sort of Books, very often
“ hinder *Europeans* from comprehending their true
“ Sense; so that we are apt to reject, as a ridiculous Ro-
“ mance, what with them passes for a well-wrought Al-
“ legory, or a useful Fable. The Missionaries, gene-
“ rally speaking agree that it is both an useful and an
“ efficacious Medicine; that it removes Vapours, raises
“ the Spirits, supplies Strength, and promotes Secre-
“ tions in a wonderful Manner. The Leaves are used
“ as Tea, and have a very great Effect that Way, but
“ the Root is far preferable, and the true Way of using
“ it is thus. Divide an Ounce of *Ginseng* into ten Parts,

VOL. II. N° 135.

“ by breaking it, for it is affirmed, that Experience
“ shows it loses much of its Virtue by being cut with
“ a Knife: One of these Portions is sufficient for a
“ Dose, and is to be put into an earthen Pot, with a
“ Pint of Water, and being closely covered, must be
“ set upon a slow Fire, till by stewing, it is reduced to
“ about a Quarter of a Pint. This Liquor is to be sweet-
“ ned with white Sugar Candy, and so drank moderately
“ hot. Then half that Quantity of Water may be
“ put upon the same Root and being half consumed,
“ the Liquor is to be taken in the like Manner. The
“ former should be taken in the Morning, fasting, the
“ latter in the Evening, and nothing eat after it. There
“ are various Reasons why this Drug does not answer
“ in *Europe*; one is, that bearing a high Value, we are
“ often cheated, and some other Root sent us, instead of
“ *Ginseng*; another and a better Reason is this, that the
“ Root itself is very apt to corrupt and spoil, so as to
“ lose all its Virtue. I knew a Physician that made
“ Use of a Tincture of it, brought by the *Chinese* to
“ *Batavia*, with great Success, but this Tincture was
“ extravagantly dear, since at the first Hand it cost
“ three Pounds an Ounce. The *Ginseng* commonly
“ grows in woody Places, under the Shade of
“ large Trees. It has been plentifully found in *Canada*,
“ where it was discovered by a *French* Jesuit one Father
“ *Lasitau*. It is also found in *Maryland*, and under the
“ Title of the *Maryland* Plant is very well described by
“ Mr. Ray. There is another Plant more common in
“ *Phylick*, the *Latin* Name of which is *Hepatica No-
“ bilis Tragi*, that is held to be very little inferior in its
“ Virtues to the *Ginseng*, and ought therefore to be
“ more in Use. It were to be wished that some of the
“ Jesuits settled in that Empire were well versed in
“ Chemistry, and then there is no Doubt they would
“ be able to prepare Extracts from this famous Root,
“ that would restore and establish its Credit in *Europe*,
“ and prevent our Physicians from believing, that the
“ *Chinese* Doctors, either through Ignorance or Prepos-
“ session in Favour of their Country, have extolled this
“ Drug far above its Deserts. But till this be done, it
“ would not certainly be amiss to make some Experiments
“ on the *American Ginseng*, of which we might have con-
“ siderable Quantities from *Maryland*; and as to the
“ Liverwort before-mentioned, one can hardly believe
“ that so good a Judge as *Schroder* should commend
“ it to such a Degree, if it had not really some very
“ considerable Qualities; but we are too apt to neg-
“ lect Simples, and leave them entirely to the Vulgar
“ and to Quacks, who very often perform such extra-
“ ordinary Cures by them, as not only raises their Cre-
“ dit, but is prejudicial to that of regular Physicians,
“ who are more enamoured of Botany as a Science,
“ than attentive to its Consequences, as it is a Branch
“ of the Art of Medicine.”

II. Having describ’d the Northern, we come to
speaking of the Southern Provinces or Kingdoms of
China.

Nanking, which we named first, is very large, and
is governed by two Viceroys: The chief City is called
Nanking, or rather at present *Kiamning*, the *Tartars* ha-
ving changed its Name. This was formerly the Me-
tropolis; and the Imperial Court, now kept at *Peking*,
antiently resided here. This is the largest City in
China; and at present is sixteen or seventeen *French*
Miles in Compass; but formerly contain’d three Cir-
cuits. The first or outermost and largest Circuit was
thirty Miles; but since the Translation of the Seat of
the Empire, it is run to Decay, and become so far de-
solate, that its second Circuit contains but sixteen or
seventeen Miles, in which Compass are above thirty
Hills.

“ The Footsteps of these Walls yet remain visible; and
“ seem rather (saith *Le Comte*, to have been the Bounds
“ of a Province than a City: And though *Peking* is
“ large and very populous, and *Nanking* very much de-
“ clined from its former Grandure, it is still more popu-
“ lous than the other. The Reason of the Removal of
“ the Court is hinted in the second Chapter.”

" We should also here add, that this City was within
 " one Night of falling into the Hands of *Coxinga* or
 " *Couesius*; but our Author having mentioned it in the
 " Chapter, where he is treating of *Fokien* and the Island
 " *Formosa*, I refer the Reader thither. And as for the
 " third Circuit, (which our Author barely mentions
 " without any Description) we gather from other Wri-
 " ters, that it was the ancient Imperial Palace, where
 " the *Chinese* Emperors formerly resided in as great
 " Splendor, as at present at *Peking*; it was on the South-
 " side of the City, and encompassed by a Wall, which
 " at present encloses the principal Part of the City.
 " Each of its four Sides were an *Italian* Mile long,
 " and consequently required above an Hour's time to
 " go round it, being by *Nieuboff* compared to *Haarlem*
 " in *Holland*."

This most charming City far surpasses all the rest;
 besides which it is adorned with a lofty Tower of the
 finest Porcelain of various Colours, and set off on the
 Outside with very fine Imagery: It is nine Stories
 high, and within is full of Stone Figures, richly
 gilt.

" The Difference amongst all Authors in the Ortho-
 " graphy, in Writing concerning *China*, is very surpris-
 " ing, they not agreeing in Names, the Sense of them,
 " nor even in Things; one writes *China*, another *Sina*;
 " this *Xanfi*, *Xienfi*, that *Chanfi*, *Chienfi*, and also *Chenfi*:
 " One calls the Emperor *Canghi*, another *Kamhi*; one
 " writes *Ousangouei*, whilst others have it *Usangejus*, or
 " *Vuisonguei*; and all mean the same Thing or Person.
 " So we find the like Difference concerning the Porce-
 " lain Tower, in, or more properly without, *Nanking*.
 " Our Author saith, the Porcelain on it is of the very
 " finest and best Sort; others say, that this Tower is
 " but plastered with Porcelain; and though the Rain
 " and Dust hath decayed the Beauty of it, the Remains
 " are yet sufficient to determine that it was Porcelain,
 " and not the finest, but a coarse Sort. Nor do Wri-
 " ters vary less about the making of Porcelain, which
 " will be treated of in the Course of this Work. But before
 " I take Leave of this Tower, I shall add what *Nieuboff*
 " saith, viz. That Seven hundred Years past this Tower
 " was built, to the great Grief of the *Chinese*, and as a
 " pompous Monument of the *Tartars* being then Lords
 " of *China*, of which they left this Memorial. *Le*
 " *Comte* on the other Side saith, it is about three hundred
 " Years since this Tower and the Temple of Memory
 " were built by the Emperor *Yonlo*: And farther, speak-
 " ing of Towers, saith, That the Spire, which is one
 " of its finest Ornaments, hath fixed on the Top of it
 " a gilt Ball, or Pine-Apple, of an extraordinary
 " Largeness; and *Nieuboff* tells us, that the *Chinese*
 " report this to be all massy Gold. Thus (*Le Comte*
 " goes on) you have a Description of the Porcelain
 " Tower, which some *Europeans* would call a Brick
 " Turret: But indeed the *Chinese* are wonderfully ex-
 " pert in beautifying their Stones with all Manner of
 " Ornaments: And as it is, it is undoubtedly the neatest,
 " most compact, and best Piece of Work at present
 " remaining in the East.

The Streets of *Nanking* are very spacious and wide,
 as well as clean and neat, and there all Sorts of Rari-
 ties and fine Wares are exposed to Sale; but what is
 most amazing is the almost incredible Number of
 Men which are observed to be there. The Inhabitants
 are computed to be eight Millions, Housekeepers or
 Masters of Families, so that the Croud of People there
 seems justly enough said to be incredible to those who
 have not seen it.

Close by, or about the City, runs a River of two
French Miles over, which in the *Chinese* Language is
 called *Tangsku Kiam*, that is, the Son of the Sea, and
 is navigable through all *China*. This River runs by and
 cuts through several Lakes and Rivulets, which all by
 its Assistance are conveyed to, and by that Means dis-
 charge themselves into the Sea: Wherefore this River
 is very richly laden with innumerable Ships, and lesser
 Craft, which are very fine within, and richly gilt
 without; besides this, they are adorned with extra-
 ordinary fine painted Flags, and above Deck provided

with all Manner of convenient Seats, Tables, and
 Couches, for the Convenience of Travellers, and they
 are withal well victualled.

" It is reported to be so deep that no Bottom is to
 " be found; whence proceeds that *Chinese* Proverb,
 " *That the Sea is without Bounds, and the Kiam without*
 " *Bottom*. And some who have been there, affirm
 " upon their own Experience, that no Ground was to
 " be discovered by Sounding. But they also add, that
 " their Line was but fifty or sixty Fathom, and that if
 " they had made use of one of two or three hundred
 " Fathom, they should have given another Account
 " of it.

The Jesuits, who have seen the vast Numbers there
 are of these Ships, say that there are enough of them,
 (proverbially speaking) to make a Bridge from *China*
 to *Europe*.

The Jurisdiction of this Province extends to fourteen
 very large and magnificent Cities, all which are vastly
 rich, and have several small, and they again several les-
 ser subordinate to them, as in the other Provinces.

The second large City of this Province is *Suchen*,
 which is the most illustrious, largest, and most famous
 of all the rest, being a Place of the greatest Trade of
 any in the whole Empire; and Ships, as well as Men,
 appear there as numerous as Sand on the Sea-shore.

The Emperor receives from hence five Millions of
Laens, each of the Value of two Rixdollars, besides the
 Corn, Rice, and Fruit, which is transported from hence
 annually to *Peking*, in nine thousand nine hundred and
 ninety nine Jonks or large Ships; each of which is ca-
 pable of carrying three or four hundred Weight: Nor
 to mention all Sorts of Silks and other Commodities
 yearly carried to the Emperor.

The Ships are six Months on the Way; and as soon
 as they are come to the End of the great Water, they
 come into navigable Rivers, cut by human Labour,
 with a Sluice at the Distance of every *French* Mile, to
 preserve the Water on Occasion.

" Travellers, in the Descriptions of their Voyages,
 " call them Sluices, but represent them widely different
 " from ours; for they are a Sort of Waterfalls, over
 " which the Ships are forced by the Assistance of
 " a great many Hands and Windlasses. It is indeed
 " strange, that the subtle *Chinese* have not yet invented
 " such as ours are, which if they once saw, they would
 " be forced to acknowledge, that we are not such
 " clumsy dull Wretches as they and other Nations re-
 " present us there; and that they themselves seem ra-
 " ther like unthinking People, when they are forced to
 " make use of so many Hands, and are so fatigued to
 " force over their Ships, which we do with the greatest
 " Ease in the World."

The Names of the other Cities are, *Nincheu Fu*,
Thaiping Fu, *Ganking Fu*, *Sun Kiang Fu*, *Chin Kiang Fu*,
Geancheu Fu, *Jungjan Fu*, *Chingan Fu*, *Lucheu Fu*,
Quongte Fu, *Chancheu Fu*, and *Kingcheu Fu*. These
 fourteen, the two former being included, exercise Ju-
 risdiction over a hundred and thirteen other considera-
 ble Cities.

12. The Kingdom or Province of *Chekiang* borders
 on *Nanking*; and the *Chinese* say, that next to that, it
 is the *Indian* Paradise of Arts, and the Paradise of the
 Gods; by reason it plentifully flows with all good
 Things. Throughout this whole Country are deep-cut
 Channels, by Help of which all Parts of this Province
 may be easily travelled over as well by Water as by
 Land. The Bridges have all of them very fine Stone
 Arches; and the Number of Barks or Boats there is
 as vast as that of Men in the great Streets of *Peking*,
 that is, innumerable; which is the less to be wondred
 at, since this Place is frequented by Merchants from all
 Parts of the World.

It contains eleven large Cities, the chief of which is
Hancheu, and is the finest of them all, being provided
 both within and without with deep and navigable Chan-
 nels, and almost all the Corners of the Streets are adorn-
 ed with lofty triumphal Arches. Not far distant West-
 ward from the City Wall, there is a very fine Lake, the
 Circumference of which takes in several Miles; its Wa-
 ter

ter falling into it from the Hills is very bright and clear, and is conveyed into the City by the above-mentioned Channels.

Eastwards also, near the City Wall, there runs a great River called *Zhien Tangkiang*, which at that Place is two Miles over, or as broad as the River *Kiam*, but not so deep, nor doth it extend so far, as passing through but one Province.

The other large Cities of this Province are. *Kiaking Fu*, *Xanking Fu*, *Nimpo Fu*, *Kiuncheu Fu*, *Vencheu Fu*, *Niencheu Fu*, *Chinchem Fu*, *Kingkoa Fu*, *Taicheu Fu*, and *Ninchi Fu*; the whole Number being eleven. They preside over seventy six lesser Cities; to which is added *Vieicheu Fu*, a City not less considerable than any of the rest, and from it are brought very great Quantities of Silk.

13. *Kiangsi* is a large Province, which plentifully abounds with all Necessaries to human Life: It borders on *Nanking*. A Lake or small Sea of three hundred *French* Miles in Bigness, called *Phojang Fu*, takes up the greatest Part of it, and is as navigable for great Ships as the main Sea, and is surrounded by a Multitude of fine Towns and Cities. All the Rivers of this Province flow into this Meer, which discharges itself into the *Nankinsian* River, and by Means of that is conveyed to the Ocean.

This Province contains thirteen large Cities, the chief of which is *Nanchang Fu*, which, though a great City, is now ruined and reduced to a desolate Condition by the Wars. *Vieicheu Fu*, a City where the *Porcelain* or *China* Earthen-ware is made, is also in this Province.

“ That this *Porcelain* is a common Manufacture in
“ *China*, is acknowledged by all; and that the oldest is
“ esteemed the best, few are ignorant, partly on account
“ of its beautiful Whiteness, partly for its Antiquity,
“ and by Reason none so good is at present made; be-
“ cause that the Emperor appoints a *Mandaryn* at the
“ Places where it is wrought, in order to choose for his
“ Use the finest Pieces, for which he notwithstanding
“ pays but a very mean Price; wherefore the Manufac-
“ turers, not being able to set their own Rate, or per-
“ haps being but very ill paid, are discouraged from
“ making it better than ordinary, and will neither take
“ Pains, nor endeavour to shew any great Art in the
“ manufacturing this Ware, without being richly re-
“ warded. Our Author here relates the Manner of its
“ Composition in his usual plain Manner. But others
“ (*J. G. de Mendoza*) tells us, that it is made of Chalk,
“ which being beaten is thrown into a Pond closely
“ walled in, in which it dissolves and boils up, a thin
“ Skum arising, of which the finest *Porcelain* is made,
“ and the coarser of the Remainder; for the nearer the
“ Bottom it grows, it becomes still coarser. They
“ work this into what Shapes they please, in the same
“ Manner as we do, and gild or paint them according to
“ their Fancies, which Colouring, or Gilding never fades.
“ This, saith he, is what we know of our own Observation,
“ and is more probable than that it should be com-
“ posed of Sea Shells which have lain a hundred Years
“ under Ground to putrify, and are taken up, beaten,
“ and then baked. *Nieuboff* saith that it is made of a
“ Sort of Earth which is brought from a certain Hill
“ in the Province of *Nanking*; that this Earth is not
“ moist like Clay or Chalk, but dry like fine Sand;
“ that they dissolve it with Water, but not that of
“ *Hoeicheu* in *Nanking* or the neighbouring Parts, it
“ being impossible to work it in that Water; the Truth
“ of which they have frequently been convinced of by
“ unfortunate Experience; but it is successfully temper-
“ ed with the Water of *Vieicheu Fu*, and the adjacent
“ Places. That having wrought it into Vessels of all
“ Shapes and Sizes at Pleasure, they first dry them in
“ the Sun, before they venture them in the Oven, after
“ which they put them into the Furnace, and let them
“ bake for fifteen Days, and stand fifteen Days after that
“ to cool, before they take it out, &c. *Le Comte* saith,
“ That it is made of a more solid Earth than ordina-
“ ry, which is found in the Stone Quarries of this Pro-
“ vince: That this being cleansed and beaten to a fine
“ Powder, is moistened and made into a Mass, which
“ is long and thoroughly mixed and beaten, in order to

“ clear and refine it: That it is probable this Earth
“ is moulded into several Forms at Pleasure by such a
“ Wheel as is used for that Purpose in *Europe*: That
“ after this it is carefully dried in the Sun, when the
“ Ground and Paint is laid on, and then is put into
“ the Furnace, which is kept to a moderate even Heat;
“ and, that being baked enough, after a long Time
“ staying there, and becoming perfectly cold, it is taken
“ out.”

This *Porcelain* is composed by the Mixture of certain Sorts of moist and dry Earths: The dry comes from the Province of *Nanking*: From these two Ingredients this *China* Earthen Ware is prepared, moulded into several Shapes, dried and baked; and when it is become cold, or rather almost cold, the Colours are laid on, and it is glazed, once more put into the Oven, and baked in the Shape the Artist desires it should remain.

The other large Cities are *Kincheu Fu*, *Suicheu Fu*, *Nanbang Fu*, *Quoangsin Fu*, *Quienchang Fu*, *Linkiang Fu*, *Chungkue Fu*, *Tungcheu Fu*, and *Nangan Fu*.

These large preside over seventy eight lesser Cities.

14. *Huquang*, and *Xiensu*, already described, are the two largest Provinces of *China*. This contains in its Jurisdiction fifteen Cities, and more plentifully abounds with Rice, Corn and Fish than all the rest; being alone very well able to furnish the whole Empire with sufficient Quantities of Corn. For the Space of ten Years, this Province was miserably infested with civil Wars and Discord, which have cut off incredible Numbers of Men.

The factious *Lichuang*, already mentioned in the Description of *Leaotung*, was the Cause of all this Bloodshed when he possessed himself of this Province.

And after an Interval of only a few Years Prince *Vii Sanguei* (who invited in the *Tartars* to his Assistance) made himself Master of a great Part of it, and for the Space of several Years carried on a vigorous War against the Emperor.

There is a Lake in this Province, the Circumference of which is above four hundred *French* Miles, into which several Streams and Rivulets fall: And at the Mouth of it are several Mountains and small Islands, from whence and from its boisterous Waves, it is not unlike the main Sea. It is frequented by an incredible Quantity of Ships, and from it descends a very large River which falls into the famous *Nanquingian* River.

On the four Corners of this Province are situate four Cities: The first of which is called *Jocheu*, and lies at the Mouth of the River, and is very strong, and the Key of all the rest. *Vii Sanguei*, King of *Junan*, took it. The Emperor's Brother, whom he had created King of this Province, assisted by the Imperial Forces, sat down before it with a very great Army, and very closely besieged it, losing a great many Men before it. It happened one Night either in this Streight, to rid themselves of useless People, and unprofitable Mouths, or else in order to convey a great Number safe over the Meer, they embarked on board three hundred Ships; but such a fatal Storm arose, that all the three hundred Ships and fifty thousand Souls were sunk to the Bottom.

But after the Death of *Vii Sanguei*, this City, as well as the whole Empire, fell entirely into the Emperor's Hands. There are in this Province fifteen large *Fu*, subordinate to which are an hundred twenty-five lesser.

Vii Chang Fu, the Principal, is a very large City, which is intersected by a River, frequented by Multitudes of Ships that drive a very considerable Trade here.

Cotton grows here in such vast Abundance, that it is transported from hence to all other Places almost throughout the whole Empire.

The other large Cities are *Hanjiang Fu*, *Huangcheu Fu*, *Gangling Fu*, *Sangiang Fu*, *Juniang Fu*, *Tegan Fu*, *Jangiang Fu*, *Jocheu Fu*, *Changxa Fu*, *Paoking Fu*, *Xincheu Fu*, *Changte Fu*, *Hangcheu Fu*, and *Jungcheu Fu*; the whole Number being fifteen, whose Jurisdiction extends over one hundred and twenty-five other Towns.

15. This

15. The Province of *Suckuen*, which hath been ruined and laid Waste by several Wars, is the least of all the *Chinese* Provinces, and is mountainous. It produces Quick-silver, Tin, Wine, and a considerable Quantity of Rhubarb, all which are exported to other Countries. But the Rhubarb is not esteemed the best, nor are great Quantities of it either used or sent Abroad.

There are in this Country nine large Cities, the chief of which is *Ckingtu Fu*; which is a very great and considerable City, but reduced to a very low Estate by numerous Wars.

The other are *Langan Fu*, *Xunking Fu*, *Hungbing Fu*, *Paoning Fu*, *Chungching Fu*, *Lingcheu Fu*, *Hiengcheu Fu*, *Mabu Fu*, and *Taoy Fu*; the Whole making up the Complement of Nine, which preside over one hundred and three lesser Cities.

16. The Province of *Queicheu* is a mountainous Country, which produces great Quantities of Quick-silver, Copper and Tin; and contains fourteen large Cities, subordinate to which are twenty-four lesser.

Though this Province hath but a very few Cities, its Circumference is very extensive; but it is also depopulated and ruined by destructive Wars.

The chief City is *Queijang Fu*, and the rest are *Gang-xun Fu*, *Tugven Fu*, *Cinquen Fu*, *Laiping Fu*, *Suckuen Fu*, *Sunan Fu*, *Xecang Fu*, *Tungin Fu*, *Pinjung Fu*, *Pinguen Fu*, *Thaiding Fu*, *Veineng Fu*, and *Mesi Fu*; amounting together as above to fourteen large Cities, which preside over twenty-four lesser.

17. *Funan*, the farthermost Province of *China*, borders Westward on the Kingdom of *Lao*; Southwards on the Kingdom of *Tunkin*, and was formerly accounted amongst the *Chinese* Provinces; but now is only tributary to that Empire.

Cochinchina and *Tonquin* also formerly made one Kingdom; but were afterwards divided into two, and distributed to two Brothers, who carried on very bloody and obstinate Wars against each other.

This Province produces Gold, Silver, Copper, and Tin, in great Abundance, and its Mountains, Rivulets and Streams afford several precious Stones, especially Rubies.

This Kingdom is very large, and was formerly, together with the Title of King, and the absolute Power of governing it at his Pleasure, bestowed on Prince *Vii Sanguet*. He also kept his Royal Court, and built a very magnificent Palace there; but after his Death the whole Kingdom as well as the Court fell to Ruin and Desolation. The Country is partly mountainous, and partly even Ground; the Air heathful and temperate, being neither too hot nor too cold; and in this Province is a Lake which is stored with Fish of different Kinds.

This Kingdom comprehends twenty large, subordinate to which are sixty-eight smaller Cities. The chief City is *Funan Fu*, a charming pleasant City, where Apples, Pears, Peaches, Plumbs, and all Sorts of Fruits, are incredibly plentiful.

The other great Cities are *Quongsi Fu*, *Kaiboa Fu*, *Cinsung Fu*, *Chingkian Fu*, *Quagnan Fu*, *Ivenking Fu*, *Chokium Fu*, *Vitling Fu*, *Tali Fu*, *Mangboroa Fu*, *Junchang Fu*, *Li Jikang Fu*, *Hoking Fu*, *Kintung Fu*, *Juning Fu*, *Xunning Fu*, *Xingan Fu*, *Tungoba Fu*, and *Sinkoa Fu*: These are the twenty above-mentioned Cities which preside over sixty eight.

18. The greatest Part of *Quoangsi* is mountainous, but the Remainder very fertile; one Point of it borders on the Kingdom of *Cochinchina*. Abundance of Cinnamon grows here, as doth also a certain very useful Wood to dye Red; which the *Portuguese* call *Sapao*; and which grows also very plentifully in *Siam*. Here are likewise several excellent Sorts of Wood fit for the making of all Sorts of Cabinet, Joiners or Carpenters Work; besides which, great Quantities of Rice are transported from hence to *Kanton*.

There are thirteen large, and eighty lesser Cities in this Province.

Queiling Fu, the chief City, is very agreeably situated in a pleasant Plain. This Province was formerly

governed by a King, who was a Prince of the ancient Imperial Blood; but he dying without any Heir, his Dowager governed it for some Time; but after her Death, the Royal Court was ruined and demolished; in which State it is at present.

The remaining great Cities are, *Pingeo Fu*, *Viichon Fu*, *Zincheu Fu*, *Nanning Fu*, *Taiping Fu*, *Sunun Fu*, *Teucheu Fu*, *Zbincheu Fu*, *Singuen Fu*, *Chincheu Fu*, (near which grows a certain Plant, of which is made a Sort of Stuff that is worth more than Silk) *Suckin Fu*, and *Chingan Fu*: They altogether commanding eighty lesser Cities.

Very good *Porcelain* is also made in this Province; but the Earth from which it is prepared (as we have already shewn) comes from one Place, and the Water from another: Possibly by reason that it is more efficacious, and breaks the Earth finer, or incorporates better with it, or for other hidden, though natural Reasons: Thus one Place borrows from another what it sometimes doubly restores.

As the greatest Part of *China*, so this Province is very populous, being alone capable of raising a Million of Men able to bear Arms, and containing near two hundred thousand Families.

19. *Quoantung*, called by the *Europeans* *Canton*, is the most Southern Province in *China*; is bounded by the Ocean, and is provided with a very good Haven at the End of a River, which is navigable by great Ships up to the City of *Canton*. The whole is a fertile Country, plentifully abounding with all Necessaries, which draws a very considerable Trade hither, as well with the *Indians* as *Europeans*, from which latter above one hundred *English*, *Dutch* and *Portuguese* Ships annually come to and go from hence.

The last mentioned Nation having made themselves Masters of *Macao*, a neighbouring Peninsula, have there a very fine Haven, from whence they drive a great Trade to *Canton*, but are obliged on that Account to pay annually 50000, some say 500000 *Laens* to the Emperor, each *Laen* amounting to two *Rixdollars*.

“*Macao*, saith *Le Comte*, is famous for the vast Commerce of the *Portuguese* formerly carried on there, before the *Hollanders* justled them out of almost all *India*: And at present they are not able to keep many Forces there. Here is a very good Road for Ships to ride; the Haven indeed is very small, but safe and very commodious. All Customs on imported Goods are the Emperor's: And though the *Portuguese* have still a Sort of Government there, yet they are subject to the *Mandaryns* in all Cases which concern the Emperor.”

They have possessed this Island above an hundred and ten Years. (Our Author wrote about the Year 1694.) and they have strongly fortified and built several Churches and Monasteries upon it. The Commodities for which they chiefly trade with the *Chinese* are Pepper, Cinnamon, Cloves, Sanders, (very useful in dying) Callicoes: The Medicinal Wood, *Pucho*; Ebony, Red Dying Wood; Wine and a Sort of Birds Nests found in the above-mentioned Island. These Birds Nests are esteemed a very good Restorative Medicine: They are commonly boiled for a Quarter of an Hour, and not longer in Chicken Broth; for if it be suffered to boil longer, the whole would dissolve: Each Pound of this cost three, and sometimes four *Laens*; and the white is esteemed best. *Arecca*, being the Fruit of a certain Palm, which is hard, bitter and astringent, is also brought hither to be sold: The *Indians* commonly chew it with the Leaves which they call Betel, which washed in a little Lime-water become red: And the Spittle of those who chew it is of a Blood-Colour: And any Person not accustomed to this Usage upon trying of it becomes very red in the Face, and as it were inebriated, or half fuddled.

This Plant is very much used in *India*; both Sexes biting and chawing it the whole Day, as some smook Tobacco in other Places: It is hot and dry, warms the Stomach, and helps Digestion. It is also boiled in Water, and being astringent, is used in Case of Fluxes. There are

are also brought hither Rhinocero's Horns, Ivory, Furrs, and red Lacca, from whence the finest Sticks of Sealing Wax are prepared: This Drug is the Excrement of a Sort of Worms or Ants, which sticks to the Leaf and Wood of the Plants. We shall hereafter treat of the Fruits.

This Province abounds with white and brown Sugar; and great Quantities of Silk are wrought here, of which all Sorts of Goods are made, and transported hence to *India* and other Places. The *Indians* also buy here great Quantities of Porcelain, Tin, Iron, and Copper-work, Paper, and several other Merchandises and Rarities, most of which are paid for in Silver; but on the other Side a great deal of Gold is transported from *China* to *India*.

The chief City of this Kingdom is called *Quangcheu Fu*, an extraordinary fine City: Which is stocked with and trades in all Sorts of *European* and *Indian* Commodities. About four *French* Miles distant from this City is a Village called *Fuxan*, where the greatest Trade in all *China* is drove: For the Inhabitants keep constantly vast Magazines of all Sorts of Manufactures: And it is reported that sixty thousand Families live in this Village.

This Province hath suffered very much by War. In the Beginning of the Revolution of the Empire, the chief City was besieged by two petty Kings, Princes of the Imperial Blood, with a very great Army, and for above the Space of one whole Year, furiously assaulted and bombarded with Cannon and great Pieces of Artillery, by which Part of the Wall was demolished; notwithstanding which it was not taken by that Means, but delivered by the Treachery of a Person, to whom the chief Command of one of the City Gates was entrusted, who, tempted by a great Sum of Money, and larger Promises, let in the Enemy; after which he received the just Reward of his Treason; for instead of the promised Riches, he was stifled in Sand, after the Enemy had cut all to Pieces that came in their Way, and plundered the whole City: And after this they overrun the whole Province.

“ These Princes were afterwards, one of them King of *Quantong*, and the other of *Fokien*: But those “ Monarchies were but of short Duration; nor did “ they devolve on their Heirs; for all these, one after “ the other were accused of some Crime or other; but “ indeed the true Reason of their Fall was, that “ Sons of State would not permit the jealous *Tartar* to “ suffer any Princes of the ancient Race, of which “ the *Chinese* were not a little fond. This was also “ the chief Reason why *Osangouei's* Posterity were killed, whatever specious Pretences were made Use of “ to colour the Barbarity; such were those drawn from “ the rigorous *Chinese* Laws, which directed the Punishment of Treason to the ninth Generation, and that “ they were thereby forced to it.”

This City was computed to contain eight hundred thousand, or near a Million of Families: And without the Fort or Castle is two Miles in Compass.

One of these Princes was made King of this Country, and built a magnificent and Royal Palace in the City; but being afterwards accused of foul Practices against the Emperor, he was deprived of his Life. And the other Prince, in Reward of his heroick Actions, was created King of *Fokien* by the Emperor then reigning.

The first Prince or King being killed, his Family, household Goods, and royal Treasure, by the Emperor's Order were carried to *Peking*. His Treasure indeed very justly deserved the Name of Royal; for that alone amounted to above one hundred Millions, besides other valuable Effects, and the most splendid Furniture of the Court.

This Province comprehends ten large Cities, which exercise a superior Jurisdiction over seventy four, that are subordinate to them. The superior Cities are *Quangcheu Fu*, already described; *Nankiang Fu*, *Xancheu Fu*, *Hoycheu Fu*, *Xanking Fu*, *Kiaochu Fu*, *Luicheu Fu*, *Liencheu Fu*, *Chauchu Fu*, and *Kincheu Fu*, situate on the Island *Ainan*, which is very considerable on Account of the great

Trade driven there with the Kingdoms of *Tonkin* and *Cochinchina*. The Compass of this Isle is three hundred Miles, and on it are thirteen lesser Cities. Here is also a very fine Pearl Fishery; and Aloes are very common. That Plant grows like a Sort of Reed or Flag, about a Finger thick, but forty or fifty Yards in Height, and is a very good Medicine on several Occasions.

“ *Le Comte*, whom we have so often quoted, relates, “ that there is upon this Island of *Anang* or *Hainang*, “ a standing Water, in which Fish petrify. I have “ my self (saith he) thrown Crabs into it, and observed “ the Claws to be consolidated and so far changed, that “ they differed very little from Flints. But these “ Miracles of Nature are not so peculiar to *China*, for we “ meet with them elsewhere (adds he) and withal a “ great many more Prodigies, and occult Qualities of “ Nature are observable there, but yet all the *Chinese* “ say must not be believed; for though there may be “ some Truth in what they relate, yet in the dishing up “ they are too apt to interlard it with so much fabulous “ Stuff, as frequently inclines us to question the Truth “ of the whole Story. However, the Reader ought “ not to doubt of the Truth of the Petrification of “ Crabs and other Things, by reason that he may at “ Pleasure see that, and other such-like Metamorphoses, “ in Mr. *S. Schynvoet's* *Museum* at *Amsterdam*.

20. The Province or Kingdom of *Fokien* hath suffered very much by several Wars; and before the present Viceroy governed it as a Viceroyalty, was ruled by a potent Prince, who when the *Tartar* seized the Empire, would neither surrender his Realm, nor acknowledge any Subjection to him: But being treacherously invited to Court, on the Pretence of treating concerning some important State Affairs there, though he was forewarned and smelt the Design, he resolved to venture thither, leaving the Regency in his Son's Hands; being the less suspicious, as he thought, that having left the Government in the Hands of so brave a Prince as his Son was known to be, the Court therefore would not dare to injure him; and accordingly he went to the Emperor's Residence, but was kept there. The more prudent Son, though daily invited, persisted to refuse that Favour, being at the same Time convinced his Father was become an involuntary Prisoner at Court: At which being highly incensed, he began, and for several Years bravely carried on a vigorous War against the Emperor; who on the other Side being impatient to reunite this Province to the Empire, was not wanting in the Use of all Means tending to compass that End; pursuant to which he raised a vast Army in order to subdue the young Prince: Who seeing this numerous Force approach him, and finding himself unable to resist such a potent Emperor, repulse his disproportionate Force, and gain his Point, though at several Times he gave them very severe Blows, at last resolved to quit his Country and ship himself off. He accordingly prepared a Fleet, embarked with his Forces, and steered with them to *Taijoan* or the Island of *Formosa*; where he landed, drove out the *Dutch*, and made himself Master of that charming Isle. This Prince is by the Natives called *Quoesing*, but by others *Coxinga*.

The *Dutch East-India* Company had possessed this Island, and had very strongly fortified it.

At the Time of the *Chinese* Commotions, and the great Revolution of that Empire, it was utterly neglected and abandoned to the next who pleased to give himself the Trouble to reduce it. The *Spaniards* of the *Manilhas* or *Lusong*, being but fifteen or twenty Miles distant, and being informed hereof, seized, built and fortified a City on it; which was afterwards conquered by the *Dutch*, who becoming Masters of the whole Island, built several other Forts upon it; and designed, on Account of its very commodious Situation, to have made it one of the most considerable Places in all *India*, and the Centre of their Commerce with the adjacent Countries.

21. *Formosa* is indeed a very beautiful Island, which is naturally fruitful, and the Air healthful as well as temperate, very commodiously situated in the Neighbourhood of *Japan*, *China*, and the *Manilhas*, fit for managing Trade both Eastwards and Westwards: it being possible

fible for Ships to come thither, and go from thence, the whole Year round.

When the above-mentioned *Chinese* Prince *Quoesing* or *Coxinga* landed, there were several large as well as small Ships in the Haven; and upon the Island there were settled nine or ten thousand *Hollanders*, who were as rich, and lived as well as any where besides. But notwithstanding the *Dutch East-India* Company was so strong there, the *Chinese* left their native Country, and blocked up the Haven with their Fleet; they bravely attacked the *Netherlanders*, and their Fortresses, and conquered, burnt or destroy'd them: So that at last they took the City, Ports, and the whole Island: They also exercised several Cruelties on their conquered Enemies, of whom they killed several, and cut off the Hands and Feet of some, and the Ears and Noses of others; after which, they sent these miserable Wretches on board three Ships to *Batavia*. This we must understand as taken from the *Chinese* Accounts.

After this Success, they dispatched away an Envoy to the *Spaniards* at the *Manilbas*, in order to demand a Recognition and Tribute of them; threatening withal, if they refused, to treat them as they had done the *Dutch*. But the *Spaniards* slighting their Menaces, peremptorily refused to comply with their Demands. Before we take our Leave of this Subject, we shall relate another Circumstance that happened to this Prince. He had dispatched three Ships freighted with Silver, under the Conduct of some of his Officers, with Orders to unlade it at *Taioan*. These Officers, instead of carrying it where it was bound, bring it to the Emperor of *China*, who appoints them safe Conduct, and praises the Enterprize. But this Prince being very much enraged at the Treachery, raises an Army of above an hundred thousand Men, and equips an innumerable Fleet, on board of which, with the utmost Dispatch, he shipped his Forces, and unexpectedly sailed up the great *Nankingsian* River, beat both Army and Fleet, by Water and by Land, reducing the Places round about the City of *Nanking*. To which he also laid such close Siege, that he plainly saw that it was feasible, and therefore he absolutely intended to master it in a very few Days: Which he had certainly done, had he not declared to his Army, that it was his Pleasure, that a certain Day should be celebrated with all Manner of Mirth and Jollity, in Remembrance of his Birth-Day, which accordingly began with all imaginable Expressions of excessive Joy; but ended with a bitter Farewel; for the *Nankingers* having Notice of it, and being informed of the Negligence of their Guards, (those upon Duty, as well as those who were not, being all drunk) took that Opportunity to make several vigorous Sallies on the Besiegers from all Parts, fell upon them in the Midst of their Debauch, beat them out of their Trenches, and killed the greatest Part of the Army, a few only escaping, who served to carry the News.

The Prince with his small Remainder returns to his Island, and is reported to be so much affected with this scandalous Loss, that running distracted he bit off a Piece of his Tongue, which Wound occasioned such a Flux of Blood, as could not timely be staunch'd, so that he died of it.

His Son, who succeeded him, being young, and very little experienced in Military Affairs, his Father's Loss remained unrevenged; and thus the fairest Opportunity imaginable of taking *Nanking* was irretrievably lost by an unseasonable Rejoicing, and a scandalous Debauch. [Our Author speaks here in the true Language of a native *Chinese*.]

On the other Side, the Emperor could not rest, till, in order to revenge the atrocious Affront offered to him and the late Imperial Metropolis, by this unexpected Incurfion, and to prevent any such Attempt for the Future, had mann'd out a Fleet of four hundred and fifty Sail, and embark'd on board them Forces enough to take *Taioan*, which was entirely encompassed and blocked up by the Fleet. But contrary to all Expectation, the young Prince taking the Advantage of a favourable Wind, though he had but forty Ships in all, yet by the Assistance of his excellent Sea-Officers,

he heroically attacked, beat, utterly ruined most and destroyed the Emperor's great Fleet. That Monarch, who thus by dire Experience was instructed not to have too mean Thoughts of his Enemy, soon resolved to take juster Measures: Accordingly he renews his Attempt the next Year, and not only sends more Ships and Forces, but took Care that they should more cautiously encompass and closely shut up all the Avenues to the whole Island, and kept it in this blocked Condition. Mean while the Prince slipping no Opportunity to gall his Enemy, imagining the Coast clear, though provided with a very small Number of Ships, boldly flew at his too powerful Enemy; but was beaten out of the Sea, and forced to fly back to his Island, where he bravely defended himself the Remainder of that Year. But the Coasts being encompassed, and consequently a Stop put to all Commerce; besides which, it was also afflicted with a very great Draught, there having been no Rain for five Years; and no Relief appearing, he at length being driven to the last Extremity by War and Famine, found himself forced to surrender his Country, and submit himself to the Emperor's Mercy, who ordered him to be brought to *Peking*. At Sight of him the Emperor (touched by the tender Years, and the heroick Deportment of the Princely Youth) not only spared his Life, but afterwards made him a Present of the before-mentioned Island, and the Title of King of *Formosa*, which he accordingly at present governs.

Thus the whole Empire of *China*, in the Year 1682, was again subjected to one Sovereign, and the Island *Taioan* or *Formosa* submitted to the Jurisdiction of the Province of *Fokien*, with the additional Appellative *Fu*, and is accordingly number'd amongst the great Cities of that Province.

Its Compass takes in a Circuit of five hundred Miles: Sugar and Buck-skins are the prime Commodities there, and this Island is reckoned about forty Miles distant from the firm Land, or Continent of *China*.

22. *Focken Fu*, that beautiful and large City, is the chief of this Province, and is very famous for its Commerce with the *Japonesse*, *Indians*, and *Europeans*, tho' this of late has declined.

This Province contains nine large Cities, amongst which, as is already hinted, the above-mentioned Island of *Formosa* is reckoned as one. Three of these nine are very considerable and large, to which is added another Island, viz. *Haimui*, which is about eleven or twelve Miles in Circuit, is blessed with the finest Haven in the whole Province, and formerly was possessed by the above-mentioned Prince of *Formosa*, and for a long Time bravely held out against the Emperor; but sometime afterwards it was conquered by one of the two Kings, which, as is before related, governed, the one *Canton*, the other *Fokien*. Both of them were rewarded for their great Actions with Donatives; but the King of *Fokien* rebelled against the Emperor.

This King of *Fokien* at the same Time prosecuted a vigorous War against the Prince of *Haimai* by Sea, and the Emperor by Land; who being too feeble to resist them both, submitted himself to the Emperor, on whose Command being come to *Peking*, he and his Son were put to Death.

In these Civil Dissentions in this Empire, there fell, by the above-mentioned Wars, above Forty Millions of Men. The Names of the remaining large Cities are, *Zhivencheu Fu*, *Hinghoa Fu*, *Chaboen Fu*, *Jenping Fu*, *Quien Fu*, *Tingcheu Fu*, *Changefu*, and *Taioan Fu*, or *Formosa*. These nine Capital Cities preside over sixty others.

The Number of Cities in the whole Empire amounts to seventeen hundred; to particularize the Names of all which would take up too much Time, and tire the Reader, wherefore we have only mentioned the Chief of them. I have barely touched on some Events, the Story of which is very well known, happening mostly within the Compass of our Remembrance, and during the Reigns of the last *Chinese* and the present *Tartarian* Families; for it would have taken up too much of the Reader's Patience, to have descended to Particulars: Wherefore

Wherefore I chose rather to supply this short Description mostly from my own Knowledge and Observation, having in the mean Time, in the acquiring of one, and making the other, suffered great Scandals and Afflictions for Christ's Sake, as well as frequently put up my Supplications to him, and implored his Aid in Time of Need, as also that he would please to make his Grace known to the World, which I hereby do, through his great Mercy; desiring the Reader to give as much Credit to these few Pages, as he would to a Person that chiefly writes the bare Result of his own Knowledge and Observation, by which Rule his Pen hath been guided, as it will be in the future Part of this Tract.

I proceed now to treat of the Distances of Provinces, and at the same Time to describe the People of the Country, the Progress of the Christian Religion; the Rivers, Lakes, Shipping, Bridges, and Walls; the Chinese moral Precepts, Education of their Children, Complements, good Manners, and Learning; their Trees, Fruits, and Vegetables; neighbouring Islands, Provinces, Kingdoms, and People; concluding with the Nations that have been subdued or were annexed to China by the present Emperor Canghi.

23. The Metropolis of the Empire, *Xuntien Fu*, otherwise called *Peking*, is situated two hundred Miles distant from *Leaotung* and *Xantung*; about one hundred and sixty Miles from *Peking*. *Xansi* is one hundred and sixty, *Xienfi* two hundred and fifty, *Nanking* two hundred and sixty, *Honan* one hundred and thirty, *Kiangsi* four hundred and thirty, *Chekiang* three hundred and fifty, *Suebuen* six hundred and fifty, *Huquang* three hundred and fifty, *Queicheu* eight hundred, *Junan* one thousand, *Quoangsi* eight hundred and fifty, *Quantung* eight hundred, and *Fokien* seven hundred and fifty Miles or Hours from *Peking*. This is the Distance of all the Provinces from the Court, computing from the Metropolis of the whole Empire to each Capital City of the respective Provinces.

From *Nanking* to *Xantung* is reckoned two hundred Miles, to *Honan* one hundred and eighty, to *Huquang* two hundred, to *Chekiang* one hundred, to *Kiangsi* one hundred and sixty. This is the Distance betwixt *Nanking* and the mentioned capital Cities.

Xienfi is distant from *Honan* two hundred Miles, from *Xenfi* one hundred and fifty, and from *Suebuen* two hundred.

Huquang is distant from *Chiangsi* one hundred and thirty, from *Honan* one hundred and sixty, from *Suebuen* two hundred, from *Quoangsi* three hundred and sixty, and from *Canton* four hundred Miles.

Chekiang lies two hundred Miles distant from *Kiangsi*, and above three hundred from *Peking*.

Canton is three hundred and fifty Miles from *Fokien*, four hundred from *Quoangsi*, and three hundred and eighty from *Kiangsi*.

Junan is distant from *Quoangsi* three hundred Miles, from *Queicheu* three hundred and thirty, and from the Kingdom of *Laos* three hundred. These are the reciprocal Distances of the capital Cities, computed according to the common Land Measure.

The Maritime Provinces are, *Zantung*, *Nanking*, *Chekiang*, *Fokien*, and *Quantung* or *Canton*.

Nanking, *Chekiang*, *Hucvang*, *Kiangsi*, *Junan*, *Canton*, and *Fokien*, are esteemed the finest Provinces.

Xantung, *Xansi*, *Xienfi*, *Peking*, *Honan* and *Leaotung*, are of the middle Sort.

But *Queicheu*, *Suebuen*, and *Quoangsi* are accounted the worst of all, by reason they are very mountainous, and very much impoverish'd by the Wars.

The largest Provinces are *Xiengsi*, *Huquang*, *Nanking*, *Junan*, *Kiangsi*, and *Chekiang*; each of these larger Provinces is above three hundred Miles wide, and much longer. Compared with these, the middle-siz'd Provinces are *Peking*, *Xantung*, *Quoangsi*, *Queicheu*, *Honan*, and *Fokien*, and so accounted, because they are not above two hundred Miles broad; and also *Quantung*, which is but one hundred and fifty Miles long, but full three hundred Miles broad; by which Rule, *Xansi*, *Leaotung*, and *Suebuen*, are likewise reckoned but small

Provinces, since they are but about one hundred and fifty Miles broad, and one hundred and sixty in Length.

The principal Maritime Trading Cities, Towns, and Places, which are frequented by the *Indians*, *Japonefe*, and *Europeans*, are the following ten, viz. *Canton*, the Isles of *Macao*, *Hainan* and *Chaocheu*; all which belong to, and are dependant on the Province of *Quoantung*; and belonging to *Fokien*, are *Fochen Fu*, and the Islands *Haemui* and *Tajouan*, or *Formosa*; these drive on a vast Trade with the *Europeans* and *Indians*: Besides which, there are also two Cities in *Nanking* and *Xangbai*, and the City *Nimpo* in the Province of *Chekiang*; all which have a very considerable Trade with the *Japonefe*. In the Province of *Xinsi* or *Xienfi* is the great City of *Zinning*, which is a most noble Emporium, being the Centre of a vast inland Commerce with the Western *Tartars*, *Moungalls*, *Tibetts*, and *Russians*.

"The Island of *Macao*, which is mentioned above, belongs to the *Portuguese*; and they have upon it a Fort and City, if that Name may be given to a few Houses, which are not enclosed by any Wall: This Place is famous for the Trade which the *Portuguese* drove there before the *Dutch East-India Company* chased them out of *India*. What they at present possess is by Favour of the *Chinese*, to whom they are obliged to pay servile Obedience, if they intend quietly to enjoy what they hold: All Customs for Goods imported here are paid to the Emperor; and though the *Portuguese* preserve a Sort of Government here, their Power extends no farther than to Cases which do not concern the *Chinese*; for they are otherwise subordinate to the Jurisdiction of the Mandarins of *Quoantung* or *Canton*.

24. It may possibly contribute to the Information, as well as Entertainment of the Reader, to peruse the following very succinct and comprehensive Account of this Empire, written within these few Years, by an *Italian* that has resided upwards of thirty seven Years in the Empire, for the Satisfaction of an illustrious young Prince, whose Inclinations leading him to procure the most certain Intelligence, as to the present State of all Nations, had found Means to request this Favour of one, who of all others, had the greatest Opportunity of satisfying his Curiosity. There is nothing taken from the Piece, except the introductory and concluding Compliments, which having nothing to do with the Matters of Fact, it was thought necessary, for the Sake of saving Room, to strike them out.

"As to the Extent of this Empire, it is not easy to speak of it with Certainty, for with Regard to the *Europeans*, they have no Opportunity of examining the Frontiers on every Side, in such a Manner as might enable them to decide on this Head, with any Degree of Exactness; and as for the *Chinese*, they have fewer Occasions, and much less Abilities for a Work of this Sort. To say the Truth, the Thing itself is scarce practicable, there being nothing more difficult, than to fix the Extent of the Territories of the *Tartar* Princes, dependant upon this Empire, and yet without this, there is no doing any Thing. It is true, the old *Chinese* Writers tell us, that their Empire was formerly much greater than it is at present; that *Japan* was once subject to them, as also the Kingdoms of *Tunkin*, *Siam*, &c. and part of the Dominions of the Great Mogul; but for all this, I am apt to believe, that since the *Tartars* became last Masters of *China*, which is now a compleat hundred Years, the Empire is to the full as large as ever it was. Its Bounds at present are the Dominions of the *Russians* on the North, the Ocean on the East; and on the South, for I look upon the Peninsula of *Corea* as dependant upon this Empire; on the West, they have great Deserts, and the Countries under the *Contaiish Khan*, which stretch as far as the *Russian Territories*; and this is all I am able to say, as to the Extent of this Empire, except that according to a Perambulation that I have seen, the Line of their Boundaries is computed at about seven thousand Miles, which, as far as I am able to judge, does not exceed the Truth.

"I can

" I can speak more particularly, as to the Climate ;
 " it extends from 18 Degrees of Latitude to 55, and con-
 " frequently takes in all the Climates from the third to
 " the tenth, so that the longest Day in the most South-
 " ern Parts is thirteen Hours and a half long, and in
 " the most Northern about seventeen Hours. The
 " Heat is great in the Southern Provinces, and the Cold
 " very severe in the North. As to the former, I have
 " been upon the Coasts of *Bengal*, and I think it not
 " at all warmer than in *China*. I have been also in
 " *Poland*, and did not find it so cold there as in the
 " Northern Parts of *China*, or rather of *Tartary* about
 " the River *Amur*. By this Means they have at *Peking*
 " all Sorts of Fruits, by which I do not mean every
 " Kind of Fruit, but of those different Sorts that are
 " peculiar to the warmest and coldest Climates ; as for
 " Instance, the most high flavoured Oranges and well-
 " tasted Apples ; but there is this Difference between
 " them, that Nature brings the Southern Fruits to the
 " highest Perfection with little or no Culture, whereas
 " those of the North require a great deal, which however
 " the *Chinese* never bestow upon them ; hence therefore
 " three or four Sorts of Apples, and five or six of Pears,
 " is all they can boast ; and as for Cherries, they have
 " them both red and black, but they are neither of
 " them good, though they might have them, if they
 " were at Pains, in the utmost Perfection.

" It is easy to discern from hence, that there are no
 " Kind of Commodities or Manufactures wanting in
 " this Country, and a very few Specimens will convince
 " you of the Truth of this ; they have the very best
 " Silks of all Kinds in the World, and in a vast Abun-
 " dance ; they have very rich Furs, which I take to be the
 " opposite of Silk ; they have also prodigious Quantities
 " of Cotton, and are not deficient in Wooll. They
 " have Metals of all Sorts in great Plenty, except Lead ;
 " they have likewise all Kinds of Wood, Sugar in the ut-
 " most Abundance, and Spices sufficient for their
 " their own Use, and yet they use a vast deal. It was
 " from a true Sense of their own Abundance, that the
 " ancient *Chinese* were averse to Foreign Trade ; and if
 " the *Tartars* permit it, it is upon this Principle, that
 " their Subjects are vast Gainers by it ; for except Toys
 " and Lead, there is Nothing comes to a good Market
 " in *China*.

" At present the Empire of *China*, exclusive of its
 " Dependencies, is divided into fifteen Provinces.
 " Those of *Chenfi*, *Chanfi*, and *Petcheli*, in which last
 " is the Imperial City of *Peking*, are bounded by the
 " famous Wall which divides *China* from *Tartary* ;
 " those of *Chan tong*, *Kiang nan*, in which is *Nanking*
 " the old Capital, *Tche kiang* and *Fokien* lie on the
 " Eastern Ocean ; those of *Quang tong*, *Quangsi*, *Yun nan*
 " *se tcbuen*, lie on the South, and on the West ; *Honan*.
 " *Hou quang*, *Koei tcbou*, *Kiang si*, are Midland Pro-
 " vinces. They divide their Towns into four Ranks,
 " which it is impossible to describe ; the three first have
 " Names, the last are such as are under the Jurisdiction
 " of the rest, and consequently have no particular De-
 " nomination. The great Cities they stile *Fou*, and
 " of these they reckon one hundred seventy three. The
 " larger Towns they call *Tcheou*, and of these they
 " reckon two hundred thirty five. They give their
 " biggest Boroughs the Name of *Hien*, and of these
 " they reckon eleven hundred and seventy three ;
 " as for the subordinate Places, I dare not call them
 " Villages, for many of them are walled, and some of
 " them contain fifty thousand Souls ; these, I say, are
 " without Names, and without Number.

" They pretend to be very exact in their Computati-
 " ons of the Number of their People, and from the
 " best Enquiry I have been able to make, though the
 " Thing must appear romantick and ridiculous in *Eu-*
 " *rope*, I am convinced that they are not much beyond
 " the Truth, in affirming that their Emperor has sixty
 " Millions of Souls in his Dominions.

" One would imagine, that vast Difficulties must
 " arise to the Government, from such a Multitude of
 " Subjects, but it is quite otherwise, for Government is
 " with them a systematical Thing, reduced under cer-

tain Rules, with which, so far as he is concerned, every
 " Man in the Empire is acquainted, and most of them
 " no farther. The Emperor himself has his Circle of
 " Business, which he is obliged to go through, and
 " which cannot be done for him, and therein consists
 " the great Secret of their Policy. He has always the
 " State of some Province or other under his Inspection,
 " and when one is finished, Nobody knows which will
 " be the next ; but all these Inspections are made with
 " great Strictness and Severity. It is true, that in some
 " Province or other, Corruption prevails perhaps for
 " twenty or thirty Years, but it is as true, that some
 " Time or other all this is redressed, and Things are
 " brought back again to their original Institution ; the
 " first Maxim in the *Chinese* System is, that the Em-
 " peror acts as the Father of his People, he may indeed
 " be a bad Father, but he would be soon told of that ;
 " by his absolute Power he might dispatch this Moni-
 " tor, but that would quickly produce more ; there are
 " always many Patriots in *China*, who for the Sake of
 " that Glory, which results from doing good to the So-
 " ciety, are ready to lay down their Lives ; yet after
 " all, Things are seldom pushed to this Extremity, and
 " it is more common to see the Emperor confessing his
 " Faults and Weaknesses in his publick Edicts, which
 " are generally calculated to repair them, and are usually
 " concluded with many fair Promises for the Future.

" It is certain, that the People are very corrupt, and
 " that this Corruption runs through all Ranks ; but
 " their Scheme of Government is so wise, that sooner
 " or later these Corruptions are met with ; so that Vice
 " ebbs and flows, and is driven out of one Province,
 " when it gains Ground in another ; but still there is
 " such a Stock of Virtue, as serves to preserve the
 " whole, and to keep the Machine moving. Capital
 " Punishments are very rarely inflicted, for there are
 " more Executions in a Year in *Naples*, than in all
 " *China* ; one Year with another, there are not three
 " in *Peking*, but there is a kind of Punishment more
 " exemplary, and more useful than Death, that is very
 " common, their Mandarines, even of the highest Order,
 " may be degraded, and he who had Yesterday a Train
 " of twelve hundred Men, shall be To-day upon a Le-
 " vel with the meanest of them, but never without
 " Cause ; for though there is Injustice enough in all their
 " Tribunals, yet the last Resort is pure, and the *Tartar*
 " Emperors have been hitherto the Fathers of their Peo-
 " ple, in almost all ; but in that Respect more especially.

" Their Armies are very numerous, and according
 " to their Mode very well disciplin'd, yet their Fire-
 " Arms are but indifferent ; it is their Numbers that se-
 " cure them from any Danger from their Neighbours ;
 " in one Thing they are singular, their Motions create
 " no Disorder, a Body of fifty thousand Men will
 " traverse the whole Empire without taking an Egg or
 " an Apple by Force. Their Traders are all Cheats, and
 " their being so is no great Inconvenience or Detriment
 " to Commerce, for it makes them all very expert and
 " attentive ; since their Maxim is, that it is not the Per-
 " son who does the Wrong, who imposes upon ano-
 " ther, but he that is outwitted that does wrong himself.
 " As great as their Country is, the Number of People
 " that are in it would soon be reduced to Starving, if
 " every Spot was not cultivated that will admit of it,
 " and every Hand employed that can work.

" This is a short but a true Representation of this
 " Empire, and of those that compose it. It is not
 " like to extend itself, but it will certainly last for
 " many Ages. The *Chinese* will never make Conquests
 " or push their Foreign Commerce beyond its present
 " Bounds. *Ningpo* will be the Center of the *Japonesse*
 " Trade, *Amoy* of the *Indian*, and *Canton* of the *Eu-*
 " *ropean*, as long as they continue a Nation. They
 " have been long free from intestine Commotions, but
 " in succeeding Times they may be exposed to them ;
 " and yet those Revolutions, though destructive to In-
 " dividuals, can hardly be dangerous to the Empire.
 " The Prosperity of their own Government is the sole
 " Object of their Consideration ; their Statesmen, and
 " more especially their Emperors, are far from being

“ so ignorant of Foreign Affairs as is imagined ; they
 “ know enough of them for their Purpose, and they
 “ have neither Leisure, Occasion or Inclination to know
 “ more ; they are naturally civil to Foreigners, but at
 “ the same Time they are naturally jealous of them.
 “ To sum up all, they look upon themselves to be the
 “ Wisest, the Greatest, the Richest, the Happiest, and
 “ the most Powerful of all Nations ; and, exclusive of
 “ their Spiritual Concerns, those who are best ac-
 “ quainted with them, will think them the least mis-
 “ taken.

25. After this concise Detail of the *Chinese* Affairs, it is Time to hasten to the End of this Subject, by giving our Readers the remaining Part of *Dionysius Kao's* Description and Account of his own Country, which is written in so plain, so distinct, and so just a Manner, that it will be easily perceived it differs as much from the Accounts given us by the Jesuits, as it is possible for Pieces to do that are written upon the same Subject, and neither of which can be said to be absolutely void of Truth : For most of the Descriptions given us by the Missionaries, are penned in a high-flown rhetorical Stile ; and every Thing in them is represented so much beyond the Life, that either we do not conceive it at all, or the Notions we form are quite beside the Truth. But what our *Chinese* writes is in an easy, simple, and familiar Way, and in such a Way as leaves us no Doubt that he tells us the Truth, and nothing more or less than the Truth. In his Account, the Reader will observe a Clearness and Candour that is scarce to be found in any other Thing of the like Nature, as well as a Strain of sincere Piety, that has very little in it of Superstition, and nothing at all of that Hypocrisy and Cant with which most of the Descriptions of *China* are burthened. The Contents of it will very fully support and confirm what is delivered in the foregoing Memorial, and afford a Picture at whole Length, of what is there represented only in Miniature.

Before we put an End to this Section however, I crave Leave to make one Observation of my own, which I flatter myself will enable the Reader to deliver himself from a Difficulty that has hitherto been thought almost inextricable. It is this : Some Writers, very well acquainted with *China*, represent its Inhabitants as the most ingenious, the most penetrating, and the most happy in their Inventions, of any People in the World ; while others again, who pretend to know them full as well, positively assert, that their Notions are narrow, their Inventions mean, their Execution very incorrect, and that, in short, they fall full as much below the *Europeans*, as their Admirers would place them above them. Now common Sense seems to teach us, that one of these Opinions must be absolutely false, and yet it is not very easy to distinguish which, since the Authorities on both Sides are pretty nearly equal.

On the strictest Enquiry I begin to think, that both these Notions, properly understood, are reconcileable enough to Truth, and even to one another. If we compare the Arts and Sciences of *China* with those of *Europe*, there is no Doubt that in most Things they fall very far short ; and yet compared with the rest of the Eastern Countries, their Knowledge and their Performances are very extraordinary.

But on the other Hand it is to be considered, that the *Europeans* have had much greater Experience, and much better Masters : For as to the former, it is notorious that we have all the Lights which various Countries and various Ages can bestow, what the *Greeks* left unfinished to the *Romans*, what the *Romans* farther perfected, and what, upon the Revival of Arts and Sciences in *Italy*, was cultivated with that Zeal and Diligence, which is natural when Arts are emerging out of Barbarism, at once excites and directs our Endeavours in these later Times. But besides all this, there is and has been a vast Spirit of Emulation in the different Parts of *Europe*, and what has been first struck out in one Country, has been altered, improved and carried to the highest Perfection in another. By this Means we are become, in most Things, infinitely superior to the *Chinese* ; but if we consider Things in another Light, we must allow them to be superior in their Turns.

They have been always a distinct and detached Nation, having nothing to do with the rest of the World, or at least nothing to do with in this Respect ; all that they have acquired, with regard to Science, all that they perform, in reference to Arts, is solely of their own Invention, Prosecution, and Improvement ; and therefore they deserve in this Sense the highest Praises. If Printing, Artillery, the Use of the Compass, and many other Things, seem very rude amongst them, in Comparison of that Neatness and Perfection to which they are arrived with us ; yet we cannot deny, that they had them long before us ; and after all, there may be many Things said in Excuse of that State in which they are found here ; for their Manner of expressing their Language in Characters, the Method they use in Printing is better than ours ; their Artillery are sufficiently serviceable for any the Purposes to which they employ them ; and as to their Navigation, considering the Maxims upon which their Commerce is carried on, it may be very doubtful whether they wish, and consequently we need not wonder, that they are not solicitous to arrive at any farther Perfection.

Thus I apprehend this Knot is fairly untied, and the Dispute settled, as to the Proficiency of the *Europeans*, and the Ingenuity of the *Chinese* ; if the former excel in the one, so do the latter in the other ; and if we know Things better, we have this Knowledge from others ; whereas they have all from their own Stock, and had all they have much earlier than we.

SECTION VI.

A copious, accurate, and authentick Account of whatever is most remarkable in Regard to Persons or Things throughout the whole Empire of *China* ; more especially the Number of the Inhabitants in general, and of the Christians in particular ; the Rivers, Shipping, Lakes, Bridges, &c. The different Religions that prevail, and have prevailed, amongst the People ; their Manners, Ceremonies, and extraordinary Politeness. Of the remarkable Trees, rich Fruits, and valuable Drugs in this Country ; together with a suc-

and Account of those Kingdoms, that either now depend, or formerly depended upon it.

By DIONYSIUS KAO, a Native of China.

1. An Account of the vast Numbers of People in this Empire, together with Proofs of, and Reasons for, its being so populous.
2. An Account of the Progress of Christianity, and of the Number of the Christians in China towards the Close of the last Century.
3. The Situation and Extent of the famous Chinese Wall; the famous Rivers, and prodigious Quantity of Shipping in this Empire.
4. Of the most famous Lakes, the most remarkable Bridges, and the most celebrated Ports in China.
5. The Religious and Philosophical Opinions of the Chinese, more especially those of Confucius and his Followers.
6. Of the breaking out of a detestable Heresy that still prevails in this Empire, and of the Entrance and Progress of Idolatry amongst the Chinese.
7. Of the Prevalence of Atheism in this Country, the Nature of it, and the pernicious Effects of their superstitious Regard for Antiquity.
8. Of Deism, or Natural Religion, as professed and practised by the wisest and best Sort of People in China.
9. Of the Established Religion among the Tartars, their Lama's or Priests, and of the Dalai Lama, or Living God; with the surprizing Progress of this absurd Superstition.
10. Of the Ceremonious Civilities and Compliments established by Law in China; and of the Rules prescribed to all Ranks of People in Reference to Things of this Nature.
11. Of the Marriages amongst the Chinese; of their Manner of Living in their Families, and other Things of that Nature.
12. Of their Funeral Solemnities, their long Mourning, and the superstitious Honours paid to Persons deceased.
13. Of the Lanthorn Feast, and of other publick and private Festivals observed by this Nation.
14. Of the Trees, Fruits, Flowers, Herbs, Drugs, &c. in China.
15. Of the Animals, Mines, Metals and Minerals in this Empire.
16. The Author's Account of Japan, Corea, Formosa, Tunkin, and Laos.
17. Of other Countries formerly dependent on, or that have been lately subjected to the Emperor of China.

I N the Villages and Towns, as well as Cities in China, the People are reckoned not by ten or hundred thousands, but by Millions: Their Numbers are so vast, and China so prodigious populous, that it really seems incredible; and those who have taken a View of this Country from an exalted Place, have always compared the Number of Men to that of Ants creeping in Crouds amongst one another. They are indeed so numerous, that common and very indifferent Houses are charged with five or six Families: And the Roads, Streets and Lanes, are so crouded, that it is scarce possible to pass without jostling one another. All this will appear yet more surprizing, if it be consider'd, that no Woman appears in Publick in any Part of China, except at Peking; they never going on Foot, but are carried in covered Seats or Chairs, wherever they please.

The most populous Cities are Nanking, Hangcheu, Sucheu, Peking, Jungcheu, Canton, Fochien, Viuchang Fu, Chengcheu, and Zuencheu, besides several others. Not to mention the fabulous Relations concerning the first planting and peopling of Countries, I am of Opinion that the first Inhabitants of this Empire were the Descendants of Shem, Noah's eldest Son; for in the Division of the World they seem to be all distributed in Asia, of which China is Part: And at the Confusion of Babel, traversing that Quarter of the World, probably settled here, because they found no Part of it better than this, which is blessed with a healthful Air, temperate with Regard both to Heat and Cold: The Fertility of the Pasture Grounds, which richly feed all Sorts of Cattle, invited their Choice, and in a Manner forced them to take up their Abode here. After which, Experience confirm'd the Happiness of their Choice, by their being amply provided not only with all Necessaries to human Life, but even with whatever Luxury could wish. Industry, Art, and Prudence, improv'd the natural Liberality of the Soil, and engaged the Neighbours to think China the Garden of the Universe, and its Inhabitants the wisest and most polite People in the World; and that those of their Neighbours, who succeeded best in the Imitation of them, were next them esteemed the most intelligent People of Asia. Buoyed up by this vast Reputation, they extended the Limits of their Empire far beyond the Bounds of China: And not only Tunkin, Cochinchina, and Laos, besides several neighbouring Islands; but the Kingdoms of Siam, Pegu, Part of Tartary, Camboja, and Japan, have been

subordinate to them, as may be sufficiently proved by their complying with and continuing to make Use of the same common Customs; which is also confirm'd by the Chinese Empire, being known to be above one thousand Years old, and to have always retained the same Language, Doctrine, Government, and Habit, down to this Time. Though indeed one Exception lies to that General Rule, which happen'd about fifty Years past; and that was the changing their Fashion of wearing their Hair, when the Tartars overpower'd their Monarchy; but that Alteration was a coercive Acknowledgment of their wretched Slavery.

The Chinese formerly wore long Hair, of which they were not a little proud, adorning it with Gold Wire, and firmly believing that they should be drawn up to Heaven by it; which doubled the Severity of the Command that obliged them to part with it, and comply with the Tartarian Fashion; and engaged them rather to sustain the Fatigues of a cruel War, at the Expence of a great many Lives, than suffer their Hair to be cut off: But the Tartar had proceeded too far to be opposed. However, the Prudence of the Emperor, and the Mildness of his Government, permitting the Chinese Men of Quality, called Mandarins, quietly to enjoy their important Posts, somewhat alleviated the melancholy Reflections, occasioned by this Loss, and their Slavery; for the Tartars having subjected China, did not shew themselves solicitous to make any Alteration in its ancient Form of Government; and, as I just now hinted, the Chinese Mandarins remained in the same State and Character as before, only having an equal Number of Tartars added to them: And by these subtle Measures the foreign Power, which they were always jealous of, stole in upon them. And this Maxim was so well observ'd, that all the Courts of Justice, from the highest to the lowest, were equally supply'd with a Tartarian and Chinese Judge; and indeed the whole Government is jointly entrusted in the Hands of Tartarians and Chinese, and to this present Time, peaceably administered in Subordination to the Commands of the Emperor of China and Tartary.

In the Reign of the present Emperor, the Christian Religion is more freely indulged than ever; so that we ought not to despair, but that the whole Empire of China may in Time embrace that Faith which only leads to Salvation. And from the first Entrance of the Missionaries into that Empire, they have continually used their utmost Industry, to engage this subtle Nation to embrace

embrace Christianity, and plant that saving Doctrine, which is at this Time very widely spread in *China*.

Kanghi, the present reigning Emperor, in the Year 1692, granted to the Missionaries and Jesuits, Freedom for all the World to worship God in their Churches, which is the same as to become Christians; and this Edict, pursuant to the Emperor's Pleasure, was ratified by the Supreme Court of Justice of the Empire; and empowered those, who thought fit to cause themselves to be baptized, afterwards freely to exercise the Christian Religious Worship, without the least Interruption, which before that Time was prohibited; a Favour that had long been earnestly desired, and before which the Christians had run through many severe Persecutions: But now by the Divine Goodness, we are delivered from sore Afflictions and Oppositions, for which we continually return our Thanks to Almighty God.

About the Middle of the sixteenth Century, *Francis Xavier*, designing to plant the Gospel here, died in Sight of Land, as he was coming from *Japan*: After him several Missionaries and Priests came into this Country with the same Intent, viz. *Martinus Xerrada*, *Geronimo Marino*, *Michael Rugieri*, *Piedro Alfaro*, and *Matthias Ricci*, besides several others, who a little before the Year 1600, laid the first Foundation of this good Work in the Reign of the Emperor *Vanlie*. Father *Ricci*, whom we named last, distinguished himself above all the rest; he converted several of the Nobility, and acquired a very great Reputation; he perfectly understood, and fluently spoke the *Chinese* Language; and being a sedulous and faithful Labourer in the spiritual Vineyard, made the most successful Beginning, on which Account he hath always been thought the first of the Missionaries.

Whilst this Father *Ricci* was in *China*, and in the Reign of the Emperor *Vaile*, the *Tartars* made an Irupition into *China*, took several Cities, and conquer'd several Countries; but were shortly repulsed by that illustrious Prince; after which he ruled in perfect Peace, and in the Year 1620, the eight and fiftieth of his Age, and forty eighth of his Reign, he died. Not long before, about the Year 1615, arose a furious Persecution, which threatened the utter Extirpation of the Faith that was so lately planted. These exorbitant Cruelties were principally pushed on by *Chinkio*, one of the chief Magistrates of *Nanking*; and by a malicious Cunning the Shepherds were the most vigorously attacked, in order the more successfully to destroy the Flock; but after they had suffered great Afflictions for the Space of six Years, their Persecutor was punished by Death, and the Church recovering her former Liberty, began to increase daily, especially after the Arrival of Father *John Adam*, *Schaal* or *Scaliger*, whose Learning, Mathematical Knowledge, and prudent Conduct, acquired for him one of the chief Places in the Emperor's Favour, and the good Opinion of the whole Court; which furnished him with an Opportunity of farther propagating and confirming Christianity. And though in the Interim the great Revolution happened, which transferred the Crown to the *Tartarian* from the *Chinese* Family, by the Death of *Zunchi*, the last of the Race of *Taiminga*, which had swayed the Imperial Sceptre for the Space of two hundred and eighty Years, and produced in that Time sixteen Emperors; yet the sagacious Father *Adam Schaal* render'd himself so agreeable to the new *Tartarian* Court, that he became President of the Tribunal of Mathematicians, and continued, though not without Envy, the Emperor's Favourite; and after having enjoyed that Post for several Years, died in 1665.

2. *Yamquamsten*, the wicked Instrument of the most cruel Persecution that ever was in *China*, succeeded Father *Adam Schaal* in his President's Charge: But his Reign did not continue long, being opposed by Father *Ferdinand Verbiest*, who clearly demonstrated his Abilities for that Post to be far superior to those of his Persecutor; wherefore he was promoted in his Place, and *Yamquamsten* fell into such a Disgrace, that he narrowly escaped a Sentence of Death, as the Reward of his Perse-

cution against Father *Adam*; a Stop being put to that Persecution by the especial Mercy of the Emperor.

After the Death of Father *Ferdinand Verbiest*, in the Year 1688, which was lamented by the Emperor himself in a Funeral Elegy, he was succeeded in the before-mentioned Charge of President of the Mathematical Tribunal by Father *Philip Grimaldi*, who filled that Post as honourably as his Predecessor, and advanced himself to such a high Place in the Imperial Favour, that in the Year 1689, he was sent Ambassador from the Emperor into *Europe*, to adjust some important Affairs in *Muscovy* with the Czar; his President's Post in the Tribunal being worthily supplied till his Return by the Fathers *Thomas Pereira* and *Anthony Thomas*.

"This is the same Father *Pereira*, who, in Conjunction with Father *Gerbillon*, was twice sent, they being dignified with the Title of *Mandaryns* of the third Rank, as Interpreters in the great Embassy and Treaty of Peace at *Nepchou*, by the *Muscovites* called *Nerzinskoy*, and of whom it is reported, to their great Honour, that they suggested the Measures which render'd the Treaty of Peace betwixt the *Muscovites* and *Chinese* successful. To which Purpose, *Gerbillon* went several Times alone to the *Muscovite* Camp, and so far convinced that Nation of their true Interest, that the Treaty of Peace betwixt the two Empire was ratified and sworn on the 3d of September, 1689."

The Number of Christians daily increased, from the Respect paid to the Jesuits by the Court, and the Emperor's zealous Inclination for the *European* Arts and Sciences, insomuch that the least Number of Christians computed to be in *Peking* was sixteen thousand; in *Nanking* an hundred thousand. In the abovesaid large trading Village or Town *Xanghui*, there were but ten thousand; in the Province of *Chekiang* are reckoned seven or eight thousand; in *Koangsi* they amount to about ten thousand; in *Huquang* there are six or seven thousand; in *Canton* about ten thousand; in *Fokien* about five thousand; and in *Xiensí* about three thousand. The whole Number of Christians throughout the whole Empire being computed to amount to two hundred thousand. But the Number of Shepherds which carefully watch this Flock, and sedulously endeavour the Conversion of others, is not above sixty.

3. The prodigious Wall which covers this Empire, is called by the *Chinese* in their own Language, *Vauli Tcham Tcham*, and was built some Centuries before Christ's time by the *Chinese* Emperor, *Chien Chu Voang*, in order to prevent the Incursions of the Western *Tartars*: For which End it is extended from the *Leaotungian*, or oriental Sea, far beyond the Middle of *Xiensí*, and includes the Provinces of *Peking*, *Xansi*, and almost all the Country of *Xiensí*: Its Length is computed directly as a right Line at above 650 *French* Miles, but reckoned as a Curve Line amounts to one thousand: Whence its *Chinese* Name was derived, which imports a thousand Miles: It is full eight Ells thick, and six high. It is not a little surprizing to see this bulky Wall in a Manner skip over the most terrible and steep Hills, and to observe three or four lofty Towers or Forts within the Compass of every Mile, as well as its having run through so many Ages, and its being in such good Case at present, which is owing to constant Surveys, and timely Repairs. The two principal Rivers in this Empire are, the Yellow River, in *Chinese* called *Hoangso*, and *Yangzu Kiang*, that is the Son of the Sea, so called on Account of its vast Depth and great Breadth, it being full two Miles wide: It is also called the *Nankingian* River, because it runs through the Province, and close by the City of that Name. This last River is navigable throughout the whole Empire; several small Lakes as well as several Rivulets fall into it, which rise in the Provinces *Kiangsi*, *Huquang*, *Quangsi*, *Quoantung*, *Chekiang*, *Suchuen* and *Honan*; and there are besides, Passages cut and rendred navigable from this to the other principal River. The Course of the Yellow River is extended to a very great Length, and runs through several Countries, it is also very deep, broad in some Places and narrow in others: It rises out of the Lake in

in the Western Quarter of *Tartary*, and runs through the Provinces of *Xansi*, *Xienfi*, *Honan* and *Nanking*, where at last it falls into the Sea. This River is scarce navigable by Reason of its prodigious Rapidity, and the vast Floods which frequently descend into it from *Tartary* and the Northern Parts, (through which it runs;) and sometimes prove very mischievous to both Men and Cattle, by carrying away Houses, Hutts, Fields and whatever is upon them, and at other Times sweeping away whole Villages and Cities.

Besides these two Principal there are other Rivers, as *Zbientangkiang* which is very broad, but not comparable to the two former in Length or Depth; running only through the Province of *Chekiang*, and then falling into the Sea. The remaining Rivers, though some of them are large, are much less considerable than these which have been described.

Besides the natural Streams or Rivers, here are several artificial large navigable Channels; most of the Provinces are provided with one of these broad Channels of long Extent, for a Conveyance from one Province or River to another: They are commonly cut in a direct Line, paved with flat Stones, and adorned with beautiful lofty Stone Bridges, the Arches of which afford a very fine and regular Prospect. Some are of Opinion that the Yellow River was cut by human Industry, above three thousand Years past, by Order of the Emperor *Juwoang*: And to strengthen their Assertion, they add, that the Land whereabouts it rises was overflowed by a vast Inundation of Water, and that the Emperor, in order to draw it off, caused a very wide and very long Channel to be dug, which making Way for this Deluge, it broke through, and discharged itself with such Force into these artificial Channels, that it composed the Yellow River. But this meets with a very cool or rather no Credit; it not being possible for the Flux of Waters occasioned by such an Inundation perpetually to supply a River, whose Length is above six hundred Miles, and the Current of which is so strong, besides its vast Depth and Breadth.

There are navigable large and convenient Canals to all Places of the Empire, except only in the Provinces of *Suchuen*, *Queicheu*, *Xansi* and *Xienfi*.

In *China* the Quantity of Ships is innumerable as the Sand of the Sea: Those which carry Corn only to *Peking* amounting to 9999 large Ships, sufficient to carry above thirty or forty thousand Weight: And their Passage from *Nanking* to *Peking*, being seven or eight hundred *Italian* Miles, mostly through artificial Channels, take up full six Months time. Besides these, there is an equal Number of Ships made use of to carry Silk, Stuffs and other Goods thither; so that they are prodigiously numerous, besides the Ships which belong to particular Merchants: So that it is not only feasible to step from Ship to Ship as on a Water-Key, from *Nanking* to *Peking*, but as the Jesuits expressing their incredible Number say, if it were but practicable in other Respects, here are Ships enough to make a Bridge from *China* to *Europe*.

"The same Number of Nine thousand nine hundred ninety nine being before-mentioned, we will explain both Passages here: *Le Comte* saith that the Barges from eighty to an hundred Tuns burthen, make this Voyage once in a Year; but in another Place he tells us, That 9999 are always kept in a Readiness; to which he adds, so runs the common Report of the People, by Reason that such a Sort of Expression in their Language imports a much larger and indefinite Number, which may fairly be construed ten thousand.

"The same *Le Comte* calls it a watry Road, destined for the Transportation of Grain and Stuffs from the Southern Provinces to *Peking*. The Number of Ships (saith he) is so large, that whenever one sees that numerous Fleet pass by, one would be apt to say, they were laden with all the Tribute and Treasures of the East, and of all their Monarchs, and that one of their Returns would furnish sufficient Stores of Provision to supply all *Tartary* for many Years."

Besides these smaller Vessels, there are at *Nanking*, and

also several other Havens of the Empire, Ships which are twice as large as these, being of seventy or eighty thousand Weight Burthen; and these serve to carry Salt to every Port in the whole Country. There are also Abundance of magnificent Barks or Ships which belong to the *Mandaryns*, Governors, and others of the Nobility, which are provided with spacious Halls and Apartments, very richly furnished, as also with Galleries, Rails, Windows and Doors, for Convenience and Pleasure; they are besides finely gilt, lacquered, and beautifully painted with the finest Colours. There are likewise several Pleasure-Boats, made Use of by the *Chinese* only for Diversion and Merry-making; these are also provided with Chambers and Apartments which are finely painted, lacquered and gilt both within and without; so that indeed they deserve rather to be esteemed Floating Houses than Ships: Besides all which, all Parts are abundantly provided with all Sorts of necessary Barks or Boats for Travellers: For there is scarce a City whether large or small, to which there is not a Passage by Water. And what is yet more, here are a Sort of driving Floats, on which whole Families live, by keeping Ducks, or following some other Trade: So that indeed, when one sees such various Sorts of Craft in one Vehicle, they seem strongly to resemble a floating City, in which the Vessels run together like Ants.

4. There are in *China* seven or eight famous Lakes or small standing Seas; three of which are the largest and most celebrated.

The first called *Tungtinghu* is in the Province of *Huquang*, and is four hundred Miles in Circuit.

The second is in the Province of *Nanking*, not far from *Suchen*, and is also about four hundred Miles in Circuit: This Sea is besides very deep, and hath in the Middle of it an Island called *Thaibu*, which is about seven or eight Miles in Compass and very mountainous.

The third is in the Province of *Kiangsi*, its Circumference is about three hundred Miles. These Lakes, by Reason of their towering hollow Waves and Roughness, appear to the Sight like the boisterous Ocean. The other Meers are in *Nanking*, and are about two or three hundred Miles in Circuit. We are told prodigious Stories concerning some Lakes in *China*, viz. That the Waters of that in the Province of *Canton*, annually exchange their Colour; that there is a Lake of green Water in *Fokien*, which transmutes Iron to Copper; that there is also a Palace on the Shore of another and not very distant Lake, where a Ringing of Bells is always heard against ill Weather; and several other like Reports are spread, the Truth of which we entirely leave to the experimental Examination of others, having had none ourselves.

There are great Numbers of fine built Stone Bridges in *China*, which are supported by Stone Arches: Two of these Bridges are the most considerable and extraordinary, being built over an Arm of the Sea: One of them is called *Loiang*, and the other *Fungiang*; and each of them is above an Hour's Journey, or a *French* Mile long. The first contains nineteen Arches, of such an extraordinary Height, that large Ships may sail under them with their Masts up. Each of these Arches is shut by two Stones, each twenty Ells long, above two broad, and three thick. The Jesuits, and other *Europeans*, who have seen and been upon them, are astonished at the Sight of them; nor can they comprehend what Instruments could be used to raise such great, heavy and long Pieces, all which are of solid white Marble, to such an extraordinary Height. The second Bridge, though not so high, is as broad and as long.

There is also a third extraordinary Bridge in the Province of *Quanton*, not far from the City of *Chaoeu*; but this is carried over Land from one Mountain to another, and is as long as the former. And throughout the whole Empire there are several of these Stone Bridges, which though not so surprizing as those already mentioned, are yet very elegantly and artificially built; and are every where carried across the Channels for the Travellers Convenience, that he may come to all Villages and Towns by a straight Road and without going a great Way about.

In watry or morassy Places there are also high Banks or Causeways raised, to serve instead of Roads, and when any Hills or Mountains obstruct these Roads, no Cost or Labour is spared to level, cut through, or render them passable. The Road from *Siquan Fu* to *Hamitcheou* is cut through a Mountain, which was very rocky and steep, and propped up with large Pieces of Timber, so that betwixt the Air and the Mountain, it looks like a pendant Gallery of Clouds, and appears very dismal to those who are not used to travel it: But they have bred and so accustomed their Mules to such Sort of Roads, that they will climb up the most rough, fatiguing and almost inaccessible Ways, as easily as if they were in ever so easy and good Roads.

On the high Ways, at the Distance of every half Hour's Journey, are a Sort of arched Gates about ten Ells high, on which, for the Direction of Travellers, are written in large Letters, the Distance of one Place from another, and an Account to what City, Town or Village that Way tends. In all Parts of *China* there are great Numbers of Marble Triumphal Arches, commonly containing three arched Doors, the largest of which is in the Middle, and the Sides are adorned with great Lions and other Sorts of Imagery; the Gates are every where beautified with very fine carved Images, Trees, and Foliages; and their Number in some Cities mounts so high, that the Streets are rather incumber'd than adorned with them.

China hath also very good Havens. That of *Nanking*, into which the *Nankingian* River falls, is much celebrated on Account of its Depth, Breadth, and the prodigious Quantities of Goods which pass from thence to the City of that Name, and higher up to *Peking*, and all over *China*, but do not pass so close by the City, since the famous Robber before-mentioned besieged, and had taken that City, if he had not been hindred by his own Negligence and Luxury.

The Haven of *Quantung* or *Canton*, on the Ocean, which washeth this Province Southwards. Before the Entrance of the City of *Canton* are a great many small Islands, the most considerable of which is *Macao*, which hath a very good Haven, and is very famous for the great Commerce of the *Portuguese* formerly there, by reason of its Neighbourhood to *Canton*, to which great Ships could easily come, and where all Sorts of Merchandize and Provisions are very plentiful.

Fokien is also provided with a very fine Haven, in which any Ships may safely ride, and come almost close to the Shore, the Sea being very deep, and the Harbour bounded on the other Side by the Island *Emoni*; and a very great Trade is driven here with Foreigners.

The Haven of *Nimpo* or *Ningno*, in the Province of *Chekiang*, is famed for the great Trade which is there driven with the *Japonefe*, because from thence it is but a short Voyage to *Japan*; but no very large Ship can well come in there by reason of Shallows and small Rocks, which render the Passage very difficult.

In the Province of *Zantung*, joining to *Chekiang*, where it runs out Eastward on the great Ocean, there is also an indifferent good Haven and Trade with the Inhabitants of *Corea* and *Japan*; but neither the one nor the other are so large and considerable as the Harbour and Commerce at *Nimpo*, though that Province is very well watered; there being there, as well as in almost all Parts of *China*, very convenient navigable Channels, provided with Sluices and Locks; without which, the Ground not being every where level, and the Water tending downwards, and all these Channels dug, they would soon be dry; which Necessity put them upon inventing those Sort of Waterfalls to let the Water through intermitting Pieces of Land, and keep it at an equal Height, and to wind or pull over them the Boats, Barges, &c. by the Help of Ropes and Wind-lasses.

5. The *Chinese* are perfectly well instructed and trained up in the Principles of their Religion from their Youth. The Parents send their Children to School at the Age of seven or eight Years, to learn Reading, Writing, and good Manners, that is, Rules which teach them to pay the subordinate Respect and Obedience due to their

Parents and Superiors. They begin their Studies and Exercises with the Instructions and Rudiments of their famous Instructor in Wisdom, Policy, and good Manners, *King* or *Confucius*, called in *Chinese*, *Kingfu*, and highly revered amongst them. These first Principles, as we have already hinted, consist chiefly in directing them to obey and love their Parents, to respect and honour those older than themselves, to live honestly and virtuously, to do no Person any Wrong, or what they would not have done to themselves, to give every Person his Due, and suffer him to keep it. All these Lessons are comprized in Five Books, which in their tender Years they are obliged to learn by Heart. After which they diligently learn the Arts of Writing, Arithmetick, and Oratory; in which having made proper Advances, they are questioned and strictly examined in what they pretend to have studied; and then being adjudged capable, they by Degrees become Bachelors, Masters, and Doctors of their highest Knowledge, and are also raised not only to that of *Mandarins*, but the more elevated Dignities of the Empire, in Proportion to their Worth, Learning, and Capacity to serve the Publick, either in the Government of Provinces and People, on the Bench as Judges, or in the Exercise of several Political and Civil Offices entrusted to them.

This learned and venerable *Confucius* lived several hundred Years before the Birth of *Christ*, was born in the Province of *Xantung*, as is hinted before in the Description of it, and died, according to some, in the Seventy-third, or according to others, in the Sixty-third Year of his Age. His Memory is very highly honoured by all intelligent and learned Men. In all Cities and Villages honorary Temples are erected in Remembrance of him; though his Image is not placed in the interior Part of them. His Virtue and honest Principles are very famous, his Precepts are revered like the Word of God, though he is acknowledged to have been but a Man, a Lawgiver and Preceptor; in Honour of whose Memory, the *Chinese* have erected a Pyramid, not of Stone, but in their Hearts, and they annually discover Signs of Gratitude and Acknowledgement. Some of his Descendants are at present living in *China*, who are by Donative endowed with the perpetual Inheritance of a City, with all its Incomes, Rights, and Lordships; and for the more august Preservation of his Memory, their Right of Exemption from all Tolls and Taxes hath been, and is, inviolably observed to this Day. He had seventy (others say five hundred) Pupils, which enforced his Doctrine with the Testimony which they bore in all Parts, that his Zeal was perfect, and nothing was to be added to the Purity of his moral Lessons: Besides which, they sometimes rather esteemed him as an Instructor of the new Law, than a Man educated in the Corruption of Nature.

6. For above two thousand Years past, or, to full five hundred Years before *Christ's* Birth, the *Chinese* have acknowledged the Lord of Heaven and Earth, abstracted from all Idols; which appears from their Histories, and the Books of the above-mentioned illustrious *Confucius*, in which we read, *Kiao xe chi li soy fu xang tie*; which imports, that our Duty obliges us to make Offerings to the Lord of Heaven and Earth; almost and only like the *Jewish* Sacrifices of a Calf or Lamb to the LORD, in the Holy Scripture. Notwithstanding which, their Knowledge and Idea of God was not so clear, but on the contrary much more obscure and confused than that of the *Jews*. But the primitive Knowledge of God declined rather than encreased, and that more especially after *Li Laokim*, a certain Philosopher, and one of *Confucius's* Disciples, appeared in the World: He indeed wrote some good Books, but withal taught, that the Supreme Deity was corporeal, and governed the other Deities as a King doth his Subjects, and that Man might be immortal: It was then that Idolatry crept in under the Shew of good Manners, and corrupted the Minds of Men, and Conjuring, and other Diabolical Arts, came into Request, in order to prevent Death. Temples were built to the Honour of

Li Laokim, and as much was consecrated to his Memory as to that of a Deity, though he died; and every Man, by Covenants with Satan and other devilish Practices, was earnestly bent in Quest of that Immortality which their great Master could not find. Time strengthened the false Doctrine, and increased the Number of its Teachers, who by their seducing Practices, drawing of Lots, and other Frauds, have even to this Day wonderfully possessed the Hearts of the Populace; who being misled to, and strengthened in that Opinion, continually searched for that on Earth, which is not there to be found.

The *Chinese* also relate, that long after that Time, an Emperor named *Fanvang*, dreamed, or was informed by Revelation, that there was a Saint in the West, whose Religion we ought to embrace; and this without wrestling may be understood to be spoke of CHRIST and his Doctrine. They also relate, that this Emperor dispatched a Person thither, in order to bring this Doctrine to *China*; but the Envoy mistaking his Way, fell into the South Country, where he met with the *Bramins*, (a Sort of Idolatrous Priests, which worship the Image of one of their Kings) and having declared the Reason of his Coming, he was so well entertained by these diabolical Engines, that they at once presented him with an Image, and with the System of their hellish Doctrine, both which he brought to *China*, and to which they at present cleave, that Idolatry being firmly retained, and numerous Temples every where erected to that Idol, insomuch that the Number of these wicked Priests is infinite. They are called *Bonzi's*, and pretend to abstain from Flesh and Marrying; but Experience convinces us of the contrary, and that they sacrifice to their Lusts in private; so that now they are not very much revered even by the *Chinese* themselves, though they have ever since that Time worshipped that Deity, and the Images representing him.

"*Le Comte* calls this Emperor *Minti*, and tells this Story thus: That *Confucius* frequently said, That the true holy One was to be found in the West; that this his Assertion was continually in the Mouths of the Learned; and that the Emperor *Minti* being disturbed at these Reports, and excited by the Image of a Man coming out of the West, and appearing to him in his Sleep, dispatched Ambassadors to the West, with Orders to travel that Way till they found this Saint, which Heaven had revealed to him about sixty-five Years after the Birth of our Lord: That these Ambassadors were forced, by the Danger of the Sea, to remain on a certain Island; and that they found there the Idol *Fo* or *Foe*, which had perverted *India* several Years before with his diabolical Doctrine: That these Ministers caused themselves to be perfectly instructed in the Superstitions of that Country, and carried them back with them to the Emperor and his Subjects; and that through those Means, and from that Time, this impious Doctrine was spread throughout the Kingdom."

Anciently they worshipped the Images of several illustrious Men, as in treating of the Province of *Xanfi*, Mention is made of a valiant and potent Hero, which sprung out of that Country, whom they honour and pray to as a Demy-God, which revives their Courage and excites their Magnanimity; and the *Tartar* themselves, at present Masters of *China*, likewise offer up their devout *Oraisons* to it; though indeed this is no Point of their Religion, Faith or Doctrine: But the Idolatrous Worship and Religion of the *Bonzi's* is spread over all *East-India*, through the Kingdoms of *Pegu*, *Laos*, *Siam*, *Cochinchina*, *Japan*, and all over *Tartary*.

7. Several of the most learned Persons amongst the *Chinese* are Atheists, who believe neither God nor Devil, deny a future State, and in Raillery ask, who hath ever seen or been either in Heaven or Hell? Or once came out of either of them? And boldly tell us they are meer idle and brainless Imaginations. But the Image-worshippers believe a Heaven and a Hell; that the ancient, virtuous, and happy Dead are great Spirits or Souls in Heaven; that placed there as superlu-

nary Princes, they tender and do good Offices to Mankind; whilst themselves abound in Riches and Prosperity, and perpetually divert and entertain themselves with the finest Wines, and all Manner of Delicacies. That on the contrary, the Souls of wicked and impious Men either go to Hell, or transmigrate into other Animals, which are either better or worse, in Proportion to their Merit. So that at present the *Pagan*, *Mahometan* and *Christian* Religions prevail in *China*.

I ought not to omit that in Paganism, the first of these, the Reason of State or Policy is the supream and prevalent Deity in *China*, to which all Principles and Practices are adapted: And whatever does not fall in with the political Interest is condemned as downright Sin, and consequently not to be tolerated. The *Chinese* are utter Enemies to Novelty, and are strangely fond of all ancient Customs, solely on Account of their Antiquity; and absolutely reject, or at least are hardly prevailed with to allow any modern Usage: This Fondness for Antiquity prevails not only in Temporals, in which they dare not presume to alter any Custom without the Emperor's special Command: But more particularly in Spirituals, though it really should be, and they themselves were convinced it was for the better. Hence it is that they reject the *Christian* Religion, because in Proportion to the Antiquity of their Empire it is too recent, and hath too lately appeared in the World, as though Antiquity alone were sufficient to triumph over Truth, and it were a Crime to hinder the perpetuating of those stupid Errors which could only pretend to have prevailed for numerous Ages.

"It is a fundamental Axiom in the *Chinese* Policy, saith *Gobien*, That the Prince is primarily obliged to preserve Peace, Repose, Plenty and Ease; for which the Subjects should acknowledge their Obligations to him, and he cause them to be instructed that they are indebted for all this to him. For all Attempts to keep the Subjects within the Bounds of their Duty would be vain, without the effectual Performance of the primary Condition of Obedience: Since the Laws themselves would be but a weak Bulwark, if opposed to the Force of Arms: And all Instructions would make but small Impressions on the Minds of a People, that are hurried on to disprove them by Want and Misery. And he tells us elsewhere, That the true Foundation of the Authority of the *Œconomical* and State Government consists, with Regard to Families, in the due Obedience and Respect to Parents and to Masters; with Respect to Government, that the Subjects be faithful to the Prince, and that he be tender of his People: A prudent Conduct, the Love of our Neighbours, Virtue and Justice are its Essentials; an exact Observation of mutual Civilities helps to fill up the Measure: But the savoury Laws of a good Government afford Means for compleating the whole."

8. There are besides several other Sects of Religion in *China*; for some of them believe that there is a supreme, eternal and omnipotent Spirit, which governs and directs all Things: This Being they acknowledge for the Lord of Heaven and Earth: And before Idolatry prevail'd, they worshipped him under the Name of *Chami* or the Lord of Heaven: But since the Sowing of that profligate Seed, this Opinion obtains only amongst a few, but those indeed are most of them great Men: The Emperor himself is said to espouse this old Sentiment; and it is not improbable, that it is owing to this, this he is not averse, but rather inclined to the *Christian* Religion and Doctrine, and probably would not reject, but easily be induced to embrace it, if not restrained by political Reasons, and a Fear of creating thereby Tumults and Insurrections in his Empire.

There are others also who acknowledge Nature to be the sole Deity; understanding thereby the Force or Power and natural Operation, which being the efficient Cause of Motion and Rest, produces, maintains and preserves all Things: They look on Dame Nature as the Fountain of all and every particular Being: And that she is able to appoint and to alter the Order of all Things: They take her to be the one Soul which universally informs Matter, by Virtue of which she produces

duces all Things ; thus attributing to Nature, almost all that the Ancients ascribed to Heaven, or we acknowledge in the Deity : They call her a Principle independent of all others ; separating her from the Imperfections and Deficiencies of all corporeal and sensible Matter. Those who encline to this Sect believe, that the World had a Beginning, and shall have an End : But shall afterwards begin and end again as before, and so perpetually and interchangeably renew and perish. And according to their Opinion numerous Worlds have already existed, and those after this to an infinite Number shall successively make Room for one another.

Though these Hypotheses and Opinions concerning Nature are but groundless Imaginations, yet the most learned *Chinese* are very fond of them, as affording Matter for several Speculations no Way disagreeable, which may tend to the Improvement of their Intellectuals.

9. We have already mentioned the *Bramins* and *Bonzi's* in this Chapter ; they are not very different from the *Lama's*, (which are *Tartarian* Priests) in any Particulars besides the external yellow Cloathing, and some peculiar superstitious Ceremonies : Both worship the same God *Fo* ; their religious Worship, Opinions and Faith is very near the same : However the *Lama's* in *China* are only *Tartarian* Priests, but in *Tartary* they act the Part of the *Lama*, God or Gods of the People : It is there that *Fo* has his Throne, it is there he appears in the Shape of an immortal rational Animal, whose Place at least is perpetually supplied by a living Creature ; for as soon as one Man dies, another like him is substituted in the divine Throne in the Temple, in order to keep up and promote the ridiculous Opinion of the Immortality of this God. To this Purpose he is honoured with religious Worship by great Crouds of *Lama's*, whose Number is so large, and the Esteem of this Doctrine (though not for the Priests of it) is so imprinted on the Minds of the People of all *Tartary* and *China*, that it is thought to withhold the Emperor himself from discovering any farther Inclinations to favour the Christian Religion for Fear of a Revolt.

We have already spoken concerning the Christians, the Time of their first beginning to settle here, their planting of the Faith, the bitter Afflictions they have suffered, and in what State Christianity stands at present. It now only remains that we say something of the *Mahometans* ; of whose Principles and Practises I shall only observe, That their Number is not very great in *China*, though they are more numerous than the *Christians*, as having inhabited that Country much longer, that is, above seven hundred Years longer in several Provinces of this Empire, where they were indulged with Liberty, which they neither did, nor do misuse, by pressing others to embrace their Religion, or zealously aiming at the making of Converts ; for they quietly live together, and are mostly allied by Marriage, Interest, or Conversation ; and, in short, live in a Sort of Covenant, like the *Jews* in other Countries. But their Religion is very much spread here since their Original, and hath taken very deep Root, more especially since the free Trade with the *Muscovites*, *Tartars*, *Mogols*, and other Nations. And as Weeds soon sprout up and grow apace, this pernicious Seed of impious Doctrine hath so increased, that the Sprouts of it are, as I have said, much more numerous in *China* than the Christians.

10. The *Chinese* in general are very well bred, and they are observed to be very civil in Words and Actions ; when they entertain any Person, though below them, they always give the Guest the upper Hand, which in the Southern Provinces is esteemed the Right, but in the Northern is taken to be the Left. They also utterly differ from the *Tartars* in their Manner of Sitting ; for the former sit down on the Earth, but the *Chinese* make use of Chairs and Stools. In Visits, the Master of the House, seeing his Guest approach, goes out well dress'd to meet him, and with his Head covered (uncovering the Head being a Salutation never used in *China*) advances half Way of the outer Court before his House, where he and the Visitant meet, and exchange Compliments in the following Manner : The Guest takes the Right

Hand of his Entertainer (or left according to the above-mentioned Difference in the Northern or Southern Provinces) who consequently stands on the other Hand ; then they both very respectfully bow very low three or four Times, lifting up their Hands and Arms, (which whilst they are going they fold in their wide Sleeves) in a Sort of stately Manner, and afterwards as decently letting them fall ; after which they speak to one another in a very civil and engaging *Chinese* Tone : This done, sometimes they change Places, he that was on the Right taking the Left Hand, in order to repay the received Civilities. After which they enter the House, where the visited Person always takes the lower, and gives his Guest the upper Hand. Being entred and sat down, a Dish of Tea, with a Piece of Sweetmeat in it is set before each Person ; he that sits at the upper Hand being first served, and the rest successively in Order. Before they sit down, even betwixt Persons of equal Condition, several ceremonious and engaging Contests arise about the Refusal of the superior Place ; the most worthy and highest esteemed Person is placed uppermost, and he among those of equal Character is the oldest ; but Strangers, and those who come from distant Countries, are set above all the rest.

The Ceremonies at Departure are almost the same with those at the Entrance. The Master of the House, with several Bowings of Head and Body, and moving the Hands, accompanies his Guests, first to the inner Door, then to the Middle of the outer Court, and lastly to the outermost Gate, out of which he also goes ; during all which Time the Visitants are complimenting and thanking their Entertainer with the same Respect ; after which, they either mount their Horses, or get into their Chariots as they came ; then a Servant is sent after them by the Master of the House, to compliment and wish them a good Journey in his Master's Name ; upon which they send their Servants back to the Entertainer, to thank him for his last Civility. The Ceremonies in paying and receiving of Visits amongst great Officers or Persons of Quality, must not be done in their common Cloaths, but in Robes of State ; and in Case the Visitant should fail in this Particular, the Visited would be apt to be disgusted at it, and not give him Entrance, at least before he had changed his own Dress : And in like Manner, if the Master of the House should attempt to receive his Guest in a meaner Robe than he hath on, the other would not enter the House. For which Reason, Persons of Condition always take Care to be provided with these visiting Robes, and cause them to be carried after them, in order to make use of them in Case of any sudden Accident ; for even in chance Meetings, the Compliments are delayed if one of them have his Robe of State on, till the other can put on his. The *Chinese* abound in these and such like Grimaces and Gestures, which they reckon an Honour to their Nation, and say that they are Signs of good Breeding, in which they excel other Nations, as much as Men do Beasts.

In Case of a Salutation or Visit betwixt Persons who have not for a long Time seen each other, they both fall on their Knees, and thrice bow so low as that their Heads touch the Ground. And it is in the very same Manner that even the meaner Sort welcome one another. This is likewise the Posture of Servants speaking to their Masters, and the Populace to the *Mandaryns* or high Officers. The like Bowings of the Head thrice so low, as to touch the Ground, are also used in the worshipping of their Idols.

I forgot to mention, that the Visitant, always before he makes any Visit, dispatches a Servant to the Person to be visited, with a Piece of red Paper in his Hand, in which is written the Name of the Person his Master intends to visit : With this he goes to the House and delivers his Message ; but if the Master of the House be abroad, or engaged, he still leaves that Paper in Discharge of his Order, and returns with the Answer to his Master.

The Ceremonies observed in Feasts and Entertainments are very great ; after the customary Compliments of Salutation, each Person is placed according to his

his Condition at a separate Table, without either Napkin, Knife or Spoon, but is presented with a Couple of long Ivory or Wooden Scares tipped with Gold or Silver, to assist him in the Conveyance of the Edibles, which are all cut in Pieces, to his Mouth; and they are so dextrous in the Use of these, that they can very speedily clear the Dish even to a single Corn of Rice. As I have already hinted, they make use of fine Chairs, Stools, or Benches, quite different from the *Tartars*, who, equally void of Civility and Manners, clap down on the Earth, without any other Gesticulations than what they now observe in the *Chinese*, and begin to learn from the very Alphabet to the Book of Manners. The *Chinese* have also very fine Beds and Couches; but the *Tartars*, on the other Side, having neither the one to lie, nor the other to rest themselves on, make use of a Board or Plank laid flat on the Earth. The first Dish is commonly some Sort of Hash, and a Glass or Cup of Wine, which yet is not so much as tasted before the Master of the House leads the Way; which is followed by the Servants crowding in Dishes and Wine, none of which are taken away, but piled up pyramidically, to the Number of twenty or twenty four, or more. Each Person drinks out of his own Cup, and is sure to follow his Leader; and though the Wine may be very briskly and continually put about, there is no Danger of intoxicating very soon, so small a Quantity being filled into the Cups, and the Wine itself not being very strong. A serious Gravity is always observed at Meals, the *Chinese* disliking all immoderate Laughter. After, and sometimes also during their Meals, several Tumblers, and such like, shew their Agility of Body, several Farces are acted, and other Diversions added: Besides which, they also play amongst themselves, and he that loses is obliged to drink, and is but within the Compass of good Manners rallied by the Company.

11. Marriages in *China* are very splendidly celebrated, and accompanied with Plays and Diversions during several Days. As for the Preliminaries to Marriage, the young Persons who intend to enter into that Estate, have not the Opportunity by conversing together to sound one another's Inclinations; for they are never permitted to come together, but the whole is managed by their Parents, who frequently promise their Children long before they come to be married, regarding Nothing so much as that their Years agree, or at least be not very disproportionate: And though their Sons and Daughters happen to be advanced in Years, yet they make the Matches without so much as the Consent of the Persons to be married. But there is yet a great Difference on this Head, betwixt the Conduct of People of Quality, Midling Persons, and those of the lowest Condition. Amongst Persons of the first Quality, no Marriages are concluded without the Emperor's Consent, great Care being taken that young People are always matched to Persons of equal Descent. Those also of a lower Degree are desirous of allying with and marrying into as good Families as their own; but their Concubines they either take or buy from their mean Parents, and this to an unlimited Number. The lawful Wife is only honour'd as Mother or Mistress of the Family, and respected and attended by all the rest as Chambermaids; and on her Death the Concubines Children are obliged to a three Years Mourning, which they are not obliged to for their own Mothers. The Children of the lowest Rank of People are in like Manner married by their Parents, and the Girls are in a Manner sold; for it is the Husband which gives the Portion, and the Bride hath only a few Trifles, though when she is led to the Bridegroom's House, she seems to bring a large Share of Household Furniture along with her; but all of it is bought before by the Bridegroom; besides which, he gives the Parents a Sum of Money in Proportion to their Character, for their Daughter, whence he is or may be said to buy his Wife. If a Nobleman or Person of Quality dies, the Widow must not marry again; but this perpetual Widowhood is not so much regarded by Persons of meaner Condition, though even amongst them, the Widows, which yield to a second Marriage, thereby lose, or at least lessen, their

Reputations. Though ceremonious good Manners and the Authority of the Parents run so high amongst the *Chinese*, the Children will not yet endure a Father-in-Law, or pay him any other than superficial Obedience; wherefore almost all the Widows end their Days in that State. The mature Years for Marriage are twenty, or two and twenty for the young Men, and eighteen or twenty for the young Women.

The *Chinese* Wives utterly seclude themselves from the Sight of all Men besides their Husbands, not allowing themselves to be seen even by their Father-in-law, their Husband's Brother, or any of the Male Sex, their Husband's youngest Brother only excepted, and that in the Time of his Childhood only: But all her own Male Relations are absolutely excluded from all Sight of or Access to her. Nor do the *Chinese* Women ever appear in the Streets throughout the whole Empire, except in *Peking*, the Metropolis, where they are carried whither they please in cover'd Coaches or Sedans, as we have before observed.

12. The Piety which the *Chinese* express towards their Parents is incredible; which yet on no Occasion shines brighter than at or after their Decease. The Mourning and Funeral Solemnities are very numerous; which consist in the lamenting, keeping the Corps above Ground, burying, and what is afterwards done in Remembrance of them. When they put themselves into Mourning, they differ from other Nations who make Use of black, and wear all white Cloaths; in which Dress they keep a long Time for any of their Relations; and for a Father or Mother they mourn thus three Years. A Wife also continues in Mourning as long for her Husband. But the Husband does not hold it above a Year on Account of his Wife's Death; which is the Term commonly observed by a Brother or Nephew for their respective Brothers or Uncles. Children for at least one hundred Days after the Death of their Father or Mother, are obliged to avoid lying on any Bed, but repose themselves on the Earth, and daily celebrate their Remembrance in Tears; besides all which, they are obliged for three Years to avoid all matrimonial Conversation with their Wives; and if any of them should happen to be pregnant in that Time, they are liable to be punished. They sequester themselves from Treats, Nuptials, and other Entertainments; they confine themselves to their Houses, without ever stirring abroad, and lay down their Offices for above a Year, and some for three Years. Whenever they are absolutely obliged to go Abroad, they cause themselves to be carried in Coaches or Chariots covered all over with close Mourning to the intended Place.

Their Obsequies are not much different from their Conversations, with Respect to Ceremonies: What first appears in the Funeral Parade, is the Representation or Figures of Men, Women, Lyons, and other Animals painted on Paper, which are carried in State; the Bearers of these are followed by several Incense-Carriers, next which comes the Bier and Coffin born by several Men, and is followed by the Sons, and all other Relations and invited Guests: The Sons are dressed all in white, and carry Wands in their Hands; next which come the Women in cover'd Chariots or Chairs, hung with Mourning so close, that no Person can see them. The Graves or Tombs are all without the City, some of them are magnificently adorned with Marble, like a Palace, enclosed on the Outside, and planted with several Trees in the Way to the particular Burying-place: To which being come, the Corps, enclosed in a Coffin of costly Wood, after the Paper Figures and Images are burned, is laid in the Tomb, and upon it are placed some Stone Figures, and an Inscription in Praise of the Deceased. And at certain Set-times of the Year the *Chinese* visit these Tombs, offering there Meat and Drink, Tears and Lamentations, in Remembrance of the Dead.

" There are, say the Jesuits, three Seasons when the Dead are honoured in different Manners in *China*:
 " First, before the Interment, when the Corps are exposed to View, or laid in State, together with a
 " wooden Image with the Name of the Deceased, which

“ is placed upon a Table, with burning Candles and
 “ Perfumes about it: They salute and honour the Corps
 “ by Kneeling and Prostrations, according to the Cust-
 “ tom of the Country. The second Season is observed
 “ from six to six Months, in a particular Chamber of
 “ the House called their Ancestors Apartment, in which
 “ every Spring and Autumn all the richest Delicacies
 “ that could be prepared for a Prince, are served up
 “ in Remembrance of the Dead. The third solemn
 “ Time happens but once each Year, and is observed
 “ at the Tombs; all of which being without the City,
 “ they visit them about *May*, when they pluck up Grass
 “ and green Herbs out of the Earth, express by several
 “ Tokens of Lamentations their Esteem for the Dead,
 “ and then having set their Victuals and Wine on the
 “ Grave, renew their Mourning Feast.”

The *Chinese* observe several Festivals, but none more ceremoniously than that of the New-Year. This Day or Days, for it lasts three Days, are by Persons of all Ranks, pass'd in very splendid Mirth and Jollity; they then dress themselves as fine as possible, visit, and make Presents to each other: There is no End of Plays, Entertainments, and other Diversions, and all are then equally rich and happy. Business is at a Stand, the Posts and Messengers cease, all civil and criminal Courts are shut up, and according to their common Phrase, the Seal shut, as indeed it is enclosed in a Chest: And this Seal is of such Force, and the Judge so far obliged to regard it, that though his Prince fully, satisfied of his Sufficiency should sign his Commission, yet he would not dare to act till he had found the Seal, if once lost.

13. The Lantern Feast observed on the following full Moon (for the new Moon begins with the Year) is not less famous; nor is there one House in all *China* which is not illuminated at that Time; the Lanterns (some of which are so very large as to admit of Theatrical Representations within them, acted by living Persons instead of Puppets) are so filled with Lights, and so numerous and close to each other, that the Cities and Towns seem to be in a perfect Flame; nor are Fireworks and Gunpowder spared to add Flame to Flame: The Clangor and thundering Noise of small and great Shot, mixed with the loud Acclamations, Singing, Roaring and Hollowing of the raving Populace, look as if the whole World rejoiced at that Time.

There are also Festivals observed in Spring and Autumn, in Commemoration of the so much celebrated *Confucius*: The Ceremonies of which consist in Kneeling before a Board erected on a Table, with this Philosopher's Name, encompassed with beautiful Leaf-work, written on it. Kneeling before this Inscription, they nine Times prostrate themselves so low till their Heads touch the Earth, and serve up Wine, Victuals, Fruit, &c. much in the same Manner as is above related, that the genteeler Sort and rich People commemorate their Parents and deceased Friends with Mourning Feasts. Anciently this Philosopher's Image was honoured in this Manner: But the Emperors finding the People fall off to Idolatry, and that they either actually did, or probably would, pray to and adore him as a God, they ordered these Sort of Boards, with the bare Inscription of his Name, to be placed in all the Schools and Colleges, instead of his Image: And the shewing of this commemorating Respect hath occasioned several warm Contentments betwixt the *Jesuits* and *Dominicans*; the latter charging this Practice with downright Idolatry, whilst the other urge in their Defence, that it is barely the Custom of the Country, and a civil Ceremony paid to the Memory of every dead Person; and not only that, but the same is given to the living *Mandarins* of the Empire in common Visits and Ceremonies.

The *Chinese* always observe and pass their Birth-day in Diversions; and as all happy Wishes of numerous Years added to that, Panegyrics, or whatever else can contribute to Pleasure, are not spared on the one Side, so grateful Acknowledgements due to such Compliments on this happy Day are not wanting on the other. In short, this Day is wholly sequestered to civil Entertainments, &c. and ends with good Wishes.

14. The Northern Provinces of *China* do not produce the Fruits which grow in *India*, but the Southern yield them in the greatest Abundance. The common arboriferous or Orchard Fruits are, Apples, Pears, Peaches, Plumbs of all Sorts, Grapes, Olives, and several Sorts of Figs, viz. the *Chinese*, *Indian*, and *European*; the *Chinese* are as large as Apples; the Skin is soft and smooth; they are variously shaped, small or large, round or oval. If they are dried in the Sun, they may be kept a long Time good; their Stem is rough and strong. The *Indian* Fig being perfectly ripe, when the Skin is taken off is longish, soft, and of a sweet Taste, though there are indeed various Species of them, and what they grow on cannot be properly called a Tree, but rather a Sort of overgrown Shrub or Plant, not unlike Box, the Sprouts of which are covered with a thin Film, not much different from the Skin of an Onion; the Leaves are extraordinary long and broad; the Trunk bears its Fruit, which hangs by a single Tendril; its Blossom is a Liver-colour'd Flower, of which it is observable, that whenever it appears, like the Infant from the Womb, it bursts and forces its Way from its proper Root; whenever the Fruit is pluck'd, this Plant dies, but is succeeded by fresh Sprouts which shoot from its Root: It is found to grow in the South Parts of *China* only, but in all Parts of *India* it abounds. These Southern Provinces also produce great Quantities of Oranges, sufficiently known in *Europe*, and distinguished by the Name of *China-Oranges*.

“ The *Portuguese* brought this delicious Fruit into
 “ *Europe*. And the very first Orange-Tree from whence
 “ all the rest Sprung, we are told, is yet in Being in
 “ the Earl of St. Laurence's Garden at *Lisbon*.

The *Licia*, a charming Fruit, also grows there; it is red and contained in or fenced with a sharp or prickly Shell; the Kernel is of a bright white Colour, very sweet, warm, and so perfectly agreeable, that it surpasses all other Fruit, not only in Taste, but Colour: The Tree on which it grows is also very fine, large, and full of Branches and Leaves, which render it very agreeable to the Sight: The Fruit, which grows in Bunches, though not crowded together, but on long Stalks, is about the Size of an ordinary Plumb or Nut, and there are also various Species of it. If eaten to Excess it inflames the Body, and raises Ulcers; for which Reason it is generally dried in the Shells, and like preserved Fruit, is served up in a Dish of Tea, and by Reason of its agreeable Acidity preferred before Sugar; the interior Part of the Kernel dissolving like Sugar in the Mouth; for which and other Reasons it is stiled the *King of Fruits*.

The Fruit called *Lungan* or *Onjeu*, is almost like the *Licia*, but not so large, and of a very different Taste; their Kernel is of a shining White, and their Shell of the same Colour; their Taste is agreeable and refreshing, but not so hot as the *Licia*, and not prejudicial to Health even if eaten to Excess: They are also very good dried, though not to compare to the fresh. The Tree which bears them is like that on which the *Licia* grows; and a well tasted Wine is pressed out of this Fruit whilst fresh.

The *Jacca* is a Fruit which grows to the Bulk of forty and sometimes fifty Pounds; but there are also small ones, of an oval Shape, with a sharp prickly Sort of a Shell: The Kernel or Pulp is not firm but fibrous, tastes very sweet, and is of a Gold Colour; and the Shell Green: This Fruit, of the great Sort, grows to the Foot of the Stem or Root, otherwise the Branches (though stiff and strong, the Tree being very large) would be too feeble to bear their Weight. The Shell of this Fruit is so very hard, that it can no otherwise be opened than by a Hatchet: The Inside is full of small Cavities, in which are contained a yellow Juice, and the Nut, which when ripe, eats better than a roasted Chestnut: The Leaves are rough and broad; and at the Branches grows also a Sort of Fruit, more agreeable to the Taste, and more healthful than the *Jacca*: The Ashes of the Shells burned are used by the *Chinese* as a Lye to cleanse Linnen or Woollen.

Anana's are a well-tasted Fruit when ripe; they are yellow or red, and emit a very agreeable Scent: The Plant shoots its Leaves (somewhat like Aloes) to the Height of six or seven Feet; the Leaves are three Fingers broad, also hairy or woolly; and of them whilst tough a Sort of Clothes or Stuffs are made, which in Fineness equals Silks: The Fruit sprouts out in the Middle amongst the Leaves, and when come to Maturity is very near as large as a Man's Head; it is sweet and acid on the Tongue, though very delicious; at a Distance it looks like an Artichoke: On its middle Stem grow several young ones, which are clapped into the Earth, by those who gather the Fruit, and in a Year's Time produce ripe Fruit. The sharp and corrosive Nature of this Fruit is so violent as to work even on Iron and Copper, and it also renders the Throat by swallowing it very rough.

The *Petchi* likewise grows here at the Side of or in the Water; and the uppermost Paring being taken off its Root, there appears a Sort of Whiteness which tastes almost like a Hazle-nut, and is endowed with the Virtue of softening Copper in the Mouth.

Le Comte saith, "That he had an Account of an Experiment made to that Purpose by one of their Society, by rubbing a Copper Coin with this Root; one of us, saith he, which had good Teeth, bit it into several Pieces, but the Fragments still remained hard, which made us apt to think that this Root was naturally more efficacious to the fortifying of the Teeth, than softning of Copper.

The *Cocao-nut* is the Fruit of a Tree which shoots upright: They grow in the Province of *Funan*, on the Island of *Hainan*, and in other Places in *China*, but in *India* they are incredibly plentiful; the Nuts are as big as a Man's Head, the external Part of the Shell is hairy, and the Substance of it ligneous, being in the whole about three or four Inches thick, and in the Core or innermost Part of it full of Juice, which the ligneous Cruft being pierced through, runs out to the Quantity of a Cup-full: The Kernel is white and firm, and being shaved or scraped, and mixed with fair Water, it turns it to a lacteous Colour, not unlike Milk from a Woman's Breast, only a little thicker, as if it had been turned with Rennet; it is also very good Food; it corroborates those who are weary and faint, refreshes Seafaring Men, fatigu'd with the Scurvy and other Diseases after long Voyages; for which Reason they are very fond of it, being well acquainted with its Uses. It is boiled with Rice, or in Flesh-soups: Besides which a very fine Oil is drawn from it, not inferior to that of Almonds, and is not only used in Medicinal Preparations, but eaten as Sauce like Oil of Olives. The exterior Shell is so hard, that the Kernel being taken out, is used as a Cup or Bottle. The Trunk on which the Fruit grows, shoots directly upright to the Height of fifty Feet, like the Mast of a Ship; the Wood is hard, and through it runs oleaginous Veins in the inner Part of it which is spongy: Its Root doth not pierce deep, nor is it large, so that it is very surprizing that such lofty Trees, laden with the heavy Weight of Fruit and Leaves, should not be blown up by the Roots by the Winds. The Branches and Leaves are very beautiful and long, the former being full charged with the latter both without and within; and both regale the Eye with a very agreeable Prospect. No Part of this excellent Tree is useless; the very hairy Covering which encompasses the Nutshell, serves instead of Tow to caulk and stop Ships: Cups and other Vessels are made of the Nutshells; the Leaves are made into Paper and Cloth; the Wood is worked into Masts, Planks, and Rudders, the Bark furnishes Sails and Ropes, and its Fruit lade our Ships, and is useful also in Physick.

Arceka, of which I spoke in treating of the Province of *Canton*, is an *Indian* Fruit, transplanted thence to *China*: The Tree bears some Sort of Similitude to the *Coco*, but is neither so thick, nor loaded with so many Leaves; both Fruit and Tree are called *Arceka*: The Fruit is hard, bitter and acrimonious; it is chewed with *Betel*, and a little softened with Lime, and the Spittle tinctures the Mouth and Lips red. The *Indians* chew

it incessantly, and are mostly followed herein by the Inhabitants of *Quantung*, *Funan*, and *Quoansi*, which is indeed to be wondred at, considering how little the *Chinese* are addicted to Travelling, and consequently the few Opportunities they have of catching Foreign Customs; but finding by Experience that it is good for their Gums, keeps their Mouths clean as well as moist in hot Countries, and besides causes a sweet Breath, hath drawn them into this Custom, as well as several others which they borrowed from the *Europeans*, being now convinced, that they are full as clear sighted, if not more, than themselves.

The Fruit *Jambua* is a Sort of Lemon and Orange blended, as big as a Man's Head; the Peel or Rind is all round a Finger thick; the Fruit is white and red, spongy, and of a bitter Taste; its Inside is almost like that of Oranges, with this Difference only, that the Kernels or Seeds are larger: The Juice of some of them is sweet, and of others sower: The Trees are much larger than Lemon-trees, and their Leaves are broader and rough; they are prickly or thorny like the above-mentioned Lemon-tree, which they also resemble in their Blossom; they afford a very grateful Smell, as hath also the Water extracted from them by Decoction.

The *Indians* call this Fruit *Pampelimans*.

The *Pepper tree* is but a Shrub, which, like Beans or Hops, climbs up Poles or Stakes, and, when got to the Top, like them, inclines downwards. There is a second Sort of Pepper, which is round and long; both of them, whilst green, grow in long Bunches close to the Stalk, but when ripe the Fruit turn black, is stript off and dried in the Sun; and if the black Skin falls off, as it is easily made to do, it is white, and tastes much hotter. The *Long Pepper*, which is more used in Pharmacy than Cookery, grows much in the same Manner, but creeps more on the Earth, and climbs about lower Stakes, wherefore it becomes more moist, and if that Humidity be not dried up, becomes worm-eaten; the long Sort is dearer and harder than the round; and the Leaf of the former differs somewhat, but not much from the latter, which is softer, and of a deeper Green than the other, somewhat like Ivy. The Leaves, Branches and Roots are all hot and dry, enflaming both Tongue and Throat, though not to so great a Degree as the small Corns.

Here grows likewise a Plant or Berry called *Maluei* (in the *Indian* Language *Carambole*;) This Fruit sprouts from large Plants or Shrubs, about three Ells in Height: The Berries are like those of *Palma Christi*; they are a very strong Purge, four or five Grains being a Dose large enough for the most robust Man; they operate on tough Phlegm, and pituitous Humours, and are good against a foul Stomach, cleansing the Entrails: The Leaves, as well as the Berries, are inflammatory to a high Degree; wherefore those who pluck them are obliged carefully to avoid putting their Hands (when gathering them) to their Face or Eyes, which would immediately inflame them. This Plant, mixed with Rice or Dough, and thrown into the Water kills the Fish. It grows in *India* as well as in several Provinces of *China*: It is also preserved in Pots with *Sugar*, and so transported; and by Reason of its cordial Virtue made use of against a cold Stomach or stinking Breath. There are also Nutmeg-Trees, in some Parts of *China*, but they are not near so Plenty there as in other hotter Places in *India*, from whence they are brought thither. This Tree is almost like a Pear or Apple-tree: It sprouts free enough and grows wild. The Nut which follows the Blossom joined to the End of the Branch, is at first green and rough, but when ripe changes its Colour, and becomes pointed all over, and chop'd on the Outside, being very ornamentally encompassed by the Mace, which perfectly ripe, is three or four times annually gathered, and is of several Sorts, and of different Natures with Respect to its Virtue and Worth.

Grinoffel, or *Clove-Trees* are by no Means so plentiful here as in other Places in *India*, from whence they are imported hither in vast Quantities. The Tree on which they grow is, when young, about as large as the former, and so encreases to a great Thickness; the

Leaf

Leaf is longish like that of the *Pear-tree*, and full of Fibres; at the End of which the Cloves grow in Bunches, and out of their Heads sprout the Blossoms, which, as well as the Cloves, afford a very strong Scent; the Blossoms are of various Colours, and like the Fruit change in Ripening; for the Cloves are not black or brown at first, but green; and accordingly the Flower is first white and then red. The Cloves are plucked or beaten off, and then gathered; and if any happen to remain on the Tree, they fall on the Ground without any farther Trouble, and from thence shoot up young Sprouts, which are nourished by the Soil, and thrive without Culture. I shall not say any Thing more of this Tree, because it is very well known all over the World, and shall only lightly touch on the *Cinnamon Tree*.

I have already hinted, that *Cinnamon* grows in vast Plenty in the Province of *Quoangsi*, and not only smells very well, but is also very sharp upon the Tongue. The Tree on which it grows is like that which bears Lemmons, but its Leaves are somewhat like those of Lawrel. This Plant hath a very fragrant Blossom, which afterwards affords us a Fruit like a Plumb; but neither the Fruit, Blossom, nor Leaf, agree in any one Particular with the Bark; which is the *Cinnamon*, and is alone endowed with the spicy and odoriferous Virtue, for besides that, the Tree is a perfect insipid Wood, whose Fruit is of no other Use than to be eaten by the Apes. This Bark, which clings close to the Tree, when the outmost Rind is scaled off, appears green, is dried in the Sun, and after it is cleansed and thoroughly dried, it turns to the known Colour. The Tree being stripped of its Bark, does not die, but, after the Expiration of some Years, obtains a new Bark, and flourishes again.

“The *Indian* Writers tell us, that these Trees grow in such prodigious Abundance in *Ceylon*, that if vast Woods of them were not burned, the whole World could not consume the *Cinnamon* which grows there. And *Nieuboff* adds, that though this Island is so very fruitful in *Cinnamon*, yet neither Clove nor Nutmeg-Trees will take there.”

There is yet another Tree in *China*, which indeed grows more luxuriantly in *Goa*, and is by some called the *Indian Fig-tree*, and it accordingly produces little Figs, full of small Seeds like other Figs, but not very much esteemed, by reason of their disagreeable Taste. This Tree or Trunk shoots up very high, and the Branches afterwards turn down towards the Earth, and take Root again; after which, like the main Trunk, they shoot up, and then down again; so that a single Tree becomes a great Wood, and the first Stem is hardly to be discovered.

The *Fat* or *Tallow-tree* is the most surprizing Plant of all that grows in *China*; it yields a very fine Leaf and Flower; it is of a moderate Height, and its Stem is but low, its Branches thick and covered with long Leaves shaped like a Heart, and its Blossoms white, which are followed by the Fruit; and this, when ripe, resembles a Chestnut or Walnut, with one Cleft. Round about the Stone, which is very like that of a Cherry, is the Grease, or that which in Colour, Smell, and all its Characteristicks exactly agrees with Grease, except only that it doth not fowl the Hands like it; round the Stones (of which each hath three separated by Films) is the Pulp, which melted makes a Candle as white as the whitest Capon, and is supplied with a Weik of Wood run through it instead of Cotton. From the Stone or Kernel, which is full of Moisture, is drawn an Oil, which, by reason of its strong unsavory Smell and Taste, is not eaten, but serves for Lamps. The red Leaves and white Blossoms of this Tree render it very agreeable to the Eye.

Cotton grows here in great Abundance, notwithstanding which, as is hinted a little higher, they do not use it for Candle-Weiks, but make several Stuffs of it. It grows on a very thick, lofty, and crooked Tree, which is not over-loaded with Branches, and its Blossom is a yellowish Flower, from whence proceeds the Fruit not unlike a common Apple, that when ripe opens and discovers the Wool, which when prepared is

transported to all Parts of the World. There are also Shrubs and Sprouts which produce this Wool, and are not very different from this Tree; but their Blossoms are of a deeper Yellow, and their Leaf more rugged; besides which, the Cotton which these last yield is better and finer, and of that are made the white Callicoës. The Stems of these second Sort of Plants, which are like Reeds, run up to a good Height; when come to Maturity, they are cut down, thrown into the Water to rot, and afterwards peeled. The Province of *Fokien* yields prodigious Quantities of this Shrub, of which the best and finest Callicoës are made. Here are also whole Thickets of Canes or tough Osiers, which the *Portuguese* call *Kota*; they grow spontaneously, spread very kindly, and are very tough; of them are made all Sorts of Ropes or Cords, Hurdles, Baskets, Chairs, Stools and Couches, which in Summer are very cool, and for that Reason are very much in Use amongst the *Chinese*.

Sugar-Canes grow in great Abundance in the Province of *Suchuen*, and produce the best Sort of Sugar; besides which, other Provinces yield very good; and this proves a very valuable Commodity.

Bambooes grow here wild, on waste and untilled Lands; and though they are but a Sort of Canes or rather Reeds, some of them grow to such a vast Thickness, that small Boats are made of them, which both the *Chinese* and *Indians* make Use of, and row very dextrously: But the chief Use which is made of the Bambooes is, that of serving for Stakes or Poles for the Pepper to grow up and cling round. When they are young, the ordinary People draw from them a Juice of an agreeable Taste; from whence they prepare their *Achar*, which is a very delicious Sauce.

Though Mulberries are a Fruit universally known, yet the Mulberry-trees in *China* are managed in a Manner absolutely different from all other Countries, for they are kept low, and lopped annually, as the Vineyards are in *Europe*, and the Reason is, because the young Sprouts contribute to the Production of the best Silk; and indeed the Difference betwixt the Silk produced by those Worms, which feed on the first Leaves, and that of the Worms feeding on the latter Growth, when they are much harder, is very considerable.

Though Ginger grows in several Parts of *India*, yet is there no Country produces greater Plenty of it than *China*; nay farther, it yields that Spice in a greater Degree of Perfection than any other Part of *India*. There are two Sorts of it, a larger and a smaller Species; the Leaves and Root of the latter are less than the former, and therefore termed *Male*, whilst the other is called *Female-Ginger*. The slender Stalk, to which it grows, is like a small Reed when it first shoots out of the Ground. And the Roots are not all of one Sort, but the heaviest are the best: Whenever they are dug, one or two of these Roots are left in the Earth, which moderately cultivated, watered, and dunged, spread luxuriantly, and next Year are dug out of the Earth with great Advantage. This Plant is also produced in another Manner, by cutting off the Ginger or Root from the Trunk, and resetting it in the Earth, which by the next Year spreads and sends forth young Shoots. The fresh or green Ginger is not so hot as the dried. It is medicinally used against flatulent Distempers, Fluxes, and other Diseases of that Class.

Tea, the Infusion of which is the common Drink, as well as the entertaining Liquor of *China*, grows there in great Abundance; but since this Plant is universally known, I shall say no more concerning it, nor intermeddle with the Disputes of its Virtue, farther than to inform my Reader of a Matter of Fact, which is, that Rheumatisms and Gouts, the Stone and Gravel, are Distempers which none of the *Chinese* are ever afflicted with. Whether this is owing to Tea, warm Water, or the Nature of the Climate, or Temperament of the People, I shall leave to be discussed by others, and proceed to the Description of several wholesome Roots.

The Root *China*, though it grows plentifully in all Parts of the Empire, yet is not of equal Virtue; for the Province of *Suchuen* produces the best, and the wild

wild Sort thrives every where. The first Sort grows out of a Sap or Gum, which adheres to the Root of a *Pine-tree*, which renders it such an excellent and efficacious Remedy, and so famous on that Account in all Parts of the World. These Roots increase to an extraordinary Size, some of them being as big as a Man's Head. The wild Root, though far short of the Virtue of this, is not less esteemed. We have already described the Root *Ginseng*, and its cardiacal Virtues, in our Account of the Province of *Leaotung*, where it grows; and therefore we refer the Reader thither.

China abounds with great Quantities of Rhubarb, but no Place produces better than the Province of *Suchuen*, as I have already hinted in the Description of that Country.

" There are two Sorts of *Rhabarbarum* or Rhubarb fold, an *Oriental* imported from *China*; and this is ponderous, distinguished by gold coloured and red Veins, bitterish and astringent, sweet scented, rather of a yellow Colour, and being moisten'd stains the Hand with a Colour like that of Saffron, and is much esteemed for its Virtues. The other Sort comes from *Russia*, and is ponderous, and of a darker Yellow, and less valued than the other.

" Rhubarb is a mild and gentle Purger of yellow Bile and viscous and tartarous Phlegm from the Stomach and first Region. It is a Specifick for the Liver, cures a Jaundice, and for its astringent Quality is commended beyond other Medicines; for all Disorders proceeding from Relaxation, as a Diarrhea, Dysentery, and the like.

" This Root was unknown to *Dioscorides* and *Galen*; and therefore some are very erroneous in confounding the Rha or Rheum of the Ancients with our Rhubarb, for the Rheum of *Dioscorides* has less of a cathartick Quality, and wants the Characters of the true Rhubarb, which is a Compact Substance, ponderous and dry, of a bitter Taste, and acrid Smell, of a reddish Colour on the Outside, and of a light Red inclining to Yellow within, with some Veins of deeper Colour, and, being macerated or chew'd, dyes of a Saffron Colour. Rapontic, on the contrary, is not of a close but thin Substance, and not ponderous, but light, and wants the sweet Scent of Rhubarb.

" The Virtue of the Root consists in the Mixture of a subtle and acrimonious Salt, with mucilaginous and earthy Particles; those saline and acrimonious Particles, in Proportion as they are more or less disengaged from the Mixture of mucilaginous and earthy Particles, in which they stuck and were entangled, the more or less they exert of their stimulating Force. Sometimes they excite so great a Commotion, as to press upon the Liver itself, and especially the Gall Bladder, whence may follow a double Excretion of Bile, which proves the Root of extraordinary Efficacy in the Jaundice, as was before observed. Its Cathartic Virtue consists in its Salt, and not at all in its Resin or oleous Particles, as appears from its Tincture, which is extracted with Water.

" Now it is clearly demonstrated from Chymistry, that Water can never resolve resinous nor oleous Substances; and besides, the Tincture extracted by Spirit of Wine is not so potent a Cathartick as what is extracted with Water; nay, the Water itself, after Mixture, does not become milky, as it happens in all other Tinctures which are extracted from oily and resinous Substances; and it is further to be observed, that the saline Principles may be so dissolved or dissolved by the Quantity of Liquids, as to be incapable of exerting their Force. The Root, when it is dried up with Age, loses its Acrimony, and all its Cathartic Virtue, as it does also in Boiling. The Smell of it, in some, provokes to Stool. It is of Service in a *Gonorrhœa*, by allaying the Heat of Urine, expelling the Malignity, and stopping the Flux. It is usually prescribed in Substance, from half a Dram to two Drams; the Dose of the Extract is two Drams, of the Tincture one Dram. The Root

" roasted or dried is astringent, as and effectual in a Dysentery as *Terra sigillata*, and being mixed with Nutmeg and *Laudanum*, proves an excellent Remedy for an immoderate Flux of the Belly, its astringent Virtue diffusing itself into all Parts. *Pecklius* employed it for Hæmorrhages of the Nose, and such like Cases. The Root is sometimes hurtful in a Vertigo; it destroys Worms, and is an Ingredient in many official Compositions.

" *Alexander Trallianus*, in the Opinion of Dr. *Freind*, was the first Physician that mentioned Rhubarb, who recommends it in a Weakness of the Liver, and a Dysentery, though *Monf. le Clerc* tells us, that the *Arabians* indeed, in translating *Dioscorides* and the *Greek* Physicians, confound this Root with the *Rhaponticum*, and ascribe the Virtues which the Ancient have observed in this latter to what is properly the *Rhabarbarum* as may be evident to any who will look into the Description which *Rhazes* gives of it. And I believe *Alexander* himself, though it is plain *Rhubarb* was known in his Time, was in the same Mistake, for he mentions it only as an Astringent, as the elder *Greeks* describe the *Rhaponticum* without the least Hint of its purging Virtue. *Paulus* seems to be the first who takes any Notice of the Purging Faculty in the Rheum (he calls it simply so) and tells us how we may make some laxative Medicines stronger by the Addition of this. And *P. A. pinus* says, that some have observed, that even the *Rhaponticum* would sometimes purge, though in a less Degree than *Rhubarb*.

" The modern *Greeks* gave this Root the Name of *Barbaricum*, not from the Place of its Growth, but from the Place it was imported to, for the Country in the Upper *Æthiopia*, was called *Barbaria*, as *Salmasius* well observes from its lying upon the *Sinus Barbaricus*, in which were many great *Emporia*, particularly *Rhapta* the Metropolis of this Region. This Gulph upon the East, joins with the *Indian* Ocean, and therefore *Æturius*, and after him *Myrepsus*, calls this Plant *Reon Indicon*. No doubt in those Times it was imported this Way to *Alexandria*, and so might be known to these latter *Greek* Physicians. However I must observe, that *Salmasius* does not take Notice of *Alexander's* mentioning *Rhubarb*, but quotes *Paulus* for it, who does not mention it, but only in general speaks of and describes the *Rha*. *Garcias ab Horto*, Physician to the *Spanish* Viceroy, tells us, he had learnt in *India*, that all the *Rhubarb* which was imported thither, and into *Persia*, grew in *China*, that was brought thither by Sea and Land, but that the latter Way of bringing it over *Tartary* to *Ormuz*, was much the best, for by Sea Carriage it was more subject to rot.

15. In Reference to the Animals in *China*, though the Natives relate strange Things of them, yet there are indeed very few so extraordinary in their Kind, as to deserve mentioning. In some of the most mountainous and worse cultivated Provinces of the Empire, there are Troops of very large Apes that live to a great Age, notwithstanding they are often attacked by the Natives, these by observing frequently the Actions of Men, and imitating them assiduously, perform many Things, which to Strangers would appear very surprizing. The *Chinese* call this Animal *Sin Fin*, and from their Description one would imagine, that these were a Race of wild dumb Men, and that perhaps Pains would not be thrown away in endeavouring to reclaim them. After all, the Truth of the Matter is, that the *Chinese* love to magnify every Thing they describe, and above all, every Thing that relates to their own Country, for at the Bottom, the *Chinese* Baboons are as much Brutes, and senseless Brutes, as any other Baboons upon the Earth.

There are also in some of the Woods, on the Sides of high Mountains, a particular Species of Bears, of a most enormous Size, and capable of doing a great deal of Mischief. These, without any View to Raillery or Wit, the *Chinese* call Men-Bears, to express their Superiority and Strength, which however it seems to do but obscurely. As for the Horse-hart, there is nothing in

it wonderful, or even singular, except that it is of the Size of a little Horse; but they have a Kind of Deer that never grow any bigger than an ordinary Dog, which from the Beauty of their Shape, and Closeness of their Hair, are real Curiosities. As to the Horse Tyger, that lives in the Water, and is covered with Scales as thick and as hard as Tortoise-shell, it is a mere Invention, contrived to impose upon weak People, and to make wiser Men laugh. But all these Kind of Tales begin to be exploded, for the *Tartars* are a Sort of People that do not at all affect them, but despise the *Chinese* for believing and telling gravely known Falsehoods and palpable Absurdities.

There are some wild Elephants in *China*, but not many; the Emperor has a Stable of fifteen or twenty of them, which are Presents from Foreign Princes. Their Horses are of middle Size, the strongest and most serviceable come from *Tartary*; there are also Mules and Camels, Oxen, Cows and Buffaloes, also Wolves, Bears, Tygers, and other Beasts of Prey in the mountainous Parts of the Country. Their Sheep are like those of *Turkey* with great Tails that weigh several Pounds. Deers and Hares they have in great Numbers. Their Hogs are black, and have Bellies that reach the Ground, they are esteemed very good Food; notwithstanding the Heat of the Country, for indeed this is made no Objection to of Hog's Flesh in the East.

Geese, Hens and Ducks, and all Sorts of Poultry, are mighty cheap, their Eggs are hatched in Ovens or Dunghills in most Places: As to the Birds of *China*, they have Paroketes extremely beautiful in their Colours, and that are as easily taught to speak as those that come from *America*. They have also a Kind of Hawks, which they call *Hai tsing*, larger than our Falcons and stronger, but these are very scarce, and are seldom seen but in the Emperor's Court. It is very true, that in *Chinese* Writers there are very curious and copious Descriptions of Birds that resemble the Phoenix of the Ancients, but then it is chiefly in this Particular, that though often described, they were never yet seen; so that there is no Need of swelling this Chapter by inserting such Descriptions. The first Missionaries however were very excusable in giving Place to them in their Writings, because it was impossible for them to perceive, but in Length of Time, how little Credit was due to those Authorities. Geese, Hens, and Ducks, as we observed, and indeed all Sort of Poultry, are excessively plentiful, and prodigiously cheap, throughout the whole Empire, and yet there are numberless Families that live by Feeding and Selling them. As for the Ducks, those that deal in them, become almost as much Aquaticks as the Commodity they deal in, for their Houses are fixed upon Barges, and as the Ducks live in, so they and their Families pass their Lives upon the Water, and their Children are often three or four Years old before they set their Feet upon the Land. Wild Fowl are also plenty, and they may very well be so, for with respect to those, as well as to Animals, the *Chinese* eat without Ceremony, eat all that come to Hand, let them breed or feed how they will.

There are Butterflies in *China* of an extraordinary Beauty, and of a very extravagant Size, but they are found only on a single Mountain in the Province of *Quangtung*; and these too are generally sent to the Emperor. They stick upon Trees and Flowers in the Day, immoveable with their Wings close; but if once discovered, are easily taken: Towards Evening they fly about like Bats, and the Extent of their Wings is very little if at all inferior to those of Bats in *Europe*. The Colours in their Wings are beautiful almost beyond Description, finely and regularly variegated with White, Green, Blue and Crimson; the Body, which is almost as thick as a Man's little Finger, is cover'd with a yellow Down as bright and as resplendent as burnish'd Gold. There are a smaller Sort of Butterflies taken in the Mountains of *Sichang*, not far from *Pekin*, which have very vivid Colours, but are far inferior to those

VOL. II. N^o CXXXVII.

enormous Butterflies beforementioned, and which make Part of the Furniture of the Imperial Cabinets.

Grasshoppers are exceeding troublesome in *China*, and frequently devour the Fruits of the Earth in some Provinces; there are also several Kinds of Serpents, particularly the *Cobra Capella*, or hairy headed Serpents, which have been describ'd in our Accounts of *India*. Fish abound in their Rivers and Canals, and besides Nets and other Engines, which are used in *Europe* to catch them, they breed up large Fowls like *Hérons*, which are as much under the Fisherman's Command as our Dogs, and Hawks are under the Huntsman's; they keep them perched on the Sides of their Boats, and when they give a Sign, every Bird takes its Flight to look for the Prey, and will divide themselves the whole Breadth of a River or Lake; when they have seized a Fish they bring it to their Master, and if it be too big for one, they will help one another; it is said when they have brought it to the Boat, they immediately take their Flight again in Search for more; but they have a String about their Necks, which prevents their Swallowing the Fish, till the Master thinks fit to leave off his Sport, and then they are suffered to prey for themselves.

There are also all those Kinds of Fish in their Waters, which are met with in *Europe*, and many more, particularly one, which is called the Gold and Silver Fish, which is wonderful beautiful, and kept by the Quality in large Basons in their Gardens. They are about the Length and Bigness of one's Finger, the Male of a fine red, from the Head to the Middle of his Body, the rest with the Tail is of such a bright and glittering Gold Colour, that no real Gildings can come near it. The Female is of a pure Silver White, the Tail of either of them is not flat, but gathered thick like a Nosegay, which is an Addition to their Beauty. They are a very tender Animal, and soon sensible of the Alteration of the Weather; therefore Contrivances are made to shelter them from the Heat, and their Water often changed. And if they are to be removed from one Bason to another, great Care is taken not to touch them, for the least Touch, it is said, will kill them, as will sometimes the Noise of great Guns, loud Thunder, or an offensive Smell, such as Pitch or Tar. But it is needless to insist longer on this Subject, since Numbers of these Fish have been of late Years brought over into *Europe*, and even into *England*, which has afforded the Curious an Opportunity of seeing that, though the *Chinese* often exaggerate, yet sometimes they keep at least pretty near the Truth.

The Mountains of *China* are held to be the richest in the World; some say, on Account of their Mines of Gold and Silver; but perhaps their Character may be maintained, even suppose their Title to these rich Metals could not be made out. Yet this is very far from being the Case; for it is certain there are two Silver Mines open, one in the Province of *Se tchun*, and the other in that of *Yu nan*, which still produce considerably, and were formerly excessively rich. The Emperor *Canghi* caused another Silver Mine to be opened and wrought for some Time, but it was afterwards discontinued. It is believed also that they have very rich Gold Mines; at least it is very certain, that in the Mountains on both Sides of *China* there are very rich *Lavadores*, as the *Spaniards* call them, that is, Places where Gold Sand is washed out of the Rocks. The *Chinese*, who are equally reserved in their Politicks, and in their Books and who in their Conversation speak Truth or Falsehood, just as it suits their Purposes best, affect to say, that though they have rich Mines of these Metals, yet they lie in Places inaccessible, and where it would cost more to come at them, than ever Gold and Silver are worth.

This, however, is but a Pretence, since the very Mine they last wrought was discontinued for being too rich; and the Secret of this Policy lies here: The Emperors of *China* have sixty Millions of Subjects, and at present the Country being perfectly well cultivated, they are plentifully supplied with Necessaries, Conveniencies

11 S

and

and Elegancies; so that Industry is rewarded by Abundance. But as there is no eating either Gold or Silver; as wearing it is of very little Consequence; and, as there is already enough for all Sorts of Plate and Manufactures; to open Mines therefore would be a Means of diverting the People from their more necessary Labours, would raise the Price of all Commodities, and instead of being a Source of real Riches, would actually become the Cause of Want and of Distress. Besides, in no Country upon the Face of the Earth the true Value, or rather the true Use, of Gold and Silver is better understood than in *China*; and therefore they hold it to be, as it certainly is, much better Policy to draw these Metals into the Empire by Commerce, than to dig them out of Mines; and from these Principles they aim chiefly at two Things, one is to export their Commodities and Manufactures into other Countries, by which they obtain a Balance of Gold and Silver; and the other is, to keep it when they have got it: In both which Schemes, as indeed in almost every Scheme they form, they have been very successful.

Add to all this, that as Indigence creates Industry, so Indigence and Industry, taken together, are the strongest Motives to Obedience. A rich and idle People may be and generally are prone to rebel; but a poor and active People are commonly dutiful and submissive. This is the Case of the Bulk of the *Chinese* Nation, who get wherewithal to live, and live pretty well; yet with all their Sharpness and Dexterity, this is as much as they can get; and to say the Truth, this is what makes them so sharp. But if War, Famine, Inundations, or any other publick Calamity happens, they are presently set a Starving; and in this Situation the Wisdom and Equity of their Government appears, for to the Emperor they apply as to their common Parent, and they never apply in vain. He takes all they feel upon himself; he ascribes their Distresses to his Errors, their Misfortunes to the Judgments of Heaven upon his Sins; and therefore, besides imploring the Mercy of the Supreme Being, and giving large Alms to the Poor and Needy in his Capital; he relieves those who are thus distressed in the Provinces, not only by a temporary Supply of Food and Raiment, but by remitting their Taxes for a certain Number of Years, and creating a Demand for their particular Manufactures by Dint of that absolute Power, so terrible in other Countries, and useful and beneficial in this alone. But to proceed.

The Mountains of *China* furnish prodigious Quantities of Coals, insomuch, that no Country in the World is better served with them, and the Island of *Great-Britain* excepted, perhaps none so well. They have also Iron and Tin in Abundance, and still greater Plenty of another Metal, called, *Tutenague*, which is highly valuable, and of which one Mine produces them Hundreds of Quintals in a Day. They have also great Quantities of Copper, of the ordinary Sort, and besides this they have two very singular Kinds of Copper, which are scarce found, more especially the first of them, in any other Part of the Universe. The *Chinese* call this wonderful Metal *Pe tong*, which is as much as to say, white Copper, and it is very properly so called, for it is as white as Silver, and they make all kind of Vessels of it; the only Fault it has, is its Brittleness, so that in the Hands of careless People, it is apt to break. To remedy this Defect, they employ one sixth Part of *Tutenague*, which makes it tougher, but if they were to use twice that Quantity of *Tutenague*, the Metal would be much better, and the Reason that they do not use it, is because it spoils its Lustre, and not its Colour, as the Jesuits commonly write; for it remains as white as ever, but it is a dead, lifeless, tinny white. Four Parts of this Metal, and one of Silver, makes a Metal equal in Lustre to Silver itself, and is fit for any thing but Money; for upon the Application of a Stamp it cracks. The other Kind of Copper, the *Chinese* very properly call *Te se lai tong*, that is *Self-made Copper*, because it is found like Gold in Grains, or in large Pieces, washed out of the Mines by Torrents; properly speaking it is red Copper and very rich. The *Chinese* have Chemists amongst

them, or rather Alchemists, but their Skill in Metals does not reach ours; for it is certain, that their red and white Copper, mixed with *Lapis Calaminaris*, in a proper Quantity, will produce a Metal as high coloured as Brass, and almost as malleable as Silver.

Their Mountains also afford them most excellent Quarries of various Sorts of Stone, and amongst others a Kind of yellow Stone, so soft, that they work it into any Kind of Vessels, paint it with Vermillion, and sell it very dear. They have also *Lapis Lazuli*, but not in any great Quantities, and Rubies, but they are very small, though very fine, and several Kinds of Agate and Jasper. Rock Chrystal they have in vast Abundance, and they make various Kinds of Utensils of it, which are extremely beautiful, as well as all Sorts of Toys. Marble of several Kinds is common, but they know not how to polish it, at least to such a Degree as is common in *Europe*. As for Stones proper for Building, and Earth fit for Bricks, they have as much as they want, and indeed every thing in this Empire is at a low Price, which is owing to the Wisdom of the Government, and to the Facility of Water Carriage, by which the Commodities and Manufactures of all the Provinces are to be found in every Province, and at reasonable Rates.

So that it may very truly be said, that *China* plentifully yields not only whatever is requisite to the Restauration of Health, supplying the Necessities and sustaining of Mankind; but likewise all Things which can contribute to gratify the luxurious Wishes even of an Epicure: Nor do any of the *European* or *Asian* Countries produce any one Commodity, which is not here to be found; or at least the Deficiency is doubly supplied with equal or much better Substitutes: But to particularize and describe all the Roots, Herbs, Fruits, Shrubs, Trees, Plants, or whatever else of the Botanical Kind, which is either necessary or agreeable to the Tongue or Eye, would be to transgress the Limits of our short Account of this Country; wherefore we have contented ourselves with barely pointing them out, and shall proceed to discourse of what we next promised.

16. *Japan* is justly preferred to all the Eastern Islands: and (though its Natives unwillingly hear it) was formerly subject to *China*: Their Manner of Living is like the *Chinese*, they learn and read their Books; and also eat with two Ivory Sticks or Scares; but sit upon the Ground, wear a different Habit, Leathern Boots, and long Hair.

"*J. D. de Mendoza*, also assures us, that the *Chinese* were formerly possessed of the whole Continent from *China* to the most remote Part of *India*: That of this there are yet several considerable Remembrances on the Coast of *Cormandel*, particularly a Castle called the *Chinese Castle*, by Reason it is supposed to be built by them: That at present in the Kingdom of *Calicut*, there are several Fruit-trees which the Inhabitants own to be planted by the *Chinese* when they governed there, and were also Masters of *Malacca*, *Siam*, &c. He adds, that at the same Time they were Masters of *Japan*, as appears by several Monuments, as well as the common Uniformity betwixt the Manners and some of the Laws of both Nations."

This Island is an independant Sovereignty, governed by a Prince who assumes the Title of Emperor. It is a hundred and fifty or sixty Miles broad, and three hundred or three hundred and fifty in Length. It very plentifully produces Gold, Silver and Copper, as well as whatever can be wished to supply both Necessity and Luxury; it lies amongst and is parted from several lesser Islands, in 34 or 35 Degrees of Latitude. The Natives are very subtle and fraudulent in their Dealing, and thoroughly versed in the Art of Politicks: They are very jealous of their Liberty, and treat all other Nations with the utmost Suspicion; pursuant to which, they are so very cautious of any Thing that barely seems to contribute to their Strength, that they unrig and take away the Rudders of all foreign Ships in their Havens. They are very neat in all Particulars, and rally the *Chinese* on that Head, believing themselves very

very much to exceed them. Before the cruel and outrageous Persecution which fell upon the Faithful, almost half the Natives were converted to Christianity, but at present no one Person who is but suspected to be a Christian, is suffered to enter any Part of that Empire, before he hath trampled upon a Crucifix, as a Testimony that he is not of that Religion. Notwithstanding which, we are told that there are some who privately retain that Belief in their Hearts, and confess it to God alone. But the very Name of Christian is here so detestable, that, even those of that Religion which do but trade here are obliged to conceal it; and the *Hollanders*, which drive a great Trade here, being asked by them whether they are Christians, never fail to reply that they are *Hollanders*, by which indirect Answer they shun the dangerous Rock, that would shipwreck their Hopes of Gain.

The second Island or Peninsula, (for it is doubted whether it be separated from the firm Land) is called *Corea*, but the *Chinese* Name it *Caoli*; it annually pays a Tribute to the Emperor; and lies Eastwards of *Peking* and *Xantung*. When the *Coreans* carry the above-mentioned Tribute to the Imperial City, they most commonly go by Way of *Leaotung*, but very rarely through *Xantung*. In their Habit, Writing, &c. the Natives follow the old Customs of the *Chinese*; but they differ from them in their common Conversation with Respect to Women, who are here allowed to come freely into the Company of Men; on which Account the *Chinese* ridicule them as a barbarous and unpolite People: And this Difference also occasions another in their Marriages, which are here the Effects of Choice. This Country is larger, but not so rich as *Japan*: It plentifully produces all Sorts of Corn, and according to the Report of the *Chinese*, is four hundred and sixty Miles long, and one hundred and sixty broad. Though this Country is very commodiously situated, and richly provided with all Things, yet its Inhabitants at present drive no considerable Trade with any other Nations than the *Chinese* and *Japonefe*. Here are very rich Gold Mines, and the Root *Ginseng*, of the Virtue of which I have already spoken, grows here; as also the red Colour which the *Chinese* call *Cil*, or *Sandaracha*, the best Sort of which is prepared here by Expression out of the Bark of a certain Tree, and is of a Consistence like Pitch or Glue; whatever it is laid on with a Brush is tinged red, and shines as bright as a Looking-glass; fine Pencils and Paper are likewise made of it.

Besides this there are two Islands situate near *Japan*, one of which is called *Chaofien*, and the other *Linkin*: The Princes of both which Kingdoms pay Tribute to the Empire of *China*, though in Habit and Manners they approach much nearer to the *Japonefe* than *Chinese*: These Islands are large, but not to be compared with *Japan*.

The Island *Taion*, otherwise called *Formosa*, is also subject as has been said to *China*, and is accounted one of the nine great Cities of the Province or Kingdom of *Fokien*. The Island *Hainan* lies South of the Province of *Canton*, and as is already said, is numbered amongst the Cities of that Province: It is two hundred and fifty Miles in Circuit.

There are also several other Islands, which are Dependents on or Members of the Province of *Canton*, as that of *Sanciam*, where *Francis Xavier* died and was buried: *Macao*, where the *Portuguese* have a Fortification and Port; together with the three Islands under *Xantung*, one of which was famous or rather infamous for the lamented Destruction of the *Chinese* Philosophers, as has been mentioned. These, besides several others, are subject to this vast Empire, all which united under one Dominion, would by themselves amount to a very potent Monarchy, and furnish Matter for a particular Description. But we shall content ourselves with barely naming them as they lie in our Way, and conclude this Chapter with an Account of some subordinate and adjacent Kingdoms.

The Kingdom of *Tunking* lies Westward of *China*; and formerly was subject to and a Province of that Empire: But is at present only tributary to it; and is divided into the two Kingdoms of *Tunking* and *Cochin-*

china; subject to their respective Kings, who are two Brothers, that continually make War against each other. And though this Kingdom, or more properly these Kingdoms, are very distant from *Japan*, they yet follow the Fashions and Manners of the *Japonefe*: They are instructed by and read *Chinese* Books, which they, like the *Japonefe* and *Coreans*, are very well versed in. Several Christians live amongst them; and the *English*, *French*, *Dutch* and others, trade very considerably with the Inhabitants of both Kingdoms.

The Kingdom of *Laos* borders on the Province of *Yunan*; and is also tributary to *China*: Its Metropolis is *Lanchang*: It borders Southwards on *Siam*, and Westwards on *Pegu*: But is a Country of no Manner of Commerce.

Siam is a very large Kingdom, which has been frequently infested with Foreign Wars and Domestick Confusions: It was formerly subject and tributary to this Empire, but taking Advantage of its distant Situation, and the various Revolutions of the *Chinese* Monarchy, that Kingdom hath, like *Pegu*, shook off the Yoke. This is a Kingdom of very wide Extent, but the Land is waste, untilled and uninhabited; and its People living mostly in Woods and Wildernesses, behave themselves rather like wild Beasts than reasonable Creatures. They build or erect Huts made of Hides, and the whole Country abounds with Woods, which harbour Elephants, Rhinoceros's, Buffloes, wild Oxen, Tygers, Bears, and several other wild Beasts. Here are great Herds of Apes as big as Children. The Woods are very closely crowded with lofty Trees, of the Height of forty or fifty Ells; some of which are also so thick, that seven or eight Men holding Hands can hardly begirt them, and one Trunk is large enough to hew out a Boat. Here are innumerable Crocodiles, which devour Men alive, and are four or five Ells long; which renders Travelling, either by Water or Land, very dangerous in all Parts of this Country; as it is also in *Pegu*, *Laos*, *Camboja*, &c. The Inhabitants of all which Countries wear the same Sort of Habits, and very nearly agree in their Customs and Manner of Living; but differ in their Language and Way of Writing. They are all Heathens, and extravagantly reverence or rather idolize their Priests. Their Pagods or Temples are all of Brick, but very numerous and ornamental; their idolatrous Images are large, beautiful, and finely gilt, some of them being about ten Ells high. The Streets and several spacious Places are adorned with large Turrets about fifty or sixty Ells high, gilded all over on the Outside. These Idols were brought by the *Bramins* (so their Priests are called) out of *India*.

The King keeps his Court at *Jutia*, which is also called *Siam*; this is a large, and upon an exterior View, seems a very fine City, but is very far from being so within. The *Dutch* have a House or Factory at the City of *Ligor*, and the *English*, *Portuguese*, *Mogols*, *Persians*, and *Chinese*, trade very considerably here; nay, several *Portuguese* live in the City. Formerly the *Europeans* enjoyed great Immunities here, but are now abridged of some of them, and this on the following Occasion.

One *Constance*, a *Greek*, that had long resided amongst the *English*, came to *Siam*, and became such a Favourite of the King's, that, in a short Time, he got into the best and most honourable Posts, and climb'd to the highest Step in the Administration; the King left the whole Government of his Realm to him, and he consequently became the Spring of Action. During this Time the News happen'd to reach the King's Ear, that *France*, then at War with the *Dutch*, had obtain'd a great Victory over the States; upon which that Prince, who look'd on the *Hollanders* with jealous Eyes, as a People that might one Day do him an Injury, resolved to send an Ambassador to the King of *France*. And he accordingly dispatched one of his *Mandaryns* on that Errand in 1677, on board a *French* Ship; but it is to this Day unknown what became of either the Ambassador or the Ship, nor was the least News of them ever heard. The King, however, pursuing his first Design, sent other Ambassadors, in a *French* Ship, to the Court of *France*, where they safely arrived, and were very well

well received. They, by Order of their Prince, entertained the *French* King's Friendship, as well as made Protestations of their Master's tender Regard for his Most *Christian* Majesty; and withal requested, that he would please to send him some Forces to remain in his Country for the Defence of it. And after the Expiration of several Years, the King of *France* sent Ambassadors, and three Ships to *Siam*, where they safely arrived, and were very well received and splendidly entertained; besides which, large Privileges were granted to the *Christians* on their Account; for besides the Ambassadors, in the three Ships, there came over with them a *French* Bishop with several Monks, which, together with three or four hundred Men designed for the Defence of the King and Kingdom, were by the Ambassadors left behind.

This very much disgusted the Populace, but more the Priests; and several of the Chief of the Nobility look'd awry at it; as did the *Mahometans*, who gave the King Poison, of which he sicken'd and died.

After which, the General and others rose up in Arms against the Regent or Administrator, mastered the City, and cut the above-mentioned *Greek* to Pieces; and the King dying without Heirs, leaving only one Daughter, and this General having forcibly got into the Throne, designed the immediate Destruction of the *French*; but they perceiving his Intention, retired to a strong well-fortified Place, which they so bravely defended, that he was obliged to permit them to depart freely, and furnish them with three Ships for their Voyage.

17. *Tartary* borders North and North-west on *China*, from which it is divided by the Great Wall: These Nations are divided into *East* and *West Tartars*; the latter conquered *China* at the latter End of the Twelfth Century; but about eighty Years afterwards were driven out of that Empire; and the *Eastern Tartars* are at present possess'd of it, having seated themselves on the Throne in the Year 1643. They are called *Eastern Tartars*, not with Regard to *China*, of which they lie Northwards, but with respect to the other *Tartars*, which lie West of them, and are called *Western Tartars*.

The *Eastern Tartars* were separated from *China* not only by the Wall, but by the Province of *Leaotung*, which was not a *Chinese* Province before the *Tartars* came through it into that Empire; but being situated without the Wall, it lay as a Barrier against the Incursions of the *Tartars*; and before it became a Province of *China*, was a Place of Exile, whither all banished Persons were either ordered or fled of their own Accord for Refuge. These and other Exiles assisted Prince *Oufangouei*, who, with the Help of the *Tartars*, drove the Usurper *Li* or *Licoung* from the Throne, which the *Tartars* then ascended. After which, the Province of *Leaotung*, in grateful Acknowledgment of its introducing the said *Tartars* into *China*, was incorporated to the Empire, and declared the sixteenth *Chinese* Province, enjoying the same Rights, Privileges and Immunities with the fifteen ancient Provinces; all whose Tribunals and superior Courts of Justice are supplied by an equal Number of *Tartars* and *Chinese*, as are also all the Presidentships.

Since the *Tartar* conquered *China*, he hath extended the Frontiers of his Dominions in *Tartary*, for being formerly but one of the petty Kings of the *East Tartars*, he hath not only obliged the other *Eastern* Princes, but even the *Western Tartars*, to submit to, obey, and for the most Part, acknowledge him their Sovereign Prince. And the Union of these two mighty Kingdoms and Nations, has swelled this Empire to an extraordinary Bulk, and rendred it one of the noblest Sovereignties in the World. By Means of this wide Extension of this Monarchy, *China*, or more properly *Tartary*, stretches its Borders to *Muscovy*, by which it is bounded Northwards. And by the Peace betwixt the Czar and the Emperor of *China*, concluded in the Year 1689 at *Nipchou*, by the Ambassadors of both Emperors, it appears that the Borders on both Sides are fixed by Agreement in the Latitude of 55 Degrees; which appeared very surprizing even to Geographers themselves, they scarce believing

that *China* and *Muscovy* were become Empires confining on each other by the Addition of *Tartary*. And the Ambassadors could not reach the before-mentioned Frontier City, situated on the utmost Borders of *Muscovy* from *Peking*, in less than six Weeks Time, the Distance being three hundred Leagues.

The Empire of the *Great Mogul*, and several other Monarchies, were in like Manner formerly Provinces obedient to the *Chinese* Empire, as is amply evinced by the present remaining Monuments in several Parts of *India*: But either their distant Situation, political Interest, or the *Chinese* Seditions, have long since torn them from that Monarchy. The Empire of the *Great Mogul* extends over all the Kingdoms and Countries betwixt the Rivers *Ganges* and *Indus*, to the Gulph of *Bengal*. The Inhabitants of *Cambay*, *Bengal*, and other subordinate Countries, drive a very great Trade with the *Chinese*, and have also with their Merchandize introduced their own, that is, the *Mahometan* Religion. The Metropolis, where the *Great Mogul* keeps his Court, as also the Province in which it is situated, is called *Delli*; the Countries subject to him are very fertile, and what by reason of the Gulph or Arm of the Sea, and the Rivers which on both Sides run by it, very commodiously situate for the Transportation of the Produce of that Country. Besides vast Plenty of Corn and Fruit-trees which that Land yields, it affords also great Quantities of Wax, Frankincense, Spices, and Drugs, as well as Diamonds and other precious Stones. The Number of Elephants is here so great, that they are not computed by Hundreds, but Thousands; and according to the Custom of this Country, the Horse and Foot capable of taking Arms, and which upon a short Warning may be raised, are reckoned by Hundreds of Thousands. The Commodities with which they chiefly trade in *China*, are rough and other Diamonds, Jewels, Elephants Teeth, Wax, &c. The Emporium to which they and other *Indians* coming out of the West resort, as is already hinted, is *Zunning*, a very great and commodious trading City, frequented by all Nations; for though anciently no Foreigners were permitted to come to or trade in *China*, yet the wiser *Tartars* regarding their own Interest much more than obsolete Customs, have allowed almost all Nations to trade amongst them. All the *Indians* are swarthy, and go naked, except only a Cloth, which both Men and Women wear about their Waistes.

It was thought best to insert the Whole of our Author's Account of the Kingdoms, anciently and at present depending upon *China*, just as it stands in his Book, and without any Remarks, that the Reader might perceive at once what the Situation of Things was at the latter End of the last Century. We may very easily discern from his Manner of Writing, that he was a very warm Friend to the Glory of his Country, and very desirous of representing it as infinitely more glorious in former Times than it is now. It is not easy to say, what his Sentiments would have been, of an Opinion that prevails amongst some very learned Men, if he had been acquainted with them, viz. that the *Chinese* themselves are but a Colony from *Egypt*. On one Hand indeed, this Notion derogates much from their Glory, as it makes them appear so far below what they esteem themselves, and of which they continually boast, that they are an original Nation; that many Nations have descended from them, and that before the Conquest of their Country by the *Tartars*, their Race was in a good Measure unmixed; yet considered in another Light, this Notion seems to do them Honour, for if we reflect on the Accounts given us by *Herodotus*, *Diodorus Siculus*, and other antient Writers, concerning the Government, Customs and Manner of Living amongst the original Natives of *Egypt*, they must be owned for one of the wisest and most polite People of whom there is any Record in History.

In Matters of this Nature, however, it is not enough to assert, there ought likewise to be some kind of Proof, and those who give into this Sentiment, endeavour to sustain it by three Arguments. The first is, that the ancient *Egyptians* positively assert it, their having

having sent, in the most early Times, vast Armies into the higher *Asia*, who left behind them considerable Colonies, of which, however, the *Greeks* tell us rather Fables than any Thing that can be called History, as to the Remnants they met with in *India*. So that supposing the Travels of the *Egyptian Bacchus* to have some Thing of Truth, though buried under a Load of Fiction, we may likewise suppose that he penetrated into *China*, and in that Country, rather than in *India*, left his Colonies. The second Argument is deduced from the great Conformity between the two Countries, for if *Egypt* has its *Nile*, *China* has its great River of *Nanking*; if the former abounds with Canals and Cutts of Water, from Town to Town, for the Sake of an easy and commodious Communication, so does the latter; and if in *Egypt* there are many Monuments of great Antiquity, the like are also to be found in *China*. The third Argument is taken from the Resemblance of their Governments, and the Maxims upon which they are founded; the Likeness between the ancient Hieroglyphicks, or rather sacred Character of the *Egyptians*, and that of the *Chinese*; the Aversion and Contempt which both Nations have for Foreigners, flowing from an arrogant Opinion of their own Superiority in Science, and in every Thing else; the Notions the *Egyptians* had of the Excellence of their Country, which is exactly copied by the *Chinese*, and in fine, the pacific Dispositions of both Nations, springing from the Principles of their Policy, immutable through the Course of many Ages. How far these Arguments reach towards establishing the Probability of this Sentiment being true, we pretend not to determine, it being our Aim only to give the Reader as short and clear Account of the Sentiment itself that was in our Power; and having done this, we leave it entirely to his Decision.

But it may not be amiss to add, that the *Japonese*, the *Simoesse*, and other Nations, mentioned by our Author, have actually such a Tradition amongst them as he contends for, and are so far from denying that they were formerly under the same Dominion with the *Chinese*, that on the contrary, they boast of being descended from them as a very high Honour, and appeal to their Customs and Manners for the Proof of it, supposing that their Learning and Knowledge of what Nature soever it may be, could be derived to them only from that People, who they esteem the wisest and most polite Nation in the East. We are not therefore to regard what our Author says, as the pure Effects of Vanity, but as an Opinion that is current amongst the several Nations of which he speaks.

It must look very strange after what has been said, that these Countries are no longer under the Dominion of the *Chinese* Emperor; for it should appear extremely easy to preserve Territories, the Inhabitants of which have a Pride in being Subjects; but the Riddle is not hard to be disclosed, and as the Solution is neither unprofitable nor unpleasant, it may not be amiss to insert it. The *Chinese* Monarchs of the last Race, before the Country was subdued by the *Tartars*, were desirous rather of keeping than of extending their Dominions; and for this Reason they chose the natural Bounds of Seas and Mountains, together with the artificial Fortification of the Great Wall, which had been raised by their Ancestors, and raised from that very Maxim which they now pursued.

By this Means the fifteen Provinces of *China*, though of such a vast Extent, were perfectly well covered from foreign Invasion. On the East or South they could be attacked only by a maritime Power, and a Power capable of attacking them, they very well knew subsisted not in that Part of the Earth; so that their Coasts were perfectly saved, even supposing they had not been so defensible as they really are. To the South-west they have a long Chain of impracticable Mountains, on the other Side of which lie the Kingdoms of *Laos*, *Tonkin*, *Cochinchina*, and *Siam*; from the People of which they knew by Experience they had nothing to fear; and they were wise enough also to know, that it would be much easier for them to assist these Nations in Case they were attacked, than to defend their respective Countries as Pro-

vinces. On the West they are likewise covered by Mountains, and on the North by the famous Wall, beyond which they have the Country of *Leontong*, which they kept as an Outwork against the *Mantcheou Tartars*.

This Policy of theirs was sound and good, and must for ever have secured *China*, if their own civil Diffentions had not opened a Way to that Revolution which the *Tartars* compassed by superior Skill rather than Force. As Things now stand there is Reason to believe, that on the one Hand the *Tartars* will be easily dispossessed, because their Force daily increases in Comparison of the native *Chinese*; and as to any Attempts of other Nations, they are less to be feared than ever, because the *Tartars* heretofore, their most formidable Enemies, are now become a kind of Out-guards, as willing and more capable to defend them than the proper Subjects of the Empire.

As this Observation is obvious, and as the *Chinese* have Penetration enough in this Respect, we have Reason to wonder that our Author has taken no Notice of it, but a little Reflexion will discover the Cause. He was not of *Tartar*, but of *Chinese* Extraction, and therefore if this Notion occurred to him, he would certainly suppress it as destructive to the Honour and Reputation of his Country, which it is visible enough from his Manner of Writing he meant to raise as high as he could. At the Time he wrote, the *Tartars* had not been Masters of *China* above fifty Years; and it is very natural to believe, that the *Chinese* still retained Hopes of being some Time or other able to throw off the Yoke; and in such Cases, those who are well versed in the Dispositions of Men, which are pretty much the same in all Countries, will easily conceive, that all Things must appear to them in false Lights, because on one Side, the flattering Expectation of becoming once more free and independent, heightened the Opinion of their own Strength; and on the other, their Aversion to Foreigners hindered them from perceiving that the *Tartar* Power was continually increasing, and at the same Time, their Ability of resisting declining apace.

But to despair, and to despair in so capital a Point as this at that Time, must have been thought by every *Chinese*, was what he must wish to avoid, and whatever Men wish with Regard to speculative Points being always in their Power, they seldom fail of bending their Belief to their Wishes. We have various Instances of this in other Countries than *China*, and Instances that in Point of Time reach very far beyond that wherein they have even now been Subjects to a foreign Power; a Circumstance every where alike hateful, and which therefore amongst all Nations will ever have the like Effect, till such Time as the Cause imperceptibly wears out, that is, till those who were considered as Strangers become Natives, and so the Will to expel them is gradually lost. In all human Probability this Time is already come in the Country of which we are speaking, and if we had a History of it written by a *Chinese* at this Day, we should find him place the Subject that we have been discussing, in the very same Light that we have done.

We must not however dissemble that there are various Passages in his Accounts which might be corrected, and some which without Prejudice to his Performance might have been omitted, but it is to be considered, that these Mistakes are not very considerable, either in their Nature or in their Number, that he wrote at a Distance of Time, when Slips of the like kind would have been very pardonable, even in an Author on this Side of the World; that there is something useful in seeing what mistaken Opinions gain Ground in those Parts, and lastly, that there is not the least Danger that a Person, who has perused the former Volume of this Work, should be misled by what he says. Add to all this, that as we have hardly seen any *Chinese* Writer before, so it would not become us to play the severe Criticks now. The Knowledge our Author had, like that of his Countryman, was all of his own acquiring, and what he has communicated, is written with that Freedom and Ingenuity, that it is highly reasonable we should afford it a favourable Reception, and make many Allowances for

the many Disadvantages he must necessarily labour under.

The same Excuses, though perhaps in a more extensive Degree, must be likewise offered for what still remains of his Account, which it is very possible may not be altogether so exact as the modern Accounts of the Jesuits, but at the same time, they are very well worth preserving for many Reasons. He had a Mind to give the People of *Europe*, a very short Account of the two great Revolutions that had happened in *China*, since they became acquainted with that Country, and also an impartial View of the State that Empire was in at the Time he left it; this very Design has since employed the Pen of a very celebrated *French* Jesuit, and yet upon comparing their Works we may safely affirm, that though our Author is not a tenth Part so long, it contains as much Matter, many Circumstances that are not to be met with in his, explains the Causes and Consequences of these Revolutions as clearly to the full, and affords a better Picture of the reigning Emperor, than that drawn by the *French* Father.

It was for these Reasons, that after mature Deliberation, we gave it a Place here, so that the Reader has now the intire Work of *Dionysius Kao*, and in a better Dress than it has hitherto appeared. Some of our Readers indeed might possibly expect a larger History of *China*, but besides that, this would have run us into much too great a Length, it would have been also foreign to, and quite beside our Design; for all we aim at, is to give our Readers a just Idea of Countries as they stand at present, and if we sometimes step back into more remote Times, it is only with a View that from the Accounts we give of these, the present may be the better understood.

Taking Things therefore upon this Footing, what our Author has delivered is precisely what we wanted it is a Sketch of the *Chinese* History, within that Period of Time which falls immediately under our Notice, and accounts for the principal Events which have happened since it was visited by *Marco Polo*, the first *European* that ever wrote about it, and whose Travels are inserted intire in our former Volume. One Thing more is to be observed upon this Subject, before we leave it, and it is this, that whatever Dislike our Author might have for the *Tartars*, he found himself obliged to speak of the Emperor reigning at the Time he wrote, in as high Terms as it was in his Power to invent; from whence we discover two Things of some Importance, with an equal Degree of Certainty; the first, that the Monarch of whom he speaks, really deserved the high Character he gave him, for otherwise it is impossible that so many Writers of different Nations and Interests, should agree in it. The second, that it plainly appears from hence, that our Author had a just Regard for his Protestations, and did not suffer either his Fondness for his own Country, or his Aversion to the *Tartars*, to misguide him from the Paths of Truth. From this extraordinary Instance therefore of his Veracity, of which we have the fullest Proof, we learn what Credit is due to the rest of his Performance, and that it is not without Reason we have commended his Writings so much, to which it is now high Time to return.

Tho' the *Chinese* Empire is by all the learned of that Nation, without the least Scruple, positively asserted to have continued for above the Space of four thousand Years, under the Government of two and twenty Imperial Families; and others believe it possible to trace its Origin five hundred Years higher; yet to this Day, or rather to the Middle of the sixteenth Century, the *Chinese* have not made any Alteration in their Humour, Morals, Learning, Habits, Manner of Government, or Language. It is indeed true, that Seditions, Civil Wars, Insurrections and Revolutions have happen'd, which have made a temporary Alteration of the exterior Form, but they soon disappear'd, and all Things returned to their former State: For one while the Empire was divided into one hundred, nay three hundred Parts, then reduced to seven, afterwards to three; and at last re-

turned to the primitive State of an entire Empire, subject solely to one Sovereign.

According to the *Chinese* Chronology, the above-mentioned two and twenty Royal Families have produced two hundred and thirty six Emperors, computed to extend to the present Monarch, and beginning with the first Emperor *Fohi*: Which Prince, agreeably to this Chronology, and the unanimous Attestation of all learned Men, is acknowledged for the undoubted Founder of the *Chinese* Sovereignty. This is particularly confirmed by those appointed to examine into it by the Emperor himself, and his chief or most able Ministers: We are told that this Emperor was a Prince of an exalted Genius, great Courage and Experience; that he projected their Laws, declared good Education and good Manners to be the best Foundation of the Publick Good, and bestowed his utmost Praises on those who by virtuous Means pressed forward to the highest Degree of Wisdom; whilst on the other Side, he banished all Sloth, and set a very high Value on those, who by their Parts and Industry distinguished themselves from the rest of Mankind. His illustrious Reign, crown'd with venerable Age and Experience, transmitted to his Descendants such a strong Impression of his real Excellencies, that his Maxims, Instructions, and Laws, are regarded as divine Precepts, and those who have studied them, have found them so superlatively excellent, that they have justly deserved as well as retained their exalted Fame amongst the *Asiatick* Nations.

Fohi was succeeded by *Chumming*, and he by *Hoangti*, who was succeeded by *Xao*, and several others in order, which according to the same Chronology were elective Kings; and being as long liv'd as the *Noachian* Patriarchs, each of these is said to have reigned above one hundred Years; though like the *Antidiluvians* mentioned in holy Writ, they declined in Proportion to the Time of their Flourishing. The same Chronologies assign *Yous* as the first Monarch which followed these elective Kings, and whose Son and Race succeeded to the Crown; since which Time it has remained hereditary to this Day.

The present reigning Monarch of the House of *Tai-cin* or *Taicou*, (as we have already hinted) is the third *Tartarian* Emperor; whose Grandfather, after the Death of *Zunchi*, the sixteenth and last Emperor of the Race of *Taiminga*, which had swayed the Scepter for the Space of two hundred and seventy six Years, seized or rather rushed into the imperial Throne, after the Defeat and Expulsion of the traitorous Usurper by Prince *Ousangouei*, assisted by the *Tartarian* Forces.

The same Writers inform us, that in the Reign of the Emperor *Xunus*, the *Tartars* made their first Incursions into *China*, but that Prince bravely repulsed them, and settled the Empire in a quiet State: So that this Event, which happened long before Christ's Time, was rather an Incursion, than a War of any Duration. But in the twelfth Century, the *Tartars* conquered this Empire in the Reign of the last Emperor of the House of *Sung*, which Family had then reigned four hundred Years: They then entered and seized the Empire, by the traitorous Assistance of *Zinghay*, one of the Nobility: For this Traytor, watching his Opportunity, introduced the *Tartars* during the Emperor's Minority; and they quietly enjoyed the Empire about eighty Years: But in Process of Time, the Peace, Ease, and Plenty in which they wallowed, debauched that warlike Nation to the luxurious, soft, and lazy Way of living of the *Chinese*: Valour and Order were displac'd, and Reputation vanished: The Soldier became leud, and transgressed his Orders with Impunity: And the great Remissness of the Commanders occasioned the greater Mischief, of Robberies on the Highways, and in the Streets, and Murthers; which Current of Crimes running high, Fear of Punishment produced Conspiracies, extending to whole Battalions, which at first sculking and dispersing themselves throughout the whole Empire, rendred all *China* very dangerous either to live or travel in: Especially when they grew strong enough to appear in the Field in Troops, and at last in small Armies.

The

The *Chinese* tired with this foreign Power, which grew to insupportable Tyranny, as appears by what followed, murmured at it, and raised Commotions throughout the whole Empire, but none of the Nobility stirred in it, notwithstanding which they were delivered from the *Tartarian* Yoke in the following Manner.

A certain Boy, born in the City of *Fajangfu*, in the Province of *Nanking*, that had lost his Parents by the Plague, to escape that raging Distemper, as well as through Want of Bread, and in Hopes of bettering his Fortune, left his native Place, and retired to a Pagod, or idolatrous Temple, and put himself into the Service of the *Bonzi's*, which are their Idolatrous Priests: But they treating him somewhat severely, he ran away from them, and became a Herdsman; and in Process of Time, being advanced to maturer Years, he lifted himself a Soldier amongst the Robbers before-mentioned, which were now grown to a formidable Body: And what contributed to his continual and gradual Advancement amongst them was, that one of their principal Commanders was his Uncle, who finding him acquit himself well, took Care to raise him: And becoming himself a General, he died sometime after, and was succeeded by this Nephew: Who had not been long General before (having encreased his Forces to his desired sufficient Number, and being assisted by the *Chinese*) he so expeditiously, vigorously, and successfully made War against the *Tartars*, that in the Space of seven or eight Years, he obliged them to evacuate the whole Empire of *China*. He fixed himself on the Throne, was proclaimed Emperor, kept his Court at *Nanking*, and died after having reigned thirty three Years, assuming the Name of *Hunguil*, i. e. the Excellency of Arms. He was the first of the House of *Minchao*, (or *Tamincha*) which governed that Empire about two hundred and eighty Years. His Son succeeded him in the Empire, and removed the Imperial Seat from *Nanking* to *Peking*, in order to be nearer the *Tartars*, upon whom he fell with all his Force, and pierced through all *Tartary*, destroying all to which Side soever he turned his victorious Arms, and sparing Nobody, pursuant to the Resolution he had made if possible to extirpate all the *Tartars*; but finding none able to oppose him, he returned to *China*, where after a long and peaceable Reign he died; and his Descendants continued in the Throne till in or about the Year 1644, at which time the Reign of that Family ended in the Emperor *Zunchi*, who by his miserable End made Way for the *Tartar* to ascend the Throne. It is indeed remarkable, that the very Family which about three hundred Years before had drove out the Western, was driven out by the Eastern *Tartars*.

Before we enter upon the present Government and Revolution of the Empire, we shall by the Way only hint, that the *Tartars* in the Reign of the Emperor *Vanli*, one of the last of the *Taiminchian* Race, who died in 1620, aged 58, after a Reign of forty eight Years, made an Irruption into *China*, and were repulsed by him: And that about the Year 1580, in the same Emperor's Reign, the Christian Religion began to be received in *China*. *Francis Xavier* attempted first to travel thither from *Japan*, in Hopes of promoting the Kingdom of Christ; but died on his Way in the Isle of *Sancham*, a Place dependant on the Province of *Canton*. Then the Fathers *Herrada*, *Marino Alfaro*, and some *Franciscans*, viz. *Martin Egnatio*, *Rogero*, *Pasio*, *Ricci*, and other Fathers, undertook this Work with the same ardent Zeal; but Father *Ricci* proved the most successful of any of them, for having long resided at *Macao*, having studied the Religion, Laws and Customs of that Empire, and being very well versed in their Language, these Accomplishments gained him the Esteem of the Emperor and the whole Court, and rendered his Mission successful; he obtained a Grant of buying a House and a Burying-place, as also Leave to settle there, which was the first Foundation of the spreading of the Gospel here. But the Lord's Vineyard at *Macao*, was once very near an utter Extirpation by a cruel Persecution, if the Hand of God had not stopped it by punishing the Persecutors.

After the Death of the Emperor *Vanli*, reigned his Son *Taichan*, a valiant Prince, who by raising a great Army against the *Tartars*, that began to be in Motion, discovered his earnest Desire of heroically attacking them, but his Design was frustrated by his sudden Death, after a Reign only of four Months. He was succeeded by his Son *Tbienski*, who not in the least degenerating from the Valour of his Ancestors, as soon as he was on the Throne, assisted by his Allies, beat the *Tartars* out of *Leaotung*, in which Province they had made an Irruption and mastered several Cities, and after a Reign of about seven Years Duration died in Peace, and was succeeded by his Brother *Zungchi*, a mild negligent Prince, who, fond of Ease, reposed too great Trust in his Officers, who instead of a faithful Service repaid his Credulity with Treachery, and after an unfortunate Reign brought their Master to a miserable End, which was followed by the Empire's falling into the Hands of a foreign Family.

"The Causes of the Revolution in *China*, and the utter Extinction of the last Race of *Chinese* Emperors, besides those alledged by our Author, are by several Writers observed to be: That the Court (or the Emperor) was plunged in luxurious lazy Ease; his only Care being employed how to pass his Days with the greatest Pleasure, with the beautiful Virgins which were selected for his Use all over the whole Empire: For the Prince being absolute, it was forbidden to marry any young Women before they were proffer'd to him. This Course has ruined more Courts than one, it naturally administering Occasions for Insurrections within, and Foreign Invasions, whilst the Emperors, drowned in ridiculous Pleasures and Diversions, never trouble themselves with the Government, but entrust it in the Hands of worthless Eunuchs. Others add, that this Prince was also very covetous."

The *Tartar* was driven out of *Leaotung* and *China* by the above-mentioned Emperor *Tbienski*, and besides made a Tributary to him; but the Sparks of civil Dissention were not so extinguished as to prevent their breaking out into a more raging Flame, which was kindled by the *Chinese* Governors exorbitantly treating and plundering the *Tartars* and *Tartarian* Merchants, and not in the least scrupling the Practice of any Manner of Injustice against them, in order to exasperate that Nation, and oblige themselves with the Opportunity of fishing in troubled Water. The Merchants and others that were abused by the Governors, petitioned against them; but the Emperor and the Court turned a deaf Ear to all their Complaints. The *Tartarian* King, in Resentment armed himself, and at the Head of his Army dispatched a Letter to the Emperor, before he had Recourse to coercive Means, or backed his Words with his Sword. He laid before him the unjust and partial Practices of his Governors and Officers; and set forth, that all the Remonstrances of his Merchants were slighted at Court; desiring the Emperor would be pleased to punish his Governors and exorbitant Robbers, and provide against such pernicious and corrupt Practices for the Future, and excuse him his annual Tribute, in order to reimburse him the Military Expences he had been at; upon Refusal of which he declared, that he should be obliged to take such Measures as the continual Complaints of the Violence and Injustice daily exercised upon his Subjects should oblige him to. The Emperor, instead of examining into this Affair, utterly discharges himself of it, and leaves it to his Council; who, keeping him blind, play'd their Game according to their own Pleasure, and without any great Opposition suffer'd the *Tartar* to seize Part of *Leaotung*. After the Conquest of which, he endeavour'd to subdue the whole Province, but was interrupted in his Career by a too vigorous Resistance; and the War betwixt the two Nations lasted a long Time, Victory sometimes inclining to one, and at other Times to the other Side: But at last the Strife ended in a Peace, in Favour of the *Tartar*, the Emperor being obliged to leave him in the quiet Enjoyment

ment of his Conquests ; by reason that the Robbers and several of the Nobility had made such a formidable Insurrection, that the Emperor seemed to apprehend more Danger from them than from the *Tartars* themselves : Which was indeed afterwards confirmed by the Event ; for the Robber *Licoung*, after taking several Cities and whole Provinces, grew so insolent as to presume to attack even the Emperor himself in *Peking* his Metropolis, which he knew to be empty of Forces, or at least, that those there were commanded by those who would betray their Prince. The Emperor finding himself betray'd on one Hand, and deserted on the other, being unwilling to fall into the Robber's Hands alive, after he had killed his Daughter with his Sword, ended his one miserable Life with a Rope.

The Conqueror attempted to fix himself on the Throne ; but Prince *Ousangouei*, who commanded the Army at the Great Wall, and kept a Watchful Eye on the *Tartar*, designing either to fall on him with his great Force, or engage him on his Side, gained over to his Party the *Leaotungers*, and all those who were either banished, or had fled to that Province ; but though they were added to his Army, he did not think himself strong enough to deal with the almost infinite Numbers, and consequently superior Force of the Usurper : Wherefore he, by a Treaty with *Tsonte* or *Zunte* the *Tartarian* King, obliged him to join his Forces against the Usurper, in order to revenge the Death of his Father, whom the Robber had cruelly murdered : He succeeded in his Design, and after a bloody Fight pursued him ; and it is at present utterly unknown where *Licoung* perished. During this Pursuit of the Robber, *Tsonte* enters the Empire, in order to support Prince *Ousangouei* on Occasion, to clear the Empire of *Licoung's* Followers, and disperse the Conspirators. He advanced to *Peking*, where finding the Coast clear, and the Throne empty, he ascends it, and, assisted by his *Tartarian* Forces, caused the *Chinese* (whose Hearts he had already won by his engaging Deportment) to proclaim him their Emperor, without making any other Alterations in the Government, than putting it in the Hands of an equal Number of *Tartars* and *Chinese*, and introducing the *Tartarian* Habit and Hair, to which he had in a Sort inured and engaged the *Chinese* by dressing them in that Manner, by a martial Stratagem, in order to deceive the Enemy, and the easier to beat *Licoung*.

“ What *Nieuboff* relates of this Prince is very remarkable, and conduces to the Illustration of this Story. This Prince (saith he) seemed naturally endowed with all Manner of Perfections, and if he had any vicious Inclinations, he very artfully corrected them by Practice. Before he ascended the Throne, he gave plain Indications of his Excellencies. In his tender Age his Father sent him in *Chinese* Habit into *China*, under the Direction and Care of some of his Counsellors. He there learned not only their Language, which his apt Capacity soon mastered, but became so tinctured with their politer Manners and Morals, that he seemed utterly to have forgotten the *Tartarian* Roughness and Barbarity. As soon as he was got into full Possession of the Throne, he changed the rigid Manner of governing into a milder, knowing very well that the former would prevent his gaining his Ends on the *Chinese*. He so established himself on his new Throne, rather by his Tenderness and good Manners than by Arms, which endeared the Hearts of his Subjects to him. He caressed the *Chinese* that came over to him, as much as his own Countrymen ; those he took Prisoners, if they pleased, he entertained in his Service, and suffer'd those who were unwilling, to depart, dismissing them with obliging Expressions and a safe Conduct ; thus he won their Hearts, and tender'd a kind Refuge and Protection to the Exiles, or those who had before fled out of their Country ; and they indeed were very assiduous to him in gaining the Empire. There were also some amongst them, which had distinguished them-

“ selves in his Service ; these he rewarded with Places or Presents that far exceeded their Expectations.”

After this, *Ousangouei* returning from the Pursuit of his Enemies, finds the *Tartar* upon the Throne, and, pursuant to the Treaty concluded betwixt them, the Empire being now in Peace, and the Rebel totally defeated, desired him to return to *Tartary*, tendering him the Presents promised for his Assistance at the Beginning of the War. To this the Emperor putting on an obliging Air, answer'd, that it was yet too soon, since the Rebel was not so enfeebled, but that hearing of his Departure to *Tartary*, he might possibly attempt a fresh Insurrection, and carry all before him ; which he should not be able to prevent, as not being at Hand to help them ; wherefore it was much better first to destroy utterly the Rebel and all his Adherents, and revenge on him all the Evils which he had drawn on his Kingdom as well as the *Chinese* Empire ; and withal, to reduce them to so low a Condition, that it should be impossible for them to make any new Attempts. The Prince either was or pretended to be satisfied with this Answer, and applied himself to the Destruction of the Rebels, which he so warmly pursued, that he did not leave the smallest Body of them together, but restored the Peace of *China*.

The Emperor *Tsonte* was scarce well settled on his Throne before he died, in the Year 1644. He was the first of the Race of *Taicim*, who annexed the Imperial Crown of *China* to his Royal one ; and govern'd both his own Nation called *Mantcheou's* and the *Chinese*, thereby tracing out a Way for the greater Glory of his Descendants.

He left a Son named *Chunchi*, who was but six Years of Age, to succeed to his Crown, and committed the Care of his Person and Education, as well as the Government of the Empire, to his Brother *Amavang* ; who was as careful in the farther Subjection of the refractory Provinces on one Side, as *Ousangouei* was in the Pursuit of *Licoung*, in order to take his just Revenge of him on the other : And we are accordingly told by some, that in an Engagement *Ousangouei* himself cut *Licoung* to-pieces, in Sacrifice to the *Manes* of his Father.

Amavang, to whom was entrusted the supreme Direction and Administration of the War and Empire, acquitted himself with so much Honour in all his Undertakings, that the Reduction and Maintainance of the Empire is to be ascribed to him as much as his Brother : He gave continual Proofs of his Wisdom and Prudence in the Direction of the State, and Forbearance of his Enemies : As he did also of his Valour and amazing Vigilance, in Beating of Thousands of his Enemies ; but he gave yet greater Evidences of the true Sense of the most exalted Honour which animated his elevated Soul, utterly untainted with any sinister Ends, or private Interest, in surrendering as willingly and freely the Empire to the young Prince as soon as ever he came of Age, as he had reduced, governed and preserved it to that time. This Action alone is sufficiently famous, because there are very few parallel Examples can be produced.

Chunchi's Reign was but short, for he died in 1662, and after his Entry upon the Government, met with very few other Difficulties than those common to the Exercise of Sovereign Jurisdiction, and the Care of the State. In his Intervals of Relaxation he discovered a strong Propensity to Arts and Sciences, particularly to those which were Mathematical : It was this that engaged him to promote Father *Adam Schaal* to be President of that Tribunal, and graced him with his Favour, notwithstanding that he was a Stranger, and a Christian ; this gave Encouragement to hope that the Christian Religion would encrease ; for when Princes begin to bestow their Favours on its Teachers, it opens a Door to their ingratiating themselves not only with the Commonalty, but with the Nobility themselves.

“ *Le Comte* saith, that the Emperor *Chunchi* came in Person to visit Father *Adam* above twenty times within the Space of two Years, that he granted him Leave

“ to

“ to build two Churches in *Peking*, and consented to
 “ every Thing that might contribute either to the Estab-
 “ lishment or Propagation of the Faith; insomuch
 “ that prodigious Advances would have been made, if
 “ a too violent Passion had not made an Alteration, by
 “ depriving us of this Prince, at a Juncture when we
 “ most wanted his Protection. He died, saith he, of
 “ Grief for the Death of one of his Concubines, who
 “ so strongly enclined him to the Service of the false
 “ Gods, that he would not hear of any other; upon
 “ which followed a severe Persecution, the Ground of
 “ which was laid by this Mistress. Nor did she strike
 “ at the *Christians* alone, but her Resentment was also
 “ fatal to the *Bonzi's*, who narrowly escaped utter De-
 “ struction by her Means.

His Son *Cambi*, or *Canchi*, which signifies *Peaceable*, succeeded him, being but eight Years of Age when his Father died. This is the present Emperor, whose Reign is crowned with such universal Elogies. He is a Lover of Arts and Sciences, and hath indulged to the *Christians* such great Immunities all over *China*, that it is to be hoped this mighty Empire, may in Time, through the divine Grace, be wrought upon entirely to quit their erroneous Pagan Doctrine, and embrace the saving Faith of Jesus Christ; which the good God grant.

His Father saw in his Infancy his excellent Endowments, and therefore passing by all his elder Brothers, declared him his Successor in the Imperial Throne. During his Minority, the Christian Church was in a suffering Condition, the four Regents being bitterly incensed and prejudic'd against that holy Religion; and then the *Christians* were obliged to try their Patience. Father *Adam Schaal* was thrown into Chains, and condemned to Death; but mercifully delivered by the wonderful Hand of God; and he died not long after, full of Years and Honour; whilst his Enemies fell into Disgrace, and some of them being caught in their own Traps, died shameful Deaths. After his Decease Father *Verbieft* came into the Favour of this present Emperor, and held the same Place in his Grace to his last Hour, as well as that of President in the Mathematics. And after his Death Father *Grimaldi* succeeded in his Stead, and to the Favour of this Prince, whose Praises are below his real Merit.

For if those Persons may be believed, which speak their own Experience, and nothing but what they are Eye and Ear-witnesses of, he is a Monarch of whom it is much better to be silent, than to say but little. His Virtues are too great to be comprehended in a narrow Compass, and my Pen too mean to do him or them Justice. Wherefore I shall by my Silence excuse myself from this too difficult Task, and only repeat and sum up the Lives of the Princes of his Race, that have ruled the Empire. His Grandfather *Tsongte* scarce enjoyed his new Acquisition so long as was requisite for him to travel through it, and died in 1644, leaving to succeed him *Chunchi*, a Prince of six Years of Age, but great Endowments, who died in 1662, after that he had declared the present Emperor his Heir, the greatest Action that he ever did, or could do. He was eight Years of Age at the time of his Father's Decease. *Canchi*, or *Peaceable*, is his Name, who now quietly enjoys and rules his Empire, and is equally honoured, feared, and loved by his Subjects. In the Beginning of his Reign he struggled with several dangerous and rough Seas, which most young Princes are obliged to break through before they reach a safe Harbour. Shortly after, and when he had scarce reached the Age of twenty, Prince *Oufangouei* rose up in Arms and carried on a vigorous War against him; and *Canchi* being by Descent a *Tartar*, and on the other Side *Oufangouei* a *Chinese*, and consequently more agreeable to the Populace, they the more blindly followed him, and such Numbers crouded to join him, that it was not a little surprizing, that having already one half of the Empire, he did not carry the Remainder. But the young Emperor, by his extraordinary Qualifications, so engaged the Hearts of his Subjects, that he at last concluded an honourable Peace with this Prince, which held several

Years; and after his Death the Emperor was wise enough to allure his Sons to Court, and make a proper Use of their Weakness to his own Advantage; and thus by one Means or other he again subjected all Parts of this Empire under one Head, and is now their sole Emperor. The Kings of *Canton* and *Fokien* also took Advantage of *Oufangouei's* Insurrection, and began to make War against him; but he knew how to draw off their Forces, and to raise Discord amongst these three Princes, (to which *Coxinga* may be added as a fourth) to divide them, and make them help to pull down each other; whereas possibly if they had all drawn one Way, how brave a Soldier, and how accomplished a Statesman soever he is, he had been defeated, dethroned and expelled. Thus by his wise Conduct, and great good Fortune, gaining of Time, and outliving his Enemies, he hath possessed himself of their Kingdoms. After the Death of their Fathers, alluring the young Princes to him, or subduing them as ill Neighbours, he clear'd his Field of all the Seed that might infest it, and thereby reaped a full Harvest of Obedience.

Having reduced his Empire to a peaceable State, he applied himself to the perfect Regulation of it; to which End he chose the best Men for his Ministers and Officers, honouring those that did well, and punishing those who misbehaved. He shewed them, by his own Example, how great his Aversion was to Idleness, and how well-disposed he was to Industry and Action. After the dispatching of State-affairs, he employs himself either in Hunting, Fishing, or the Study of the Sciences; for being a learned Prince, he protects and favours those who excel in the learned Arts, whether his Subjects or Strangers, preferring them to the highest Dignities, and not disdaining to make use of the *Europeans* in the most important Services, and to bestow on them the greatest Posts; nor is he ashamed to learn from them Astronomy, and other Mathematical Arts, Anatomy, Medicine, and Natural Philosophy; in all which the *Jesuits* are his Instructors, from whom he daily condescends to receive Lessons; *Grimaldi*, *Gerbil- lon*, and *Pereira*, are three of that Society whom he has made use of in Embassies. The first of them was sent alone to *Muscovy* in 1686, and the two latter were added to the great Embassy which proved so successful by their Negotiations in 1689, for the adjusting all Differences betwixt the Great Czar and this Emperor at *Nogovium* or *Nipchou*. The Fathers *Schaal*, *Verbieft*, and some of the above-mentioned, he hath distinguished by the honourable Charge of Presidents of Tribunals, and the Dignity of *Mandaryns*, and himself as well as the Prince his Son, always heard them discoursing of Arts and Sciences with the utmost Pleasure.

This mighty Emperor is not content personally to excel in Arts and Sciences, but endeavours to implant them in his Children, especially *Hoangtaise* the Prince, his Heir apparent, whom he himself particularly instructs. And the Education of Children, and reverencing their Parents, being one of the fundamental political Maxims of the *Chinese*, this great Prince pleases himself with it; and the Son discovers such pregnant Signs of a good Genius, that far from degenerating from his illustrious Father, he gives just Reason to hope that he will make as great Advances in Wisdom as his so great Predecessor.

Whence it is, that if it should please God, that the *Christian Religion* should ever take Root in the Hearts of this great Father and Son, it might reasonably be hoped that *China* would soon submit to the Obedience of the Cross. The Learning of the *Jesuits* furnishes them with an Opportunity to endear themselves not only to these two Princes, but likewise several others, who by the Respect paid to these Learned Men, grow into a favourable Opinion not only of their Persons, but of their Doctrines, which is heightened by their Abilities manifested in both the former *Muscovite* Embassies, which was the Foundation of the favourable Edict promulgated in 1691, (about three Years before the writing of this) relating to the *Christian Religion*; by which a Door is opened without Distinction to all Persons of all

Degrees, to embrace that holy Faith. And what enhances the Value of this Favour is, that if *China* could be converted, with the Blessing of God, we may unquestionably expect the Conversion of all *India*, and all the more remote and distant Nations; of which *China* being the Head, the lesser Members, as Politicians observe, would of Course follow; to which the Lord give his Blessing.

In this Manner our Author concludes his Work, written in the true Patriot Spirit of a *Chinese*, and with all the Piety of a Christian, showing himself equally concerned for the Prosperity of his Country, and for the Propagation of the Gospel in his Country, which is a new Argument in Favour of his Writings, since publick Spirit, and religious Zeal, without Views of Interest, which closely considered, will be found to be very near the same Thing, are the true Springs of the most noble and heroic Conduct, as well as the most candid and ingenuous Writings; and though these may be sometimes dissembled, yet to do this, so as to deceive, requires a much greater Measure of Art, than our Author seems, from his Book, to have been endowed with by Nature, or to have acquired by Practice. It remains to compleat our Author's View, and the Design of this Section, to continue this History as low as we can, that the Reader may be acquainted, as near as possible, with the *Chinese* History down to the present Times.

This great Emperor *Canghi* reigned about twenty seven Years after the Conclusion of our Author's History, and in that Space of Time, had several Disputes which were terminated by as many Negotiations with the late Czar, *Peter* the Great. The Designs of these two mighty Monarchs were in a Manner opposite; the *Chinese* Emperor was desirous of preventing the Encroachments of the *Russians* upon his Territories, and on the other Hand the Czar proposed to himself the establishing a regular Commerce in *China*. It was in order to accomplish this, that by a new Treaty he regulated the Confines of the two Empires, upon Condition of a free Passage for the Caravans from *Russia* to *Peking*, which subsisted, tho' not without some Interruptions, during the Reign of *Canghi*, who, directly contrary to the *Chinese* Maxims, admitted a *Russian* Resident to remain constantly at *Peking*. The *Sieur de Lange* who had that Character, has published his Memoirs, but they contain nothing that is very material; on the contrary, they consist chiefly of his Disputes with the Emperor's Ministers, who on the one Hand disliked the Trade by Caravans upon the old Principle of despising all foreign Trade, which produced a Balance in Favour of Foreigners, and on the other were in a Manner distracted at having a *Russian* Minister in their Capital, who sometimes had Audiences of the Emperor, whose Notions with Respect to these Matters were not at all agreeable to his Ministers, that Monarch foreseeing, that without some Concessions in Favour of the *Russian* Trade, he should sometime or other be exposed to a War with a Prince, capable of giving him infinitely more Trouble than the rest of his Neighbours; of which however the *Chinese* Mandarins, wedded to their old Maxims, and presuming on the irresistible Power of their Armies, had not the least Conception.

All this Time the Emperor of *China*, was engaged in an obstinate and bloody War with the Western *Tartars*, which was ended by a compleat Victory gained in the Year 1720. in Consequence of which the far extended Country of *Tibet*, and all its Inhabitants submitted to and acknowledged him for their Sovereign, by which Peace was established on that Side. This was a Thing of prodigious Consequence to the Empire, as well as an Event remarkably glorious for the reigning Monarch. In the succeeding Year, the *Chinese* Inhabitants of the Island of *Formosa*, resolved to make a brisk Effort, in order to shake off the Yoke of *Tartars*, in Hopes that lying at a Distance, they might be able to preserve their Independency, and by the Accession of their Countrymen from different Provinces, become powerful enough to establish themselves in the Dominion of that and the adjacent Isles. In Consequence of this wild and ill concerted Scheme, they made a sudden Insurrection, murdered all the *Mandarins*, and drove the Imperial

Troops out of most of the Cities in that Island. When the News of this Revolt was brought to *Peking*, the Ministry would have persuaded the Emperor; that the People had been excited to it by the *Dutch*, and this with a View to irritate him against Foreigners, but he was too wise to entertain any such Notions, and immediately ordered Part of the Forces in the Provinces opposite to *Formosa* to be transported thither, which in a very short Space of Time extinguished the Rebellion, by extirpating the greatest Part of those who had any Concern in it, and forcing the rest to fly for Shelter in the Mountains, where they lived by Rapine and Plunder, till by Degrees they were rooted out as Robbers and Thieves; insomuch that this, like all Rebellions, that are suppressed, served only to fix the Government, they intended to throw off, more strongly. The Year after the Suppression of this Rebellion, the Emperor being at his Country Palace, mentioned by his Excellency Mr. *Isbrant Ides*, and going according to his usual Custom to hunt early in the Morning in a very rigorous Winter, he found himself suddenly struck with a Chilness, which disabled him from continuing on Horseback, so that returning to his Palace, he took his Bed immediately; and his Physicians declaring that his Blood was coagulated, and that there was no Hopes of his Life, he ordered his principal Ministers to attend him, and appointed his fourth Son to be his Successor in the Government, soon after which he expired. This happened on the 9th of September 1722. according to our Style, about eight in the Morning, in the seventieth Year of his Age, and the next Day his Corps was transported to *Peking*.

The new Emperor, who was about forty five Years of Age, took the Name of *Yong Tching*, which signifies, settled Peace, and from the Day of his Accession, discovered not only great Abilities, but a very steady and resolute Temper; he found the Imperial Family very numerous, and many of his Brethren were possessed of the first Employments in the Government, in which relying on the paternal Tenderness of the late Emperor, they had not behaved with so much Circumspection as they ought, more especially the ninth Brother, who had the Direction of Part of the Publick Revenues, him the Emperor called to a severe Account, and not satisfied with his restoring Part of what he had embezzled, he caused him to be banished into *Tartary*, where he died not long after. Another of his Brothers, who was at the Head of the Army, had likewise the Misfortune to incur his Displeasure, was deprived of his Post, and otherwise punished. These Acts of Justice, his constant Application to Business, and his great Tenderness to his Subjects in general, gained him universal Reputation, and procured him the strictest Obedience. In his Father's Life-time he had never shewn any Liking to, or Confidence in the Missionaries, but on the contrary, behaved towards them with great Coldness and Reserve, and yet the Jesuits themselves confess, he was as great a Lover of Learning as his Father, and as much inclined to protect and promote the Sciences as any of his Predecessors.

There is a great Probability, that the Reason of his Dislike to the Christian Fathers was owing to their Influence over the deceased Monarch, and of his observing that they made Use of that Influence, not only in regard to publick, but even to Family Affairs, and a Jealousy perhaps they were averse to, and had employed their Intrigues for preventing his Succession. We find this asserted by one who was in the Train of a *Russian* Minister at his Court, and it is the more probable, because an *Italian* Monk, of great Simplicity of Manners, of exemplary Piety, and who amused himself with Painting, continued still in his good Graces, and was not removed out of the Palace. Nay, Father *Kegler*, who was President of the Tribunal of Mathematicks, enjoyed also his good Graces, and was treated not only with all the Respect due to his Character, but even promoted to a superior Rank; which shews that he distinguished between Religion and Manners, and knew how to set a just Value upon worthy Men, notwithstanding they were of a different Religion.

What-

Whatever the Cause might be of his Dislike to the Jesuits, it was not long before it became fatal to the Christians in general; and yet this did not immediately spring from his own Will and Pleasure, but from a Memorial presented to him by one of his chief Ministers, setting forth abundance of Enormities of which these Men had been guilty, more especially in the ill Use they made of their Favour with the late Emperor, and of the Influence they had over their Converts, which they represented as highly prejudicial to the State, and dangerous too, if not destructive of their ancient Constitution. This Memorial was followed by several others of the same Nature, and not long after by a much warmer Paper, transmitted by the Viceroy of *Fokien*, containing his Reasons for expelling the Missionaries out of that Province; and concluding with a Request, that the Emperor would issue his Orders for exiling them out of all the rest of the Provinces, and send them either to Court or to *Macao*.

This last Memorial was referred to the Tribunal of Rites, and by their Advice the Prayer of the Petition was complied with, notwithstanding all the Endeavours the Jesuits could use, and the Intercession of their Friends and Patrons, who in this unlucky Situation could do them no farther Service than to procure a small Alteration in this Measure, which was to substitute *Canton* instead of *Macao*; and accordingly all the Missionaries throughout the Provinces were obliged to abandon their respective Places of Residence, and were either sent to the last mentioned City, or to *Peking*. Not long after this a Prosecution was commenced against a Prince of the Blood and all his Family, purely on the Score of their being Christians, which notwithstanding it was very numerous, and descended from an elder Brother of the Founder of the Empire, was carried so high, that by the supreme Tribunal of the Empire they were condemned to suffer Death; which however the Emperor was pleased to commute, and sent them into perpetual Exile, as some say, or as others assert, directed them to be kept Prisoners during Life.

One would imagine from these Accounts, that the Emperor *Yong Tching* was of a very severe Disposition, and had either conceived some frightful Idea of the Christian Religion, or thought he had good Grounds to secure himself against any Attempts that might be made to the Prejudice of his Authority by some of his own Family. Yet nothing of this Kind ever appeared, for with respect to the Christians that made use of *Chinese* Priests, and performed their divine Worship without Ostentation, he allowed them much the same Kind of Indulgence they had under his Predecessors; so that it seems it was not the Precepts of the Jesuits, at least in a Religious Sense, that he feared, but their Dominion over Consciences, their secret Intrigues and hidden Practices. As to the Imperial Family, he behaved towards such as were in a private Condition, with all the Respect and Tenderness due to his Relations; but in regard to such as were in publick Stations, he expected from them as clear and as candid Accounts as from others in the like Employments, and if these were wanting, he punished them without any Respect to their being of his Blood, which he considered only as an Obligation on them to be more circumspect in the Discharge of their Duty. An Instance there was which put the Rectitude of his Behaviour entirely out of Dispute. The next Brother to him had been thought of for the Succession, being a Prince of great Wisdom and Prudence, and he was set aside only from his affecting a sedentary Life. Yet the Emperor his Father admitted him into his Cabinet Council, took his Opinion upon all Matters of Importance, and very seldom or never acted contrary to his Advice. This Brother, when *Yong Tching* came to the Throne, he made the Partner of his Cares and of his Power; he did nothing but according to his Counsels, and was so constant in this Respect, that he seemed rather his Brother's Minister than his Prince.

When he died, which was in the Month of *June*, 1730, *Yong Tching*, according to the Custom of the Country, shewed his Reverence and Esteem for the Deceased, by the Solemnity of his Funeral, and the Length

of the Mourning, both of which rather suited the Companion of his Throne than the Prince of his Blood. After the Death of this Prince, the whole Weight of Affairs devolved upon the Emperor, and he attended to them with Patience beyond Example, and behaved, whenever he gave Audience, with an Affability beyond the Reach of Description. The Jesuits at *Peking*, who would have been glad to have discovered any Mistake in his Conduct, or Error in his Policy, very freely acknowledge this, and that instead of indulging his Ease, or pursuing his Pleasures, he was temperate in the highest Degree, and dedicated more Hours to Business than almost any Man in his Dominions. He made use of his Revenues purely for the publick Service, and in Case of Dearth, or any other publick Calamity, he was sure to prevent any Applications for Relief by an early and adequate Assistance. He gave an extraordinary Instance of this paternal Affection for his Subjects on the happening of an Earthquake, *November* 19, 1731, by which a great Part of the Imperial City of *Peking* was demolished, and upwards of a thousand People buried in the Ruins. He was at the Time it happened at one of his Palaces in the Country, not far from that City, and was taking the Air in a Boat upon one of the Canals, from whence he had the Mortification to see the greatest Part of the Buildings, which had cost his Predecessors immense Sums, subverted in an Instant. Upon this he immediately went a-shore, prostrated himself upon the Ground, implored the Mercy of the Great God of Heaven and Earth for his Fellow Creatures, and besought him, if that Punishment was due to any Crimes of his, that he might rather be removed, and become the Object of the Divine Vengeance, than that it should fall upon an innocent People, criminal only from their being his Subjects.

As soon as the Danger was over, forgetting the Ruin of his Palace, he appointed Commissioners to enquire into the Losses which the People of *Peking* had sustained, relieved the Families of those who were killed, and issued a prodigious Sum of Money for repairing the Houses, and rebuilding the publick Edifices that had been thrown down, and which is a very strong Proof of his having no Pique or Prejudice to the Christian Religion; being informed that the great Church of the Jesuits was in a Manner totally ruined, he sent for the Missionaries, treated them with great Humanity and Tenderness at their Audience, recommended to them the Repair of their Church as soon as possible, and made them a Present of one thousand Taels in Gold, which amounts to 666 *l.* of our Money, for that Purpose.

We need not wonder that a Monarch, who reigned so worthily, should be beloved and revered, as well as obeyed with the utmost Submission by all his People; and it is universally allowed, that the *Chinese* shewed their Duty to this Prince in a Manner suitable to the Obligations which he daily conferred upon them, and testified upon all Occasions as sincere and tender Affection for him, as if he had been their natural Parent. We have no certain Accounts since these, except only the Misfortune that befel the Christians in 1732, when the Missionaries that had been hitherto allowed to remain at *Canton* were of a sudden ordered to retire to *Macao*. They had this Notice given them on the 6th of *August*, and on the 9th they were embarked, to the Number of thirty Persons, and those who accompanied the Missionaries, were treated with the utmost Indignity; the only Reason assigned was, because, contrary to the Emperor's Orders, they had endeavoured to propagate the Christian Doctrine. But various Disputes having arisen between the *Dominicans* and the *Jesuits* residing in *China*, and several Books having been lately printed in *Popish* Countries relating to these Disputes, we may from thence in some Measure gather what have been the Motives to this new Persecution.

In order to set a Matter so obscure, in a Light as distinct as may be, it will be, in the first Place, right to observe, that it is not absolutely certain, whether it can be, with greater Propriety asserted, that the *Jesuits* have taught the *Chinese* a new Religion, than that the *Chinese* have taught them one; it is very reasonable to believe, that

that the first Missionaries, even of this Order, studied the *Chinese* Literature very innocently, and only with a View to enable themselves to preach the Faith of Christ more effectually. But by Degrees, it seems, they have taken such a Liking to the *Chinese* Philosophy, and the *Chinese* Manners, that they indulged their Disciples in Practices, which they stile idle Ceremonies, but which the *Dominicans*, who seem to have no farther View than barely doing their Duty, consider as rank Idolatry. This has occasioned a long and warm Controversy at *Rome*, which has been at last decided against the *Jesuits*, who notwithstanding proceed still in their own Way, without paying that Respect to the *Roman* See, of which they boast so much in *Europe*.

In a Word, the *Jesuits* finding that the Study of the *Chinese* Learning was the high Road to Preferment in that Country, and that these Ceremonies were necessary to the acquiring it, could not find in their Hearts to block up either their own or their Disciples Way to Power, to Credit, and Court Interest. Their Politics, to be sure, were right; but the Question is, Whether they were consistent with their Religious Interests; or whether it would not have been full as well for Christianity, if they had been more solicitous about teaching the People the Path to Heaven, and less careful about their Success at Court? Certain it is, that the great Influence this Order always have over the temporal Concerns of those to whom they become spiritual Guides, is sufficient to awake Attention, and even to alarm any Government, and more especially a Government so watchful and suspicious as that of the *Chinese*. Their particular Applications to Women also, and that Itch which they too frequently discover of gaining Wealth to the Church, cannot but be prejudicial to them in the Opinion of all sensible People, more especially when they find it so apparently repugnant to the Principles of that Doctrine they pretend to teach.

We may be allow'd also to observe, that the Propensity of these Fathers to a Relaxation in Morals in Favour of those who are intirely at their Disposal, is another unlucky Circumstance in Regard to the Propagation of the Gospel, which has always prevailed most, where Men's Lives have been strictly agreeable to its Precepts, and where the Converts to the Faith have shewn themselves rather solicitous of obtaining the Blessings of another Life, than the Conveniencies of this. At least two Things are very certain; one, that, by pursuing their particular Plan of promoting a temporal as well as spiritual Interest, that Persecution was brought on in *Japan*, which extinguished Christianity, and therefore a like Consequence may be justly feared in *China*. The other is, that in *Paraguay* the *Jesuits* have actually established, under Colour of promoting the spiritual Interest of the Natives, a temporal Dominion so absolutely independent of the Crown of *Spain*, that it is very doubtful whether the People have the least Notion of their being his Catholick Majesty's Subjects. Now whatever Motives that Monarch may have to wink at this Behaviour of the *Jesuits*, and to suffer them to maintain such a distinct Kind of Government in *America*, it cannot be conceived, that the *Chinese* Emperors will ever enter into any such Notions of false Policy, or permit the Obedience of their Subjects to be withdrawn in this World, under Colour of consulting their Happiness in the next.

These Hints will very probably lead the Reader to the Knowledge of the true Causes of the sudden Change that has happened in the Condition of the *Chinese* Christians, and will account for a Persecution, by a Monarch, who even those whom he thus persecutes, acknowledge to be a Prince of great Equity and Moderation, and neither an Enthusiast nor a Bigot.

To speak impartially, the *Jesuits* themselves do not much dissemble these Things in their Memoirs. We see throughout, that they are charmed with their Court Life at *Peking*, the Respect shewn them by, and their Influence over the Emperor, the Titles with which they are honoured, the great Employments to which they are advanced, their living within the Walls of the Palace, and being admitted to the Imperial Presence, at the

Seasons, when so great a Monarch is most disengaged, the Preceptors of his Studies, the Companions of his literary Amusements, the Persons (who as Foreigners) are chiefly called upon to fill up the Vacancies in his leisure Conversations. All these Particulars they relate at large, with a long Train of Circumstances, and in Terms which most evidently shew their Sensibility with Regard to the Things which they relate. So that on the whole, we cannot help seeing that all the loud Boasts of the Popish Writers, as to this Mission of the *Jesuits*, are built upon a very sandy Foundation, and that the Conversions they make are very precarious Things, resembling rather the Gaining Men over to a Faction, than reconciling them to a new Religion, and consequently tending to awaken the Suspicions and Jealousies of the most dark, subtle, and designing People on the whole Earth, except it may be—the *Jesuits* themselves.

As it is impossible the Gospel Doctrines should be effectually spread by these Missionaries, who are so much taken with the Kingdom of this World, so it is not at all likely, that the *Chinese* Trade will ever become beneficial to this Part of the World, till it falls under some new Regulation. In Reality, Nobody trades there upon a free or equal Footing, but in a submissive slavish Manner, by the Grace and Favour, as it were, of the Emperor, and upon such Terms precisely as he is pleased to prescribe; by which such Advantages are secured to his Subjects, that the Profits of a *China* Voyage result entirely from the Sale of the Goods returned, and consequently are gained, by *Europeans* from *Europeans*; a very considerable Balance on each Cargo being in the first Place left behind in *China*. These are plain and unquestionable Facts, and therefore deserve to be maturely weighed, and thoroughly considered, by such as look upon Commerce as a Thing of the utmost Importance. If the *Dutch* had remained Masters of *Formosa*, or if we had continued our Factory at *Chusan*, Things might have changed their Face, and the Trade to these Countries been carried on in a more advantageous Manner.

As it stands at present, I will venture to hazard a Thought of my own, which I desire may not be despised, till the Arguments I offer in Support of it are clearly refuted. It is this, I am apprehensive that while we are contending about the Balance of Power, and sacrificing each others Trade to a Spirit of mutual Jealousy, Trade itself will remove to the North; and when it is too late we shall perceive, that not only the *French* and *Spaniards*, but the *English* and *Dutch*, have been doing the Business of the Nations bordering upon the *Baltick*, and putting it in their Power to become rich and potent at our Expence. For to me, it is a Thing past all Doubt, that if the *Swedes* had not an actual and immediate Benefit accruing to them annually from the Trade with *China*, they would not carry it on, since *Sweden* is a Country that cannot afford to export great Quantities of Bullion, as all the other Nations engaged in this Trade actually do; and if by the bare vending their own Manufactures, they can make this Trade turn to Account, it must be visible to all who have a true Insight into Commerce, that sooner or later they will become entire Masters of this Branch of Traffick, or at least, whatever Share we have in it, must be a dead Weight upon us, as furnishing the Instruments of Luxury only in Exchange for our Coin; and when once this comes to be the Case, we may please ourselves with the Thoughts of the *China* Trade, but considered in a national Light, it would be better for us that we had none.

There is nothing more common, than for such as are actually concerned in Commerce, to smile at and despise Speculations upon that Subject; but I believe it would on due Search be found, that though Companies of Merchants and private Traders may be enriched by pursuing their own Schemes, and contriving to make the Management of them an impenetrable Mystery; yet with Respect to National Advantage, the Notions of speculative Men have been, generally speaking, right. It is agreed on all Hands, that Trade is a Thing of a nice and delicate Nature, that from secret and imperceptible Causes it

it ebbs and flows, is possessed now by one Nation, and then by another; and that when it is once lost, it is very hard to be regained. If therefore we obstinately persist in the old Road till the Northern Nations actually become possessed of this and other Branches of Traffick, and in Consequence thereof, of a great Naval Force, it will be to no Purpose to look back, or to consider by what Means this might have been prevented. There is a natural Vigour that attends an increasing and growing Trade; and there is also a natural Supineness and Negligence which accompanies the Declension of Trade; so that when Nations in these different Circumstances come to contend with each other, it is no difficult Thing to perceive which must go to the Wall.

We well know, that there was a Time when we had very little Trade, that it was with great Difficulty we first raised and then extended it, and that our doing this, made Way for the Declension of the *Spanish* and *Portuguese* Trade, which have never recovered since. We also know, nay we even remember, when the *Swedes* and *Danes* had little or no Trade, and when themselves considered it as impracticable for them to interfere with us, or the *Dutch* in the Trade of the *East-Indies*; but we now learn from Experience, that they are able to do it, and we cannot but be sensible, that the greatest Obstacles to such Endeavours are felt at the Beginning; and that when these are once got over, as in Respect to them, they are already got over, Things go on a-pace, that is to say, Exportation increases, Navigation is extended, Wealth rows in, Shipping multiplies, and a naval Power is suddenly raised. The Business therefore is to reflect in Time, and to make Enquiries into the properest Means for preserving what we have got, while it is yet in our Hands. Opportunities once slipped, are never to be retrieved; we are still a naval Power, and a great naval Power; but if we imagine that this depends upon the Nature of our Government, upon the Supplies granted for the Navy, and the Orders issued from the Admiralty, we shall very soon become sensible of our Mistake. *Philip II.* of *Spain* fell into this Mistake, he fancied that naval Power might be maintained, as well as employed, by Policy; but what followed? In 1588, the Efforts of *Spain* were terrible to *Europe* in general, and to us in particular; in less than twenty Years the Returns from the *Indies* became absolutely precarious, the *Spanish* Fleets were the Contempt of their Enemies, and in half that Time both we and the *Dutch* insulted the Coasts of *Spain*. The Source and Support of a naval Power is Commerce, and if we cannot keep this, we must lose that, let the Administration in this Country be ever so honest, or so wise; from whence my Conclusion is, that though there may be other very important Concerns, yet the most important of all is our Trade; and may Providence incline us to see this in Time!

But that we may not seem to be always complaining, and never thinking of any Means of removing the Evils of which we complain, let us consider a little with ourselves, if somewhat may not be thought of, which may afford us rational Hopes of preserving the Commerce we have left, and even of extending it. Such an Attempt as this would be serviceable many Ways; it is peculiarly adapted to our present Situation; we have a rich and powerful Company, who are intrusted with the Commerce in these Parts, and who might be excited by the Desire of expressing their Gratitude to the Publick for what they have received, to try what might be achieved on this Side.

We have in the former Volume mentioned somewhat of the Possibility of venturing once more into the Island of *Japan*. But if that should be thought too hazardous, what can hinder some of our Ships from visiting *Formosa*? a fruitful, pleasant, and well situated Island. Are there not a thousand Pretences that may be suggested for putting in there? and if the Vessel that makes this Attempt be a Ship of Force, and well manned, is there any Reason to doubt, that she would be able to procure that Respect

which would make way for Trade? It may be replied, that the *Chinese* Laws are so strict, that there is no Trading in *Formosa* without the Emperor's Leave. To which I reply, that it is very well known the *Chinese* insist upon their Laws in the most peremptory Manner, where they are sure they have Force enough to support and carry them into Execution. On the other Hand, where this is not to be done, they are very slow in coming to Extremities, and had rather bate some of their Punctilio's, than run the Hazard of a Dispute that might be attended with bad Consequences.

In Times past, the *Dutch* made the Conquest of this Island, or rather the *Dutch East-India* Company made it, and kept Possession of it in Spite of the whole Force of the *Chinese* Empire. I am very far from saying, that this should become a Precedent to our *East-India* Company, or that they ought to attempt either a Conquest, or a Settlement by Force; all I contend for is, that if the *Dutch East-India* Company conquered it, the *English East-India* Company might find a Way to trade there. They would find their Account in it, and the Nation would find their Account in it; and though it might cost some Time and Trouble to bring it about, yet this very Time and Trouble would for so long a Space, exclude other Nations, and we might perhaps find a Means of putting the Trade there on such a Foot as to keep it wholly and for ever to ourselves.

If we never try, it is certain we shall never succeed; and if the *Swedes* or *Danes* had been discouraged by such Obstacles, there is no Doubt that they had never brought that Trade to bear which they now enjoy. Besides, when our *Drake's* and *Cavendish's* undertook those perilous Voyages in the Dawn of our Navigation, they had much greater Difficulties to struggle with, and much less Assistance to hope for, yet they overcame them all; and to their Boldness and Intrepidity we owe that Figure we have since made as a Maritime Power. If therefore a Spirit of this Kind could be raised, or rather revived, why should not we expect some such-like Effects? or why should we rest satisfied with the present State of Things, and lay aside all Thoughts of improving or extending our Commerce, when we see other Nations, far less able and powerful than our own, and under much greater Difficulties than we have any good Grounds to fear, making such Attempts, and making them with Success?

But to put this Matter out of all Doubt, and to set the Thing in so clear a Light that every Reader of tolerable Understanding may be able to judge of it, I have added another Section, which relates to a Country that hitherto we have little or no Knowledge of, with which we never attempted any Trade, and to which, notwithstanding there is the highest Probability that an advantageous Commerce might be carried on. Whether this be practicable or not; whether it will be ever attempted by this Nation; or whether the Hints here given may prove useful to some more confident and enterprising Nation, must remain in the Womb of Time.

Yet till this shall be disclosed, I shall have the Satisfaction of knowing that I have done my Duty; and that with infinite Pains and Trouble I have collected and reduced into their proper Order, all the scattered Hints and Passages relative to a very large and fruitful Peninsula, not less wealthy, not less populous in Proportion to its Bigness, than *China* itself, and of which there is not hitherto extant any regular or tolerable Description in any Language; so that if I should miss in my great Aim, and which ought to be every Man's Aim, that of doing good to and improving the Trade of my Country, I shall at least succeed as an Author, by enriching with a new and curious Section this great Work, which I commit to the Perusal and Consideration of Posterity, and more especially of those heroick and enterprising Spirits destined to strike out of the common Path, and to acquire immortal Glory by bringing new Advantages to Mankind.

SECTION VII.

A curious and concise Description of the Country, History of the Inhabitants, and Account of the present State of the Kingdom of *Corea*, together with some Hints of the Ease with which Commerce might be established in its Ports, the Benefits that might be expected from thence, the great Likelihood of Gaining an Entrance from thence into *Japan*, or at least an Intercourse with the *Japonese*; and many other entertaining and instructive Particulars relative to this Subject, and the Trade that is or might be carried on in the Dominions and Dependencies of the Emperor of *China*.

Collected chiefly from Memoirs hitherto unpublished, and compared with all the printed Histories and Travels, in which any Mention is made of this Country, its Commerce or Inhabitants.

1. Of the Situation, Extent, Climate, and Boundaries of the Kingdom of *Corea*, with Remarks and Observations.
2. Of the History of this Country, as delivered in the Chinese and Japonese Authors, which, for any Thing that is hitherto known, are the only Writers upon that Subject.
3. Of the Soil, Produce, Commodities, Manufactures, and Riches of this noble Peninsula.
4. Of the Provinces, Cities, Ports, Fortresses, &c. in *Corea*, and of the Islands that lie upon its Coasts.
5. Of the Inhabitants, their Stature, Complexion, Habit, Customs, Manners, Temper, Learning, Diversions, &c.
6. Of the Commerce of the *Coreans* with the Chinese, the Commodities they import and export, and the Reason why the last mentioned Nation are so excessively jealous of them.
7. Of the Commerce of the *Coreans* with the *Japonese*, the Commodities and Manufactures they export and import, and of the natural Aversion between the two Nations.
8. An Enquiry into the Probability of the *Coreans* trading by Stealth into other Countries, and some Conjectures of the Countries to which they trade, and the Commodities for which they deal.
9. Reasons why it is not at all impossible to enter into a Trade with the *Coreans*, as also why this Commerce might answer, notwithstanding any Umbrage it might give to the Chinese.
10. Some Arguments tending to prove, that a Trade with *Corea* is the most probable Method of recovering some Degree of Intercourse with *Japan*; with a few Hints of the Means by which this might be effected.
11. A succinct Representation of the Advantages that might result from such a Commerce as this, with Reference to the Discovery of unknown Countries, that are probably richer than any to which we trade at present.
12. A Hint that we may receive Satisfaction this Way, as to the Possibility or Impossibility of finding a North East Passage.
13. Miscellaneous Remarks and Observations on the principal Points mentioned in this Section.

1. **T**HERE are two different Methods by which Commerce may be promoted, the one derived from the Improvement of the Lights afforded by Experience, which is indeed certain and sure, but generally speaking slow, and producing only a moderate Profit; the other arising from Science, and the endeavouring to strike out a new Road to fresh Markets, by a comprehensive Knowledge of Cosmography, Navigation, and the Manner of conducting foreign Trade. In Reference to the first, the *Spaniards* resolved to attempt a distant Navigation, after the Example of the *Portuguese*; the *Dutch* when oppressed by the *Spaniards*, and denied a Share of the *India* Trade in *Europe*, resolved to attempt a Passage thither themselves; and in like Manner, when we perceived the Advantages resulting to *Spain*, from her Colonies in the *West-Indies*, determined to try what might be done in the same Way. In Regard to the latter, *Columbus* was the first, who had the Courage to propose going in Quest of all those Islands and Continents, that his own Sagacity had discovered on the other Side the Globe, and we very well know, what mighty Things followed from the Queen of *Spain*'s accepting his Proposal. In like Manner, *John Cabot* first formed a Notion of a North-west-Passage, which hitherto has not, but I persuade myself will, sometime or other, be discovered. *Ferdinand Magellan* was happier in his Project of going to the *Indies* by a South Passage, which he accomplished; all these were with

Respect to the human Species in general, and with Regard to the Inhabitants of *Europe* in particular, very great and important Discoveries, and those chiefly that in the Eye of important Reason set this Part of the World in a much fairer and better Light than any of the rest.

But notwithstanding the manifest Advantages resulting from this high Prerogative of visiting and commanding in all the other Quarters of the Globe, it seems in this last Century to have been less regarded. Far from prosecuting that noble Plan, which in the Midst of such Obscurity our Ancestors had the Wisdom to draw, and the Courage to carry into Execution, we are disposed rather to make the most of what they have left us, and even to quarrel with each other about our Shares; so that *Asia* and *America*, instead of wondering, as they were wont to do, at the Boldness of our Voyages, and the Expertness of the *Europeans* in whatever relates to Traffick, are justly astonished at our Feuds, and see with Amazement, that we labour to destroy Settlements already planted, instead of making new; that we employ our Pains in decrying and discrediting each other, in publishing our Imbecilities and Misfortunes, and in exciting the *Indians* to shake off that Fear, which the Exploits of the *Europeans*, in the two last Ages impressed, and to exert that Power, which themselves always possessed, but hitherto have been afraid to employ, in thrusting out those, who, not contented with trading, have ventured to play the Masters so far from Home.

If instead of so weak, so rash, and so impolitick a Behaviour, we had forborn every kind of Dispute, supported each others Settlements, and gone on in making Discoveries, we had been in a much better Condition by this Time than we are. These distant Countries would have furnished us with Places enough to have discharged those useless Hands that we have employed, not to terminate, but to continue our Disputes with each other. By their Labour, our Power, our Wealth, our Fame might have been extended, and those Countries that are now poor and desolate, might have been then rich, populous and happy; it is some Excuse for Barbarians, that they live in continual Enmity against, and in perpetual Wars with each other; but in us who pretend to have Policy that teacheth us better, and profess a Religion that requires a Conduct opposite from this at our Hands, it is as impious and iniquitous as it is ridiculous and absurd. We disclaim by this Behaviour, all Title to Wisdom, Moral or Divine, and put ourselves upon a Level with the Savages; we descend to, or rather sink ourselves beneath them, by doing precisely those Things, for which we esteem them Savages and despise them.

The only Apology we ever hear made for so irrational a Practice, is a very ill grounded Pretence of Necessity; our Ancestors, it is said, have done so much, that there is nothing left for us to do; they discovered, they conquered all, and thereby made Way for our Disputes with each other about Titles; in short, they were fortunate and glorious, and we unhappy, and precluded from acquiring Fame.

But these are all the simple Pretences of Indolence, or the false Colours of Avarice, which when we come to examine with impartial Strictness by the Light of Truth, will totally disappear. Amongst other Discoveries of our Ancestors, we may reckon this as none of the least important, that they discovered, that after all they had done, much more remained to be discovered. What a Scandal is it then to us, that having not only their Example to encourage us, but their Conjectures to instruct us, we have neither followed the one, nor made use of the other. They left us an exact Survey of the best Part of *America*, and we have left the rest totally unsurvey'd. They saw Reason to believe that a South-west Passage might be found to the *East Indies*; they attempted and discovered it; they left us better Reasons to prove that there is a North West Passage, and though by Fits and Starts we have made Trials, yet still it remains undiscovered. If we set down and consider with Attention, in how short a Tract of Time, from the finding a Passage by the Cape of *Good Hope* to the *East Indies*, all the subsequent Discoveries were made, how suddenly they stopt, and how long it is since any thing has been done of this Kind; it must induce us to believe that we either fall very far short in Point of Courage and publick Spirit of our Forefathers, or that there is some secret Reason why we are so backward in spite of the Encouragement we have received. This secret Reason is no other than our managing our Trade into these distant Parts by exclusive Companies, such as the *East India*, the *African*, the *South Sea*, and the *Hudson's Bay* Companies, the Discoveries under the Auspices of all which, may I presume be contained in a Volume of no exorbitant Size. It may be asked, Do our Companies restrain the rest of the World? To which I answer, No: But their own Companies do, and that Discoveries are attempted in no Kingdom in *Europe* by an old Company, but either where there are no Companies, or by a Company expressly erected for that Purpose.

Now to shew that something may be done without any mighty Hazard towards extending our Trade and our Knowledge at the same Time towards the North East, I have, by the Assistance of Lights and Memoirs communicated to me from Abroad, composed the following Description and History of the Peninsula of *Corea*; from whence it will appear, that it is a fine and fertile Country; that it is exceedingly populous, and inhabited by a civil, humane, and courteous People; that they are much given to Commerce, and would in all Probability rejoice at and encourage any Attempt

made by us to commence a Trade with them; that this Trade might be made highly beneficial to the Nation; that it is far from being improbable it might procure us both *Chinese* and *Japan* Goods at a more reasonable Rate than we have them at present; and last of all, that it must open a Passage to Discoveries of much greater Consequence than any that have been yet made.

2. The *Peninsula* of *Corea*, so little known to, and therefore so little considered by the *Europeans*, is one of the largest, and in all Respects one of the finest, noblest, and best situated *Peninsula's* upon the Globe. The *Tartars*, who are at present possessed of *China*, and who, before they conquered that Empire, were Masters of the Country of which we are speaking, call it in their Language *Solbo Kouron*, which is as much as to say, the Kingdom of *Solbo*. There is no Doubt that they have some sufficient Reason for this Appellation, though for Want of being acquainted with the *Tartar* Historians, we are able to say no more, than that they are reported to call it so by the *Chinese* Geographers. As for this last mentioned Nation, they have been pleased to bestow upon this Country the Name of *Kao li koue*, which we shall endeavour to explain as well as we can. This *Peninsula* was originally inhabited by various Nations, each governed by its particular Chief, untill they were all reduced under the Subjection of one Monarch, whose Name was *Kao*. As for the Word *li*, it has many different Significations in the *Chinese* Tongue, and amongst the rest, it implies obeying, being subject to, or under the Obedience of. The Word *Koue* is properly translated by that of *Kingdom*; so that taking this Title as it stands in the *Chinese* Maps *Kao li koue* altogether, it may be very faithfully rendred thus, *the Kingdom ruled by Kao*, or, in our Manner of speaking, *Kao's Kingdom*. It is true, that in the modern Records of the *Chinese* it is called *Tchao ssien*, from another Prince, or rather from another Race of Princes; but however this Name has never grown into common Use; but the *Chinese*, when-ever they mention it in Conversation, or in Writing, call this *Peninsula* *Kaoli*, which they pronounce in such a Manner, that from thence by Corruption the Word *Corea* has been formed, by which it is universally known in *Europe*.

After adjusting as well as we can the Name, let us proceed to say somewhat of the Nature of this Country, which has been variously represented to us by different Authors, some treating it as a Kingdom distinct from, others, as a Part of *China*; many affirming it to be an Island, but the best modern Writers asserting it to be what it really is at this Day, a *Peninsula*. At first Sight these Differences seem to be the Effect of Ignorance, but at the Bottom there is some Colour of Truth for every one of these Representations. According to the most ancient *Chinese* Histories, though the Thing is not affirmed in direct Terms, yet it may be fairly inferred, that *Corea* was once joined to *China* on the West-side, though it is now divided from it by a large Gulph. For those Histories say, that the Ocean broke in with great Violence on that Side, and overwhelmed a vast Tract of Country, and when this happened, it is not at all improbable, that *Corea* became an absolute Island. For the same Histories say, that a very ancient Emperor, whom they call *Yu* the Great, formed a Design of recovering at least a Part of these Countries, by drawing Canals to a vast Channel, and by piercing a Mountain, opened a Passage for the great River *Hoang ho*, which finding by this Means a Vent into the Sea, carried off a great Part of the Inland Waters, and thereby left the Northern Country dry, which now connects *Corea* with the Continent; and in this Manner we are told it became a *Peninsula*.

This Country in the State it now is, is bounded on the North by the Country of *Nieucheu*, or the ancient hereditary Dominions of that *Tartar* Monarch, who is now Emperor of *China*; on the West it has the Gulph of *Leao tong*, which separates it from the Provinces of *Pe tcheli* and *Chan tong*, which are Part of *China*; on the East lies the Sea of *Japan*, and on the South it is washed by the Ocean. It extends from thirty four Degrees
thirty

thirty Minutes, to forty two Degrees thirty Minutes, of North Latitude, and from one hundred and forty two, to one hundred forty seven Degrees of Longitude; it is in Length from North to South, four hundred and fifty of our Miles; in Breadth from East to West, about three hundred; the Form of it is that of a Parallelogram, the upper Part towards the North being somewhat narrower than the Southern Part of it. It is from hence apparent, that it lies in the fifth and sixth temperate Climates, the most Southern Part of it being in the same Parallel with *Persia*, *Cyprus* and *Barbary*, and the most Northern in that of *Portugal*, *Sicily*, and the *Madera's*; the longest Day in the South is fourteen Hours and a Quarter, and in the North about fourteen Hours three Quarters.

The present Capital of it *Han ching*, is in the Latitude of thirty six Degrees North, and in the Longitude of ten Degrees East, from the City of *Pekin*, the Capital of *China*. It is represented by all the *Chinese* Geographers, as a Country full of Mountains, more especially towards the North, or rather towards the North-west, where there is a Ridge of high Hills that separates it from that Part of *Tartary* which depends on *China*, and these Hills are rocky and barren, but the other Mountains, more especially those towards the South, are of easy Ascent, covered with a fine Turf, shaded by beautiful Groves, and refreshed by a Multitude of pleasant Brooks. It is also furnished with several large and navigable Rivers, of which we shall take particular Notice only of four; the first is the *Yalou* on the North-west Side of *Corea*, which falls into the Yellow Sea, or that which divides this Country from *China*; the Mouth of this River is in the Latitude of forty Degrees North, and is there about thirty Miles over. The River *Li* falls also into the Yellow Sea, and is a large, beautiful and navigable Stream; the *Tatong* falls into the Eastern Sea, or the Sea of *Japan*, and at the Mouth of it there is a noble Port; the River *Han* is in the South Part of *Corea*, and falls into the Ocean, and is also large and navigable; in a Word, when we consider that this Country is washed by two great Seas, and by the Ocean, and that its Coasts are fifteen hundred Miles in Extent, we cannot Doubt of the Excellency of its Situation.

3. It is very certain, that the People of *Corea* are much inclined to Letters, and that they have very ancient and very authentic Histories, and some Books still more ancient, but these are full of Romances and Fables. They are very sensible of this, and say that they contain some instructive Truths disguised, of which having lost the Key, they are no longer able to decypher them. Those which they regard as true Histories, go between two and three thousand Years higher than the Birth of *Christ*, and yet are said to contain nothing in them that carries the least Air of Fiction or Falshood. They assert that their Country was at first inhabited by three or four different Nations, which however they admit to have been of *Tartar* Original; that these in a long Course of Years, and after various Wars with different Success one against another, were at last reduced under the Power of one Monarch. That his Posterity degenerating from the Virtues of their Ancestors, behaved themselves so ill as to occasion civil Wars, which weakened the Country to such a Degree, that it fell under the Dominion of the *Chinese* Emperors, who sometimes governed it as a Province, and at others, appointed Kings, from whom they received only an annual Tribute.

It is remarkable that these ancient Histories speak of the Capital of this Kingdom, a thousand Years before *Christ*, as situated in *China*; from whence it seems highly probable, that this must have been before the Inundation, that has been mentioned, for otherwise it is not easy to conceive, why this Prince, even supposing him Master of that Part of *China*, should chuse to reside in a narrow Slip of Country, divided by a wide Sea from the rest of his Dominions. The same Histories speak of a Country lying to the North-East, but still on the same Continent, from whence one would imagine, that some Alteration has happened on that Side,

and that some Earthquake or Inundation separated *Corea* from the Land of *Yedso*, which is no other than the Southern Part of that great Peninsula, known to the *Russians* by the Name of *Kamkatka*. The greatest Part of their History is taken up in accounting for their Disputes with the *Chinese*, from whom they often revolted, and were as often reduced; and in them likewise they give a large Account of their having attacked and subdued the *Nieuchieu Tartars*, or at least a Nation that formerly inhabited their Country.

Towards the latter End of the fifteenth Century, the *Japonefe* invaded *Corea*, and were at first very successful, driving the King from his Capital, and becoming Masters of the greatest Part of his Dominions; but he having Recourse to the *Chinese*, they, after a long and bloody War, drove out the *Japonefe* from all except two Provinces. Soon after this, another great Army landing from *Japan*, the War was carried on with greater Vigour than ever, but at last the *Coreans* and their Confederates had so much the better of these Invaders, that they concluded a Peace, and agreed to quit the Country, which they did. Before this Time, the *Coreans* and *Japonefe* had always lived, not only in Peace, but in perfect Harmony with each other, inso-much, that many of both Nations were respectively settled in the others Country; but these Wars occasioned such an implacable Spirit of Resentment, which sometime after the Conclusion of the last, the *Japonefe* took an Opportunity of massacring all the *Coreans* that were settled in their Dominions. All these Events, and many more are found in the *Japonefe* Chronicles, and are briefly set down in the Histories of that Country, written by the Christian Missionaries, which is a very strong Confirmation of the Veracity of the *Corean* Histories.

About the Beginning of the last Century, the *Manchou Tartars*, after they became Masters of *Leontong*, attacked and reduced the Kingdom of *Corea*, that is, obliged the King to acknowledge their Khan for his Sovereign, and to pay him Tribute; which the *Coreans* resented as the most grievous Indignity, having as we observed before, been once Masters of this Country themselves; but since these *Tartars* have reduced *China*, the *Coreans* no longer consider their Subjection as a Disgrace, but remain well satisfied with their Condition, as indeed they have good Reason, since it has preserved them for the Space of one hundred and fifty Years, in a State of constant and settled Peace. All the Marks of Submission required from them, is, to send annually an Ambassador, or rather an Embassy, for sometimes there are three or four Persons charged with equal Powers to *Pekin*. These have also a Commission in Reference to Trade, are intrusted with all the Commodities and Manufactures which the *Coreans* are allowed to transport into *China*, and are impowered to settle and receive the Price or Equivalent for them.

The only sensible or uneasy Mark of Dependance which this Nation feels, arises from the Usage this Ambassador and his Retinue meets with, for they are assigned a Dwelling-Place in *Pekin*, which the *Chinese* are pleased to call a Palace, but from its Outside Appearance, and the Care with which it is guarded, it might better pass for a Goal; there they remain from the Time they come, to the Time they leave this Capital of the *Chinese* Empire, without so much as stirring, except to Audience, and without seeing any but such as are first examined by their Guards. The Reason of all this Jealousy, which of late Years has increased rather than abated, is the Dread the *Chinese* are under of the *Coreans* coming to have any Intercourse with the *Russians*, who are their very near Neighbours, and might find an easy Access into their Country, in Case they had Notice of it, and of the Advantages that might accrue from their settling a Trade with these People.

The *Chinese* are the more uneasy about this for two Reasons; first, because they know that the *Coreans* are naturally hospitable, desirous of seeing Strangers, and very willing to entertain and trade with them; and secondly, because this would place the *Russians* on both Sides their Empire, and in some Measure between them

and *Japan*, which is what they could not bear, and must be attended with a long and dangerous War, to remove an Evil of which they are so apprehensive. It was for this, and no other Cause, that they insisted so peremptorily on making the River *Amur* the Northern Boundary of their Dominions, because they judged that this would effectually cut off all Communication between the *Russians* and the *Coreans*, or rather all Possibility of a Communication, as by Land it really does. But they made use of a very plausible Pretence, which was, that the *Russians* disturbed them in their Pearl Fishery in that River, a Thing in itself of no great Consequence to either Nation, and which therefore the *Russians* readily gave up in Hopes of a settled and quiet Trade with *China*. This was also the Secret and true Reason, why the *Chinese* Ministers would not long endure the Presence of a *Russian* Resident at *Pekin*, notwithstanding that they kept him in full as great Restraint, as they do the *Corean* Embassadors, and at last led them to insist upon the sending away the *Sieur du Lange*, who had that Character from the Czar of *Muscovy*. But after all, these Precautions need be no Bar to the *Russians*, whilst the Passage is open and easy by Sea, and as will be shewn hereafter; the *Coreans* themselves making Use of it to carry on a small and inconsiderable Trade with the Subjects of *Russia*, without knowing from what Country they come, or of what Nation they are.

4. The Reader has been already told, that there is Reason to believe, this Country made formerly quite a different Appearance from what it does at present; and that the whole Gulph, which separates *Corea* from the opposite Coast of *China*, and which extends to full seven Degrees of Longitude, was formerly dry Land. The Reader has been also told, that in the most ancient and authentick Histories, this Country is said to have been inhabited by various Nations; and in the Accounts we have of the Provinces into which *Corea* is now divided, we are told to which of these ancient Nations they belonged; but at the same Time we find the Names of other Nations whose Dwellings are not to be found, and who from the Actions recorded of them appear to have been all settled on the West Side of the *Peninsula*, which affords another Argument to prove, that a vast Tract of Country was anciently either subverted by an Earthquake, or overflow'd by the Sea.

Our present Business is with what remains, and with the Kingdom of *Corea* as it stands at this Day, when it is divided into eight Provinces; the first of these is *Hien king*, which is as much as to say, *the prosperous Court*; it is the North-east Quarter of *Corea* stretching all along the Sea of *Japan*, which by the Way is almost as close shut up as the *Black Sea*; and this is the Reason that when there are any Kind of Winds, the Navigation is extremely dangerous, the Waves running excessively high, and beating with prodigious Fury upon the Coasts, which is but bleak and inhospitable, except at its very Extremity where it is divided from the Country of the *Man tcheou Tartars* by a very large River, on the Banks of which are several good Towns, and the Districts round them are very well cultivated. This Province was the native Seat of the *Kaskiuli*, a Nation that in Process of Time overcame all the rest, and stretched their Sway over the whole Country. It is from this Province, that the Inhabitants in their small Vessels glide along the Coast under a Notion of Pearl Fishing, but in Reality that they may trade with their Northern Neighbours, and sometimes with the *Russians*, who take them for *Japanese*.

The next Province to this is that of *Ping ncan*, which makes the North west Side of *Corea*, or, strictly speaking, of the Continent of *Corea*, for this with the Province before-mentioned, lie to the North of the *Peninsula*, and make a Part of the great Continent of *Asia*. This Province, the Name of which signifies *the peaceable Land*, or *the Country of Quiet*, is bounded on the West by the Province of *Leaotong*, and on the South by the *Yellow Sea* or *Corean Gulph*. It is through this Province that the River *Yalou* rolls its Course, till it falls

into the *Yellow Sea*, and it may not be amiss to observe, that according to the *Chinese* Custom of distinguishing their Rivers by its Colour, this has received the Name of *Yalou Kiang*, that is as much as to say, the *Green River*, from the Tincture of its Waters, which are supposed to be mineral, and are therefore seldom drank till they have been boiled, and have stood so long as to precipitate a Kind of yellow Sediment. This is a very large, populous, and well-built Province, which is chiefly owing to the River, that is navigable above ninety Miles, and has several large trading Towns upon its Banks. It was the ancient Habitation of the *Tchao sien*, which, as we have heretofore observed, is the Name now bestowed in the Records of *China* upon the whole Country of *Corea*.

The Province of *Kitang yuen* lies on the North-east Side of the *Peninsula*, and the Name signifies the River's Source; it stretches along the Sea of *Japan*, and has under its Jurisdiction a great Number of small Islands, inhabited chiefly by Fishermen. The Climate of this Country is remarkably pleasant, being neither excessively cold in the Winter, nor scorching hot in the Summer. It is finely diversify'd with Hills and Plains, and the best Timber in *Corea* for House and Ship-building grows here. It is very populous, but the People live mostly in Villages and small Towns, as being addicted chiefly to Pasturage, Tillage, and Fishing. In the Time of the Wars between the *Japanese* and *Coreans* this Country was the principal Scene of Action, and consequently suffered extremely; and therefore to this Cause we may reasonably refer there being no Cities, and but very few great Towns within its Limits; and perhaps to this likewise is owing the Activity, Hardiness and martial Genius of its Inhabitants, who are all well disciplin'd, and remarkably skilful in military Exercises. This Province is likewise famous for a good Breed of small but serviceable Horses.

The opposite Province, or the North-west Side of the *Peninsula*, is stiled *Hoang hai*, which is as much as to say, *the Yellow Sea*, from its stretching along the Coasts of it. It extends Northwards as far as the Mouth of the River *Yalou*, and stretches from thence Southwards for the Space of two hundred Miles. It is for the most Part a flat and fruitful Country, abounding with People who live in Cities and large Towns, and are much addicted to Trade and Manufactures; on the Coast there are several very large Islands, particularly, *Tshao tong* and *Tsiang hoa*, the latter deriving its Name from a great City, the Inhabitants of which are chiefly employed in making a Kind of Stuffs that are very thin and light, but withal very close and warm. This was anciently the Seat of a Nation called *Mahans*, tho' they ought rather to be regarded as a Tribe, for the true Name of the Nation was *Han*, the largest of all those separate People that originally inhabited this Country, and therefore divided into three Tribes, inhabiting as many different Districts.

The middle Province is called *King ki*, the former signifying, as we have often before observed, a *Court*, the latter a *Region*, *Province*, or *District*; and it is so called, because the City of *Kingki tao*, which was the ancient Capital of this Country, stands therein. This is the only Inland Province in *Corea*, and lies precisely in the Heart of the Country, being about two hundred Miles from North to South, and near an hundred from West to East. There can be hardly imagined a Country more pleasant, more fruitful, or better peopled than this is, full of large Towns and almost innumerable Villages, and containing besides several great and well-built Cities. The Inhabitants are remarkable for Learning and Politeness, and the Buildings in this Country are little, if at all inferior, to those of *China*, even in its best Provinces. The King has in this Country many noble Palaces, adorned with fine Gardens, and spacious Parks well stocked with Game. The People of this Province are a Mixture of all the Nations that formerly inhabited *Corea*, and it appears from their Histories, that this is a new Province taken out of the rest, and peculiarly subject to the Tribunals of the Royal Cities, from whence Mandarins are sent to govern the several

Districts into which it is divided; but the chief Cities are under the Direction of particular Mandarins, and the Troops both here and in the rest of the Provinces, are commanded by the Nobility or Persons of Estates, who raise them amongst their Vassals, holding most of their Lands from the King by a Sort of military Tenure. The Corn and Fruits that grow in this Country are the best in *Corea*, which perhaps is chiefly owing to the great Care taken in their Cultivation.

The South-east Province of *Corea* is called *Kin chan*, which is bounded on the East and on the South by the Sea of *Japan*, abounds with Cities and great Towns, and there are five large and commodious Ports in this District; the Southern Extremity, which is directly over-against the two great Islands that form what we call *Japan*, is distanced from thence about one hundred Miles, and there are Vessels that pass regularly from one Country to another thrice in a Week. It is necessary to observe, that in these Streights which separate *Corea* from *Japan*, there lie two small Islands, *Key* and *Dor*, which are as it were in the Middle; from the Mountains, in both of them, the Coasts of each Country are very easily discovered. These Islands are small but very fruitful, and it would be no difficult Matter to erect on either a Fortrefs capable of resisting any Force that these People could employ against it; so that if any *European* Nation should settle themselves here under the Direction of a wise and prudent Governor, and with a competent Body of seasoned Troops, he might maintain himself, and provided he attempted Nothing upon the opposite Continents, might very soon compass a free Trade with one, if not both Nations.

The Province of *Tchu sin* occupies the South-west Side of the *Peninsula*, lying over-against the Province of *Chan tong* in *China*, from whence the North-east Extremity of it is distant about forty Leagues, whereas the South-west Point of it is full two hundred Leagues distant. The Name of this Province signifies *Ever Faithful*, and also *without Blemish*; and it was so called, because in the Wars with the *Japonefe* it was never conquered. The Air here is soft and temperate, for the most Part, and though their Summers are pretty hot, the Soil is very fruitful; it is watered by several fine Rivers, and besides a Multitude of Villages, and a great Number of good Towns, there are in it four great Cities. The People are very industrious, not only in the Cultivation of their Land, but also in Manufactures, in Navigation and Fishing, which makes them very stout and hardy, so that the best Infantry in *Corea* are those raised from thence. There are several considerable Islands along the Coast, and at the Distance of about ten Leagues from the South-west Corner is the great Island of *Fong* or *Fong ma*, which is near seventy Miles in Circumference, and upon which, if the *Europeans* could make a Settlement, it would lie conveniently enough for the Trade of *China* and *Japan*, as well as *Corea*, since it is not above eighty Leagues from the former, and not quite sixty from the latter.

The eighth and last Province in this Country is *Tsuen lo*, which lies between the two Provinces last mentioned, and takes up the Middle of the Southern Extremity of the *Peninsula*, the Ocean washing its Coasts, which extend about one hundred and fifty Leagues. It was anciently the Country of the *Pien han*, which was the third Tribe of that Nation, and is at present inhabited by a very robust and industrious People, who are naturally civil and courteous to Strangers, and much addicted to Commerce. The whole Course of this Country is, as it were, covered with Islands, some of which are rocky and uninhabited, others equally fruitful and populous. There are many great Towns, and two large Cities, in this Province, and it is generally believed that there is more Shipping belonging to it than to any of the rest. The Island of *Kelpaert* lies about twenty four Leagues due South from its Coasts, and is much larger than any of the Islands hitherto mentioned, but notwithstanding this great Distance, it is in a Manner united to *Corea* by an *Archipelago* of Islands that lie to the North-west of it, and reach to the very Shore. We shall have Occasion to mention this Island here-

after, and shall not therefore dwell any longer upon it here.

Thus the Reader has as clear and distinct a Geographical Description of the whole of this Country as we have been able to give him, after comparing together a Multitude of different Accounts, some of which were written above an hundred Years ago, when it seems that *Corea* was better known to the *Europeans* than it is at present. Within the Compass of these eight Provinces they reckon forty Cities, to whom *Mandarins* are sent directly from the Court, and of which there are generally three in each. Besides these, there are thirty three great Towns of the first Order, like those which in *China* are called *Fou*, upon which are depending sixty of the second Order, equivalent to those which the *Chinese* call *Tchou*, and no less than seventy *Hien*, or Towns of the third Order, every one of which has at least six or seven, some of them upwards of twenty Villages in their Districts. The Northern Provinces are mountainous, and the Air sharp and cold, notwithstanding which they produce all the Necessaries of Life, have Woods of most excellent Timber, in which are Abundance of wild Beasts that produce Furs, little if at all inferior to those of *Siberia*; and on the Frontiers of those Provinces towards *Tartary*, the greatest Plenty of *Gin seng* is found, of which they make a great Profit by selling it to the *Chinese*. There are also Mines of all Sorts, and even of Gold, of which a considerable Quantity is annually sent to *China*. The Southern Provinces, that is to say, the three last mentioned, are as rich and fruitful in Grain and Corn as any in the World.

The Reader is to observe, that when we speak of Corn, it is to be understood, in the Northern Parts, of Barley, and in the Southern Parts of Rice; and though they want not other Grain of various Sorts, they have also excellent Roots, some of which in Taste resemble the Potatoe, but are of a much larger Size. As for Fruits, they have those of *Europe*, such as Apples and Pears in the Northern Provinces, and the richest Fruits of *China* in the Southern. As for their Timber, it consists of Oak, Chestnut, Pine, Fir, and of several Sorts that are not known in *Europe*. Silver and Lead they have in great Plenty, but the latter is not so good as that of *Europe*, which in all Probability is owing to their Want of Skill in managing the Oar, for its Defects consist in being hard and brittle. Horses and Cows are in vast Abundance, and they make use of Oxen to plough their Land, and to draw their Carriages; in the Woods they have Bears and Foxes, Zibbelins and Castors, wild Boars in great Numbers, a good Breed of tame Swine, chiefly black. Their Rivers are well stored with Fish, and would be much better stocked if they were not infested with Crocodiles, and those too of a most enormous Size, some of thirty Foot long. They have also great Plenty of all Sorts of Fowl, such as Swans, Geese, Ducks, Storks, Herons, Pidgeons, Woodcocks, Pheasants, and tame Fowl, that are excellent. They have likewise Eagles, Falcons, Kites, and other Birds of Prey, and many Kinds of very beautiful Birds, which are not known in *Europe*, some of great Value, with party-colour'd Feathers in their Tails which are three Foot long, and these are commonly either exported to *China* or *Japan*, and make also Part of the annual Present sent to *Pekin* for the Emperor.

5. The Inhabitants of the Northern Provinces are generally tall, active, well shaped, healthy, robust People, with very little about them of the *Tartar*, but those of the South are of a more sickly Complexion, weaker Bodies, and in their Persons and Temper very much resembling the *Chinese*. In the Northern Provinces, Most People wear a Kind of Furr Caps, silk Vests, which in the Winter are lined with Lamb-skin; and the Women wear their Jackets and Petticoats flounced and fringed with Gold Lace. Most Persons of Quality affect to have their Robes of Violet-colour'd Silk; in the other Provinces both Men and Women are drest in painted Linnen or Chinces, but are, generally speaking, adorned with Silver and Gold Ornaments notwithstanding. As they have Hemp and Flax in the Northern

thern Parts in Plenty, they make vast Quantities of Cloth, but none of the Memoirs that I have seen make any Mention of Cotton. They are very neat in their Dress, and the better Sort affect Magnificence, yet they are far from being vain, and can be hardly said to have any Fashions amongst them. Their Cities are walled and fortified, but neither so strongly nor so neatly as in *China*; their Houses are commonly no more than one Story, with a Kind of Cock-loft over them, in which their Merchants keep their Goods; and in private Families they serve for their Fruit. In their Villages they build with Earth, but in all their great Towns and Cities with Brick; but they thatch every where either with Straw or Reeds, which is the only Kind of Covering they have. The People are courteous, modest, and well behaved, yet their Morals are not quite so regular as in Times past, when Robbery, Murder, and Adultery, were Crimes unknown amongst them. They have common Women amongst them as in *China*, and none of their young Men are ashamed of conversing with, or being seen in their Company. They allow their Wives much greater Liberties than in *China*; and for this Reason the *Chinese* esteem them *Barbarians*, though in all other Respects they speak of them not fairly only, but with Reverence.

In point of Learning they fall little, if at all, short of the *Chinese*; and here, as well as in *China*, none but Scholars are preferred to Employments. They bestow Degrees once in three Years, and all who are Candidates for them undergo a very rigorous Examination; so that it is very difficult to obtain any Promotion but by Merit. With Respect to Religion, People of Distinction are generally bred up in the Sentiments of *Confucius*, and are a Sort of moral Deists, who make an uncorrupted Probity their Point of Honour. The common People are Idolaters of the *Indian* Sect, and have amongst them a vast Number of *Bonzes*; they have also Monasteries of both Sexes, where People lead single Lives, but are restrained only by their own Choice, for they may marry if they think fit, and sometimes they do.

As to their Estates, the King has the sole Property in the Land, which is granted out to every Man in Proportion to his Family, but personal Estates descend from Father to Son. The *Mandaryns* have also Lands assigned them for the Support of their Dignity, which they let out in Farms, but receive their Rent in Kind and not in Money. The Monarchs of *Corea* are absolute, except the Homage they pay to the Emperor of *China*, from whom they receive the Investiture of their Dominions by their Ambassadors; and though the Heir apparent enter immediately on the Administration from the Decease of his Predecessor, yet neither he nor his Consort assume Regal Titles till they have the Emperor's Consent, which is always given; and as the whole Ceremony upon this Occasion is very exactly regulated, as well as the Tribute paid, which amounts to eight hundred Taels; so there never happens any Disputes.

Each Province maintains a certain Number of Horse and Foot, except that in which the Capital City stands, and which is exempted on the Score of maintaining the Court. The Troops of each Province serve annually about the King's Person, so that he sees the whole Force of *Corea* once in seven Years; but proportionable Detachments are sent from every Province to guard that whose Forces are about the King. They are remarkably mild in their Punishments for common Crimes; they are bamboo'd or bastinado'd, but with more Modesty and less Severity than in *China*. Adultery, Murder, and Treason, are punished by Beheading; and for other Offences capital in their Nature, the Criminals are banished into the adjacent Islands.

Poetry and Musick are their principal Amusements, more especially publick Spectacles, such as Comedies, Tragedies, and Operas, in the Performance of which they spare no Expence. It has been surmised that they were very ignorant, because they fetched their Kalendars annually from *Pekin*, but in Reality this is a Point of Submission to the *Chinese* Court, which is also paid by the Inhabitants of every Province of that Empire

from political Considerations, and they go in the tenth Month of every Year to receive their Kalendars for the next. The People of *Corea* are the most dutiful in the World to their Parents; it is said that Disobedience is capital by the Laws, but that there has been no Instance of any Punishment of that Sort, the very Law preventing any such Offence. They mourn for their Fathers and Mothers three Years, during all which Time the Corpse is kept embalmed in their House; at the End of that Space the Body is interr'd, and the Wearing Apparel, Horses, Dogs, and whatever else belonged to the Person of the Deceased are distributed among the Relations at the Funeral. The Mourning for a Brother lasts in the same Manner for three Months.

The common People are plainly clad, and so are their Soldiers, who carry a Pole-axe, a Firelock, and have a Sabre at their Sides; they live, generally speaking, soberly, though they have great Plenty of every thing, and make very good Ale, or if you please to call it Wine of Rice, from whence also they distill Arrack, which is preferable to that of the *East Indies*, being a clearer and stronger, as well as a better flavoured Spirit. Tea is much drank in the Northern Provinces, but less used in the South, where their Rivers are bright and clear, so that they have every where good Water, which is wanting in *China*, and of which there is also a Scarcity in *Japan*.

6. We have observed, that the Subjection of the *Coreans* to the *Chinese*, is very far from being burthensome to them, but this must be understood of their Condition in their own Country; for in Reference to the Deputies that are sent once a Year into *China*, and who are generally accompanied by about threescore Merchants, they are certainly treated with as much Severity and Indignity as People well can be. The Months in which they travel are *March* and *August*; in the former they sometimes cross the Gulph of *Corea* upon the Ice with their Carriages; but in *August* they come in pretty large Vessels, and having debarked their Cargoes, convey them by Land to *Pekin*. The Commodities they bring are principally these that follow:

A coarse Kind of Paper made of raw Silk, very thick, smooth, even, and strong, which is made Use of in *China* instead of Glass to cover their Windows. A very fine, thin, white, and smooth Paper for Writing. A third Sort of Paper thick like the first, and smooth and fine like the last, with large Figures embossed in Gold and Silver, made use of for Hangings. It may not be amiss to observe here, that eight hundred Years ago the *Chinese* had that black shining Stick Ink, which they now make themselves, from the *Coreans*, and they acknowledge that they were three hundred Years before they arrived at the Art of making it in the same Perfection. Umbrelloes of all Sorts, very strong and very neat. Fine Mats, beautifully wrought and of many Colours. Tobacco of a small Cut for smoaking; this they had from the *Japanese*, to whom it was brought by the *Portuguese*; it is of the *Brazil* Kind, and the *Chinese* esteem it much more than their own. Striped Cottons of several Kinds, Furs of various Sorts, dried Fish, which are taken out of large Shells in the Sea of *Japan*.

They bring with them likewise vast Quantities of Silver and Gold, Part in Ingots, and Part in *Spanish* Pistoles. They are close shut up, as in a Prison, all the while they remain at *Pekin*; and the *Mandaryn* who has the Guard of them, sells the Liberty of trading with the *Coreans* to the Merchants who give most; and yet these have not the Liberty of conferring with them but in the Presence of a Soldier and two Interpreters. Whenever they stir abroad they have a Guard about them with Whips in their Hands, who lash any that come near, or offer to speak to them.

The Goods they purchase are fine Silks in prodigious Quantities, but raw; a Kind of Damask, which they take off also in great Quantities; a Sort of very thin Silk for Linings, which the *Chinese* call *Fansa*; Tea and China-ware, white Copper Vessels of all Sorts, vast Quantities of Cotton, Part of which they manufacture in such a Manner, that they bring it back and sell it in *China* at a high Price.

The

The *Coreans* likewise bring as Curiosities, fine Pencils made of the Hair of their Wolves Tails; a Sort of yellow Varnish that shines like Gold, made of the Gum of a Kind of Palm-tree, as also several Iron and Steel Wares. Once in three or four Years, when the Season affords them a safe Passage over the Mountains, they bring their Caravans by Land, and in them great Quantities of Silver, that they may buy up the more raw Silk, which they manufacture for their Trade, though the *Chinese* prohibit them dealing with any foreign Nation whatever, and have a *Mandaryn* at the King of *Corea*'s Court to see that this Prohibition is observed; and he is very careful in this Particular in all Cases but where he is largely paid for not being so.

It is not easy to enter into the Reasons why the *Chinese* are so excessively jealous of the *Coreans* having any Commerce with Strangers, except the Dread they have of Foreigners establishing themselves in that Country, from whence they might so easily pass over into *China* itself. But of all Nations they most dread the *Russians*, and it is not so much through Ignorance as Cunning, that all their Maps of the Frontiers of *Corea* are so incorrect. But this Kind of Precaution can only be of Use in deceiving the *Europeans*, for as to the Natives of *Corea*, they have so much of the *Chinese* in them, that they have falsify'd their Maps and Charts likewise, and represent the North-east Coast of their Country as utterly innavigable, on Account of Shallows, Rocks, and Banks of Sand, which is only with a View to cover their Trade on that Side, in which they employ a great Number of Vessels under the Pretence of the Fishery. For in the *Japonesse* Sea there are Shell fish of a most enormous Size, which being broke so as to get out the Fish, they hang up and dry it, sprinkling it from Time to Time with Salt Water; this dried Fish, which in Taste resemble Codfouns, are held a great Delicacy in *China*, and are sold at a pretty good Price; but the *Coreans* will tell you that they get Millions by them, which alludes to their clandestine Trade, that is chiefly covered by Presents of these Fish made to the *Chinese Mandaryn* resident in *Corea*.

7. In ancient Times, as has been already observed, the Intercourse between the People of *Corea* and of *Japan* was very great, and highly beneficial to both Countries; and we have likewise shewn how this Intercourse was interrupted, and the Means by which it was followed with Hatred as implacable on both Sides, as their former Friendship was cordial and sincere. In Process of Time however, and by a Suspension of Injuries on all Sides, this Enmity is again in a great Measure wore out, at least among the People of both Nations, for the Governments still keep at their old Distance, the *Japonesse* from political Jealousy of all Strangers, and the *Coreans*, because the Court of *China* has strictly forbid all Traffick between them and the *Japonesse*.

But for all this, the Commerce is constant, regular, and even publick enough between the two Nations, and the Manner in which it is managed is this: There is a pretty large Island between *Corea* and *Japan*, but nearer to the Coasts of *Japan*, which in our *European* Map is called *Susima*, but by the *Coreans* *Tui la tao*; and this by the *Japonesse* Government has been yielded to the King of *Corea*, with an evident Intention to facilitate the Trade between their Subjects, notwithstanding the Prohibitions on both Sides. In this Island, the Property of which, as we have observed, belongs now to the *Coreans*, the *Japonesse* Merchants have vast Magazines, so that all Ships that come hither are very speedily laden; and on the other Hand, the *Coreans* have their Magazines at *Tsin tchion*, in the Province of *Tsuen lo*, from whence they are brought by two navigable Rivers, one of which falls into the other, and the Mouth of the latter is directly over-against the Island of *Tui la tao*, at the Distance only of eighteen Leagues.

It remains now to give an Account of the Merchandize in which the Traders of both Countries deal; and first with Regard to the *Japonesse*; their Magazines are constantly full of Pepper of *Sapan*, and other sweet-scented and fine Woods, Boufflers Horns, which the *Coreans* burn, and use the Powder in making their Ink; of

Deer and Goat-skins, and of various *European* Commodities, which they purchase partly from the *Dutch* in their own Country, and partly from the *Chinese*. The *Coreans*, on the other Hand, barter with the *Japonesse*, Tyger Skins, Furs, Lead, Ginseng, several Sorts of Varnish, and the Balance of this Trade, generally in Favour of the *Japonesse*, is paid in Ingots of Silver. They likewise change their Ingots for *Spanish* Ducats, upon which they receive a Premium of Six or Seven per Cent. and the Design of this is to carry these Ducats to *China*, to conceal the better that Plenty of Silver which they have of their own; but the Ducats produced by this Trade are believed not to amount to a tenth Part of what the *Coreans* carry to *China*; and how they come by the rest will be explained hereafter.

Besides this Trade with the *Japonesse*, they carry on a Sort of smuggling Commerce at the Island of *Kelpraet* or *Quelpaet*, where there are also Magazines of both Nations, but not near so great as those of *Tui la tao*; for, as we shall hereafter inform the Reader, this Island is chiefly remarkable for a Kind of Smuggling or contraband Trade, for which there never was a Place better situated or disposed by Nature, as having convenient Ports on all Sides. Some modern Writers say, that the *Coreans* exchanged this Island with the *Japonesse* for that of *Tui la tao*, which is a Point that hitherto is not supported by sufficient Evidence. The *Dutch* Seamen that were shipwreck'd here in 1662, and whose Account of *Corea* is almost the only one published, make this a Place of much too great Consequence to be exchanged; and as other Accounts we have from the *Philippines* admit there are great Numbers of *Japonesse* settled here, perhaps this may be thought Foundation enough for such a Report.

It is indeed very certain, that the printed Relations of all these Countries are very superficial, and are to be read with great Caution; the Missionaries in *Japan* were able to give no Account of *Corea*, but as they met with it in *Japonesse* Books; since they fairly acknowledge, that none of their Fathers ever went there, and if they had, perhaps they would not have learned much more than those who went to *Jedzo*, and yet were not able to say whether it was a Continent or an Island. The last of the Missionaries Account of *China* admit, that what is contained in the *Chinese* Maps and Books concerning *Corea*, cannot well be depended upon. His Excellency Mr. *Ysbrants Ides*, who with vast Pains and Difficulty made a large Map of his Travels, which he sent to Burgomaster *Witzen*, and who settled his Geographical Faith upon it, though he is very accurate in describing the Countries through which he passed, is miserably mistaken in all those that he has ventured to lay down from Information. As for *Corea*, he makes it a small Island, with a Strait to the North between it and *China* almost as broad as the Gulph, by which it is really divided from that Country on the West; and as to the North-east Continent of *Asia*, it is laid down within the same Longitude with *Corea*, whereas the Country of *Kamskatska* stretches several Degrees to the East, and if produced, would lie in a Manner parallel to *Corea*, as the Peninsula of *Corea* lies parallel to the Continent of *China*. The *Dutch*, while they were possessed of *Formosa*, had great Opportunities of becoming acquainted with the Coast of *Corea*, and accordingly by the Favour of a very worthy Person, I have seen several remarkable Passages in the Journals of a Person in a distinguished Station at *Formosa*, which are vastly clearer than any Thing published of late Years, tho' written above a Century ago.

As far as I know, there is Nothing of this Sort printed; and as for the Shipwreck of the *Dutch* Seamen on *Quelpaet*, it will be a useful Thing to those who have read this Section, because they will then see the Reason of the Treatment those Seamen met with from the *Coreans*, and of the great Dread these People had of the *Tartars*, by whom they had not then been subdued full thirty Years. We might expect some tolerable Account of these North-east Parts of *Asia* in the *Spanish* Histories of the *Philippines*, if there were any such, of modern Date, but we know only of one, and that printed at *Madrid* in 1733, and suppressed for Reasons

Reasons of State. The Truth of the Matter is, that the *Spaniards* are as suspicious and jealous of that Colony as the *Chinese* are of *Corea*, and with some Reason, for *Manila* is incredibly rich, and the Trade driven there is not of a Nature to be disclosed, as appears from some Memoirs lately transmitted from *Batavia*, in which we are told, that if this Country was in the Hands of any but the *Spaniards*, it would produce as much Benefit to *Europe*, as all the other trading Settlements in the *East Indies* put together.

8. After what has been already said of the many Difficulties that occur in obtaining Accounts that may be depended upon of the Commerce of the *Coreans*, the Reader will, no Doubt, be pleased with whatever can be rationally given him upon this Subject, though it is not quite so full, so clear, or so certain as either he could desire, or we could wish; but upon this he may depend, that we shall set Things before him in a just Light, and leave that to his Decision, which perhaps some Writers would have delivered with a greater Degree of Confidence, and consequently less Respect to Truth. In the first Place, we lay it down as a Thing absolutely certain, that notwithstanding all the Precautions of the *Chinese*, the *Coreans* carry on a very large Trade; which appears thus:

They purchase vast Quantities of raw Silk in *China*, beyond the Degree of Consumption in their Country, which they must manufacture and dispose of somewhere, otherwise their Trade with *China* would have declined, whereas it increases. They take off large Quantities of manufactured Silks in *China*, more especially of that Sort of Damask, which from its being chiefly in Demand from them, the *Chinese* call *Kao li Toanza*, i. e. *Corean Damask*, very little of which however is worn by them. They pay for most of their Goods in *Spanish Silver*, which *Spanish Silver* must be acquired by Trade. They purchase no *European* Commodities at *Pekin*, and yet they are common enough all over *Corea*; they must therefore have them some other Way. They purchase some small Quantities of *Russian Furs*, when they are to be had, in *China*, and yet the finest *Russian Furs* are commonly worn by Persons of Distinction in *Corea*, which therefore they must obtain by some other Channel. They have Spices and other *Indian* Commodities amongst them, though none of these are bought from the *Chinese*; and they have also Amethysts and Emeralds, which is a Proof of their having Correspondence with some Nations that trade to *America*. We will endeavour to give a probable Account of the Manner in which they come by all, or at least most of these Commodities and Manufactures, and in several Instances we shall confirm our Conjectures by indisputable Testimonies, which in a Matter of this Nature is all that we pretend to do, and is much more than has hitherto been done.

The Country of *Corea*, or to speak with Strictness and Propriety, the *Peninsula* of *Corea*, excluding the two Provinces that belong to it upon the Continent, is very carefully laid down in the modern Maps of *China*; but the same thing cannot be said of the adjacent Countries to the East and North-east, as will appear to any competent Judge who will compare the several Maps of those Countries that are extant, hardly any two of which are alike, and consequently, tho' it is very possible they may be all false, yet it is impossible they should be all true, and more than probable the greatest Part have no Resemblance to Truth.

In the *Sieur Bellin's* Map, of the last Discoveries made by the *Russians*, there is a large Gulph which he calls the Gulph of *Kamschatska*, which separates that Country from the Continent to which *Corea* is joined, and from this Map it appears to be very easy for the *Coreans* to sail along the Coast as high as the River *Amur*, the Mouth of which is there laid down in the Latitude of 46 Degrees, and passing up this River they trade with the Subjects of the *Russians*, and sometimes with the *Russians* themselves, as appears from what Mr. *Tsbrant Ides* tells us of People who come thither dressed in Robes of blue Silk, with long Beards, who pretend that they dwell in an Island lying North-east of that Coast.

Now, in the first Place, we know that the *Coreans* actually dress in this Manner, and on the other Hand it is very certain, that the Inhabitants of any Island lying to the North-east of the River *Amur*, could not well have Silk of their own Growth, or purchase it in *China* without our hearing of them.

The Reason why the *Coreans* make use of this Method to deceive the *Russians*, is to prevent their Commerce coming to be made known to the *Chinese*, which they are very studious to avoid, as the *Chinese* appear to be much more jealous of the *Russians* than of any other Nation. It may be enquired, how it is possible for them to avoid a Discovery, since the *Chinese* Dominions are now extended to the River *Amur*? To which the plain Answer is, That these Countries do not belong to the Emperor of *China* in that Quality, but as he is the Sovereign of the *Man tchou Tartars*, and these People are not of so jealous and suspicious a Nature as the *Chinese*, and therefore content themselves very probably with such Accounts, as for their own Conveniency the *Coreans* are pleased to give. It is also not at all unlikely that they may trade with the Inhabitants of the opposite Coast of *Kamschatska*, but what Commodities they obtain from them we cannot pretend to say.

After having thus shewn how they obtain rich Furs, and other Northern Commodities, we will endeavour to describe their Trade to the South, in reference to which the Reader is to observe, that under Colour of sailing to the Island of *Quelptraet*, they take in from the Magazines there full of *Chinese* Commodities, a proper Cargo for the *Philippines*, and passing behind the Island of *Formosa* by the Help of the proper Trade Wind, they come safely to the Port of *Manila*, where they trade under the Name of *Chinese*, and by this Means it is that they obtain such Quantities of *Spanish Silver*, without which they would find it very difficult, if not impracticable, to carry on their *Chinese* Trade. Here likewise they purchase Spices and other *Indian* Commodities; nor is it at all improbable that they trade in their Passage home with the Inhabitants of those Islands that lie between *Manila* and *Formosa*.

It may be asked, What Certainty we have of this? To which I answer, That since we are certain they have *Spanish Silver*, and since we are as certain that no *European* Nation trades with them in their own Ports, we may be sure that they have it this Way, because they can have it no other Way. Besides, I am sure they did carry on this Trade above an hundred Years ago, and this from the Lights given me by some Papers relating to the melancholy Massacre at *Amboyna*, several of those who were stiled *Japonese*, and who suffered with the *English* for their pretended Conspiracy against the *Dutch*, were in Reality *Coreans*. If therefore they were expert enough to enter into this Navigation then, what Reason is there to doubt that they carry on the same Commerce now; more especially since we know, that so late as the Year 1702, their Merchants brought a large Quantity of *Spanish Silver* to *Pekin*.

It may also be enquired, how the *Coreans* escape being discovered by the *Chinese* at *Manila*? And the Answer to this is very short and easy. The Trade to *Manila* is as much a contraband Trade to the *Chinese* as to the *Coreans*, and therefore it would be impossible for them to discover such an Offence to their Government, without confessing themselves guilty of the same Crime; and every body knows that the *Chinese* are much too cunning to do that. I foresee also that it may be demanded, why, if they trade to *Manila*, they may not also trade to *Batavia*? To which I can only say, that there are no Proofs of it, nor any great Probability, whereas with Respect to their other Commerce we have both Evidence and Probability.

I have already observed, that we are far from having distinct Accounts of the Commerce at *Manila*, we only know in general Terms, that Vessels from almost all the Countries in the East resort thither, not only for the Sake of trading with the *Spaniards*, but with each other. It may indeed be said, that *Macao* lies more conveniently for the *Coreans*, and that they might be furnished there with *European*, and per-

haps also with *Indian* Commodities. But when it is considered that this Place is under the Power of the *Chinese*, who have a *Mandaryn* constantly residing there, it will appear no proper Port for *Corean* Vessels; and therefore their not making use of it, cannot be esteemed an Objection of any Weight to the Truth of what I have delivered; neither am I conscious to my self of having concealed any thing that might make against the Account which I have given, and which therefore I hope will be thought to deserve Credit, at least till we can obtain a better.

9. The Pains taken to describe this Country, to digest the scattered Remains of the History of its Inhabitants, to explore their Manners and Customs, and to investigate the Nature and Circumstances of their Commerce, might pass for a very rational Amusement, even supposing no higher End to be proposed, than that of supplying the Deficiency of other Writers; and placing in a tolerable Point of Light a Subject that had remained in the Dark before. But I must confess this was not my Motive, or at least it was not my only Motive; and when I say this, I persuade my self that the Reader will be not at all at a Loss to discover what was my Motive. At the Time when an Application to Parliament was designed for altering the Method of collecting the Duties upon Tea, which since that has in some Measure taken Place, I remember, among other Suggestions, this was one, that for many Years past our Trade to *China* was declining; and this first put me upon enquiring whether there might not possibly be some Method found of supplying this Deficiency in our *India* Trade; and this Hint produced the Thoughts of carrying on a Commerce on the Coasts of *Corea*; for which I sought and procured Materials, with an Intent to have published them by themselves; but after engaging in this Work, I thought they might be better preserved here.

The Reasons which induced me to think a Scheme of this Sort practicable, were chiefly these: The Situation of the Country, which being a *Peninsula* with a vast Extent of Coast, made it probable that some convenient Port might be met with to which *British* Ships might resort. If upon Trial this should be found either impracticable or difficult, it appeared to me, that as the whole of this Coast was surrounded by Islands, some of them might afford such a Port, without the Hazard of navigating a Coast which I know some of the *Dutch* Charts represent as very dangerous, though I am not altogether certain that these Charts are to be absolutely depended upon. Something of this Kind might undoubtedly be undertaken, for as these Islands are very numerous, it is not to be conceived that in none of them a good Port, a tolerable Bay, or a safe Road should be found; because Experience shews us, that there is no such Thing to be met with in the rest of the habitable World. When I found, upon Enquiry, that the *Coreans* were much addicted to Trade, and very desirous of corresponding with Foreigners, which obliged the *Chinese* to take so many Precautions to prevent their Deputies from indulging this Propensity during their Stay at *Pekin*; I concluded, that if an Attempt of this Sort was made with proper Care and Diligence, it could not well fail of succeeding; and that though very possibly the first Trials might not be attended with any great or any extraordinary Profit, yet they must of Necessity afford us great Lights, and enable us by Degrees to open a new Branch of Trade, which in the End must tend greatly to our Benefit.

I was confirmed in these Notions, by considering, that the Inhabitants of the Northern Part of this *Peninsula* live in a very cold Climate; for all the Writers of Credit, in relation to the Affairs of *China*, agree, that the upper Part of the *Corean* Gulph is entirely froze over almost every Year; that therefore the People might very probably be pleased with some Kind or other of our Woollen Manufactures; and I was the rather induced to entertain this Opinion, when I found that we formerly sent considerable Quantities of Cloth to *Japan*. It occurred to me farther, that as the *Coreans* had a great many valuable Commodities and Manufactures much esteemed in *Europe*, the Returns could

not but be valuable in Case such a Trade could be brought about; or if we found ourselves disappointed in that Respect, as it is certain that these People have amongst them Plenty both of Gold and Silver, we could not fail of being very well paid, in Case our Commodities and Manufactures could be introduced. I was indeed aware of the Umbrage this might give to the *Chinese*, and that very possibly it might put them upon taking every Measure in their Power to distress, and even to destroy this Trade; but on the other Hand, when I reflected, that in Spite of the Endeavours of the *Chinese*, the *Coreans* were in actual Possession of a considerable domestick, and no very despicable foreign Trade, this did not appear any formidable Objection, there being no Reason why the *Chinese* should exert themselves with greater Vivacity to hinder the *Coreans* from trading with us than with the *Japonefe*, which they tacitly permit, though they openly prohibit; and as they are a very subtle Nation, I could not help thinking they might be rather induced to connive at our Trade, in Hopes of its destroying, in a great Measure, the Inclinations which the *Coreans* are known to have for carrying on a Correspondence with the *Russians*.

It is very easy to penetrate the Causes that alarm the Government of *China* upon this Head; and as they have been before set forth, there is no Occasion for repeating them here; but whoever considers them, must at the same Time discern, that our Trading upon the Coasts of *Corea* would be attended with none of those Inconveniencies. It could not be feared that we should aim at discovering in order to conquer the Country; it could not be apprehended that we should excite the *Coreans* to revolt; it could not be so much as suspected, that under Pretence of Commerce we should attempt any thing to the Prejudice of those Rights which for a long Course of Years the *Chinese* Emperors first, and the *Tartar* Monarchs since, have established over this Kingdom and its Inhabitants. I am well enough acquainted with the *Chinese* Government, to be very sensible that Nothing of this Kind can be suggested by any Ambassador in our Favour; but I know very well, that whatever we may imagine in *Europe*, there are no Resolutions taken in the Cabinets of the *Chinese* Monarch till the Consequences are thoroughly considered; and therefore we have good Reason to believe, that amongst other Circumstances attending a new Trade, these might fall under their Cognizance; and as the Inference I make is drawn from their own Maxims, there is Nothing absurd in supposing that they may see it as well as we; but I must desire the Reader to observe, that what I contend for is not a Permission, or a Toleration to trade to *Corea* in the same Manner as we do to *Canton* in *China*, but a bare Connivance only, founded upon prudential Motives, which to be sure the *Chinese* will not think proper to declare, and into which it will be as little necessary for us to enquire. But besides all this, let us but remember a little what passed in former Times. The *Dutch* actually possessed themselves of *Formosa*, when it was more strongly connected with *China* than *Corea* is at this Day; nor does it appear from any thing recorded in History, though I must confess that we are pretty much in the dark as to what passed in this Island, that the *Chinese* Government ever made any considerable Attempt to recover it out of the Hands of the *Dutch*; but it was taken from them at last by a Multitude of desperate Persons, who when they were themselves driven out of *China*, were to seek for a Habitation, and resolved to fix themselves here, which however not with great Difficulty they did.

It is indeed true, that we have some imperfect Accounts of an Attempt made by the *Dutch* to fix themselves at *Amoy*, on the Continent of *China*, in which they were repulsed with considerable Loss; but as the Point I am labouring is not at all of this Nature, and as I do not apprehend there is or will be any Occasion for proceeding to Force in order to fix a Trade, or even an Establishment in one of the Ports, or on some of the Islands about *Corea*, there will be no Danger of a Quarrel with the *Chinese*, though if there were, I presume that their naval Force, which never appeared terrible

terrible to any other *European* Nation, would not very much alarm us; and yet nothing but a naval Force, and that too, acting at some Distance from their Ports, could be employed to dispossess us of this Trade, in Case we were once possessed of it.

Taking therefore the whole of this Matter together, there is nothing visionary, romantick or absurd, in supposing that it might be worth the while of our *East-India* Company, to make an Experiment of this kind, in which if they succeeded they could have no Cause to repent; and if they did not succeed, we shall hereafter shew, that the Discoveries with which such an Attempt must be attended, would very well compensate the Expences which such a Tryal would require. I likewise beg leave to add, that it would be no bad Policy for a great trading Company to make now and then such an Attempt, for the Sake of National Advantage; because it would be a just and rational Recommendation of their Interests to this, as to a trading Nation, and take off in a great Measure that Load of Envy, which has long sat hard, and must otherwise continue always to sit hard upon every exclusive Company.

10. Whenever a Design of this Sort shall come to be maturely weighed, in order to its being put in Execution, it will be natural to endeavour at deriving from it all the Advantages that are possible, and amongst these I apprehend, there is none more obvious, than the reviving thereby in some Measure our Commerce with *Japan*, which has been now interrupted for a long Series of Years, and I believe was never so much as thought of, at least as a Thing any way practicable since the Reign of King *Charles II.* We have already shown how the Trade is carried on between *Corea* and *Japan*, and from thence, I think there naturally arises a Prospect of no less than three different Methods of making an Attempt of this Sort, favourable to so important a Scheme. In the first Place, we might hope for something by establishing a Factory upon the Island of *Quelpaert*. It is very true, that the *Dutch* lost a Ship there, in the Year 1653. but according to the Description given us by those that escaped that Shipwreck, there is a tolerable Harbour on the South-side of that Island, and more than one good Road on the East-side towards *Japan*.

If therefore we could introduce a Trade there, we might in all Probability either enter into a direct Commerce with the *Japonese* who frequent that Island, or at least purchase many of their Commodities from the *Coreans*, out of their Magazines. This I say is the first Method, and we are pretty sure that no great Difficulties could attend it, for by the Help of the *Dutch* Charts, and we might possibly have the Help of *Dutch* Seamen too, this Navigation either is or might be very soon tolerably well known, and therefore I should imagine, that this might be first tryed. The second Method is attempting the Island of *Tui la tao*, which as I have shewn, is the direct and capital Seat of Commerce between the *Coreans* and the *Japonese*, and if upon this Island we could make a tolerable Establishment, there can no Doubt arise, that we should be from thence able to carry on both the *Corean* and *Japan* Trade with equal Advantage, and this without giving any Umbrage either to the *Chinese* or to the *Japonese*. For with Respect to the former, they have never hitherto pretended to consider this Island as dependant upon them, and therefore could not take any just Colour of Offence at any Nation's trading thither, and as for the *Japonese* they seem to consider this Island in the same Light, and as a Place that affords their Subjects an Opportunity of gratifying their Desire for foreign Commodities, without Danger to the State; one might therefore hope, that from the same Views we might establish a Factory there, without being at all exposed to those uneasy and mortifying Circumstances that attend the Commerce of the *Dutch* in *Japan*, and which perhaps have been the chief Causes, that for so long a Tract of Time, no other *European* Nation has ever judged it expedient so much as to attempt interfering with them.

The third Method by which we might possibly come to a good Conclusion in this Affair, might be by settling upon one or other of those two little Islands, that lie to the Eastward of *Tui la tao*, and which in the *Chinese* Maps are stiled, *Doro sima* and *Key sima*. These are indeed very small Islands but withal they are very conveniently situated, are within a Day's Sail of one of the best Ports in *Corea*, in less than a Day's Sail of the *Japonese* Coasts, and so near *China*, that it would be very easy to detach an annual Ship from those that are constantly sent to *Canton*, and for that Ship to join the Companies Vessels from that Port at *Macao*, in order to return in Consort to *Europe*. With Respect to this third Method, I do not think it difficult, though at the same time, I must confess, I should not advise it to make a Descent upon, and a Conquest of which ever Island should be held most convenient. We have already mentioned more than once, the *Dutch* Conquest of *Formosa*, which in Comparison of either of these Islands, is much the same as *Jamaica* and *St. Christophers*, or of *Ireland*, and the Isle of *Man*; so that methinks, if the *Dutch* Company could undertake and maintain such a Conquest as the former, there is nothing unreasonable in supposing we might be able to achieve the latter. Besides the smaller our Acquisition was, the less Umbrage it would give, and the easier it would be to keep.

It may indeed be objected, that if any Thing of this Kind was practicable, it is highly probable the *Dutch* would have long ago undertaken it. At first Sight, there is something in this plausible enough but; when thoroughly examined, this Objection will be found to have very little in it. For the *Dutch* have no Temptation to a Thing of this kind, as they are already possessed of a settled and profitable Trade with *Japan*; and we are too well acquainted with the wise Maxims of that People, to suppose that they would risk a Certainty for an Uncertainty, or quit the Monopoly, which they now enjoy, for a kind of Trade in which they might be rivalled by some other Nation. But this is not at all our Case, we had formerly a Share in this Trade as well as they, from which we are now excluded, and are like to remain forever excluded, unless we should make some such Attempt as this to recover it; and though perhaps at first, the *Japonese* might be a little intractable, and forbid their Subjects holding any Correspondence with us, yet by Degrees, and in Process of Time, we might very well hope to overcome their Jealousy and Aversion; for when they found that we aimed at nothing farther than a Settlement for the Sake of Trade, and did not propose any Encroachment upon their Dominions, they might be brought to consider us in the same Light they do the *Dutch*, and admit, for their own Sakes, a regulated Commerce, under certain Restrictions; at least there are two Things morally certain, first, that if we were so established, we might be able to subsist by our Correspondence with the *Coreans*, who have a natural Propensity to Trade, whether we had any Intercourse with the Inhabitants of *Japan* or not; and secondly, that lying thus at a Distance from their Coast, we should be in very little Danger from the whole Force of the *Japonese* Empire; which was not the Case, when we were actually settled on the Continent by their Permission, and under their Protection.

We may likewise add, that the Case of the *Portuguese* at *Macao*, is a kind of Parallel to such an Establishment; and though it is very true, that in its present Situation, that must be allowed to be both a very mean and a very precarious Settlement, yet it was not always such, nor is the Force of the *Portuguese* in the *East-Indies* at this time any way comparable to ours; so that if they, even with the little Power they have, are still in a Capacity of maintaining themselves on the Coast of *China*, we who have a much greater Power, might very well hope to compass and support a better Settlement upon the Coasts of *Japan*. At least, there is no Harm in thinking of it, in stating the Arguments in Favour of such a Thing, or in looking into and enquiring after the Advantages with which it might be attended.

If the *Europeans* had never entertained much bolder and more romantick Schemes than these, we had never known more of *Japan*; than what was handed to us in *Marco Polo's Travels*; and why our Ancestors in Cock-Boats, in Comparison of our Ships, and with few or none of the Advantages which we possess, should attempt Discoveries, establish Colonies, and make Conquests that we ought not so much as to entertain any Thoughts of, is paying so high a Compliment to them, and throwing so depreciating a Character upon ourselves, as with all our Faults I think we can hardly deserve. But suppose we did take it for granted, that we were such mean spirited dastardly Creatures as this Comparison would make us, let us not expect that our Posterity must follow our Examples, or that we are to decline and grow downwards to the End of Time. If softened by Luxury, if enervated by Corruption, if hampered by private Interests, and the Chains of exclusive Companies, the present Generation dare act nothing that is great and noble, let us at least preserve our Thoughts free, and discover, settle, and conquer in Imagination; nor need we debar ourselves the poor Pleasure of hoping that those who come after us may be better than we, as well as those that went before us.

II. When such a Race of Men shall arise, the Advantages that we have already proposed will in all Probability appear sufficient to engage them either to chuse one of these Methods which we have offered, or to think of some other which may be preferable to any of them, and which at the same Time may do Honour to their own Invention. They will also in all Probability push Things still farther, and entertain Hopes of new Discoveries, when they once find themselves settled on the Frontiers, as it were, of the known World. I beg my Readers will now reflect, that I speak of those who shall live when we are no more, and that I do not pretend to expect any modern Supercargoes, who can make great Fortunes in two or at most three Voyages, Factors at *Buenos Ayres*, *Panama* or *Jamaica*, who in the Space of a few Years can rise from Indigence to Opulence, though now and then their Practices may plunge the Nation in a seven Years War or so; or those active and busy Spirits, who know how to fish golden Treasures out of the troubled Waters of *'Change-Alley*; I say, I do not expect that these should so much as relish my Proposals, much less concern themselves in their Execution; indeed I should be sorry if they did, for I should then have the Mortification to see the Trade to *Corea* made a Bubble; or, the Revival of our Commerce to *Japan*, a Jobb. No, I please myself with the Prospect of a new Race of Men, who when our Confusions are over, and our Animosities buried in Oblivion; when Parties, Factions, Intrigues, Corruption and Stockjobbing shall be no more, may inhabit under a new Heaven as it were on a new Earth.

It is from these Men, full of the good old *English* Spirit, that sent *Drake* and *Cavendish* round the World, that inspired the great *Sir Walter Raleigh* with the View of peopling *Virginia*, and even in our degenerate Times, excited another Gentleman I need not name, to an Attempt which will be the wonder of future Ages, as the Neglect of it will be the Reproach of ours; from these Men, I say, I expect that when they have fixed such an Establishment as I have been speaking of, that they would consider what it is makes the *Japan* Trade so dear to the *Dutch*, in Spite of the Dangers, the Difficulties, and the disagreeable Circumstances with which it is attended. They will find, that it is the rich Copper they receive from thence, by which they always make fourscore, and sometimes *Cent. per Cent.* that it is the Silver of which they likewise make a Profit, and that a great Part of the former, and almost all the latter, come to the *Japonesse*, from Countries to the North-east of their own, and of these Countries wherever they lie, I make no Doubt but such *Englishmen*, upon these Informations, will go in Quest.

These Countries must be inhabited, otherwise their Mines could not be wrought, and from the Climates in which they lie, the People must stand in Need of warm

Cloathing, so that without Question, our woollen Manufactures would be very acceptable to them; when these Countries are found, they will lead to the Discovery of new, for Countries without doubt there are, from *Japan* to *California*; and as the wise *Columbus* rightly foresaw, that a West Course, must of Necessity carry Men from *Europe* to the *East-Indies*; so with equal Security we may pronounce, that this North-east Navigation will sooner or later bring them to that North-west Passage, which whenever it is discovered, will set the Name of *Dobbs* on a Level with that of *Magellan*. I do not wish that these Discoveries should lead to Conquest, or that the *English*, like the *Spaniards*, should employ their Force in subduing the Natives, and bury Millions in digging to support their Luxury. No, from such Men I expect better Things, and that they will place their Glory in what all-wise Providence has made their Interest, in civilizing the Savages they may find, in teaching them Humanity, and the Truths of the Gospel, and in Exchange for the Blessings their own fruitful Countries enjoy, bring back the Tribute of those new discovered Lands.

These are high and noble Sentiments, which however slighted and despis'd by such as have no Principle but Gain, and no God but Gold, are those that tend to make a People truly great, and to establish that Greatness upon a Foundation never to be shaken. If the modern, narrow and selfish Notions had prevailed in former Ages, the *East-Indies* and the *West* had still remained unknown; and if they had not been propagated in succeeding Times, there would not remain at this Day a full third Part of the habitable Globe to be discovered. At the same Time that we know this with as much Certainty as it is possible, that a Thing of this Nature should be known, we cannot but be sensible that it is ridiculous to complain of Want of Trade, while so many Branches remain unopened; we likewise know, that within a short Time after their being first discovered, Trades are the most profitable, and are at the same Time easiest kept, as appear'd by our preserving for a long Time our Commerce with *Russia*, in Consequence of our finding the Route thither by *Archangel*, and our quiet Enjoyment of the *Hudson's Bay* Trade, in Virtue also of our being the first Discoverers.

To such Men as I have described, to those who have sound Heads and honest Hearts, these will be persuasive Arguments; and far from considering the Revival of the Trade to *Japan*, as the utmost Limits of their Hopes and the *British* Commerce, they will embrace every Opportunity to carry their own Knowledge, and the Commodities of their Country farther, and try every Method that can Art dictate, or Genius can devise, for gaining fresh Information. Nor will they have any Apprehensions that their Labours may prove fruitless, or their Discoveries ineffectual, since this will be suspecting Providence, and supposing that God would create Countries, and place Men in them beneath the Notice, and unworthy the Conversation of their Fellow-Creatures; which, impious as it is, may be agreeable enough to the Pride of corrupted Minds, but must seem equally absurd and shocking to every well seasoned Understanding. Besides, Experience tells us, that never any Discovery was yet made, which proved utterly useless, ineffectual, or when properly pursued.

The Coast of *Guinea*, when first visited by the *Portuguese*, did not promise any mighty Things, and yet it proved the Way to the *Indies*. The Country about the Cape of *Good Hope* was deserted by more Nations than one, as absolutely worthless and incorrigible, and yet in the Hands of the *Dutch* it is a kind of terrestrial Paradise. We may say the same of the Shores of the *Magellanic Straits*, which are inhospitable to the last Degree; but they open into the *South-Seas*, and are, if I may be allowed the Expression, the Gates to a new World. As these are Wonders disclosed by past Discoveries; they may well provoke Men of high Spirits and true Courage to prosecute the same Road, and endeavour, by fresh Expeditions of the same kind, to rival

val the Reputation of old Discoveries, by the more surprizing Scenes they unfold, in making new.

12. It is a very just Observation of the wise Lord Chancellor *Bacon*, that there are many People, who chuse to put the most material Part of their Letters in their Postscripts; I must confess, I do not enter into the Reason of the Thing; though without adverting thereto, I have fallen into the Practice, of which I shall give the Reader very sincerely and without Reserve my Motives. When I undertook to give this History of *Corea*, and to recommend an Establishment upon the Coasts of it, I proposed to spare no Pains in order to recommend it to my Countrymen, as a Thing highly advantageous, and that could not possibly fail of amply rewarding their Endeavours; but at the same Time it was my Intention to have concealed the capital and strongest Reason, which had induced me to press this Matter so warmly, not out of the least ill Will or Jealousy of my Countrymen; not from any private View to my own Advantage, but because I was apprehensive, that the disclosing this Matter might give other Nations an Opportunity to profit, by an Invention which I could wish to see in the Possession of the *British* Nation alone. This I the rather apprehended, because of that supine Indolence, which for many Years has locked up our Faculties, with Respect to Discoveries, while other Nations that we seem to despise have crept so fast into Naval Power, as already to tread upon our Heels; for the *Swedes* this very Year have destined thirty five thousand able Seamen for the Service of their Navy, and at the same Time have renewed the Charter of their *East-India* Company for twenty Years, and dispatched two large new Ships to *China*.

But being well informed, that those worthy and publick spirited Men, who were at the Expence of the last Expedition, for the Discovery of a North-west Passage, continue in their Resolution to prosecute that Design, which sooner or later I am convinced will be attended with Success; I was from thence determined to alter my Plan, and to acquaint the World, fairly and truly with the Secret of this Business; and the principal Reason of my contending so much, not only for the Expediency, but even for the Necessity of making an Attempt on this Side, and securing a solid Establishment on some or other of the Islands between *Corea* and *Japan*. The setting this Affair in a clear and proper Light will take up some Room, and require a little Attention; but every ingenious Reader, I am confident, will allow me the one without complaining, and gratify me in the other with Pleasure, since what I have to offer, carries along with it the prevailing Charm of Novelty, at the same Time that it is equally curious and important.

The Hopes of discovering a North-east Passage have been long laid aside, from a great Variety of Reasons, but chiefly on Account of those advanced by the last Adventurer for that Discovery our Countryman Captain *Wood*, who like many other great Navigators, having failed in his Expectations, consoled himself for that Disappointment, by labouring to take away Expectation itself. I must confess, that this Method, however common, is very far from being satisfactory to me, inasmuch that I could wish it was disused, and that such as are for the future employed in any Expeditions of this Kind, would content themselves with the Vindication of their own Conduct, in giving a fair Detail of their Miscarriages, without laying it down as a Thing certain, or even probable, that no Man should ever succeed where they failed. But notwithstanding all the Disappointments, and, I must confess there have been many of them in attempting this North-east Passage, the Reasons for believing it remain yet unanswered, and particularly a Matter of Fact which belongs properly to the Subject of this Section, and therefore I will report it in the Author's own Words.

The Person, whoever he was, that wrote an Account of the Shipwreck of the *Dutch* Sailors on the Island of *Quelpraet*, has added a short Description of the Kingdom of *Corea*, in which he has the follow-

ing very remarkable Passage. "On the North-east it is bounded by the vast Ocean where there is every Year a great Number of Whales taken, some of them found with the *French* and *Dutch* Harping-Irons, those People using to follow that Fishery. There are Abundance of Herrings also catch'd there in *December*, *January*, *February* and *March*. Those taken the two first of these Months, are as large as ours in *Holland*, but what they catch afterwards are smaller, and like those in *Holland*, called Frying Herrings, which are eaten in *March* and *April*. Hence we infer, that there is a Passage above *Corea*, *Japan* and *Tartary*, which answers to the Straights of *Weigats*. For this Reason we often asked of the *Corean* Seamen, who use the North-east Sea, what Lands were beyond them, and they all told us they believed there was nothing that Way but a boundless Ocean."

This very Passage is alledged by Captain *Wood*, as one of the seven Reasons which induced him to attempt finding this Passage; but as at the Time of Writing his Book, he had two very different Objects in View, viz. the Showing that he did not venture upon the Expedition without good Grounds; and the Proving that, notwithstanding their fair Appearance, these were in Effect no Grounds at all; he is so far from citing the Passage as I have done, that he gives a very inaccurate, I might say, false Account of it; for he says, that the *Dutch* Writer reports, that in a certain Bay of the Kingdom of *Corea*, dead Whales drive in with *English* and *Dutch* Harping-Irons in them; which if true, he owns had been a great Argument of a Passage.

The Reader may see, that the *Dutch* Writer says no such Thing, and if he had said it, the Absurdness of these dead Whales floating so far, would have rendered the Passage ridiculous; and this, very possibly, Captain *Wood* intended by making the Change. Of the Herrings he says not a Word, and therefore giving him up the dead Whales for his own Use, I presume the living ones, and the Herrings, may still pass for two very strong Arguments of such a Passage, and in its proper Place, I have produced these and many more. If therefore there be any such Passage, it is very manifest from hence, that making such a Settlement as I contend for, is the likeliest Method to find it. For supposing that we had a good Colony, or at least a strong Fort and Factory, upon the Island of *Tui la tao*, we might from thence annually endeavour to discover along the Coasts of *Kamschatka*, at the most favourable Season of the Year, and thereby obtain a fairer Opportunity than has yet offered, of getting round into the *European* Seas; for as *Dampier* very rightly said of the Northwest Passage, that it was more likely it should be found by those who attempted it from *California*, than by such as sought it from *Hudson's-Bay*; so I may say, with Regard to this Discovery, that they have infinitely a better Chance, who seek this Passage from *Japan*, than those who prosecute it from the North of *Scotland*; and for the very same Reason, because this is proceeding from the Unknown to the Known, and making the latter Part of the Voyage safe and easy, which in the other Way is always dangerous and incertain; to which we may with much Probability, attribute most of the Disappointments that have been met with.

But if contrary to all Appearances, if in Spite of all the Reasons, Physical, Philosophical and Cosmographical, that countenance this Opinion, and which hitherto remain altogether unrefuted, there should, after all, be none such, we should make this negative Discovery earlier, and with greater Certainty than other People, and even from hence there might very great Advantages arise, that have not hitherto been considered; for though it would be impossible to transport Goods, yet Letters and Intelligence might be carried over Land; a Sloop in the Space of three Weeks, with a fair Wind, in much less Time, might proceed from *Quelpraet*, up the River *Amur*, and so the Packets might be conveyed to *Nipchou*, from whence there are frequent Opportunities of sending to *Moscow*, and by this Means, in the

Space of six Months, Letters would reach *Hamburg*, from a Factory upon the Coast of *Japan*; in this there is nothing dark or unintelligible, nothing that rests upon Supposition or Conjecture, the whole is just as certain, as that the Dominions of the Czarina border upon those of the Emperor of *China*.

Thus then, whether a North-east Passage, or no Passage, such a Settlement would be highly useful, highly advantageous, and highly convenient. But I have something farther to say, such a Settlement as this might be of Use, if not to the Discovery, yet to the Preservation and Improvement, even of a North-west Passage; for though I am not so sanguine, as to imagine, that those who shall be so lucky as to make that Passage, would afterwards have the Courage to make such an enormous Stretch, as from *California* to *Japan*; yet I presume, that in Process of Time, such a Discovery being once made, Endeavours might be used on both Sides, by discovering to the East one Way, and to the West the other, to facilitate a Junction in some middle Port; for to me it appears a Thing certain, that there are Countries, at least Islands all the Way. This double Discovery would lay open the Whole, in half the Time that would be otherwise necessary, perhaps in less than half the Time, for in both Cases our Seamen having reasonable Hopes of reaching an *English* Port, would make infinitely greater Efforts than could be expected from them in a State of Uncertainty, and proceeding constantly through unknown Seas, without any View of being safe at last.

It is to be observed, that all I have advanced under this last Head, is absolutely independant of what was said before; so that if the Advantages first proposed are such as may encourage the attempting such a Settlement, by proving the great Probability there is of its being advantageous to the *British* Nation, then these additional Considerations ought very much to strengthen and confirm the Resolution of doing something of this Sort in Time, and before any other Nation lays hold of what we neglect. To some possibly this may appear highly improbable, but to remove that, as I would willingly do every other Objection, I beg Leave to take Notice of three Things, which, in my Apprehension, are sufficient to shew, that a Suspicion of this kind is not altogether groundless, much less chimerical. In the first Place then, I presume Nobody will doubt, that if we are so happy as to find the North-west Passage, it will excite a great Spirit of Emulation, in all the trading Nations of *Europe*, more especially, if we should, as there is great Probability we must; reap very great Advantages from that Discovery. Now to balance this, the most natural Expedient they could recur too, would be attempting the Discovering of the North-east Passage, towards which, the finding the other would be the strongest Encouragement.

But, supposing this to be utterly impracticable, yet without any greater Knowledge than they have already, the *Russians* might be tempted to make Use of the Advantages they already possess, in order to be beforehand with us, in opening a Commerce with *Japan*, and thereby precluding us from those Benefits, which from a little Industry and Pains we might now secure to ourselves against all other Nations, at least for a considerable Space of Time, during which we might establish ourselves so effectually, as to preserve those Advantages for ever, in Spite of any Attempts to dispossess us.

My second Observation is, that the *Russians* have this very Point already in View, that it is what they aim at by all the Discoveries they have been for many Years making; that this is confessed in all the Accounts, that they have hitherto published of their Progress; that it is the true and only Reason of their not making their last Discoveries as publick as they did those of Captain *Behring*; and though I am very far from saying, that we have any Right to take this ill, or to be offended with the Conduct of the *Russians* in this Particular, yet I cannot help thinking, that it is worth our Observation, and that there is full as good Reason we should make Use of the Experience and Advantage, derived to us from our *East-India* Trade, as the *Russians* of the Situa-

tion of their Territories, and the Discoveries which they have made by that Means.

In the third Place, I must remark, that ever since the *Swedes* succeeded in their Attempt of opening a Communication with the *East-Indies*, they have had something of this Kind in their Head, I mean making a Settlement upon some Island near the Coast of *China*, or to the East of it; nor are we at all certain, that the Ships which have sailed from *Gottenburgh*, while this very Section was printing, may not have Instructions to make, or at least attempt making such a Settlement. Why then we should sit still with our Arms before us, while other Nations, more especially the Northern Nations, who are avowedly and earnestly endeavouring to render themselves maritime Powers, use so much Vigilance and Activity to compass their Ends; or why, according to the old, but true and sensible Proverb, *We are to take no Care of the Stable-Door, whilst the Steed is unstolen*, I am at a Loss to comprehend? Sure I am, that whatever Reception these Remarks may meet with at present, it will not be many Years before the World will see, that I am not altogether mistaken in my Estimate, and that the rich Goods of *Japan* will find their Way to *Europe* in some other Bottoms than those belonging to the *Dutch East-India* Company; and I am satisfied, that the *Dutch* themselves will not blame me, for wishing, that in such a Case they might be freighted in *British* Vessels.

There is a natural Connection between the Interests of the maritime Powers in the *Indies*, as well as in *Europe*, and though it is certainly true, that as Trade is our common Mistress, we must in many Cases be considered as Rivals; yet it is no less true, that if our Interests be well understood, we ought to avoid Quarrelling even upon that Account; for though it may be in our Power to destroy each other, yet we have this Comfort, that if it is never in our Will, we may preserve our Commerce and our Naval Force in Spite of all our Enemies; and this is a Topick that can never be too much preached upon, either in *England*, or in *Holland*; and as a Proof of this we need only consider, that such as are Enemies to both, never fail to insinuate the contrary. Whoever looks into the Pamphlets, published here in the Reign of King *Charles* the II^d, and whoever has read, and remembers the celebrated Letters of *Van Hoey*, cannot but acknowledge the Truth of this Observation, which I the rather make, because in some Parts of this Work, I have expressed myself very freely, in Regard to the Practices of the *Dutch* in the *East-Indies*; but I desire that it may be understood, that I distinguish between the Servants of the *East-India* Company, and the Subjects of the *States-General*; for though they are the same Men, they are under different Directions, and this Distinction is none of my coining, but one I learned from my old Master *John de Witt*, whose Maxims first gave me a true Notion of Trade, and taught me to look upon it, not in the narrow Light of a Scheme to acquire Wealth, but as a generous System, of distributing through all Climates the Blessings bestowed by Nature, and thereby promoting the common Happiness of Mankind.

13. After having thus finished the Business of the Section, with the Readers good Leave, we will take the Liberty of making a few Remarks and Observations upon it. It consists in a Description of *Corea*, which is entirely new, and consequently cannot be thought either useless or unentertaining. It shews from the Description laid down of this Country and its Inhabitants, that there is nothing improbable, in supposing that we may become better acquainted with them; it is true, we lie a great Way from them, but we visit the *Chinese* very often, and these same *Coreans* live but at next Door: It exhibits also some Reasons that may induce us to think of calling upon them, and amongst others, that of opening by their Assistance the Way to renew our Acquaintance with the *Japonesse*, with whom we had Dealings in Times past. It farther lays open some additional Advantages that may result from our entering upon this Commerce; and finally it brings to Light some very curious, and if they were well weighed, some very cogent Reasons for our not sleeping over

an Affair, which, if well managed, may be attended with so many good Consequences.

The Plan, it is true, is very extensive, and I will readily grant is much sooner conceived and thrown out upon Paper (though that too has cost a good deal of Time) than carried into Execution. But it may be a very good Plan for all that, and I have the better Opinion of it, because it may be executed Step by Step, and be made to bear its own Charges into the Bargain. If the Trade to *Corea* should be found practicable and profitable, I should certainly incur no Blame for pointing it out; but say, that Experience should justify the former only, and not the latter: In that Case I should think we might eke out Matters from *Japan*, not in two or three Years perhaps, but in half a Score much might be done; and in the mean Time some Trials might be made towards other Discoveries. The old Proverb says, that *Rome was not built in a Day*, and this Proverb was never better verified than when applied to Trade, to Settlements, and to Colonies. They are, to be sure, neither adjusted, fixed, or rendred beneficial in a Moment; but in Matters of this Nature, Time and Patience will do all. Let us look at *Virginia* and *New-England*, those Sister Plantations, that have grown up to be fine comely Personages, though they were somewhat difficult in the Rearing; and let us remember how often this Nation was told, while they were at her Breasts, that it was all Labour in vain, and that they would never live to go alone. But Thanks be to God, we were not terrified by these old Womens Prophecies, we continued our Care of them notwithstanding these untoward Prognostications, and we have had no Cause to repent of it; the young Women, as they grew up, thrived apace; they have been long since able to get their own Living, and have made us very grateful Returns for the Pains we took in nursing them.

The Danger is not so great in undertaking extensive Projects, as that which arises from the Folly of abandoning them too soon. We ought most certainly to examine Things maturely before we resolve upon them; as I said once before, I am not vain enough to imagine, that I have pointed out all the Methods, or even the best Methods for accomplishing this Design, but if upon Trial it should be found that I have been ever so much mistaken, and that the Thing must be gone about in quite another Way, it will not afflict me much provided the Thing can be done. That, and that alone, is my View, let the Project be decried, let the Projector be thought a Fool, if his Folly proves an Instrument to his Country's Good, and his Countryman's Glory, that Fool will be happier than all the *Indies* could make him. The Vanity of knowing much, the Ambition of making a Figure in the learned World, the aspiring Hopes of striking out new Paths, are Weaknesses without Doubt, but they are Weaknesses that are often beneficial to Mankind, and in that Light are excusable. I desire this may be considered in no other, though in Truth I am not much concerned in what Light it is considered, if it is but productive of any Good.

Extensive as the Plan is, yet we see plainly that it consists of Parts; though it is proposed at once, yet it may be effected by Degrees. We are told that *Milo*, a famous Lubber of Antiquity, began with carrying of a Calf, and was able to jog about with it upon his Shoulders when it grew up to be an Ox, which he afterwards knocked on the Head with a Blow of his Fist; and then I think the Story says, he eat it, not at a Meal, I presume, but in Joints. This shews us, that Time and Application will achieve Wonders, and provided we make an Essay to take up the Calf all in good Time, we may come to have many a good Dinner out of the Ox. But we must set our Shoulders to it, that was *Milo's* Beginning, and it must be ours. If we can but carry the Calf, and do not fling it down in a Passion, there is no doubt of its becoming an Ox, or that our Strength and his will keep Pace, and that we shall be able to carry him when he is an Ox. The Comparison is familiar and coarse, but it is very apt, and if I was sure that the Criticks would not be angry, I

would say that *Homer* himself has made use of some that are not a bit more clumsy or less cleanly.

It may be farther objected, and indeed I cannot deny, that though I stile it a single Proposition, yet there is a great Variety of Objects pointed out; but if from this Concession it should be said that any Distraction arises, against that I shall enter my Protest. It is very certain that one Machine may answer a Variety of Purposes, and therefore because a Man affirms, that if a certain Thing be done, it may prove the Means of doing many other Things, it does not at all follow that what he proposes is the more difficult, much less that it is impracticable. To judge of this, we must consider the Relation between the Means he proposes, and the Ends which he affirms may be answered by them; for if there be a proper Connection between them, he may be still in the right, tho' at the first Appearance he may seem to promise large. To apply this general Doctrine. When I say that *Corea* is happily situated for Trade, the Reader need only turn to a Map to know whether I speak Truth. When I affirm that the Inhabitants are addicted to Commerce, he may have Recourse to the Authorities I have cited, and upon due Examination the Witnesses will be found to speak my Sense. When I lay it down that there are Islands very conveniently situated between *Corea* and *Japan*, I mention also their Names, so that it may very easily be seen, whether I imitate that Painter, who to gratify his Wife that did not love to see so much white in one part of the Globe, sprinkled a few Islands through it, which are called the Painter's Wife's Islands to this Day. When I hold forth about Countries beyond *Japan*, I must confess I am a little ashamed to appeal to Father *Charlevoix* and his Brethren the *Jesuits*; but however, if their Testimony should be rejected, I believe I could produce some Protestant Witnesses to the same Facts. And lastly, when I talk about a North-east Passage, there is Captain *Wood* will bear me out in all that I have advanced. Thus I reconcile my Means to all these several Ends, or at least I put it into the Reader's Power to see whether I reconcile them or not.

In the next Place it is to be observed, that I do not pretend to say, that the Moment a Settlement is fixed, it will fulfill all that I have promised in its Behalf, or that it is requisite we should attempt to fulfill them the very Instant that we have made such a Settlement. This I am so far from affirming that the principal Reason of my introducing this Remark, is to shew that it ought not to be expected. I maintain that there is a Connection between this Settlement and all the Ends I have alledged it may answer; but we must touch but one String at a Time, otherwise we shall produce Discord instead of Harmony. We must take each in its Order, and if we do not immediately succeed, we must drop that Design for a Time, and drive only the Nails that will go, and thus by Degrees there is no Room to fear we shall come to drive them all at last.

When the *Canaries* were first discovered, and tossed about from Hand to Hand, whoever thought that from thence a new World might be discovered? Why truly *Columbus*. And what then? He proposed it to the *Portuguese*, who were thought to be the best Judges of such Projects, and they rejected it as an idle Dream. But as good Judges as they were, they mistook the Point, and as much as they thought him mistaken, he hit the Mark. Not at once indeed, but gradually; he first reached the *Bahama* Islands, then the Continent of *America*, and as soon as he heard of a *South Sea*, he pronounced that the *Indies* he sought lay beyond that. By Degrees every End was answered, and the Spices brought home in *Magellan's* Ships, though many Years after *Columbus's* Death, proved that his first Conceptions were right; and give me Leave to say they would have been just as right if *Magellan* had not succeeded in his Voyage. All the Ends of a Proposition may not be answered in a very long Tract of Time, and yet they may be all truly laid down. We have not yet squared the Circle, but the *Dutch* Mathematician that had a Line and half of Decimals inscribed upon his Tomb went very near it.

Without

Without doubt many a one will say, that the Scene is laid at a prodigious Distance, that there are a Multitude of Obstacles lie in the Way, and that it would be a wild Waste of Wealth to undertake any of these enormous Schemes, which are out of the Reach of any but whimsical People's Observations. As to the Distance, I protest I can't tell what to say. It is most certain, that I can't bring *Corea* nearer, but where it is there Providence placed it; and if it had been placed any where else, it would have been so much the worse, for all the Ends that I have proposed, and I must even have had Recourse to any other Country that stood in its Room. But then if a North-east Passage should be discovered, though it would not bring *Corea* nearer, or shorten the Distance a Yard, yet we should get sooner there by very near two thirds of the Time. Well then, there is something in Alleviation of the Distance, and as to the Difficulty why that is not much greater than must be got over to get at a Pound of Hyson Tea, and not so great as is actually got over, before *Europeans* can make themselves Masters of a *Japan* Tea-board. Whence I infer, that any Body who ever drank Tea upon such a Tea-board must allow that the Thing may be done.

King *Philip* the II^d, who was a very wise Man, framed far more extensive Projects, and durst think of encountering Difficulties, to which all that I have mentioned are but Mole-hills. He conceived an Idea at least of universal Monarchy in *Europe*, and a Monarchy as universal on the Ocean. He knew all the possible Passages to the *Indies*, and resolved to be Master of them all; with a View to this he actually attempted to fix a Settlement, and build a City on the miserable Coast of the Straights of *Magellan*, where one of our Men of War's Boats Crew could not subsist during their Passage; and it fell out with Respect to his Colony, as might be expected, that is, such as did not drown or hang themselves were fairly starved. He had it likewise in his Head to put it out of every Body's Power to look either for North-east, or North-west Passages, by reducing the *English* and *Dutch*, the only Nations that had thought of such a Thing. Nay to such a Degree did he carry this kind of Imperial Madness, that he was even for locking up the *Baltick*, and with that View actually took Measures for making himself Master of the Sound.

These were prodigious and impracticable Projects, and yet they enter'd into a very wise Man's Pate; they were pursued with the utmost Vigour, and with the Assistance of as much Power as *Europe* ever saw, and yet they miscarried. But all this happened by assigning to their Accomplishment the Life of a single Man. Had *Philip* contented himself with framing his Plan, executing any one Part of it, and by cultivating the Arts of Peace, raised the Power of his Subjects to a Degree proportionate to the next Branch of his Scheme, what he left unaccomplished, might have been performed by his Posterity, supposing them to have made no more Haste than good Speed in compleating this stupendous Fabrick, which like the Tower of *Babel*, being consecrated to the Use of Slavery, the divine Justice of Providence tumbled to the Ground. Thus the Reader sees, that there are great Projects practicable, and greater Projects impracticable; that wise and powerful Kings may be mistaken and defeated, and that an Adventurer, like *Columbus*, without a Freehold as big as his Hat, or Half a Crown in his Pocket, may bring his Desire to bear, even when that Desire was so seemingly improbable, as to look for a new World. But after all, the Difficulty in this Case is not so great as to exceed the Power even of the *East-India* Company; they can do much more than I have proposed, that they will do it, though I am bold enough in prophecy, I shall not venture to foretel.

There is another Thing that I apprehend may be called in Question, and that is the Stress I lay upon the Expeditions made by the Northern Nations to the *East-Indies*. What does this Fool mean, will some great Politician say, by being in such a Panick about the *Swedes* and *Danes* sending now and then a Ship to

China? Will erecting an *East-India* Company establish a Maritime Power? Truly I can't say that, but this I will say, and can prove, that no Nation ever carried on a Trade to the *East-Indies*, but became a maritime Power. I have written half a Folio Volume to evince this, and I defy all the Men in the World to shew the contrary. Within the Compass of these last five hundred Years, did not the *Venetians* and *Genoese* become maritime Powers by the *East-India* Commerce, though they carried it on at second Hand. What made *Portugal* a maritime Power, but the *East-India* Trade? What made *Spain* a maritime Power, but the Desire of the *East-India* Trade, which threw the *West-Indies* in her Way? it is true, she stood still to pick them up, but then she went on, as the *Philippines* will bear me Witness? What made us? What made the *Dutch* maritime Powers? This very Trade. And when have all maritime Powers declined? When they lost their Trade to the *East-Indies*. Judge then Reader for yourself, whether my Conjectures be rash or vain, or whether I have not too good Grounds to suspect, that those who have overcome greater Difficulties, than in Respect to Navigation was opposed to other Nations, will in a short Time become maritime Powers also.

I may be mistaken, and should be glad to be mistaken; I say no more, and I wish I had never had Occasion to say so much. Yet even this affords a Justification of my Scheme; for if I point out the Disease, I have likewise prescribed a Remedy. If there be any Maxim in Politicks, certain it is this, that if a maritime Power does not increase, it must quickly decline. We are every Day complaining that our old Branches of Trade fail, that one turns to no Account, that in another we are supplanted, that a third is quite wore out. What Medicine then so natural, and at the same Time so easy as to strike out new Branches? We have Strength and Power enough to do that, but whether we have Force sufficient to abet such an Attempt as that of King *Philip's*, I mean to restrain all the rest of the World from Trading, I suppose, I need not say; but if we really had, that very Force would sink and crumble to Pieces in the Attempt. This Remedy then or none must cure us; it is the Tar-Water of the State, and if it will not help us, we may die according to the regular Practice, as other maritime Powers have done before us.

These are melancholy Considerations, but however they may lead to a merry Purpose. There is a Time for every Thing, and we must be sometimes grave as well as gay; and if heretofore we had no Rival but the *Dutch*, we must not now flatter ourselves that we have no other Rival, when every *Dutch* Mail that bring us Papers and Letters from the North, show the contrary. I might say somewhat of the *Prussian* Pretences, but I don't care to talk of Lovers in Leading Strings, or pretend to think of strangling a hopeful Babe in its Cradle, for fear when he grows up he should prove our Rival too. Yet it may not be amiss to observe, that there is a strange Spirit gone Abroad, and that while every Body is looking after Trade, it becomes us who subsist by it, to look about it too. This indeed is a very obvious Remark, but the more obvious it is, the more necessary; if none but a blind Man could miss seeing it, what must he be who misses the right Use of it? The Question is easily answered, and it is the Answer that I will recommend to the serious Consideration of our Superiors.

One Observation more and I have done; some Objection may be made as to the Season in which I made this Proposal; we are engaged in a dangerous, doubtful and destructive War, this therefore cannot be thought fit Time for thinking of new Schemes, or for aiming at Discoveries. But alas, I am sorry this is so easily answered; we have already lost a great deal of Time, and it is our own Fault that we did not think of these Things sooner, that we should not chuse such a Time as this I will readily agree; but it is not left to our Choice, the Situation of Things has made it necessary, and as Necessity, in Fact, has no Law, so Necessity in Argument will admit of no Answer.

It is indeed true, that in a Time of War the Thoughts of our Statesmen are much occupied, and Money is not easily found for Expeditions of this Sort, where neither immediate Necessity, nor instant Gain seem to require or excite them. But Men who see further will perceive, that notwithstanding these and some other Inconveniences that might be pointed out, yet upon the whole a Time of War may be esteemed the most proper, because Ships of Force may be dispatched into those Parts, first without Suspicion, and next without any Loss; for the Situation of Things is Reason sufficient to account for our sending Ships of Strength to the *Indies*, without leaving it in the Power of any to discover what our true Intentions in sending them may be; and next they may actually render such Service to our Commerce in those Parts as may effectually indemnify us for our Expences in fitting them out, even if we should be so unlucky as in the first Trial not to succeed. Besides, whatever Acquisitions we make in Time of War, may be fortified and secured by a subsequent Treaty of Peace, since none of our Neighbours are so much interested in those distant Parts as to refuse to accomodate us, if in Return we gratify them in Matters in which they have a nearer Concern, and which it is very possible, may not affect us, or at least not so much.

For though, without Doubt, we have a very high Interest in the Balance of Power, and therefore ought to be careful in securing it, yet there is no Means so sure for compassing this as enlarging our Trade, and thereby extending the Foundation of our Naval Force. Whatever therefore tends to this Point is our highest Concern; and if there be any thing that merits more than ordinary Expences, even at a Juncture when we have so many good Reasons to be frugal, most certainly Projects of this Sort ought to be regarded in that Light. We should be the more sensible of this, if we would but consider seriously, and reflect frequently upon what first gave us that wide Power, that high Credit, that great Influence amongst our Neighbours, of which we have been so long possessed. It was not most certainly the deep Schemes of our Ministers, for these have been seldom laid, and when-ever they were laid, have been commonly disappointed; for though no Nation has a greater Proneness to talk Politicks than the Inhabitants of *Great Britain*, yet since the Reign of Queen *Elizabeth*, we have had no great Reason to boast of very refined Statesmen; nor at the Bottom, perhaps, has this been any Misfortune to us, any more than to our Neighbours. It was not our military Exploits that raised us to this envied Station, for though the Bravery of *English* Troops was never contested, yet we have seldom seen it employed so much in our own Service as in that of our Allies. But the Foundation both of our Grandeur and of our Glory has been, on the one Hand, our great maritime Force, which, generally speaking, whether well or ill employed, has maintained its Superiority; and on the other, our immense Wealth, accruing from an extensive Commerce, of which indeed we have seen many, and some very large Computations made, and yet I am convinced, that none of them exceeded the Truth, from this plain Reason, that as yet we are not undone, after wasting in other Folks Quar-

rels such a Proportion of Wealth, as Nothing but foreign Trade, superior even in Profit to what it was ever thought, could possibly have supplied.

This then should be our great Concern, for if we ever hope to discharge our Debts, to lessen our Taxes, and thereby recover those Branches of Commerce that have been lost in *Europe*, it must be by opening new Channels, through which, notwithstanding the Burthens they have upon them, our Manufactures may be carried to Markets where we may set upon them what Value we please. This Point is of all others that of which we ought to be most jealous; for if our Neighbours should get the Start of us in this, we should find our Misfortunes grow upon us, and our Prosperity decline apace. It is necessary therefore that we should be very strict in examining what others may do, and what it is in our Power to do, while we have yet a superior Naval Force; for to provide early, and to prevent Mischiefs, is the Part of a wise and of a prudent People; but to stay till they come upon us, is the very Reverse. It is very evident, that notwithstanding the vast Profits of our Commerce, we have been compelled to run in Debt; and it is as plain, that other Nations, fully possess'd of Naval Stores and valuable Commodities, are now setting up Manufactures, and launching into a Commerce more distant from them than *Japan* is from us. Does it not then become us to weigh the Consequences of such a Conduct, both with Regard to them and to ourselves? Would it not be right to prevent the Effects of their Industry by resuming our own? Is there any Thing that can better employ the Thoughts of such as are at the Helm? Can they answer it to their Country, if they neglect Matters of such high Consequence, for the Sake of Things that are nearer, but at the same Time inconsiderable when compared to these? Or can we have any Right to blame them, if from a senseless Spirit of Faction, a groundless and unreasonable Opposition, we keep them continually upon the Watch for their own Safety, and leave them not either Time to contrive, Power to provide, or Means to execute what is required for the publick Good? How many Nations have been undone by some or other of these Mistakes? And if we pursue their Errors, what Reason is there to expect, or even to hope, that we should escape their Fate?

I must indeed acknowledge, that in Point of Composition I have offended greatly, by recurring so often to Remarks of this Kind; I am sensible that in this I have acted weakly, ridiculously, absurdly, as an Author; but alas! what is my Character in that Respect to the Duty I owe my Country? Perish all private Advantages, all Views of Interest, all Hopes of Fame, when it comes in Competition with a Nation's Good. Let every Man who has the happy Fortune to gain the publick Ear, in any Measure, in any Manner, or upon any Terms, strive to turn that Attention to the publick Benefit. Let his Endeavours at least speak him a Patriot, whatever his Success may do; and let me have Leave to remember by Way of Excuse, for what may be accounted my Failing, the Answer of the *Athenian* Philosopher who was charged with the same Fault, *I repeat, said he, over and over again my Admonitions, to a People, who commit over and over again, the same Faults.*

SECTION VIII.

A distinct Account of Part of the North-east Frontier of the *Russian* Empire, commonly called the Country of *Kamschatka* or *Kamschatska*, including the Voyages of Captain *Behring*, for discovering towards the East; with many curious and entertaining Circumstances relating to those distant Countries and their Inhabitants; and also an Enquiry into the Probability of the Country which he discovered, being connected with *North America*; with a Variety of other Points of great Consequence in Relation to the Designs now on Foot in various Parts of *Europe* for making a thorough Discovery of the superior Parts of the Northern Hemisphere, which would be of the utmost Consequence to Trade and Navigation in general, and to those of *Great Britain* in particular.

Collected from the best Authorities both Printed and Manuscript.

1. A general Introduction, in which is shewn the wonderful Change made in the Affairs of Russia by the Czar Peter the Great, and his having first conceived a Notion of opening a Trade between his Country and North America.
2. A Description of the Country of Kamichatska, as described by the Russians in the Time of Peter I. shewing its supposed Situation, Boundaries, and Extent.
3. The Motives of Captain Behring's Expedition, his Departure from Petersbourg, Feb. 5, 1725, and Journey through Siberia.
4. An Account of the Preparations and Expeditions made for furthering his Discoveries in the Year 1726, with various other Circumstances relating to the Produce and Inhabitants of the Countries through which he passed.
5. A Detail of the many Miseries and Hardships sustained by this Gentleman, and the Inferior Officers and Soldiers under his Command, to the Time of his Arrival at Kamschatska.
6. A large Account of the Country, the Russian Settlements, Fortresses and Garrisons there at the Time of Captain Behring's Arrival.
7. His Preparations in order to prosecute his Discoveries to the East; and an Account of his Discoveries and Return to Petersburgh.
8. Some Account of this Gentleman's subsequent Expedition, and of the Discoveries that have been since made on that Side by Direction of the Russian Court.
9. A Representation of the new Hypothesis said to be built upon these Discoveries, collected from the Memoirs of the Royal Society.
10. The Improbability of that Hypothesis fully shewn, from a great Variety of Circumstances, which amount to a Proof, that nothing advanced on this Subject ought to prejudice our Hopes of finding a North-west Passage.
11. Historical, Physical, and Critical Remarks upon the principal Points in this Section.

THERE could not be a more proper Subject chosen for the shutting up a Collection of this Kind, than the History of the Discoveries made by the *Russians* in the Northern Parts of their Dominions. In Point of Matter they are far more important than any which have been attempted within our Memory, the finding out a North-west Passage only excepted. In Point of Time also they are later, for the last Account of their Discovery is, if I may be allowed so familiar an Expression, dated but the other Day, and these Discoveries are still prosecuted, perhaps with greater Skill and Constancy, and with more Vigour and Industry than has been commonly imagined.

It is generally looked upon as the Foible of inquisitive Minds, that they are apt to make such Excursions into the Realms of Fancy, as sometimes to fall under the Power of Superstition, and to be enslaved by Enthusiasm at others. I am very much afraid I shall run the Risk of one, if not both Imputations, from what I am going to say; but that gives me little Concern, for I had rather be laughed at for speaking what I take to be Truth, than applauded for dissembling it.

There seems then to me to have been a very singular Kind of Providence discernable in all the Discoveries that have been hitherto made, by which I mean, that from their Consequences they appear to have been conducted by another Spirit than that of human Wisdom;

for in Proportion as the Nations who made Discoveries have abused the Advantages they derived from them, those Advantages have gradually sunk, and that Spirit of Discovery has been lost, of which I could give various Instances, if it was not wholly unnecessary, since upon the bare Mention of the Fact the judicious Reader will instantly recollect them.

It is from the considering Things in this Light, that I am led to apprehend the late Czar *Peter the Great*, of glorious and immortal Memory, was one of those signal Instruments, raised up by the immediate Power of the Divine Ruler of all Things, to fulfil the great Purposes of his unsearchable Providence. Before his Reign, the People who inhabit the vast Country of *Russia*, were very little or scarce at all known to the rest of the World by their Actions or Performances. It was owing to that Spirit of Discovery which reigned here in the Time of Queen *Elizabeth*, that the Importance of their Situation came to be at all considered. The *Dutch* indeed quickly followed the Lights we gave them, and converted to their own Advantage that Route which with infinite Pains and Hazard we first described.

But this great Monarch was born to be not only the Governor, but the Legislator of his People; his Genius was the Gift of Nature, or to speak with greater Piety, and at the same Time with more Propriety, the Gift of the great Author and Lord of Nature, and appeared

appeared with all the Lustre worthy of its Author. That knowing, that well-meaning, that Patriot-Monarch of the North, drew, or rather forced his Subjects out of that Obscurity in which for many Ages they had remained. He enlightened them by his Exhortations, he animated them by his Example, he compelled them by his absolute Power to shake off the Chains of Barbarity, to come forth out of a State of insensible Ignorance, and to appear upon the bright Theatre of the Universe, not only as a great and powerful Nation, but as one of the greatest and most powerful Nations that have been the Object of History.

He it was that made the World know the Importance of the Country he possessed, and this in Spite of Obstacles that would have amazed and terrified an Inferior, that would have tired and overcome a less vigorous Genius. It was this wise, this active, this heroick Prince, that raised his People from being the lowest to the highest of the Northern Powers. It was he that taught them to triumph by Land, and opened them a Passage to the Sea; In short, it was he that conceived and executed the amazing Project of making them a Maritime Power, and this too in a surprizing Extent.

From a People unacquainted with a Vessel bigger than a Bark, and who knew no Navigation but that of their own Rivers, he not only taught them the Use of Ships, but put it into their Power to build and to equip them; nay, he did more than all this, he was not content with opening Ports on one Side only, he opened them on all; his Frigates, secured him the Possession of the *Caspian Sea*, his Men of War surprized with their Appearance the Nations inhabiting the Coasts of the *Black Sea*, and even the supine Pleasures of an Eastern Prince were disturbed by the Thunder of his Cannon, that alarmed the Inhabitants of *Constantinople*; after trying these Experiments, he aspired to still greater Things, and not only built the City of *Petersbourg*, but opened various Ports upon the *Baltick*, which he covered with his Fleets, and came in Person as their Admiral to *Copenhagen*, where not some Ages only, but some few Years before, they would have as soon expected a Visit from the Emperor of *Japan*.

His Predecessors hardly comprehended the Extent of their Dominions, but the Czar *Peter* not only discover'd that his Dominions were the most extensive in the World, but that he had a Mind more extensive than these. He saw the Advantages that might be made of every Province, every Port, and every River in his Empire, and in the Course of a short Reign, a very short Reign indeed, compared with the great Events to which it gave Birth, he convinced his Subjects, his Neighbours, and all the considerate Men in every Part of the World of the Truth of this; and that he perfectly knew how to have pushed his Greatness on all Sides, if the pushing it had not exceeded the Strength and Limits of a single Life.

But within the Compass of that single Life what did he, or rather, what did he not! He exhausted the Power of *Sweden*, the only Means of taming the lion-like Spirit of his Enemy *Charles XII.* he put it out of his Power to conquer, for to conquer him was not even in *Peter's* Power. He protected *Poland*, to which before his Time his Empire was inferior. The *Tartars*, to whom his Predecessors were Tributaries, he frightened into Quiet. He encountred alone, and when they had no other Enemy to deal with, the Forces of the *Turks*. He extended his Dominions on the Side of *Persia*. He sometimes encroached upon their Territories, he sometimes sought to conciliate by Concessions, the Friendship of the *Chinese*.

He did more than all this, for after making himself first known, and then admired in all Parts of the civilized Earth, he began to look beyond the Bounds of the habitable World itself, and to propose after showing his Subjects so many new Seas and new Countries, to point them out the Way to the *East Indies* and to the *West*. Such were the Cares that occupied the Thoughts of this great Prince, while other Monarchs were complimented with high Titles for disturbing the Peace of Mankind about Trifles, for stealing little Provinces, and buying now and then a Town.

It is very true, that he did not live to perfect his last great Design, but that he framed it was sufficient for his own Glory, and to amaze all who are capable of forming a competent Judgment of the Circumstances that must attend the perfecting this Design when-ever it shall be brought about. To shew that this is no Chimera, but a very wise and well laid Scheme, and which sooner or later will be certainly carried into Execution, is the Business of this Section, in which we are to speak of the North-east Limits of the *Russian Empire*, and of the Country of *Kamtschatka* or *Kamtschatska*, for it is written both Ways, of which, though we have but lately heard, it imports us as much to be well acquainted with as any Country upon the Face of the Globe; for though we cannot boast much of the Figure it makes at present, yet as it is the Possession of this Country that put it more in the Power of this Nation than any other to make Discoveries, and as the most important Discoveries that ever were made, may very probably be made from hence, we must be content to take a little Pains in the Explanation of this Point, and in becoming Masters of a Subject, as curious and entertaining as it is useful and important; so that however great they may be, we shall have no Cause to regret the Labour they cost, to think our Time ill bestowed, or our Trouble not well laid out.

2. It is not easy to discover at what Time the *Russians* became acquainted with that Part of their own Dominions which borders North-east upon the *Icy Sea*; but it seems very evident, that though the Name of *Kamtschatska* was given to some very remote Parts of their *Asiatick* Dominions, then commonly included under the general Name of *Siberia*, yet were they very indifferently and very indistinctly known at the Close of the last Century, as appears by the Map of Mr. *Ysbrant Ides*, which is very far from agreeing with later Discoveries. But after the Czar *Peter* had travelled, and had acquired a competent Knowledge of Cosmography and Geography, he began to be extremely desirous of having these Parts more thoroughly examined, as having now some Notion of their Importance. He took great Pains to make himself well acquainted with the Route to *China*, and also caused a very accurate Map to be drawn of the Countries lying about the River *Amur*, as far as the Peninsula of *Corea* on the South, and as high as he had any certain Accounts of his own People to the North.

He likewise directed the strictest Enquiries to be made into the State of *Nova Zembla*, and the Country about the Straights of *Wygatz*, and so along the *Icy Sea* as far as possible to the East; and of these also he had Maps, in which the Mountains and Rivers that had been carefully examined, were laid down; but the whole was not compleated at the Time of his Death; so that he enjoyed not the Satisfaction of beholding a distinct Representation of his Dominions on that Side. He had the Pleasure however of discoursing frequently of the Discoveries that might be made, and of the Trade that probably might be carried on from these Countries, bounded by the Sea of *Japan*; and as he would sometimes discourse of these Matters a little hyperbolically, which was however no more than necessary to awaken the Curiosity and Attention of his Countrymen and Subjects; so by Degrees it had Effect, and many of his Ministers, especially Prince *Menzikoff* and Admiral *Apraxin*, entered pretty well into his Sentiments, and endeavoured all they could to push their Colonies as far as *Kamtschatska*.

It was however with infinite Difficulty that they prevailed, and the Relations that were transmitted from thence seemed to destroy all Hopes of doing any thing there to the Purpose; for the Soil was represented the most sterile that could be possibly imagined, the Climate severe beyond Expression, binding not only the Brooks and Rivulets, but even the Earth itself in such Icy Chains, that it was as practicable to dig a Rock, as to make a Spade enter it. It was said that Wild-fowl were frequently killed by Cold, and that sometimes even the wild Beasts perished by the excessive Severity of the Weather; neither do the very latest Accounts

that

that we have received contradict this, though they lay the Scene of these tragical Effects of Cold on Countries to the North-east of *Kamschatska*.

The first Accounts of *Kamschatska* that had any Appearance of Clearness or Certainty, reached this Part of the World about the Year 1723, and were brought by an *Englishman*, whom the Czar *Peter* had employed in erecting a Glass-work; and they amounted to no more than this, that it was a vast Tract of Country, extending from the Polar Circle down to sixty Degrees of North Latitude, I make use of the Person's Words from whom I had it; that it contained thirty Degrees of Longitude; and that the North-east Extremity was either a Promontory shooting into the *Icy Sea*, or the Beginning of a long Ridge of Mountains that were supposed to run out Eastward, and join the Continent of *North America*.

Wild and extravagant as this Account may seem, I am very certain it was the best that at this Time could be given by the most experienced Persons in *Russia*; and that from this Account, and the Conjectures founded upon it, a Resolution was taken for pushing their Discoveries on that Side in Hopes of some beneficial Consequences. It was allowed, that no Country could be more wretched than this, that it produced only a few Roots, that no Kind of Grain would grow there, and that a small insignificant Colony of *Russians*, that had been forced thither in Obedience to the Czar's Orders, subsisted entirely upon Fish, and such small Supplies of coarse Rye Bread as could from Time to Time be sent them; that it was certain they had not any Black Cattle, Horse, or Deer, but that however some Animals they had, of the Skins of which they made their Cloathing. This was the Sum total of what was known of this Country before the Expedition of Captain *Behring*; upon which we are next to enter, and of which I shall give as clear and plain an Account as it is possible.

3. It was in the last Year of the Life of *Peter* the Great, that Captain *Behring* received Orders from Count *Apraxin*, Admiral of *Russia*, to traverse the vast Country of *Siberia*, to penetrate its utmost Extremities to the East or North-east, in order to obtain a distinct Notion of its Bounds, and of the Distance between them and the Continent of *North America*. The better to enable him to fulfil these Instructions, which were given him in the Month of *February* 1725, a Lieutenant was dispatched with twenty-five Men, and such Baggage and Tools as could be carried upon twenty-five Horses before him; and as soon as he could make the necessary Preparations, the Captain followed with a Retinue of about thirty-three Persons. He came up with his Lieutenant at *Wologda*, and continued his Journey to *Tobolsky*, which is looked upon as the Capital of *Siberia*, where he arrived on the 16th of *March*.

The Season being too far advanced for him to make an immediate Progress, he continued there for two Months, and then having received a considerable Reinforcement, he proceeded on his Expedition on the River *Irtish* till it falls into the River *Oby* or *Obb*, and then remounted that River as far as the Town of *Narin*. All the Country through which he passed was inhabited by the *Ostiacks*, formerly *Pagans*, but a little before converted to the Christian Faith by the Care of the Metropolitan of *Tobolsky*. He proceeded from thence to the Monastery of *Makofsk*, and from thence went by Land to the City of *Jenisciski*. He embarked there with thirty Persons on board of four small Barks, in order to continue his Voyage on the River *Jenisa*, and afterwards on that of *Tunguska*; from whence with much Difficulty he reached *Ilinski*.

There he determined to winter, and to send his Lieutenant to make the necessary Preparations for continuing their Voyage upon the *Lena*, directing him to employ his Time in constructing a small Squadron of Barks for that Purpose. The Captain himself, during the Winter, took all the Care he could to inform himself of the Countries that he had still to pass through, before he reached that which was the proper Object of their Enquiries. And the Accounts that he received, were such as gave him to understand that a more difficult

Task could scarce be imposed on any Man than that which had been lain upon his Shoulders. The Country where he now was belonged to the *Tungusees*, a Nation of *Pagans*, who lived very miserably along the Sides of the great Rivers, which they navigated in small Boats, or rather Canoes made of the Barks of Trees. When the Severity of the Season was a little over, he resolved to prosecute this tedious and dangerous Expedition with all the Diligence and Caution in his Power.

4. In the Beginning of the Spring he began to descend the *Lena* with his small Squadron of fifteen flat-bottom'd Boats, and arrived safely at *Jakutsky*. Both Banks of the *Lena* below the River *Witem*, are inhabited by the *Jakuts* and some few *Tungusees*. As for the former, they are well provided with Horses, and have great Herds of Black Cattle, that is to say, such as are in a tolerable Situation in the World; and as for the poorer Sort, they maintain themselves as well as they can by Fishing. As for their Religion, they are *Pagans* and gross Idolaters, worshipping the Sun and Moon, and some Kind of Birds, such as the Swan, the Eagle, and the Crow. They are famous for having many Conjurers among them, and for praying to a Sort of diminutive ugly Idols, called in their Language *Saitans*. In other Respects they reckon themselves, and are esteemed by others, a Tribe of *Tartars*. Upon his Arrival at *Jakutsky* the Captain demanded a Reinforcement, and having obtained it, he gave Instructions to a Lieutenant to proceed with the best Part of his Troops and all the heavy Baggage upon the *Lena*, to its Confluence with the River *Aldan*, in order by remounting that, and the Rivers *Maya* and *Judoma*, to reach *Judomska Kresta*, that is, the little Fort of *Judomska*, and by this Route he was in Hopes of lessening the Fatigue of so long and troublesome a Passage.

As for himself, he set out on Horseback, attended by the few People that were left about him, and some Horses laden with Provision, to go by Land to *Ochotski*, though the Road was very far from being tolerable. The Captain also left a Lieutenant at *Jakutski*, with Orders to pass the Winter there, and to follow him at the Beginning of the Spring over Land to *Ochotski*. Upon his arriving in Person at that Fortress, he found it in a very poor Condition, and no more than ten *Russian* Families residing there or in its Neighbourhood. About the End of the Month of *December* he received Advice from his first Lieutenant, importing that he had been surprized by the Ice at his Entrance into the River of *Gorbea*, distant above one hundred Leagues from *Judomska*; and that this obliged him immediately to construct some long and narrow Sledges for the Carriage of his Provisions and Baggage; but as for himself and his Men, they continued their Route on Foot. Upon receiving this News, the Captain thought proper to advance from *Ochotski* to relieve his Lieutenant, carrying with him a Convoy of Provisions laden upon large Dogs. By this wise Precaution he brought his Lieutenant and the Remainder of his Detachment safe to *Ochotski*, upon *New-Year's-Day* 1727.

5. The Account which this Officer gave him of the Miseries they sustained in their March was equally melancholy and sincere. They quitted the River of *Gorbea* on the 4th of *November*, and not being able to carry with them a sufficient Quantity of Provisions, were very quickly constrained to feed upon the Flesh of their dead Horses. They afterwards burnt off the Hair from their Skins with Lime, and then converted them into Coats and Shoes. They were forced to abandon their Baggage in three different Places, and had certainly perished at *Judomska Kresta*, if it had not been for a small Quantity of Meal which the Captain had been obliged to leave there by Reason that some of his Horses died. The Nation of *Jakuts*, who inhabit the Banks of the *Lena*, dwell also on those of the Rivers *Aldan* and *Maya*, but on the Sides of the River *Judoma*, and in the Neighbourhood of the Fortress of *Ochota*, reside the Nation *Lamutki*. These People have tame Rain-Deer, which they employ in drawing their Carriages, as well as to furnish them with Cloaths and Subsistence. In the Neighbourhood of the Lakes and of the

the Sea, dwell the *Tunguses*, for the Conveniency of Fishing. These People are as barbarous and as much Idolaters as the *Jakuts*.

In the Beginning of the Month of *February*, the Captain dispatched a Lieutenant and 90 Men, with some Dogs, to fetch off the Baggage that had been abandoned in the Manner before-mentioned; he returned with a part of it in *April*; and another Detachment being ordered on the same Service, they brought the rest back in *May*. In this Country the Snow falls in such prodigious Quantities, that it commonly lies about two Yards thick, and sometimes more, upon the Ground, which obliges People, for three or four Months, to travel on Foot, and to drag their Baggage on little Sledges, which will carry 6 or 700 Weight. In this Manner the Lieutenant marched that came to *Ochotski*, and during his whole Passage, the poor People had no other Relief in the Night-time, or when the cutting icy Winds blew, than to cover themselves as deep as they could in the Snow. This is practised on the Coasts of *Hudson's-Bay*, and in other cold Countries as well as here; and if Credit may be given to several Narrations written by those who have visited these frozen Climates, it is a very convenient and effectual Screen from the extreme Fury of the Weather, which will be the less wonder'd at, if we consider, that both Gardiners and Husbandmen acknowledge very discernable Heat in Snow, by which Corn, Fruit and Flowers, are defended from the Rage of Winter, in the Earth, and are enabled by this kindly Covering to push out and discover that they are alive in the Spring.

On the 30th of *June* the Captain ordered Lieutenant *Spanberg* to cross the Gulph to the Mouth of the *Balchaia rerka*, or Great River; he was to perform this Voyage in a new stout Vessel built by their own Workmen, and had Orders to carry over with him the second Architect, and a sufficient Number of Men to cut down Timber, and to build a new Vessel there, which when they had performed, they were instructed to give the Captain Notice of it at *Ochotski*. While they were thus employed, the other Lieutenant *Creziboff* returned, bringing with him 2300 Poud of Meal, that is about 800 Weight, which was immediately embarked on board the new Vessel that was return'd from *Kamtschatska*. The Captain then ordered all the heavy Baggage and Provisions to be embarked without Delay, and on the 21st of *August* he went on board himself for the Port before-mentioned. He left behind him a Pilot, and a small Number of Persons, with Instructions as to the recovering and securing the Provisions that had been left behind, which they were to bring with them if they could, but if not, they were to deliver them to the Government of *Jakutsky*, and to take a Discharge for them; after which, the Pilot, and those under his Command, were to join the Captain, and bring with them a small Supply of Provisions, Iron, and Tar. However, he saw nothing of them till the Year 1728.

The Captain being come to the Mouth of *Bolchaya rerka*, transported his Provisions and other Necessaries to *Bolchay reeski ostrog*, or the Habitation of the great River. The heavy Baggage was from hence conveyed in small Boats, that were drawn against the Stream for 120 Wersts, to the higher Settlement in *Kamtschatska*. This Journey they performed themselves by Land, making use of the little Sleds before-mentioned, that were drawn by Dogs, for the Carriage of what was necessary for them during the Journey. On this Occasion, they had thorough Experience of the extreme Rigour of the Climate, being obliged to have Recourse to the Method before-mentioned, that is to say, towards Night, or when-ever they had a Mind to rest, they ran a very deep Trench or Ditch through the Snow; at the Entrance of this Trench they hung up Deer Skins, and then lay down under the Snow, either to sleep or to take Repose. The Intent of hanging up the Skins, is to prevent those sudden Storms which are common in these Parts, and to which they give the Name of *Purgi*, from being fatal to them, as they often are to less cautious Passengers, by bringing with them such prodigious Quantities of Snow as bury these unfortu-

nate Victims under it, past all Possibility of extricating themselves or escaping.

As we have now conducted the Reader into that Country which is the proper Subject of this Section, and which, for any thing that is yet known, seems to be the very Extremity of the Continent, on this Side, tho' there is a very wide Country behind it, extending directly North for above 15° of Latitude. I say, as we have followed him hither, the next thing is to see what Account he gives us of this strange Place, which lies so far out of the Reach of the rest of Mankind, and which could never have been visited, much less planted and possessed by any but the *Russians*, and even these had not been long fixed there at this Time.

The *Russians* have three Settlements, or to speak with greater Propriety, have occupied three Posts in this Country. In the Fortress which is in the upper *Kamtschatska*, there are seventeen, in the lower Fortress there are about fifty *Russian* Houses, exclusive of those that are about the Church, which may be about fifteen in Number. At the Mouth of the River before-mentioned, there were at this Time fourteen Houses. In these three Posts there were about 150 Soldiers in Garrison, and the principal Point aimed at by fixing them here, was to collect the Tribute from the neighbouring Nations. The Captain, to reward those that had assisted him in transporting his heavy Baggage, his Stores and Ammunition, and who had likewise furnished him with Carriages, gave them about an hundred Weight of Train Oil, which he extracted from a Whale the Sea left upon the Coast at the warm Season of the Year; and with this and a little *Chinese* Tobacco, they were better contented than if he had given them Money. To the South of this Country inhabit the Nation of the *Kuriles*, and to the Northward dwell the *Kamtschadales*, the Languages spoke by these Nations are so different, that they hardly understand each other; some of them are addicted to Idolatry; amongst others there are no apparent Signs of any Religion; and to say the Truth, hardly any convincing Tokens of Humanity.

The *Russians* that are settled in *Kamtschatska*, as well as the Natives or original Inhabitants, are destitute both of Cattle and Corn; instead of the former they make use of Dogs, which are very large and strong; and by the way, this is likewise the Custom in *Groenland*, and in the Countries bordering upon *Hudson's-Bay*. As to Provisions, they live chiefly upon Fish, Roots, and Pears; they have likewise Carrots and Beans, and in some Seasons of the Year tolerable plenty of Wild-fowl. As to their Cloaths, they are made of Dogs-skin; it is however worth observing, that in the Country about the Convent of *Pakusska*, which is not far from the Church, they have a little Barley, as also some Hemp and Radishes, and in the Plantations about the *Russian* Houses, they have Turnips of a prodigious Size, that is to say, of five or six Pounds Weight a piece. The Captain, while he was there, caused some Rye and Oats to be sowed, but he did not stay long enough to see whether they came up. The Frost sets in here very early, and the People, who are tributary to the *Russians*, pay their Taxes in several Sorts of Furs.

The Customs of these People are barbarous in the highest Degree, of which a very few Instances may be sufficient to convince the Reader. If a Woman happens to have two Children at a Birth, one of them is destroyed as soon as it is born, and it would be esteemed a Crime to preserve it. Nor are they cruel only to Children, for if the Father and Mother of a Family happens to fall sick, tho' the Disease does not appear to be mortal, yet they drag them away presently to a Wood, let the Weather be what it will, and there they leave them, not indeed without Provisions, for they commonly carry them as much as will serve them for a few Days, but they very seldom hear any more of them. When People die so suddenly that they cannot be thus removed, they drag the Body into the Woods, and leave it there to be devoured by the Dogs. There seems to be a good deal of Superstition in this, for some of them will quit the Place of their Residence, if a Man happens to breathe his last in it. The Nation

of the *Koratskes* burn their Dead, and though they have been often admonished to leave off this Practice, yet hitherto there has been no breaking them of it.

Since the Time our Author wrote, it appears from several Books that have been published at *Petersbourg*, that this Country, at least the *Russian* Settlements in it, have been greatly improv'd; so that in the Latitude of 56, and even higher, they have Barley, Oats, and Rye, in tolerable Plenty. The Number of Houses also are greatly increased, and the Fortresses are in much better Order, which is owing to the Hopes that are still entertained of opening on this Side, some Time or other, a very advantageous Commerce. We have been promised, and were in Hopes of receiving a large and accurate Description of this Country in its present Condition, but as yet it has not been published; many People may possibly think, that considering the Rigour of the Climate, the Barrenness of the Soil, and the Thinness of its Inhabitants, that it is no great Matter whether it be ever published. Yet notwithstanding all this, it is not impossible, or even improbable, that in Process of Time Things may change their Face here, for the Country now called *Kamtschatska*, is not that vast Northern Continent that extends from 60 to 73 Degrees of North Latitude, which was formerly included under that Name, but the Peninsula only which extends from the Latitude of 51 to 60, and lies between 80 and 95 Degrees Longitude East from *Tobolski*; so that if a sufficient Number of People were sent thither to cut down the vast Forests with which it is incumber'd, and enabled to till, manure, and cultivate the Earth, it might be render'd a Place far enough from being despicable; and then the great Importance of its Situation would very quickly appear. But to return to our Narrative.

7. Upon the Captain's Arrival at the lower Fortress, he found Wood enough cut for the building a Vessel, which was put upon the Stocks *April 4, 1728*, and was entirely finished the 10th of *July* following. It is certain that a properer Person could not well have been employed, since he thought nothing a Difficulty, nor was afraid of any kind of Hardship or Danger that stood in the Way of the Execution of his Orders, but with infinite Address, and almost incredible Patience, got over those Difficulties, that to another Man would have appeared unsurmountable. All the Timber that was used in Building, was conveyed to the Place where his new Vessel was constructed, upon Sledges drawn by Dogs, and consequently with infinite Pains and Trouble. The Supply of Tar he expected not being arrived, was another great Inconveniency, but the Captain, who had a Brain very fertile in Expedients, observed a Tree there, called by the Natives *Lisniskink*, which he fancied would supply them either with Tar, or something like it; accordingly he caused great Quantities of it to be cut and burned, and, as he expected, the resinous Matter that run from it answered the Ends of Tar, if not perfectly, at least tolerably.

The Vessel being built, the next Thing was to victual her, and that for a Voyage, the Length of which was altogether uncertain; and to do this in a Country in a Manner destitute of Provisions, was none of the easiest Undertakings. The Captain however went about it, and, in the first Place, having collected a vast Quantity of Plants and Herbs, he distilled from them a pretty strong Spirit, upon which he was pleased to bestow the Name of Brandy, and of this he laid in a plentiful Stock. Instead of Meal or Corn, he furnished himself with Carrots or other Roots. By boiling the Seawater, he procured as much Salt as he wanted. Fish Oyl served instead of Butter, and dry and wet Salt-fish took the Place of Beef and Pork. These Provisions, such as they were, he embarked in such Quantities as would serve his Crew, consisting of forty Men, for a whole Year.

Thus equipped, he undertook the Execution of the Instructions given him by his Sovereign *Peter the Great*, under his own Hand, and of which the following is a Copy taken literally from his Journal.

I. You shall cause one or two convenient Vessels to be built at *Kamtschatska*, or elsewhere.

II. You shall endeavour to discover, by Coasting with these Vessels, whether the Country towards the North, of which at present we have no distinct Knowledge, is a Part of *America*, or not.

III. If it joins to the Continent of *America*, you shall endeavour, if possible, to reach some Colony belonging to some *European* Power; or in case you meet with any *European* Ship, you shall diligently enquire the Name of the Coasts, and such other Circumstances as it is in your Power to learn; and these you shall commit to Writing, so that we may have some certain Memoirs by which a Chart may be constructed.

On the 14th of *July*, having recommended himself to the Protection of Almighty God, he sailed out of the River of *Kamtschatska*. On the 8th of *August* he found himself in the Latitude of 64 Degrees, 30 Minutes, and being perceived by the Inhabitants on Shore, eight Men put off in a Boat made of Skins, and came to the Vessel, that is to say, to the Side of it, where they enquired whence he came, and to what Purpose. After he had answered them, they acquainted him in their Turn that they were *Tzuktshchi*, which is the Name of a Nation with whom the *Russians* have been for some Years acquainted. It was with some Difficulty that he got one of them to come to him, but he was soon followed by the rest. They informed him that the Coast, for a considerable Extent, was inhabited by their Nation, and that the Land tended to the West. They likewise gave him Information of an Island that was not far off, which he accordingly found on the 10th of *August*; and as that is the Feast of *St. Lawrence* in the *Russian* Kalendar, he thought fit to bestow that Name upon the Island. He sent an Officer on board a Shallop of four Oars thither twice to examine it, but he could not find any Inhabitants, though there were some Houses upon it; which sufficiently shewed that it was inhabited, though the People, out of Fear, or from some other Motive, thought proper to conceal themselves.

He continued his Course to the 15th of the same Month, when he found himself in the Latitude of 67 Degrees 18 Minutes, and conceiving that he had now fully executed the Emperor's Orders, as he saw no Land, either to the North or to the East, he resolved to return, as thinking it to no Purpose to continue his Voyage towards the West, or to run the Hazard of being driven by a contrary Wind beyond the Possibility of getting back during the Summer to *Kamtschatska*, and to winter in a Country where he was sure of meeting with little or no Wood, and which might very possibly be inhabited by some Nation, Enemies to the *Russians*, was, in his Opinion, running a very great, and, at the same Time, unnecessary Hazard.

From the Mouth of the River *Kamtschatska*, to the utmost Point of their Voyage, they saw nothing upon the Coast but great Ridges of Rocks, the Tops of which were covered with Snow, though it was Summer. They traversed, according to their Computation, about ten Leagues of Latitude, and thirty of Longitude, that is to say, the farthest they sailed East, was 372 *German* Leagues. On the 20th of *August*, in their Return, they saw forty Persons on board four small Boats rowing towards them from Shore with all their Force; they lay by for them, and upon their coming near them, they concluded them, from their Appearance, to be of the Nation called *Tzuktshchi*. They had with them a good Quantity of dry'd Flesh, Fish, and Water contain'd in Whales Bladders, 15 Fox Skins, and four Narval's Teeth, which they sold, or rather exchanged for Pins and Needles with the Seamen. These People told them, that their Nation travelled with Rain Deer as far as the River *Koblina*, which runs into the North Sea, but that they never had attempted any Passage by Sea. That their Nation inhabited a very long Tract of Country upon that Coast, and had been possessed of it for many Years; one of them particularly said, he had been at the Fortress of *Anadirski*, where they had traded with, and been very well treated by

by the *Russians*. They had very great Hopes of obtaining considerable Intelligence from this Man, but notwithstanding all the Questions they proposed, they could gain from him no more than a Confirmation of what they had formerly learned from the *Tzuktshi*.

On the 29th of *August* they met with a great Storm, attended with a thick Fog, by which they were driven upon the Coast of some Country East of *Kamschatska*, and where they were oblig'd to come to an Anchor. Upon their endeavouring to weigh it the next Day, their Cable broke; however, they were so lucky as to escape with no other Loss than that of their Anchor. On the 2d of *September* they arrived safely in the Mouth of the River of *Kamschatska*, where they landed, and having secured their Vessel in a Creek, went to the lower Fortrefs, where they passed the Winter. There they met with the rest of their Companions, who brought them a considerable Supply of Provisions, which, after the Fatigues they had sustained, were very acceptable. In this Place they spent the Winter, without meeting with any thing worthy of our Notice. On the 5th of *June* 1729, they repaired their Vessel and put to Sea, steering due East from the Mouth of the River *Kamschatska*, in Hopes of discovering that Land, which the Inhabitants affirm'd might be seen in a clear Day; which, however, they were not so happy as to meet with, though they continued that Route for 30 Leagues, and then meeting with a Storm at East-North-East, they were obliged to return to the Mouth of the *Bolschay reeschbi*, after having passed round the South Point of *Kamschatska*, which was a Voyage that was never performed before. They went from thence by Sea to the Fortrefs of *Ochotsky*, where they delivered up their Stores of Provision, consisting of Flour, dry'd Flesh, and Salt, to the proper Officers. On the 20th of *July* they arrived at the Mouth of the River *Ochota*, where they delivered up the Vessel, with the Materials and Tools on board her, to the Governor. The Captain then hired Horses for himself and Company, to go by Land to *Judomska kresta*; thence they proceeded by Water in small Boats and Rafts, along the River *Aldan* to the Passage of *Beloya*, and thence they went on Horseback to *Jakutski*; all this they performed exactly in a Month, arriving there on the 29th of *August*.

On the 20th of *September* they left that Place, and went in two Vessels up the River *Lena*, as far as the Village of *Peledun*, where they arrived on the 10th of *October*, and there they were obliged to stay for about ten Days, because the Rivers began now to be covered

with Ice. The Snow falling in great Quantities, and the River being thoroughly froze, they set out on the 29th of *October* for *Ilimski*, and from thence by the Rivers *Tungus* and *Jenesi*, which were now covered with Ice, they came to the Town of *Jenischiski*; from that Town, passing through several Villages of *Russians* and *Tartars* newly converted, they reached *Tomski*, and passing over the great Deserts of *Bambinski*, they reached *Tara*, and from thence mounting the River *Irtisch*, they came to *Tobolski*, *January* 10, 1730. In this City they remained till the 25th of the same Month, and then set out by the Road before described, for *Petersbourg*, where the Captain safely arrived on the first of *March* following.

This Detail which we have given our Reader, is not barely copied from the Accounts that have been published in *German*, *Low-Dutch*, *French*, and other Languages, but hath been compared with a Copy of Captain *Behring's* original Journal, which has been of very great Service; we have also examined his Map very carefully, and considered, at the same Time, how far it was consistent with prior and with posterior Discoveries, of which more shall be said hereafter. At present I will crave Leave to add here, from a Manuscript Copy of the Journal, a very curious Table of the Places mentioned therein, with their Latitudes and Longitudes from *Tobolski*, the rather, because it has never been published, at least so far as I know, and because it will serve as Kind of Test, by which all subsequent Accounts may be tried with respect to their Veracity; for I make no Doubt at all, that this Table was framed with the utmost Care and Circumspection, because I find it was transmitted by the Author to the *Russian* Court in 1728, immediately after his Return from his Voyage for Discovery, and while he remained at the Lower Fortrefs of *Kamschatska*.

It is also necessary to take Notice of the Meaning of the *Russian* Words made use of in this Table, which, as they are but very few, cannot burthen the Reader's Memory. *Krepost* signifies a Fortrefs, *Ostrog* a little Fort, *Slaboda* a Borough or Place bigger than a Village, *Monasteria*, a Convent or Monastery. It is true, we might have avoided these, and have given the Places in plain *English*, but as the Design of this whole Section is to facilitate the understanding such Accounts as may be hereafter received of the *Russian* Discoveries, I thought proper to preserve the Names for that Reason, as well as because we find them frequently occur in the Maps. These Points being premised, the following Tables will be very plain and perspicuous.

Names of the Remarkable Places.

	Latitude.	Longitude from Tobolsky.
The Town of <i>Tobolski</i> , which is the Capital of <i>Siberia</i> ,	58 5	—
<i>Samarofsky Jam</i> , upon the River <i>Obb</i> ,	60 17	— 30
The Town of <i>Surgut</i> upon the River <i>Obb</i> ,	60 51	5 18
The Town of <i>Narim</i> upon the same River,	58 48	14 35
<i>Keetsky Ostrog</i> ,	58 19	16 60
<i>Lofnojariski Monastir</i> ,	58 17	22 —
<i>Makowski Ostrog</i> ,	58 3	23 13
The Town of <i>Tenriski</i> upon the River <i>Tenisci</i> ,	58 20	25 12
<i>Caschin Monastir</i> ,	58 37	32 —
The Town of <i>Timakin</i> , near the Mouth of the River <i>Ilim</i> ,	57 25	35 16
The Town of <i>Ilimski</i> ,	56 40	36 44
<i>Utkutsky Ostrog</i> ,	56 40	38 28
<i>Kirinski Ostrog</i> ,	57 50	41 1
The Town of <i>Jakutski</i> upon the River <i>Lena</i> ,	62 8	57 53
<i>Ochotski Ostrog</i> , at the Mouth of the River <i>Ochota</i> ,	59 13	76 7
The Mouth of the <i>Bolschoyan Retfchka</i> in <i>Kamschatska</i> ,	52 48	89 51
<i>Wereknoi Kamschatska Ostrog</i> ,	54 48	91 —
<i>Nischuvvi Kamschatska Ostrog</i> ,	56 11	98 30
The Mouth of the River of the Apostle <i>Thadeus</i> and the Cape,	56 3	96 10
The Elbow of the River <i>Swetoi Krest</i> ,	62 20	111 32
Eastern Point,	65 35	115 15
The Elbow of the <i>Swetoi Preobrazensky</i> ,	65 1	120 30
The Eastern Point of <i>Suchotski</i> ,	64 25	122 55
The Island of <i>St. Lawrence</i> ,	64 —	122 55
The Island of <i>St. Demetrius</i> ,	66 —	125 42
The Place from which the Captain returned,	67 18	126 7
The Southern Point of <i>Kamschatska</i> or <i>Oskoi</i> ,	51 10	89 51

It may perhaps contribute to make this Matter somewhat easier to the Reader, if we observe that *Tobolski* is 86 Degrees of Longitude East from the Island of *Fero*, and about 68 Degrees East from *London*; so that to find the exact Longitude of any of the Places mentioned in the Table, there is nothing more necessary than to add the respective Numbers before-mentioned to those which he has set down. As for Instance, the Place from whence he returned, is, in his Table, 126 Degrees 7 Minutes East from *Tobolski*; if therefore we add to this 86 Degrees, we find the Longitude from *Fero*, which is 212 Degrees 7 Minutes, and in the same Manner by adding 68 Degrees, we find that Place to be 194 Degrees East from the Meridian of *London*.

It will not appear to one who barely peruses this Account, without weighing and considering it attentively, that there is any thing in it very extraordinary; and yet to speak impartially, there is hardly any thing more so in the Compass of this Collection; for, in the first place, this Gentleman was charged with a most arduous Employment, that of conducting a Number of Men over the greatest Tract of Land that is perhaps in the World; in doing which he was to undergo the greatest Hardships, as he actually did, and arriving at his Journey's End, found himself in one of the most inhospitable Spots upon the Globe, there he was to build a stout Vessel, where hardly any but himself could have found Materials, and victual it in a Country where there was not a Dust of Meal, or any other Animal but Dogs; and in this Vessel, when finished, he was to make Discoveries on an unknown Coast through an unknown Sea. It is very evident that he did all this with the utmost Spirit and Vigour, and without the least Loss of Time, and yet it was somewhat more than five Years before he reached *Petersbourg* again; which, exclusive of the Difficulties he met with in Travelling, will appear less strange, if we reflect, that going and coming his Journey was very little short of eighteen thousand Miles.

He has likewise given us a Table of the Nations inhabiting the Countries through which he travelled, that is very curious, and which is a Circumstance of still greater Value, seems to be very accurate and authentick, and therefore I shall give it the Reader in the best Manner I am able, and as a Thing that may be of Use towards explaining any future Discoveries that may be made on this Side, the Credibility of which, as I hinted before, ought to be regulated by their Consistency with his Accounts.

Table of the several Nations inhabiting the Countries between Tobolski and Kamtschatska.

Ostjaks, living in Villages from *Tobolski* to the *Slaboda Domianska*.

Different Tribes of the same People on the Banks of the River *Irtisch*.

Different Tribes of the same People in the six Villages on the Banks of the River *Oby*, from *Surgut* to *Narim*.

Different Tribes of this Nation intermixed with others as far as *Jenischiski*.

Tunguses in one large Town, and twenty little Villages as far as the River *Tongus*.

The same Nation, amongst whom there are two Fortresses, one Monastery, and thirty Villages of several Sizes to the Mouth of the River *Ilim*.

The same Nation, inhabiting one large Town and twenty-seven Villages, as far as the Town of *Ilimski*.

The same Nation, inhabiting forty-three Towns and Villages, of different Sizes, as far as *Kermya*.

The same Nation and the *Jakuts*, amongst whom there are two large Towns, two Fortresses, two Convents, and thirty Villages of different Sizes, along the River *Lena* to *Jakutski*.

Tunguses, *Jakuts*, and *Lamutski*, from thence to the *Ochotski Ostrog*.

Kamshales and *Kutiles*, amongst whom are two Fortresses on the River *Kamtschatska*.

From the Mouth of the River *Kamtschatska*, steering North-east, the Coasts are inhabited by the several Nations of *Kamtschadales*, *Kurackes*, and *Tzuktchys*.

The North-east Cape is distant from *Tobolski* ten thousand five hundred and twenty-nine Wersts, twelve thousand nine hundred and seventy eight from *Moscow*, and thirteen thousand one hundred and eighty-eight from *Petersbourg*.

We see from hence the true State of these vast Countries, and may from hence form to ourselves, at least, tolerable Ideas, as well of what they produce at present to the *Russian* Government, as of the Improvements of which they are capable, in Case *Kamtschatska* should be more fully settled, and the Discoveries made from thence render'd some way or other useful in respect to Trade. It is very possible, that within a few Years we may have very extensive Histories, or at least very copious Geographical Descriptions of all these Countries made publick with the Stamp of Authority, and then by comparing them with these Tables, we may be very well able to decide whether they have also the Sanction of Truth, since at the Time Captain *Bebring* wrote his Journal, the Scheme of concealing Discoveries was not adopted.

8. We need not at all wonder, that after the Return of this Gentleman, and the Relation of his Discoveries was made publick, it occasioned much Speculation and a great Variety of Enquiries at *Petersbourg*, in Consequence of which, it is said, that they obtained certain and distinct Accounts of coasting Voyages made by Sea from the Mouth of the River *Lena* by Cape *Suetonios*, or, as I find it laid down in Captain *Bebring's* Map, Cape *Shelleginski*, which he places in the Latitude of 72 Degrees 30 Minutes, and in the Longitude of 112 Degrees from *Tobolski*, and so down to the Coasts which he had visited. Upon some Memoirs of this Kind, I mean of these Voyages from the Mouth of the River *Lena*, the *Sieur Bellin* published at *Paris* in 1735, a Chart of these Discoveries, which the Reader may find in Father *Charlevoix's* History of *Japan*; but upon a strict Examination, I think a proper Judge of these Matters will agree, that there cannot be any thing more romantick or incorrect. Instead of that vast Continent that Captain *Bebring* lays down to the North-east of *Kamtschatska*, we have this Peninsula enlarged vastly beyond its due Bounds, and hardly any thing of that Continent appears; and whereas Captain *Bebring* positively lays down the most Southern Point of that Peninsula round which himself sailed, in the Latitude of 51°. 10 Minutes, in this Map it is brought as low as 41, and by that Means appears to be the same Country heretofore called the Continent of *Jesso*, divided only by a narrow Channel from *Nippon*, the largest of the *Japan* Islands. As this Peninsula is produced ten Degrees farther South than it ought to be, so the Continent is removed 12 or 14 Degrees Westward farther than it ought; and, in short, the whole of this extraordinary Piece, notwithstanding the Accuracy that is pretended to, is equally absurd and chimerical. It must however be allowed, that it was not possible to discover this without the Assistance of Captain *Bebring's* Voyage, and of some later Discoveries; and therefore the Author of that Chart is the more excusable, and all the Conclusion I mean to draw from what I have advanced, is, that we ought not to be too hasty in giving Credit to such kind of Performances, for there is a very wide Difference between Charts drawn from Conjectures, and those laid down by Men like Captain *Bebring*, from their own Experience. But if the Reader will be directed to a better View of these Countries, I would recommend him to the Northern Hemisphere published by Mr. *William DeSile*, in which these Countries are very accurately laid down.

Before I speak of the second Expedition of Captain *Bebring*, it may not be amiss to observe, that if there be any Truth in the Accounts of Vessels sailing from the Mouth of the River *Lena* in the Manner before-mentioned, it amounts to a direct Demonstration, that the

the Dutch Ships employed to discover a North-east Passage in 1670, advanced far enough to have made that Passage; nor is it possible to admit one Fact and deny the other, which may deserve Consideration, since I think at this Day the North-east Passage seems, without any just Reason, to be treated as a Thing known to be impracticable; and as from the Discoveries made by Land, we may in a great Measure perceive, that this is a Judgment made at Random; so there is the highest Probability, that if Discoveries by Land were properly pushed, the very same Thing would appear with respect to the North-west Passage. The sudden Alterations of Government that have happen'd in *Russia*, may be look'd upon as the principal Cause why these important Discoveries have not been prosecuted to the utmost; and yet it must be allowed that they have not been altogether neglected, as appears from the sending Captain *Bebring* back into those Parts better supported than before.

It is not in my Power to say at what Time this was done, or to give any distinct Account, either of his Instructions or his Expedition. All we know of the Matter amounts to no more than this, That in the Month of *January* 1740, an Account arrived at *Petersbourg* from Captain *Spanberg*, who served as a Lieutenant under *Bebring* in his former Attempt, and who commanded a Vessel now, importing, that at the Close of the Summer of 1739, he had discovered, after sailing fifteen Days, thirty-four Islands, some large, and others small; that upon his approaching them, the Inhabitants sent six of their Vessels to observe them; that however he came to an Anchor, and they suffered him to land without any Resistance; that in other Respects he met with a tolerable Reception; but as he knew nothing of their Language, so he was able to learn very little from them by Signs, only they shewed him considerable Quantities as well of Gold as of Copper Coin; and some Pieces of the latter he obtained from them, and sent by the Courier who brought his Dispatches to *Petersbourg*.

Mr. *Swartz*, who was then and is now Minister from their High Mightinesses the States General at that Court, gave at that time the following Account, in a Letter dated from *Petersbourg*, Jan. 13, 1740, O. S. "On *Saturday* last arrived here an Express from *Kamschatska*, with the News, that Captain *Spanberg* having failed from thence with four Ships, after being sixteen Days at Sea, discovered thirty-four Islands of different Sizes, the Inhabitants of which sent six Gallies to reconnoitre him, notwithstanding which they suffered him to land, and received him with great Affability; but as he understood not their Language, he could not converse with them; however, they shewed him a considerable Quantity of Gold Coin. This was all that Officer would communicate to Commodore *Bebring*, desiring to come hither himself, in order to discover to her Imperial Majesty Things of the last Importance, which may be highly advantageous to her Interests, and which he was resolved to discover to no other Person. Upon which the Commodore suffered him to return, and he is expected here in the Spring. It is believed that these are Islands belonging to *Japan*. The Courier has brought hither with him some of the Money of this Country, of which I have seen a Piece; it is of red Copper, round, and about the Size of a *Holland* Doit, but a little thicker, surrounded by a small flat Border, and in the Middle there is a little square Hole, on each Side of which, upon the Face of the Coin, there is imprinted a Chinese or *Japan* Character; but on the Reverse it is quite smooth.

Captain *Spanberg* at the same time wrote to one of his Friends, and the Reader will, no doubt, be glad to see an Extract of that Letter, which however is without a Date, and conceived in the following Terms. "I employed all the Month of *August* in the last Year in cruizing upon the Sea of *Great Tartary*. Amongst the Islands I discovered, there were many that were only full of wild Beasts. I anchored however near one that seemed more considerable than the rest.

"There we thought fit to go on Shore, and soon after met with Inhabitants, who from their Figure and Dress appeared to be Savages. As soon as they saw us they made their Escape into a Wood. We did all that was in our Power to surprize some of them, but found it impossible to succeed in that Design. When they saw themselves pursued, they fled into the thickest Part of the Wood and set up the most dreadful Cries. The Inhabitants of some of the neighbouring Islands were more communicative, as I have shewn in former Relations. I found the Country every where extremely fertile, and embarked on board my Ship large Quantities of the Fruits and other Productions of those Islands. The Journal which I shall publish of my Discovery, will contain Matters very satisfactory to the Curious, at the same time that it will render it evident, that the Commerce of the *Russians* with the Inhabitants of *China* and *Japan*, will receive great Benefit thereby."

It is probable, that after this Captain returned to *Kamschatska*, Commodore *Bebring* continued his Voyage, of which all that we know is this, that he sailed Southward to the Isles of *Japan*, and from thence Eastward about eighty Leagues. At that Distance from *Japan* he discovered Land, which he coasted Northwest, still approaching towards the North-east Cape, without going ashore until he came to the Entrance of a great River, where sending his Boats and Men ashore, they never returned, being either lost, killed, or detained by the Natives, which made his Discovery incomplete, his Ship being stranded; and he afterwards died in an uninhabited Island. Without doubt, the *Russians* are endeavouring to improve and extend these Discoveries, and we very well know that Members of the Academy, Persons of great Knowledge, and animated by the Desire of Glory, and supported by whatever Assistance they can desire from the Government, have been employed in this far distant Country; and, as I have before observed, Descriptions of it thus obtained have been actually composed, and may very probably be published at *Petersbourg* before this Time.

There is no Question that this is a very right, as well as a very regular Method; for without knowing exactly the Situation and Bounds, the Climate and Soil, the Mountains and Rivers, in any Country, it is simply impossible that any just Notion should be formed of the Means by which it may be render'd useful; but that notwithstanding all this Care and Caution, and notwithstanding all the Lights they may have received from thence, and from any Accounts they may have had of subsequent Attempts, they are not yet very far advanced in respect to real Discoveries, may be easily shewn from the Notions that they still entertain about them (supposing them in earnest in what they say) which may be clearly demonstrated to be altogether vain and chimerical; even from the very Lights that they themselves have afforded, and from the Facts which they insist upon as Proofs in Support of those Notions.

We know from a Multitude of Instances, that there is no Weakness to which the human Mind is more subject, than to run into new Errors by running away from the old, notwithstanding that both Reason and Experience teach us, that Truth seldom lies in the Extremes, but generally speaking, in the Middle. When first the *Russians* began to enquire carefully into the Extent of that Part of their Empire which lies in *Asia*, they found it went much farther to the East than they had ever imagined; and the further and the more carefully they searched, the greater Certainty they obtained of this Fact, and were still carried farther and farther. In order to understand this clearly, it may not be amiss to observe, that according to the best Maps of *Russia* made thirty Years ago, the Town of *Jakutski* upon the River *Lena* was placed in the Latitude of 64 Degrees 50 Minutes, and in the Longitude of 120 Degrees, the first Meridian being placed in *Fero*; but according to the latest Observations, this Place actually stands in the Latitude of 62 Degrees 8 Minutes, and in the Longitude of 143 Degrees, 53 Minutes. It was at that Time believed, that Cape *Noss*, or the Icy Cape, laid down in

the Map by the Name of Cape *Suitenos*, extended very far to the North-east, and, as has been before hinted, might possibly be joined to *America*. In Process of Time however, this was discovered to be a Promontory only, and was placed in the Latitude of 66 Degrees, and in the Longitude of 160; but in the Chart of Captain *Bebring's* Voyages and Travels, where it is called Cape *Scheleginski*, it is laid down in the Latitude of 72 Degrees 38 Minutes, and in the Longitude of 198 Degrees 30 Minutes; so that it appears to be almost six Degrees farther North, and 37 Degrees and a half farther East than it was imagined.

But after all, this is not the farthest Stretch of the *Asian* Continent; for the North-east Cape, discovered by Captain *Bebring*, runs almost 14 Degrees farther, lying, as he found by a very exact Observation of a Lunar Eclipse, in the Latitude of 67 Degrees 18 Minutes, and in the Longitude of 212 Degrees 7 Minutes. This altered the Notions of the Mathematicians at *Petersbourg* extremely, since it appeared from hence plainly and certainly, that their Empire extended 48 Degrees farther East than it was held to do thirty Years ago, that is, upwards of 384 Leagues, and more than a thousand Miles, which greatly strengthened the Opinion which they had before entertained, that the Extremity of their North-east Frontier was at no vast Distance from the Continent of *North America*. They were indeed thus far right, that from these Discoveries it was put out of Dispute, that the North-east Cape was much nearer to the Coast of *California* than had been formerly imagined; but still the Distance was very great, and not the least probable Ground to believe that there was only a Passage of inconsiderable Breadth between them. Yet as this was the original Suggestion of the Czar *Peter* the Great, who very probably had no other Reason for giving it out, than to excite the Desire of his Subjects to co-operate with his Views of discovering on this Side, by making them imagine they might by this Means become Masters both of the *East Indies* and of the *West*; they remained fixed in their Belief of it, seeing, as they thought, such strong Reason brought from these Discoveries to support it. They flattered themselves, perhaps, that as such an enormous Mistake had been made in settling the Geography of their own Country, it was not impossible but that a like Mistake might be made as to the North-west Continent of *America*; and this indeed might have lessened the Distance very considerably. Yet if they had reflected, that the nearest Coast of *California* had been visited and examined by Strangers, whereas their own North-east Coast was totally unknown to every other Nation but themselves, and but a little while before unknown to them too, they would have seen just Reason to reject such a Supposition.

But so natural it is to see clearly what makes for our own Hypothesis, and to see whatever makes against it, either doubtfully, or not at all, that we need not be much surprized at this Turn of Mind in the *Russian Virtuosi*. That this is really so, and that from hence there is a great Probability of their concealing most Part of their Discoveries for the future, will sufficiently appear to any attentive Reader, from the following very curious Extract printed in the *Philosophical Transactions*, N^o 482. Page 421. being Part of a Letter from Mr. *Leonard Euler*, Mathematical Professor, and Member of the Imperial Society at *Petersbourg*, to the Reverend Mr. *Charles Wetstein*, Chaplain and Secretary to his Royal Highness the Prince of *Wales*, dated from *Berlin*, Dec. 10, 1746, which I shall take the Liberty of entirely transcribing.

"As you are desirous to hear something more particular concerning the *Russian* Expeditions to the North, and North-east of *Asia*, I will here give you an Account of all that has come to my Knowledge relating to the same. But as I should, on the one Hand, be very glad that these Observations might give any Light concerning the Passage now sought through *Hudson's Bay*; I should, on the other, be very sorry, if Mr. *Bebring's* Opinion, who believed that the new Land he had discovered was joined to *California*,

"should rather lead us to doubt of the Success of that glorious Undertaking. I wish however, that a happy Experiment may soon inform us certainly of the Truth. In the mean Time, you will not be sorry to be acquainted with the Reasons upon which Mr. *Bebring's* Suspicions were founded, notwithstanding the Objections you have been pleased to make, and to communicate to me upon that Head.

"First, This new Land which he fell in with at the Distance of 50 German Miles from *Kamschatska* towards the East, was followed by him and coasted for a great Way, though I cannot say how far: From whence alone it will appear, that an Abatement must be made in the Distance of 30 Degrees, or thereabouts, which you suppose to be between the last known Headland of *California* towards the West, and the farthest Extremity of this new discovered Land towards the East. Secondly, Captain *Bebring* having had the Opportunity of observing an Eclipse of the Moon at *Kamschatska*, concluded from the same, that that Place lay much farther off to the East than is expressed in any Map; and that to represent it truly, it ought to be transferred into the other Hemisphere, as its Longitude is more than 180 Degrees East from the Isle of *Fero*, for this Reason, Captain *Bebring's* new Land will be considerably approached to the last known Part of *California*, and will not indeed appear to be many Degrees from it.

"What we have therefore still to hope, is only that in this unknown District there may be found some Streight, by which the *Pacifick Sea* may freely communicate with *Hudson's Bay*; but if it shall appear that there is no such Passage, it must then be concluded, that whatever further Progress may happen to be made through *Hudson's Bay*, the Opening at last must only be into the Frozen Sea, from whence there could be no passing into the *Pacifick Ocean*, but by the Neighbourhood of *Kamschatska*; and this Way would, without doubt, be too long and too dangerous to be mastered in the Course of one Summer.

"I very much doubt, whether the *Russians* will ever publish the Particulars of their Discoveries, either such as have been made from *Kamschatska* towards *America*, or such as have been made upon the Northern Coasts of *Asia*. And indeed it is but very much in general that I know the Success of this last Expedition. What I do, was communicated to me by Order of the Court from the College of Admiralty, for me to make use of it in the Geography of *Russia*, with which I was at that Time charged.

"They passed along in small Vessels, coasting between *Nova Zembla* and the Continent at divers times in the Middle of Summer, when those Waters are open. The first Expedition was from the River *Oby*, and at the Approach of Winter the Vessels shelter'd themselves by going up the *Jeniska*, from whence the next Summer they returned to Sea in order to advance further Eastward, which they did to the Mouth of the *Lena*, into which they again retired for the Winter Season.

"The third Expedition was from this River to the farthest North-east Cape of *Asia*. But here they lost several of their Boats, and a great Part of their Crew, so as to be disabled from proceeding, and from making the whole Tour so as to arrive at *Kamschatska*.

"It was however thought, that a further Attempt was then unnecessary, because Captain *Bebring* had already gone round that Cape, sailing Northward from *Kamschatska*.

"The *Russians* have not attempted the Passage round *Nova Zembla*, but as they have passed between that Land and the Coast of *Asia*, and as the *Dutch* did formerly discover the Northern Coasts of *Nova Zembla*, we may be now well assured that that Country is really an Island."

There are several Points in this Letter that are very well worth our Observation. In the first Place, it is very evident, that from Captain *Bebring's* Discoveries, the *Russians* look upon it as a Thing certain, that a short Passage may be opened from their Dominions to *North America*;

America; and that the Sense they have of the great Advantages that may be derived from thence, is the Reason that induces them to think of concealing what may be discovered for the future, esteeming such Lights as they may receive thereby as Secrets of State, to which no Strangers have a Right to be admitted. In the next Place we may observe, though the Professor speaks very modestly, that he looks upon Captain *Behring's* System as absolutely destructive of our Scheme for discovering a North-west Passage through *Hudson's Bay*; which indeed is so far well founded, as that granting his Premises, and that the new discover'd Country of *Behring's* lies contiguous to *California*, cannot be denied. Lastly, It may be observed, that though he speaks very cautiously, and therefore indeterminately of the Position of the North-east Cape, which he says ought to be carried into the other Hemisphere, as indeed it ought, yet he plainly enough insinuates, that if this be duly considered, it will overturn the Arguments formerly offered in Favour of the North-west Passage. So that on the whole, if we attend to the Spirit rather than the Letter of this short Discourse, we must plainly discern, that the *Russians* look upon themselves as in full Possession of that great Secret, so long and so ineffectually sought by the Northern Maritime Powers, of a short Passage to the *East Indies* and the *South-Seas*, and that too exclusively of other Nations, from a Persuasion, that by discovering this Passage, they have discovered also that the North-west Passage, by which only we could interfere with them, is impracticable.

10. But in the next Number of the *Philosophical Transactions*, viz. 483. Page 471. there is a very curious Letter from the ingenious *Arthur Dobbs*, Esq; to the before-mentioned Mr. *Wetstein*, in which all this Reasoning is very fully and fairly refuted; and it is chiefly from the Arguments advanced therein, that I shall be enabled to make good my Promise to the Reader, by shewing, that in the first Place, there is no Reason to apprehend that Captain *Behring* has made any Discovery at all, at least with regard to the Point we are examining; by which I mean, that he has given no new Light whatever as to a new Continent, which may be reasonably presumed contiguous to *California*. Secondly, That the Argument drawn from the advanced Situation of the North-east Point of *Asia*, is absolutely inconclusive, and does not at all prove so much as the Probability of there being any such Continent as the *Russians* seem to be satisfied they have found. Thirdly and Lastly, That taking every Thing they have advanced, as through this whole Section, I have taken them for indisputable Truths, yet the North-west Passage by *Hudson's Bay* remains not only as probable as ever, but is in reality rendered more probable than ever from these very Discoveries. All this I hope to make out to the entire Satisfaction of the ingenious, inquisitive, and impartial Reader, so as to leave not the least Scruple upon his Mind in reference to this *Russian* System.

As to the first Point; as there are no Longitudes or Latitudes mentioned in reference to Captain *Behring's* second Voyage; all we can possibly know of it amounts to this, that he sailed South from *Kamschatska*, as low, or perhaps lower than 50 Degrees, and there found Land 80 Leagues North-east from *Japan*, for otherwise by coasting it North-west, as it is expressly said he did, he could not possibly have approached the North-east Cape; to do which, had it lain due East from *Japan*, he must have sailed North-east. Now there is the highest Probability, not to say an absolute Certainty, that this is the very same Land that was discovered by *Gama* so long ago, and is likewise that very Land to which *Martin Heritizoon* of *Uriex* gave the Name of the *Company's Land* in the Year 1643, making the West-side of the Straits of *Uriex*, which lie seven or eight hundred Leagues West of any known Land in *America*, and above a thousand Leagues West of any Land in the Latitude of *Japan*; and consequently, whether Continent or Island, there is Room enough for a very large Passage between this Country and *America*; neither did Captain *Behring* coast it so far as to come at any Kind of Certainty whether it was Conti-

nent or Island; all therefore that can possibly be collected from this Account, is no more than a Confirmation of the two former Discoveries, and perhaps of a third; for, as Dr. *Cromwell Mortimer* has very judiciously observed, the *Japoneses*, in their Maps, have laid down two Islands, each as large as *Ireland* in this very Tract, as appears from the Map Dr. *Kempfer* brought from thence in 1666, and which is now in Sir *Hans Sloan's Museum*.

Taking therefore the whole of this together, what we learn from Captain *Behring's* second unfortunate Voyage, is so far from shewing that he discovered a Continent contiguous to *America*, or that probably might be so, that, on the contrary, he only touched upon a Country which several *Europeans* had visited before, and which there are very strong Reasons to believe is not a Continent, but an Island. Neither is this said with any View of disparaging the Industry or Abilities of that adventurous, brave, and indefatigable Person, whose Memory ought always to be revered, and to which I have raised the best Monument I was able; but in Things of this Nature, Truth is to be regarded before any other Consideration; and there can be nothing plainer than this Truth, that his Discovery does not warrant any such Supposition, as that the Country he touched was a great Continent making Part of *North America*; and if in any Accounts he left behind him, he furnished any thing like this, he must have been mistaken.

As to the second Point, the Argument drawn from the Proximity of the North-east Cape, and the most western discovered Coast of *America*, is easily discussed; for though, as has been already observed, the Discoveries and accurate Observations made by Captain *Behring* in his first Voyage, have really altered the Face of Affairs extremely, and shewn us Things in quite a new Light, by proving that the North-east Part of *Asia* is a Country of much larger Extent, than, till it was thus examined, was ever suspected, or would ever have been supposed true, if it had been ever so strongly asserted without Proof; yet for all this, the North-east Continent of *Asia* has some Bounds, and Captain *Behring* has very accurately fixed those Bounds, by assuring us, that the most North-east Cape of the *Asiatick* Coast is in the Latitude of 194 Degrees East from the Meridian of *London*. There might indeed have been some Dispute about this, as Captain *Behring* did not examine the Coast any higher than to the Latitude of 67. 18 Minutes, if the Account which Professor *Euler* has published had not plainly proved him in the right, by assuring us that his Observation was confirmed by those who sailed round Cape *Suitonos* to the North-east Cape of Captain *Behring*, by which it is rendered perfectly certain, that he has fixed the Longitude of the Extremity of the *Asiatick* Continent.

If therefore we add to its Longitude from *London* the Longitude of *Churchill River* in *Hudson's Bay*, which the ingenious Captain *Christopher Middleton*, by a very accurate Observation fixed at 95 Degrees West; I say, if we add these two Longitudes together, they will amount to 289 Degrees; and if we subtract this Sum from 360, there will remain 71 Degrees of Longitude, which is the Distance between the North-east Cape and that Part of *Hudson's Bay*. In order to reduce this into Leagues, we may compute a Degree of Longitude in the Parallel of 65 Degrees at the Rate of eight of those Leagues, of which 20 make a Degree of Latitude; and from thence it will appear, that there are 568 such Leagues, or upwards of 1700 of our Miles between the Extremity of the North-east Continent of *Asia* and *Hudson's Bay*; and this surely is Space sufficient for many larger Islands, and a considerable Passage between the nearest Coast of *America*, and the most Eastern of those Islands, supposing all these Lands to lie in that Parallel, which however is a Supposition we are not obliged to make, there being not the least Shadow of Proof of any Countries or Islands hitherto discovered so far to the North.

But farther still from the settled Longitude of the North Cape of *Japan* in 40 Degrees Latitude, which is pretty exactly known from the Observations made by the Jesuits at *Peking*, and is about 150 Degrees East from *London*, and from the best computed Longitude of *California* in 40 Degrees North Latitude, it lies in 130 Degrees Longitude West from *London*, making together 280 Degrees, leaves 80 Degrees for the Distance of *California* from *Japan*, allowing 17 Leagues to a Degree of Longitude, in 40 Degrees North Latitude, the Distance would be about 1360 Leagues: By the same Calculation, *California* must be at least 7 or 800 such Leagues from the North-east Cape of *Asia*; so that in so great a Space there may be very great Countries or Islands, without supposing the new discover'd Country continuous to *California*, and might well allow of an open Channel or Sea from 50 to 100 Leagues wide between the discovered Coast and *California*.

The two Insinuations, of which we have undertaken the Disproof, have a visible Connection with each other; and if either of them had been well founded, it might have been urged as an Evidence in Support of the other. But examining them separately, we have shewn, that the Country discovered by Captain *Bebring* in his second Expedition, whether Continent or Island, does not render it at all probable, that the Land of which it makes Part, is continued to the North-west of *America*, and joined there either to *California*, or to the Continent lying farther to the North-west of that Country, now known not to be an Island, but Part of the main Land. What we have urged upon this Subject, is farther supported and rendered more credible by the Disproof of the second Suggestion, viz. That the Distance is but very small between the North-east Cape of *Asia*, and the North-west Part of *America*; for with respect to this we have proved, and that from Captain *Bebring's* own Observations the direct contrary, and have not only made it evident that the Space between them is very great, but have likewise shewn what that Space is; so that the Reader can decide for himself as to the Probability of this Position, that there is only a Passage by Sea between *Asia* and *America*, near the Confines of the *Russian* Dominions, and that the rest of the Space is taken up by the North-west Continent of *America*, Part of which was coasted by Captain *Bebring* in his second Voyage.

But we have undertaken to do still more than this, and to make it appear that the *Russian* Discoveries are so far from yielding any Colour of Proof as to the Probability of that Supposition that has been advanced from them, that in reality they rather prove the contrary, and add Weight to the opposite Opinion, which is a Point of very great Consequence, because it removes that Bar which has been thrown in the Way of our discovering a North-west Passage, which is a Thing of the highest Importance to us as a trading Nation. Of which, if we stood in need of Arguments to prove it, this alone is no inconsiderable Reason; that almost all foreign Nations are inclined to represent it as a Chimera, which is a Notion dictated to them by their Interests, and therefore ought to contribute to make us sensible of our own. When I say this, I have not the least Intention to represent such an Insinuation as the Sentiment of the Professor *Euler*, who speaks as an indifferent Person, and in the Language of a Gentleman, and a Man of Learning; for I am only labouring to refute those after whom he speaks, whose Objections he has heard and repeats, and to which he shews himself very willing to hear what can be said in Answer. To come to the last Point, and to shew that these Discoveries of the *Russians*, instead of justifying their Notions of a North-east Passage only, of which they look upon themselves in Possession, rather favour the opposite Sentiment, and afford probable Grounds to believe, that the Space between the North-east Cape of *Asia* and the opposite Continent of *America*, is filled up by broken Lands, and consequently that there is also a North-west Passage, I shall make use of several different Methods.

In the first Place then, I must observe, that the concluding Paragraph of the Professor's Letter evidently proves that he is of the same Opinion with me, in respect to a North-east Passage, that is to say, that from the Expedition of the *Dutch* Ships in 1670, the coasting Voyages of the *Russians* from the Mouths of the Rivers *Obi*, *Jenisca*, and *Lena*, and from the late Discoveries made by Captain *Bebring* in his first Voyage, there is an incontestable Proof of such a Passage. Now from hence I make two Inferences; the first is, that if the North-east Passage, so long ago given up, and that too, if Captain *Wood's* Arguments had signified any thing upon what might be called direct Evidence, as chimerical and impracticable, be at this Day known to be real and practicable, since every League of it has been sailed over, I should be glad to know, why even without the least Degree of Evidence, it is to be thought reasonable to conclude in the like hasty Manner, against a Possibility of finding a North-west Passage? It is an usual and a very just Method of Argument, that after detecting one great Mistake, one ought from thence to be doubly cautious of committing another of the same Kind; but it is a new and strange Reasoning to conclude, from the Detection of a Mistake, into which Men were drawn by some kind of Evidence, that they may, without Danger of mistaking, conclude the same Thing with Regard to another like Point, and this without any Evidence at all. My second Inference is, that as the same kind of Reasoning is applied, I mean with respect to Cosmographical Topicks, to the North-west as to the North-east Passage, and it is now found by Experience, that those Arguments were well and rightly applied with respect to the Oeconomy of Providence in reference to one Passage; this should therefore be taken, not as Evidence indeed, but as a very probable Indication that the same Arguments have not been wrong applied in regard to the other Passage. It is indeed true, that Nature effects the same End, when aimed at under different Circumstances, by several Means; and this shews at once the Wisdom and the Power of Providence, but in like Cases she generally takes the same Means; and therefore this being considered, our having a Certainty of a North-east Passage, which Certainty is derived from these Discoveries, becomes a strong analogical Argument for there being a North-west Passage.

I shall now beg Leave to offer quite another Method of Argument, and that shall be taken from the Nature of the Whale-fishing, or to speak with greater Propriety, from the Nature of the Whale. Those Fish resort at a certain Season of the Year from warmer to colder Climates, and the Reader is very well acquainted that it was urged as a strong Reason why there should be a North-east Passage, that Whales were thrown upon the Coast of *Corea* with *Dutch* Harpoons in them. We now see that this was a just and a right Argument; for Captain *Bebring* tells us, that he met with Whales cast ashore on the Coast of *Kamschatska*, and I suppose no body can doubt that these Whales went thro' the North-east Passage, now that such a Passage there is known to be. But Whales are found, even in the latter End of the Summer, in the *Welcome* in *Hudson's* Bay. Instinct being an unerring Principle, I should be glad to hear where these Whales must be going at that Time of the Year, if not into the *South-Seas*, and if into the *South-Seas*, whether there must not be a Passage between the North-west Continent of *America*, and the Countries, whether Continents or Islands, between that and the North-east Cape of *Asia*. For to suppose that these Whales should go round such a vast Continent as that must be, if the new-discovered Land was continuous to *America*, and were to enter by that Passage in which Captain *Bebring* was, is a palpable Absurdity, because in the advanced Season of the Year, and in so high a Latitude, those Seas would be frozen. This Argument I must insist upon to be in a Manner decisive; we know there are Whales upon the Coasts of *Spitzbergen* and *Nova Zembla*; we now know that these Whales go through the North-east Passage, and so descend into the warm Seas of *Japan*; we know that

Whales

Whales are found in the North Part of *Hudson's Bay*, and not in the South, why then should we not think, or rather, how can we avoid thinking that they also find a Passage round into the warmer Seas?

Another strong Motive there is to believe that this Country, upon which Captain *Bebring* touched in his second Expedition, must be an Island, and not any such Continent as he is said to have imagined, is this, that being so near *Japan* as himself places it, it is impossible the Subjects of that Empire should not have been long ago acquainted with it, and with its Inhabitants; yet we are well enough versed in the *Japonese* History, to be thoroughly satisfied they know of no such Continent; but on the contrary, have laid down two pretty large Islands in this Tract, one of which, in all Probability, Captain *Bebring* coasted. If all the Space between the North-east Continent of *Asia*, and the opposite Continent of *America*, is partly Sea, and partly Islands of several Sizes, we may very easily account for their remaining so long unknown to the *Spaniards* in *America*, and in the *East Indies*, as well as most of them are to the *Japonese*; whereas if the Continent of *America* extended in such a Manner as the *Russians* seem to imagine it does, it must appear almost an Impossibility that it should not have been long ago discovered, considering how often, in a long Series of Years, the annual Ships from *Manila* to *Aquapulco*, must have been driven out of their ordinary Route (which it must be confessed is not calculated for Discoveries) either outward or homeward bound. Yet nothing of this Kind has been ever heard of; but all the flying Stories we have of Discoveries made in these Transits, relate only to Islands, and those too none of the largest, as appears from the Difficulty of meeting with them again.

One might add to all this, that the Consideration of the vast and enormous Extent of this new Continent, which upon this Supposition would contain 140 Degrees of Longitude, renders it highly improbable, and this more especially, if we consider the Disposition of other Parts of the Globe, and particularly that Part of *America*, the Coasts on both Sides of which are perfectly well known. It was this uniform and wise Distribution of Sea and Land, that first induced Men of penetrating Parts and great Experience to expect, that so many different Passages might be found from one Part of the Globe to the other; and as we see that these Expectations have been perfectly answered in respect to the Passage into the *South Seas* by *Cape Horn*, and are now convinced that there is a Passage by the North-east; so till they are absolutely certain of the contrary, it cannot be supposed that the ablest Cosmographers will be dispossessed of the Notions they have entertained of finding a Passage by the North-west, to which I hope I have fully shewn, that these new Discoveries are so far from raising an insuperable Bar, that on the contrary, they have made it more probable than it was before. For it must be observed, that the Advocates for a North-west Passage are very far from disputing any of the Points that are actually settled by these Discoveries, and are only engaged in a Controversy about the Probability or Improbability of this imaginary Continent, which is no Part of those Discoveries, but a Supposition raised in Consequence of them, without any just Grounds.

If it should be enquired, why, considering the Industry and perfect Understanding of Captain *Bebring*, with respect to Matters of this Nature, he should be so desirous of setting up a Fiction, like this, without any just Foundation or Authority, the Answer is not very difficult. He was instructed to find such a Continent as we have already seen; so that he set out upon his first Expedition, with a Prepossession that perhaps he could never get over. We have already seen in the Beginning of this Section, that before the North-east Coasts of the *Russian* Dominions were thoroughly known, a Notion prevailed, that possibly they might be continued in such a Manner as to join and make the same Continent with *America*; and when this was found to be false, notwithstanding their extending so far into the other Hemisphere, then his other Opinion was taken up;

and because Captain *Bebring* had fully discovered that there was an open Passage round the North-east Continent of *Asia*, by his first Expedition, and the Consequences that attended it; and because in his second Expedition he discovered new Land still farther to the Eastward, it was from thence presumed, that this must be Part of that Continent he was sent to look for, because had it been so, he would have fully executed his Instructions, and have found what the Court of *Petersbourg* were desirous he should find. This is a very clear and candid Account of the Matter, and what I am inclined to flatter myself, will satisfy every sensible and impartial Reader.

But to make it still plainer and more satisfactory, if possible, I will beg Leave to cite a parallel Case, which has been frequently mentioned in the Course of this Collection. The great *Christopher Columbus*, as wise a Man, and as experienced a Cosmographer as he was, when he first framed his Scheme of Discovery, proposed nothing more than to find out a new Route to the *East Indies* by sailing West, and when he met with the *Bahama* and *Lucaya* Islands, he flattered himself that he had obtained what he sought, that he had performed what he promised, and that he had put the Crown of *Spain* in Possession of a Part of the *Indies*; and from this Persuasion, when the Error was discovered, the Name of the *West-Indies* arose, to distinguish these new-found Countries from the old, of which they now appear to be no Part. Thus we see how *Columbus* was deceived in imagining, that by sailing directly West he could not fail of meeting that Eastern Continent, which was then the Object of the Wishes and Searches of all Discoveries, by which indeed he made a great and glorious Discovery, that will and ought to perpetuate his Name; but at the same Time that he did this, he discovered his Mistake, and that he was very far from having reached those Countries for which he originally sought. Yet he still retained his first Purpose, and in some Measure his first Notion; for when he heard of a great Continent lying still West from those Islands, his Hopes revived, but it was not long before he perceived that he was again mistaken, and then finding there was a narrow *Isthmus* which connected the Northern and Southern Parts of this Continent, he flattered himself there might be still a Passage, and under this Persuasion he died.

Now, as the Criticks say, there is something divine even in the Dreams of *Homer*; so in respect to the Sentiments of *Columbus*, of whose Memory I never speak but with the utmost Reverence, there was always something great and noble; and if I might be indulged so bold an Expression, I would venture to say that there was somewhat of Truth in his Errors, and of Wisdom in his Mistakes; for notwithstanding he was wrong with respect to Circumstances, he was right in the main; for had there been no such Continent as *America*, he might undoubtedly have failed, as he proposed, from *Spain* to the *Indies*, though hardly with such Vessels as those in which he made his first Discovery. However, it was upon his Thought that succeeding Discoverers built; it was from his Discourses they collected those Lights that led them to all they afterwards performed; and it was from the Scheme of *Christopher Columbus* that *Sir John Cabot*, (for he was the Knight, and not his Son *Sebastian*) took the Hint of a North-west Passage, which is yet undiscovered; that *Sebastian Cabot* framed his Design of finding a North-east Passage, which has been but of late known to be possible; and that *Ferdinand Magellan* gathered those Observations from whence he has so confidently undertook, and so happily accomplished, the finding a Passage to the *Spice Islands* through the *South Seas*.

In Matters of this Nature, as it is very easy to mistake, as well as very hard not to mistake; so there is nothing shameful or injurious to a Man's Reputation, who from real Discoveries falls into erroneous Suppositions; the only Danger is, that the Fame and Credit of the Discovery should give Weight and Authority to such Suppositions; and this makes it both necessary and laudable to examine them with the strictest Atten-

tion, which must be my Apology to the Reader for the Pains I have made him take upon this Occasion, in order, through all this Mist of Obscurity, to bring him out again into the Light, and to enable him to make the proper Use of Captain *Bebring's* most admirable and most important Discoveries, without being led away by that vain and idle Delusion to which they have most unaccountably given Rise. We may from this Examination of the Matter, very easily, and with some tolerable Degree of Certainty, perceive, what will be the Issue of this Design, in Case the *Russians* should continue, as in all Probability they will, to prosecute these Discoveries. What I mean by this, is, that in the Course of a few Years, they will very probably find out all that is yet to be found on that Side, and pass from one Island to another, till they have obtain'd an absolute Certainty as to the Situation, Size, and Nature, of the Countries that Providence has placed between *Asia* and *America*, amongst which, I will not presume to allege there may not be one more considerable than the rest, and extending much farther to the North, which in that Respect may deserve to be stiled a Continent; neither will I dispute, than when this shall be done, it may be both possible and practicable for the *Russians* to obtain a Share in the Commerce of *America*, though for many Reasons, some of which I shall hereafter mention; this seems to be a Thing far enough from being probable.

We may likewise discern from what has been said, how very little the rest of the World have to apprehend, from any Pains this Nation may employ to conceal their Discoveries; for, in the first Place, if they should prove considerable in themselves, and advantageous in their Consequences, that will be a Thing absolutely impossible; for whether they derive those Advantages from Conquests, or from Commerce, they cannot be hid; and if we once learn that these Advantages are derived to them, the Manner in which they are derived cannot long remain a Secret. On the other Hand, if they proceed slowly in these Discoveries, and reap no great Profits from them, they need not take much Pains about the Matter, since no Secret is so easily kept as that which is hardly worth the knowing. But as we have already explained the true Cause of that erroneous Notion of the Continent of *America* being at no great Distance from the North-east Coasts of the *Russian* Dominions, so it will be no hard Task to find out whence this other Sentiment of the Possibility of concealing Discoveries has its Original; the *Russians* have, for the two last Ages, employed themselves in making Discoveries and Conquests to the North-east, and these they have taken great Care, and not without considerable Success, to conceal, which they might very easily do, since it was not possible for any other Nation but themselves to reach them. Yet while they were thus concealed, they proved of no mighty Consequence to them; and the only Fruits of their Industry, in that Respect, at least so far as we can learn, were Want of real Improvements, or so much as acquiring a just Notion of their Importance. When the Czar *Peter* came to have right Ideas, in respect to Government, Power, and Commerce, this little narrow unprincely Scheme of concealing was immediately banished, and he not only took all the Methods possible to make himself and his Ministers thoroughly acquainted with the remotest Parts of his Dominions, but with equal Care and Industry published the Results of his Enquiries to all the World; and from thence it was that he not only raised a just and never-fading Reputation, but likewise reaped many Advantages, in a very short Space of Time, that otherwise must have cost whole Ages in the Form of slow and silent Methods to attain. By this Means principally he reached the great Point at which he aimed, and came to have right, distinct, and thorough Notions of the Value of the Discoveries made in the Reigns of his Predecessors, which were not known to them from their being addicted to that barbarous Policy of hiding and making a Mystery of what must be useless in the very same Proportion that it is concealed.

This shews the Folly and Absurdity of such a Principle, while confined to Discoveries upon the Continent, in which it was very possible it might be pursued with Success; but there is nothing easier than to shew, that it is not barely ridiculous, but absolutely impracticable, with respect to such Discoveries as are made by Sea. We already know enough of their Discoveries not to be much, if at all in the dark, as to the Sources of any Advantages they may reap from them hereafter; and, as I observed at the Close of the former Section, so long as we preserve our Naval Force, it will be always not only practicable, but a very easy Thing for us to acquire a Share of these Advantages, let them be what they will, in spite of any Pains, or any Means they can possibly use to prevent it. For it will be always possible for us, while we have such large Possessions in the *East-Indies*, to fit out Ships; or if it was necessary, Squadrons of Ships, and that with as great or greater Advantage than can be done by the *Russians*, and with these we may at any Time retrace all their Discoveries, and make them our own, in Case there shall appear any good Cause to expect that Expeditions of this Kind may turn to our Profit.

Neither is it Reason alone that teaches us this; for the same Lesson may be learned in the School of Experience. The *Spaniards* and the *Portuguese* were the original Discoverers of *America* and the *East Indies*, but how long did they remain the sole Proprietors of those valuable Possessions? And yet they were possessed of an Advantage which the *Russians* have not, and which it is in a great Measure out of their Power to attain; that of being the greatest Maritime Powers in *Europe*, indeed almost the only Maritime Powers in *Europe*, at the Time they made them. Therefore if with this singular Advantage, and when making Discoveries was a Thing new, those Nations found it impossible to conceal their Discoveries, or to exclude Strangers from sharing with them, how should the *Russians*, who on this Side of their Dominions neither have, nor in any reasonable Space of Time, can raise any formidable Naval Force?

Yet after all that has been said, I must confess, that if the *Russians* continue to proceed in these Discoveries, with that Vigour which their great Importance deserves, and which the Success they have lately met with may well encourage them to do, they may possibly make a Discovery of the highest Consequence, and perhaps conceal it too, and that to the great Advantage of themselves, and the great Detriment of the rest of the World, and of the *British* Nation in particular; and to this I attribute all that Air of Darkness and Mystery that has been of late thrown over most of their Relations. In short, I apprehend, and am very sure, that I have good Reason for my Apprehensions, they are already pretty well satisfied; or rather, the few judicious Heads amongst them, are convinced, not of the Possibility or Probability, but of the Reality of a North-west Passage; and this it is that makes them so very desirous of promoting a Belief of the running out of the two great Continents, till they almost meet each other, and hath also put them upon the Scheme of stifling their future Discoveries, that they may make the most of what they have already discovered, and not lead others to the Knowledge of a Route, which would make them Masters of these Discoveries, and of many more.

XI. After having examined as thoroughly as possible these *Russian* Discoveries, which have made so much Noise in the present Age, and which it is not impossible may make still more Noise in the next, let us proceed to a few Observations on what has been said in order to render it more useful and more intelligible to the Readers. It is now about two hundred Years ago, since our finding out the Navigation to *Russia*, was considered, as a more surprising Discovery, than any of which the *Russians* are now in Pursuit; but then it must be considered that they had no Dominions upon the *Baltick*, nor hardly any Intercourse with their Neighbours, except the *Poles* and the *Swedes*. It was presently foreseen, that from *Archangel*, which was the Port frequented

frequented by us, a Passage might be conveniently sought round *Nova Zembla* to the *East Indies*, and accordingly various Attempts were made that Way, as in its proper Place has been shewn. It could however hardly be foreseen, that so long a Series of Years should elapse, before the *English* Nation received any Certainty as to the North-east Frontiers of this spacious Empire, and yet it is purely owing to the great Wisdom and superior Genius of the Czar *Peter* the First that we are acquainted with them now, so late have we been instructed as to the real Boundaries of that Part of the Globe, with which, during so long a Space, we have had almost a constant Correspondence.

But now we are acquainted with them, let the Question be put, What are we the wiser or the better for this Piece of Knowledge? For that is the Touch-stone of all Acquisitions of this Sort; since if our Knowledge serves only to amuse the Learned, and to surprize the Ignorant, it is of very little Consequence, and indeed hardly deserves the Name. If, on the other Hand, it gives us a juster Notion of Things than we had before, delivers us from the Mists of ancient Errors, affords us a Prospect of new Truths, and enables us, by these Helps to decide judiciously of our own Interests, and those of other Nations; then, without doubt, our Enquiries are to some Purpose, and the Issue of them may be well stiled useful and solid Knowledge.

In the *first* Place then, we are now able to rectify our Mistakes, which to be sure were great enough concerning the Country of the *Russians*. We considered them heretofore as a rude and barbarous Nation, thrust up into a Corner of the Globe, of little Consequence to their immediate Neighbours, and who were almost in a State of Inability of making themselves so much as known, much less respected and feared by the rest of the World. We see them now in quite another Light; we see, that in Point of Extent and of Compactness, no Empire, either ancient or modern, can enter into Comparison with that of *Russia*, which is at once equal to any *European* Power, and superior to that of any Potentate in *Asia*. We see, that instead of being unknown or disregarded, even by her Neighbours, she has made herself courted as well as respected by the greatest Powers in both *Europe* and *Asia*, as being equally formidable to the *Turks*, the *Tartars*, the *Persians*, the *Chinese*, and, it may be, the *Japoneses*, on one Side, and to all the Powers in the North, on the other.

We may from hence learn how easy such Mistakes are, and how much Time and Pains it costs to rectify them, which ought to render us more careful in other Respects, how we suffer ourselves to be imposed upon by crude and indigested Opinions, or how we give into that common Source of great and dangerous Errors, the hasty rejecting as weak, absurd, and chimerical, such Propositions, of which, from their Novelty and the Want of present Lights, we cannot immediately see the clear and distinct Grounds. Of this I shall presently give a very strong, and hitherto unnoticed Instance with respect to this very Nation, and the Consequences of our Correspondence with them. It is very well known, that but a few Years ago, an Act of Parliament was obtained in Favour of the *Russia* Company, to enable them to carry on, through that Empire, a Trade with *Persia*; and that this was not obtained without Opposition, though the Advantages of such a Trade were then set in a very clear Light, and have been since felt by Experience, notwithstanding the unforeseen and inevitable Difficulties to which this new Trade has been subjected by the great Troubles and frequent Revolutions in the Country last mentioned. It would be no difficult Thing to shew, that Projects of the same Kind had been many Years ago set on Foot in *Italy* and in *France*, but I believe it will be News to most of my Readers, that it was with a View to an Establishment of this Sort, that King *James* the First proposed to send Sir *Thomas Overbury* into *Muscovy*; and that some who looked upon themselves as very penetrating People, and above the ordinary Rank of Politicians, valued their own Sagacities in seeing through this Project, as they imagined, and treating it as a Thing altogether im-

practicable, and fit only to amuse the Minds of Speculators; by which, very probably, the Nation was defrauded of a Branch of Commerce that might have proved highly beneficial.

I am too well acquainted with the Temper of the present Age to advance so strange, and, to most People, so unheard-of a Thing as this, without Proof; and therefore I shall cite a Letter from Mr. *John Chamberlain* to Sir *Ralph Winwood*, preserved among that Gentleman's State Papers, who was afterwards Secretary. It is dated May 6, 1618, and the Writer having first observed, that it was the urging Sir *Thomas Overbury* to go to *Muscovy*, that drove him to that peremptory and unmannerly Answer for which he was committed to the Tower, he proceeds thus: "Indeed we have great Doings in Hand, and strange Projects for that Place, which I doubt will all prove Discourses in the Air, for they be grounded upon certain Speeches of some of the Nobility to an *English* Merchant about two Years since; but *tempora mutantur*, and the Case is much altered there since that Time. Yet the King apprehends the Business very earnestly, and hath caused Sir *Henry Nevile* to confer with some of the Council about it divers Times, wherein, they say, he hath shewed great Sufficiency, and discoursed at large what Commodity might arise by bringing the whole Trade of *Persia*, and the Inland Part of the *East Indies* up the River *Hydaspes*, and so with a short Cut down the River *Oxus* into the *Caspian* Sea, and then up the River *Volga* to a Straight of Land that will carry all into the River *Dwina*, that runs down to St. *Nicolas* and the Town of *Archangel*, the ordinary Port and Station of our Shipping in those Parts. These are goodly specious Discourses of Things not so easily done as spoken." If we have found a nearer, shorter, and more expeditious Method of carrying on and improving this Trade, it is because, as our Author says, *Tempora mutantur*; and that with regard to us and the *Russians* also, we are no longer under the Necessity of making the long Voyage to *Archangel*, nor are they obliged to take the Course before laid down for bringing *Persian* Commodities into the Heart of their Empire. Yet for all this, it is no hard Matter to discern this Project was both very possible and very practicable at that Time, and might have been attended with very great Advantages to both Nations.

We may learn from the Contents of this Section, more especially if we compare them with those of the foregoing Sections, what are the true Reasons why, with all the seeming Advantages of which the *Russians* are now possessed, they make, notwithstanding, but a very small Figure in Commercial Affairs. It is very true, that from the advantageous Situation of their Empire, they have a Variety of different Prospects of extending and promoting their Trade; but perhaps this Variety has been, and still is rather detrimental than beneficial. We find them sometimes intent upon establishing their Navigation on the *Black Sea*, and in a few Years this is dropped, and their Efforts are made upon the *Caspian*; then the Trade by Land with *China*, and the supposed Advantages that may be derived from regular Caravans ingrosses their Thoughts, till on a sudden they are turned to more distant Discoveries and a Naval Correspondence with *Japan*, which is again dropped for the Sake of pursuing, a still more distant, and more uncertain Scheme of opening a new Route to the Coasts of *America*.

Thus by running from one Thing to another, and by a preposterous grasping at many Things, Nothing is attained, if we except this, that from these Attempts it has been made very apparent, that all, save the last, might have been attained. For while *Peter* the Great was possessed of *Asoph*, he not only opened to his Subjects the Commerce, but, as we hinted before, established a Naval Force in the *Black Sea*, and thereby terrified the Grand Signior in his Seraglio, but this however inspired the *Turks* with a Resolution of depriving him of that Fortress, and of the Power of making him uneasy on that Side; which they had the good Luck to accomplish; yet there may come a Time, when, if the

the *Russians* should be content to prosecute one Point at once, they may again become Masters of *Asoph*, and of that advantageous Commerce that might be carried on from thence. Nay, it is not at all impossible that they may conquer *Crim Tartary*, which, with respect to Trade and Naval Power, would be the most important Acquisition they could make; but it would require much Time and no small Application to render such a Conquest as advantageous as it might be made to their Empire, and indeed to the Christian World in general.

On the *Caspian* also *Peter* the First built Vessels of various Sizes, and conquered some of the most valuable Countries in *Persia*; he likewise formed Projects of Discovery in the most distant Part of that Sea; where, for the Encouragement of his People, he gave out there were Gold Mines; but all these Projects, partly by other Accidents, but chiefly by his Death, came to nothing. The same great Emperor actually opened a Trade by Land to *China*, of which we have given a large Account, and of the Reasons of its Declension. Reasons that still subsist, and will always subsist, while the *Chinese* Government is carried on in Conformity to the Maxims that having prevailed there for many Ages, are not likely to be laid aside in haste. It remains that we should examine the Causes that have hindered the Accomplishment of the two last Designs.

With respect to these, there is nothing clearer than that the vast Distance of *Kamschatska*, the present Condition of that Country, and the great Difficulty of establishing any certain and easy Communication between it and the western Provinces of the Empire, are Obstacles of such a Nature as must render it very hard to surmount. On the other Hand, we are very well apprized of the settled Aversion which the *Japoneses* have to any Correspondence with the *Europeans*, which there are good Grounds to believe may rise higher with regard to the *Russians*, whom, notwithstanding their vast Dominions in *Asia*, they will always consider in that Light. I say, that we have good Grounds to believe, that their Aversion will rise higher against them than any other Nation, because their Apprehensions, in respect to their Power, will be greater and better founded. Thus we see that there is no great Cause to be surprized, that the Court of *Petersbourg* has not been able to make any great Progress hitherto in that Commerce, of which Captain *Spanberg* gave them such mighty Expectations.

Yet great as these Obstacles are, they seem to be still inferior to those that lie in the Way of this so much wish'd-for Commerce with the Northern Continent of *America*; for which, as we have shewn, they are utterly unqualified, until such Time as *Kamschatska* is much better improved than we have any Reasons to believe it is at present; because, as we have already shewn, the Space is much larger between the two Continents than they apprehend; and if it were much less, it is not very easy to conceive either with what Commodities they would trade from *Kamschatska*, or where they would find Men to undertake any thing in the Way of Conquest. The Reader will observe, that I state these only as very great Difficulties, which it will be hard, but not impossible to overcome. The Method they are now in of surveying these Countries, diligently inquiring into their Produce, and framing from thence natural Histories, tracing the several Rivers from their Sources to their Mouths, bringing the barbarous Inhabitants under Obedience, and using every other Means possible to come at an exact Knowledge of their vast Dominions, though very slow, is out of Comparison the surest to attain Success.

It is not at all improbable, that in Process of Time they may find either Mines or Drugs, or some other Commodities of Value, that may make the Plantation and Improvement of these Places, at least bear the Expences, and so by Degrees extend their Settlements and Fortresses in a regular Manner from *Tobolski* to *Ochotski*; and then, no doubt, the peopling and improving *Kamschatska* will be found far easier than is generally imagin'd; for, as I hinted before, there seems to be good Reason to believe, that there is nothing, either in the Climate

or the Soil, so incorrigible, as to take away all Hopes of making it a tolerable Habitation. It is indeed true, that some Hints have been given of taking a shorter Way, by settling a Port at the Mouth of the River *Lena*, and opening the Navigation to *Kamschatska* by Vessels of considerable Burthen. I might object to this, what *Ysbrant Ides* tell us of the Northern Seas being choaked with Ice for several Years together, so as to render such a Passage absolutely impracticable; but as I am strongly inclined to doubt the Truth of this, I cannot think it fair to alledge any such Thing. But supposing the Passage to be always practicable in the Summer, which is the utmost that can be contended for, yet the thorough settling of *Kamschatska* will remain a Thing absolutely requisite before any Discoveries of Importance can be undertaken with any tolerable Advantage on that Side, since after so long a Voyage as that round the North-east Cape, it cannot well be imagined that Vessels should be in a Condition to proceed, without putting into some Port for Refreshment.

If therefore this could be done at *Kamschatska*, and proper Magazines of Provisions and Naval Stores were erected there, no Doubt need be made, that in the Course of a few Years, Things in this Part of the World would change their Face, and a Commerce of very great Consequence might be soon settled. Whenever this shall be effected, and such a Navigation from Practice and a perfect Knowledge of the proper Seasons made common, if not convenient, I cannot help hazarding a Conjecture, that the Court will call to Mind a Project formerly set on Foot for reviving and restoring the Trade of *Archangel*. It may be said, that to suppose the Possibility of an easy Passage to the North-west of *Nova Zembla*, which must be the Course from any Port established at the Mouth of the River *Lena*, is absurd and romantick, but this is easier said than proved; the *Dutch* Ships that were sent in 1670 for the Discovery of the North-east Passage, actually passed round *Nova Zembla* the other Way, and therefore it is very plain the Thing is not at all impossible; and to People who inhabit the Country that borders upon the Sea, have an Opportunity of making Choice of the fittest Season, and may have such Assurances from the Nature of their Government, as cannot be expected in Places, where not only the Climate, but the Laws are milder; this may, in Process of Time, and that no very long Time either; be render'd very practicable, and *Archangel* become once more the Centre of the *Russian* Trade, as in former Times. The Reason that the Czar *Peter* the Great, who delighted so much in Improvements, made it in some Measure a Point to ruin *Archangel*, by withdrawing the Trade from it, may be very easily learned. In the first Place, it had been insulted by the *Swedes*, which made him apprehend, that the richer this Port grew, the more likely it would be to tempt his Neighbours to make it such Visits. Besides this, he was very intent upon whatever might contribute to the establishing, enlarging, or enriching of the new City of *St. Petersbourg*, which he was building, and which he was equally desirous of rendering the Centre of Commerce, and the Capital of his Empire.

Both these Reasons are, in a great Measure, taken away; for with Regard to the Power of the *Swedes*, and the Safety of *Archangel*, there are no longer any Apprehensions, or indeed the least Grounds for them; and with respect to *Petersbourg*, it will always remain the Center of the *Baltick* Trade, as well as the Western Capital of the *Russian* Empire; so that instead of suffering, it would in reality receive great Advantages by the Revival of the Commerce at *Archangel*; and still greater, if such a Communication could be opened, as that which I have described. We were heretofore very well acquainted with that Port, as having a regular as well as constant Navigation thither; but of late we speak less of it, and consequently are so much the worse Judges of its Consequences, which is in reality very great, since there is no Place in the whole Dominions of *Russia* that lies so conveniently for uniting the Commerce of the most distant Countries in the East with
that

that of *Europe*. Of this a remarkable Specimen has been given from our own History, and that too in a most extraordinary Period, as I could very easily shew, if it was proper at this Time; another I have exhibited from my own Conjecture, in Case these Discoveries to the North-east should be prosecuted with Effect; and a third shall be taken Notice of hereafter, but in the mean Time, I believe it may contribute to the Amusement and Relief of the Reader, and at the same Time prove no great Interruption to the Course of our Reasoning, if we insert a very ingenious and lively Description of this Port, when in its most flourishing Condition, written upon the Spot by Sir *Dudley North*, a Man of remarkable Abilities, and no less distinguished for his Accuracy in observing, and his Veracity in relating whatever he met with worthy of Notice, in the many Years that he spent Abroad.

This Gentleman after a very pleasant and humorous Description of this Voyage, which not being to our Purpose I pass by, proceeds thus in setting forth the State in which he found the Port that is now under our Consideration. "We went ashore to live in Houses built with Trees laid along one upon another, and let in at the Ends, the Streets are paved with Trees, and the Houses covered with Birch Bark. The Ground where the *English* are appointed to dwell, is paved round with great Trees set upright; the like there is for the *Dutch* and *Hamburgers*. The Emperor of *Russia* sends down every Year a Governor, and a Gort or Judge to keep the Peace, and decide all Differences. Their Law is in their Heads, and what comes out of their Mouth is without Controul or Appeal. So that whatever Difference ariseth between one Man and another, it is sure to be fully decided in less than an Hour. After the Parties have once spoke, he gives the decisive Stroke, and there's an End.

"Now this is a fine Place to live in, Victuals of all Sorts plenty, and brave Sunshine Weather: As we sailed along the Coast of *Norway*, I fancied the Clouds, though lost in the Horizon, were but a small Distance from us, which this place confirms, else one place could not be so very serene, and another so cloudy, and that almost constantly. For at the North Cape it is rare to see the Sun, and here at *Archangel*, about two hundred Leagues distant, not a Cloud to be seen for several Months together; when we were two Leagues distant from the huge Mountains on the Coast of *Norway*, we could plainly discern the Clouds to pass between the Mountains and us.

"One of the Inconveniencies that lie on those who dwell in this Country, is, that the People are so given to Nastiness, that nothing can be eaten out of their Hands; you shall have perhaps four Brothers and as many Sisters, with their Father, Mother, Husbands, and Wives, all dwell in one hot House, (*Wisbe*) they call it. They have nothing but a little Straw strewed on the Ground to lie upon. They wear loose Garments above, with Linnen Drawers, which go down to their Heels, and a short Shirt underneath like a Coat. To this in the Winter, they add a Cassitan as they call it, which is an Under-Coat, the Upper they call a Shube. And for their Boots, and huge thick Stockings, and double Mittens for their Hands, they never alter but continually wear them. The Women I think are the most deformed Creatures that ever were seen, generally short, and by Reason of their lying in Wisbies and Bastoes, very swarthy. Their Wear is for the labouring Women, Boots, but for them that keep House, neither Shoes nor Stockings; they wear a Linnen loose Garment next their Skin for the most part, without any Thing else, but sometimes they have another of blue Callico over the former, but that is all.

"The Men account it a Sin to have either long Hair or a short Beard. They are extremely superstitious, every Man has his Object of Worship, but some twenty or more. They are Commodities sold in the

"Marker, and they will not sell any to a Stranger, or suffer him so much as to touch them. These are Pictures of the Saints, and that of our Saviour. The great Men burn Lamps before them Day and Night, and adorn them richly with Gold and Pearl, but when these are worn out, and they cannot see any Thing of them, they hold it not lawful to burn them, but in a solemn Manner carry them to the Sea, and there set them a-drift to shift for themselves.

"These People are generally Thieves from the first to the last, and steal not only from Strangers, but Neighbours; and Possession is all the Law they have among themselves. Drinking is their only Pastime, and he that is not drunk on a Holiday, or Sabbath-day, is not either a Friend to their God, or Emperor. They are all left to get their Livings the best Way they can. He that is a Carpenter To-day, is a Labourer To-morrow. Every Man breeds up his own Sons, and it is a Shame to be wiser than their Forefathers.

"This Town of *Archangel* stands on a Bog, and if you offer to walk out of Town, (except one Way, which is by the Water-Side, leading to a small Grove of Trees, that are of a competent Height, and mostly Pine, Fir, and Birch) if the Way be not paved with Planks, as ordinarily is done, to make a Passage from the Town to some Windmill, you are presently over Shoes and Boots. Among the rest of the Islands, some are very good Grounds, and bear Corn of all Sorts, which after it is turned Colour, as it will in five Weeks after it is put in the Ground, they cut down and lay in the Sun to ripen or harden, and thus they often have two Crops in a Year.

"You shall not see in all this Country, one hundred Acres of good Ground without a Monastery or two or three in Sight of it; who will may shave himself a Fryar, but it is seldom done unless in Sickness, for they think, whoever dies without the last Unction cannot be saved, and he that recovers, and lives after he hath received that Sacrament is a Friar all the rest of his Life.

"In this Country the Husband is the sole Commander of the Wife, who differs very little from his Servant. Many will marry their Sons very Young to lusty Baggages, on Purpose to gain able Servants.

"I shall add (though not very material) the Process of making Tar, the Product of this Place. They dig a Hole in the Ground of a competent Size, some two or three Fathom deep, and a little lower than the middle they make a Platform of Wood, and thereon heap Earth about a Foot deep, except in the Middle, where an Hole is left in the Form of a Tunnel. Then they fill the Pit with Fir Billets, piled up from the Platform, and rising about a Fathom or more above Ground, which part they wall about with Turf and Clay to keep in the Fire. They command the Fire by quenching, for which Use they make a *Lixivium* of the Ashes of Fir. When all is ready they set Fire a-top, and keep the Wood burning, but very leisurely, till it comes within a Foot or two of the Partition, and then they heave out the Fire as fast as it is possible, for if it once lay hold of the Tar, which is settled down into the lower Pit it blows all up forthwith. These Tar-Pits occasion a great deal of Trouble, and require many Men to tend them during the Time of their Burning, that the Fire may descend even and leisurely, whereby the Tar may have Time to soak out of the Wood, and settle down into the Pit. As it comes from the Wood it is pure Tar, but in the Pit it mixeth with Water, which issues from the Wood also, therefore it must be clarified from it once or twice.

"The Manner of their Bastoes or Baths is worth Notice. They are made as a square Room, in one Corner of which is built a Sort of Oven, the Top of which is covered with great round Pebble-Stones,

“ Stones laid very thick one upon another, without any
 “ Mortar. In this Oven they burn an Arm-full or two
 “ of Billets, and, during the Fire, leave the Door open
 “ for the Smoke to go out, which else could not pass
 “ for the Closeness of the Room. When the Fire is
 “ out, and the Stones thoroughly hot, you go into it
 “ stark naked, and the Heat is so extraordinary, that
 “ in less than a Quarter of an Hour the Sweat shall
 “ run from you like Water, and the Heat almost stifle
 “ you. There are several Benches, which are the De-
 “ grees of Heat; on the Ground it is tolerable, but
 “ very few are able to hold up their Heads to the Top
 “ of the Room, or stand upright. They heat the
 “ Room to what Degree you please, by dashing cold
 “ Water upon the Stones, which doth wonderfully
 “ augment it. These Bastoes are such common Things,
 “ that there is scarce an House, however poor, that
 “ wants one. They seldom or never lie with their
 “ Wives but in the Basto; the Women are always
 “ brought to Bed in it. It is common to see Men
 “ stand at the Church Door, not daring to enter, be-
 “ cause they have not washed since they lay with their
 “ Wives, so nice is their Devotion.

“ All the Tools they work with about Wood is an
 “ Hatchet, and all of a Bigness, so that the largest
 “ Trees, and smallest Pieces of Wood are wrought
 “ upon with the same Tool. I believe they are the best
 “ Hatchet-men in the World, for except a Shave, they
 “ have no other Tool to do all Manner of Work.
 “ Most Houses in the Country are of Wood, and have
 “ no Sort of Materials else about them: And some
 “ again, as at the City of *Moscow*, for Prevention of
 “ Fire, have not a Stick of Wood about them, the
 “ very Doors and Windows are of Iron. Most of our
 “ Warehouses here have Fire-houses under them; it is
 “ a perfect House under Ground, built as others are,
 “ and covered with great Trees, with a Fathom of
 “ Earth laid over it. The Door is deep and laid
 “ round with Brick. When a Fire happens, the
 “ Goods are flung down at that Door, and there al-
 “ ways stand ready about a Dozen Barrels of Sand,
 “ which serve to dam up the Door. Then the House
 “ may be burnt to the Ground, and all the Goods re-
 “ main safe.”

This short and entertaining Account demonstrates to us sufficiently the Possibility of rendring *Archangel* a very commodious Place, a good Port, and a well fortified Town; so that in all these Respects it might very well serve as a middle Place for the Reception of the Commerce of *Europe* and *Asia*; and if the *Russians* can tell how to bring it thither, of all the Islands between *Asia* and *America*, and even of *America* itself. It has been before hinted, that another Proposition has been made for settling the Trade of the East here of late Years, that is, in the Reign of the Czar *Peter*, of a different Nature from either of those which the Reader has yet met with; the former, he must remember, went upon this Supposition, that the Commodities and Manufactures of the *Indies* might be brought through *Persia* to the *Caspian Sea*, and so by various Rivers to *Archangel*. The other suggests a Possibility of carrying on a Trade from *Kamschatska* to the Islands near *Japan*, to *Corea*, *China*, &c. and carrying the Produce of this Trade round by Sea to *Archangel*.

This other Proposal goes upon the old Supposition, that a North-east Passage was impracticable; and therefore two Merchants laid a Scheme before the Senate, to make a Communication between several navigable Rivers and Lakes, by the Means of which, the *Russian* Merchants might carry their Goods from *Archangel* to the Eastern Ocean, and so by an easy and short Way trade to *Japan* and the *East Indies*, to the incredible Advantage of the *Russian* Dominions. The Connection was to be by the Rivers *Dwina*, *Fasta*, *Irtis*, *Oby*, *Keta*, *Tenisra*, *Angur*, the Lake *Baikal*, the Rivers *Schulka*, and *Amur*, the latter of which runs through *Dauria* into the Eastern Ocean. It would perhaps be no difficult Thing to shew, that though this Scheme is not impossible or impracticable, yet it would be much harder to accomplish, than that of opening a Communication by

Sea; and the only Reason I mentioned it was to shew how many different Methods have been contrived to transfer the *East India* Trade, at least in a great Measure to the *Russians*; according to all which, *Archangel* has been the Port preferred; so that some Time or other, perhaps, it may obtain what has been so long sought, in different Times, by different Heads, and from such different Ways.

To conclude this Subject, and to shew how great a Sacrifice was made in the establishing of *Petersbourg*, I shall present the Reader with a Memorial, shewing the Inconveniencies that would arise by transferring thither the Trade from *Archangel*. It was drawn up by a Committee of Merchants, who were the best acquainted with the Interests of *Russia*; and of the rest of the Nations in *Europe* trading thither, and though it had no Effect, yet the Facts contained therein are very curious; they were briefly these:

1. That at *Wologda* only, a Town situate between *Moscow* and *Archangel*, there are three *German* Merchants, who at their own Charge maintain 25000 Persons and upwards in dressing and preparing Hemp to be sent to *Archangel*, and from thence into foreign Countries: But should they be obliged to keep such a Number of People at *Petersbourg*, where every Thing is five Times as dear as at *Wologda*, that Trade not only would turn to no Account at all, but they would even be Losers by it.
2. That the greater Part of the Exportation of *Archangel* is of the Growth of the neighbouring Country of *Wologda*, from whence those Commodities are with a great deal of Ease carried by Water to *Archangel*; whereas were they to be transported to *Petersbourg*, it must be done a great Way over Land, and with far greater Expences to the Merchants.
3. That the Soil at *Petersbourg* is such, that the Hemp cannot be kept there a few Months without growing damp.

It is hoped, that from these Remarks and Reflexions, the Reader will be led to a perfect Acquaintance with the Consequences of the *Russian* Discoveries, the Nature of the several Projects that have been formed for improving and extending the Commerce of that Empire, and the Effects that these must necessarily produce upon the Trade of *Europe* in general, in case they should ever be brought to any tolerable Degree of Perfection, than which it would be hard to find a Subject more useful or more entertaining to such as are desirous of acquainting themselves with the real and substantial Knowledge that is, the Result of Enquiries into the past and present State of distant Countries, and of learning from the Comparison of the Situation and Products of the several Parts of the Globe, how they may be best connected and made useful to each other.

But it may possibly be objected, that all these Things are at a very great Distance, in as much as hitherto the *Russians* have scarce entered into any Kind of Commerce with other Nations, or at least with other Nations who inhabit Countries lying at a Distance from them; so that to consider them in the Light of a naval and commercial Power, seems a little premature; and considering also the Vicissitude of human Affairs somewhat chimerical. But to this it is very easy to give a full and satisfactory Answer. It is scarce half a Century since this Nation became thoroughly known to the rest of *Europe*, that is to say, known as an independent and great Power, capable not only of holding the Balance of the North, or rather of prescribing to the Powers there, but also of having a considerable Influence upon the general System. Yet within this short Space, and notwithstanding several Revolutions in their Government, they have acquired, and that very justly, a very high Degree of Reputation, as well by a successful War against the *Turks*, as by their important Conquests from the Crown of *Sweden*; and exclusive of this, have twice within the last twenty Years, given Check to the Power of the House of *Bourbon*, and Peace to *Europe*, by marching their Troops into *Germany*, exactly in the same Manner, as when the over-grown Power of the House of *Austria* engaged the *Swedes* in an Enterprize of the like Nature, and with the like Success. If there-fore

fore it cannot be denied, that in so short a Time, and notwithstanding the many Obstacles they had to surmount, this Nation has carried its Power to so unexpected a Height, and render'd its Authority and Influence so very extensive, why should we doubt, that upon turning their Thoughts to the promoting of Industry, encouraging Manufactures, and improving their Trade, all which, it is very certain, are Points that have for some Years occupied their Thoughts. I say, why should we doubt, that in Process of Time they should become as successful in this, as in the aggrandizing themselves by their military Expeditions, and their political Negotiations, for both which they were thought infinitely more incapable, but forty or fifty Years ago, than they can be now, with respect to Improvements in Trade and Navigation?

I know very well, that it has been esteemed the Foible of this Nation, that they esteem themselves absolutely Masters of any Science, by that Time they have acquired the first Principles of it, and are apt to boast of Things as accomplished almost as soon as they have formed a Design of undertaking them; but as this is natural to all Nations, upon their first emerging out of a State of Barbarity, it may be probably concluded, that this is in some Measure worn off, and that in Consequence of their being more familiar with the Sciences, and having a greater Intercourse with other Nations, they are become both more knowing and more polite; which if it was at all necessary, might also be made good with respect to Facts, and that from the most authentick Evidence. But supposing they have still some Remains of this Humour sticking upon them, as has been before admitted in the Case of Discoveries, where, without question, their Conclusions have been a little too hasty, and their Expectations not a little too sanguine, yet this is no kind of Proof that they shall not succeed by Degrees, or that they may not acquire a very profitable and extensive Commerce, though not quite so profitable and extensive perhaps, as they have flattered themselves.

For if we reflect, that notwithstanding the Rigour of the Climate, and the Sterility of the Soil in some parts of their Territories, yet there is within the Dominions of *Russia*, not only as rich and fertile Countries as any in *Europe*, but a much larger Quantity of rich and fertile Ground than in the Possession of any *European* Power whatever, we shall surely see some Cause to alter our Opinion. Another strong Argument to this Purpose, may be drawn from the Staple Commodities of *Russia*, which are very numerous, of general Use, and of great Value; they have Hemp, Flax, and Timber; Tar, Wax, Hides, Tallow, &c. in vast Quantities; and if their Lands were improved, they might have as great Abundance of Corn as any Nation in the World; neither are the worst part of their Dominions unproductive of very rich Commodities, such as vast Quantities of the finest and most valuable Furs, Iron in the greatest Plenty, Salt, and many more Things than we have not either Leisure or Necessity to enumerate, since enough have been already mentioned to prove that they are in a Capacity of exporting as many and as valuable Commodities as their Neighbours, from the immediate Produce of the several Provinces of their vast Empire.

But farther still, a third and no less weighty Argument may be advanced from their Inland Commerce, which is very considerable, as will appear from the Places in which their great Custom-houses are erected, and which are become so many Staples for different Branches of Trade. As for Instance, there is a Custom-house at *Kiow* in the *Ukrain*, to which City there is a prodigious Resort of *Turkish*, *Tartarian*, *Polish*, *Armenian*, and *Rascian* Merchants. At *Tomski* in *Siberia*, there are likewise great Magazines of rich and valuable Commodities, brought thither by all the various Nations inhabiting the Heart of *Asia*, and with whom no other *European* Nation have any Intercourse or Trade. Thither also and to *Tobolski* are brought the Commodities and Manufactures of *China*, *Corea*, and of all the Nations which inhabit to the North and North-east of the River *Amur*. The City of *Astracan* is the Center of the *Per-*

sian Trade; and of what is derived from other Nations that inhabit either on or near the Shores of the *Caspian* Sea; and from all these Places there is a constant and prodigious Resort to the great City of *Moscow*, where a very large Traffick is driven by Merchants of all Nations. I say nothing of the *Lapland* Trade, which centers at *Archangel*, or of what is still carried on at *Novogorod* from *Courland*, *Poland*, *Lithuania*, and other Places; from all which it manifestly appears, that exclusive of their own, the *Russians* may be able to export very large Quantities of foreign Commodities and Manufactures, which they procure in the Way of Exchange, and may consequently enlarge their Trade that Way.

It may be indeed objected against what has been advanced, that as Luxury increases as fast or faster in *Muscovy* than in almost any other Country, the Balance of Trade is not like to be much in their Favour; but to this it may be answered, That the general Notions about Luxury are very false, both with respect to the Thing it self, and in regard to its Consequences. In common Speech, we take Luxury for the Desire of enjoying many Things that are not absolutely necessary; whereas in Truth, Luxury only consists in the Abuse of Things, whether necessary or not necessary; and tho' it be true, that Luxury taken in either, or in both these Senses, impoverishes and brings to Destruction particular and private Families, yet it may be justly questioned, whether Luxury is highly destructive to a Nation; for if we consider it seriously, it will be found, that such as assert this Talk in a Circle, and having first confounded their own Notions, labour next to disturb those of others. For what is it that encourages and promotes Industry amongst the lower Sort of People, but the Luxury of their Betters? What has been the Source of all fine Manufactures at Home, of importing rich Goods unmanufactured or manufactured from Abroad, but Luxury? Or what Justice is there in reproaching a Nation as barbarous, that in their Entertainments, Cloaths and Buildings, fall infinitely below their Neighbours, and then charging them with Luxury for endeavouring to live like their Neighbours?

The Truth of the Matter is this, that if the *Russians* confine themselves to the bare Search of Necessaries, they may find them with very little Trouble, and remain as poor, as idle, and as barbarous as before the Reign of *Peter* the Great; or suppose they would confine themselves to the bare Pursuit of Conveniences, these also may be had without any great Dealing with their Neighbours. But if in Consequence of travelling abroad, of receiving Foreigners hospitably at home, and of imitating such as pass for the wisest and most polite Nations, they come to enlarge their Circle of Conveniences, and thereby create innumerable Wants that they never knew before, what will the Consequences of this be? Not living in Huts, leaving their Lands untilld, and spending their Lives in eating dry'd Fish, and drinking Malt Spirits, or Mead, as they were wont to do; but in setting themselves to improve their Country, to increase its Produce, to bring their Commodities to Light, to vend them to Strangers, and thereby acquire those Goods that they want, or which is exactly the same Thing, those Goods they think they want, from Strangers. That Spirit of Luxury therefore that is said to prevail in *Russia*, is so far from being an Impediment to their becoming a trading Nation, that in Reality the Prevalence of this Spirit will make them so.

Another Argument which plainly proves that this Nation begins to have a Turn, and that a very serious one too towards Commerce, is the several Treaties they have concluded both with *European* and *Asiatick* Nations, for the encouraging, securing, and promoting it; of which Treaties many Instances might be given. It is true, that by their last Treaty with the *Turks*, they are restrained from Trading in the *Black Sea*, except in *Turkish* Bottoms; but this is only an accidental Restriction arising from the Circumstances of their Affairs at the Time the original Treaty in which this Clause is inserted, was concluded. Before that Time, the Czar *Peter* had no less than 200 Sail of Men of War, Gallies and Brigantines of his own upon that Sea, and we need

not

not doubt, that the *Russians* preserve the Memory of this, and will take the first Opportunity that offers, of recovering a Trade which they once prosecuted with great Diligence and Spirit.

I will add to these Arguments but one more, and that is, the prodigious Pains taken, and the immense Expence the Czar *Peter* and his Successors have been at in the Improvement of Roads, cutting Canals, rendring Rivers and Lakes navigable, purely for the Sake of facilitating the Communication of the different Provinces of their Empire with *Petersbourg*, and each other. These are manifest Instances both of the Rectitude of their Conceptions on this Head, and of the Sincerity of their Intentions, which have been also attended with surprizing Consequences; so that at present there is hardly a Country in the World where Carriage is either cheaper or more expeditious than in *Russia*; and this in Winter more especially, when by the Help of the Snow, their Sledges make an easy Passage from *Petersbourg* to *Moscow* in four Days, tho' the Distance between these two Cities is between four and five hundred *English* Miles, a Thing that would be scarce credible, if it was not supported by as authentick and indubitable Proofs as any Fact whatever; so that as the Summer is favourable to their Navigation and foreign Commerce, the opposite Season of the Year is no less so to their Inland Traffick, which is a very great Advantage; and tho' it is already much improved, is still capable of being rendered more commodious.

But there may be another Objection started, which will at first Sight seem subversive of all that I have been saying, and that is taken from the Nature of their Constitution, by which their Nobility, and indeed all Persons of Property, are absolute Lords over their Peasants, who for that Reason abhor Industry, considering it as an Obligation to Labour, not for their own Profit, but that of their Masters. In Support of this Objection, it may be likewise urged, that these Lords, who have such a boundless Power over the miserable People that live upon their Estates, are in their Turns exposed, upon very trivial Offences, to feel the bitter Effects of the Resentment of their Government; so that from this double Consideration it cannot be reasonably expected, that either the Peasants should alter their Course of Life without any Encouragement, or that the great Lords, from a meer Principle of Beneficence, should put their Dependants upon a better Foot than themselves.

But tho' it must be confess'd, that there is much more in this than in any other Objection that can be made upon this Subject, yet it is very far from being unanswerable. For by Degrees, as a new Spirit prevails in the *Russian* Government, and among the *Russian* Nobility, new Maxims must also of Necessity take place; and as, on the one Hand, the great Men will find it requisite, from no higher Principle than that of Interest, to deal more kindly, or at least more humanely with their Vassals; so on the other Hand, the Government also will relax in its Severity; for in Proportion as the great Lords come to employ themselves in attending to their own Affairs, managing their Estates, and taking Measures to live decently at home, and magnificently at Court, they will contract new Habits and new Notions, that will hinder them from running into Conspiracies or desperate Designs, and will consequently contribute to fix their Government upon a firmer Foundation; and this by Degrees will beget a milder Administration, and in Process of Time produce a better Constitution.

Those who are acquainted with the present Situation of Things in *Russia*, are very sensible that considerable Alterations have been made already, and that the Clemency of the present Reign has had very singular Effects, more especially if we consider, that as yet it has been of no long Duration. One Thing is particularly worth observing, that the Government is now altogether in the Hands of the Natives, from whence several Inferences may be drawn. First of all, that evil Spirit which reigned among the People, and made them so averse to all Kinds of Improvement, from a Notion that it served only to subject them to Strangers, is in a

great Measure worn out, and their natural Readiness to pay an implicit Obedience to their Superiors, provided they are of their own Nation, makes them cheerfully undertake those Things to which they were formerly dragged with great Violence. In the next place it is evident, that the *Russian* Nobility also have got pretty well rid of their Prejudices, begin to embrace other Notions, and to act upon Principles very different from those by which they were governed in former Times. *Thirdly* and *Lastly*, The happy Consequences that these Alterations have produced, as well by establishing great Regularity and a new Face of Things at Home, as by rendering them esteemed and respected abroad, may be very well supposed to have raised so strong a Barrier against their ever relapsing into their former Estate of Barbarism, that we may rather expect to see them animated by a warm Ambition of carrying to the utmost Degree of Perfection that new Stile of Life, if I may be allowed so Metaphorical an Expression, from whence they have already received so many and so considerable Advantages.

It may perhaps be alledged, and that with some Foundation of Truth, that there are still many great Obstacles to be got over in their Manners, Policy, and Views, both in private and publick Life; but when one considers how much greater Difficulties have been already overcome, and how much easier a thorough Reformation is effected when once well begun; then the slightest Alterations made, while a People are universally barbarous, we cannot suffer ourselves to be much moved by any such Representations. Besides, it is very well known, that the Impressions given us of the *Russians*, by some who have remained several Years in that Country, in reference to these Points, have been falsified by Facts; for it is not a long Time ago that such People insisted very positively on the absolute Incapacity of the Government to march any considerable Body of Troops out of their own Territories, and this, notwithstanding an Instance to the contrary fresh in every body's Memory, which has however proved an absolute Untruth, that large Body of Auxiliaries having marched with greater Ease and Expedition, with more Cheerfulness and Alacrity, and with better Discipline than the like Body of Men of almost any other Nation could have done, the Season of the Year and other Circumstances considered.

It is therefore better to found our Opinions upon Facts, than upon Conjectures; and we shall be less liable to be misled, if we form our Sentiments of what this Nation may hereafter do from what they have already done, than from what Statesmen or Travellers may believe, or pretend to believe, they can or will do.

But now it is high Time to collect from all that has been said, some few Conclusions that may be applied to certain useful Purposes. It has been shewn, that notwithstanding that Spirit of Discovery which has of late appeared in *Russia*, and which in many Instances has been prosecuted with Zeal, Industry, and Vigour, yet there is little Reason to suppose that any great Progress can be made in such Discoveries during our Times, and that for a Variety of strong Reasons which have been already given. That tho' from the Situation of this vast Country there result many, and those too very considerable Advantages with respect to Commerce, yet there are many Difficulties that lie in the Way, and must render the turning these Advantages to any great Account, a Work of Skill, Time, and Labour. That notwithstanding all this, there is a very high Probability these Difficulties will be got over, and that the best Use may be made of many, and in Length of Years, of all these natural Advantages, so as to render the *Russians* by degrees a trading People, and that from these gradual Improvements, as well of the interior State of the Empire, as of its Intercourse with Foreigners, the Face of Affairs will be continually altering for the better.

It is indeed no way impossible, that either from foreign Wars, or domestick Commotions, these Improvements may suffer short Interruptions; but it seems to be a Thing absolutely improbable, that the *Russians* should ever fall back into their former State of Obscurity,

rity, or relinquish that high Rank to which they have raised themselves amongst the Powers of *Europe*. Now if this shall be the Case, the present System of the Commercial World will be entirely altered. The bringing *East India* Commodities through *Russia* into *Europe*, would as effectually ruin the Commerce now carried on by the Way of the Cape of *Good Hope*, as the Discovery of this demolished the *Venetian* Trade by the Way of *Alexandria*, after it had subsisted in the Hands of different Nations for the Space of several Ages, and for the very same Reasons. When this is reflected upon a little, it will appear at once both evident and certain.

For first, with respect to the Evidence of it, whatever Method is taken, and I have shewn there may be three several Ways employed, two of which are not in the least incompatible with each other; I say, which ever of these Courses are taken, the Consequence will be, that the Commodities and Manufactures of *India* will come at a more moderate Price at any Mart the *Russians* shall establish, than in the Way they are now brought into *Europe*, except, it may be, Spices, and a very few other Things hardly worth mentioning; and therefore, as the *Portuguese* first, and the *English* and *Dutch* since, have supplanted the *Venetians* and the *Genoese* in this most valuable Commerce, those who first fall into a Way of dealing with the *Russians* for the Produce of *China* and the *Indies*, will in all Probability get the Start of other Nations, and thereby procure great Advantages to themselves, notwithstanding that the *Russians* must also find their Account in this Manner of Dealing.

It may be indeed surmised, that all the Methods I have mentioned being attended with many and great Difficulties, and requiring a considerable Space of Time to be spent in Carriage, this will go near to render the Time of the Passage as long as that which is now in Use. But when we come to examine this Objection closely, it will not be found near so strong as at first Sight it seems; for if this Trade can be carried on entirely by Sea, it would be no difficult Thing to prove, that Commodities might be transported from *Kamschatka* to *Archangel* in one Summer; and in Process of Time, by raising proper Magazines in that Country, Supplies might be annually brought to *Archangel*, from whence the Passage is far from being long to certain Countries that I shall have Occasion hereafter to mention. But if instead of taking this Method, they should be brought, by embarking them on different Rivers to *Moscow*, and from thence to *Archangel*, there will appear no Kind of Absurdity in supposing this may be done in thirteen or in fifteen Months at the most; and after this Commerce shall be effectually settled, much sooner. We must likewise consider the Cheapness of Carriage through this Empire, and that Ease and Expedition with which the Court can bring any thing to pass that is practicable, and may be attended with Profit.

I might upon this Occasion take Notice of the Possibility there is, that the *Russians* may one Day become Masters again of *Asi*, or perhaps may conquer *Crim Tartary*, or at least secure a Fortress and Port there, which would open to them a new Channel for this Trade, as was shewn in the former Volume, in speaking of the different Methods by which the Trade to the *Indies* is now, and has been formerly carried on. I presume the Reader will easily grant, that if any one of these Attempts met with Success, it would be an Encouragement to make more, and not only so, but would likewise furnish the Means of making them, as well as raise the Spirits of the *Russian* Court, and induce it to bestow greater Attention upon Projects of this Kind, and make stronger Efforts for carrying them into Execution than it has hitherto done.

But it may be said, To what Purpose is all this? Why should we trouble our selves with foretelling or foreseeing these Things, in regard to which, in the first place, there is great Uncertainty; and in the next, it is Time enough to concern ourselves about them, when they shall actually come to pass. To this I answer, That whoever has well weighed what has been advanced

from the best Authorities, in this Section, will very plainly see, that the pretended Incertainty refers only to Time; for that the *Russians* have turned their Thoughts this Way already, and that they have actually Variety of Means in their Hands to bring almost any Schemes of this Sort they can form to bear, are Points out of Dispute. All that is in Doubt amounts to no more, than whether they shall fall into a Share of the *India* Trade within these ten Years, or whether another ten Years shall elapse before they obtain it. This, I say, is the single Question upon that Head, and I refer it to the Consideration of those who make it so much a Question, whether the Improbability of their attempting and succeeding in this Way, is near so great as that the *Swedes* should attempt and succeed in the other Way, which we see they have actually done, and that their Trade to *China* is every Year increasing.

Besides all this, let it be remember'd, that two new *East India* Companies are on the very Point of being set up, one at *Embsen* in *East Friesland*, under the Auspice of his *Prussian* Majesty, now become Sovereign of that Country; and the other at *Leghorn*, under the Protection of the Emperor in Quality of Grand Duke; and that it is no Secret there are Adventurers enough ready and willing to advance large Sums of Money for the Support of these Undertakings. Shall we imagine then, that so many Examples will not rouse the *Russians* to look about them, and to put in their Claim, where they have at least as good a Title as any; or shall we imagine, that those who have the greatest Advantages, shall be the only Parties in such a Struggle that will meet with Disappointments? No, certainly, whenever a Design of this Sort is heartily undertaken and vigorously pursued, it will not only succeed, but succeed sooner, and in a higher Degree than can be easily imagined.

Now to the most material Point, which is to shew how far this touches us, and why we ought to interest ourselves therein, so far as the early Consideration of these Points may be called interesting ourselves rather than our Neighbours, tho' in Fact perhaps that may not be our Case, since we have not been of late over-ready in seizing Commercial Advantages that lay more immediately in our Way, than I must confess this does at present. I say then, it behoves us to be very attentive to what passes of this Kind in *Russia*, for this plain and strong Reason, *viz.* that we have better Grounds to hope we might avail ourselves of such a Change in the Commercial System than any other Country in *Europe*.

In the first Place, the Situation of our Island renders it very easy for us to carry on a large Trade with that Empire with mutual Advantage to both Nations; and in case it became very considerable in Comparison of what it now is, we might very easily provide for the carrying it on successfully, by enlarging and improving the Ports we have in the North-east Part of this Island, by opening new ones, and by establishing Magazines in proper Places, which by extending Navigation, promoting Industry, employing Thousands of our Countrymen and Fellow-Subjects in several Ways beneficial to the Publick, who are now either idle and useless, or if at all employed, are in the Service of our Enemies, would turn to the great Profit of this Island, and to the inconceivable Advantage of its Credit and Influence. For there is Nothing we want so much as a due Distribution of Trade and Manufactures, that Wealth may circulate freely through every Part of the Island, and thereby diffuse a kindly Warmth and lively Spirit, for Want of which, some distant Parts seem cold and useless, like decayed Limbs, which has tempted some Quack Politicians to talk of cutting them off, without considering that such Amputations in the Body Politick are as absurd and ridiculous as they are impracticable and unsafe.

Another Reason we have to expect that we might be preferred to most other Nations in such a Case as this by the *Russians*, is the many Years that not only a fair Correspondence, but a close Friendship has subsisted between the two Nations; for from the Reign of Queen *Mary* to these Times, that is, from our first opening a

Passage to *Russia* till now, we have dealt with its Inhabitants on the Foot of perfect Amity, except during the Usurpation that followed after the Murder of King *Charles I.* when out of their Abhorrence of that Fact, all Intercourse with this Empire, was suspended. But after the Restoration, our Commerce with that Country again revived, and has continued ever since with little or no Interruption. It was here that the great Czar *Peter* acquired the Rudiments of Ship-building, and from hence he drew most of those Artificers which he employed in that and other Arts; not to mention the high Respect paid him by King *William*, and the many good Offices done to himself and his Family, by the Possessors of this Throne ever since.

We may indeed, with great Justice, mention our Naval Power as a third Argument in Favour of what has been asserted; for, without all Question, this must ever intitle us to be very highly consider'd by such as administer the Affairs of that Empire, in as much as Experience has shewn what great Effects the Appearance of *British* Fleets have had in the *Baltick*, and how sure that Cause is to triumph which they espouse. As there is nothing clearer, than that the most certain Method of obtaining the constant Assistance of *Great Britain*, is to favour her Commerce, which *Sweden* heretofore, and *Portugal* has lately felt, so we may reasonably presume, that a Thing of such Notoriety must be well known to the Politicians of *Russia*, and cannot but have a proper Influence on their Councils, more especially if we remember, that as *Russia* has all things to hope from our Friendship, so she has nothing to fear from the aggrandizing our Power.

This will be another Motive to increase her Readiness to share her present and future Advantages with us, because it is impossible, from any Alteration of Circumstances, or as far as can be foreseen from any Vicissitude to which all sublunary Things are liable, that ever our Interest should come to clash with theirs; which is more than can be said for almost any other Power in *Europe*. For this is one of the many Benefits that we draw from our being an Island, viz. that our Interests, as a great Power, must always be the same with our Interests as a trading Nation. It is indeed very possible, that ambitious enterprising Statesmen may sometimes pretend to divide these, and may perhaps find their Account in it; but as it is impossible the Nation should, so it is at least highly improbable that such unnatural Notions should long prevail. The *Russians*, who have Sense enough to know, and who have hitherto shewn Spirit enough to adhere to their true Interests, cannot fail of being sensible of this, and of affording due Weight to a Circumstance of so great Importance which concerns them so nearly, and is of so permanent a Nature.

As Reason teaches this, so it has been hitherto justified by Experience, since in the several Revolutions that have happened there in our Times, every Government and every Administration have made it their first Care to renew their Engagements with *Great Britain*; and as they have always hitherto found their Account in so doing, we may from hence infer, that it will become a settled and unvariable Maxim in their System of Politicks.

Lastly, in Conjunction with these there is another, and that no inconsiderable Argument, to induce the *Russians* to grant us, rather than any other trading People, a Participation in whatever Advantages may accrue to them from the future Advancement of their Trade, or Improvement of their Dominions; and it is this, that we are most likely to take all their Commodities off their Hands, at the same time that we are able to supply them with whatever they can want or wish in Return. This is the natural Consequence of that extensive Commerce which we already possess, and which puts it fully in our Power to accommodate them with all those Things which either Necessity requires, Convenience renders valuable, or Luxury desirable; and all these too, supposing them enriched by a Correspondence with the *East Indies*, in Exchange for other Commodities and Manufactures, without draining them of their Specie, and consequently to the reciprocal Benefit of each Nation. Any one of these Arguments taken singly, might

afford us very rational Hopes of attaining all that is proposed; but if we take them all together, I think it will be very difficult for any one who is well acquainted with the true State of Commerce in general, and of these two Nations in particular, to avoid yielding to the Force of this Reasoning, or not to confess that we have much to expect, and very little to apprehend from any Progress that the *Russians* may make in the enlarging and Improvement of what Intercourse they have at present with the Eastern Nations.

Yet I do not deny that some plausible Objections may be made to this System; and to shew that I have thoroughly considered it, and to prevent the Reader's being much moved when-ever he shall hear them mentioned, I will briefly state and remove them; yet I do not apprehend that any System, well supported by affirmative Arguments, ought to be rejected and treated as chimerical, even if there should be some Difficulties incapable of a conclusive Answer; which however, in the present Case, I will be bold to say there are not. For it must be granted me, that all the Objections that can be made to this will either arise on their Side or on ours. I will begin therefore with such as may be taken, or rather such as may be suspected, from the System of Power in *Russia*, or from the natural Disposition of the Nation.

In the first Place it may be said, that if ever this comes to pass, it will be a vain Thing to expect that the *Russians* will take the Pains, which from what is laid down in this Section, it is apparent they must take, in order to obtain the Commerce of the *Indies*; and then from a Notion of Friendship and Alliances, transfer the Benefit of this hardly acquired Traffick to another Nation, which by exporting they might keep to themselves. Now in Answer to this it may very well be observed, that as it must be a Work of Time, Application and Labour, for the *Russians* to obtain this Trade, so the obtaining it will very fully employ their Endeavours, and leave them without either Leisure or Abilities to attempt another and yet a harder Scheme to accomplish, of opening a Trade to the other Countries of *Europe* at the same Time. Besides, the one is very natural and agreeable to the People, who without stirring beyond the Limits of their own Territories, may convey all that is brought to them by their Subjects or their Neighbours to *Moscow*, *Archangel*, *Petersbourg*, or some other Mart; where, no doubt, they will be glad to receive from another Nation such Commodities and Manufactures as they really want or very much esteem, in Exchange for the Superfluities of the Eastern Commerce, which would otherwise lie heavy upon their Hands. We ought likewise to reflect, that tho' the Multitudes of barbarous Subjects they have, may be easily led, or if that should be requisite, without much Difficulty, be compelled to assist in promoting such an inland Traffick, yet it will be a Thing morally impossible to make Seamen of these Savages, or to think of dragging them out of their Deserts, which however horrible to others, are most desirable to themselves, in which, as a Matter of Fact, all Travellers agree.

In the next Place it may be suggested, that there is no Quality for which the *Russians* are more remarkable, than their Jealousy and Suspicion of Strangers; and that therefore it is highly improbable they should make it their Choice to deal exclusively with any one Nation, which I must confess seems to have much greater Weight than the former Difficulty. However, when it is maturely considered, it will be found to open a fair Answer to it self. For, let the Jealousy and Suspicion of the *Russians* be ever so great, it can only determine them not to deal with Nations that may be capable of turning what they acquire by their Trade to the Prejudice of their Interests, and to encourage the Commerce of any Nation that is in a Capacity to assist, and never can be under a Temptation to distress them, which we have already shewn to be precisely the Case of the *British* Nation. This therefore, whatever it may be in Appearance, is in Reality and at the Bottom so far from being a conclusive Objection against my System, that in Fact it is a good Argument in its Favour; so that the better founded it is, the more Reason we have

to believe, that their Success, in regard to the *Indian Trade*, may become very beneficial to us, unless we are wanting to our selves.

The last Objection that I can foresee, must be taken from the Nature of their Government, and in Reference to this it may be surmised, that there is no guarding against the short Turns that may be made by a very selfish and a very arbitrary Power, and in support of this, I know that several Matters of Fact may be urged, such as, that *Peter the Great*, when he made his last Journey to *Holland*, ordered all the *Russia* Leather to be delivered to his Factors at a certain Rate, and then sold by them at a set Price to such as would pay for it in Bills drawn upon *Amsterdam*. But this was in the first Place a very singular Thing, and if we stay till a *Russian* Sovereign makes such another Journey, it is not very likely to happen again. In the next Place it is very certain, that the *Czar* himself soon found the Inconveniency of that Proceeding, and revoked his Order, so that allowing it to be a Precedent, it appears at the same Time, a Precedent not like to be followed. Some certain Commodities there are which belong to, and are entirely appropriated to the Sovereign, who sells them to the highest Bidder. This will hardly be the Case of *Indian* Commodities, for that would cramp the Trade, and turn to the Prejudice of the Sovereign. The new Trade to *Persia* has been already once suspended, which looks like a Case in Point. But when we remember, that this last Suspension was occasioned by an *Englishman's* entering into the Service of *Shah Nadir*, and undertaking to build Ships of Force for him upon the *Caspian* Sea, we shall not be much surprized at such an Event, or fall into any Fear of our Countrymens traversing *Siberia*, and the Countries beyond it, or transporting themselves from *Kamschatka*, into *Japan*, and creating Disturbances there. Without doubt Difficulties may happen in this and in all other Trades; but for all this, Treaties of Commerce wisely made, and punctually executed on our Part, will secure us from any real Danger, in case we are once possessed of this Traffick, from ever having it taken out of our Hands.

Thus far we have insisted only upon the Reasonableness of Things, but there would be no Difficulty in shewing, that Experience is also in our Favour. In Reference to the first Objection we ought to reflect, that the *Swedes* and *Danes* actually dispose of all their *Indian* Commodities to Strangers, and consequently so must the *Russians*. If we do not buy from them, it is because it is not our Interest, and if we should deal with the *Russians*, it has been shewn, that it must be our Interest to buy, and theirs to sell. As to the second Objection, Treaties of Commerce have been set on Foot between *Russia* and *France*, and between *Russia* and *Spain*, but the Jealousy of the Ministers at *Petersburg*, and the Inconveniencies that were foreseen, and in some Measure felt from those Treaties, have rendered them ineffectual, whereas nothing of that Kind has happen'd to us. With Respect to the last, we are towards the Close of the second Century of our Correspondence with this Empire, and in that long Space, have not experienced any considerable Inconveniencies, from the short Turns made by their arbitrary Government, and consequently there is the less Room to fear for the Time to come; more especially as the *Russians* are so much altered, as their Customs are so much changed for the better, as the Interests of the two Nations are so thoroughly conciliated by repeated Alliances, and as we have all the Reason in the World to apprehend, that their Ministers will consult the Interests of their own Country, which while they do, they must be always Friends to ours.

We will now take a View of those Objections that it may be supposed may arise on our Side, and as I have stated the former in their full Force, so I shall do the same Justice to the latter, as I have no other Thing in View, than to find Truth, and to point it out to others. It is not at all impossible, that, notwithstanding all that has been or can be offered upon this Subject, the old Objection will start up, and we shall be told, that such a Trade as this, would be altoge-

ther unnecessary, that the Nation has no Need of it, that little Profit could be drawn from it, and that therefore it is wild and chimerical to talk about it. As this is absolutely begging the Question, I might very fairly dispense with giving any Answer to it at all.

But as I desire to leave nothing unanswered, I shall not make Use even of this allowable Advantage, but shall consider it, as far as it is possible, such a Suggestion can be considered. We have already explained the Causes from whence it is probable, that, if ever a Trade is established from *Russia* to *China*, or the *Indies*, the Produce of that Trade will come cheaper than in the present Course of Things, and I presume, it will be no difficult Matter, for an intelligent Reader to perceive, that it will behove us to think of finding out the cheapest Market, when so many new Companies are set up, by which it will be put out of our Power to vend the Commodities we bring directly from the *Indies* at a high Rate. An Opinion is propagated with great Warmth, that however is altogether erroneous, which is this, that the *Swedish*, *Danish*, and other new Companies are under very great Difficulties for the Want of Settlements, that this renders their Trade very precarious, and has also a great Effect in diminishing its Profits. All this is very plausible, and serves to give us hope, that these new Companies cannot long subsist, but in Reality the Case is far otherwise. The Want of Settlements is so far from being a Disadvantage in Respect to National Commerce, that it is quite otherwise. We know very well, that the *Ostend* Company, so long as it subsisted, made large Dividends; we know that the *Swedish* Company have sometimes divided near Forty per Cent. and if this is thought at all incredible, or if credible, that there is something of Art in it, let the inquisitive, impartial, and judicious Reader, consult the Table of Dividends of the *Dutch East-India* Company, inserted in the first Volume of this Collection, and he will find, that in the same Proportion the *Dutch* Company became potent in the *Indies*, their Dividends to their Proprietors have lessened. My Inference from this, is, that when there comes to be a real Competition in Trade, the new Companies will be able to undersell the old Ones, and then I suppose the Necessity will pretty plainly appear, of having Recourse to the cheapest Market, if we intend to preserve this Trade at all. Now it has been shewn, that whenever the *Russians* can bring their Designs to bear, they will have very great Advantages over their Neighbours; for either they will not be obliged to make any Settlements at all, or if they are obliged to make them, they will be made in their own Dominions, that is, either at the Mouth of the River *Amur*, or upon the River of *Kamschatka*. In either of these Cases, the Expence will not be very large, and whatever it may be, as it will be entirely laid out amongst themselves, it will in Effect be no Expence at all, as to the Nation. These Circumstances therefore maturely considered, will I presume, go a great Way towards satisfying the candid Reader, that there is nothing chimerical, in supposing that before the End of the present Century, the *Russians* may divert to themselves, a very large Proportion of the *East-India* Trade, and when this comes to be the Case in Fact, which is now so only in View, what I have advanced upon this Subject, will be thought very well worth the Reading.

The second Objection that may be raised in respect to ourselves, will be taken from what is stiled a Fundamental Law in respect to our Commerce, by which I mean the Act of Navigation, which I very readily admit, is directly in the Teeth of what I propose, since the *British* Subjects are restrained by this Act, from importing Goods from other Countries, than those in which they grow. Now in Answer to this, I do not pretend to say, that the Act of Navigation ought to be repealed, or that the Principle upon which it was made was wrong in it self, or mistaken by those who made it; but this I say, that all Laws made upon a general Principle, are ever liable to some necessary Exceptions, as this Act has often been, and for that very Reason has been dispensed with. As for Instance, in the first *Dutch* War, under

under the Reign of King *Charles II.* that King by Proclamation gave Leave for all Foreigners to import Artillery, Ammunition, Timber, Hemp, and Flax, and in short, all Sorts of Military and Naval Stores, in their own Bottoms; which if he had not done, that War could not have been carried on; and therefore this is among the Number of the few Actions in that Reign, which we find approved and commended by Mr. *Roger Coke*, who certainly was no Flatterer, either of that Monarch, or any of his Family. I might add to this several other Instances, but that I look upon them as unnecessary, since there is an unwritten Law in regard to Commerce, as truly fundamental as the Act of Navigation, *viz.* That whatever will promote it, either is lawful, or ought to be made so. It is an absurd Notion to suppose, that while Trade remains a fluctuating Thing, which it ever was, and ever will be, there can be any Laws made about it that it ought to remain invariable.

It is indeed true, that with respect to the Act of Navigation, as with regard to every other Act made upon right Motives, and with due Deliberation, we ought to be very cautious in making Alterations; but provided they are made with Caution, no doubt such Alterations should be made when they appear necessary, or which is the same Thing, advantageous. This has been always thought allowable in Time of War, when done by the Royal Authority only, notwithstanding the just Apprehensions that have been entertained of allowing too great Latitude to the Prerogative; but with sensible People the Laws and the Prerogative both will stand upon the same Foot with regard to the publick Good; that is to say, it will be expected, that either, or both of them should give Way upon such an Occasion, and the proper Judges of this Occasion, are, without doubt, the Legislature. The Humour therefore of giving a peculiar, and, as it were, sacred Authority to particular Acts, and treating them as superior in their Nature to the rest of our Laws, is, to say the best of it, no better than political Enthusiasm, which may be attended with very bad, and can be very seldom productive of any good Consequences. There is no Doubt, that while Things remain in their present Channel, or any thing near it, and while there is no Danger that any of our Neighbours may supplant us, by drawing to themselves the Distribution of *Indian* Commodities and Manufactures brought into *Russia*, it would be very absurd and chimerical to make any Change in the Act of Navigation relative to this Point by Way of Precaution. But on the other Hand, if ever such a Trade through *Russia* should become practicable, it would be to the full as absurd and ridiculous to pretend that no Alteration ought to be made in this Law, but that we must still remain tied down to the old Method of carrying on this Commerce, though ever so much to our Disadvantage.

I dare say, that no body will dispute this with me at present, but will as readily grant the latter as I do the former; neither is it impossible, that some may think it is to no Purpose to dwell upon this Head, which of itself is sufficiently clear. So for any thing I know it may be, but when the Passions of Mankind are moved, when their Prejudices are thwarted, and both these happen when-ever their particular Interests are ever so lightly touched, all Things change their Faces, and what before was thought as clear as the Sun at Noon-day, begins to be obscured, and in a very little time is not so much as discernable. So many Instances of this Sort have happened within the Compass of my own Observation, that I cannot help providing against them; and I must desire my Readers to observe, that whatever Concessions are made me now, will remain just as reasonable, when some People, for Causes that will be then visible enough, may take it in their Heads to retract them, and set up once more this Notion, that the Act of Navigation is a fundamental and constitutional Law, no Part of which is to be repealed or altered on any Pretence, or for any Reason whatever.

The third Objection on this Side, will in all Appearance arise from the Privileges of the *East India* Com-

pany; and indeed, this I think by much the most formidable Objection of all, because it is the most reasonable. It will be said that this Company hath great Merit; that it has rendered great Services to the Nation; that its Proprietors are a very considerable Body; that they have received high Immunities from the Favour of the Crown; and that these have been confirmed to them by the Legislature. To all this it might be answered in general, That all Privileges, those of exclusive Trade not excepted, are granted in Trust for the publick Benefit, and that tho' this may not be express'd, yet it is always to be presumed and understood; for a Law made for private Advantage to the Detriment of the publick, is void in itself; neither is this any Impeachment of the Power of the Legislature, because it must be supposed that it was obtained by Deception, that is, by giving false Colours to Things, to which the highest Tribunals may be subject, because the highest human Assembly cannot be infallible. Upon these Topics, I say I might insist, in order to furnish a general Answer; but I declare I do not rely upon them, tho' at the same Time, I am very far from admitting that they are not just and reasonable, for the Good of the whole ought certainly always to take place, and no Body of Men, however considerable, can have a Right to any Thing that is either dangerous or destructive to the Nation.

Yet the Answer I depend upon is this, That in such a Case, Expedients are to be sought for that may reconcile the Interests of the Company to those of the Nation; neither will it be difficult to find such Expedients, for when such a Trade shall be found beneficial, Care may be then taken, first to fix it by a Treaty of Commerce, and then the Benefit of that Treaty may be made over to the Company, provided always due Care be taken that this Privilege shall not be abused, or so managed, as to turn to the Emolument of that Company, and the Prejudice of the Publick.

Thus I have taken the Liberty of discussing this Matter thoroughly, not from any presumptuous Opinion of my own Judgment, or from a Desire of dictating in a Matter of so high Importance, but merely because I think any Man may speak and write freely as to a Case that he thinks may happen, and which others, who are perhaps wiser than he, will conclude may never happen. One of the most judicious Historians of Antiquity thought his Time not thrown away in examining a Matter still more chimerical than this, which was, Whether *Alexander the Great* would have succeeded, if he had attempted to subdue the *Romans*? Some great Criticks have imagined, that all he meant was to pay a Compliment to his Countrymen. I should be glad to have the same mild Censure fall for the present upon this Discourse, in which I think it is most evident that I can have no private Views, and therefore hope it will be no inexcusable Piece of Vanity, if I flatter my self upon this Occasion, with, having thought for the Publick.

If after all I have said, it should fall out that nothing of this Kind ever happens, why then it is plain, that whatever I have advanced can do no Hurt. But if, on the other Hand, my Conjectures should happen to hit the Mark, or even to come near it, no body will deny, that the previous Consideration of the Subject may be of Use; for these Arguments, how little Authority soever they may derive from their Author, must necessarily carry with them this Weight, that they proceeded purely from a Spirit of Reasoning, and were not dictated from any particular, private, or selfish Consideration. I must also desire it may be remember'd, that I have already consider'd the Point of securing, improving and promoting our *East India* Trade in many other Lights, which evidently shews my sincere Desire that we may avail ourselves of our own Skill, our own Lights, our own Naval Power, and our present Circumstances, rather than wait, till by our Indolence and Neglect we come to fall under the Necessity of being some way beholden to others. Until such Time as this shall become the Case, there is no Need of recurring to this System; but if ever it should become the Case, there will be no Harm in having this System recur

recur to, and in all Probability it will not then be thought a Crime that such Notions as these, once upon a Time, enter'd into a speculative Head, for the Benefit of those who confine their Thoughts intirely to Things present, and care not to look forward into Futurity, or to trouble themselves with contriving Schemes for the Service of Posterity.

However I shall conclude this Section, with a full Proof, that I am far enough from being bigotted to any System of my own. For after all that has been advanced from Matters of Fact, from the Consideration of *Behring's* Discoveries, from the Hints that we have received of subsequent Discoveries, and from the Consequences that we might rationally conclude may attend them, it must be acknowledged, that if we continue to prosecute that Design, which is the Glory of the present Times; I mean, the endeavouring to discover a North-west Passage, we shall infallibly deliver ourselves from all Apprehensions of seeing either the *East* or the *West-India* Trade ingrossed by any other Nation, but on the contrary, may have well grounded Hopes of extending our Commerce, and preserving our naval Power to the latest Times, and as long as we shall continue a Nation.

That there have been probable Motives to establish the Belief, and consequently to encourage our Endeavours for finding out a North-west Passage, I have shewn at large in its proper Place, have occasionally insisted upon them elsewhere, and particularly in this very Section; that all the Disappointments we have hitherto met with, ought not to destroy this Belief, or deter us from carrying our Enquiries as far as they will go, has I think been very clearly made out by others; but whether all that has been done and written upon this Subject, will be sufficient to keep up that Spirit, which in the End must bring this long-hid Secret to light, is in the Womb of Time. However, as no Man wishes more to see it disclosed, or has done more within the narrow Sphere of his Capacity towards the promoting of it, without any Motive of Interest than myself; I cannot but think it my Duty, though it may seem a little out of the ordinary Manner of Writing, to finish this Section, by giving the Reader notice of some new Arguments, perswading the Possibility, Probability, and Reality of this North-west Passage.

For who can tell into what Hands this Book may fall? Part of it has already travelled to the last discovered Parts of *Hudson's Bay*, and served for an agreeable and not useless Companion to the Gentleman who carried it. It may be, that what I have farther to say, will be no less fortunate, perhaps more so, for what is there impossible, in supposing it may amuse the leisure Hours of him, who is so lucky as to make the Discovery? At least this I will hope, and in the Warmth of that Hope, set down those Reasons, that, to the best of my Knowledge, have, in the long Course of this Dispute been wholly omitted.

To begin then with an Argument of the Possibility of such a Passage, that learned Naturalist, and most candid Enquirer after whatever had any Relation to rational Cosmography, Mr. *Ray*, in his excellent Discourse upon the Deluge, assures us, that *East-India* Fruits have been found washed on Shore, on the North-west Islands of *Scotland*. Now if this be a Fact, as I believe indisputable Evidence might be brought to prove it such, then I presume, it may be stil'd an Argument for the Possibility at least of such a Passage. Whoever considers how reasonable and how natural it is to suppose, that these Fruits, of whatever Kind they be, are washed from the nearest *Indian* Coasts, to that upon which they are found, will readily confess, that a North-west Passage is the most likely Way for them to come. If we should suppose that many Islands, great and small, are scattered in the Space between *America* and *Asia*, then it might be more probable, because such Fruits might be presumed to grow in those Islands, and being driven to the Coasts of *California*, be forced by the high Tides that are now known to flow there into the Passage, and so round to the North-west Islands before-mentioned.

I treat this as an Argument of the Possibility only of such a Passage, because there are other Ways, by which these Fruits may be supposed to come; but then there are infinitely greater Difficulties that lie in the Way of supposing other Passages than can be possibly objected to this. I will name only one. There can be no Reason in the World assigned, if they come by any other Passage than this, of the North-west why they should not be found in other Places, and that in the same Plenty, or rather more so, than in these Islands of *Scotland*, which is however a Fact, that I never heard so much as pretended. But be that as it will, and allowing that there are other Passages by which they may come, it is at most but possible they should come by these Passages, and I think no Man that is a Judge of the Subject, will deny, that till we have full Evidence of there being no such Thing as a North-west Passage, it is likewise possible they may come that Way. Now though in itself, this is no very weighty Argument, yet in Conjunction with others it may become so; for in all Enquiries of this Nature, the first Step in the most regular and certain Method, is to prove that the Thing sought for is possible, and the next, that it is probable.

In Reference to this also, I think, I can offer another Argument, that is in a good Measure new, and it is this. The most judicious Cosmographers are unanimously of Opinion, from the wise Distribution of Land and Water, in the Structure of this Globe, that not only the Centre of Motion, and the Center of Gravity, but the Center of Magnitude also is very nearly the same, and consequently that the Center of the Convex Superficies of the Sea is the true Center of the whole terrestrial Sphere. It was from this Argument, that before any Discovery was made of a Southern Continent, of which a large Account has been given in the former Volume, it was judged highly probable, that such a Continent there might be, and as we now very well know, that such a Continent there is, it certainly adds both Weight and Strength to this Way of Reasoning.

Before it was known that the Continent of *Asia* extended so very far to the North-east, we might with equal Probability have conjectured, that either it really was so, or that the Continent of *America* projected very far to the West, in order to form a due Proportion between Land and Sea. But now that the Thing is put out of Dispute, on one Side, and we have all the Certainty that can be desired, that the North-East Continent of *Asia*, extends above thirty Degrees of Longitude into the other Hemisphere, there is the highest Probability, that the Balance of Sea is preserved on the *American* Side, and that there is no such projecting of that Continent, as till this Discovery was made, might with equal Reason have been presumed. From this Consideration therefore, one hath as good Cause, as the Nature of the Thing will allow, to assert, that the Space between *America* and *Asia* is chiefly Sea, as we actually know it to be, between *America* and *Europe*, on the other Side.

This will appear still the more probable, if we consider the vast Breadth of *America* from the Coasts of *Canada*, or of *Hudson's Bay*, to *California*, and how strangely disproportionate this would be, if the Continent should be still extended farther on that Side towards *Asia*. I cannot tell what Degree of Evidence this may carry to other People, but I confess, it weighs very much with me, and I flatter myself, that whoever will seriously consider the Figure of the Globe, with the new Discoveries of the *Russians* properly laid down thereon, will incline to think as I do, and see plainly, that the Supposition of such an extended Continent would in a great Measure destroy that Proportion between Land and Sea, which, for the Causes before assigned, we have the greatest Reason to believe should be always preserved. If therefore this be so, it cannot be thought, that I carry Things too far, in alledging that this is a probable Argument in Favour of a North-west Passage.

To this I beg Leave to add another Consideration, which will carry the Thing much farther. The greatest Philosophers have differed, at least heretofore, about the Origin of Rivers; but in this I think they all agree, that as Rivers fall at length into the Sea, so from thence they are in a great Measure derived, whether by secret or subterraneous Passages, and the Percolation of Waters through the Earth, by the condensing of Vapours, or the falling of Rain. I say, which ever of these Ways we suppose Springs, Fountains, and Rivers, to arise, or by a Conjunction of them all, still the Vicinity of the Sea is necessary; and it is observed, that the Size of Rivers depends, in a great Measure upon the Extent of the Country thro' which they run, and of the Disposition of the Seas in respect to that Country of which *America* is a very pregnant Instance, for that Continent having a vast Ocean on each Side the *American* Rivers, are the largest in the World.

If therefore the Continent of *America* should be so extended as to join to that Land which was lately seen by Captain *Bebring*, and before him by others, it would not be easy to conceive how such a Continent as this should be furnished, in any Proportion, with Rivers, in as much as there would be but a narrow Sea between that and *Asia*, and its Distance from those that we stile the North-Seas, would be prodigiously great. But if the Case, as I suppose it to be, is quite otherwise, and the Space between the two Continents is a great Ocean, interspers'd with Islands of different Sizes, then the Disposition of this Part of the Globe will correspond perfectly well with the Disposition of other Parts, and these Countries may be at once as rich, as beautiful, and as pleasant, as any that are hitherto known, either in the Old World, or in the New.

Thus I have assigned two probable Reasons in Favour of this Passage, or rather, I have supported one good Argument by another; for in Reality, this second Reason is no more than assigning the Reason of the first. When we say that the Globe is so disposed as to form a Ballance between Land and Sea, because this seems to be necessary, or at least expedient to preserve the Equability of the Earth's diurnal Motion, we give a Reason that respects the World in general; but when we say that Continents must be of a moderate Size, in order to render them convenient Habitations for Men, we give a Reason that accords to, and agrees with every known Portion of the Globe, and consequently is more capable of being thoroughly examined and perfectly understood. I might add to this, as perfectly consistent and agreeable to my Notions, the Observations made by those who were last sent to discover in *Hudson's-Bay*; who finding the Rivers there short in their Course, and of no great Breadth, very judiciously concluded that the Country could not be very broad, or the Rivers of a greater Length that fell into the *South-Sea*. I say, I might insist upon this, but as I have promised to dwell only upon new Arguments, I shall content my self with the bare Mention of it.

From possible and probable Arguments, we will proceed, with the Reader's Permission, to such as actually prove a Passage, for such there are, and those likewise new, and hitherto not insisted upon. It was long ago observed, that the Tides in the Northern Parts of *Hudson's-Bay* were so high, as put it out of Doubt that they could not be propagated from the *Atlantick* Ocean; it was then pretended by those who opposed the Sentiment of there being a North-west Passage; that these extraordinary Tides were raised from a Communication with *Baffin's Bay* and *Davis's Streights*; in Answer to which, it has been shewn, that the Tide in the *Welcome* rose 17 Feet, and not above 9 Feet in *Davis's Streights*; from whence it is justly concluded, that supposing such a Communication, it would by no Means prove what it is brought to prove, because the Effect would be then superior to what is supposed to produce it.

Thus, I say, the Case has hitherto stood in reference to the several Opinions that have been advanced upon this Subject. For my Part, upon mature Deliberation, I am inclined to a Sentiment different from all these;

for I think that there is a Communication between *Hudson's-Bay* and *Davis's Streights*, and that the Height of the Tides in the latter is not otherwise to be accounted for, than by allowing a free Passage into the *South-Seas* near the *Welcome*. I shall endeavour to prove this to such as are Judges of the Thing, and well acquainted with the Facts, in very few Words. Captain *Baffin*, in his Letter to Sir *John Wolstenholme*, observes, that the Tides in *Davis's Streights* keep an equal Course, and rise to about eight or nine Feet. Now this being the Fact, I say it is impossible that this Tide should come from the *Atlantick* Ocean; for at *Cary Swan's Nest* it rises but six Feet, and therefore in *Davis's Streights* ought not to rise above three or four. Neither is it at all likely that it should come from any Northern Ocean; for upon the Coast of *Nova Zembla* the Tide rises but one Fathom, or six Feet, and not above half so high at *Spitzbergen*.

This equal and regular Tide therefore up *Davis's Streights*, declining gradually till it rises only a single Foot in *Baffin's Bay*, is as much out of the ordinary Course of Things, as the high Tides in the *Welcome*. As therefore such extraordinary Effects must have a proportionable Cause, and as we have hitherto looked on every Side for such a Cause in vain, it remains that a Passage by the North-west into the *South-Sea*, is that Cause, for that will fully and perfectly account for both these Appearances. It ought, according to the known Law of Tides, to make them in the *Welcome* at the Time in which they are found to rise, and if they are propagated from *Hudson's-Bay* by any Communication into *Davis's Streights*, they may very well enter from the Southward, that is, through some Passage on the West-side of *Davis's Streights*, and ought to rise and to decrease in the very Manner which they are found to do; and if this will not pass for an actual Proof of a North-west Passage, I am at least intitled to expect from him who denies it, to give a more satisfactory Account than I have done, of the Tides both in the *Welcome* and in *Davis's Streights*, for till this is done, I shall continue to look upon this Argument as unanswerable.

As to the common Affectation of treating this Matter as a Chimera, and behaving towards those who think it otherwise, as if they were either very credulous or visionary People, ready to rely upon any Authority, or apt to be led away by whatever has so much as the Appearance of an Argument. I must say, that it is either an insolent, or disingenuous Way of treating them. Insolent, if it comes from those who have not ever looked into the Merits of the Cause, or are not competent Judges if they have; or disingenuous, if being competent Judges, they haughtily reject an Opinion supported by strong Reasons, without deigning to refute those Reasons, which they ought to do if they are able, and if they are not able, they ought to confess it.

But I now hasten to a Conclusion, and so to leave the Reader in Possession of all the Arguments that I can offer him in Support of this, which I am not ashamed to own, is a favourite Opinion, because I look upon it as equally tending to promote the Honour of Science, the Welfare of Mankind, the Extension of Commerce in general, as well as the Glory and Good of this Country in particular. How far soever this latter Consideration may move us, who have, or ought to have, an extraordinary Zeal for whatever may turn to the Benefit of the Place of our Birth, yet I presume it cannot be supposed that foreign Writers can lie under any Influence or Bias of this Kind, and therefore I shall crave Leave to mention a very singular Matter of Fact, inserted by the very curious, and no less learned Father *Charlevoix*, in his Chronological Series of Discoveries, prefixed to the first Volume of his History and Description of *Japan*; in which he tells us, that in the Year 1609, he has read in some Memoirs, that a certain Ship sailing from the Port of *Acapulco*, in the Kingdom of *New Spain*, in order to proceed in the usual Course to the *Manilas*, being an annual Ship, was surprized almost as soon as she was out of Port by a Tempest, that

that lasted long, and with such Violence, that her Crew were forced to give her up to the Mercy of the Winds, which in two Months Time brought her upon the Coast of *Ireland*, and into the Harbour of *Dublin*; from whence she safely returned to *Lisbon*, where, by Order of the King of *Spain*, all the Pilots Journals were taken from them and burnt, in order to prevent Strangers from becoming acquainted with so short a Cut into the *South-Seas*. I have not added or altered, magnified or diminished this Relation in the least, but have reported it exactly as I find it in my Author.

It is indeed to be wish'd, that we had a better Account of the Memoirs from which this Fact was taken, because in them, perhaps, there might be other Circumstances worth knowing, and which might be of Use to fix the Matter of Fact beyond Dispute. In the mean time I must observe, that this has no Correspondence whatever with the Relations heretofore published of Persons who have made that Passage. The *Portuguese* Pilot *Martin Chacke*, who published in 1573, an Account of his Return from the *East Indies*, through the same Passage to *Ireland*, from whence he went to *Lisbon*, places his Voyage in the Year 1567, and therefore it is absolutely impossible that these two Voyages should be confounded, as at first Sight might be imagined, from the Circumstance of their both putting into *Ireland*, and returning from thence to *Lisbon*; on which, for the Reader's Satisfaction, it may not be amiss to insist a little farther.

In the first Place, There is a very wide Difference in the Place from which the Ships sailed, the former from the *East Indies*, the latter from the *West*; the Size of the Ships also are very different; the *Portuguese* Vessel was of the Burthen only of 80 Tons; the *Acapulco* Ship near ten times as big; the *Portuguese* Pilot sailed in Company with four Ships of very large Burthen for *Europe*; the *Spanish* Ship sailed alone for the *East-Indies*; the *Portuguese* did not put into *Dublin*, but into a Port on the North-west of *Ireland*, from whence he returned to *Lisbon* a Month or five Weeks before the other Ships in Company with which he sailed from the *East Indies*: And besides the great Difference in Point of Time, which is no less than two and forty Years, it is very remarkable, that the *Portuguese* Pilot returned home, and published his Book under the Reign of *Don Sebastian*, King of *Portugal*; whereas at the Time the *Spanish* Ship arrived at *Lisbon*, the Kingdom of *Portugal* was under the Power of the Crown of *Spain*; of all which Circumstances the Reader may be convinced, by comparing this Relation with the Certificate relating to the *Portuguese* Voyage, inserted in this Volume, Page 401.

I must further observe, that if there be a North-west Passage, there is nothing incredible in the Voyage being performed in so small a Time; for from the *Welcome* in *Hudson's-Bay* to *Ireland*, is a Voyage only of three Weeks; and if there be a Passage, the like Time might have sufficed for their coming through it from *Acapulco*. I might take Occasion to add to this, what is mentioned by that great Mathematician Mr. *Henry Briggs*, of a *Spanish* Captain reported to have sailed this Way to the *Moluccas*, in the Service of the Emperor *Charles V.*; but, as I am persuaded, that he only made such an Offer, and did not really attempt to perform it, I shall say no more of it. Upon the whole, having shewn the Possibility, Probability, and Reality of such a Passage, by Arguments as conclusive as the Nature of the Thing either require or will admit, I have Nothing more to add but my good Wishes, that the Spirit lately raised for Discovery may not be allowed to sink, or the Light we have already obtained be left to extinguish, before this Matter be prosecuted to the utmost Extent, and all the Places thoroughly searched, where, with any Degree of Probability, such a Passage may be look'd for. The Success of such an Undertaking would indeed contribute effectually to raise our Hopes, and efface our Apprehensions, by opening not only a new, short and easy, but a commodious, pleasant, and wholesome Passage to the *East Indies*, which would at once contribute to encourage and promote our Industry at Home, and

extend our Commerce abroad, as well as increase our Shipping, and improve our Navigation.

Besides all this, we have great Reason to hope, that so fortunate an Enterprize would recover us out of that State of Supineness and Luxury into which we are fallen, and inspire us with a noble Desire of transmitting Wealth and Reputation to our Posterity, rather than live as we do at present upon the Riches derived to us from our Ancestors, and the Credit that their known Success in Trade has given us with all our Neighbours. These are Considerations truly important, such as ought to make Impression on the Minds of all who have the Interest of their Country at Heart, who wish to see her thrive beyond, and yet not at the Expence of other *European* Nations. These are Considerations that relate alike to all Ranks and Degrees of People, because all Ranks and Degrees will receive Benefit from it, if properly weighed, carefully attended to, and push'd with Spirit and Success, these Considerations would lead to the only effectual Methods of repairing past Mistakes, and opening a wide Prospect to future Advantages, the Consequences of them would speedily enable us to discharge our Debts, and thereby afford the Means of taking off our Taxes; they would also extinguish Party Animosities, dissipate Faction, and by opening suitable Employment to every different Genius, afford a proper Scene of Action to all, without giving Disturbance to any.

It may be therefore justly presumed, that those whose peculiar Interest it is that their Countrymen may be made rich and happy by their Wisdom and Care, and transmit the Memory of their glorious Administration to latest Times, will have a just Regard to whatever hath a Tendency to promote such a Disposition as this, which is always necessary, and which, however, may be said to be more especially necessary at this Juncture, when we receive repeated Accounts of the Pains, every where taken, to point out the Benefits of Discovery, to magnify the Advantages of Commerce, and to kindle a Spirit of Industry amongst those who have been remarkable for the Want of it through a long Series of Ages. How possible it is to enlighten even the cloudiest Heads, how practicable to warm even the coldest Mind; and how soon such an heroick Flame gathers Force and Strength enough to carry all before it, the former Part of this Section has fully demonstrated. Neither would it be near so hard a Task to shew how easily Commerce may decline, how certainly Virtue may wear out, and how speedily Frugality and Industry may decay, if not warm'd and cherish'd by proper Attention and due Encouragement, which are full as requisite to preserve them as Food to Animals, Fuel to Fire, or Exercise to Health.

Thus after a long but not unpleasant Excursion, I return again to my Subject, and having largely shewn when and how the first Notions of Discovery rose, and how they have been conducted in *Muscovy*, by what Hopes they have been promoted, how far they have been carried, what they have really brought to Light, what lies within, and what without their Reach, why they have been so much retarded, whence, at other times they have been advanced, what Improvements are practicable, and what Schemes of Extention are at Bottom but Chimeras; where the Assistance of their Government may be applied with Effect, and where all the Force that could be exerted would fail, what other Nations have to apprehend from this new Turn of their Temper, how probable it is that we are not amongst the Number; and that on the contrary, we might share in whatever Profits they obtain; I have, last of all, set before the Reader, the only Means of anticipating their Views, by bringing the Riches of both the *Indies*, by a shorter Route to all the Markets in *Europe*, than they can pretend to do, even if all their Efforts, should be crowned with all the Success they can wish; yet be it far from me to mingle with these Reflections any Spirit of Peevishness, Prejudice or Partiality; they have a Right, no doubt, to all the Acquisitions they can make, but then we have the same. I repine not at their Power, their Projects, or their Progress; all I aim at, is to make a right Use of their Example, in order to hinder my Countrymen from changing Place with the *Russians*.

C O N C L U S I O N.

A retrospective View of this whole Collection, in which its particular Advantages are explained, and an Account given of the Uses to which the Contents may be applied.

I. *A general View of the whole Work, its End and Intention, and a Method proposed for discovering how far this has been answered, not only in the Gross, but in every Part separately, throughout the Performance, as a Key to the Uses of the Book.* II. *The Plan of the History of the Circumnavigators, intirely new, and absolutely comprehensive; Advantages derived from that History thus chronologically digested; and the Reasons for rejecting two Works, that seem at first Sight to come within the Plan.* III. *The Scheme of the History of the East-Indies, briefly and fully represented; the Probability of a late Suggestion, that the Arabians first opened this Commerce, shewn, and a short Review of the Principal Points regarding the Commerce of the Ancients in the East.* IV. *The Uses that may be drawn from this regular Series, how they contribute to fix the Excellencies and Deficiencies of the Ancients compared with the Moderns; together with a curious Remark as to the Riches of Spain in ancient Times.* V. *The Care taken to relieve the Reader's Attention, by interspersing the Description, Natural History, and most remarkable Curiosities of those famous Countries; the Benefits resulting from that Method, and the great Help it affords of bringing much useful Knowledge within a little Room.* VI. *The Manner in which the History of Commerce is pursued after the Declension of the Roman Empire, and the sinking of that of Constantinople; Digression as to the Rise, Progress, and Decay, of the Republicks of Venice and Genoa; and Remarks on their present State.* VII. *How the modern History of the East-Indies is conducted; the Rules by which the Choice of Materials has been made; Difficulties and Deficiencies common amongst our latest Writers; what might be reasonably expected from them, and an Example given of the right Method of reporting Facts.* VIII. *A succinct View of the Uses arising from the Matters treated of in the first Volume, to Persons in different Ranks and Stations, and a political Disquisition as to their Importance to the Nation in general, more especially at this critical Conjuncture, when so many Attempts are making in all Parts of Europe for erecting new Companies to trade to the East-Indies.* IX. *A Review of the second Volume of this Collection, in which is first shewn what was proposed in treating so particularly the Discovery, Conquests, and Settlements made by the Spaniards in America.* X. *A short Representation of the Use of our History of the subduing the Empire of Peru, the surprizing Boldness and amazing Success of that Attempt, with the famous Sir William Temple's admirable Survey of the Laws and Government of the Ynca's, the old Sovereigns of Peru.* XI. *The Manner in which the other European Settlements in America are treated, more especially those of the English and French, with an Acknowledgment of Communications receiv'd, and Approbation shewn of this Part of the Work, and an Apology for some Freedoms taken therein.* XII. *The Contents of the second Book explained, the Rules established in selecting the Voyages and Travels necessary to give a competent Idea of the Northern Parts of the Globe in general, and of the particular Countries in Europe, and the Reasons of those Rules set in a clear Light.* XIII. *The Scope of the third Book, and a distinct Detail of the several Pieces that regard the Description, History, and Commercial Concerns of the Asiatick Empires; the Authorities on which they are founded, the Motives on which they were admitted, and the Means of applying them so as to answer the great End of this Collection.*

I. **W**E are now arrived at the Close of a very large Work, undertaken upon a Plan more regular, and of far larger Extent than was ever proposed, either in our own, or any other Language; and of the Execution of which many have despaired in the Progress of its Publication; but by the Blessing of God it is now finished, and finished with the very same Spirit with which it was begun; for I am persuaded, the most critical Reader will allow there has been as much Pains taken with the last Section, as with any in the whole Collection. What now remains, is to cast our Eye back a little, in order to discover what all this Enquiry, Labour, and Expectation, has produced.

A large Work of this Kind may be very well compared to a publick Structure erected for the Service of Society, as well as at the common Expence, and of the Value of which we may, with tolerable Certainty judge, by considering the Scheme or Ground-plot, that is to say, the Plan upon which it was erected, the End proposed by it, and the particular Advantage that every Peruser may expect from it. With regard to the original Scheme, there were never many Objections made to it, except that the Bounds were too large, the Materials hard to be acquired, and the Labour of putting them together a Thing scarce to be effected; so that speaking with Propriety, these could not be said to re-

late to the Work, but to the conducting of it; and our Business here is not to say only, but to prove, that if the Outlines were drawn as they ought to be, the Edifice has been finished according to the Draught.

The great End proposed, was reducing within a tolerable Compass the Substance of a Multitude of Books, well written upon useful Subjects, in order to render them thereby more easily purchased and read. Now it is hoped that this has been also done in as great a Degree as the Size of this Collection, and it is no small one, would permit; and that due Care has been taken to make such a Choice of our Materials, as that by the Perusal of this single Book, the Reader may acquire the practical Knowledge of Cosmography, obtain a perfect Notion of the Situation of different Countries in all Parts of the Globe, together with their Relation to, and Distance from all other Countries, the Manner of their Correspondence, the Commodities furnished, and those wanted by them.

In reference to the more particular and immediate Business of the *English* Reader, which we may suppose to respect the Interest and Commerce of his own Country, it may with great Truth be affirmed, that so much upon that Subject, and that too in so many different Lights, is not to be met with elsewhere, since within the Compass of this Collection lies all that has occurred within the Space of twenty Years, to one who has had his

his Head ever turned that Way, and has likewise had it no less at Heart, which will appear particularly from his never espousing the Cause of any Party, but regarding the Independency, commercial Concerns, and Naval Power of *Great-Britain*, as her most essential Interests, which, if well minded, all other incidental Matters will fall in happily of Course. Thus much as to the Work in general; we will next consider the Parts of which it is composed, from whence its Correspondence with the Plan proposed will manifestly appear.

II. The first Thing designed and executed, was the History of the *Circumnavigators*, which the best Judges of Works of this Kind had always represented as equally important and necessary; so that it had been greatly desired, often attempted, but never in its full Extent performed, in any Collection extant in any Language, which was owing to certain Difficulties that are occasionally taken Notice of in the Progress of that Part of the Book, and therefore not necessary to be repeated here. It is sufficient to observe, that this History is absolutely compleat, and that all the *Circumnavigations* in the Space of 225 Years, are particularly, circumstantially, and impartially written.

The Merit of first forming this Design of sailing round the Globe, is justly attributed to the great *Columbus*, and it is fully shewn, that to him of right it belongs, tho' he was not so fortunate, tho' very fortunate in other Respects, as to execute it. The Reasons that induced him to think it practicable, and the Motives that lead him to attempt it, are fully explained from the most authentick Memoirs, and the Obligations which Mankind owe him in that Respect, are set in a true Light. The particular Advantages arising from the Discoveries made by each of the *Circumnavigators* are constantly attended to, and from thence the gradual Extension of Commerce, and with it our most perfect Acquaintance with the Situation of the different Parts of the Globe, are manifestly shewn. But as it fell out that various of these Discoveries, which were only touched upon in these general Voyages, afforded afterwards Occasion to closer Enquiries, and more distinct Description of Countries very far distant, by particular Expeditions undertaken with that View, the most accurate and considerable of those Expeditions are thrown in as Appendices in their proper Places, to render the great Point in View as clear and as perspicuous as it was possible, so as that the Reader may be perfectly informed of what has been found, what there is good Reason to believe may be found, and what still remains absolutely unsurveyed and unknown.

In some Cases, the Memoirs of *Circumnavigators* were so involved and confused, that their Names were ever hardly heard of as such; as for Instance, the Officers in the *Nassau* Fleet, that sailed from *Holland* in the Year 1623, and Captain *John Clipperton*, who sailed from *Plymouth* in the Year 1719, these we have drawn out of the dark, assembled all the Circumstances relating to them, the best we could, and have given them as entire as it was possible, under such Difficulties, to collect them. As for the Voyage of *Commodore Roggewein*, which, take it altogether, is one of the most entertaining, curious and instructive Pieces that was ever published, it never appeared in our Language till now, and never in any Language so fully as in this Collection, as we had an Opportunity of consulting a very candid and knowing Person, who made that Voyage upon every Part of it, and who was very desirous that the Publick should receive as ample an Account of it as possible.

We have likewise given, so far as was necessary, and so far as we could come at, with any Degree of Certainty, the principal Points of the personal Histories of all the *Circumnavigators*, which cannot but be very satisfactory to the inquisitive and judicious Reader, since there is nothing so natural as to desire to know, what became of a Man who so remarkably distinguished himself as by conducting an Expedition of this Sort, of which there have not been more than fifteen in the whole, from that of *Ferdinand Magellan*, who sailed from *Seville* in *Spain*, August 10, 1519. to that of the

present Lord *Anson*, who sailed from *St. Hellens*, September 18, 1740.

The Disposition of all these Voyages, in their regular and natural Order, renders them infinitely more useful, than when read separately, as they reflect reciprocal Lights upon each other, and at the same Time afford an Opportunity of throwing out many needless and useless Repetitions. It was upon these Principles that two Pieces, which from their Titles might seem to claim a Right of being considered in that Part of our Work, were, after mature Deliberation, rejected.

The first of these is the Voyages and Travels of Dr. *Gemelli Carreri*, a very large Work, already translated into our Language; so that the judicious Reader will easily judge of the Solidity of those Arguments upon which it was left out. In the first Place, what-ever the Title Page may say, this cannot, strictly speaking, be considered as a Circumnavigation, since the Author went from Place to Place by Land, and embarked as his Occasions required, or his Inclinations led him, aboard several Vessels which carried him from Port to Port, and the Sum total of these Travels and Voyages, is what he is pleased to call a Tour round the World. All our *Circumnavigators* were other Sort of Men, and made their respective Voyages on board the Vessels they commanded, or of which they had the Direction, so that each Account is the History of a distinct Expedition, and not a Detail of Adventures by Land and Sea. In the next place, the Doctor is a very voluminous Writer, and takes in such a Variety of Matter, beyond what it was possible should fall under his own immediate Knowledge and Inspection, as render'd his Performance very improper to be ranged with those in which there is little or nothing related but from the Authority of Eye Witnesses. Lastly it has been asserted by Authors worthy of Credit, who inquired upon the Spot in *China*, more especially, as to the Opportunity the Doctor had of seeing those Things which he relates, as very particularly examined by himself, that they were thoroughly informed that he took them upon Trust. Besides, there is Nothing to be met with in all his large Work, which is not to be found in this Collection, digested in its proper Place, from the Memoirs of Authors of undisputed Credit.

The other Piece is in *French*, written by Mr. *de la Barbinais le Gentil*, and printed at *Paris* in 1728. The Author embarked at a *French* Port, and in a *French* Vessel, August 20, 1714, but for some Reasons which he does not disclose, he conceals both the Name of the Port, and of the Vessel. He proceeded to *Chili*, and after making some Stay in *South America*, embarked on board another Vessel, in which he went to the Port of *Amoy* in *China*, from whence he returned into *Europe* in the Year 1718, touching by the Way at the *Brazils*. The whole of this Relation is digested into fifteen Letters, written in a very pleasant and entertaining Style, agreeable to the Design of the Author, who travelled only out of Curiosity, and of which we have made the best Use we were able, by extracting every Thing that is curious, and inserting it in the Accounts we have given of *Chili*, *Peru*, *China*, and the *Brazils*, which appeared to be more suitable to the Nature of our Design, than making a professed Translation of a Piece, which the Author himself acknowledges to be made up of occasional Remarks and cursory Observations; which he thinks is a sufficient Reason for its being defective in other Points, that had however been absolutely necessary to intitle him to the Honour of being a *Circumnavigator*, in the strict and proper Sense of the Word.

There is no Doubt, that after all much is wanting to render this Kind of History compleat; but to make it absolutely perfect, future Discoveries must contribute; and there is no Doubt that *Circumnavigations* by new Routes, that is, by the North-east and North-west Passages, will afford a noble Supplement to what has been already done. Yet the most important, the most curious, and the most entertaining Circumnavigation would be through both those Passages, for we should

then have a distinct Account of the Countries that lie between *Asia* and *America*, with which the Inhabitants of *Europe* are most desirous of being acquainted, and towards obtaining of which we have done all that lies in our Power, by labouring to shew, that such a Circumnavigation is not either impossible or impracticable, notwithstanding what has been alledged by some very understanding Persons to the contrary.

III. The Plan upon which the *HISTORY of the Commerce of the INDIES* is written, the Publick must be satisfied is entirely new; and as it is very extensive, taking in the Accounts of the remotest Antiquity; so, upon reviewing it, there appears to be some Room for Emendation. There is not the least Doubt to be made, that the first Mention we have of *Indian* Commodities, is the Traffick carried on in *Spices* by the *Idumeans*; and we have said in general Terms, that they carried on a Trade with *Arabia*, *Persia*, and *India*, from which we have no Reason to depart; but perhaps that Matter is not quite so clearly explained as it might be, and as the best Lights that can be obtained from History confirm it, so there is much Probability in the Conjectures offered upon this Subject, since the Publication of this Work, that the first Traders by Sea in the World were the *Arabians*. We will therefore lay hold of this Opportunity of inserting a very curious Passage from a late Treatise on Trade and Commerce, which will very much illustrate, though it does not in the least contradict what is advanced in the third Section of the second Chapter of our first Book; that Passage runs thus:

"It is a Point as yet undecided by the Learned, to what Nation the Invention and first Use of Commerce belonged; some attribute it to one People, some to another, for Reasons that are too long to be discussed here. But after mature Reflection, I must confess it seems most probable to me, that the Inhabitants of *Arabia* were those that first made long Voyages. It must be allow'd, that no Country was so happily seated for this Purpose as that which they inhabited, being a *Peninsula* washed on three Sides by three famous Seas, the *Arabian*, *Indian* and *Persian*. It is also certain, that it was very early inhabited, and the first Notice we have of any considerable Trade, refers it to the *Ismaelites*, who were settled in the higher Part of *Arabia*. To them *Joseph* was sold by his Brethren when they were going down with their Camels to *Egypt* with Spicery, Balm and Myrrh.

"It may seem strange to infer from hence, that Commerce was already practised by this Nation, since Mention is here made of Camels, or a Caravan, which certainly implies an Inland Trade; and it must be likewise allowed, that Balm and Myrrh were the Commodities of their Country. But whence had they the Spicery? Or how came *Arabia* to be so famous in ancient Times for Spices? Or whence proceeded that Mistake of many great Authors of Antiquity, that Spices actually grew there? Most certainly because these People dealt in them, and that they dealt in them the first of any Nation that we know of, appears from this very Instance: *Strabo*, and many other good Authors, assure us, that in succeeding Times they were very great Traders; they tell us particularly what Ports they had, what prodigious Magazines they kept of the richest Kinds of Goods; what wonderful Wealth they obtained; in what prodigious Magnificence they lived; and into what Excesses they fell, in respect to their Expences, for Carving, Building, and Statues. All this shews that they were very great Traders; and it also shews that they traded to the *East-Indies*, for from thence only they could have their Spices, their rich Gums, their sweet-scented Woods, and their Ivory, all which it is expressly said that they had in the greatest Abundance. This therefore proves they had an extensive and flourishing Commerce, and that they had it earlier than any other Nation, seems to me evident from their dealing at that Time in Spices.

"Besides, there is much less Difficulty in supposing that they first discovered the Route to the *Indies*, than

"if we ascribe that Discovery to any other Nation; for, in the first place, they lay nearest, and in the next, they lay most conveniently; to which we may add, Thirdly, That as the Situation of their Country naturally inclined them to Navigation; so by the Help of the *Monsoons*, they might make regular Voyages to and from the *Indies*, with great Facility; nor is it at all unlikely that this Discovery might be at first owing to Chance, and so some of their Vessels being blown by a strong Gale to the opposite Coast, from whence they might take the Courage to return, by observing the Regularity of the Winds at certain Seasons. All these Reasons taken together, seem to favour this Opinion, that Commerce flourished first among them; and as to its Consequences in making them rich and happy, there is no Dispute about them.

The same Author having mentioned the *Phenicians* in Terms perfectly agreeable to what we have said of them, proceeds to shew what Uses were made of their great maritime Skill by *Solomon*, and takes Occasion from thence to confirm what he had before advanced in reference to the *Arabians*; the Passage is not long, and withal equally curious and instructive, it runs thus: "It is very certain, that *Solomon* made use of their Assistance in equipping his Fleets at *Elatb* and *Ezion Geber*, and it is very probable that they put him upon acquiring those Ports, and gave him the first Hints of the amazing Advantages that might be derived from the Possession of them, and from the Commerce he might from thence be able to carry on. These Ports were most commodiously situated on the *Arabian* Gulph, and from thence his Vessels, manned chiefly by *Phenicians*, sailed to *Ophir* and *Tharsis*, where-ever those Places were. Some Writers will needs have them to be *Mexico* and *Peru*, which is certainly a wild and extravagant Supposition; others believe, that we are to look for *Ophir* on the Coast of *Africa*, and *Tharsis* in *Spain*; but the most probable Opinion is, that they were both seated in the *East Indies*.

"By this adventurous Navigation he brought into his Country, Curiosities not only unseen, but unheard of before, and Riches in such Abundance, that as the Scripture finely expresses it, He made Silver in *Jerusalem* as Stones, and Cedar Trees as Sycamores that grow in the Plains. The Metaphor is very bold and emphatical; but when we consider that it is recorded in this History, that the Return of one Voyage only to *Ophir* produced 450 Talents of Gold, which make 51328 lb. of our *Troy* Weight, we cannot doubt of the immense Profit that accrued from this Commerce. It is also observable, that the Queen of *Sheba* or *Saba*, which lies in that part of *Arabia* before-mentioned, surprized at the Reports that were spread of the Magnificence of this Prince, made a Journey to his Court, on purpose to satisfy herself, whether Fame had not exaggerated the Fact, and from the Presents she made him of 120 Talents of Gold, of Spices in great Abundance, and precious Stones, we may discern the true Reason of her Curiosity, which proceeded from an Opinion, that no Country could be so rich as her own. And there is another Circumstance very remarkable, and which seems strongly to fortify what we have advanced in the Beginning of this Discourse, it is added, *neither was there any such Spices as the Queen of Sheba gave to King Solomon*; which seems to intimate, that the *Arabians* had penetrated farther into the *Indies* than even the Fleets of this famous Prince, and brought from thence other Spices (perhaps Nutmegs and Cloves) than had ever been seen before.

"It was by his Wisdom, and by his steady Application to the Arts of Peace, all of which mutually support each other, as they are all driven on by the Wheel of Commerce, which supplies every Want, and converts every Superfluity into Merchandize, that this Monarch raised his Subjects to a Condition much superior to that of any of their Neighbours, and rendered the Land of *Israel*, while he governed it, the

"Glory

“ Glory and Wonder of the East. He made great Acquisitions without making Wars; and his Successors, by making Wars, lost those Acquisitions. It was his Policy to keep all his People employed, and by employing them, he provided equally for the Extension of their Happiness and his own Power; but the following Kings pursued other Measures, and other Consequences attended them. The Trade of *Judea* sunk almost as suddenly as it rose, and in Process of Time they lost those Ports on the *Red Sea*, upon which their *Indian Commerce* depended.”

After this, there is nothing dark or intricate in that Part of the History of the Commerce of the Ancients, of which we have undertaken to treat. It appears very clearly, that from the earliest Times, even the remotest Countries of the East have been the Sources of all the Advantages derived from Trade, and the Possession of this particular Branch of Traffick has constantly given the Ascendant to the Nation in whose Hands it was. In tracing this History we have made it apparent, that the most considerable Points in the System of Commerce, considered as a Kind of Science, were both very well known, and very steadily practised in ancient Times, and produced exactly the same Consequences then that they do now; or, in other Words, enabled People to heap up immense Riches, induced them to encourage Arts and Sciences, by rewarding plentifully such as excelled in them, propagating Magnificence and Luxury, from whence, in Process of Time, arose Indolence, Effeminacy, and a total Depravation of Manners, which made Way either for foreign Conquests, or such a Declension of Morals at home as produced Ruin and Poverty, and from which hardly any of the ancient States ever recovered.

We have shewn the true Source of that incredible Wealth, for which, in the earliest Times of which, History affords any Record, the *Egyptians* were renowned; and we have shewn also how all this was transferred to the *Persians*, in Consequence of their becoming Masters of *Egypt*, and of the Means by which its Inhabitants amassed such prodigious Wealth. This leads us to consider the Conquests and the Views of *Alexander* the Great, in a Light very different from that in which they have been hitherto seen, and from which it is unquestionably evident, that he was a much greater and wiser Prince than he has been represented, not by Historians only, but by Panegyrists, that his Views were of quite another Nature than are commonly imagined; and that his Notions were incomparably more just and more extensive than that of any other Conqueror, either ancient or modern, since he did not barely aim at establishing an universal Monarchy, but was also desirous of making this turn to the universal Benefit of Mankind, by settling a constant and regular Intercourse amongst all the Nations he subdued, and rendering them thereby useful to each other; to facilitate which, he formed Projects impracticable indeed with Regard to their ultimate Intention, but which, notwithstanding, were designed with wonderful Sagacity, and from their Consequences in such Parts as could be executed, fully answered all that he expected from them.

It was by making use of the Lights afforded him by this great Monarch and his indulgent Master, that *Ptolemy* erected a *Greek Empire* in *Egypt*, which in point of Strength and Duration, as well as Magnificence, so much exceeded all the rest that were formed out of his Conquests. We have had many large and well-written Histories of that Empire, considered in a political Light, but there was still wanting a Commercial History of *Egypt*, which we have endeavoured to supply, and from the attentive Perusal of which the Reader will see, that nothing can contribute so much to the Power and Splendor of Sovereigns, and at the same Time to the Welfare, Happiness and Tranquility of a People, as commercial Maxims well applied. All the other Successors of *Alexander* lived as it were upon the main Stock, and only wasted in fruitless Projects, and wild and extravagant Expeditions, the Riches which they extorted from their Subjects, and which they continued to extort, till by totally exhausting them, they were no longer able to maintain that Power which was

requisite to support their Tyranny. Whereas *Ptolemy* and his immediate Successors, by following in their Dominions the judicious Maxims of *Alexander's* Policy, kept their Countries full of People, and by providing for the Happiness of those People, were able to keep up larger Armies, to maintain greater Fleets, and to live with infinitely more Magnificence than those Monarchs, whose Dominions were much larger, and who, till they ruined them by their Excesses, might have been more powerful and considerable, and might have made their Empire as permanent as his.

It is true, that at length the Government of *Egypt* sunk and fell into Confusion from its falling under the Dominion of weak Princes, and from the prevailing Corruption of Manners, against which Accidents human Policy affords no Defence. Yet it appeared great even in Decay, and its Magnificence was apparent in its Ruin. The *Romans*, when they became possessed of it, were very soon made sensible of its Importance, and of the Wisdom of those Maxims by which its Monarchs ruled in better Times. They therefore adopted those Maxims, and not only pursued but improved the Methods formerly employed to make this Country the Center of Commerce, and the great Magazine of the civilized part of the World. All these Points we have at large explained, by which it appears, that the Splendor and Glory of the *Roman Empire* was chiefly built upon this important Conquest, and the Consequences that attended it. That in Proportion as the *Roman Affairs* were wisely and prudently, or weakly and indiscreetly managed, the Concerns of *Egypt* were attended to or neglected; and that the great Blow given to the real Power and internal Force of the *Roman Empire*, was transferring this Province to the Princes that reigned in the Eastern parts of that Empire, and fixed their Seat at *Constantinople*.

We have described, tho' very concisely, what were the Effects of this Change, and how the Imperial Residence last mentioned became so large, so beautiful, and so immensely rich as it was, by drawing thither, in a great Measure, the Trade of the whole World. The gradual Ruin of the Eastern Empire, and the Growth of the *Arab* or *Saracen* Power, did not make a greater or more universal Change in the political Affairs of *Europe*, than in the commercial; for *Egypt* falling early under the Power of those Barbarians, since however learned they became afterwards, they certainly deserv'd that Title, when they subdued *Egypt*, all Thoughts of Commerce were laid aside. At that Time War was their Trade, and they knew no other Way of making Acquisitions than by the Sword. The Countries of which they became Master, were exceedingly rich and populous, and they had no Views beyond seizing the former by Force, and imposing Slavery upon those whom they had deprived of their Property. But by Degrees, Experience, which is the proper Mistress of such Sort of People, taught them, that Force and Violence were not the surest Means of maintaining Empire, and therefore they had Recourse to Learning and Arts; and though they did not apply themselves to Trade, yet they encouraged and promoted that of their Subjects, and allowed Strangers to deal with them, but upon such Terms as were highly advantageous to these Conquerors, who were never at a Loss how to squeeze the Money out of the Purses of their Subjects, provided they had any to be squeezed out.

IV. This regular Series of History is extremely useful in a great Variety of Cases, and is at the same Time exceedingly entertaining; it at once raises and satisfies our Curiosity, it informs us of what is to be found in the most distant Countries, and the Uses that have been in all Ages made of this Propensity to visit other Countries, and to bring back their Produce to our own. But above all, it serves to destroy those weak and vulgar Prejudices, by which Men are inclined to fancy, that in former Ages Mankind were absolutely deficient in Learning, Politeness, and above all, in understanding the Nature, and consequently acquiring the Advantages deducible from Commerce. But upon examining this History, we see precisely in what the Ancients excelled,

in what they came up to, and in what they were defective, when compared with the Moderns. From hence also we discover; to what all this was owing, what were the natural, what the accidental Advantages they had over us; and, on the other Hand, what we really and certainly possess, which were inaccessible to them. To give a few Instances of both.

The Ancients seem to have carried the Art of cultivating and improving Countries to a Height of which we have hardly any Comprehension. In the earliest Times *Egypt* was wonderfully cultivated, admirably improved, and exquisitely adorned. We cannot form a Notion of an Agriculture more perfect than what was practiced by the ancient *Egyptians*; their Temples, Palaces, and other publick Structures, were magnificent in the highest Degree; and if we incline to doubt the Veracity of the Records that relate to them, the very Ruins that still remain afford us Testimonies that are absolutely incontestible. The Contrivances made use of for supplying Water, and the Conveniency of Water Carriage, not only to all the great Cities, but to every Town and Village, surpass any thing that is to be seen at this Day in the most civilized Part of the World, unless perhaps we except *China*. This shews that the Ancients excelled also in Policy, or the Art of establishing right Rules for the Government of Mankind, which are best discovered from their Effects, the true Criterion of Government being the Exercise of human Industry about useful Things, for without Question that Nation is best governed where Individuals are best employed, that is, where, on the one Hand, the Laws provided suitable Encouragements for the active, and by a right Direction and Distribution of Authority, prevent any from being idle. The Ancients excelled also in all the Sciences that depend either on the Quickness of Parts, or the Solidity of Judgment, and in all the Arts that furnish the Necessities, procure the Conveniencies, or exhibit the Elegancies of Life; the Proofs of all which are to be found in their Writings, in the History of their Manners, and in the Remains of their Buildings, Utensils, Coins, Curiosities, &c.

On the other Hand, they were certainly defective in those Sciences that depend upon Experience, as well as Sagacity and Genius. Their Cosmography was equally narrow and erroneous; the same may be said of their Astronomy, which was not either accurate or well applied. Hence it came to pass, that their Navigation was uncertain, slow, dangerous, and confined. Neither had they any Notions of managing Commerce by Factories or Settlements. In these and many other Things we certainly surpass them, but then it must be also allowed, that they could, and we cannot do without them, which perhaps is the real Cause of their Defects, as well as of our Proficiency.

But there is one Advantage they had, which is very little attended to, and yet it was the principal Source of that Wealth, the very Relation of which appears to us almost incredible, I mean that amazing Fertility in valuable Commodities which several Countries enjoyed, and of which there are scarce any Traces to be met with now. Several Instances of this, with regard to the Regions of the East, occur in our History of them; but because we had no Opportunity of mentioning it elsewhere, it may not be amiss to set down a Testimony here that is very well worth Consideration. The *Phœnicians* considered *Spain*, and with very good Reason, in the very same Light that *Spain* now considers *Mexico* and *Peru*, that is to say, they drew from thence in Return for Merchandize of small and inconsiderable Value, immense Quantities of the richest Metals, and of Silver more especially.

If we may credit *Aristotle*, they not only found wherewith to load their Ships, but when that was done, they forged Anchors, Bolts and Bars of Silver, to supply the Place of Iron, that they might carry away the more of it. *Diodorus Siculus* assures us that it was chiefly owing to the prodigious Riches they drew from *Spain*, that the *Carthaginians* were able to set on Foot such numerous Armies, to equip such potent Fleets, and to raise such stupendous Fortifications, as made them at once the Wonder and the Terror of their Neighbours.

In a Word, one might produce good Authorities to prove, that there was hardly a maritime Province in *Spain*, from *Algarve* and *Andalusia*, to *Galicia*, *Asturias*, and the *Pyrenean* Mountains, but what abounded in Gold, Silver, Copper, Tin, or some other valuable Metal. Yet except a Silver Mine in *Portugal*, of which the Reader has had a very particular and authentick Account in this Volume, there is not the least Sign or Token of these vast Treasures, exclusive of the Appearances that yet remain of the Works that were carried on for maintaining them.

V. But though we have attended closely to the Commercial History of the *Indies*, yet we have not neglected or omitted what might be thought as useful or more entertaining. We have drawn together, from the best and most authentick Writers, whatever would contribute to the true Representation of the Religion, Government, History, Laws and Customs of the several Nations of *India*, and have been more especially solicitous in setting forth the Learning, Discipline, Offices, Way of Living, and peculiar Privileges of the *Brachmans*, now called *Bramins*, and have taken the Pains to set forth the principal Doctrines of their Theology and Philosophy. We have been as solicitous about the natural History of the *Indies*, and have compared what ancient Authors have recorded, with the Remarks made by modern Travellers upon that Subject.

By this Means we have given the Reader, in a very narrow Compass, and in such a Manner, as that Things of a like Nature are all placed together, what would have cost very great Labour to assemble out of the different Books in which they are dispersed, and yet to preserve, as far as possible, all the Advantages that arise from a Variety of Reading, we have, generally speaking, made use of the Author's own Words, and have cited the Places where they are to be found in the Notes. We have very frequently taken Occasion, from this Manner of handling the Subject, to distinguish Fables from true History, and to shew sometimes, that there is a great deal of true History in what many hasty Critics have rejected as Fables. For if, on the one Side, it be true, that Ignorance is the Mother of Credulity, one may very much doubt, whether Incredulity be not her Daughter also. This will be the more easily apprehended, if we consider that there is a Kind of Similarity between Extreams, and that different Deviations from Truth may very well arise from the same Cause. For, after all, what is Credulity, but believing without Evidence? And what Incredulity, other than believing against Evidence? And whence can either of these arise more naturally than from Ignorance. If this mean and detestable Vice occupies the Breast of one of a mild and placid Spirit, he believes without examining whatever he hears; and again, if Ignorance be coupled with Obstinacy, there is hardly such a Thing as driving Belief into a Mortal, whose Mind is over-run with such Maladies.

It is very possible, that notwithstanding all the Care we have taken, some Mistakes may be discovered in this Part, by those who have been so happy as to obtain better Lights; but a diligent Enquiry, and a strict Examination, were the only proper Methods to be employed to prevent such Mistakes, and they were employed to the utmost of our Power. We may add to this, another and a very just Apology, that in this Tract we were without any Guide, all who had gone before us chusing rather to save their own Pains than that of the Reader, and to heap up Relation upon Relation, Extract upon Extract, by which they multiplied their Volumes, and neither represented Things distinctly themselves, nor left it in the Power of a Reader, who had not uncommon Leisure, to form any distinct Notion of what was really worth knowing, in that vast Load of Materials that they exhibited to his View. In short, we saw very plainly, what was amiss in the Compilations that went before us, and we were very willing to take Warning by their Miscarriages, which put us upon pursuing another Method, and if we have missed of Perfection in that, we have at least this to plead, that we meant well, and have done our best.

VI. After

VI. After shewing how Commerce was in a Manner totally overwhelmed in the East, we proceed next to point out the Methods by which it was in some Measure revived by the Subjects of the two trading Republicks of *Venice* and *Genoa*; and we have taken great Pains to discover the different Ways, by which, at several Times, and under various Circumstances, the Commodities and Manufactures of the East were brought into *Europe*. But as the Manner of our treating that Subject would not allow us to digress there, so far as to give any Account of the Rise of those two celebrated States, it cannot be amiss, in this Review of our Performance, to supply that Defect in as concise a Manner as it is possible.

When the Western Part of the *Roman* Empire was over-run by *Barbarians*, and Arts and Sciences sunk with that Power which had cultivated and protected them; Commerce also visibly declined, or to speak with greater Propriety, was overwhelmed and lost; for in Times of Confusion and publick Desolation, when the Giant War stalks abroad, overturns great Cities, tramples down the noblest Improvements, and lays whole Countries waste, it is impossible that Trade should continue; or rather, it is highly probable, that on the very Approach of these Dangers she must have already fled. It is a common Saying, that Riches are the Nerves of War, rather, I think, the Food of it; and therefore where War devours, there Commerce cannot subsist, which is a perpetual Reason why all Trading Nations should avoid offensive Wars; for by those that are absolutely defensive they can never be hurt. But to keep to the Point; when that Irruption of various Nations had driven the *Roman* Policy out of the greatest Part of *Europe*, some straggling People, either forced by Necessity, or led by Inclination, took Shelter in a few straggling Islands that lay near the Coast of *Italy*, and which would never have been thought worth inhabiting in a Time of Peace.

This was in the Sixth Century, and at their first fixing there, they had certainly nothing more in View, than living in a tolerable State of Freedom, and acquiring a Subsistence as well as they could. These Islands being divided from each other by narrow Channels, and those Channels so incumber'd by Shallows, that it was impossible for Strangers to navigate them, these Refugees found themselves tolerably safe, and uniting among themselves for the Sake of improving their Condition, and augmenting their Security, they became in the Eighth Century a well settled Government, and assumed the Form of a Republick.

Simple and mean as this Relation may appear, yet it is a plain and true Account of the Rise, Progress, and Establishment of the famous and potent Republick of *Venice*. Her Beginnings were indeed weak and slow, but when the Foundation was once well laid, her Growth was quick, and the Increase of her Power amazing. She extended her Commerce on all Sides, and taking Advantage of the barbarous Maxims of the *Mohamedan* Monarchies, she drew to herself the Profits of the *Indian* Trade, and might in some Sense be said to make *Egypt* a Province, and the *Saracens* her Subjects.

By this Means her Traffick swelled beyond Conception, she became the common Mart of all Nations, her Naval Power arrived at a prodigious Height, and making use of every favourable Conjuncture, she stretched her Conquests not only over the adjacent *Terra Firma* of *Italy*, but through the Islands of the *Archipelago*, so as to be at once Mistress of the Sea, of many fair and fruitful Countries, and of Part of the great City of *Constantinople* it self. But Ambition, and the Desire of Lording it over her Neighbours, Passions equally fatal in publick and private Life; to States and Empires, as well as to great Men, and to great Families, brought upon her those Evils which first produced a Decay of Trade, and then a Declension of Power. General Histories indeed ascribe this to the League of *Cambray*, when all the great Powers in *Europe* combined against this Republick; and in Truth, from that Period the sinking of her Power is truly dated; but the *Venetian* Writers very justly observe, that though this Effect fol-

lowed the League, yet there was another, a more latent, but, at the same Time, a more effectual Cause, which was the falling off of their Commerce.

Her Subjects were become less frugal, and less wealthy, and, at the same time, more ambitious and more profuse. It was impossible, in such a Situation, that the State should maintain it self when so warmly attacked; a Man in a Consumption cannot struggle with the same Force as in Health; and though By-standers may attribute the Fall he receives to the Strength of his Adversary, he cannot help knowing, that it proceeds solely from the failing of his own Strength. This was the Case of the *Venetians*, and they have ever since been more indebted to their Wisdom, than their Power, to the prudent concealing of their own Weakness, and taking Advantage of the Errors of their Enemies, than to any other Cause; for their keeping up that Port which they still bear, and which had been lost long ago by any other Nation but themselves.

At the same Time that *Venice* rose, as it were, out of the Sea, another Republick was erected on the Coasts of *Italy*, there could not well be a worse Situation than the narrow, marshy, unprofitable and unwholesome Islands in the *Adriatick*, except the rocky, barren, and inhospitable Shores of *Liguria*; and yet as Commerce raised *Venice* the Rich, on the one; so she erected *Genoa* the Proud on the other. In Spite of ambitious and warlike Neighbours, in Spite of a confined and unproducing Country, and which were still greater Impediments, in Spite of perpetual Factions and successive Revolutions, the Trade of *Genoa* made her rich and great. Her Merchants traded to all Countries, and thrived by carrying the Commodities of the one to the other. Her Fleets became formidable, and besides the adjacent Island of *Corfica*, she made larger and more important Conquests. She fixed a Colony at *Caffa*, and was for some Time in Possession of the Coasts on both Sides of the *Black Sea*.

That Emulation which is natural to neighbouring Nations, and that Jealousy which rises from the Pursuit of the same Mistress, Commerce, begat continual Wars between these Rival Republicks, which after many obstinate and bloody Battles, was at last terminated in Favour of *Venice*, by that famous Victory of *Chiozzi*, gained by her Doge *Andrew Contarini*, from which Time *Genoa* never pretended to be Mistress of the Sea. These Quarrels were fatal to both; but what proved more immediately destructive to the *Genoese*, was their Avarice, which induced them to abandon the fair Profits of Trade, for the Sake, by that vile Method of acquiring Wealth by Usury.

This leads us to mention another Subject that has a close Connection with Commerce, and that is, the Business of Exchanges. This, tho' in many Cases useful to Commerce, concerns also many other Things, such as Transactions of State, and of War, the Removal of Families, or the Descent of Successions upon Strangers; all of which create the Necessity of removing Money from one Country to another, which sometimes cannot be done at all, and in most Cases must be attended with Inconveniency, if practised in the plain Way of Transportation. The *Lombards*, one of the many Nations that established themselves in *Italy* after the Ruin of the *Roman* Empire, and who have bestowed their Name on one of the finest Countries in it, devised a Method for removing, in a great Measure, this Inconvenience; for they observed that Money was very often wanting reciprocally in several Countries, and therefore they imagined, that if a Way could be found to establish a Correspondence capable of supplying their mutual Wants, it might prove very advantageous to the middle Persons, and this produced that Kind of Practice now known by the Name of *Exchange*; which, as it was invented by, so it continued long in the Hands of the *Lombards*. For this Purpose, they settled themselves in most of the great Cities in *Europe*, and having a strict Correspondence one with another, they managed this new Branch of Business, of drawing and remitting Money with vast Advantage to themselves; and to do this the more effectually, they enter'd into Partnership, kept

large Houses, and had vast Capitals, which were stiled *Banks*; and as it was their Custom (as indeed it was of all Sorts of Merchants) to live together, so the Street in which they resided in this City, acquired from thence its Name; and tho' Things are long since changed, yet it is still inhabited by *English* Bankers, and retains its old Title of *Lombard-street*.

We may discern the wonderful Effects of Industry in this Invention, for the *Lombards* inhabiting an inland Country, drew by this Means to themselves a very considerable Profit out of foreign Trade, and made *Milan* and other great Cities in which they resided, populous and opulent, by their becoming the Center of their Exchanges. But when the *Genoese* fell into it, they began to carry it farther, for they not only drew and remitted Money, but lent it also, and by this Means, as their Profits increased, they began to slight their foreign Trade, or rather their Capitals, however large, becoming unequal to the double Demands of Commerce and Banking, the former gave Way to the latter, as the most secure, if not the most profitable; and by this Alteration Individuals became immensely rich and great, while the State grew weak and poor; and thus the Republick of *Genoa* dwindled into a low Condition, and by Degrees was obliged to pawn almost all its Revenues to its own Bank of *St. George*, which amidst a long Series of foreign Wars and domestick Seditions, remained unhurt and inviolable, till the last taking of that City by the *Austrians*, when the Bank of *St. George* met with the same Fate with the Common-wealth, and whether either of them will recover their former Lustre, is a Problem that must be left to Time to resolve.

While the *Venetians* were able to maintain their Commerce in *Indian* Commodities, and while the *Genoese* had any Kind of foreign Trade, they maintained a considerable Naval Force, and frequently made Attempts to retrieve, at least in some Measure, the Figure they had formerly made; but in Process of Time, as other Nations pursued the Route discovered by the *Portuguese*, new Maritime Powers arose, and the whole System of Commerce in *Europe* was thereby changed in such a Manner, as to leave hardly any Hopes of Recovery to these *Italian* States. I do not say absolutely that they are without Hopes, for if ever the *Russians* should make themselves Masters of the *Black Sea*, but more especially if they should ever conquer *Crim Tartary*, this may alter Things again, and prove the Means of reviving the Trade of *Italy*.

VII. The new Commerce to the *East Indies* by the Way of the Cape of *Good Hope*, takes up the remaining Part of the first Volume; by Way of Introduction to which, we have given the Reader the Travels of *William Rubruquis* and *Marco Polo*, which gave this Part of the World the first Knowledge of *Tartary*, *China*, and *Japan*. We intended likewise to have given the Travels of our Countryman Sir *John Mandevile*, but finding that these ancient Accounts were thought very dry Reading, we desisted from that Design. To say the Truth, his Travels are rather Matters of Curiosity than of Use; for though it is very certain, that many Circumstances of his Narration may be so explained as to justify them from being absolutely fabulous, yet he is not, upon the whole, a Writer that deserves to be commended, because of that strange Propensity he had to represent every thing as marvellous, and to make his Book rather a Collection of Wonders than of Travels. It is nevertheless certain, that from the Peregrinations of adventurous Persons by Land, the *Portuguese* received those Lights that enabled them to find their Way to the *East Indies* by Sea; and therefore it is of great Importance where Discoveries may be prosecuted by Land as well as by Sea, to make use of both Methods; upon which Subject we shall have Occasion to say something very curious hereafter.

The Voyages we have given by the Way of the Cape of *Good Hope*, are the best that we could select, and in Conjunction with those that are contained in the first Book, will afford the Reader as clear, as copious, and as comprehensive an Account of the past and present State of those Countries as he can reasonably desire; and

therefore it would have been to little or no Purpose to have swelled our Collection with a greater Number of Voyages and Travels, which must unavoidably have made Way for numerous Repetitions, equally fatiguing and distasteful. Instead of these, we chose to insert an authentick, regular, and compleat History of the *Mogul* Empire, from the earliest to the present Times, which though much desired, was still wanting. By this Means we had an Opportunity of shewing the Progress of that extensive Empire, together with the Means in, and the Manner by which it has swallowed up many of those small Kingdoms that were heretofore famous in these Parts of the World. Yet it is not at all impossible that the next Age may see that Empire dissolved, and either the old Kingdoms revived, or new ones erected out of its Ruins. For it is visible enough from this History, that the *Mohametan* Power declines greatly in the East, and that the Native *Indians* begin to retrieve their Strength, and to affect an Independency, which they will find it the more easy to establish, if they continue to apply themselves, as they have done during the current Century, to the Cultivation of a Naval Force.

It is indeed very highly to be regretted, that we have not so much as a tolerable Account of the present Princes of *India*, whom we affect to treat with Contempt, and who are generally represented in modern Travels as Robbers and Pyrates; whereas if we would but consider that they are the native Proprietors of the Countries which they inhabit, and have as much Right, at least, to retrieve what has been taken from them, as those who took it have to keep what they have got, we should, in all Probability, change our Notions. There was indeed, some Years ago, an Account of Mr. *Mathews's* Expedition into the *East Indies*, published, in which something of this Kind was contained, but it was written by a common Sailor, and the proper Names more especially, so terribly disfigur'd, that it was a difficult Matter to pick out any thing from it with Certainty, of which I will leave the Reader to judge from one singular Instance only. An *Indian* Prince, well enough known in better Books by the Name of *Seva Rajah*, he is pleased to call throughout the whole of his Relation, the *Sow Roger*, and in the same Manner he confounds every Thing else. We have been promised by the *French* more distinct Accounts of these Matters, and some little Histories we have had from them that are, though of an ancient Date, very curious and entertaining.

But our People have so many more and better Opportunities, that if some of them who have Abilities and abundant Leisure, would attempt it, they might certainly give us a better *Indian* History than is yet extant in any *European* Language. Mr. *Frazer*, who is at present in the *Indies*, and to whom we are indebted for an excellent Account of *Kouli Kan*, would be the properest Person in the World to undertake a Work of this Kind; and one would imagine that if he did undertake it, he might meet with proper Encouragement. That we are at present but very indifferently instructed as to the Temper and Disposition of many Eastern Nations, and therefore ought to be willing to get better Accounts, is out of all Doubt, and might be fully demonstrated from the very latest Books that are published.

Our Writers commonly represent the *Arabs* on the Sea Coasts as Pyrates, just as our Travellers, when they speak of them by Land, treat them as a whole Nation of Thieves; but Men of Candour and Sense speak otherwise from their own Experience, as may be seen from the following Relation of a Person who spent many Years in the *Indies*, and did not affect to treat all as Barbarians whom he conversed with there. The *Muskat Arabs* (says he) are remarkable for their Humility and Urbanity. I had one Instance of their Civility. As I was one Morning walking the Streets, I met accidentally the Governor of the City, by them called the *Waahy*, and, according to my Duty, I went into the Door of a Shop to let him and his Guards have the Street, which generally are narrow; but he observing by my Complexion and Garb that I was a Stranger, made his Guard to go on one Side, and beckoned me to

to come forward, and stood still till I passed by him. And for an Instance of their cool Temper in hearing Debates, and rectifying Mistakes between Parties disagreeing about Commerce, a Person of my Acquaintance was Commander of a Ship from *India*, and had freighted her to *Muskat*. The Freighter, who was a *Mohamedan*, delay'd paying the Freight long after it was due by the Tenor of the Charter-party; upon which he being in a Passion with the Freighter for his continued Delays, went to the *Waaly* to complain. He observing by the Gentleman's Countenance that his Mind was discomposed, answered him, That being at that Time very busy about some of the King's Affairs, he had not Time to send for his Freighter, but desired that he would come some other Time, and he would hear him and order the Payment. The Delays still continuing, the Captain went again in an angry Mood to make his Complaint, but was still put off with gentle Excuses; but at last, addressing the *Waaly* with Coolness, he was desired to sit down, and he would send for the Freighter; which accordingly he did, and on his Appearance, the *Waaly* ask'd him, why he did not comply with his Contract as was stipulated by the Charter-party? And his Excuses being thought insufficient, he was ordered to make Payment forthwith, or go to Prison; but the Freighter chose rather to bring the Money, and end the Dispute. The Captain ask'd the *Waaly* why he did not do him Justice sooner; who returned for Answer, That it was his own Fault for coming drunk to make Complaint. The Captain protested that he had not been drunk in many Years; but the *Waaly* replied, That he saw him drunk with Passion, which was the most dangerous Sort of Drunkenness. This sufficiently shews of what Nature those Accounts are which we really want, as well as the just Reason we have to complain of too many of those that we have already.

VIII. The Detail we have given of the History of the Affairs of the *Europeans* in the *East-Indies*, is the first Attempt of its Kind, and is as methodical, regular and copious, as we could make it. It shews at what Time each *European* Nation entered the *Indies*, what Success they met with, where and how they established themselves, and what subsequent Fortune has attended their Commerce and their Settlements. All this is undoubtedly of very great Importance in reference to the acquiring with Facility an extensive Circle of intrinsic and useful Knowledge. We shall be the more sensible of this, if we consider how many different Sorts of Persons may reap considerable Benefit thereby.

In the first Place, for surely his Station intitles him to that, the Statesman will be the better for our Labours. This is a Subject of which he will be obliged often to think seriously, and may sometimes be obliged to enquire into it carefully. Now what we offer to his View, may be esteemed a general Introduction to all that can be known upon this Head; and if he afterwards examines Projects for Improvement or Discovery, he will be the better able to judge whether they are chimerical, grounded upon private Interest, or really calculated for the publick Good; and he will likewise be able to form a shrewd Guess whether they are practicable or not. If he is under a Necessity of examining Treaties, or the Pretensions of different Nations, he will receive such Lights as may render them perspicuous without much Trouble; or if it imports him to learn what is the true State of Things in that Country, and how Power, Possession and Commerce are divided amongst the Nations interested in the *Indies*, he will find a Scheme of all this ready drawn up to his Hands.

A young Adventurer, who is on the Point of being sent into these Parts to raise his Fortune, will, doubtless, wish to go thither with some general Notions of what he is to expect, what may merit his Attention, and what may deserve his Enquiries. Here he will find all these Matters drawn together to his Hand, and ready digested for his Perusal; so that without any Loss of Time, he may acquire a larger Stock of useful and applicable Knowledge, than he could possibly have fish'd out even from a well chose Collection of Voyages and

Travels, which however are not easily made, more especially by a fresh Man, or one who has but just turned his Thoughts to so extensive a Subject. Not to multiply Instances, a Gentleman who desires to gain, with as little Trouble as may be, a competent Notion of those Topicks that enter frequently into Discourse, will find in this History what will effectually answer his End, and set him upon a Level at least with most other People in reference to these Matters which ever were, and ever will be thought of great Importance. Besides all this, we perceive every Day new Causes and new Inducements to attend to Things of this Sort, from beholding what Effects they have upon the wisest Heads in other Nations.

It is a Thing so recent, that few People can have forgot to how great a Degree the Affairs of *Europe* were influenced by the Emperor's setting up an *East-India* Company at *Ostend*, which actually produced a total Change in the System; and as it began with an Alliance between the Courts of *Vienna* and *Madrid*, so it brought about a Conjunction as extraordinary between *France* and the Maritime Powers. This Conjunction indeed proved too hard for the Alliance, and brought about at length the Subversion of that Company; but this only removed, it did not eradicate the Evil with respect to the Maritime Powers, since the *Swedish* and *Danish East-India* Companies rose up instead of this of *Ostend*. If they affected us less at the Beginning, it was so far from being an Alleviation, that in Reality it was an Aggravation of our Misfortune, because it hindred the Maritime Powers from perceiving immediately the Consequences of these Establishments. It was indeed alledged, that the Remoteness of the Navigation, their Inexperience with regard to Commerce, and Disappointments they had already met with in Schemes of this Sort, would make them very quickly weary of such Kind of Projects, and consequently deliver the Maritime Powers from all Apprehensions of this Sort for the future.

We see however, that these Allegations were without Foundation, and the Event forces us, whether we will or not, to discern that these Obstacles are not insurmountable, and which is still more, that this Trade has precisely the same Effects in those Countries, that it had when first engaged in by the *English* and *Dutch*, that is to say, it has put the *Swedes* and *Danes* upon erecting Manufactures, opening other Branches of Commerce, and enabling them thereby to become Maritime Powers.

The History of all this, which will become every Day more and more worthy of our Cognizance, is to be found here, and here only; for hitherto Collections of this Kind had been made, rather with a View to Amusement than Instruction, and were better calculated to entertain the idle, than to instruct the Industrious, which in a Nation like this, that derives its Grandeur, Independency, and Influence from Trade, was equally melancholy and surprising. We may add to all this, that whatever we may think of the Matter, who in Fact are most concerned to think of it, if the Welfare and Prosperity of our Country be at all our Concern, the Success of these new Companies have made a very sensible Impression upon other Powers, in so much that the King of *Prussia* is meditating the Establishment of an *East-India* Company at *Emden*, which, if carried into Execution, as what is there that he has contrived and not carried into Execution, will infallibly diminish the *East-India* Trade of the United Provinces, not without some Detriment also to ours.

It is moreover no Secret, that his Imperial Majesty, in Quality of Great Duke of *Tuscany*, has likewise a Design of setting up a new *East-India* Company at *Leghorn*, which will very sensibly affect our *Italian* Commerce, not only by furnishing immediately and directly all the Countries bordering on the *Mediterranean*, with *East-India* Commodities, but still more by its remoter Consequences in promoting and encouraging the speedy Erection of new Manufactures in those Countries, which cannot but lessen very greatly our Exportations, and circumscribe our Trade in a Manner easily apprehended, and which at present it is needless to describe.

But if upon this Occasion it should be demanded what Remedy there is for these Things, we can only answer, that all the Remedy in the Power of private Persons, is to foresee and point out the Causes of such Evils; and by acquainting their Countrymen with the real Importance of this Commerce, to awaken and excite their Diligence, to preserve what is yet left, and if possible, to open new Channels, which may balance the Deficiencies that must naturally arise from the losing those Branches of Trade, which, by these new Attempts, are likely to be cut off. All this the Reader will find regularly digested to the utmost Extent of our Power, and throughout the several Sections which relate to them, interspersed with a great Variety of probable Expedients, by which these great and important Ends may be attained.

It is not at all in ours, or indeed within the Compass of private Peoples Abilities, to carry Things of this Nature any farther; but the Rectitude of carrying them thus far, and of publishing and making manifest the mighty Advantages that would result from directing our Councils to the Improvement of our Commercial Concerns, rather than the settling the Interests of other Nations upon the Continent, which perhaps the better they are settled, the less it may tend to our Benefit, since we see that the first Consequence of their Independency and Security is to prosecute Projects for the Benefit of their own Trade, and to the Prejudice of ours, is put out of all Dispute.

Those who affect to treat these Things either as Chimeras or Trifles, Points of inconsiderable Moment, or remote and uncertain in their Consequences, are either really or affectedly Ignorant; and which ever they are, so far as they can carry their Opinions and Influence, the most dangerous and most destructive Enemies to their Country; for to propagate Notions of Security, and to rock us as it were in the Sleep of Indolence, while other Nations are awake and full of Attention to the Means of improving Traffick, and laying the Foundations of Maritime Power, is to enervate and destroy us, more especially, if at the same Time we are exhausted by Taxes, which necessarily render our Manufactures dear, and give thereby great Advantage to our Rivals, and oppressed with Debts, a very large Proportion of which being due to Foreigners, must speedily and infallibly draw the last Shilling out of these Kingdoms, if fresh Supplies of Wealth are not regularly and constantly brought in by foreign Trade.

These are the Subjects chiefly insisted upon in the first Volume of this Collection, diversified by a great Variety of pleasant and entertaining Reading, so disposed as to heighten Instruction, and not to distract the Mind, by aiming at no useful or perceptible End. We come next to speak of the Contents of the second Volume, and to shew how far they are likewise calculated to answer the same useful, important and national Purposes.

IX. As an Intercourse and Commerce with the *East Indies* was the great Concern both of the Ancients and Moderns, to the Time that AMERICA was found out, so that DISCOVERY, and the great Consequences that have attended it, have been the just Subjects of the principal Attention of the trading Nations in *Europe* ever since; and hence the examining every Thing relating thereto in its proper Order, became naturally the next Object of our Care. We begin with a copious and circumstantial Relation of the several Expeditions of the great *Christopher Columbus*, in which we have fully explained the Motives upon which they were grounded, the many Discouragements he met with, and the various Difficulties he encountered before he was able to bring Things to bear. In treating these Subjects, we have taken the Liberty to intermix some Reflections on the Detriments that *Spain* received from the early Interposition of Statesmen in the Management of the new Colonies, from whence many Mischiefs arose, and the Profits of those early Establishments were very much lessened, and their future Progress greatly checked.

We then proceed to the intermediate Expeditions between those of *Columbus*, and the Conquest of *Mexico*

by *Ferdinand Cortes*, which affords the Reader an ample Prospect of the mighty Difficulties that Men will go through from the Hopes of Gain, more especially, when it is to come immediately to themselves, and they are not circumscribed either by the unreasonable Power or particular Views of Companies, to which alone is to be ascribed the rapid Progress of the *Spaniards*, in those Countries where their Conquests in our Times, when nothing is done but at an immense Expence of Time, Men and Money, appears incredible. The Passage being now open, we go on to the Conquest of *Mexico*, and to shew from the best Authorities, how a very great and powerful Empire, governed by a wise and brave Monarch, and supported by numerous Armies of faithful Subjects, was nevertheless successfully attacked, and in the End totally over-turned by a very handful of Men, and those too all the Time caballing, conspiring, and quarrelling amongst themselves, so that the prosperous Event of that marvellous Expedition, is entirely due to the incomparable Abilities, indefatigable Labours, and singular Virtues of the Commander in Chief; to whom however there was but very little Gratitude shewed by his Countrymen, who reaped all the Benefits of that most important Conquest.

After recording his Actions, the Reader will find a succinct Account of the Manner in which the *Isthmus* of *America*, and the Country adjoining, were subdued, and of the Disputes that arose amongst the *Spanish* Officers, or rather Adventurers that undertook and effected those Conquests, which, how fatal so ever they might be to themselves, turned notwithstanding, as much, or more, to the Benefit of the *Spanish* Crown and Nation, as if they had proceeded with all the Harmony and good Understanding possible; so valuable a Principle is Activity, and so advantageous to the Publick a busy and enterprising Spirit, when employed at a Distance, whether well or ill conducted, by which very often prodigious Conquests are made abroad by those of restless and turbulent Minds, that very probably had stirred up Rebellion and Confusion, if they had staid at home. We may enter farther into the Truth of this Observation, if we consider how little has been done in these Parts in so long a Course of Years, in Comparison with what was then done in so few; from whence it is visible, that as Example excites and encourages vigorous Measures, so it likewise countenances Indolence, and by degrees fixes and establishes it by Habit.

X. The Conquest of *PERU* was not at all the Effect of any deep laid Scheme of Policy, or of Measures taken in Consequence of Orders from *Spain*; on the contrary, it arose from a Kind of Agreement or Compromise between two or three enterprising Adventurers, and those too in desperate Circumstances. All the Force they could muster up was so insignificant, as scarce to exceed a Modern Independent Company; the Vessels on which they embarked, were still meaner than the Forces they carried; and as for the Funds which were to defray the Expences of this Expedition, they were equally insignificant in Money and in Credit. What is still more extraordinary than all this, these Undertakers had little or no Intelligence; they knew that the Country they were to attack was very large, and well peopled, but they knew very little of its Government, and still less of the Customs and Manners of those People. We are not to imagine from hence, that the Inhabitants of *Peru* were wild and barbarous Savages, or that they were defeated and subdued for Want of a Constitution, Laws and Policy; for this was so far from being the Case, that Sir *William Temple*, than whom there hardly ever was a better Judge of Things of this Nature, has given us, within a very narrow Compass, a most excellent System of the *Peruvian* Empire, which having had no Opportunity to insert elsewhere, it cannot be displeasing to our Readers, upon this Review of the whole Work, to find it here, more especially, as it is justly esteemed the Master-piece of that polite Writer, who has therein given us both Facts and Observations that might very well furnish Matter for a considerable Volume. "The Empire of *Peru* deduced its Original "from their great Heroes *Mango Copac*, and his Wife "and

“ and his Sister *Coya Mama*, who are said to have first appeared in that Country, near a mighty Lake, which is still sacred with them upon this Occasion. Before this Time, the People of these Countries are reported to have lived like the Beasts among them, without any Traces of Order, Laws, or Religion, without other Food than from the Trees, or the Herbs, or what Game they could catch, without further Provision than for present Hunger, without any Cloathing or Houses but dwelt in Rocks or Caves, or Trees, to be secure from wild Beasts; or on Tops of Hills, if they were in Fear of fierce Neighbours. When *Mango Copac* and his Sister first came into these naked Lands, as they were Persons of excellent Shape and Beauty, so they were adorned with such Cloaths as continued afterwards the usual Habit of the *Ynca's*, by which Name they called themselves.

“ They told the People who came first about them, that they were the Son and Daughter of the Sun, and that their Father taking Pity of the miserable Condition of Mankind, had sent them down to reclaim them from those bestial Lives, and to instruct them how to live happily and safely, by observing such Laws, Customs and Orders as their Father the Sun had commanded these his Children to teach them. The great Rule they first taught, was that every Man should live according to Reason, and consequently not either say nor do any Thing to others, that they were not willing others should say or do to them, because it was against all common Reason to make one Law for our selves, and another for other People; and this was the great Principle of all their Morality. In the next Place, that they should worship the Sun, who took care of the whole World, gave Life to all Creatures, and made the Plants grow, and the Herbs fit for Food to maintain them; and was so careful and so good as to spare no Pains of his own, but to go round the World every Day to inspect and provide for all that was upon it, and had sent these his two Children down on purpose for the Good and Happiness of Mankind, and to rule them with the same Care and Goodness that he did the World.

“ After this, they taught them the Arts most necessary for Life, as *Mango Copac* to sow *Mayz*, or the common *Indian* Grain, at certain Seasons, to preserve it against others; to build Houses against Inclemencies of Air, and Danger of wild Beasts; to distinguish themselves by Wedlock into several Families; to cloathe themselves so as to cover at least the Shame of Nakedness; to tame and nourish such Creatures as might be of common Use and Sustenance. *Coya Mama* taught the Women to spin and weave both Cotton, and certain coarse Woolls of some Beasts amongst them. With these Instructions and Inventions they were so much believed in all they said, and adored for what they did and taught of common Utility, that they were followed by great Numbers of People, observed and obeyed like Children of the Sun sent down from Heaven to instruct and govern them.

“ *Mango Copac* had in his Hand a Rod of Gold, about two Foot long and five Inches round. He said that his Father the Sun had given it him, and bid him, when he travelled Northward from the Lake, he should, every Time he rested, strike this Wand down into the Ground, and where at the first Stroke it should go down to the very Top, he should there build a Temple to the Sun, and fix the Seat of his Government. This fell out to be in the Vale of *Cusco*, where he founded that City which was Head of this great Kingdom of *Peru*. Here he divided his Company into two Colonies or Plantations, and called one the *High Cusco*, and the other the *Low*, and began here to be a Law-giver to these People. In each of these were at first a thousand Families, which he caused all to be register'd, with the Numbers in each. This he did by Strings of several Co-

lours, and Knots of several Kinds and Colours upon them, by which both Accounts were kept of Things and Times, and as much expressed of their Minds as was necessary in a Government, where neither Letters, nor Money, or consequently Disputes or Avarice, with their Consequences, ever entered.

“ He instituted Decurions through both these Colonies, that is, one over every ten Families, another over fifty, a third over a hundred, a fourth over five hundred, and a fifth over a thousand; and to this last they gave the Name of *Curaca*, or Governor. Every Decurion was a Censor, a Patron, and a Judge or Arbiter in small Controversies among those under his Charge. They took care that every one cloathed themselves, laboured and lived according to the Orders given them by the *Ynca's* from their Father the Sun, among which one was, That none who could work should be idle, more than to rest after Labour; and that none who could not work by Age, Sickness, or Invalidity, should want, but be maintained by the others Pains. These were so much observed, that in the whole Empire of *Peru*, and during the long Race of the *Ynca* Kings, no Beggar was ever known; and no Woman ever so much as went to see her Neighbours but with their Work in their Hands, which they followed all the Time the Visit lasted. Upon this I remember a Strain of refin'd Civility among them, which was, that when any Woman went to see another of equal or ordinary Birth, she worked at her own Work in the other's House; but if she made a Visit to any of the *Palla's*, which was the Name by which they called all the Women of the true Royal Blood, as *Ynca's* was that of the Men, then they immediately desired the *Palla* to give them a Piece of her own Work, and the Visit passed in working for her.

“ Idleness sentenced by the Decurions, was punished by so many Stripes in publick, and the Disgrace was more sensible than the Pain. Every Colony had one supreme Judge, to whom the lower Decurions remitted great and difficult Cases, or to whom, in such Cases, the Criminals appealed. But every Decurion that concealed any Crime of those under his Charge above a Night and a Day, became guilty of it, and liable to the same Punishment. There were Laws or Orders likewise against Theft, Mutilations, Murders, Disobedience to Officers, and Adulteries, for every Man was to have one lawful Wife, but had the Liberty of keeping other Women as he could. The Punishment of all Crimes was either corporal Pains or Death, but commonly the last, upon these two Reasons which they gave; first, That all Crimes, whether great or small, were of the same Nature, and deserved the same Punishment, if they were committed against the Divine Commands, which were sent them down from the Sun: Next that, to punish any Man in his Possessions or Charges, and leave him alive, and in Strength and Liberty, was to leave an ill Man more incensed or necessitated to commit new Crimes.

“ On the other Side, they never forfeited the Charge or Possessions of a Son for his Father's Offences, but the Judges only remonstrated to him the Guilt and Punishment of them for his Warning or Example. These Orders had so great Force and Effect, that many Times a whole Year passed without the Execution of one Criminal. There is no Doubt, but that which contributed much to this great Order in the State, was the Disuse of other Professions than what were necessary to Life, and the eminent Virtue of their first great Hero or Legislator, which seemed to have been intailed upon their whole Race in the Course of their Reign: So as in the whole Length of it, it is reported among them, that no true *Ynca* was ever found guilty or punished for any Crime. Thus particular Qualities have been observed in old *Rome* to be constant in the same Families for several hundred Years, as Goodness, Clemency, Love of the People, in that of the *Valerii*; Haughtiness, Pride, Cruelty

" Cruelty, and Hatred of the People in that of the
 " *Appii*; which may come from the Force of Blood,
 " of Education, or Example.

" It is certain, no Government was ever established
 " and continued by greater Examples of Virtue and
 " Severity, nor gave ever any greater Testimonies, than
 " the *Ynca's*, of an excellent Institution, by the Pro-
 " gresses and Successes, both in the Propagation and
 " Extent of Empire, in Force and Plenty, in Great-
 " ness and Magnificence of all publick Works, as
 " Temples, Palaces, Highways, Bridges, and in all
 " Provisions necessary to the common Ease, Safety, and
 " Utility of human Life: So as several of the Jesuits,
 " and particularly *Acosta*, are either so just or so pre-
 " suming, as to prefer the civil Constitution of *Mango*
 " *Copac*, before *Lycurgus*, *Numa*, *Solon*, or any other
 " Lawgivers, so celebrated in the more known Parts
 " of the World.

" To every Colony was assigned such a Compass of
 " Land, whereof one Part was appropriated to the
 " SUN, a second to the Widows, Orphans, Poor, Old,
 " or maimed, a third to the peculiar Maintenance of
 " every Family according to their Number, and a
 " fourth to the *Ynca*. In this Order the whole was til-
 " led, and the Harvest or Product laid up in several
 " Granaries, out of which it was distributed by Offi-
 " cers to that Purpose, according to the several Uses
 " for which it was designed, and new Seed issued out
 " at the Season for the new Tillage. Every Decurion,
 " besides the Office of a Censor and Judge, had that
 " likewise of a Patron or Solicitor, for Relief of the
 " Necessities or Wants of those under his Charge.
 " They were bound to give in to the publick Register,
 " an Account of all that were born, and of all that
 " died under their Charge. None were suffered to
 " leave the Colony or People he was born in without
 " Leave, or to change the Habit commonly used in it
 " (by some Parts or Marks whereof those of each Pro-
 " vince was distinguished); none to marry out of it, any
 " more than the *Ynca's*, out of their own Blood.

" The *Ynca* that reigned was called *Capa Ynca*,
 " which the *Spaniards* interpret *Solo Semor*, or *Only*
 " *Lord*. He ever married the first of his Female Kin-
 " dred, either Sister, Niece or Cousin, to preserve the
 " Line the purest they could. Once in two Years he
 " assembled all the unmarried *Ynca's* Men above
 " Twenty, and Women above Sixteen Years old, and
 " there in publick married all such as he thought fit,
 " by giving each of their Hands one to the other.
 " The same was done among the Vulgar by the *Ca-*
 " *raca* of each People. Every Family at their Time of
 " Meals, eat with their Doors open, so that all might
 " see their Temperance and Order. By these and such
 " other Laws and Institutions, *Manga Copac* first settled
 " his Government or Kingdom in the Colonies of *Cuz-*
 " *co*, which were in Time multiplied into many others
 " by the willing Confluence and Recourse of many se-
 " veral People round about him, allured by the Divine
 " Authority of his Orders, by the Sweetness and Cle-
 " mency of his Reign, and by the Felicity of all that
 " lived under it; and indeed the whole Government of his
 " Race of the *Ynca's*, was rather like that of a tender
 " Father over his Children, or a just, careful and well-
 " natured Guardian over Pupils, than of a Lord or
 " Commander over Slaves or Subjects. By which they
 " came to be so honoured or adored, that it was like
 " Sacrilege for any common Person so much as to
 " touch the *Ynca* without his Leave, which was given
 " as a Grace to those who served him well, or to new
 " Subjects that submitted to him. After the Extent of
 " his Kingdom into great Compasses of Territory
 " round *Cuzco*, by voluntary Submission of the People,
 " as to some Evangelical rather than legal Doctrines
 " or Institutions, *Manga Copac* assembled all his *Ca-*
 " *raca's*, and told them that his Father the SUN had
 " commanded him to extend his Institutions and Orders
 " as far as he was able for the Good and Happiness of
 " Mankind; and for that purpose, with armed Troops
 " to go to those remoter Parts that had not yet received

" them, and to reduce them to their Observance. That
 " the SUN had commanded him to hurt or offend none
 " that would submit to him, and thereby accept of the
 " Good and Happiness that was offered him by such
 " divine Bounty, but to distress only such as refused,
 " without killing any that did not assail them; and then
 " to do it justly in their own Defence.

" For this Design he formed and assembled Troops
 " of Men armed, with offensive, but chiefly with de-
 " fensive Weapons. He cast them into the Order of
 " Decurions, in the same Manner as he had done the
 " Families, to every ten Men was one Officer,
 " another to fifty, and another to one hundred, a fourth
 " to five hundred, and a fifth to a thousand. There
 " was a sixth over five thousand, and a seventh as a Ge-
 " neral over ten thousand, of which Number his first
 " Army was composed. With this and other such Ar-
 " mies he reduced many new Territories under his
 " Empire, declaring to every People he approached, the
 " same Things he had done first to those who came
 " about him near the great Lake; and offering them
 " the Benefit of the Arts he had taught, the Orders he
 " had instituted, the Protection he had given his Sub-
 " jects, and the Felicity they enjoyed under it. Those
 " who submitted were received into the same Rights
 " and Enjoyments with the rest of his Subjects. Those
 " who refused, were distressed and pursued by his For-
 " ces, till they were necessitated to accept of his Offers
 " and Conditions.

" He used no offensive Weapons against any till they
 " attacked them, and then defensive only at first, till
 " the Danger and Slaughter of his Men grew otherwise
 " unavoidable; then he suffered his Forces to fall upon
 " them and kill without Mercy, and not to spare even
 " those that yielded themselves after having so long and
 " obstinately resisted. Those who submitted after the
 " first Threats or Distresses, or bloodless Opposition, he
 " received quickly into Grace, suffered them to touch
 " his sacred Person, made great and common Feasts
 " for them and his own Soldiers together for several
 " Days, and then incorporated them into the Body of
 " his Empire, and gave to each of them Cloaths to
 " wear, and Corn to sow.

" By these Ways and such heroic Virtues, and by the
 " Length of his Reign, he so far extended his Domi-
 " nions as to divide them into four Provinces, over
 " each whereof he appointed an *Ynca* to be a Viceroy,
 " having many Sons grown fit to command, and in
 " each of them established three supreme Councils; the
 " first of Justice, the second of War, and the third of
 " the Revenue, of each of which an *Ynca* was likewise
 " President; which continued ever after.

" At the End of a long and adored Reign, *Manga*
 " *Copac* fell into the last Period of his Life; upon the
 " Approach whereof he called together all his Children
 " and Grand-children, with his eldest Son, to whom he
 " left his Empire, and told them, that for his own
 " Part, he was going to repose himself with his Father
 " the SUN, from whom he came; that he advised and
 " charged them all to go on in the Paths of Reason
 " and Virtue which he had taught them, till they fol-
 " lowed him the same Journey; that by this Course
 " only they would prove themselves to be true Sons of
 " the SUN, and be as such honoured and esteemed.
 " He gave the same Charge more especially and more
 " earnestly to the *Ynca* his Successor, and commanded
 " him to govern his People according to his Example,
 " and the Precepts he had received from the SUN, and
 " to do it always with Justice, Mercy, Piety, Clemen-
 " cy, and Care of the Poor; and when he the
 " Prince should go in Time to rest with his Father the
 " SUN, that he should give the same Instructions and
 " Exhortations to his Successor. And this Form was
 " accordingly used in all the Successions of the Race of
 " the *Ynca's*, which lasted 800 Years with the same
 " Order, and the greatest Felicity that could be of
 " any State.

" I will say Nothing of the Greatness, Magnificence,
 " and Richness of their Buildings, Palaces, or Tem-
 " ples,

“ ples, especially those of the SUN, of the Splendour
 “ of their Court, their Triumphs after Victories, their
 “ Huntings and Feasts, their military Exercises and
 “ Honours. But as Testimonies of their Grandeur,
 “ mention only two of their Highways, whereof one
 “ was 500 Leagues, plain and levelled through Moun-
 “ tains, Rocks and Vallies; so that a Carriage might
 “ drive through the whole Length without Difficulty.
 “ Another very long and large, paved all with cut or
 “ squared Stone, fenced with low Walls on each Side,
 “ and set with Trees, whose Branches gave Shade, and
 “ the Fruits Food to all that passed.

“ I shall end this Survey of their Government with
 “ one Remark upon their Religion, which is, that tho’
 “ the Vulgar worshipp’d only the SUN, yet the *Amanta*’s,
 “ who were their Sages or Philosophers, taught, that
 “ the SUN was only the Minister of PACHACAMAC,
 “ whom they adored in the first Place, and to whom a
 “ great and sumptuous Temple was dedicated. This
 “ Word is interpreted by the *Spaniards*, *Animador del*
 “ *Mundo*, or, He that animates or enlivens the World,
 “ and seems to be yet a more refined Notion of
 “ the Deity than that of the *Chineses*, who adored
 “ the Spirit and Soul of the World. By this Principle
 “ of their Religion, as all the others of their Govern-
 “ ment and Policy, it must, I think, be allowed, that
 “ human Nature is the same in these remote, as well
 “ as the other more known and celebrated Parts of the
 “ World.

“ That the different Governments of it are framed
 “ and cultivated by as great Reaches and Strength of
 “ Reason and Wisdom as any of ours, and some of
 “ their Frames less subject to be shaken by the Passions,
 “ Factions, and other Corruptions, to which those in
 “ the middle Scene of *Europe* and *Asia* have been so
 “ often and so much expos’d. That the same Causes
 “ produce every where the same Effects; and that the
 “ same Honours and Obedience are in all Places but
 “ Consequences or Tributes paid to the same heroick
 “ Virtue or transcendent Genius, in what Parts soever,
 “ or under what Climates of the World it fortunes to
 “ appear.”

This may satisfy the most critical Reader, that the old
 Inhabitants of *Peru* were far enough from being Barba-
 rians; though at the same time it must be confess’d,
 that they were very much degenerated before they were
 delivered up by Providence to that severe Correction
 they have received from the haughty *Spaniards*, under
 which they still groan, and suffer their Slavery with in-
 finite Grief and Pain of Mind; neither have they for-
 got the Splendor of their ancient Empire, but in cer-
 tain Songs set to melancholy Tunes, deplore its Down-
 fall and Ruin. After describing the capital Settlements
 of the *Spaniards*, we proceed to examine how they spread
 themselves into the remotest Parts both of the Northern
 and Southern Continents, set forth the Regulation and
 Dependency of their several Governments, compare
 the Value of their ancient and modern Revenues ex-
 tracted from *America*; lay down the Manner of their
 working their Mines, give a true Account of the
 Commerce carried on amongst their Settlements, as well
 as of that to *Europe*, and the contraband Trade.

We have likewise omitted nothing that might give
 the Reader intire Satisfaction as to the present State of
 Things in that Part of the World, and of the true
 Sources of that Feebleness and Decay which is incon-
 testably visible in all the *Spanish* Settlements, and which
 is gradually increasing; so that if a Stop is not quickly
 put to this Declension by an absolute and thorough
 Change of Measures, which however is hardly to be
 looked for, the whole of their Power must crumble by
 Degrees, at least in the Extremities and in the Islands,
 and leave those Countries in other Hands better dispos’d
 to make a right Use of them.

XI. In the Execution of the remaining Part of our
 Plan, we give the Rise, Progress, and present State of
 the Settlements of all the other Powers that are now
 fixed in that Part of the World, viz. the *Portuguese*,
English, *French*, *Dutch*, and *Danes*. With respect to

the first, we have drawn together out of an infinite
 Number of Books in which they are scattered, the Ma-
 terials that are requisite to form a succinct History of
 the great Country of *Brazil*; and this obliges us to en-
 ter into the Detail of the Conquest of that Country,
 once made by the *Dutch*, a Thing of very great impor-
 tance, and yet never thoroughly treated in our Lan-
 guage; we have also shewn, how the Recovery and Im-
 provement of this Country became the principal Cause
 of the Declension of the *Portuguese* Power in the
East-Indies; that Nation finding it too hard for
 them to combat so great a maritime Power as the
 Republick of *Holland* was become; in both *Indies*
 at once. We have also endeavour’d to set in a clear
 Light the present State of that Country, which is of so
 great Importance, not only to its present Masters, but
 to all the trading Nations in *Europe*; and though in
 the Course of the whole Work there was nothing that
 gave greater Trouble, yet it is hoped that it now ap-
 pears in a tolerable Light; and that with respect to the
 Gold and Diamond Mines especially, much more has
 been said than will be easily met with elsewhere, for
 which we are greatly indebted to the Communications
 received from several Persons to whom we are not per-
 mitted to make any more particular Acknowledge-
 ments.

As to the *British* Plantations, both on the Continent
 and in the Islands of *America*, we have been almost as
 copious as the Subject required, and have laboured
 with indefatigable Diligence to set the prodigious Ad-
 vantages derived from them, and their very high Im-
 portance to this Crown and Nation in a true Light.
 To speak freely, there is no Part of this Collection that
 we had so much at Heart, or in the compiling of which
 we proceeded with greater Industry, Care, and Free-
 dom of Spirit, without having the least Regard to any
 private Interest, or the Sense of this or that Body of
 Men, who might be oblig’d or offended by our Manner
 of treating certain Subjects one Way or other. We
 were sensible that the Interests of the Publick ought to be
 dearer to us than any other Consideration whatsoever;
 and we dare confidently affirm, that to the utmost Ex-
 tent of our Knowledge, and to the best of our Skill and
 Judgment, these Subjects have been treated with the
 utmost Zeal and Impartiality; and as they have had the
 Honour to be commended and approved by those who
 were best acquainted with our Plantations abroad, and
 those who have most at Heart the promoting their
 Welfare here at Home; so we look upon this as the
 highest Reward, as indeed it was the only one sought
 by this Performance, which if at present or hereafter it
 shall any Way contribute to the Ease, Security, or Be-
 nefit of those distant Parts of *Great Britain*, for so they
 ought ever to be esteemed, will afford us infinite Sa-
 tisfaction.

The *French* Power in the *West-Indies* has been of late
 Years the Subject of much Discourse; one would wish
 to say that it had been likewise the Object of much
 Care and Attention, which it most certainly deserved,
 as it is more likely to clash with our commercial Inter-
 ests than any other. It is for this Reason that we
 have represented it as fully and as truly as it was pos-
 sible; that we have shewn its Advantages and Disad-
 vantages, the Probability there is that the former may
 be promoted, and the latter removed; the Methods ne-
 cessary to be employed in both Cases, and the Remedies
 that may be applied to prevent the Consequences of
 those Improvements from becoming prejudicial to our
 selves. In doing this, we have likewise taken Occasion
 to mention the Precautions that may be used to secure
 our Settlements from running any Risk from the Vi-
 cinity of these ambitious, enterprising, and dangerous
 Neighbours; neither have we omitted to set in a just
 Light our present Superiority, that it may appear we
 are not in so much Danger, either from the Power or
 the Capacity of our Rivals, as for Want of Circum-
 spection, Unanimity and Prudence in our own Conduct;
 and that consequently, if we do suffer, there will be no
 body so much to blame as ourselves.

Neither

Neither have we been afraid to profess our Sense of the Chimericalness of some Apprehensions, and the too great Sanguineness of others, or of assigning our Reasons for both; whence we hope it will be sufficiently apparent, that nothing but unexpected and unexampled Vigour and Vigilance on their Side, and inexcusable Indolence and Inattention on ours, can possibly cause any great Alteration in the present Situation of Things between the two Nations in that Part of the World during our Times. All which is delivered, not with the least Intention to render us careless and secure, but to keep up the Spirits of our People, and to introduce and maintain a right Opinion of our own Strength and Capacity of maintaining and extending our Commerce, notwithstanding the Growth of that of *France*, and the Pains taken to improve and encourage it. This we conceive to be a Spirit that ought to be excited in our Plantations, as of all other the most capable to enliven their Hopes, invigorate their Conduct, and give Success to their Endeavours.

The Possessions of the *Dutch* in the *West Indies*, are in themselves far enough from being considerable, and yet through the Industry of their Inhabitants, and that Wisdom and Dexterity with which they manage their clandestine Trade with the *Spaniards*, they are of no small Consequence, as we have largely shewn. It is indeed true, that since the Writing of that Part, we have been assured from very good Hands, that the Colony of *Surinam*, which we gave them in Exchange for their Settlements at *New York*, is very much improved, and is improving daily; nor can there be much Doubt of this, if we may believe what the *French Gazettes* have told us of the Value of the Prizes taken by their Privateers in that short Space that actual Hostilities were exercised between the Subjects of the two Powers, which according to those Accounts amounted to between two and three hundred thousand Pounds; and this too in the actual Commodities and Manufactures of that Colony. This is the more surprizing, because there has been a general Opinion, though I doubt not very well grounded, that the *Dutch* were not very expert in making Settlements in that Part of the World; however it must not be concealed, that the modern Improvements of *Surinam* are said to have been in a great Measure owing to the Planters receiving great Assistance from the *English* and *French*, that from *Cayenne* and the *Leward Islands* have come and settled amongst them, and have taught them new Methods of manuring their Lands, of raising Sugar, and other valuable Commodities.

The Court of *Copenhagen* has for two Reigns applied it self with so much Attention and Diligence to commercial Affairs, that we cannot at all wonder at the Reports which are daily spread of the *Danes* having an Intention to extend their Commerce in the *West Indies*; but considering that the small Island of *St. Thomas* is all that they possess there, and is in itself incapable of being render'd much more beneficial than hitherto it has been, we cannot easily apprehend, how any Pains that can be taken about it, will be brought to yield any adequate Returns, unless there should be some Truth in what has been likewise intimated from *Denmark*, that there is a Scheme on Foot for reviving their *African* Commerce, with a View of transporting their Negroes to the Isle of *St. Thomas*, and supplying from thence the *Spanish* Plantations. Time will shew whether this Project has any Foundation, and also whether it is possible for the *Danish* Government to bring it to bear.

XII. The second Book consists of a Description of the Northern Parts of the Globe, and of Travels thro' most of the Countries in *Europe*. We have handled the first Part of the Subject very largely, and that chiefly for this Reason, because it had been very much overlooked and neglected by others. We have also taken the Opportunity of giving very compleat Histories of the Attempts made for discovering the North-east and the North-west Passages. With respect to the first, it was our Misfortune not to receive any certain Intelligence with respect to the *Russian* Discoveries, till long after that Part of the Work was finished and pub-

lished; but we have endeavoured to supply that Defect, as far as possible, in the last Section, as, being willing to run the Hazard of some Impropriety, rather than bury in Oblivion those curious and important Passages that came so lately to our Notice.

In reference to the North-west Passage again, we were still more unlucky, as not having an Opportunity to see the Account of the last Voyage, made with a View to that Discovery, till many Months after that History had been in the Hands of the Publick. But it gives us great Pleasure to find, that the Event of this last Voyage is so far from destroying the Credibility of what we have advanced upon that Head, that it agrees in all Respects with what we have delivered, and adds much greater Strength to our Conjectures than we could well have hoped for or expected. This too has encouraged us to add some farther Thoughts upon that important Discovery in the last Section, which we flatter ourselves will not be disapproved by our Readers, and which, we have little Doubt, will be also confirmed by the Event of the next Voyage, when-ever it shall be undertaken, which for the Honour and Welfare of our Country, we hope will be very soon.

As to the Voyages on the Coasts of *Norway*, *Lapland*, and *Muscovy*, the Accounts of *Sweden*, *Denmark*, and *Poland*, and the Remarks upon them, they will be found to give as much Light into the present State and Condition of the Countries to which they relate, as any thing that could be extracted from what has been published about them; and if any who peruse them think that we have carried Matters a little too far, with respect to that very extensive View which we have given of the commercial Improvements in the North, all the Favour we desire is, that they will suspend a decisive Judgment for some Time, and we shall then both readily and patiently submit to any Censure that shall be grounded in Reason.

Of the Travels thro' the middle Parts of *Europe*, particularly the *United Provinces*, the rest of the *Low Countries*, *Germany*, *Italy*, *Switzerland*, &c. we can only say, that they are such as were possessed of the publick Esteem long before they enter'd into this Collection; and as we have given them very faithfully, and with no other Corrections than what relate to their Style, and some Part of their Disposition with a View to prevent tedious and needless Repetitions, we have no Cause to fear any Strictures upon our Conduct in relation to them.

The same Care and Fidelity was shewn in the other Travels through *France*, *Spain*, &c. and some Merit we assume from recalling to the Eye of the World, the Travels of Dr. *Edward Brown* through *Hungary*, *Austria*, and other Countries, even to the very Frontiers of *Europe*, which, without Question, are in all Respects as worthy of Attention and Credit as any Thing of their Kind in our Language. What Additions we have made, more especially in regard to the present State of *France*, and the reigning System of Policy in that Kingdom, will be found very agreeable to Truth, and not at all unworthy of the Reader's Notice.

The great End of this Sort of Reading, is the very same that is sought by actual Travelling, that is to say, the shaking off those narrow Notions; and, if I may be allowed so familiar an Expression, those clownish Conceptions which such People have, as have never suffered either their Bodies or their Minds to make any Excursions beyond the Limits of their own Countries, or to acquire a general Idea of the principal Nations about us, as well as some tolerable Notions of the Countries they inhabit; the Manners, Customs and Policies of the one, and the Climate, Soil and Produce of the other.

Such Books therefore as were most likely to answer these Intentions, were fittest for our Purpose, and were therefore taken into this Collection in Preference to such as were written perhaps in a more elevated Style, and were fuller of that Kind of curious Learning which renders them the Delight of Antiquaries and *Virtuosi*; not that these are not also valuable in their Kind, but that they are less fit for general Reading, less useful to the

Bulk

Bulk of Mankind, and less likely to invite the Perusal, and then to fix the Attention of those, who, it is probable, will reap the most Benefit from this Kind of Reading, and who may afterwards, if they think fit, peruse those more refined Travels with much greater Satisfaction and Pleasure.

XIII. The *third* Book, and, as Things stand at present, the last in this Collection, takes in the entire Description of *Asia*. In order to effect this, we have made use of those Writers that have the highest Character in Point of Accuracy, Sincerity and Abilities; and, wherever the Subject required it, or the Helps received from later Writers put it absolutely in our Power, we have improved, explained, and continued their Performances down to the present Times. Thus in Reference to the Customs, Manners, Laws, Policy, and present Condition of the *Turks*, we have augmented the Author from whom our principal Collections were made very considerably, and this for two Reasons, first, because it was impossible that in the short Space of Time which a Man spends in his Travels, or even tho' he resides a little longer in a Place, he should enter deeply into the Concerns of a great Nation; and secondly, because at the Time Mr. *Thevenot* travelled through the *Turkish* Empire, the *Ottoman* Power was far greater than it is at present. We have therefore to his Remarks, joined those of a most worthy and intelligent *Turkish* Merchant, who resided a long Time in that Country, and many Years at *Constantinople*; and we have also, after proving that the Opinion of the Declension of the *Ottoman* Force is well founded, pointed out the real Causes of that Decay, and assigned the Reasons which render it very probable this Empire is sick of a mortal Disease, from whence it is scarce possible it should recover.

The Travels of the Reverend and learned Mr. *Maundrell* through the *Holy Land* are superior to Correction, and all we could do was to bring them within proper Bounds, so as to suit with our Design; in order to which, we have done little more than was necessary to reduce the Copiousness of the Style, that we might bring the Matters of Fact closer to each other.

The Travels through *Persia*, and the very full Description of that extensive Empire, was drawn from several Authors, but the best Parts of it from the incomparable Writings of the late Sir *John Chardin*, the last *French* Edition of whose Travels is certainly one of the best Books of its Kind that ever was published. The succinct History we have given of that Empire, was in some Measure without our Bounds, and ought to be considered as a Present made to the Publick, not the less valuable for being voluntary. It happened that while this Part of the Work was in the Press, the famous *Shah Nadir*, better known by his old Name of *Thamas Kouli Kan*, was murdered, and thereby a new Revolution brought about in that Country. This excited the Curiosity, and awaked the Attention of the Publick, we were willing therefore to gratify the one, and do our utmost to satisfy the other. At the same Time we did this, we afforded a Specimen of the Possibility of bringing a modern History, even for a long Series of Time, and fruitful of great Events, within a very moderate Compass. In this, and in the other Parts of the Collection relating to these oriental Regions, we have not failed to keep in View our primitive Purpose, of giving, from the best Materials we could obtain, an Account of their Commerce; and if this is not altogether so accurate or so ample as we could wish, it cannot but prove acceptable, since for the most Part it is entirely new, at least in regard to our Language, and the Fruits of those generous Communications which the Concern we expressed for Things of this Nature, drew from several Persons of as great Candour and desity, as of Knowledge and Experience.

The Description, the History and Trade of the *East Indies*, and more especially of the *Mogul* Empire, having been explained at large in the preceding Volume, there was no need of our repeating any Thing here, which is the Reason of our passing directly to those

Travels that lead us to the great Empire of *China*. Yet not so directly, but that we take the vast Countries between *Russia* and *China* in our Way, those Countries which have been hitherto the least known of any in *Asia*, except the North East Regions within the Arctic Circle, and which however deserve to be as well known as any, notwithstanding those Reproaches of Stupidity and Barbarity which the Nations that inhabit them lie under, and which perhaps arise full as much from our own Prejudices as from their Ignorance.

The Description of these Countries we owe to the indefatigable Pains of his Excellency *Ysbrant Ides*, Ambassador from the late Czar *Peter* the Great, in the Beginning of his Reign, to that famous *Chinese* Emperor, equally remarkable for the great Length of his Reign, the Equity and Moderation of his Temper, and his Contempt of those invariable Rules the *Chinese* Policy prescribes, even to their Emperors, by which the most absolute Sovereigns are kept, as it were, in Chains. As the Account of *China* by that illustrious Traveller is very short, he, and we following his Example, have subjoined an ample Description of *China* by a Native; and have also interspersed throughout the Whole, such explanatory Remarks as were either communicated to us, amongst which we acknowledge that excellent Dissertation upon the making of Porcelain, or that we had an Opportunity of collecting from other Writers. We have also given many curious and entertaining Accounts from the Journal of the *Sieur du Lange*, who resided for a long Time in *China* with the Character of Envoy from the Court of *Petersburgh*, not that short and meagre Journal which had been formerly published in *English* by way of Appendix to the present State of *Russia*, but from the Author's own original Memoirs, in which we have a far better Account of the interior and exterior Commerce of that Empire, than are to be met with elsewhere, the great Collection of Father *Dubalde* not excepted.

The Description, History and Discourses relative to the *Peninsula* of *Corea* are entirely new, and are not to be met with either in our own, or in any other Language, so that it is hoped they will be found as pleasant and entertaining as they are useful and important; more especially as they tend to excite a Spirit of making new Discoveries for promoting Navigation and improving our Commerce. The last Section, in which the Reader has an Account of the latest *Russian* Discoveries, compleats the History of *Asia*, and of the whole trading World.

It is true, that in preparing it, we trespassed not a little on the Patience of the Publick; but when it is considered from how great a Distance Part of the Materials were to be expected, and how much Care and Caution were requisite in disposing and digesting them, we shall stand in some degree excused; more especially, if now, when they are all put together, they should afford the Generality of the World a Variety of new Lights in reference to the Possibility of opening fresh Channels of Trade, and thereby in a great Measure changing the whole Commercial System.

There are indeed some who think this Point drive rather too far, and that we have carried our Respects for Trade beyond its due Bounds. But if these Criticks imagine that this proceeds from a particular or overweening Fondness for a Favourite Subject, they are at least in that Circumstance very much mistaken. In the Dedication prefixed to the first Volume of this Work, we have at large assigned the Reasons why Commerce ought to be considered in the Light that we have placed it. We have there shewn, that it procures most of the real and substantial Blessings which Mankind can either hope for or enjoy; and that the only Way to avert the Evils and Miseries to which we are exposed, is to cultivate and promote it. As there is in every Man a Spark of Ambition, there is and must be the same in Nations. Now this natural Desire of Greatness and Fame, can be gratified only by an incessant Application to War, or by a constant and uniform Regard to Commerce. The former may indeed, though it seldom does, render a

Nation rich and powerful by the Spoil of others ; but then it carries the Seeds of Destruction in the very Principles of its Greatness ; for where Military Power is the Source of Grandeur, there must be perpetual Hazards, not only as to the Issue of Foreign Contests, but from the frequent Convulsions of intestine Troubles, as not only Reason teaches, but Experience vouches. Most of the ancient Empires were subverted by this Means. That of the *Greeks* lasted but for a single Life ; the great Captains of *Alexander's* Army thought they had the same Title to be Kings, that he had to rule over Kings. The *Roman* History is, at the Bottom, no other than a Record of foreign Expeditions, to gratify the Thirst of Dominion, and of Civil Wars arising from the same Cause. But an Application to Commerce cannot be charged, at least not justly, with any of these Inconveniences. We may trade with People without subduing them, and we may become potent, rich and happy, from the Effects of our Industry, without injuring ; but, on the contrary, exercising our Beneficence towards our Fellow Creatures. It is indeed true, that some, or to speak the whole Truth, most trading Nations, have pursued a contrary Conduct ; but as in this they desert the Principle that we recommend, so it affords no real Objection to what we have advanced, nor are we under any Necessity of defending them. Factories are very necessary, and in distant Countries so are Fortresses ; but the Humour of subduing those with whom we trade by Force is rarely beneficial. In Countries thinly inhabited, or by Savages, Plantations may be made agreeable to the Law of Nature ; and these will be found equally honourable and profitable to the Nations that make them. By a due Distribution therefore of Factories, Fortresses, and Plantations, and by a just Regard to Maritime Power, a Nation wisely governed may preserve a Correspondence with every Part of the Globe, without Injury to the Subjects of other Powers, and without Danger to their own Independance ; which Plan comes the nearest to political Perfection of any that has been laid down. Providence has disposed large Chains of Mountains, and other natural Fortifications, to check warlike Ambition, but the Seas are every where open to promote Commerce between the most distant Countries ; and navigable Rivers, or artificial Canals, serve in civilized Nations, to nourish and

maintain Trade amongst themselves, as the Notion of communicating with each other, and thereby reciprocally removing Want, is the very Source of Civility itself. Conquerors we may be, and Barbarians still, but a Race of barbarous Traders is at once a Scollicism in Language, and an Absurdity in Nature.

Thus, by giving the Reader first a succinct Detail of the Scheme, the End and the Aim of this Work, and by proceeding afterwards to an express Enumeration of its several Parts, and exhibiting their Relation to and Connection with each other, we have put it in his Power to judge how far we have executed what was originally proposed and promised, and that too within the Bounds which were assigned it by the Proprietors Stipulations with the Publick. He will also see what the peculiar Advantages are which arise from the very Nature of this Collection, and from the known Characters of the several Pieces of which it is in a great Measure composed, he will farther enter into, and it is hoped, will at the same Time approve, the Reasons from which such Pieces as are of dubious Authority, contain Matters of mere Amusement, are filled up with extravagant and uninstrutive Adventures, and have nothing to recommend them but Liveliness of Thought and Vivacity of Style, have been rejected ; to which we may add, that he will be also sensible of the great Usefulness of the Introduction, in which the Principles of those Sciences, some Tincture of which was absolutely necessary, to the understanding both the Historical and Argumentative Part, of this large Collection, are laid down with such Plainness and Perspicuity, as to render them obvious to every Understanding.

These Considerations, as they were of continual Weight with us in the compiling, disposing, and adjusting that great Variety of Treatises which in Whole or in Part have been admitted into this Performance, it was equally reasonable and requisite they should be brought to the View of every Peruser ; which being done, there remains nothing farther but to wish the great Purposes that have been honestly pursued in the Execution of this Design, may be successfully promoted thereby, and that the Publick will afford a kind Reception to Labours that have been most steadily, as as well as most sincerely, dedicated to their Service.
